UNITED STATES TAX COURT

ESTATE OF WILLIAM G. ADAMS, JR. DECEASED, GEORGE W. SAENGER, EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 14698-99. Filed March 28, 2002.

George W. Saenger, pro se.

James E. Gray and Steven Webster, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

COLVIN, Judge: Respondent determined a $635,018.85 deficiency in the estate tax of the Estate of William G. Adams, Jr. (decedent). After concessions, the sole issue for decision is whether the fair market value of decedent's 61.59-percent interest in Waddell Sluder Adams & Co., Inc. (WSA), on September

28, 1995, was $1,746,000, as respondent determined, or $920,800, as the estate contends. We hold that it was $1,161,705.

Unless otherwise specified, section references are to the Internal Revenue Code as amended and in effect on the date of decedent's death, and Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found.

A. Decedent and the Executor

Decedent, who lived in Asheville, North Carolina, died testate on September 28, 1995. When he died, he owned 178 shares of WSA voting common stock, which was 61.59 percent of its outstanding stock. Voting common stock was WSA's only outstanding stock when decedent died.

George W. Saenger, the executor of decedent's estate, lived in Asheville, North Carolina, when the petition was filed.

B. Waddell Sluder Adams & Co., Inc.

1. Insurance Business

WSA has been an S corporation since the early 1970s. It has two components, a retail insurance agency and a managing general insurance agency (MGA). In 1995, the retail agency generated 5 percent of WSA's revenue, and the MGA generated 95 percent. The retail agency sells insurance to the public.

When decedent died, and until the time of trial, WSA had a contract with the Maryland Casualty Co. (MCC) to be an MGA. The contract provides that MCC is the sole supplier of insurance to the MGA and that WSA has the exclusive right to sell personal and commercial lines of insurance for MCC in 17 counties in western North Carolina. In 1995, 68 to 72 percent of WSA's business came from personal lines. WSA was MCC's only MGA in 1995. MCC or WSA could terminate the contract at any time by giving 180 days' written notice to the other party.

WSA sells insurance for MCC through about 42 independent retail insurance agents. Independent agents may obtain insurance for their customers from any insurance company. WSA processes insurance applications from customers of the retail agents and makes underwriting decisions. If WSA accepts an application, it sets the premium, issues the policy to the retail agent, and pays the premium to MCC. MCC then pays part of the premium to WSA. WSA uses these funds to pay its expenses and the retail agents and keeps the excess as profit. The retail agents have contracts with WSA which establish the amounts of commissions they will receive for selling MCC products. WSA would not be a viable business without its relationship with MCC or if it could not sell personal lines of insurance.

2. Key Personnel

a. Decedent

Decedent began working for WSA in the mid-1940s. He became president of WSA around 1972, and he worked for WSA until April or May 1995. He worked fewer hours in his later years. His primary function in those later years was to set wage and bonus levels for WSA officers.

b. Robert B. Gelder, Jr.

Robert B. Gelder, Jr. (Gelder), was born in 1949 and has lived in Asheville, North Carolina, since 1953. He graduated from the University of North Carolina. He worked for 5 years for NCNB (now Bank of America). He began working for WSA in 1976.

Gelder spent his first year at WSA learning the insurance business. In 1976, WSA's insurance underwriting was divided between property and casualty lines of coverage. Gelder became the manager for personal and commercial lines of casualty insurance after 15 months at WSA. He began to perform underwriting services, i.e., to assess risk for applicants of property insurance policies, around 1982. He developed marketing skills and gained experience in all aspects of underwriting for WSA. He developed and maintained a close relationship with the independent agents who sold WSA products and with MCC personnel. He became the sole liaison between WSA and MCC beginning around 1982. He began managing WSA around 1987. He became the general

manager and president of WSA in 1994. In 1995, his duties included maintaining WSA's relationship with MCC and the retail agents in western North Carolina. He has performed all of the management functions for WSA since 1995.

Gelder has no written employment contract or noncompete agreement with WSA. WSA had no other employee who could replace Gelder in 1995. Gelder's compensation and dividends from WSA for 1991-95 were as follows:

	1991	1992	1993	1994	1995
Wages	$234,700	$258,100	$299,600	$381,200	$381,465
Dividends	76,614	83,581	84,247	108,889	167,239
Total	311,314	341,681	383,847	490,089	548,704

c. Julia Adams Slipher

Julia Adams Slipher (Slipher) is decedent's daughter. Slipher began working for WSA in 1977 as an assistant bookkeeper. She later began underwriting personal lines of insurance, and she was responsible for underwriting property insurance coverage for commercial middle markets (not otherwise described in the record) in 1995. Slipher could not have done Gelder's job in 1995.

3. Officers and Employees

On September 28, 1995, WSA's officers were Gelder (president), Slipher (vice president and secretary), and decedent (treasurer). On that date, WSA had 16 employees in addition to Gelder, Slipher, and decedent.

4. Stock Holdings on September 28, 1995

On September 28, 1995, decedent, Gelder, and Slipher owned WSA's stock as follows:

Shareholder	No. of shares	Percentage of total
William G. Adams, Jr.	178	61.59
Robert B. Gelder, Jr.	105	36.33
Julia Adams Slipher	6	2.08
Total	289	100.00

5. Zurich Insurance Group's Purchase of MCC

The Zurich Insurance Group (Zurich) purchased MCC in the late 1980s. Zurich considered implementing a "service center" concept for MCC, which would have caused WSA to lose underwriting authority, eliminated the need for WSA to serve as an MGA or as a retail agency, and eliminated the work done with WSA by the independent agents throughout western North Carolina. WSA opposed imposition of the service center concept in the 17 counties which it serviced, and Zurich eventually abandoned the concept. Through considerable effort, Gelder maintained and improved WSA's relationship with Zurich.

6. Pending Litigation

The North Carolina Rate Bureau represents insurance companies before the Insurance Commissioner of North Carolina. In 1994, the Rate Bureau commenced litigation with the Insurance Commissioner which potentially affected WSA. If the Rate Bureau had prevailed, WSA would have been required to pay about $407,000

to Zurich to be refunded to WSA's customers. That litigation was pending on September 28, 1995.

OPINION

A. Contentions of the Parties

The estate contends that the value of decedent's 178 shares of WSA stock (a 61.59-percent interest) on September 28, 1995, was $920,800. Respondent contends that the value was $1,746,000 on that date.[1]

A tax is imposed on the fair market value of the decedent's property on the date of death. Secs. 2001, 2031. The fair market value of property is "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." Sec. 20.2031-1(b), Estate Tax Regs.; sec. 25.2512-1, Gift Tax Regs. The estate bears the burden of proof.[2] Rule 142(a)(1).

Both parties rely on the testimony of experts to establish the fair market value of decedent's WSA stock. We may accept or reject expert testimony according to our own judgment, and we may

[1] In objecting to the estate's proposed ultimate finding of fact, respondent contends that the fair market value was $1,757,911. However, respondent's proposed ultimate finding of fact is that the value of decedent's interest in WSA was $1,746,000, the value that respondent determined. Respondent does not explain this difference.

[2] The estate concedes that sec. 7491 does not apply because the examination began before July 22, 1998.

be selective in deciding what parts of an expert's opinion, if any, we accept. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938).

Herbert T. Spiro (Spiro) testified for respondent. F. Foster Shriner (Shriner) testified for the estate.[3] Shriner and Spiro estimated, and computed the present value of, future returns an investor would receive from an investment in WSA. They did so by calculating the present value of the stream of estimated future cashflows to WSA. Spiro concluded that the fair market value of the shares at issue was $1,904,403 on September 28, 1995; Shriner concluded that it was $920,800.

B. Spiro's and Shriner's Expert Reports

We believe that Shriner's approach for estimating the value of WSA stock (before applying a discount for lack of marketability) was more thorough than Spiro's. Spiro did not speak with anyone from MCC or investigate the pending

[3] Kevin M. Stipe also testified for the estate. However, the estate does not rely on Stipe's estimate even though it was more favorable to the estate than Shriner's estimate. We do not consider Stipe's estimate of value.

litigation.[4] Shriner did those things, and reasonably concluded that it was unlikely that WSA would survive without Gelder.

C. Whether Shriner Properly Estimated Gelder's Future Compensation

Respondent contends that Shriner underestimated future net cashflows by overestimating future compensation to Gelder. On the basis of Spiro's testimony, respondent contends that Shriner should have used $125,000 per year as Gelder's future compensation. We disagree.

Gelder's salary in 1995 was $381,465 and his salary and dividends totaled $548,704. Spiro acknowledged that Gelder was a key employee, and that no one would buy WSA without Gelder. We do not believe that Gelder could have been replaced for $125,000 per year.

Respondent contends that WSA could have found a suitable replacement for Gelder in 1995 and that Gelder had no attractive employment alternative. We disagree. Slipher testified that it was unlikely that anyone could assume Gelder's responsibilities because few people understood as well as did Gelder the market, the industry, underwriting, and management as they affect WSA.

---

[4] In his report, Spiro said:

> Not having interviewed persons in authority at The Maryland in 1995, it is impossible to determine conclusively whether or not The Maryland would have cancelled or materially modified WSA's personal lines underwriting authority upon the transfer of Mr. Adams' interest to another party.

Spiro projected Gelder's future salary based on the salary of the top 10 percent of underwriters, even though Gelder spent only 10 or 15 percent of his time underwriting. Spiro's methodology ignores the fact that Gelder did much more than underwriting.

Shriner used insurance industry data for officers and managers to estimate Gelder's future compensation. That data shows that officers of companies in the insurance industry with assets of $1 million received compensation of 14.6 percent of gross revenues. Shriner estimated that future compensation of WSA officers would be 14.7 percent of WSA's gross revenues. We believe that Shriner reasonably estimated Gelder's future compensation.

Respondent contends that Shriner should have assumed that WSA would make payouts to investors at the middle of the year (midyear convention) rather than at the end of the year (yearend convention). Respondent contends that Shriner's approach is incorrect because he "artificially treats net cashflows as not received until the end of each year." We disagree. There is support for use of the yearend convention on the grounds that payment at the end of the year is better than payment in the middle of the year because payment at the end of the year enables the managers to see how the year has turned out. Pratt, Cost of Capital, Estimations and Applications 30-31 (1998). We do not

apply the midyear convention here because respondent offered no evidence that WSA would pay its investors at the middle of the year rather than at the end of the year.

D. Estimating the Discount and Capitalization Rates

Shriner used the income capitalization method and Spiro used the discounted cashflow method to estimate the fair market value of WSA stock. In the discounted cashflow method, a discount rate is applied to a series of future cashflow periods (e.g., each year in the future that the asset will produce a return on investment) to estimate present value. In the income capitalization method, the future cashflow of a single period (e.g., the next year) is estimated. An estimated growth rate is applied to project the cashflow for that single period into the future. An estimated discount rate is applied to reduce the projected future cashflows to present value. A capitalization rate combines the estimated growth rate and the discount rate. It is applied to the estimated future cashflow of the single period. Neither party contends that the other's method is inappropriate here.

Both experts began their analyses by estimating a discount rate to apply to WSA's projected net cashflow using the "build-up method". They both used a rate of return on risk-free investments (risk-free rate) of 6.86 percent, which was the 30-year Treasury rate for August 1995.

1. Added Risk Premiums

Both experts increased the 6.86-percent rate to account for risks that an investor in WSA would assume; i.e., "added risk premiums".

Spiro and Shriner both added a 7.03-percent equity risk premium[5] to account for the fact that the rate of return on stock is less certain than on U.S. Treasury obligations. They obtained this value, which is based on investment returns of C corporations, from Stocks, Bonds, Bills, and Inflation: 1995 Yearbook by Ibbotson Associates, Inc.

Both experts added a 5.25-percent risk premium to account for the fact that WSA was a small company. Both experts based this added risk premium on data from Ibbotson Associates.

Spiro also added a 10-percent risk premium to account for potential loss of personal lines of underwriting authority and the fact that WSA is an S corporation. Shriner added a 9.03-percent risk premium (7.03 percent for WSA's tenuous relationship with Zurich and 2 percent for its thin management and the importance of Gelder). The sum of the risk-free rate and added risk premiums equaled a discount rate of 29.14 percent for Spiro and 28.17 percent for Shriner.

---

[5] Adding the equity risk premium to the risk-free rate is a widely accepted method. Brealey & Myers, Principles of Corporate Finance 146-147 (5th ed. 1996); Pratt, Cost of Capital, Estimation and Applications 62 (1998).

2. Deriving a Capitalization Rate

Shriner derived a capitalization rate of 20.53 percent from his estimated discount rate and from his estimated future average annual growth rate of 6.34 percent for WSA.[6] Respondent does not dispute Shriner's estimated growth rate or capitalization rate. We accept Shriner's estimate of a capitalization rate of 20.53 percent. However, we do not accept an increase that Shriner made to that rate for reasons discussed next.

3. Whether Shriner Properly Converted the Capitalization Rate From an After Corporate Tax Rate to a Before Corporate Tax Rate

The net cashflow and the capitalization rate used to compute the fair market value of the WSA stock should have the same tax character; i.e., before corporate tax or after corporate tax. See Gross v. Commissioner, T.C. Memo. 1999-254 (both the discount rate and cashflow should be before shareholder tax or after shareholder tax), affd. 272 F.3d 333 (6th Cir. 2001). See generally Black & Issom Associates, Fundamentals, Techniques and Theory of Capitalization/Discount Rates, ch. 5, at 23 (1995); Ibbotson Associates, Stocks, Bonds, Bills and Inflation: Valuation Edition 1999 Yearbook; Pratt, supra at 151-152, 155.

[6] The capitalization rate is generally derived by reducing the discount rate by the expected long-term stable growth rate of net cashflows to the investment being valued. Pratt, supra at 21-23.

The estate contends that Shriner's estimates of WSA's prospective net cashflows are before corporate tax. The estate also contends that Shriner properly converted the capitalization rate from an after corporate tax rate to a before corporate tax rate to match estimated prospective net cashflows and that the conversion increased his capitalization rate from 20.53 percent to 31.88 percent. We disagree with the estate on both points.

We disagree that Shriner's estimates of WSA's prospective net cashflows are before corporate tax because it is appropriate to use a zero corporate tax rate to estimate net cashflow when the stock being valued is stock of an S corporation. Gross v. Commissioner, supra. WSA is an S corporation, and its cashflows are subject to a zero corporate tax rate. Thus, Shriner's estimates of WSA's prospective net cashflows are after corporate tax (zero corporate tax rate) and not before corporate tax as the estate contends.

We disagree that Shriner properly converted the capitalization rate because there was no need to do so. The parties agree that Shriner's estimated capitalization rate (before he converted it to before corporate tax) is an after corporate tax rate. Thus, as in Gross, the tax character of Shriner's estimate of WSA's prospective net cashflows matches that of the unconverted capitalization rate because both are after corporate tax. It follows that Shriner should not have

converted the capitalization rate from after corporate tax to before corporate tax because the tax character of both his estimated net cashflows for WSA and unconverted capitalization rates is after corporate tax.

We conclude that Shriner improperly increased the capitalization rate from 20.53 percent to 31.88 percent.[7]

4. Conclusion

The following shows the value of decedent's interest in WSA on September 28, 1995, before applying a discount for lack of marketability:

Normalized net cashflows	$595,746
Capitalization rate	÷ 20.53%
Capitalized net cashflows – total entity	[1]$2,901,831
Equity interest of 61.59 percent	x .6159
Value of decedent's interest	[2]$1,787,238

[1] $595,746/.2053 = $2,901,831.
[2] Before discount for lack of marketability.

E. Discount for Lack of Marketability

Both experts applied a discount for lack of marketability because there was no ready market for WSA stock on September 28, 1995. We agree that a discount for lack of marketability is appropriate.

[7] The result here of a zero corporate tax on estimated prospective cashflows and no conversion of the capitalization rate from after corporate tax to before corporate tax is identical to the result in Gross v. Commissioner, T.C. Memo. 1999-254, affd. 272 F.3d 333 (6th Cir. 2001), of zero corporate tax rate on estimated cashflows and a discount rate with no conversion from after corporate tax to before corporate tax.

Shriner applied a 20-percent discount for marketability. To calculate the marketability discount, he first derived a 32.89-percent discount by averaging the discounts found in various restricted stock studies. He reduced that amount to 20 percent to account for his belief that the insurance industry was more stable than the general market.

Like Shriner, Spiro found that the average marketability discount based on restricted stock studies was between 30 and 35 percent. Spiro also found that initial public offering studies show an average marketability discount of nearly 45 percent. Spiro considered the fact that WSA's very specialized operations would limit potential buyers and detract from the stock's marketability. He also considered the size of the block of stock and elements of control which could enhance marketability. After listening to testimony at trial, he stated that a discount for lack of marketability of 40 or 45 percent would be appropriate to account for the risk due to the pending Rate Bureau litigation. We conclude that a 35-percent discount for lack of marketability applies.

We disagree with Shriner's reduction from about 33 percent to 20 percent because we do not believe WSA was as stable as the insurance industry average. We disagree with Spiro's increase from 35 percent to 45 percent, not because the Rate Bureau litigation should not be considered, but because we believe a 35-

percent discount adequately takes into account WSA's vulnerabilities.

F. Conclusion

The fair market value of decedent's interest in WSA on September 28, 1995, is $1,161,705 ($1,787,238 x .65).

Because of concessions and the foregoing,

Decision will be entered under Rule 155.

JUDGES:

Whitaker, Judge.

OPINIONBY:

WHITAKER

OPINION:

OPINION

Respondent determined a deficiency of $ 160,981.67 in the Federal estate tax of petitioner. The sole issue for decision is the date-of-death fair market value of shares of stock held by decedent in four closely held corporations. Since this case is largely factual, we have combined our findings of fact with our opinion.

Some of the facts have been stipulated and are so found. The parties have stipulated that Woodbury G. Andrews (hereinafter referred to as the decedent) was a resident of Excelsior, Minn., when he died testate on May 16, 1975. It has been further stipulated that Woodbury H. Andrews, a son of decedent, was appointed executor of the estate of decedent and resided in Minneapolis, Minn., when the petition in this case was filed.

Among the assets listed in the estate tax return of decedent were his interests in the following four closely held corporations: (1) 54 shares of W.F. & H.H. Andrews Co. (W.F. & H.H.), (2) 100 shares of St. Anthony Holding Co. (St. Anthony), (3) 50 shares of Green Mountain Investment Co. (Green Mountain), and (4) 63 shares of Andrews, Inc. Decedent owned approximately 20 percent of the total outstanding shares of each of the four corporations at the time of his death, n1 with the remainder being owned by his four siblings in approximately equal proportions. The stock had been held by these five individuals since their father died in 1945. Decedent worked with these corporations from approximately 1927 until his death in 1975. His two brothers have been involved with the corporations since the early 1930's. Together, decedent and his two brothers constituted the entire management of all four corporations; the two sisters did not actively participate in management. There is no evidence of any significant internal management disputes or family discord.

n1 The exact percentages held by decedent were 20.4 percent of Andrews, Inc., 21.6 percent of W.F. & H.H., and 20 percent of the other two corporations.

As of the date of death, W.F. & H.H. had been in business 73 years; St. Anthony, 71 years; Green Mountain, 66 years; and Andrews, Inc., 53 years. All four corporations have been involved primarily in the ownership, operation, and management of commercial real estate properties, although they also held some liquid assets such as stocks, bonds, and cash. n2 The real estate holdings included warehouses, apartment buildings, factories, offices, and retail stores in the Minneapolis - St. Paul metropolitan area. Many of the properties were in rundown urban areas, and most of the buildings were quite old, having been acquired during the early years of the corporations' operations. Most of the properties were leased to small tenants under leases for periods of less than 5 years.

n2 Based on respondent's expert's appraisal of the assets of each corporation, W.F. & H.H. had 76.6 percent of its assets invested in real estate; Green Mountain had 80.9 percent; St. Anthony had 55.8 percent; and Andrews, Inc., had 66.4 percent as of the date of decedent's death. Additionally, most of the cash held by Andrews, Inc., was attributable to a condemnation award and fire insurance proceeds, which were to be invested in real property to avoid recognition under sec. 1033. These amounts, earmarked for the purchase of real estate, should be considered as invested in real estate for our purposes, and, after making this adjustment, Andrews, Inc., should be seen as having had 89.9 percent of its assets invested in real estate.

To handle their management and maintenance responsibilities, the corporations together employed approximately 22 persons in addition to the three Andrews brothers. Fourteen persons were listed as employed and paid by Andrews, Inc.; two by Green Mountain; and three, each, by St. Anthony and W.F. & H.H. However, the record discloses that many of the employees assigned to Andrews, Inc., performed services for all the corporations, which were billed on a monthly basis for their allocable shares of employee payroll and related charges. The types of employees included janitors, parking lot attendants, night watchmen, office personnel, and maintenance workers, who handled plumbing, carpentry, painting, heating, and other maintenance and repair work.

On its estate tax return, petitioner valued decedent's stock interest in Andrews, Inc., at $ 56,700; St. Anthony at $ 45,000; W.F. & H.H. at $ 12,690; and Green Mountain at $ 13,000. In his notice of deficiency, respondent determined that petitioner had significantly undervalued these stocks, and valued Andrews, Inc., at $ 517,608; St. Anthony at $ 287,400; W.F. & H.H. at $ 114,264; and Green Mountain at $ 93,650.

Fair market value has long been defined as the price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. Sec. 20.2031-1(b), Estate Tax Regs.; United States v. Cartwright, 411 U.S. 546, 551 (1973). This is a question of fact, with the trier of fact having the duty to weigh all relevant evidence of value and to draw appropriate inferences. Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. a Memorandum Opinion of this Court.

In determining the value of unlisted stocks, actual arm's-length sales of such stock in the normal course of business within a reasonable time before or after the valuation date are the best criteria of market value. Duncan Industries, Inc. v. Commissioner, 73 T.C. 266, 276 (1979). However, the stock of these four corporations has never been publicly traded, and there is no evidence of any sales of stock in these corporations at any time near the date of decedent's death. In the absence of arm's-length sales, the value of closely held stock must be determined indirectly by weighing the corporation's net worth, prospective earning power, dividend-paying capacity, and other relevant factors. Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963), remanded on other grounds 344 F.2d 763 (6th Cir. 1965); sec. 20.2031-2(f), Estate Tax Regs. n3 These factors cannot be applied with mathematical precision. Rather, the weight to be given to each factor must be tailored to account for the particular facts of each case. See Messing v. Commissioner, 48 T.C. 502, 512 (1967).

n3 Sec. 20.2031-2(f), Estate Tax Regs., provides:

(f) Where selling prices or bid and asked prices are unavailable. If the provisions of paragraphs (b), (c), and (d) of this section are inapplicable because actual sale prices and bona fide bid and asked prices are lacking, then the fair market value is to be determined by taking the following factors into consideration:

(1) In the case of corporate or other bonds, the soundness of the security, the interest yield, the date of maturity, and other relevant factors; and

(2) In the case of shares of stock, the company's net worth, prospective earning power and dividend-paying capacity, and other relevant factors.

Some of the "other relevant factors" referred to in subparagraphs (1) and (2) of this paragraph are: the good will of the business; the economic outlook in the particular industry; the company's position in the industry and its management; the degree of control of the business represented by the block of stock to be valued; and the values of securities of corporations engaged in the same or similar lines of business which are listed on a stock exchange. However, the weight to be accorded such comparisons or any other evidentiary factors considered in the determination of a value depends upon the facts of each case. In addition to the relevant factors described above, consideration shall also be given to nonoperating assets, * * *

Both parties relied upon experts' valuations derived from analyses of intrinsic factors. However, because of fundamental differences in approach between respondent's and petitioner's experts, particularly with respect to the weight to be placed upon net asset value as opposed to earnings or dividend-paying capacity, the amounts arrived at in the valuations were extremely far apart. The following chart, which was used on the estate tax return, lists the different values arrived at by petitioner's primary expert, Sigurd Wendin; petitioner's second expert, Orville Lefko; and respondent's expert, Edward Bard:

	Andrews, Inc.	St. Anthony	W.F. & H.H.	Green Mountain
Mr. Wendin	$ 56,700	$ 45,000	$ 12,690	$ 13,000
Mr. Lefko	55,755	46,500	12,204	12,250
Mr. Bard	570,843	260,000	113,832	97,800

Respondent's Valuations

Respondent's first witness, James M. McKenzie, performed an appraisal of the assets held by the corporations. He valued each real property using three commonly accepted approaches to valuation -- comparable sales, replacement costs, and income-producing capacity. After correlating the values found under each of these approaches, he arrived at the following total values for the assets held by the corporations:

	Andrews, Inc.	St. Anthony	W.F. & H.H.	Green Mountain
Real estate	$ 2,780,700	$ 1,239,800	$ 677,500	$ 645,500
Cash, stocks, and bonds	1,405,024	808,230	56,700	151,682
Miscellaneous assets	121,313	174,105		149,388
Total	4,307,037	2,222,135	883,588	797,182
Liabilities	116,493	2,667	696	515
Net asset value	4,190,544	2,219,468	882,892	796,667

Petitioner has not attacked Mr. McKenzie's valuations of the underlying assets. However, the executor has argued that in arriving at overall net asset value, adjustments should have been made to reflect costs that would have been incurred if the corporations had liquidated all their real estate properties and placed them on the market at one time. The adjustments sought by petitioner are for blockage, capital gains tax to the seller, real estate commissions, and real estate taxes and special assessments constituting a lien against the real estate. We disagree with this argument. Both parties have agreed here that there was no reasonable prospect of liquidation, and the evidence clearly supports this finding. When liquidation is only speculative, the valuation of assets should not take these costs into account because it is unlikely they will ever be incurred. See Estate of Piper v. Commissioner, 72 T.C. 1062, 1087 (1979); Estate of Cruikshank v. Commissioner, 9 T.C. 162, 165 (1947); Estate of Huntington v. Commissioner, 36 B.T.A. 698 (1937). n4

n4 See also Estate of Thalheimer v. Commissioner, T.C. Memo. 1974-203, affd. on this issue and remanded without published opinion 532 F.2d 751 (4th Cir. 1976); Gallun v. Commissioner, T.C. Memo. 1974-284.

Respondent's second expert, Edward Bard, a financial analyst employed by respondent, initially used three approaches to value the stock of each corporation: Earnings and dividend-paying capacity, linear regression analysis, and net asset valuation. The former two methods produced values far lower than

valuation based on net asset values. For instance, the values he computed for Andrews, Inc., based upon capitalization of earnings and dividends ranged from $ 1.1 million to $ 1.5 million, n5 the value based on linear regression analysis was $ 1.6 million but the value based on net asset value was $ 4.1 million. n6 He concluded that the former two values should be disregarded because they were unrealistically low, even though his computations did show that the corporations' yields on investment had consistently been exceptionally low. n7 Thus, his starting point for valuing each of these corporations was the net asset values derived from Mr. McKenzie's appraisals. Because he saw the corporations involved here as holding passive items, he believed they were comparable to closed end mutual funds, which are also corporate entities holding investment properties. He found that shares of mutual funds generally traded at a 25-percent discount from the value of the assets held by such funds, and accordingly, applied a 25-percent discount to the net asset values of the corporations. To this amount, he then applied a lack of marketability discount, varying from 11.9 percent to 20.74 percent to reflect each corporation's costs of flotation if the stock were to be publicly offered. n8

n5 To arrive at these figures, Mr. Bard computed the price-earnings ratios of publicly owned real estate enterprises, primarily real estate investment trusts, that he considered comparable to the corporations involved here. The corporations selected as comparables had price-earnings ratios on a 3-year average of approximately 11 percent, price cash flow earnings of approximately 6.4 percent, and dividend income that averaged 9.6 percent. He applied these percentages to the earnings of Andrews, Inc., to arrive at an income valuation of $ 1,393,990 based on the latest 3-year average earnings; $ 1,134,214 based on the latest 3-year average cash flow earnings; and $ 1,452,073 based on dividend-paying capacity.

n6 All these values were prior to any discount for lack of control or marketability.

n7 Dividing net assets by net income for each corporation showed yields on investment of 3.1 percent for St. Anthony, 3.6 percent for Andrews, Inc., 3.5 percent for W.F. & H.H., and 4.1 percent for Green Mountain.

n8 At trial and on brief, respondent, in light of Rev. Rul. 81-253, 1981-2 C.B. 187, has taken the position, which we discuss later in this opinion, that neither of these discounts should be allowed.

Respondent argues that Mr. Bard was correct in ignoring earnings and dividend-paying capacity because all four corporations should be classified as investment companies not involved in the active operation of a business. He believes that a willing buyer would recognize that the value of his investment would be in his right to share in the value of the corporations' underlying net assets, regardless of their low earnings and dividend-paying capacity. Petitioner attacks respondent's characterization of these corporations as investment companies, stressing that the corporations employed 25 employees and actively performed real estate management and maintenance functions. n9 Characterizing these corporations as operating companies, petitioner believes greater weight should be placed on earnings and dividend-paying capacity than on net asset values.

n9 As we found earlier, although employees other than the three Andrews brothers were assigned to only one corporation for bookkeeping purposes, many of them actively performed services for all the corporations.

We believe, however, the corporations here cannot be characterized for valuation purposes as solely investment companies or solely operating companies. The cases cited by respondent, n10 which involved corporations holding only cash, commercial paper, or marketable securities, are readily

distinguishable on the ground that the corporations involved here were actively engaged in the real estate management business. But cases dealing with corporations owning factories and other industrial or commercial operations are also not directly on point. n11 Unlike many industrial companies, where the value of the manufacturing equipment and plant is tied to the nature of the manufacturing operation, here, the value of the underlying real estate will retain most of its inherent value even if the corporation is not efficient in securing a stream of rental income. It seems reasonable to assume, as we did in Estate of Heckscher v. Commissioner, 63 T.C. 485, 493 (1975), that a --

potential buyer would have to forego some current return on his investment in exchange for an interest in a net worth much more valuable than the price he pays for the stock, and the seller would have to be willing to part with an equity interest in the company for much less than its indicated value in return for something that would produce a greater yield on his investment. * * *

n10 The following cases were cited by respondent: Estate of Cruikshank v. Commissioner, 9 T.C. 162 (1947); Gallun v. Commissioner, supra; Estate of Thalheimer v. Commissioner, supra; Estate of Cotchett v. Commissioner, T.C. Memo. 1974-31; and Richardson v. Commissioner, a Memorandum Opinion of this Court dated Nov. 30, 1943, affd. 151 F.2d 102 (2d Cir. 1945). Estate of Lee v. Commissioner, 69 T.C. 860 (1978), in which we used net asset values in arriving at the value of a close corporation that held primarily real estate is likewise distinguishable because the real estate was not rental property but rather undeveloped property that offered no immediate prospects for taxable income to the corporation.

n11 See Waterman v. Commissioner, T.C. Memo. 1961-225, in which we rejected both respondent's valuation based solely on net asset values and petitioner's valuation based solely on earning capacity as inappropriate for a corporation holding improved rental property; and Estate of Tompkins v. Commissioner, T.C. Memo. 1961-338, in which we rejected similar contentions with respect to a corporation holding unimproved real estate.

Furthermore, regardless of whether the corporation is seen as primarily an operating company, as opposed to an investment company, courts should not restrict consideration to only one approach to valuation, such as capitalization of earnings or net asset values. See Hamm v. Commissioner, 325 F.2d 934 (8th Cir. 1963), affg. a Memorandum Opinion of this Court; Portland Manufacturing Co. v. Commissioner, 56 T.C. 58, 80 (1971); Estate of Schroeder v. Commissioner, 13 T.C. 259 (1949); Hooper v. Commissioner, 41 B.T.A. 114 (1940). n12 Certainly, the degree to which the corporation is actively engaged in producing income rather than merely holding property for investment should influence the weight to be given to the values arrived at under the different approaches but it should not dictate the use of one approach to the exclusion of all others.

n12 See also Estate of Dooly v. Commissioner, T.C. Memo. 1972-164; Lippman v. Commissioner, T.C. Memo. 1965-73; and Wallace v. United States, an unpublished opinion (D. Mass. 1981, 49 AFTR 2d 82-1482, 82-1 USTC par. 13,442), in which the court stated:

"The 'willing buyer' and 'willing seller' * * * test the experts' advice, and the formulas the experts advance to bolster their advice, against common sense. The willing buyer and willing seller are not limited to choosing one formula or another among competing formulas advanced by experts. [49 AFTR 2d 82-1482.]"

The regulations n13 call for all relevant factors to be examined and, in a case such as this, we believe values arrived at under all the accepted valuation methods should be considered. We therefore believe respondent's expert was incorrect to simply reject earnings and dividend-paying capacity valuations because they produced too low a result. Certainly, a prospective buyer would not so reject one particular type of valuation. A buyer of stock in these corporations would necessarily look to the earning capacity for part of his return on his investment. Nevertheless, this would not be the only factor that he would consider. Undoubtedly, he would also give substantial weight to each corporation's underlying net asset value even though he would have no ability to directly realize this value by forcing liquidation.

n13 See sec. 20.2031-2(f), Estate Tax Regs.

Respondent argues that there is a particular reason why only net asset values should be used in this case. Mr. McKenzie's determination of the values of the real estate properties held by the corporations was arrived at through a computational method that considered, among other factors, the projected earning capacity of the properties. Respondent contends that in valuing each corporation it is therefore appropriate to use only the underlying net asset value, which is the sum of the appraised real estate values plus the values of other assets held by the corporation, such as stocks and bonds, minus all the corporation's liabilities. n14 However, to do so would ignore the corporate entities. If the properties had been held directly by decedent, respondent would undoubtedly be correct, but here we are not faced with the question of finding a value for the properties themselves; rather, we must find the value of shares of the corporations that held the properties. The corporations are businesses, engaged in the maintenance and management of these real estate properties. Thus, some of the value attached to the corporations must be based upon the operating nature of the businesses, with attention paid to their earnings and dividend history, management, and prospects for growth.

n14 Because the corporations followed a very conservative policy of avoiding substantial debt, St. Anthony, W.F. & H.H., and Green Mountain had virtually no liabilities, and the liabilities of Andrews, Inc., equaled only 2 percent of the value of its assets.

Petitioner's Valuations

We turn now to analyze petitioner's experts' valuations, which we also find to be markedly deficient, largely because of their adopting approaches that minimize the importance of the value of the underlying assets.

Petitioner's first expert, Sigurd Wendin, selected as comparables four large publicly traded real estate management corporations, although he recognized that there were differences in size, financing, number of employees, and types of activities carried on. Based on his analysis of these publicly traded corporations, he assigned price earnings multiples to the corporations involved here of five for future earnings, four for current earnings, five for the average of the last 3 years' earnings, and seven for the average earnings for the period 1970 through 1973. These multiples were somewhat lower than those obtained from the comparable companies because of the difficulty in marketing nonpublicly traded shares. He then applied these multiples to net operating income during the applicable periods, and applied a minority discount for lack of marketability of 40 percent based on his overall experience with the amount of such discounts commonly allowed.

For dividend capitalization purposes, Mr. Wendin assumed a 10-percent rate, based upon the fact that corporate bond yields were around 9 percent to 11 percent. He believed bond yields were better comparables than the yield rate on stocks because the assets involved here were frozen and stock yields had been quite variable during this time period. He applied this 10-percent rate to the last year dividend and to his estimate of the future dividend that could be expected. Again, he discounted these amounts by 40 percent for lack of marketability.

Mr. Wendin also looked at the corporate balance sheets showing net assets and liabilities of the corporations. He did not have Mr. McKenzie's or any other appraisal of underlying assets so he looked at book values instead of net asset values. He reduced the book values to 80 percent based on the market-to-book-value ratio here found in analyzing his four "comparables." n15 To this he applied a 40-percent discount for lack of marketability.

n15 Exactly how he arrived at this 80-percent figure is not clear since the ratios for three of the selected "comparables" were 51 percent, 79 percent, and 92 percent, and for the fourth "comparable" an astounding 3,007 percent.

In combining all of these factors to arrive at an overall valuation of each corporation, Mr. Wendin minimized the impact of the adjusted book value per share. He believed this approach was necessary because there were no plans to liquidate and because a minority stockholder would have had no ability to force liquidation. Listed below as an example are the weights given to each factor, the values per share, and the overall average value arrived at for Andrews, Inc., stock:

	Per share	Weight	Amount
Future dividend capitalization	900.00	5	$ 4,500.00
Last year dividend capitalization	770.76	4	3,083.04
Future earnings capitalization	1,167.00	3	3,501.00
Last year earnings capitalization	940.34	2	1,880.68
Three-year average earnings capitalization	963.57	1.5	1,445.36
1970-73 year average earnings capitalization	998.07	1.5	1,497.11
Book value	2,345.11	1	2,345.11
		18	18,252.30
		Average	1,014.02

To this $ 1,014.02 value per share he applied an additional discount to reflect specific negative factors such as deterioration of areas, strategic location, rising inflation, taxes, future maintenance costs, and the ability to quickly adjust rentals. He ended up with an estimated value for Andrews, Inc., of $ 900 per share. The values for the other three companies were determined in equivalent manners. In no case was book value given more than a one-ninth weight in determining the current value.

We find Mr. Wendin's valuations to be seriously flawed because they did not take into account each corporation's net asset value, i.e., the total value of its assets less liabilities. Although he attempted to approximate net asset values by using adjusted book values, n16 which were arrived at by reducing book values by a market-to-book ratio, the figures so computed bore no reasonable relation to actual net asset values. Mr. Wendin used a market-to-book ratio of 80 percent, but a comparison of book values to the appraised values determined by Mr. McKenzie shows the ratio was actually near 300 percent. Moreover, even if the adjusted book values had been close to actual net asset values, Mr. Wendin assured they would be of little importance in his overall computations by assigning insubstantial weights, varying from one-ninth to one-eighteenth, to them. As discussed earlier, a prospective buyer of stock in these corporations would undoubtedly give substantial weight to net asset values.

n16 Mr. Wendin apparently recognized that unadjusted book values are often unreliable for valuation purposes because they may have little relation to the assets' fair market values at the date of valuation. With an asset that appreciates in value (and thus has investment value), such as real estate, book value may be far below current fair market value. See Estate of Poley v. Commissioner, a Memorandum Opinion of this Court dated Mar. 7, 1947, affd. per curiam 166 F.2d 434 (3d Cir. 1948).

Another problem with the Wendin valuations was that he applied to his adjusted book values a 40-percent discount for lack of marketability and control. We believe this was improper because lack of control was also reflected (excessively) in the weighting of factors considered in computing an overall valuation.

Petitioner's second expert, Mr. Orville G. Lefko, was retained to prepare an analysis after the McKenzie appraisals had been made available to petitioner. Mr. Lefko employed an approach somewhat different than Mr. Wendin but still minimized the importance of net asset values and arrived at figures quite close to those computed by Mr. Wendin.

Mr. Lefko felt that both net asset value and earnings capability were not very important in comparison to dividend projections for purposes of valuing corporations such as the ones at issue here. Although the dividend history of each of the corporations had been irregular, Mr. Lefko came to the conclusion that each corporation had the ability to pay a regular dividend. To arrive at a rate of dividend capitalization, he looked at seven equity real estate investment trusts, which he selected as comparables. These "comparables" yielded a 12-percent dividend capitalization rate, which he increased to between 15 and 17 percent because he believed that real estate investment trusts involved lower risks due to factors such as professional management, geographical diversity, and size. After applying the dividend capitalization rate to projected dividends, he applied a 45-percent discount for lack of marketability.

Mr. Lefko did not entirely dismiss the net asset value of the corporations but attempted to factor into his overall value a liquidation probability value, to reflect the buyer's prospect of realizing on liquidation a share of the underlying asset values. First, he adjusted the appraised value of the corporation's assets. He decreased the values of real properties by anticipated liquidation costs of stocks and bonds by handling charges, and receivables by a bad debt allowance. This gave him a net realized value per share of each corporation. Next, he projected when a purchaser of shares that had been held by decedent might reasonably expect to obtain his share of the underlying assets through liquidation. Because of the corporation's long history of continuing operations and no prospect of imminent liquidation, Mr. Lefko believed there was no chance of liquidation within 5 years, a 5-percent chance in 10 years, a 10-percent chance in 15 years, a 35-percent chance in 20 years, and a 50-percent chance

in 25 years. He multiplied the net realized value per share by each of these percentages and then discounted the resulting amounts because of the lost time value of money prior to the assumed future liquidation. He thereafter added together all the discounted amounts and applied a 45-percent illiquidity discount. In this manner, he computed a liquidation probability value for each corporation, equal to approximately 3 percent to 5 percent of the fair market value of the underlying assets. This liquidation probability value was added to the previously determined dividend capitalization value of each of the corporations. n17

n17 We note that it is highly unusual in a valuation to add together the values derived through two independent estimates of valuation, here the liquidation probability approach and the dividend capitalization approach. Theoretically, each approach should result in computation of the entire value of the property and although averaging of the different computations might be necessary, it would not be appropriate to add together separate valuations.

We find the liquidation probability approach to be highly speculative at best. Moreover, we believe the computation improperly reduced asset values on account of lost use of money. This discounting for lost use of money is unrealistic because it fails to recognize that the underlying assets will themselves appreciate, most probably, at a rate similar to that applied as a discount. Another problem with Mr. Lefko's valuation was his use of real estate investment trusts (REITs) as comparables. These entities are not truly comparable to the corporations involved here because of the requirement that REITs must pass through 90 percent of earnings as dividends and because REITs are generally highly leveraged while the corporations here were virtually debt free.

Petitioner's third expert, Thomas C. O'Connell, based his valuation solely upon an approximation of cumulative future dividends of all the corporations. He started with the total average dividend for all the corporations over the 3-year period from 1972 through 1974. To this amount he applied a dividend capitalization rate of between 18.75 percent and 25 percent. He explained that this capitalization rate was arrived at based upon his belief that an investor would require a return of 150 to 200 percent of the prime rate because the companies had certain negative factors such as a low return on invested capital, a low rate of cash flow, very conservative management, fragmented management control, and a lack of consistent policy in prior years. He also stressed that there was no public market for the shares, a low return on net worth and a lack of any long-term plan or growth strategy. Applying the dividend capitalization rate to the prior 3-year total average dividend, he computed a value for the four corporations of between $ 605,000 and $ 807,000. For the 20 percent of the shares involved here, he estimated the value of $ 121,000 to $ 161,000 total.

We have accorded little weight to Mr. O'Connell's valuation for several reasons. Most importantly, he did not consider earnings and took no account whatsoever of the net asset values of the corporations. Furthermore, in selecting a dividend capitalization rate, he did not examine comparable companies but simply expressed his relatively unsubstantiated opinion that an 18.75- to 25-percent rate of dividend capitalization would be desired by a willing purchaser. In the absence of more facts showing why this specific rate was chosen, it is difficult for the Court to determine whether the rate was simply an educated guess or whether he really had a substantial basis for concluding that it was appropriate. Another problem with Mr. O'Connell's approach was that in applying the dividend capitalization rate to

the average dividends received for the prior 3-year period, he did not differentiate among the corporations but considered them as if they were only one single entity. Thus, there is no way in which his valuation can be used directly to arrive at the value of any particular corporation involved here.

Lack of Control and Marketability Discounts

In Mr. Bard's valuation report and in computing the amount of deficiency, the net asset values of the four corporations were each reduced first by a 25-percent discount based on a comparison with publicly traded closed end mutual fund shares, and then by discounts ranging from 11.9 percent to 20.74 percent based on Securities Exchange Commission flotation rates. These discounts were designed to reflect the shares' restricted marketability and lack of control.

Rev. Rul. 81-253, 1981-2 C.B. 187, was published by respondent after the statutory notice was issued, and it sets forth respondent's current position concerning the allowance of minority discounts in valuing stock of closely held family corporations. Based on Rev. Rul. 81-253, respondent now argues that no discounts for lack of control or restricted marketability should be applied, although he has not asserted a deficiency greater than that asserted in the statutory notice. Thus, respondent argues that discounts should not be applied to the extent they would result in reducing the values below those asserted in the notice of deficiency.

Petitioner has questioned whether it is proper for respondent to now argue against allowing a minority discount even though he allowed a discount in computing the deficiency in the statutory notice. However, this is not a case where petitioner was surprised at trial by respondent's introduction of a new issue. It is clear that petitioner was prepared for the minority discount question being raised at trial, and has devoted large portions of its briefs to rebutting respondent's position that no minority discount should be allowed. Therefore, we find no merit to petitioner's claim that the minority discount issue has been improperly raised by respondent. See Llorente v. Commissioner, 74 T.C. 260, 269 (1980), modified on other grounds 649 F.2d 152 (2d Cir. 1981).

Respondent argues that no discounts should be allowed because all the shareholders in the four corporations, including decedent, shared in control. According to respondent's argument, the hypothetical "willing seller" used in arriving at valuation of the stock must be presumed to be one of the five family members, including decedent, who held stock in the corporations and shared an element of control. Respondent reasons further that such a willing seller would not have sold his shares except as part of the controlling family interest, unless to another family member or the corporations, themselves. If the shares were sold in this way, respondent contends they would retain their control value, and no minority discount would be justified.

In their arguments, neither petitioner nor respondent clearly focuses on the fact that two conceptually distinct discounts are involved here, one for lack of marketability and the other for lack of control. n18 The minority shareholder discount is designed to reflect the decreased value of shares that do not convey control of a closely held corporation. The lack of marketability discount, on the other hand, is designed to reflect the fact that there is no ready market for shares in a closely held corporation. Although there may be some overlap between these two discounts in that lack of control may reduce marketability, it should be borne in mind that even controlling shares in a nonpublic corporation suffer from lack of marketability because of the absence of a ready private placement market and the fact that flotation costs would have to be incurred if the corporation were to publicly offer its stock. However, the

distinction between the two discounts is not crucial for purposes of this case. Because respondent's basis for opposing both discounts is the same -- that the hypothetical willing buyer must be seen as a family member -- our subsequent discussion, like the parties' briefs, will consider the two discounts together.

n18 See Fellows & Painter, "Valuing Close Corporations for Federal Wealth Transfer Taxes: A Statutory Solution to the Disappearing Wealth Syndrome," 30 Stan. L. Rev. 895, 920 (1978).

The leading case dealing with this question is Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981) (en banc), in which the court recognized that a minority interest in a corporation should not be seen as having any control value, even though the family unit had control of the corporation. The case involved whether a minority discount should be allowed in valuing a decedent's undivided one-half interest in the control block of 55 percent of the stock of a corporation, where the other one-half interest in the control block was owned by the husband of the decedent (who was also executor of the estate and subsequently trustee of the testamentary trust that received the stock in issue). Two major bases for its decision were explained by the court. First, it found that established case law did not support any type of "family attribution" in which the control of the corporation was attributed among family members. The Fifth Circuit noted that the Tax Court, since at least 1940, has uniformly valued a decedent's stock for estate tax purposes as a minority interest when the decedent, himself, owned less than 50 percent of the stock regardless of whether control of the corporation was in the decedent's family. n19 The court also cited two District Court opinions that took the same position, n20 and it stated that it had found no estate tax cases supporting respondent's position. The court found further that case authority in the analogous gift tax area also supported the taxpayer's position, although not unanimously. n21

n19 The following Tax Court cases were cited by the Fifth Circuit for this proposition: Estate of Zaiger v. Commissioner, 64 T.C. 927 (1975); Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963); Estate of DeGuebriant v. Commissioner, 14 T.C. 611 (1950), revd. on other grounds 186 F.2d 307 (2d Cir. 1951); Hooper v. Commissioner, 41 B.T.A. 114 (1940); Estate of Kirkpatrick v. Commissioner, T.C. Memo. 1975-344; Estate of Stoddard v. Commissioner, T.C. Memo. 1975-207; Estate of Thalheimer v. Commissioner, supra; Estate of Maxcy v. Commissioner, T.C. Memo. 1969-158, revd. on other grounds 441 F.2d 192 (5th Cir. 1971); Estate of Katz v. Commissioner, T.C. Memo. 1968-171. We agree with the Fifth Circuit that these cases show our established view that a decedent's stock in a family controlled corporation should be seen as a minority interest whenever the decedent individually did not have control.

n20 The Two District Court opinions cited by the court were Obermer v. United States, 238 F. Supp. 29 (D. Hawaii 1964); and Sundquist v. United States, an unpublished opinion (E.D. Wash. 1974, 34 AFTR 2d 74-6337, 74-2 USTC par. 13,035).

n21 Cases cited by the court for the proposition that minority discounts were allowed for gifts of stock in family controlled corporations included Meijer v. Commissioner, T.C. Memo. 1979-344; Koffler v. Commissioner, T.C. Memo. 1978-159; Estate of Heppenstal v. Commissioner, a Memorandum Opinion of this Court dated Jan. 31, 1949; Whittemore v. Fitzpatrick, 127 F. Supp. 710 (D. Conn. 1954); Clark v. United States, an unpublished opinion (E.D. N.C. 1975, 36 AFTR 2d 75-6417, 75-1 USTC par. 13,076).

The second major reason cited in the Estate of Bright opinion for applying a minority discount was based upon the concept of the hypothetical willing-buyer, willing-seller rule. Section 20.2031-1(b), Estate Tax Regs., sets forth the following rule, which has been universally applied by the courts and respondent:

The fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. * * *

The Fifth Circuit saw this language from the regulation as indicating that the "willing seller" is a hypothetical seller rather than the particular estate. Thus, the willing seller should not be identified with the decedent, and the decedent's stock should not be included as part of a family unit for valuation purposes. Nor was it proper, according to the Fifth Circuit, to place any weight upon the identity of the parties that actually received the stock after distribution from the estate. For purposes of valuation, one should construct a hypothetical sale from a hypothetical willing seller to a similarly hypothetical willing buyer.

In Propstra v. United States, 680 F.2d 1248 (9th Cir. 1982), the Ninth Circuit followed Estate of Bright and discounted the value of an undivided one-half interest in real estate held by the decedent and his wife as community property at the time of death. The Ninth Circuit noted that Congress has explicitly directed that family attribution or unity of ownership principles be applied in other areas of Federal taxation, and felt that in the absence of any legislative directive, it should not judicially require such principles to be applied in the estate tax area. Furthermore, the court emphasized the advantage of using an objective hypothetical willing-buyer, willing-seller standard, instead of a subjective inquiry into the feelings, attitudes, and anticipated behavior of heirs and legatees, which might well be boundless.

Respondent argues that the Fifth Circuit misinterpreted the concept of the hypothetical willing seller and willing buyer. In his briefs, he relies primarily upon three cases to support his proposition that a minority discount should not be applied if family members control a corporation. Richardson v. Commissioner, a Memorandum Opinion of this Court dated November 30, 1943, affd. 151 F.2d 102 (2d Cir. 1945), involved a family holding company whose assets were readily marketable securities. On appeal, the Second Circuit upheld the value established by us but questioned whether we had used the correct standard of valuation. Our Richardson opinion must be read narrowly in view of the long series of subsequent cases in which we have allowed discounts in valuing shares of family corporations that held operating as well as investment assets. Blanchard v. United States, 291 F. Supp. 348 (S.D. Iowa 1968), contains language supportive of respondent's position. But the court stressed that it was dealing with a unique situation involving a planned sale of all the family's shares of stock in the corporation. At first blush, Rothgery v. United States, 201 Ct. Cl. 183, 475 F.2d 591 (1973), seems to support respondent. But even though its valuation was phrased in terms of seeing the willing buyer as a particular person (the family member who already held almost 50 percent of the shares of the corporation), the court also explicitly found that there would have been other potential buyers for the decedent's shares of the stock at the same price if the stock had been offered for sale to persons outside the Rothgery family. Thus, despite analyzing the hypothetical sale in terms of the sale to a particular person, the court evidently attributed no premium to the fact that the family member would assure himself of control by obtaining these shares.

Three cases provide at best weak support for respondent's position that no discounts should be applied here. Opposed to this meager case law in favor of respondent is the large number of cases allowing such discounts, which were discussed in the Estate of Bright opinion. We see no reason to depart from such established precedent but follow the Fifth Circuit's well-reasoned and thoroughly researched opinion. Respondent's approach would have us tailor "hypothetical" so that the willing seller and willing buyer were seen as the particular persons who would most likely undertake the transaction. However, the case law and regulations require a truly hypothetical willing seller and willing buyer. We must assume these hypothetical parties exist even though the reality of the situation may be that the stock will most probably be sold to a particular party or type of person. Certainly, the hypothetical sale should not be constructed in a vacuum isolated from the actual facts that affect the value of the stock in the hands of decedent, but we do not see any actual facts in this case that require the stock to be valued as anything other than minority interests in each corporation.

Overall Valuation

We have pointed out above the defects of the approaches used by both parties' experts. Having taken diametrically opposed views as to the factors to be weighed in valuing the stock involved in this case, the parties "failed successfully to conclude settlement negotiations -- a process clearly more conducive to the proper disposition of disputes such as this." Messing v. Commissioner, 48 T.C. 502, 512 (1967). Because we have concluded that none of the experts gave appropriate weight to net assets as well as earning and dividend-paying capacity, we must necessarily make our own best judgments of value. While we have considered the valuation reports of Messrs. Wendin, Lefko, and Bard, we have also weighed all other relevant factors such as the extremely conservative business attitudes and practices of the management, the nature of the real estate holdings, the amount of cash and other liquid assets held by the corporations, and the business climate on the valuation date, both overall and for these corporations in particular. We have discounted the values because of the restricted marketability of the shares and the lack of control a hypothetical willing buyer of these minority shares would be able to exercise. Based on all these factors and on the entire record, we conclude and find as a fact the following date-of-death fair market values for the stock held by decedent:

Andrews, Inc	$ 302,400
St. Anthony	158,000
Green Mountain	56,000
W.F. & H.H	64,800

Decision will be entered under Rule 155.

24 T.C.M. (CCH) 1030 (1965)
T.C. Memo. 1965-200.

Bardahl Manufacturing Corporation
v.
Commissioner.

Docket No. 2917-63.

United States Tax Court.

Filed July 23, 1965.

Joseph H. Trethewey, White-Henry-Stuart Bldg., Seattle, Wash., for the petitioner. Richard H. M. Hickok and Wesley A. Dierberger, for the respondent.

Memorandum Findings of Fact and Opinion

WITHEY, Judge:

The respondent determined deficiencies in petitioner's income tax for the years and in the amounts as follows:

Year ended December 31	Deficiency
1956	$ 47,607.70
1957	77,997.79
1958	259,471.08
1959	263,771.03

The sole issue presented for our decision is whether petitioner was availed of during each of the years 1956 through 1959, inclusive, for the purpose of avoiding the imposition of individual income tax on its shareholders, by permitting its earnings and profits to accumulate instead of being divided or distributed.

Additional issues presented by the pleadings have been disposed of by concession or stipulation of the parties.

Findings of Fact

Petitioner **Bardahl Manufacturing Corporation** (sometimes hereinafter referred to as **Manufacturing** or the **corporation**) was organized under the laws of the State of Washington during September 1939. Petitioner filed its income tax returns for the years 1956, 1957, 1958, and 1959 with the director at Tacoma, Washington.

The **corporation's** principal place of business is located at Seattle, Washington.

Bardahl Manufacturing Corporation has been engaged in the business of **manufacturing** an oil additive known as "**Bardahl**" since the commencement of business in 1939. From 1939 to 1955 it was also engaged in the business of selling the **Bardahl** additive. The **corporation** was a pioneer in the oil additive business. During the years here pertinent it also has manufactured certain related products such as gasline antifreeze, engine cleaner, carburetor cleaner, a water pump lubricant, a lubricant for transmission and differentials, and an outboard motor oil.

During 1954 **Bardahl** International **Corporation** (sometimes hereinafter referred to as International) was organized under the laws of the State of Washington.

Pursuant to a contract executed by **Manufacturing** and International on January 1, 1955, **Manufacturing** agreed to sell its entire production to International which in turn undertook the responsibility of acting as the sole sales representative of **Manufacturing**.

At all times here material, Ole **Bardahl**, individually, was the principal stockholder of both **Bardahl Manufacturing Corporation** and **Bardahl** International **Corporation** and also served as president of each **corporation**. During the years 1956, 1957, 1958, and 1959 the outstanding common stock of **Bardahl Manufacturing** Company was held by the individuals and in the amounts as follows:

1032 *1032 Under the contract executed by **Manufacturing** and International on January 1, 1955, **Manufacturing** agreed to undertake the production of **Bardahl** concentrate which is the basic ingredient that is blended with oil to produce the **Bardahl** additive. **Manufacturing** also undertook responsibility for the quality control of its oil additive and for conducting research and development with a view to producing new products.

International at all times here material was exclusively a sales organization and undertook no **manufacturing** or production activities. It distributed **Bardahl** concentrate during the years in issue to various blenders and distributors located in the United States and in foreign countries with which it had executed franchise contracts. The blenders purchased the **Bardahl** concentrate and blended it with oil to produce a marketable product which, after canning, was distributed to retail outlets and sold to consumers. The franchise distributors, on the other hand, purchased the finished **Bardahl** additive and sold it themselves.

During the years in issue neither petitioner nor International had any capital investment in either the blenders or distributors of **Bardahl** additive (with the exception of **Bardahl** International Oil **Corporation**, S. P. A., an Italian **corporation** formed in 1959 on petitioner's behalf to manufacture concentrate in Europe). The blenders and distributors (except for **Bardahl** International Oil **Corporation**, S. P. A.) during the years here pertinent were wholly owned by individuals unrelated to either of the **Bardahl** corporations.

Petitioner maintained quality control over its additive by means of running chemical tests on raw materials throughout the **manufacturing** process and by testing samples of products marketed by the franchise blenders and distributors.

During 1959 and 1960 **Bardahl Manufacturing Corporation** organized wholly-owned subsidiaries located in foreign countries to manufacture its concentrate. Its foreign subsidiaries manufactured and blended the concentrate in accordance with formulae and procedures determined by **Manufacturing**. The foreign subsidiaries of petitioner which which manufactured its concentrate during 1960 and subsequent years were located in Montreal, Canada, and Milan, Italy. The concentrate plant located in Montreal was owned by **Bardahl** Lubricants (Canada), Ltd., and the **manufacturing** facilities located in Italy were controlled by **Bardahl** International Oil **Corporation**, S. P. A.

The accumulated earnings and profits of **Bardahl Manufacturing Corporation** as of December 31, 1955 through 1959, were as follows:

Year ended December 31	Amount
1955	$ 819,686.18
1956	965,039.74
1957	1,194,483.15
1958	1,540,049.28
1959	1,880,097.17

Petitioner's sales, net income before taxes, Federal taxes paid, net income after taxes, and cash dividends paid, both in dollar amounts and percentages, from 1939 through 1962 were as follows:

Year	Sales	Net income before taxes	Federal taxes paid	Net income after taxes	Cash dividends declared	Percent of net income distributed as cash dividends
1939	$ 188	.....	.....	.....	.....	....
1940	1,108	.....	.....	.....	.....	....

The **Bardahl** oil additive is a highly promotional product and is subject to rapid fluctuations in the market place. It is a luxury type product and requires extensive national advertising in order to create a consumer demand. **Manufacturing** produced animated spot advertisements for its motor oil additive beginning about 1953. Such spot advertisements were carried over television stations in the United States and have proven successful in creating a nationwide advertising image of the **Bardahl** name and product.

The oil additive industry is a highly competitive field of business which includes numerous competing products. During the years 1956 through 1959 there were at least 45 different oil additives marketed which were competitive with petitioner's additive. Among the products competing with the **Bardahl** additive were those marketed by Shell Oil Company, Dupont, General Motors **Corporation**, Wynn Oil Company, Quaker State, and Chrysler **Corporation**.

It was the practice of the petitioner during the years here in issue to invest sizable amounts of its liquid funds in temporary securities such as Government notes, Treasury bills, municipal bonds, or readily convertible debentures, and occasionally in cash deposits in a savings and loan association, so as to enable its unused working capital to earn a small interest return and still be available when needed for the
1034 demands of its business operations or for financing capital improvements. At the end of each *1034 of the years in issue, petitioner held governmental obligations in the following amounts:

December 31	Amount
1956	$205,263.98
1957	204,857.73
1958	208,717.14
1959	556,889.80

On August 23, 1954, **Manufacturing** deposited $35,000 with the Ballard Savings & Loan Association. On December 31, 1959, petitioner's balance in this account, including accumulated interest, was $41,634.80.

During 1956 **Bardahl** International **Corporation** in the ordinary course of business incurred trade receivables due to **Manufacturing** in amounts between $60,000 and $90,000.

In 1958 International in the ordinary course of business incurred a trade receivable due petitioner in the amount of $81,787.17 which was paid in full during January 1959.

Throughout the years in question petitioner held 8 percent debentures of the Coast Mortgage Company in the total face amount of $40,000. By agreement with the issuer the debentures were cashable on demand by **Manufacturing**. The Coast Mortgage Company maintained a cash reserve for this purpose at all times during the years 1956 through 1959.

The current assets and current liabilities of **Bardahl Manufacturing Corporation** on December 31, 1956 through 1959, inclusive, were as follows:

Current Assets	1956	1957	1958	1959
Cash	$300,566.79	$ 390,993.39	$ 327,597.63	$ 372,262.49
Notes and accounts receivable	123,773.22	255,346.45	512,037.00	622,891.68
Inventories	105,419.27	126,214.08	97,176.43	79,070.23
Government securities	205,263.98	204,857.73	208,717.14	556,889.80
Coast Mortgage debentures	40,000.00	40,000.00	40,000.00	40,000.00

Total current assets	775,023.26	1,017,411.65	1,185,528.20	1,671,114.20
Current Liabilities				
Accounts payable	4,956.37	55,634.42	26,689.62	86,038.55
Mortgage payable within one year	3,357.58	.....	.....	.....
Accrued liabilities	42,095.15	54,034.53	50,899.80	52,629.42
Federal income tax payable	172,956.49	235,230.03	322,278.30	339,035.23
Dividends payable	51,594.50	32,688.25	20,871.25	102,682.21
Total current liabilities	274,960.09	377,587.23	420,738.97	580,385.41

Petitioner's net liquid assets (consisting of its total current assets less its total current liabilities) as of December 31, 1956 through 1959, inclusive, were (rounded to the nearest dollar) $500,063, $639,824, $764,789, and $1,090,729, respectively.

Operating Costs

Petitioner's annual operating costs (excluding depreciation and Federal income taxes), cost of goods sold, and the total of the two for 1955, 1956, 1957, 1958, and 1959 were as follows:

Year ended Dec. 31	Operating costs[1] (less depreciation and Federal income taxes)	Cost of goods sold	Total
1955	$242,474.07	$540,515.73	$ 782,989.80
1956	268.907.67	532,692.15	801,599.82
1957	298,303.22	539,877.53	838,180.75
1958	468,937.07	902,560.33	1,371,497.40
1959	400,961.12	993,602.15	1,394,563.27

1 Including advertising costs.

Manufacturing's operating cycle, consisting of the period of time required to convert cash into raw materials, raw materials into an inventory of marketable **Bardahl** products, the inventory into sales and accounts receivable, and the period required to collect the outstanding accounts, averaged approximately 4.2 months during the 4 years here in question.

Petitioner required working capital as of the end of each of the years in question at least in an amount sufficient to cover its reasonably anticipated costs of operation for a single operating cycle. Since its
1035 operating cycle during the period 1956 through 1959 averaged approximately 35 percent of a year, its working capital requirements for the continuation of its normal operations *1035 amounted to approximately 35 percent of its reasonably anticipated (and steadily increasing) total annual operating costs and cost of goods sold as of the end of each of the years in issue. Accordingly the amounts of working capital reasonably anticipated by **Manufacturing** as being necessary to finance its costs of normal operations as of December 31, 1956, 1957, 1958, and 1959 were $293,400, $480,000, $488,000, and $488,100, respectively.

Plant Expansion

During the years 1956 through 1959 **Bardahl Manufacturing Corporation** and **Bardahl** International **Corporation** occupied the same premises located in Seattle, Washington. **Manufacturing** owned all of the land, buildings, and other physical assets. International paid **Manufacturing** a rental in the amount of $725 per month prior to 1958 for the office space and warehouse facilities which it occupied.

The minutes of the meeting of the stockholders of **Bardahl Manufacturing Corporation** held March 12, 1956, stated in part as follows:

> There followed a general discussion on the financial progress of the company and to what extent the company would necessarily need to expand. It was brought to the attention of the stockholders that the company would need additional warehouse space and that also it would soon be necessary to add another floor to the office of the present building. It was estimated that it would require approximately $300,000 to accomplish this improvement. The discussion was closed by the president, with the understanding that the matter would be placed before the board of directors at their next annual meeting which would follow the present stockholders meeting.

The minutes of the meeting of the board of directors of **Bardahl Manufacturing Corporation** held March 12, 1956, contained the following statement:

> The President, in his comments on the outlook for the future, announced that very soon it would be necessary to provide additional warehouse space, and that considering the rapid growth of the business, it was imperative that the business office space be increased and improved by adding another floor of office space to the present office building.
>
> The President stated that, in his opinion, the sum of approximately $300,000.00 would be required to carry these proposals to completion, and that while it would not be possible to accomplish the completion of these projects during 1956, he deemed it quite important that plans be prepared for this undertaking so that the expansion program could be undertaken just as soon as the corporate finances would permit.
>
> After a general discussion of the suggested expansion program, it was duly moved, seconded and carried, that the President be authorized to employ a reliable architect to draw up plans for both the addition to the warehouse and for the addition of another floor to the present office building.

The minutes of the meeting of the stockholders of **Bardahl Manufacturing Corporation** held February 26, 1957, stated in pertinent part:

> The President announced that the expansion plans contemplated in 1956 were now taking shape and that new walk-in vaults would also be added to the present office building. Plans are presently being completed by one of the well-known Seattle architectural firms.

The minutes of the special meeting of the board of directors of **Manufacturing** held on August 14, 1957, contained the following statement:

> C. B. Merritt presented the current financial statement to the Board, outlining to the Board the financial condition of the business, and the progress being made in the new additions which would be dedicated in the very near future, stating also that the greater portion of the estimated $300,000.00 capital outlay has already been expended.

The minutes of the annual meeting of the stockholders of **Manufacturing** held February 28, 1958, stated in part as follows:

C. B. Merritt outlined the progress made in the estimated expansion program provided for in 1956, in connection with which there had been expended to date for new buildings, equipment	$300,000.00

```
      and tank farm, approximately ..........     229,000.00
                                                 ___________
      leaving an unexpended estimate
      balance of ............................    $ 71,000.00
      to which should be added a further
      expansion estimate of .................      50,000.00
                                                 ___________
            Total ...........................    $121,000.00
    Of the total estimated expansion
      balance of ............................    $121,000.00
      it was estimated that expenditures
      in 1958-1959 for capital
      items would be in round figures
      as follows:

1036 *1036
      New equipment
        in plant ..............................  $47,500.00
      New office equipment ....................    8,500.00
      Building additions ......................    3,000.00
      Additions to tank farm ..................   62,000.00  $121,000.00
                                                 _________
```

> The Secretary stated that, in his opinion, it might be good financial policy to hold a minimum and [sic] dividend payment in 1958, in order to retain sufficient liquid capital to meet not only current working capital needs, but also to provide necessary funds to complete the above expansion proposals.

The minutes of the annual meeting of the board of directors of **Manufacturing** held February 28, 1958, contained a statement substantially identical to that last quoted above.

A number of architectural drawings relating to petitioner's proposed warehouse additions, tank farm, and office building additions were prepared and certified by a registered architect during 1957, 1958, and 1959. The first of such drawings was certified on May 3, 1957, and the last was certified on July 28, 1959.

After completion of the second floor addition to petitioner's office structure, some of the additional space was occupied by **Bardahl** International **Corporation** and its rent was increased in 1958 from $725 per month to $1,500 per month.

During the years 1956 through 1959, **Manufacturing** converted its production operation from a batch-type process to a continuous process. This change involved an expansion of petitioner's plant facilities which prior to 1956 were inadequate to accommodate a continuous operation. The cost savings to the **corporation** resulting from the change in **manufacturing** technique amounted to at least $30,000 a year during the years here involved.

The net expenditures (after salvage recoveries) made by **Bardahl Manufacturing Corporation** during 1956, 1957, 1958, 1959, and 1960 for the acquisition of additional equipment and plant, warehouse, and office facilities were $76,013.93, $112,947.41, $245,500.32, $123,571.12, and $106,553, respectively.

As of December 31, 1956, 1957, 1958, and 1959, petitioner's board of directors had formed specific and definite plans for the expenditure of $220,610, $245,500, $123,571, and $106,553, respectively, for the purpose of acquiring additional equipment, expanding its plant and warehouse facilities, and adding office space.

Raw Materials

Certain chemical compounds and raw materials are basic ingredients in the manufacture of **Bardahl** concentrate. One indispensable chemical component is a special type of lead naphthenate.

At all times here material it was necessary for petitioner to maintain a raw materials reserve of various chemicals in order to consistently maintain its level of production. Certain of these chemical ingredients which are indispensable to the production of the **corporation's Bardahl** additive occasionally have become quite difficult to obtain as a result of changes in world conditions.

Throughout the years 1956 through 1959, and over a span of approximately 20 years, petitioner purchased several of its essential raw materials from W. Ronald Benson, a chemical engineer, manufacturer's representative, and proprietor of a chemical supply business. As a manufacturer's representative Benson sold **Manufacturing** each year approximately $200,000 worth of raw materials during the years 1956 through 1959. In conjunction with the chemists and employees of **Bardahl Manufacturing Corporation** he formulated certain chemical components exclusively for petitioner's use.

During 1951, one of the ingredients essential to the production of a chemical compound used in the manufacture of **Bardahl** concentrate disappeared from the market and it became necessary for petitioner to spend approximately $75,000 in cash in order to stockpile the ingredient in sufficient quantity to enable it to remain in production.

During the years 1956 through 1959, W. Ronald Benson discussed with Ole **Bardahl**, president of **Manufacturing**, and also with its chief chemist and its secretary-treasurer, the possibility of emergency situations arising which would cut off the supply of raw materials needed for the production of chemical compounds used in the manufacture of **Bardahl** concentrate. Benson warned the officers of **Manufacturing** that shortages of such raw materials could force the **corporation** to stop production and he accordingly alerted them that it might become necessary to stockpile a surplus of raw materials on
1037 short notice. He advised petitioner's *1037 officers that in the event of an emergency it would be necessary to spend at least $100,000 in cash in order to acquire a stockpile of raw materials sufficient to enable it to remain in production through the emergency period.

As of December 31, 1956, 1957, 1958, and 1959, inclusive, petitioner reasonably anticipated the expenditure of at least $100,000 cash for the stockpiling of essential chemicals and raw materials in the event of emergencies which would cut off the supply of ingredients indispensable to the manufacture of **Bardahl** concentrate.

Foreign Subsidiaries

In May 1958, William G. Simpson, vice president of both **Manufacturing** and International, was sent to Europe by petitioner to assist several European distributors in marketing **Bardahl** products, and to investigate the general situation existing among the blenders and distributors there. Upon returning from his European trip, he reported to the board of directors of **Manufacturing** on September 30, 1958, as follows:

> When Mrs. Simpson and myself left for Europe, it had been rumored that Mr. Gheysens who was operating a sub-distributorship under Kjell Stray in Belgium, was marketing a fraudulent **Bardahl** product. We investigated this matter and found it necessary to cancel out Mr. Gheysens Belgium operation, as well as Mr. Stray in this territory.
>
> A new Belgium **Bardahl** firm was established under the name of **Bardahl** Lubricants Belgium, Ltd. During the negotiations which took place in Paris with Mr. Gheysen's attorney, Kjell Stray, Mr. Bagn, Mr. George L. Geddes and our **Bardahl** attorney representing us, and Mr. Vandenbusch from Antwerp were present.
>
> We met with Mr. Nathan Murat in Paris and had an opportunity to talk and discuss the **Bardahl** operation in France. Through these talks it was learned that Mr. Murat, our **Bardahl** distributor, and Mr. Geddes were having difficulties that might soon lead to litigation. As a result of the conversation in Paris, we proceeded to inspect the **Bardahl** operations in Portugal, Florence and London. We found many discrepancies in all of the operations that were under the control of Mr. Geddes.
>
> As a result of this trip Mr. Giorgio Geddes and his cousin Mr. Rudolfo Geddes agreed to come to the States and meet with their attorney, and our attorney, to straighten out the misunderstanding that was evident in Europe.

The European territory (except England and Scandanavia) for the marketing of **Bardahl** products, as well as the Far Eastern and South American territories, were under the control of Giorgio Geddes during 1956, 1957, 1958, and until May 1959. Geddes had originally obtained his franchise as a sub-distributor from Alex Henderson of Montreal, Canada, the first franchise distributor employed by the **Bardahl** interests.

In January 1959, Giorgio Geddes, Ole **Bardahl**, and William G. Simpson and their attorneys met in Seattle, Washington, for the purpose of discussing and settling their differences with regard to the operation of the European and South American **Bardahl** distributorships. The European distributorship accounted for approximately 15 percent of the total sales of **Bardahl** products. Approximately 70 percent of the **Bardahl** products sold in the European market were purchased by industrial users and about 30 percent were bought for use in automobiles, whereas in the United States approximately 80 percent of the total sales of **Bardahl** products were made for automotive use, with 20 percent sold to industrial purchasers.

On March 23, 1959, Ole **Bardahl** and William G. Simpson were authorized by petitioner's board of directors to make a trip to Europe to further investigate market conditions and the operation of the Geddes franchise. Upon their return from Europe they reported their findings to the board of **Manufacturing**. The minutes of the meeting of the board of directors of the **corporation** held on April 30, 1959, stated in part:

> The President then gave a brief outline of his recent European trip in which connection he stated that he was formulating plans for the establishment of the **corporation's** own blending plants in foreign territory, two in Europe and one in South America, the estimated cost of this expansion plan being somewhere in the neighborhood of $200,000.00.

During their European trip Simpson and **Bardahl** discussed with a Minister of Industry in France and with certain public officials in Italy the possibility of constructing a concentrate plant in either country. Ole **Bardahl** previously had expressed to W. Ronald Benson his intentions regarding the construction of a concentrate plant to be located in Europe and had requested Benson and the Witco Chemical Company,
1038 one of petitioner's suppliers of chemical components, to investigate the sources of chemical supply available in Europe. As a result, *1038 officers of Witco Chemical Company sought to confer with Ole **Bardahl** and William Simpson in Paris, France, for the purpose of discussing sources of raw materials and the feasibility of the construction of a chemical plant in Europe by Witco to serve as a supplier of chemical products for petitioner's contemplated European concentrate plant. The president of Witco was unable to contact **Bardahl** or Simpson in Europe and later wrote W. Ronald Benson on May 14, 1959, as follows:

> While Mr. Wishnick and I were in England, Mr. Clarke, of **Bardahl**, contacted our London Office to see if we were in a position to make raw materials for a plant to be located in the Common Market. I communicated with Mr. Clarke and he stated Mr. **Bardahl** and Mr. Simpson were in Europe and, from that, we tried very diligently to contact Mr. **Bardahl** but, apparently, we missed him by a few hours in Paris. However, we did get word to him of our willingness to cooperate on this matter.
>
> You will note by the attached copy of letter that I have written directly to Mr. **Bardahl** to inform him of our regrets at not meeting with him in Europe and offering our whole-hearted support and cooperation in this matter of furnishing him with the type of Lead Naphthenate they require. If they contact you concerning this matter, please get as much information as you can concerning the volume of their requirements and the proposed location of this plant. * * *

Max Minnig, president of Witco Chemical Company, also wrote to Ole **Bardahl** on May 14, 1959:

> Mr. R. I. Wishnick and I regretted very much that we were unable to make contact with you during our European trip. However, I do want to go on record that we wish to cooperate whole-heartedly with you in the furnishing of raw materials for your operations in the Common Market.
>
> We sincerely appreciate the cooperation of your Mr. Clarke, in England, and shall be delighted to hear from either you or Mr. Simpson concerning your requirements in the European area and the possible location of your European Plant. If you wish to transmit this information through Mr. Ronald Benson, this will be perfectly satisfactory.

On May 26, 1959, **Bardahl** International **Corporation** canceled the European franchise contract held by Giorgio Geddes. On July 15, 1959, International sent Geddes and Alex Henderson letters formally terminating the European franchise.

Following cancellation of Geddes' European franchise, William G. Simpson went to Europe to take steps to preserve the market for **Bardahl** products. On September 29, 1959, an Italian **corporation**, **Bardahl** International Oil **Corporation**, S. P. A., was incorporated by Lillian Simpson, William Simpson, and Amedeo Totaro. The stock of the **corporation** was held as follows:

```
Lillian Simpson ..................    550,000 Lire
William Simpson ..................     50,000 Lire
Amedeo Totaro ....................    400,000 Lire
```

On May 20, 1960, petitioner purchased the stock of Amedeo Totaro in **Bardahl** International Oil **Corporation**, S. P. A., for $20,000. On May 22, 1960, **Manufacturing** acquired the stock of William and Lillian Simpson (totaling 600,000 lire) in the Italian **corporation** for $30,000. All of the stock certificates of **Bardahl** International Oil **Corporation**, S. P. A., were endorsed to **Bardahl Manufacturing Corporation** and deposited with a bank in Milan, Italy.

In the fall of 1959 **Manufacturing** purchased from Giorgio Geddes for $49,000 an inventory of concentrate bearing the **Bardahl** name which subsequently was destroyed. The reason for the purchase of the inventory was to prevent the overstocking of dealers and a saturation by Geddes of the European market for **Bardahl** products.

Bardahl International Oil **Corporation**, S. P. A., entered into an agreement with a refinery located in Genoa, Italy, pursuant to which the refinery agreed to furnish materials and blending facilities for a 1-year period. This arrangement was intended by **Manufacturing** as a temporary measure to keep the European distributors in business until a concentrate plant could be built in that territory. After shipment of the first batch of concentrate to Italy, **Manufacturing** assigned a man to the refinery in Genoa to supervise the blending and production process on behalf of **Bardahl** International Oil **Corporation**, S. P. A.

One of the principal reasons for petitioner's decision to establish a concentrate plant in Europe was the high rate of duty on imported **Bardahl** concentrate. The duty rate on shipments of concentrate to Italy or
1039 Spain during 1958 and 1959 was between 65 percent and 75 percent of the invoice price. In other countries the duty rate varied from 50 percent to nearly 100 percent of the invoice *1039 price. The officers of **Manufacturing** were informed that with a concentrate plant located in Europe its Italian subsidiary would be able to take advantage of certain benefits in marketing **Bardahl** products in the European Common Market.

Manufacturing's decision to create a subsidiary **corporation** in Italy also was influenced by the fact that otherwise it would be subject to corporate liability in Italy as a result of establishing a concentrate plant there. An additional incentive for the formation of **Bardahl** International Oil **Corporation**, S. P. A., was the fact that **Manufacturing** thereby would be able to avoid disclosing its financial statements to the Italian Government thus reducing its tax burden in Italy.

The minutes of the meeting of the board of directors of **Manufacturing** held December 16, 1959, stated:

> The members of the board expressed their concern with reference to the conditions found by Mr. Simpson in his travels to the various countries covered in his report. All members were now made to realize that some immediate action must be taken in order to recover the market that we so nearly lost. It was regularly moved and seconded and passed of the board that the sum of $257,000 be set aside and allocated to be used where needed and in the manner later to be determined in an effort to recover the market.

From November 28, 1959, through February 24, 1960, **Manufacturing** advanced supplies of chemicals and raw materials to its Italian subsidiary in the total amount of $61,153.41. Such advancements subsequently were repaid by **Bardahl** International Oil **Corporation**, S. P. A., during 1960, 1961, and 1962.

During the spring of 1960 petitioner's wholly-owned subsidiary **corporation** in Italy was able to achieve steady production and to deliver supplies of **Bardahl** products to its European distributors.

The distributorship held by Alex Henderson originally included the eastern portion of both the United States and Canada. During the years in issue Henderson's franchise territory was confined to eastern Canada which accounted for approximately 20 percent of the total sales of **Bardahl** products.

On January 15, 1960, a franchise contract was executed by Alex Henderson and **Bardahl** International **Corporation** with respect to the distribution of **Bardahl** products in eastern Canada.

On August 11, 1960, Henderson unexpectedly canceled the franchise agreement he had with International covering the entire eastern Canadian territory. The franchise termination was formally accepted by International on August 15, 1960.

On September 18, 1960, B. D. L. Lubricants, Ltd., was incorporated in Canada. The name of the **corporation** subsequently was changed to **Bardahl** Lubricants (Canada), Ltd.

The outstanding common stock of **Bardahl** Lubricants (Canada), Ltd., at all times here material was held as follows:

Shareholder	No. of shares
Bardahl Manufacturing Corporation	503
Stephen Swantz	1
Jacques Tetrault	1
Ole **Bardahl**	1
Inga **Bardahl**	1
W. G. Simpson	1
Evelyn Nicolaysen	1
R. E. Parsons	1
Total	510

On September 24, 1960, **Manufacturing** and Alex Henderson executed an agreement under which petitioner agreed to pay Henderson $25,000 for a covenant not to compete with it in the manufacture or sale of products similar to **Bardahl** in Canada.

On December 2, 1960, petitioner transferred $143,268.31 to **Bardahl** Lubricants (Canada), Ltd., which was used by it to purchase the inventory, supplies, materials, and the **Bardahl** trademark from the corporate blender and distributor controlled by Henderson.

Manufacturing advanced $46,480.50 to its Canadian subsidiary **corporation** on January 27, 1961, which was used by it for the construction of a concentrate plant located in Canada. During the years 1960 to 1962, **Bardahl** Lubricants (Canada), Ltd., purchased land for a plant site and commenced construction of a building.

As of December 31, 1962, **Manufacturing** had advanced as loans to **Bardahl** Lubricants (Canada), Ltd., a total of $498,742.71 (including the above-mentioned advances in the amounts of $143,268.31 and $46,480.50). A portion of the above-described advances was paid out of funds that had been designated by petitioner's board of directors on December 16, 1959, for the reestablishment of the market in Europe for **Bardahl** products. Part of these funds were diverted to the Canadian market during 1960 through 1962 because of the unexpected termination by Alex Henderson of his franchise agreement.

1040 *1040 Petitioner limited its equity investment in its Canadian subsidiary during 1960, 1961, and 1962 to $510 so as to be in a position to recover the funds advanced and to enable **Bardahl** Lubricants (Canada), Ltd., to deduct its interest expense in computing its Canadian tax liability.

On October 12, 1961, **Bardahl** Lubricants (Canada), Ltd., borrowed $100,000 from the Canadian Imperial Bank of Commerce. The loan was personally guaranteed by Ole **Bardahl**.

As of December 31, 1959, **Manufacturing's** officers and directors had formed specific and definite plans for the expenditure of $257,000 for the rehabilitation of the European market for **Bardahl** products.

Drawing Account

During the years here in question **Bardahl Manufacturing Corporation** maintained a drawing account for its president Ole **Bardahl**. The purpose of the drawing account was to make cash advances and to pay certain personal bills during his absence from the home office. Ole **Bardahl** traveled extensively in connection with the conduct of petitioner's business operations during 1956, 1957, 1958, and 1959. Petitioner paid Ole **Bardahl's** Federal income taxes during January of each of those years.

It was the consistent practice of Ole **Bardahl** to make substantial cash payments to **Manufacturing** in reduction of his temporary loan balance at various times during each of the years in issue and to make payment in full satisfaction of his account during December of each year.

During April 1958, Ole **Bardahl** sold a residence to International in exchange for the assumption by that **corporation** of a mortgage in the amount of $15,152.39 and a demand note in the amount of $84,847.61 bearing 4 percent interest. In December 1958, petitioner's president delivered to it the foregoing promissory note issued to him by International in the amount of $84,847.61, and a note executed by him in the amount of $45,000 bearing bank interest. The delivery to **Manufacturing** of the two above-described notes by Ole **Bardahl** constituted partial payment of his drawing account balance for that year. The note for $84,847.61 was paid in full with interest on September 10, 1959, and the $45,000 note bearing bank interest was paid in five installments made during the period March 1959 through September 1959.

Real Estate Investment

Prior to the formation of **Manufacturing** in 1939, Ole **Bardahl** had been engaged for 20 years in the business of land development and the construction of houses. He had constructed approximately 400 houses in Seattle, Washington, prior to 1940. David Harvey, a friend and former business associate of Ole **Bardahl**, approached him in 1955 concerning the possibility of investing in a land development venture. **Bardahl** caused petitioner to invest funds in the development of a subdivision known as **Bardahl** Parks as a joint venturer with David Harvey. Petitioner's investment in **Bardahl** Parks was in the following amounts at the end of each of the years 1955 through 1959:

Year	Amount
1955	$79,902.44
1956	86,332.58
1957	62,148.50
1958	52,794.61
1959	26,163.99

David Harvey and Ole **Bardahl** selected jointly the parcel of land to be developed. Petitioner did not participate in the management of **Bardahl** Parks. David Harvey supervised the addition of improvements to the undeveloped land and also conducted the sale of lots. He shared equally with **Manufacturing** any profits resulting from the sale of lots in **Bardahl** Parks. After petitioner and David Harvey began their joint undertaking in **Bardahl** Parks the cost of unimproved land rose so sharply that Ole **Bardahl** decided to terminate any further joint ventures in real estate.

In 1958 and 1959 **Manufacturing** invested $27,072.64 and $15,916.55, respectively, in another land development project known as Sunset Developers.

Petitioner's investments in the **Bardahl** Parks and Sunset Developers real estate projects during the years in issue were unrelated to its oil additive business and did not constitute a diversification of business activity.

A parcel of land situated adjacent to petitioner's plant was offered to **Manufacturing** in 1959 by its owners, Dickey and Clauson, for $80,000. The offer was refused because the officers of the **corporation** felt that the asking price was excessive.

1041 On April 13, 1960, **Manufacturing** purchased the abovementioned parcel from Dickey and Clauson for $75,000. On the same date petitioner leased the property to *1041 Dickey and Clauson for a period of 10 years with the understanding that the lessees could vacate the premises at any time.

As of December 31, 1959, petitioner had not formed a specific and definite plan for the expenditure of any of its funds for the acquisition of the property subsequently purchased from Dickey and Clauson.

Loans

During 1955 **Manufacturing** loaned Harvey $30,000 for the purpose of protecting its interest in the **Bardahl** Parks development. This loan in the amount of $30,000 was still outstanding at the close of 1956.

During 1957 petitioner accepted a mortgage from Albert Anderson in the amount of $21,750 in satisfaction of the Harvey loan. The amount of the outstanding mortgage from Albert Anderson was reduced to $21,444.62 as of December 31, 1957, and was further reduced to $20,808.94 as of December 31, 1958. This mortgage was replaced in 1959 by a mortgage from Melvin Heide in the amount of $20,754.32 which was reduced to $20,136.68 as of December 31, 1959.[1]

Manufacturing loaned W. A. Watts, an electrical contractor, $12,000 in exchange for his promissory note in that amount in 1955. The outstanding balance on petitioner's loan to W. A. Watts was increased to $20,000 as of December 31, 1956, and was decreased to $8,000, $6,000, and $4,000 as of the end of 1957, 1958, and 1959, respectively.

In 1957 petitioner accepted conveyance of a dwelling house from W. A. Watts in partial satisfaction of its outstanding loan to him.[2] In 1959 petitioner sold the house to E. R. Rollin for $31,500. Rollin executed and delivered to petitioner a mortgage in that amount. The amount of the outstanding mortgage from E. R. Rollin was reduced to $30,729.04 as of December 31, 1959.

None of the above-described loan transactions were related to **Manufacturing's** business.

Dividend Policy

The policy of petitioner consistently has been to finance its operations and capital investments with cash whenever possible. The officers of the **corporation**, since the commencement of its operations in 1939, have been opposed to the utilization of borrowed funds unless forced to do so. With the exception of the construction of a plant in 1951 which required petitioner to borrow $60,000, it has not financed its equipment acquisitions or capital improvements with borrowed funds.

Manufacturing's board of directors generally based its decisions as to dividend distributions at the close of each of the years here in question upon the recommendations of its secretary-treasurer, C. B. Merritt, or its president, Ole **Bardahl**.

Petitioner's net income after taxes, its outstanding capital stock, its net earnings per share after taxes, cash dividends declared per share, the percentage of its net income after taxes distributed as dividends, and the percentage of net earnings after taxes retained as of the end of 1956, 1957, 1958, and 1959 were as follows:

Year	Net income after taxes	Stock outstanding on dividend date	Per share net earnings after taxes	Cash dividends per share	Percent of net earnings after taxes distributed as cash dividend	Percent of net earnings after taxes retained
1956	$198,925.46	12,500	$15.91	$4	25.14	74.86
1957	258,387.76	15,000	17.23	2	11.61	88.39
1958	369,755.16	17,500	21.13	1	4.73	95.27
1959	458,225.00	20,000	22.91	5	21.82	78.18

Several of the above findings are summarized in the following table:

1042 *1042

Year ended Dec 31 —	(1) Accumulated earnings and profits	(2) Increase in earnings and profits over prior years	(3) Net liquid assets available to meet anticipated business needs	(4) Ordinary operating expenses for one business cycle	(5) Anticipated extraordinary expenses
1955.....	$ 819,686	.....	.....	.....	.....

1959.....	951,653	139,076	42,081	54,866	236,023

Manufacturing's income tax returns and its books and records were examined by the **Commissioner's** agents during July 1961. On October 2, 1962, respondent mailed petitioner a notification that he proposed to issue a notice of deficiency for the years 1956, 1957, 1958, and 1959 determining a deficiency under section 531 of the Internal Revenue Code of 1954 relating to the accumulated earnings tax. In response thereto petitioner filed with the respondent a statement containing certain grounds and allegations on which it sought to rely in support of the retention of its undistributed current and accumulated earnings and profits.

On March 28, 1963, the respondent mailed petitioner a notice of deficiency determining that its earnings and profits were accumulated beyond the reasonable needs of its business and that it was availed of for the purpose of avoiding the income tax with respect to its shareholders by permitting its earnings and profits to accumulate instead of being distributed.

Ultimate Findings

During 1956, 1958, and 1959, petitioner permitted its earnings and profits to accumulate beyond the reasonable needs of its business to the extent of $22,386, $159,895, and $236,023, respectively. In each of the years 1956, 1958, and 1959 **Bardahl Manufacturing Corporation** was availed of for the purpose of avoiding the income tax with respect to its shareholders by permitting earnings and profits to accumulate

instead of being divided or distributed.

During 1957 petitioner did not permit its earnings and profits to accumulate beyond the reasonable needs of its business and in that year it was not availed of for the purpose of avoiding the income tax with respect to its shareholders by permitting its earnings and profits to accumulate instead of being divided or distributed.

Opinion

Sections 531 and 532 of the Code impose an accumulated earnings tax upon corporations availed of for the purpose of avoiding the income tax with respect to their shareholders by permitting earnings and profits to accumulate instead of being divided or distributed. Section 533(a) provides that the fact that the earnings and profits of a **corporation** are permitted to accumulate beyond the reasonable needs of the business shall be determinative of the purpose to avoid the income tax with respect to shareholders unless it shall prove to the contrary by a preponderance of the evidence. Under section 537 the "reasonable needs of the business" include the reasonably anticipated needs of the business.

Under section 534 the burden of proof in proceedings before this Court may be shifted to the respondent with respect to a determination that the earnings and profits of a **corporation** have been permitted to accumulate beyond its reasonable business needs if: *1043 (1) the **Commissioner** has mailed the taxpayer notification of his intention to impose the accumulated earnings tax and (2) the taxpayer has submitted a timely statement of the grounds (together with facts sufficient to show the basis thereof) on which it relies to establish that all or any part of its earnings have not been permitted to accumulate beyond its reasonable business needs.

In order to effectuate a partial shift of the burden of proof to the **Commissioner**, the statement submitted by a taxpayer pursuant to the provisions of section 534 must set forth facts supporting the grounds contained therein which are substantial, material, and definite. *American Metal Products **Corporation*** [Dec. 24,142], 34 T. C. 89, affd. [61-1 USTC ¶ 9332] 287 F. 2d 860; *I. A. Dress Co.* [Dec. 23,541], 32 T. C. 93, affd. [60-1 USTC ¶ 9204] 273 F. 2d 543, certiorari denied 362 U. S. 976.

The respondent mailed petitioner proper notification pursuant to section 534 and the **corporation** in turn filed a statement in response thereto. In view of the state of the record here presented we find it unnecessary to determine the adequacy or inadequacy of petitioner's statement to accomplish any shifting of the burden of proof to the respondent. See *I. A. Dress Co., supra.* Our conclusions herein rest upon the clear and convincing evidence presented and would remain the same regardless of which party bears the burden of proof with respect to any or all of the grounds contained in petitioner's section 534 statement.

We have commenced our analysis of the evidence presented by first ascertaining the amount of net liquid assets available to petitioner at the close of each of the years in question so as to determine whether it possessed sufficient liquid funds to enable it to meet its reasonably anticipated business needs and still permit the distribution of additional dividends to its stockholders. See *Gus Blass Co.* [Dec. 15,885], 9 T. C. 15; *Sauk Investment Co.* [Dec. 9436], 34 B. T. A. 732. We have determined from the record that petitioner had available liquid working capital as of December 31, 1956, 1957, 1958, and 1959 in the amounts of $500,063, $639,824, $764,789, and $1,090,729, respectively.

In our computation of **Manufacturing's** current assets as of the end of each of the years in issue we have included items representing the equivalent of cash, such as Treasury bills and Government securities. The record discloses that petitioner's 8 percent debentures in the total face amount of $40,000 issued by the Coast Mortgage Company were cashable on demand pursuant to an agreement between **Manufacturing** and the issuer thereof and that during the years in question the Coast Mortgage Company consistently maintained a cash reserve for bond redemptions. Accordingly, we also included the $40,000 Coast Mortgage Company debentures in determining petitioner's current assets at the end of each of the years before us. In our computation of the current liabilities of **Manufacturing** at the close of each year we have included its provision for Federal income taxes payable for the indicated year. See *Kerr-Cochran, Inc.* [Dec. 22,934], 30 T. C. 69, at 73, 74; *Sandy Estate Co.* [Dec. 27,195], 43 T. C. 361, 377.

Turning next to a consideration of the reasonably anticipated needs of petitioner's business at the close of each of the years here in question, we must first determine the amount of working capital which it reasonably anticipated as sufficient to finance its expected costs of normal operations. Earnings retained to provide for working capital requirements are accumulated for the reasonable needs of the business. Section 1.537-2(b)(4), Income Tax Regs.

On brief, the respondent contends that the amounts of working capital required by petitioner as of the end of 1956, 1957, 1958, and 1959 to cover its anticipated operating costs were $322,965, $348,180, $396,500, and $435,243, respectively. Petitioner claims that it required as of the close of each of the years before us a working capital reserve to finance its expected costs of operation in the amounts of $448,132, $499,182, $632,496, and $726,984, respectively. **Manufacturing** does not contend that its reasonably anticipated business needs as of the close of each of the years before us required a working capital reserve in an amount sufficient to cover the cost of its operations for an entire year. *Cf. J. L. Goodman Furniture Co.* [Dec. 16,614], 11 T. C. 530; *Sandy Estate Co., supra.*

In view of the nature of petitioner's business, the amounts of its inventories and the rate of inventory turnover, the amount of its accounts receivable, and the collection rate thereof, we would be unable to find on the record before us that a cash reserve sufficient to cover one year's operating costs would be justified. The parties appear to agree on brief that the most appropriate *1044 basis for determining petitioner's need for operating capital is to compute the amount of cash reasonably expected as being sufficient to cover its operating costs for a single operating cycle. See *Smoot Sand & Gravel **Corporation** v. **Commissioner*** [60-1 USTC ¶ 9241], 274 F. 2d 495, affirming a Memorandum Opinion of this Court [Dec. 21,668(M)]; *United States v. McNally Pittsburg **Manufacturing** Corp.* [63-1 USTC ¶ 9498], 342 F. 2d 198. The evidence discloses that the **corporation's** operating cycle, consisting of the period of time required to convert cash into raw materials, raw materials into an inventory of marketable **Bardahl** products, the inventory into sales and accounts receivable, and the period of time required to collect its outstanding accounts, averaged approximately 4.2 months during the 4 years here involved. Thus the length of **Manufacturing's** operating cycle during the period 1956 through 1959 averaged approximately 35 percent of a year. In our view, at the beginning of each year petitioner would need liquid assets to meet operating expenses for a maximum of only 4.2 months on the assumption that no operating revenue would be received until the expiration of its operating cycle. Additional expenditures for operating costs beyond the first 4.2 months of each year would not be incurred without the production of operating revenue.

We accordingly have computed the amounts of working capital needed to finance **Manufacturing's** reasonably anticipated costs of normal operations as being approximately 35 percent of its expected annual operating costs and cost of goods sold. Its total annual cost of goods sold and operating costs consistently increased throughout the years here in issue. We have determined that the amounts of liquid working capital which reasonably could have been anticipated by **Manufacturing** as being necessary to finance its costs of normal operations as of December 31, 1956, 1957, 1958, and 1959 were $293,400, $480,000, $488,000, and $488,100, respectively. In making the above computation of petitioner's working capital requirements, we have considered all of its expenses as shown in its profit and loss statements, including both direct and indirect expenses (except depreciation), and its cost of goods sold. We have eliminated from our computation of funds necessary for petitioner's operating costs for one operating cycle any consideration of its anticipated Federal income taxes for the following year since this is not the kind of operating expense for which cash is needed in advance. Federal income taxes would be incurred in the following year only if there arises sufficient earnings from profitable future operations to require their imposition.

The parties on brief devote considerable argument to the question whether petitioner needed funds for advertising expenses and whether the retention of cash to meet its anticipated advertising expenses was justifiable. It is not entirely clear from petitioner's brief whether it claims that during the years here involved it was entitled to maintain a separate cash reserve exclusively to meet its advertising costs or whether its argument as to this item is merely one aspect of its broader contention regarding its need for working capital to finance normal operating costs for one operating cycle.

In our computation of the amount of working capital which petitioner at the end of each of the years in question reasonably could have anticipated as being needed to finance its normal operating costs for a single operating cycle, we have taken into account its expected advertising expenses. In concluding that it was entitled to accumulate a sufficient cash reserve to meet its estimated operating expenses for 4.2 months, we have permitted it to accumulate sufficient cash to cover approximately 35 percent of its anticipated annual advertising costs. The record demonstrates to our satisfaction that petitioner's reasonable business needs did not require any additional accumulation of liquid assets to meet expected advertising expenses as of the close of any of the years before us.

Petitioner also contends that at the end of each of the years in question it had formed specific and definite plans for the expenditure of substantial amounts of cash for the expansion of its plant and office facilities and that it was entitled to accumulate liquid assets to the extent thereof. Section 1.537-2(b)(1), Income Tax Regs. The minutes of several meetings of the board of directors of **Bardahl Manufacturing Corporation** held during 1956, 1957, and 1958 clearly demonstrate that the **corporation** had specific and definite plans to construct additions to its warehouse, office building, and tank farm in the immediate future. Further, it engaged the services of a registered architect who prepared and certified a set of architectural drawings *1045 relating to these proposed additions to petitioner's plant and office facilities. The first of such drawings was completed and certified by the architect on May 3, 1957, and the last of the series was completed and certified on July 28, 1959.

The record discloses that one of **Manufacturing's** principal purposes in expanding its plant facilities was to enable it to convert its production from a batch-type process to a continuous process, a change which was completed during the years in question, and which resulted in an operating cost saving to the **corporation** of at least $30,000 a year due to the change in its **manufacturing** technique.

Petitioner actually completed most of its contemplated expansion projects during the years before us. Its net expenditures, after salvage recoveries, for the acquisition of additional equipment, plant, warehouse, and office facilities were $76,013.93, $112,947.41, $245,500.32, $123,571.12, and $106,553 during 1956, 1957, 1958, 1959, and 1960, respectively.

We have determined that as of December 31, 1956, 1957, 1958, and 1959 **Manufacturing** had formed specific and definite plans for the expenditure of $220,610, $245,500, $123,571, and $106,553,

respectively, for the expansion of its plant and office facilities.

An additional extraordinary expense which was reasonably anticipated by the **corporation** at the close of each of the years involved was an emergency fund in the amount of approximately $100,000 which was needed throughout the 4 years in issue to finance the stockpiling of chemicals and raw materials in the event of sudden changes in world conditions. It is apparent from the record that it was necessary at all times during the 4-year period in question for petitioners to maintain a raw materials reserve of various chemicals in order to maintain a consistent level of production. Certain of the chemical ingredients which are indispensable to the production of the **Bardahl** additive occasionally have become scarce as a result of changes in world conditions.

During 1951, one of the essential raw materials needed by petitioner in the production of its **Bardahl** concentrate disappeared from the market and the **corporation** found it necessary to spend approximately $75,000 in cash in order to stockpile the ingredient in a quantity sufficient to allow it to remain in production.

One of petitioner's suppliers of chemical products who was a chemical engineer and who had sold chemical products to **Manufacturing** over a period of approximately 20 years, testified that he had advised its officers during the years 1956 through 1959 that in the event of a sudden change in world conditions an emergency situation might well arise which would necessitate the expenditure of at least $100,000 in cash to enable the **corporation** to acquire a stockpile of raw materials sufficient to allow it to continue its normal level of production.

We are convinced from the record that a **corporation** engaged in the type of business operated by petitioner, being dependent upon a continuous supply of chemicals and raw materials drawn from different sources throughout the world, would require a cash reserve to enable it to obtain a sufficient quantity of materials to remain in business during emergency periods. It is therefore our conclusion that a business need actually existed for the accumulation of a reserve to meet such a contingency. See *L. R. Teeple Co.* [Dec. 12,582], 47 B. T. A. 270; *William C. Atwater & Co.* [Dec. 16,240], 10 T. C. 218. We are persuaded by the testimony herein that petitioner's officers reasonably anticipated the need for a reserve of at least $100,000 as of December 31, 1956, 1957, 1958, and 1959 for the stockpiling of essential chemicals and raw materials in the event of emergencies which would cut off the supply of ingredients indispensable to the manufacture of **Bardahl** concentrate and we have so found.

With respect to the reasonable needs of the **corporation** existing at the close of 1959 it claims that in addition to expected expenditures for normal operating costs, plant expansion and the emergency stockpiling of raw materials essential to its operations, it anticipated the expenditure of $257,000 as of December 31, 1959, for the rehabilitation of its European market, capital investments in an Italian subsidiary and the construction of a concentrate plant to be located in Europe. It accordingly contends that it was justified in accumulating liquid assets in that amount at the end of 1959 for such purposes.

During 1956, 1957, 1958, and until May 1959, the European territory for the sale of **Bardahl** products as well as the Far Eastern and South American territories was under the control of Giorgio Geddes. The
1046 European distributorship produced approximately *1046 15 percent of the total sales of **Bardahl** products.

Petitioner's officers made trips to Europe in 1958 and 1959 and discovered a number of irregularities in the operation of Giorgio Geddes' distributorship which seriously hampered the marketing of **Bardahl** products in the territory under his control. During 1959 **Bardahl** International **Corporation** terminated Geddes' European franchise. The officers of **Manufacturing** thereupon began to take steps to investigate the possibility of constructing a concentrate plant in Europe and forming an Italian **corporation** to serve as a subsidiary of petitioner for the production of **Bardahl** concentrate for the European market.

The minutes of the meeting of petitioner's board of directors held April 30, 1959, show that its officers had previously formulated plans for the construction of one or two concentrate plants in Europe as well as one in South America. The estimated costs of constructing the three plants was placed at $200,000. During 1959 the president and vice president of **Manufacturing** discussed with government officials in France and Italy the possibility of erecting such a plant in one country or the other. They also investigated the sources of raw materials available in Europe and approached at least one supplier of chemicals which expressed interest in constructing its own European chemical plant for the purpose of supplying petitioner's contemplated concentrate plant in that area.

One of the principal reasons for **Manufacturing's** decision to construct a concentrate plant in Europe was the opportunity to avoid the high rate of duty on imported **Bardahl** concentrate. During 1958 and 1959 the duty rate on shipments of concentrate to Italy or Spain was between 65 percent and 75 percent of the invoice price. Petitioner's officers were informed that with a concentrate plant located in Europe its contemplated Italian subsidiary would be able to take advantage of certain benefits in marketing **Bardahl** concentrate in the European Common Market.

On September 29, 1959, **Manufacturing's** vice president, William G. Simpson, caused an Italian **corporation** to be formed under the name of **Bardahl** International Oil **Corporation**, S. P. A., the stock of which was held temporarily by three individuals and later was acquired by **Bardahl Manufacturing Corporation** in May 1960 for $50,000. During 1959 **Bardahl** International Oil **Corporation**, S. P. A., entered into an agreement with a refinery located in Genoa, Italy, under which the refinery agreed to furnish petitioner's Italian subsidiary with materials and blending facilities for a 1-year period. **Manufacturing** later assigned a man to work with the refinery in Genoa to supervise the blending and production of **Bardahl** concentrate on behalf of **Bardahl** International Oil **Corporation**, S. P. A. One of the principal purposes for the formation by petitioner of a subsidiary **corporation** in Italy was the avoidance by **Manufacturing** of corporate liability in Italy upon establishing a concentrate plant there.

In the fall of 1959, **Manufacturing** purchased from Giorgio Geddes for $49,000 an inventory of concentrate bearing the **Bardahl** name in order to prevent his overstocking the dealers in Europe and thereby saturating the European market.

From November 28, 1959, through February 24, 1960, petitioner advanced supplies of raw materials in the amount of $61,153.41 to its Italian subsidiary. The minutes of the meeting of petitioner's board of directors on December 16, 1959, state that its directors formally resolved to set aside $257,000 of its funds for use in reestablishing the European market for **Bardahl** products.

During the spring of 1960 petitioner's Italian subsidiary achieved a steady level of production.

On August 11, 1960, Alex Henderson unexpectedly canceled his franchise agreement with International covering the eastern Canadian territory. As the result of the unanticipated emergency which disrupted the Canadian distributorship for **Bardahl** products, petitioner in September 1960 formed a Canadian subsidiary known as **Bardahl** Lubricants (Canada) Ltd. In order to capitalize its Canadian subsidiary with funds sufficient to enable it to purchase inventory, supplies, and land for use as a plant site and to enable it to commence construction of a concentrate plant in Canada, **Manufacturing** found it necessary to divert to the Canadian market in 1960, 1961, and 1962 a portion of the funds that had been designated by its board of directors on December 16, 1959, for the recovery of the European market.

1047 In view of the extensive groundwork that had been laid by petitioner's officers during 1959 for the construction of a concentrate plant in Europe, the formation of its Italian *1047 subsidiary in September 1959, the clear statements contained in the minutes of its directors' meetings held April 30, 1959, and December 16, 1959, allocating $257,000 of its funds for the reestablishment of its European market, and the actual expenditure in 1960 of roughly $110,000 in cash and raw materials for the capitalization of its Italian subsidiary and the rehabilitation of its European market, we are of the opinion that on December 31, 1959, petitioner had formed specific and definite plans for the expenditure of $257,000 for the purpose of reestablishing its market in Europe for **Bardahl** products.

In further support of its accumulation of liquid assets as of the close of 1959, **Manufacturing** advances the argument that it anticipated the expenditure of approximately $80,000 for the acquisition of a parcel of land located adjacent to its plant site in Seattle, Washington. This property was offered to petitioner in 1959 by its owners, Dickey and Clauson, for $80,000. Their offer was refused. Subsequently, however, in April 1960, **Manufacturing** purchased the parcel of land from Dickey and Clauson for $75,000. On the date of purchase petitioner leased the property back to the sellers for a period of 10 years. It appears from the record herein that petitioner has never made any use whatever of this parcel of land. It is apparent from the evidence before us that the Dickey-Clauson property was not needed by petitioner in its business and that on December 31, 1959, it had not formed any definite plan for the expenditure of any amount for the acquisition of such property. We therefore have not allowed petitioner to accumulate any amount of its liquid assets for this purpose in ascertaining its reasonably anticipated expenses as of December 31, 1959.

The respondent emphasizes on brief that petitioner has unjustifiably accumulated at least $469,561, $488,224, $748,426, and $579,336 at the end of 1956, 1957, 1958, and 1959, respectively, because it is claimed that **Manufacturing** held unrelated investments and made loans to its principal stockholder to the extent of those total amounts. A very substantial proportion of the foregoing totals represents amounts invested by petitioner in Government bonds, Coast Mortgage debentures, and cash on deposit with a savings and loan association. We conclude from the record that these amounts represent temporary investments by **Manufacturing** of its liquid assets which its officers believed it might need to withdraw at any time in order to finance the cost of operation or expansion. We are convinced that petitioner throughout its history has consistently followed a policy of financing its operations and expansion activities with cash insofar as possible. In our view the amounts represented by petitioner's savings and loan deposit, its investment in Government bonds and its Coast Mortgage debentures do not represent a diversion of the **corporation's** funds to unrelated activities. As noted above, we have included these amounts in our computation of **Manufacturing's** current assets in calculating its available working capital at the close of each of the years here involved.

The respondent's calculation of petitioner's unrelated investments for 1958 includes an outstanding trade receivable from **Bardahl** International **Corporation** in the amount of $81,787.17 which arose in the ordinary course of business operations and which was paid in full during January 1959. This item quite obviously does not represent a diversion of petitioner's funds or an investment in unrelated activities.

We thoroughly agree with the respondent, however, that the **corporation's** investments in the **Bardahl** Parks and Sunset Developers real estate projects during the years in issue were unrelated investments for which its funds were unjustifiably withdrawn. It is clear from the record that the investment of petitioner's funds in these real estate ventures was fundamentally the personal endeavor of its principal stockholder, Ole **Bardahl**. Neither the joint venture with David Harvey in **Bardahl** Parks nor the Sunset Developers project was conducted in a manner which would tend to indicate a corporate purpose on the part of **Manufacturing** to enter the real estate business, and we conclude from the record that these investments did not represent a genuine diversification of corporate activity but were in fact a diversion of corporate funds to a personal project of its principal stockholder which was wholly unrelated to its oil additive business.

In addition to its investments in certain real estate projects during the years here involved, **Manufacturing** loaned money to several individuals for purposes entirely unrelated to its business. The outstanding balances of such loans totaled $50,000, $29,445, $26,809, and $54,866 at the end of 1956, 1957, 1958, and 1959, respectively.

1048 *1048 The respondent also contends that **Manufacturing** made a permanent loan to its principal stockholder which was perpetuated throughout the entire 4-year period here involved and which it is argued represented an unjustifiable diversion of corporate funds for the purely personal purposes of its stockholder. The record discloses that the advances in question were made to Ole **Bardahl** pursuant to a drawing account which was set up primarily for the purpose of taking care of his personal expenses while he was away from Seattle on trips connected with the business of the **corporation**. He traveled extensively in connection with the conduct of petitioner's business operations during each of the 4 years before us. During January of each year **Manufacturing** paid Ole **Bardahl's** Federal income taxes. It was his practice to make substantial cash payments to **Manufacturing** in reduction of his drawing account balance during each of the years in question and to make payment in full satisfaction of his account during December of each year.

In December 1958, Ole **Bardahl** delivered to **Manufacturing** a promissory note previously issued to him by International as partial consideration for the purchase of a residence in the amount of $84,847.61 bearing 4 percent interest, and he also delivered to the **corporation** a note which he personally executed in the amount of $45,000 bearing bank interest. The delivery of these two notes to petitioner was made in partial payment of Ole **Bardahl's** drawing account balance for 1958. Both notes were paid in full with interest during 1959.

In view of the purpose of these drawing account advances and the facts that they were consistently repaid promptly either in the same year or in an immediately subsequent year and that in two instances the **corporation** was paid interest on loans made to Ole **Bardahl**, we find that the advances and loans made to him in connection with his drawing account during the years in issue constituted bona fide loans. We are unable to find from the record that the above-mentioned loans and advances were of indefinite duration and should be regarded as a substitute for the distribution of dividends to the **corporation's** principal stockholder. Since the amounts in question were consistently repaid and since the record indicates that Ole **Bardahl** intended at all times to repay the **corporation** the amounts advanced to him, we cannot conclude that the transactions did not represent bona fide loans or that such advances require us to conclude that the funds advanced were unreasonably diverted from the petitioner's business. *F. E. Watkins Motors Co.* [Dec. 23,233], 31 T. C. 288; *Corporate Investment Co.* [Dec. 10,928], 40 B. T. A. 1156.

To summarize the several conclusions set forth above, we shall first consider the total accumulations of earnings and profits available as of the close of 1956 and 1957. As indicated by the table appearing near the conclusion of our findings of fact herein, a comparison of petitioner's liquid assets available for the needs of its business with the amounts we have determined to be its reasonably anticipated need for cash at the close of each of the years in question discloses an apparent shortage of working capital at the end of 1956 and 1957. To the extent of **Manufacturing's** investment in unrelated properties at the end of those years and the outstanding balances of loans made by it for purposes unrelated to its business, any such working capital shortage was solely of its own making.

Had petitioner retained the funds which were represented by its net investment in unrelated properties and the loans unrelated to its business at the conclusion of 1956, it would have had available an actual *excess* of working capital in the amount of approximately $22,386. We accordingly hold that as of December 31, 1956, petitioner had permitted its earnings and profits to accumulate beyond the reasonable needs of its business to the extent of $22,386.

However, at the close of 1957, if petitioner had funds available equal to its net loans unrelated to its business and its net investment in unrelated properties, its liquid assets still would have fallen far short of the total needs for cash expenditures which the record has established were reasonably anticipated by its officers and directors at that time. Even with the funds available which the liquidation of such unrelated loans and real estate investments would have produced, **Manufacturing** nevertheless would have faced a very sizable shortage of working capital at the close of 1957. We are satisfied from the record that the amounts anticipated by the **corporation** for its expected business needs in the following year substantially exceeded *both* the available liquid assets and its investments in unrelated loans and real estate
1049 ventures. We therefore *1049 conclude that as of December 31, 1957, **Bardahl Manufacturing Corporation** did not accumulate its earnings and profits beyond the reasonable needs of its business.

With respect to 1958 and 1959, the total picture is considerably different. A comparison of **Manufacturing's** available liquid assets at the close of each of those years with its reasonably anticipated business needs discloses a substantial excess of available liquid funds at the end of each year. To such excessive amounts of liquid assets, we have added petitioner's net investments in unrelated real estate ventures and unrelated loans and have determined that it permitted its earnings and profits to accumulate beyond the reasonable needs of its business as of December 31, 1958 and 1959 to the extent of $159,895 and $236,023, respectively.

Under the statutory presumption created by section 533(a) of the Code our findings that petitioner allowed its earnings and profits to accumulate beyond the reasonable needs of its business as of the close of 1956, 1958, and 1959 are determinative of the ultimate issue that it was availed of for the purpose of avoiding taxes on its shareholders unless it has demonstrated to the contrary by a preponderance of the evidence. Although the evidence before us discloses that petitioner had followed a consistent policy of financing its operations and capital improvements exclusively with cash expenditures and despite the further fact that it has demonstrated a favorable dividend record which shows that throughout the 4-year period here involved it had distributed an average of approximately 18 percent of its net income (after taxes) as cash dividends to its shareholders, these factors are overridden by its substantial investment in unrelated real estate ventures and its loans made for purposes unrelated to its business throughout each of those years. Accordingly, in addition to the statutory presumption that **Bardahl Manufacturing Corporation** at the end of 1956, 1958, and 1959 was availed of for the purpose of avoiding taxes on its shareholders by reason of the fact that it allowed its earnings and profits to accumulate beyond its reasonable needs, we are of the opinion that the record in its entirety independently demonstrates that such accumulations were in fact due to the purpose of avoiding taxes on its shareholders and we so hold.

Decision will be entered under Rule 50.

[1] The terms of the arrangement under which petitioner accepted first the mortgage from Albert Anderson in 1957, and subsequently the mortgage from Melvin Heide in 1959 in satisfaction of the original $30,000 loan to David Harvey are not disclosed by the record.

[2] The terms of the arrangement under which petitioner accepted the house from W. A. Watts in partial reduction of his indebtedness to it are not disclosed by the record.

Beasley v. Beasley

Case name: Beasley v. Beasley
Citation: 359 Pa. Super. 20, 518 A.2d 545, 1986 Pa. Super. LEXIS 13031
Date of decision: November 20, 1986
Country: US
State or Federal: State
State/Jurisdiction: Pennsylvania
Court: Superior Court
Type of action: Marital Dissolution
Judge: Tamilia
SIC: 8111 Legal Services
NAICS: 541110 Offices of Lawyers

Keywords: Marital dissolution, Personal goodwill, Sole proprietorship

---

COUNSEL:

Larry I. Haft, Philadelphia, for appellant Helen M. Beasley.

Richard Sprague, Philadelphia, for appellant James E. Beasley.

JUDGES:

Cirillo, President Judge, and Wickersham, Brosky, Wieand, Olszewski, Del Sole, Montemuro, Tamilia and Johnson, JJ. Wieand and Montemuro, JJ., concur in the result by Tamilia, J. Del Sole, J., files a dissenting opinion which is joined by Johnson, J.

OPINIONBY:

TAMILIA

OPINION:

This matter was appealed by Helen M. Beasley, plaintiff in the court below, and a cross-appeal was filed by the defendant, James E. Beasley.

In her complaint for divorce, the appellant/wife made a claim for equitable distribution and as part of that claim requested that the good will aspect of the husband's law practice be determined to be marital property and subject to equitable distribution. The court denied this request and held that good will is future earnings and that the Divorce Code of 1980 permitted distribution only of present property, the value of which could be ascertained. Thus, the issue raised by appellant/wife is whether or not, under the equitable distribution proceedings of the Divorce Code, good will is a component of the value of a professional practice and to be considered marital property.

In the alternative, appellant/wife asks, if the law practice, conducted as a sole proprietorship, is not marital property must it not nonetheless be appraised for purposes of equitable distribution and alimony as the separate estate of its owner and as an income-generating asset. The court responded affirmatively to this, but to the degree that the files of a professional practice are confidential, it was subject to a non-disclosure order, and only to the extent that it is necessary to ascertain present value of work in progress can there be an appraisal. In doing so, the court limited the extent of intrusion into the personal files of the cross-appellant, James Beasley.

In the cross-appeal, James Beasley alleged that the trial court was without jurisdictionto consider or decide the petition filed by appellant/wife to permit appraisal pursuant to Pa.R.A.P. 1701 because an appeal in the same action was pending in the Superior Court from an Order by Brody, J. granting appraisal fees. The lower court rejected this objection on the basis that the matter was ancillary and incidental to the main suit and found that the main suit could go forward.

Secondly, on cross-appeal, the husband contends good will of his sole proprietorship is not subject to equitable distribution under the Divorce Code of 1980, which position was sustained by the trial court. In counterstatement, cross-appellant/husband also alleged that good will, pertaining to sole proprietorship of a law practice, could not be appraised for the purpose of setting alimony under section 501 of the Pennsylvania Divorce Code. The alimony issue was not raised or addressed in the lower court but Mr. Beasley's position was actually sustained by the trial court when it held that appraisal was permitted for the purpose of determining present value only. It permitted appraisal of work in progress to ascertain the present value of the proprietorship, while rejecting appraisal of good will.

The next issue on cross-appeal is whether or not work in progress of a law practice could be appraised by requiring the examination of case files and financial information relating to cases which could lead to the disclosure of confidences and secrets of the attorney's clients. The lower court rejected the cross-appellant's position even though appellant's expert attributed no value to work in progress. For reasons discussed below, we believe the finding by the trial court is correct.

Lastly, cross-appellant alleges that it would be a denial of due process and an abuse of discretion to order appraisal fees when in fact there had been no determination on the record that the property to be appraised was in fact marital property. The court determined that simply setting an appraisal fee would not be an abuse of discretion and that there would be no prejudice or harm resulting from the appraisal of property even if it later should not be determined to be marital property.

The issues are clearly stated, but prior to analysis of the legal issues, a brief discussion of the facts is warranted.

James and Helen Beasley were married in 1958, at which time Mr. Beasley was employed as an associate of a Philadelphia law firm in which he had no proprietary interest. In January of 1959, he acquired a minority partnership interest in the law firm of Cohen, Ornsteen and Beasley. Later that year, in December 1959, that firm was dissolved and Mr. Beasley became an equal partner in the firm of Beasley and Ornsteen. Dissolution of Beasley and Ornsteen occurred at the end of 1963 and from early 1964 until the present time Mr. Beasley has continued his law practice as a sole proprietorship.

The record establishes that of the last twenty of the twenty-six years of Mr. Beasley's marriage to Mrs. Beasley, his practice has remained in the form of a sole proprietorship. As a sole proprietor, Mr. Beasley employs fourteen to fifteen attorneys, primarily, in the field of "negligence" or "tort" practice, focusing on

medical malpractice, product liability, defamation, a few automobile cases and some incidental matters. At the time of their marriage, Mr. Beasley's annual salary was approximately $ 6,000, whereas his annual earnings now exceed that amount substantially, as established by the parties' 1982 joint federal income tax returns. All of the physical assets of his practice are owned by him. Mr. Beasley alone determines the compensation of his employees and they have no control over the operation of the law practice. He pays them no compensation over and above their salaries for any revenue they generate for the firm or any cases they may attract to the firm. The practice is, however, conducted under the name of Beasley, Hewson, Casey, Colleran, Thistle and Erbstein.

Some of the attorneys associated with Mr. Beasley have dual professions. Hewson is a physician and Thistle is an engineer. Clients frequently come to the practice because of one of the other attorneys and not because of Mr. Beasley. Many of the cases in the office are handled entirely by attorneys other than Mr. Beasley, who may himself have no knowledge of the files and may never have discussed the client with the other attorney. Each of the attorneys associated with Mr. Beasley may leave at any time and each client would, in the event his attorney left, determine whether he wished to take his case and follow the departing attorney or remain with Mr. Beasley's office. The cases handled by the attorneys associated in the practice are conducted on a contingent fee basis. Among the cases are disciplinary cases, malpractice cases and defamation cases. Some, as with the disciplinary matters, are matters of sensitivity, which have received no public exposure and may not entail litigation. Even where litigation has started and the matters are of public record, the files contain extremely sensitive, confidential information regarding the parties, witnesses, the conduct of the cases or confidences and secrets of the clients.

The attorneys in this law practice keep no time records and Mr. Beasley does not know nor can he estimate the percentage of his time spent on the office operation as opposed to the practice of law. Each year, during the course of this marriage, the balance of monies generated by Mr. Beasley's practice of law, which were not returned to the proprietorship as business expenses, were drawn out and used jointly by Mr. and Mrs. Beasley.

Mrs. Beasley in no way contributed to Mr. Beasley's education, creation of the business or operation of the law practice, and aside from her employment as a secretary during the first year of marriage, she has not been employed outside of the home.

We will consider the issues as they developed in this case, but it appears necessary to first determine whether the issue raised on cross-appeal, that the lower court was prohibited from exercising jurisdiction in this matter by reason of Pa.R.A.P. 1701, stays any proceeding in the court below, during the pendency of that appeal. That appeal resulted from an Order by Judge Brody in the lower court granting $ 3,500 in appraisal fees when Mr. Beasley and his counsel of record were not present at a hearing. We need not go into the merits of that Order as it was decided by this Court by Opinion Per Curiam filed September 28, 1984, that the appeal must be quashed as there were no exceptions filed and final judgment was not entered on the docket. In that Opinion, it was, however, stated that this was an appealable issue citing Sutliff v. Sutliff, 326 Pa.Super. 496, 474 A.2d 599 (1984). However, Sutliff has been overruled by the Pennsylvania Supreme Court in Fried v. Fried, 509 Pa. 89, 501 A.2d 211 (1985), which holds that ancillary matters in a divorce proceeding must await a final decree of divorce before being appealed.

The present contention of lack of jurisdiction, based on the matter being on appeal, is that the Order of the Superior Court is presently subject to review by the Supreme Court which has before it a petition for allowance of appeal upon which it has not yet acted. In light of Fried and the findings of the Superior Court in quashing that appeal, we may not assume that Mr. Beasley will prevail. However, aside from that, we believe there is no question that this case can proceed to the merits despite an appeal on the issue of the appraisal fee.

In Beasley v. Beasley, 348 Pa.Super. 124, 501 A.2d 679 (1985), an earlier appeal in this case on the issue of whether or not bifurcation was an appealable matter, (as an Order which is separable from and collateral to a cause of action, appealable under certain circumstances), Judge Wieand, author of that Opinion, found as follows:

Those circumstances, all of which must be present [for appeal to lie], are as follows:

' [the order is] separable from, and collateral to, rights asserted in the action, too important to be denied review and too independent of the cause itself to require that appellate consideration be deferred until the whole case is adjudicated.' Cohen v. Beneficial Industrial Loan Corporation , 337 U.S. 541, 69 S.Ct. 1221, 93 L.Ed. 1528 [1949].

Id., 348 Pa.Superior Ct. at 127, 501 A.2d at 680. Also see Fried, supra; Pugar v. Greco, 483 Pa. 68, 394 A.2d 542 (1978). "A final order is one which usually ends the litigation or alternatively, disposes of the entire case."

The order of appraisal from which appeal was taken does not involve a right which is too important to be denied immediate review. The issue of the appraisal fee, aside from compliance by the court with due process, will turn upon the final determination of the matter sub judice. See Pa.R.A.P. 1701(c).

The record also shows that Mr. Beasley appealed the appraisal Order before appraisal was actually undertaken and before the lower court had the opportunity to certify the issue to this Court as a controlling question of law as to which there is a substantial ground for difference of opinion (Pa.R.A.P. 312, 1311 and 1312, interlocutory appeal may be taken by permission under 42 Pa.C.S.A. § 702(b)). The issue, not having been certified or accepted, was not an appeal which would result in a stay in the lower court.

That leads us to the subsequent certification of the matters sub judice, which are in proper form for our consideration.

Ancillary to the question of jurisdiction of the lower court to proceed in that case is consideration by this Court as to whether or not we should accept certification of the issues before us. (Pursuant to 42 Pa.C.S.A. § 702(b), interlocutory appeals by permission, governed by Pa.R.A.P. 312, 1311 and 1312). The temptation is great in this case, and might be justified under Fried, supra, to reject the certification and return the case to the trial court for a full determination of all issues as presented and ultimately to bring the matter back to the Court when a final judgment is entered. Except for one aspect of it, this case cries out for such a treatment. Already it has involved multitudes of proceedings and appeals and the parties have proceeded in a piecemeal fashion to have the rights of the parties adjudicated. This case was commenced in October of 1981 and, well into the year of 1986, it has still not progressed to

the merits in the court below, despite the extraordinary number of pleadings, filings, appeals and hearings which appear to carry the adversary nature of the proceedings to the ultimate degree.As Judge Wieand stated in the earlier appeal,

[t]he right of appeal is intended to confer upon an appellate court the power of review; it has never been intended to vest in an appellate court the power to intervene in matters pending before the trial court. So long as actions remain open, undetermined and unfinished, this Court will not intrude by deciding premature appeals. (citation omitted)

Beasley, 348 Pa.Superior Ct. at 128, 501 A.2d at 680.

The exceptional ingredient in this matter is the issue concerning the right of appraisal of a professional sole proprietorship and the possibility of irreversible harm by the intrusion into confidential records and relationships of clients, whose rights are superior to those of the parties in resolving their private litigation. If we await a final decision in this case, those rights, if inviolate, will be lost. See Cohen, supra. Also, the issue of value of goodwill in a sole proprietorship law practice as marital property is one of first impression in Pennsylvania and one of such commanding importance that it is believed, before the case moves forward in the lower court, this Court should rule on those considerations. For these reasons we proceed to consider the issues on their merits, first of which is the determination of whether good will of a sole proprietorship is marital property.

The trial court, by its Opinion and Order dated March 30, 1984, held "the law practiceconducted by defendant James E. Beasley, as a sole proprietorship, exclusive of good will factor, is marital property as defined by the Pennsylvania Divorce Code of 1980." Despite the lower court's refusal to include good will as a factor of the law practice as marital property, it did conclude that Mrs. Beasley was entitled to an appraisal of Mr. Beasley's interest in the law practice for the purpose of determination of the present value of that practice including work in progress if any. Appellant/wife contends that the court was in error in refusing to consider good will as a factor in marital property subject to distribution whereas the cross-appellant/husband alleges the court was in error in permitting an appraisal for the purpose of present value and particularly allowing any consideration of work in progress as present value. These issues will be considered separately and discussed below.

The rule, until recent times, was stated in Sale of "Good Will" of Law Practice, 79 A.L.R.3d 1243:

In the very few reported cases which have dealt specifically with the subject under annotation, the courts have agreed that despite the fact that the good will of a law practice has an ascertainable value for certain purposes, it is not an asset which may be sold or transferred for a consideration. Thus, it has been held that the good will or personal professional reputation of an attorney, does not survive him, and may not be sold or transferred upon his death. And in what is apparently the only case in which the court directs its full attention to the question of the validity of a contract for sale of good will of a law practice, under the restrictive guidelines set forth in the ABA Canons of Ethics, the court in Geffen v. Moss (1975) 53 Cal App 3d 215, 125 Cal Rptr 687, 79 A.L.R.3d 1232, infra § 4, refers specifically to pertinent regulations set forth in the California Business and Professions Code, the State Bar Act (of California), and the ABA Canons of Ethics as prohibiting the sale of a law practice as a going business.

As defined in Corpus Juris Secundum:

Goodwill 38 C.J.S. § 1. Definition

Good will is that element of value which inheres in the fixed and favorable consideration of customers, arising from an established and well-known and well-conducted business. It is distinguishable from the "going value" or "profits" of a business.

At Goodwill 38 C.J.S. § 3. Adherence to Place, Name, Property, or Business, it is stated:

Good will exists as property merely as an incident to other property rights and is not susceptible of separate ownership or disposition. It may attach to the place, name, property, or reputation of a business, but some decisions hold that it may not adhere to a business or profession dependent solely on the personal qualities of the owner.

The only reported Pennsylvania case on the sale of good will of a professional man is In re Baer's Estate, 38 D. & C. 409 (1940) which held there is no legally recognized property right in the nature of good will attached to the practice of a professional man, such as to continue after his death.

Good Will 38 Am Jur2d § 1. Definitions defines good will in its narrowest case "as the probability that old customers will resort to the old place", to the broadest,

the advantage or benefit, which is acquired by an establishment, beyond the mere value of the capital stock, funds, or property employed therein, in consequence of general public patronage and encouragement, which it receives from constant or habitual customers, on account of its local position, or common celebrity, or reputation for skill or affluence, or punctuality, or from other accidental circumstances or necessities, or even from ancient partialities or prejudices.

J. Story, Commentaries on the Law of Partnerships, § 99, at 170 (6th ed. 1868).

The appellant/wife would have us rely on the very recent line of cases expanding good will to capitalization of personal reputation and relies primarily on the testimony of Seymour Rubin, C.P.A., to establish that good will is a factor in establishing the value of marital property and that it is essential to its measurement to look at the confidential files in the office of Mr. Beasley.

For purpose of our considerations, the extensive testimony of Mr. Rubin may be summarized as follows. Various computations are made which result in an "adjusted income" figure.Deduction is then made for overhead and for reasonable compensation, utilizing well known law firm economic surveys. A second deduction is then made for "fair rate of return of net tangible assets." The resulting figure is "excess earnings." To arrive at a calculation of good will, these excess earnings are capitalized using an appropriate multiple. The amount attributable to good will is then added to the cumulative value of the practice's tangible assets to achieve a final valuation of the law practice. In evaluating the tangible assets, competent trained people would consider the value of computers, word processors, typewriters, telephones, motor vehicles, the law library and other physical assets. The evaluation would also review tax returns, accounts receivable, actual original books and records of the entity, including accounts receivable records and work in progress records, bank statements, journal ledgers and independent accountant's year-end worksheets and other things of that nature. As to the good will of the proprietorship, this would be an intangible asset in the evaluation; the appraisal would be started with the tax returns, the reputation of the lawyer,reviewing records for the prior five years to see the type of practice Mr. Beasley had and to determine what he had done for five years.

The evaluation would include the past work and present work in progress on files that were opened as of the end of each of the years that he was examining for a determination of costs, advances, details of pension and profit sharing plans, insurance policies, employment contracts, or employee compensation arrangements to establish a determination of reasonable compensation so that the element of good will can be calculated from the excess over reasonable compensation that was obtained by the firm's activities.

Mr. Rubin testified that he would handle the confidentiality by not disclosing or identifying any of the files or names of persons contained in those files and do whatever was required by a non-disclosure Order issued by the court. In this way, Mr. Rubin testified he could ascertain the good will which he defined as "the valuation of the excess earnings that are derived from any business endeavor, whether it would be a professional practice or what have you, over and above a fair rate of return on net tangible assets -- and after making allowance for reasonable compensation for the owners of that particular endeavor."

Appellant/wife contends that the majority of jurisdictions which have considered the issue have held that professional good will is subject to equitable distribution in divorce. Appellant/wife relies on the definition of good will stated by Mr. Rubin and alleges that by deducting the average of actual earnings in the amount reflecting the sum of a reasonable return on the enterprise's capital and the reasonable value of the professional's services, the result in excess earnings which are then capitalized over a specific period of years in accordance with accepted accounting procedures, provides a present value that is ascertainable and capable of distribution. As authority for this position, cases from various jurisdictions, as well as law review and professional journal articles, are cited. Stern v. Stern, 66 N.J. 340, 331 A.2d 257 (1975); Levy v. Levy, 164 N.J.Super. 542, 397 A.2d 374 (1978); Mueller v. Mueller, 144 Cal.App.2d 245, 301 P.2d 90 (1956); also see In Re Marriage of Ronald Keith Hull, 712 P.2d 1317(Mont.1986); Raggio, Professional Goodwill and Professional Licenses as Property Subject to Distribution upon Dissolution of Marriage, 16 Fam.L.Q. 147, 154 (1982). This is known as the "capitalization formula" which holds that a future flow of income has a present value which can be reduced to a lump sum payment. Appellant would also find authority in the Divorce Code of 1980 in its mandate under 23 P.S. § 102(a)(6) to "[e]ffectuate economic justice between parties who are divorced or separated and . . . insure a fair and just determination and settlement of their property rights" and in subparagraph (b), "The objectives . . . shall be considered in construing provisions of this act and shall be regarded as expressing the legislative intent."

Further, reliance is placed on 23 P.S. § 401(f), that all property acquired by either party during the marriage is presumed to be marital property regardless of whether its title is held individually or by the parties in some form of co-ownership. Additionally, appellant points out that in Commonwealth ex rel. Gutzeit v. Gutzeit, 200 Pa.Super. 401, 189 A.2d 324 (1963) (allocatur denied), good will is a valuable asset. In that case, good will was evaluated in the context of a support order to determine the value of a one-man company with thirteen employees. Good will was also considered by this Court in Smith v. Munizza, 170 Pa.Super. 122, 84 A.2d 352 (1951) and Boni v. Boni, 302 Pa.Super. 102, 448 A.2d 547 (1982), and by the Supreme Court in Felt v. Hope, 416 Pa. 118, 206 A.2d 621 (1964). It would appear to be incontrovertible that good will is a valuable asset and in proper context must be considered in valuation of a property.

The context most cited is that of a corporation or business entity in which it can be clearly calculated that there is an excess value beyond the fair return of compensation for work performed. It is the contention of the cross-appellant/husband that a sole proprietorship of a law firm is unique in the sense that there is no value to be transferred upon the dissolution of a sole proprietorship. In effect, there cannot be a sale of a sole proprietorship, and since no sale is possible, the good will aspect of such a sole proprietorship in fact does not exist. This was the position accepted by the trial court and the one that seems to be most appropriate under the circumstances and facts of this case. See Goodwill 38 C.J.S. § 3, supra.

A sole proprietorship can be distinguished from a partnership, or a professional corporation, to which an ascertainable value can be ascribed for the purpose of buying into or withdrawing from the relationship; but it is the association, or some share of it, that is valued and not the individual partner upon which the value is placed. See Geesbright v. Geesbright, 570 S.W.2d 427 (Tex.Civ.App.1978). The productivity or work effort of the partner is often not the measure of the share possessed by various members of the association. That share is a measurable and marketable commodity and is generally defined by contract. When a sole proprietor terminates his activity, the lights go out, the value of the sole proprietorship is extinguished and is non-transferable; the clients in the law firm cannot be sold, they can only be transferred and they have the absolute right to select their own future representation; nothing remains in residue which could be determined of value aside from tangible physical property, or work performed on partially completed cases, which may entitle the lawyer or his heirs to a quantum meruit payment. Appellant argues that if Mr. Beasley, tomorrow, converted his sole proprietorship to a partnership he could obtain payment from the proposed partners for admission to the firm based on the value of good will of his law practice. While this might be so, the entity, the sole proprietorship, which is the whole, would be diminished in terms of Mr. Beasley's share of the income and profits to the degree of division in exchange for monies he received in capitalization of the firm, and the theoretical value would be unchanged.

The key issue as to good will of a sole proprietorship has to do with the value, if any, which can be attributed to it, causing it to be subject to distribution. Aside from a share arrangement in partnerships or professional corporations, the only commodity subject to good will considerations in a sole proprietorship is the professional reputation. A number of cases have considered this to be of ascertainable and divisible value and numerous articles have discussed this issue. n1 The testimony of appellant/wife's expert, Mr. Rubin, capsulates the underlying theory espoused by those cases (supra). The major cases to the contrary are Nail v. Nail, 486 S.W.2d 761 (Tex.1972) (since skill, experience and reputation -- good will are not distinguishable from the professional (doctor) and would be extinguished in the event of death, retirement or disablement or sale of the practice, it may not be characterized as an earned or vested right or one which fixes any benefit in any sum at any future time); Austin v. Austin, 619 S.W.2d 290, 291 (Tex.Civ.App.1981) (good will of an ongoing, noncorporate, professional practice is not the type of property that is divisible as property in a divorce proceeding); Stephens v. Stephens, 625 S.W.2d 428 (Tex.Civ.App.1981) (there is no separate good will where the earnings of a sole practitioner depend on his individual skill and experience); Holbrook v. Holbrook, 103 Wis.2d 327, 309 N.W.2d 343 (1981) (the reputation of a partner in a law firm was not property subject to division in a divorce action).

See also: Annot., 52 A.L.R.3d 1344 (1973); 24 Am.Jur.2d Divorce and Separation § § 899, 945 (1983); 38 Am.Jur.2d Good Will § 8 (1968); 38 C.J.S. Goodwill § 3 (1943).

While the position of the Texas courts appears solid despite the numerous findings in other jurisdictions to the contrary (see footnote 1, supra), the inescapable logic of that position becomes evident upon consideration of the effect on an award of alimony after assessing value to good will based upon reputation, skill and experience. The good will of a sole proprietorship is related only to his future earnings, since an actual sale produces no value. To assess a value on future productivity and to award a proportionate amount to the spouse is akin to making a lump sum alimony payment since it is based on future earnings of the paying spouse. If, in addition to this payment, alimony is awarded, there is, in effect, a double charge on the future income of the paying spouse. Even without an alimony award, a fixed sum, not having the designation as alimony, carries none of the flexibility of an alimony award derived from its modifiability and, therefore, may penalize the payor if he suffers reverses, unemployment or dies. See Lurvey, Professional Goodwill on Marital Dissolution: Is It Property or Another Name for Alimony?, 52 Cal.State Bar J. 27 (1977).

In Holbrook, supra at 350, 309 N.W.2d at 354, the court said:

The concept of professional goodwill evanesces when one attempts to distinguish it from future earning capacity. Although a professional business's good reputation, which is essentially what its goodwill consists of, is certainly a thing of value, we do not believe that it bestows on those who have an ownership interest in the business, an actual, separate property interest. The reputation of a law firm or some other professional business is valuable to its individual owners to the extent that it assures continued substantial earnings in the future. It cannot be separately sold or pledged by the individual owners. The goodwill or reputation of such a business accrues to the benefit of the owners only through increased salary.

In an exhaustive article, Marital Property at Marriage Dissolution, 43 Mo.L.Rev. 157 (1978), Krauskopf states in her conclusion:

The second round of appellate decisions will reveal the depth and sophistication of the courts' acceptance of the partnership theory of marriage. If the fruits of all efforts of each spouse are, indeed, to benefit the family created by the marriage, then all interests of value, whether contingent (nonvested retirement benefits), nonassignable (personal injury cause of action), unmarketable (goodwill of a professional practice), or cloaked in separate title (increased value of prior owned close corporation or realty), developed by the efforts of either spouse during the marriage should be subject to the discretionary division of the trial court.

Id. at 198. The single exception to contingent value to be considered under the partnership concept of acquisition of marital property, which is both presently unascertainable and subject to double assessment through alimony, is professional good will. Thus no matter how ingenious the formulae are in establishing "value," assessing it as value and subjecting the same assessment to alimony is inequitable and prohibited by the Divorce Code, 23 P.S. § 102(a)(6), 23 P.S. § 401(d).

In cases where there is a contingent fee arrangement, the value of work completed, or work done and the costs advanced, is absorbed by the sole proprietor and cannot be recouped until the case is completed. This cannot be equated with those cases in which a fee is fixed based upon the work to be performed whereby an appraisal can be made establishing the value to the time of distribution as a recoverable asset. See Sundheim v. Beaver Co. Bldg. & Loan Assoc., 140 Pa.Super. 529, 14 A.2d 349 (1940); Tranberg v. Tranberg, 456 F.2d 173 (3d Cir.1972); In Re Normal Towel Service Inc., 18 B.R. 949 (Ill.1982); Detroit Bank & Trust Co. v. Coopes, 93 Mich.App. 459, 287 N.W.2d 266 (1979). However this process is construed by the I.R.S., (appellant contends value can be fixed as if at the time there was a sale) it cannot be a sale under standards controlling the practice of law as a profession. If there was a fee prorated upon work performed, then the amounts would have been collected and presumably absorbed in the performance of the work that was done. To the extent there was value received, this presumably would have been absorbed in the salaries and overhead and profits of the proprietorship. The amounts collected in the future would follow the performance of the work and would be payable to the person performing that work.

It is tenuous and risky to attempt to evaluate the likely return on contingent fees and as such, no value can be placed on them for purposes of equitable distribution. However, the Divorce Code is flexible and in this respect, the income producing capacity reflected by such cases can be estimated on the basis of compensation for completed cases and, therefore, that record should be sufficient to project the earning capacity of the attorney without speculating on the nebulous return that might be derived from examining active contingent fee cases. Permanent alimony, as support, is modifiable, and should the expectations vary either upward or downward, adjustments can be made by the court in an expeditious and reasonable manner. For support, and recently for alimony, earning capacity has been one of the considerations upon which an award may be based. In Hodge v. Hodge, 337 Pa.Super. 151, 486 A.2d 951 (1984), we held that increased earning capacity through acquisition of a professional degree during marriage was not marital property subject to distribution, but it would be a consideration in awarding alimony. Similarly, and perhaps more to the point, this Court said in Pacella v. Pacella, 342 Pa.Super. 178, 492 A.2d 707 (1985):

Nor did the trial court err in considering appellant's earning capacity rather than his salary, as a basis for calculating the appropriate amount of the award. The Divorce Code directs that a trial court "grant or withhold alimony according to the actual need and ability to pay of [] the parties . . . ." in order to "effectuate economic justice between [the] parties[.]" 23 Pa.C.S. § 102(a)(6). While ordinarily this means that alimony should be based upon actual earnings, that is true only because ordinarily actual earnings accurately measure "ability to pay." Moreover, in the context of support proceedings, we have held that earning capacity, rather than actual earnings, is the determinative factor in ascertaining a party's ability to pay support, Commonwealth ex rel. Raitt v. Raitt, 203 Pa.Super. 226, 199 A.2d 512 (1964), ... Where we have found, in support cases, that actual earnings did not reflect earning capacity, we have approved the use by trial courts of a variety of means to arrive at earnings figures that accurately reflect a party's real wealth. See e.g., Commonwealth ex rel. Maier v. Maier, 274 Pa.Super. 580, 418 A.2d 558

(1980) (where supporting spouse is sole stockholder of corporation and determines his own salary, court may pierce corporate veil and use corporate income as basis for determining earning capacity); Commonwealth v. Miller, 202 Pa.Super. 573, 198 A.2d 373 (1964) (where supporting spouse is self-employed, net income, as it appears on income tax forms, is not "infallible" measure of real wealth; court accordingly may add back portion of depreciation deduction in calculating amount of support owed); Commonwealth ex rel. Gutzeit v. Gutzeit, 200 Pa.Super. 401, 189 A.2d 324 (1963) (in determining supporting spouse's earning capacity, court should consider not only salary paid by wholly owned corporation, but all prerequisites [sic] provided by corporation.) As a matter of economic common sense, earning capacity is equally relevant whether the proceeding be for support, alimony pendente lite, or alimony after divorce.

Id., 342 Pa.Superior Ct. at 186-88, 492 A.2d at 712.

In this manner, the wife will not receive, as property or alimony, that which has no present value from which she may be unjustly enriched, whereas the husband will not have a windfall from income or property that has only a present potential but which will be realized in the future.

Contingent fees, while having a degree of similarity to pensions, do not have the same expectation of vesting which permits greater certainty in fixing value and for establishing present worth. Of course, in those cases wherein the professional is paid for service performed, a clear appraisal of the value of uncompensated work in progress can be made upon which a determination of marital property and division of that property can be based. This can be ascertained through bookkeeping records, which do not involve the evaluation of confidential files.

There is no question that the law firm itself has value which is ascertainable. For this purpose, the trial court permitted a controlled appraisal to look into the files of the firm, even though confidential, for the determination of that value.

The right of appraisal provides an extremely difficult issue to resolve because aside from the interests of the parties in whatever business the firm may pursue, there is the right of confidentiality and for the clients to have their personal affairs be absolutely privileged and private. On balance, it would appear that the trial judge approached this in a sensible manner. It is undeniable that he carefully considered the rights of the individual clients, the ethical standards of the bar association and the ability of the court to exercise control over such confidential information. (Code of Professional Responsibility, Canon 4, Disciplinary Rule 4-101(A), (B), (C), (D); Ethical Consideration 4-1, 4-4.) He permitted the appraisal pursuant to EC 4-2, DR 4-101(C)(2) and (4) which authorizes revelationof client case files where required by law or court Order. n2 Unquestionably, lawyers cannot be carved out as a special category of professionals who are immune from evaluation as to present value, but to permit inquiry into confidential files for the purpose of evaluating contingent fees as potential earnings is inappropriate. The review by an outsider of confidential files, which can contain information which would never be revealed except to the lawyer in a confidential relationship, would have a chilling effect on that relationship which far outweighs the need to appraise those files for these purposes. With these limitations, it is believed that adequate means are provided by Pa.R.C.P. 1920.22, for this purpose. n3

n2 DR 4-101.(C)(2)

DR

4-101. Preservation of Confidences and Secrets of a Client

(C) A lawyer may reveal:

(2) Confidences or secrets when permitted under Disciplinary Rules or required by law or court order.

EC

4-2. Details the considerations for preserving the confidences and secrets of a client and restates the provision of DR 4-101(C)(2).

n3 Pa.R.C.P. 1920.22 provides:

Rule 1920.22 Discovery

(a) Except as provided by subdivision (b), there shall be no discovery in an action of divorce or for annulment or a claim which has been joined as permitted under the Divorce Code unless authorized by special order of court.

(b) When a claim is made for alimony or the determination and distribution of property rights, any party may serve upon any other party as of course within such time as not to delay the trial interrogatories limited to those claims. The practice and procedure shall be governed by the rules of civil procedure governing depositions and discovery.

We, therefore, hold that good will of a sole proprietorship under these facts is not an element of present value; we also hold that the records of the firm may not be appraised to determine present value and to evaluate earning capacity. n4

n4 That is not to say that good will expressed as a share of a partnership or professional corporation, with an ascertainable value which can be purchased or transferred, is to be excluded. Such is not the case here.

The major contention of the cross-appellant/husband is that since this is an office that works entirely on a contingent fee basis, there cannot be an evaluation of present value by evaluating the work in progress. The expert for appellant/wife agreed that work in progress is not a basis for assessing present value. This would appear to be true.

We have previously held that property for purposes of marital distribution must be a liquidated amount in a tort claim. Hurley v. Hurley, 342 Pa.Super. 156, 492 A.2d 439 (1985). Just as we could not establish good will based on contingent fee earnings, as at best these are potential earnings, so must we limit consideration of contingent fees for purposes of present value. Under these circumstances, no significant distinction exists between good will and present value as to contingent fees. If the firm ceased to exist or the appellee/husband retired or withdrew from the firm, there would be no capitalization of contingent fees for the reasons discussed earlier as to good will.

While this appraisal aspect of the case has another overtone, which is alleged by the appellant/wife, it was neither considered by the lower court nor is it a factor in our finding against the appraisal of the law practice. That has to do with the appraisal of good will for purposes of alimony. As we have held that in this case good will is not a factor in terms of the value of the sole proprietorship for purposes of equitable distribution, neither can it be a factor for evaluating the amount to be awarded in alimony. Gutzeit, supra, does not apply in this case since there, the court considered a business corporation which had substantial assets and good will beyond the earnings and income of the firm which would generate substantial profits upon the sale of that business. No facts similar to that exist in this case. No sale can be made here from which a profit maybe derived. Therefore, to consider the value of the property to include good will for the purposes of establishing alimony would be to include a non-existent asset. That is not to say that the appraisal of the present value of the law firm (not including good will), Mr. Beasley's income, and potential earnings, and those related factors are not relevant considerations under the Divorce Code, 23 P.S. § 501, Alimony.

The final issue in this case has to do with whether an appraisal for the purposes of establishing value can be made without first determining what is marital property subject to distribution. This is a matter that would appear to be within the discretion of the trial court. Unquestionably, a determination of what is marital property in many cases can easily be made prior to any appraisal of the value of that property. Pursuant to 23 P.S. § 401(d), there is a presumption that all property, whether real or personal, acquired by either party during the marriage is marital property, subject to limited exceptions under section 401(e). Since this presumption has not been overcome and the issue relates to the transfer of airplanes by Mr. Beasley to a trust fund for his sons, with further action being stayed by the court, appraisal is proper.

In a case as involved and complex as this one, the court could properly find that the appraisal would establish a two-fold purpose; that it would divulge both the value of the assets and particularly in regard to the airplane, which appears to have been placed in trust under questionable circumstances, aid in determining whether that trust, in fact, is not an improper divestiture of marital property. Since appraisals normally would include the time of acquisition of an asset, its increase or decrease in value, and whether or not there was a sale or divestiture or whether there was some return or equivalency derived from a transfer, it would serve to aid the court in making a determination both as to value and as to marital property. It would serve the dual purpose of appraisal and accounting. There can be no prejudice to the defendant by this evaluation and it would forward the progress of this case.

In summation,we find: review of this case is not prevented or stayed by the pendency of the matter of an award of appraisal fees before the Supreme Court; the review is not prevented as being interlocutory as it presents substantial questions of fact and law which have been certified to us for consideration; good will is not an element of value for purposes of equitable distribution involving a sole proprietorship of a professional practice; good will is not an element for alimony considerations of a sole proprietorship of a professional practice; contingent fees may not be considered to establish present value or good will; contingent fees may not be considered for the purpose of establishing a basis for an alimony award since they are unascertainable earnings; appraisal of the law practice, not including confidential records, is permissible to ascertain present value and basis for alimony; and appraisal of property transferred into a trust is permitted without a prior determination that it is marital property.

We, therefore, modify the Order of the lower court by eliminating therefrom the direction that "client files" be delivered to Helen Beasley or her selected appraiser; as modified,the Order is affirmed.

DISSENTBY:

DEL SOLE

DISSENT:

DEL SOLE, Judge, dissenting:

I respectfully dissent based upon my belief that the permission to appeal was improvidently granted, and the appeal should be quashed.

The Majority citing Fried v. Fried, 509 Pa. 89, 501 A.2d 211 (1985) and Cohen v. Beneficial Industrial Loan Corporation, 337 U.S. 541, 69 S.Ct. 1221, 93 L.Ed. 1528 (1949) notes that rejection of certification "might be justified". Majority Opinion at 549. It finds, however, an "exceptional ingredient" in this case, the potentially lost rights of those clients who may be irreversibly harmed by intrusion into their attorney's confidential files. I believe this rationale is flawed for two reasons.

The test applied to a question of appealability in Fried v. Fried, was as follows:

(u)nder Cohen, an order is considered final and appealable if (1) it is separable from and collateral to the main cause of action; (2) the right involved is too important to be denied review; and (3) the question presented is such that if review is postponed until final judgment in the case, the claimed right will be irreparably lost. (Citations omitted).

Fried v. Fried, 509 Pa. at 94, 501 A.2d at 214, quoting Pugar v. Greco, 483 Pa. 68, 73, 394 A.2d 542, 545 (1978).

The Majority would find, under the third prong of the Cohen test, the client's rights to confidentiality will be "irreversibly harmed" by the failure of this Court to grant permission to appeal. However, prong three of the test speaks to lost rights which belong to the parties, not the parties' clients.

In addition, the Majority's conclusion that an appeal is proper here because the case contains an issue of "commanding importance", is not based on the appropriate standard. See: Toll v. Toll, 293 Pa.Super. 549, 439 A.2d 712 (1981).

This court does have discretionary power to hear an appeal of an interlocutory order that has been certified by the lower court as presenting a "controlling question of law as to which there is substantial ground for difference of opinion and (where) an immediate appeal from the order may materially advance the ultimate determination of the matter (.)

Toll v. Toll, 293 Pa.Super. at 554, 439 A.2d at 715 (emphasis added), citing 42 Pa.C.S.A. § 702(b).

While the certified issues in the present appeal have not been previously treated by the appellate courts of this Commonwealth, I am not convinced that immediate appellate review will materially advance the ultimate termination of the case. Rather, I perceive this appeal as premature and inappropriate since it serves to add yet another delay to disposition of this litigation.

Assuming this court were to rule that the interlocutory appeal in this case should be quashed, I believe it would expedite the case without serving to expose the confidential matters included in a client's file. For appraisal purposes, most of the information necessary to evaluate the potential worth of a claim is based upon information gleaned through discovery, and is therefore readily available without breaching any duties of confidentiality. Materials sought for appraisal which counsel deems are confidential and nondiscoverable are best handled by the trial judge supervising the evaluation on a case-by-case basis. If a situation were to develop where a decision is issued and a party fails to comply with a court order requiring information to be disclosed, a contempt citation would be issued and sanctions would be imposed.An appeal from this type of final order would then be appropriate. See: Hester v. Bagnato, 292 Pa.Super. 322, 437 A.2d 66 (1981).

Beerly v. Dept of Treasury

768 F.2d 942 (1985)

Gustav E. BEERLY, Trustee of the Gustav E. Beerly Trust, Plaintiff-Appellant, v. DEPARTMENT OF the TREASURY, et al., Defendants-Appellees.

No. 84-1763.

United States Court of Appeals, Seventh Circuit.

Argued April 12, 1985.
Decided July 29, 1985.
Rehearing Denied August 30, 1985.

James E. McParland, Morgan, Lanoff, Denniston & Madigan, Chicago, Ill., for plaintiff-appellant.

Frank C. Bonaventure, Jr., Washington, D.C., for defendants-appellees.

Before CUMMINGS, Chief Judge, POSNER, Circuit Judge, and PECK, Senior Circuit Judge.[1]

POSNER, Circuit Judge.

This appeal requires us to examine the meaning and constitutionality of the little-known statutory provisions for appraisal by the Comptroller of the Currency of shares owned by shareholders dissenting from (1) mergers, consolidations, or conversions of national banks into state banks, 12 U.S.C. § 214a; (2) consolidations of national or state banks under the charter of a national bank, 12 U.S.C. § 215; or (3) mergers of national or state banks into a national bank, 12 U.S.C. § 215a—all transactions that require the Comptroller's approval. The provisions for appraisal go back to 1918, yet, surprisingly in this litigious age, in only one reported case has an appraisal under any of them been challenged. See *Simonds v. Guaranty Bank & Trust Co.,* 492 F.Supp. 1079 (D.Mass.1979).

In the case of a type (3) transaction, the type involved in this case, a dissenting shareholder who gives the proper notice (as was done here) is entitled to receive the "value" of his shares. 12 U.S.C. § 215a(b). Value is determined by a committee of three appraisers of which the dissenters select one, the bank resulting from the merger another, and the two party-designated appraisers the third. 12 U.S.C. § 215a(c). If any dissenter is dissatisfied with the appraisers' valuation of his shares, or if for some reason one of the appraisers is not appointed, or if the appraisers fail to make an appraisal, then the Comptroller shall on request "cause an appraisal [or reappraisal, if the dissenter was dissatisfied with the appraisers' appraisal] to be made which shall be final and binding" on all parties. 12 U.S.C. §§ 215a(c), (d). Similar provisions are applicable to transactions of types (1) and (2). See 12 U.S.C. §§ 214a(b), 215(c), (d).

[1] Hon. John W. Peck of the Sixth Circuit, sitting by designation.

The Mid-City National Bank of Chicago was merged into Mid-City Bank, N.A., which immediately became a subsidiary of Mid-Citco, a newly formed bank holding company. All three entities are under common ownership, the purpose of the chain of transactions being simply to enable Mid-City National Bank to operate in the bank holding company form. However, the first step—the merger of Mid-City National Bank into Mid-City Bank, N.A., a so-called "interim bank," see 12 C.F.R. § 5.21(a)—required the Comptroller's approval under 12 U.S.C. § 215a. Beerly, trustee of 2,061 shares, dissented from the merger. When the party-designated appraisers were unable to agree on a neutral appraiser, Beerly, pursuant to 12 U.S.C. § 215a(d), requested the Comptroller to do the appraising, who after considering written submissions from the parties fixed a value of $282.39 per share for Beerly's stock. Beerly thought the appraisal too low, sued the Comptroller under 28 U.S.C. § 1331, lost in the district court, and appeals to us. The record is silent on the current price of Mid-City's stock.

Even though section 215a(d) states that the Comptroller's appraisal is "final and binding" on all parties, and no procedure for judicial review of an appraisal is specified, it has not been suggested that Congress wanted to insulate the Comptroller's appraisal from judicial review. We cannot rest on the parties' concession of subject-matter jurisdiction, but our independent analysis leads us to the same conclusion. The presumption that final administrative action substantially affecting personal and property rights is judicially reviewable is a powerful one, see, e.g., *Abbott Laboratories v. Gardner,* 387 U.S. 136, 140-41, 87 S.Ct. 1507, 1510-11, 18 L.Ed.2d 681 (1967), and we can find nothing in the history or setting of the appraisal provisions to overcome it. The valuation of dissenters' shares is a traditional judicial function, see *Simonds v. Guaranty Bank & Trust Co., supra,* 492 F.Supp. at 1081-82, and, when performed by an administrative agency rather than a court, invites judicial review. It is not a managerial or political judgment, the kind of judgment that a court cannot usefully review because it lacks the proper analytic tools. The statutory words "final and binding" have no necessary reference to judicial review; they may just mean that the Comptroller's appraisal is the last appraisal.

When no statute prescribes the procedure for judicial review of a particular administrative action, review is in the district court under 28 U.S.C. § 1331, the general federal-question jurisdictional statute, see Administrative Procedure Act, § 10(b), 5 U.S.C. § 703; *General Finance Corp. v. FTC,* 700 F.2d 366, 371 (7th Cir.1983), with a right of appeal to the court of appeals. That was the route followed here.

Our review of the district court's decision is plenary, *Stop H-3 Ass'n v. Dole,* 740 F.2d 1442, 1450 (9th Cir.1984), since that court and this court have the identical information on which to base review of the challenged administrative action, namely the written record compiled in the administrative proceedings. So it is as if we were reviewing the Comptroller directly; and the parties agree as they must that the scope of judicial review of the Comptroller's decision is for the usual reasons narrow, deferential. See *E.I. DuPont de Nemours & Co. v. Collins,* 432 U.S. 46, 56-57, 97 S.Ct. 2229, 2235, 53 L.Ed.2d 100 (1977); *City Federal Savings & Loan Ass'n v. Federal Home Loan Bank Bd.,* 600 F.2d 681, 688 (7th Cir.1979). Thus the issue for us is not whether the Comptroller's decision was correct but whether it was reasonable—not "arbitrary, capricious, [or] an abuse of discretion," 5 U.S.C. § 706(2)(A); cf. *Camp v. Pitts,* 411 U.S. 138, 141-42, 93 S.Ct. 1241, 1243-44, 36 L.Ed.2d 106 (1973).

There are many ways to value a share of stock. The Comptroller considered four: book value, adjusted book value, market value, and investment value.

1. Book value is the difference between the firm's assets and liabilities as valued on its books of account, divided by the number of shares. For Mid-City this comes out to $600.10. But the Comptroller gave book value zero weight in his appraisal.

2. Adjusted book value is book value multiplied by the ratio of the market prices of comparable institutions to their book values. The "peer group" used by the Comptroller to determine the adjusted book value of Mid-City stock consisted of other middle-sized Chicago banks. Their stock was selling at an average of 46 percent of book value. Multiplying this by Mid-City's book value per share produced the figure $294.05; this was the stock's adjusted book value.

3. The meaning of market value is self-evident; but because Mid-City's stock had been very thinly traded (only one-quarter of one percent of its stock had been traded in any recent year), the Comptroller decided to give zero weight to this valuation too. The stock's market value was about $160.

4. Finally, the Comptroller computed an "investment value" for Mid-City by multiplying its most recent annual earnings per share by the price-earnings multiple—which was 6—of Mid-City's peer group; and this produced a figure of $270.72. The Comptroller averaged the two figures he had calculated — the adjusted book value and the investment value—and this yielded his appraisal of $282.39 for each of Beerly's shares.

The methodology of appraisal used by the Comptroller resembles that used in appraising dissenting shareholders' rights under state corporation laws. See, e.g., Fischel, *The Appraisal Remedy in Corporate Law,* 1983 Am.Bar Foundation Research J. 875, 889-96; Note, *The Valuation of a Close Corporation: Glimpses of Objectivity in an Inflationary Period,* 13 Loyola U.L.J. 107, 114-25 (1981); Note, *Valuation of Dissenters' Stock Under Appraisal Statutes,* 79 Harv.L.Rev. 1453, 1456-71 (1966). Although this methodology has frequently been criticized (as in the articles just cited), the fact that the Comptroller was following a conventional approach goes far to shield his results from judicial invalidation. It is not for a reviewing court to tell an administrative agency to defy the conventional wisdom, to innovate, to be daring. And one of the principal criticisms of the conventional methodology of appraisal—that market value is a better index of value than any valuation formula—is, as we shall see, inapplicable to this case. The criticisms of the Comptroller's appraisal that Judge Keeton made in the *Simonds* case, *supra,* 492 F.Supp. at 1084, are also inapplicable.

The purpose of an appraisal is to give the owner of the property being appraised the cash equivalent of what he has given up by relinquishing his ownership. In the case of stock what he gives up is the opportunity to sell the stock or to keep it and obtain an income from it. Ordinarily the best estimate of what an opportunity to sell is worth is found in recent sales of the same thing, which would mean, recent sales of stock in Mid-City National Bank. See, e.g., *Metlyn Realty Corp. v. Esmark, Inc.,*763 F.2d 826, 835-36 (7th Cir.1985). If the Comptroller had used this method of estimation, it would have turned out very badly for

Beerly, because the market value of the stock in the relevant period was only about $160 a share.

It is true that when stock is traded infrequently, past sales may not be a reliable guide to current value, because they impound valuations by only a few buyers and sellers, and because circumstances may have changed since those sales took place. (The other side of the coin is that if a stock has a "thick" market, not only is market value the only rational measure of value, but appraisal rights are unnecessary since the dissenting shareholder can fully protect his interests by selling his shares. On this ground, Delaware does not recognize appraisal rights in such settings. See Del.Gen.Corp.Law § 262(b)(1) (1984).) But the fact remains that if Beerly had wanted to cash in his stock he would have had to take his chances in a market in which the demand was weak. Indeed, since he owned 4 percent of the stock of the company—16 times as much stock as had been sold in any recent year—he might not have been able to unload all of his stock at $160 a share.

And it is necessary to distinguish between a "squeeze-out" and a change merely in the form of the shareholder's rights. When a stock is thinly traded, so that its market value is not a reliable index of its true value, controlling shareholders may be tempted at a time when the market valuation is unreasonably low to force minority shareholders to give up their shares in exchange for the market value of the shares, which by hypothesis is less than their true value. But Beerly was not squeezed out; he was offered what appears to have been equivalent shares in the reorganized firm; he left voluntarily. The Comptroller was generous in giving no weight at all to the (low) market value of Beerly's stock.

Book value is a virtually meaningless index of what a share of stock is worth to the shareholder, and the Comptroller properly disregarded it. The main component of book value is the original cost of the firm's assets, as depreciated. Wholly apart from the well-known vagaries of depreciation, if a firm's assets are specialized to the firm's business they may have very little sale value. Their only value may be to generate the firm's earnings. But then it is clear that the value of the firm is some multiple of its earnings, and not some function of the original cost of its assets. Evidently the book value of middle-sized Chicago banks in the relevant period was greater than their market value, for the stock of Mid-City's "peer group" was trading in the market at an average of only 46 percent of book value per share. Such discounts are common, as any owner of railroad stock knows.

It is true that Beerly presented evidence that some middle-sized Chicago banks had been bought for more than their book value. But there is a big difference between the value of a minority shareholder's interest and the value of a controlling interest, which is what is at stake when the whole firm is acquired and not just some shares of its stock. Someone who thinks he can run a firm better than its present owners—that is, thinks he can get more value out of the firm's assets than they can—naturally will be willing to pay more (if he must!) for a controlling interest than the current market value of the firm's stock; that stock is worth more to him. But the qualification is vital; the stock is worth more to him only if he has control of the firm, so that he can run it; and for control he needs more than 4 percent. Of course the analysis would be more complicated if a buyer were not allowed to pay a premium for a controlling block of stock—if he had to pay all shareholders the same price for their shares. But federal law contains no such requirement, which would make transfers of corporate control more costly and therefore reduce the effectiveness of the market for

corporate control in disciplining managers and in moving corporate resources into the hands of those who can get the most value out of them. See Easterbrook & Fischel, *Corporate Control Transactions,* 91 Yale L.J. 698 (1982). All shareholders may be better off, ex ante, with a rule that facilitates takeovers, even though, ex post, some may get lower prices for their shares if a takeover occurs.

The two measures of value that the Comptroller used are more consonant with economic reality than book value is and more favorable to Beerly than market value. The Comptroller's "adjusted book value" was essentially a measure of the market value of a portfolio of comparable banks, and thus corrected for the thinness of the market in Mid-City's own stock. The Comptroller's "investment value" assumed quite sensibly that the value of bank stock is as an income-producing asset and is therefore a function of the bank's income. The precise form of that function depends on investors' estimates of the riskiness of the bank's stock and the prospects for the bank's future earnings; and while it is possible that Mid-City is less risky than its peers or has brighter prospects, the Comptroller was entitled to assume, in the absence of more direct evidence of Mid-City's prospects, that investors were unlikely to consider it a more valuable asset, per dollar of earnings, than a portfolio of stocks of similar banks.

The two measures the Comptroller used are closely related. In effect he made two adjustments to the average market value of the stock of the peer firms to derive the market value of Beerly's shares in Mid-City: He multiplied it first by the ratio of Mid-City's book value to the peer group's average book value and then by the ratio of Mid-City's earnings to the peer group's average earnings, and then he took the average of these two products. He assumed, in other words, that Mid-City's stock would be worth more, relative to the market value of comparable banks' stock, the more its book value exceeded the average book value of the comparable banks and the more its earnings exceeded their earnings. This is a defensible procedure (ratios of book values may be a little more meaningful than absolute book values), and on the whole one generous to Beerly.

The Comptroller gave no weight to the appraisal made by Beerly's own appraiser, in the aborted private appraisal that preceded the Comptroller's intervention: $743.77. But, contrary to Beerly's suggestion, the Comptroller was not required to average that appraisal with his own in coming up with a valuation for Beerly's shares. If the parties had agreed on a neutral appraiser, he would not have averaged his own estimate with those of the party-designated appraisers. People estimate value differently, and there is no difficulty in finding an expert from the upper tail of the distribution. *Metlyn Realty Corp. v. Esmark, Inc., supra,* 763 F.2d at 836. The search for extremes in valuation should not be encouraged by requiring that the highest appraisal be averaged in with the others.

The most questionable feature of the Comptroller's valuation (apart from his giving no weight to the bank's market value—an omission that favored Beerly, however) was the refusal to count any part of the bank's reserve for bad loans as an asset, rather than a liability. The reserve, $2 million, had remained unchanged for many years during which the bank wrote off an average of only $10,000 a year in bad loans. The recent and well-publicized difficulties of large Chicago banks, together with the uncertainties that have been created by the deregulation (though as yet partial) of banking, seem to confirm the prudence of the Comptroller's conservative approach to bank reserves—and in any event

we can think of few areas less suitable for judicial second-guessing than the Comptroller's determination of how large a reserve is suitable for a bank of Mid-City's size and condition. But the point is not whether the Comptroller acted reasonably in requiring a large reserve for bad loans; it is whether investors would have considered the reserve excessive, for if so they would have treated the excess as an asset rather than a liability in valuing the firm. However, an adjustment to take account of this possibility would not have altered the appraisal significantly. The reserve was equal to only 7 percent of the bank's book value. Suppose it was twice as large as investors would have thought proper. The effect on adjusted book value (equal to 46 percent of book value) would be to increase that value by only 1.6 percent (46 percent of 3.5 percent is 1.6 percent); and since adjusted book value was given a weight of one-half in valuing Beerly's stock, the result would be a less than 1 percent (0.8 percent, to be precise) increase in the value of his stock. If there was an error in the treatment of the reserve for bad loans—and that is uncertain—it was trifling.

We do not understand Beerly's complaint that the bank paid lower dividends than comparable banks. That would just go to increase the bank's capital, and hence book value, and hence the valuation of Beerly's shares.

Beerly argues that the statutory procedure for appraisal by the Comptroller violates the Fifth Amendment's due process clause because it does not provide for an evidentiary hearing. Although the due process clause comes into play only when there is a deprivation of life, liberty, or property, there was a deprivation of property here. Granted, the merger itself did not deprive Beerly of his stock. He was not squeezed out; he opted out; he could have exchanged his stock for shares in the interim bank. But the new shares would not have been the exact equivalent of the old; at common law he could have vetoed the transaction, *Chicago Corp. v. Munds,* 20 Del.Ch. 142, 149, 172 A. 452, 455 (1934); a forced exchange is still a deprivation. A less metaphysical point is that once Beerly chose appraisal, as the statute entitled him to do, he was stuck with the result of that appraisal; and if the Comptroller violated due process of law in conducting the appraisal, and as a consequence valued Beerly's stock at less than the minimum reasonable estimate of its true value, the Comptroller could be said to have deprived him of property without due process of law. It is true that we have found the valuation reasonable, but this conclusion is based on the record compiled by the Comptroller; if that record is tainted by his failure to accord Beerly a hearing, our conclusion is undermined. So we must determine whether the procedure denied Beerly due process.

The process that is due depends on the nature of the inquiry. Since time out of mind, appraisal by informal procedures not involving oral hearings has been used to value property, including property as valuable as Beerly thought his stock was. Generally, appraisers are not arbitrators; they do not weigh in a trial setting conflicting opinions of value that have been subjected to cross-examination; they make their own evaluation. See *Hayes v. Allstate Ins. Co.,* 722 F.2d 1332, 1340 (7th Cir.1983) (dissenting opinion) (citing cases). The procedure for valuing dissenting shareholders' rights under state law is various. See 12B Fletcher Cyclopedia of the Law of Private Corporations § 5906.8 (Van Swearingen rev. ed. 1984). In some states the court does the appraising; in others appraisers are appointed and use their own judgment in valuing the shares; in still others the appraisers take evidence before making their valuation. In none so far as we know is an oral evidentiary hearing with cross-examination either required or customary.

The procedure used by the Comptroller in this case was as formal as any used in cases of this general nature and more formal than many.

Thus if the appraisers designated by the parties had been able to agree on a neutral appraiser, and the committee of appraisers had then set about to appraise Beerly's stock, in all likelihood it would not have done so with an oral hearing or any of the other traditional accouterments of formal procedure. We need not decide, however, whether the Comptroller could, consistently with due process, have proceeded as informally as private appraisers. He weighed the written submissions by Beerly and the bank and having done so made his appraisal in a reasoned opinion that considered all of Beerly's evidence and argument. The only thing missing was oral testimony and the opportunity for cross-examination. Beerly has not shown how the use of these expensive and time-consuming procedures would have reduced an otherwise high probability of a serious error in the appraisal. The procedure was therefore constitutionally adequate. See, e.g., *Mathews v. Eldridge,* 424 U.S. 319, 335, 96 S.Ct. 893, 903, 47 L.Ed.2d 18 (1976); cf. *Richardson v. Perales,* 402 U.S. 389, 402, 91 S.Ct. 1420, 1427, 28 L.Ed.2d 842 (1971); *Chicago & North Western Transport Co. v. United States,* 678 F.2d 665, 671 (7th Cir.1982).

Beerly's final complaint is that the statute makes no provision for the payment of interest. The merger took place in February 1982, and that fixed the date for valuing Beerly's shares. The Comptroller made his valuation in June 1983, about 15 months later. Assuming purely for illustrative purposes that the market rate of interest on such an investment was 9 percent, Beerly lost $65,000 as a result of the delay between the merger and the valuation. The delay was not unreasonable, but the consequences for Beerly's wealth position were significant and, he argues, unreasonably deprived him of property. But we shall not consider the merits of the argument. It appeared for the first time in Beerly's reply brief. That was too late. *Christmas v. Sanders,* 759 F.2d 1284, 1291-92 (7th Cir.1985).

AFFIRMED.

54 T.C.M. 1123 (1987)
T.C. Memo. 1987-576

Estate of Norman L. Bell, Deceased, Shirley Bell, Independent Executrix
v.
Commissioner.

Docket No. 12692-85.

United States Tax Court.

Filed November 23, 1987.

1124 *1124 Donald D. DeGrasse, for the petitioner. Thomas G. **Norman** and David E. Whitcomb, for the respondent.

Memorandum Findings of Fact and Opinion

WILLIAMS, Judge:

The Commissioner determined a deficiency in petitioner's Federal **estate** tax in the amount of $1,194,949.31. The issue we must decide is the value for Federal **estate** tax purposes of shares of stock in a closely-held corporation. Our decision has turned on how poorly petitioner and respondent have carried their respective burdens of proof.

Respondent's determination of a deficiency in **estate** tax is presumptively correct. Thus, petitioner has the burden of proving that respondent's valuation of **Bell** Oil stock is erroneous. *Welch v. Helvering* [3 USTC ¶ 1164], 290 U.S. 111 (1933); Rule 142(a), Tax Court Rules of Practice and Procedure. Respondent, on the other hand, must prove the correctness of his increased deficiency claimed in his amended answer. Rule 142(a), Tax Court Rules of Practice and Procedure. Based on the record before us, we conclude that neither petitioner nor respondent has satisfied the burden of proof.

Some of the facts have been stipulated and are so found. **Norman L**. **Bell** died on July 12, 1981 a resident of Jefferson County, Texas. Shirley **Bell** McBride was appointed as executrix.

At the time of his death, decedent owned 16,825 shares of stock in **Bell** Oil of Texas, Inc. (hereinafter "**Bell**-Tex"), and 4,510 shares of stock in **Bell** Oil of Louisiana, Inc. (hereinafter "**Bell**-La"). No other shares of either company were outstanding. The decedent was survived by a wife and left a community **estate**. The shares of stock in the **Bell** Oil corporations were, however, decedent's separate property.

During 1981, the **Bell** Oil companies owned and operated 21 **Bell's** convenience stores, including several hardware stores, in eastern Texas and western Louisiana. Some of the stores operated "washaterias," and each of the stores retailed gasoline and oil.

Petitioner filed a Federal **estate** tax return on April 13, 1982. As reflected on Schedule B of the **estate** tax return, the 16,825 shares in **Bell**-Tex were valued at $452,592.50; the 4,510 shares in **Bell**-La were valued at $470,167.50. Petitioner's valuation was based on multiplying earnings by assuming a price/earnings ratio of 5:1. Petitioner did not offer evidence to support its use of this price-earnings multiple to value the stock or any discount for lack of marketability of the stock. While it is generally recognized that the value of stock in closely-held corporations is subject to a discount for lack of marketability, petitioner must establish (1) the value to be discounted and (2) the amount of the discount. See, e.g., *Ward v. Commissioner* [Dec. 43,178], 87 **T.C.** 78 (1986); ***Estate** of Andrews v. Commissioner* [Dec. 39,523], 79 **T.C.** 938, 953 (1982). Both points are a matter of proof.

The only evidence offered by petitioner to substantiate its valuation of **Bell**-Tex and **Bell**-La was the testimony of Shirley **Bell** Marshall, the daughter of decedent. While she was a credible witness, the scope of her testimony was limited. The principal subject of her testimony was the effect on operations of the death of **Norman L**. **Bell**, founder and key employee. The loss of

decedent's services decreased the value of the companies, and a knowledgeable individual who could assume supervisory responsibility over all operations had to be found and hired. Mrs. Marshall also testified that a significant number of improvements had to be made to the stores. While the improvements prevented deterioration of the stores, petitioner failed to prove that the stores were dilapidated or in serious need of restoration. Further, this testimony lacked a starting point for valuation. Although we accept this testimony, petitioner's valuation of **Bell**-Tex at $452,592.50 and of **Bell**-La at $470,167.50 was asserted summarily and was not supported by the detail necessary to carry the burden of proof.

Respondent valued the decedent's interest in **Bell**-Tex at $1,000,000.00 and in **Bell**-La at $900,000.00. Respondent amended his answer to claim the value of **Bell**-Tex was $2,100,000.00 and of **Bell**-La was $1,136,000.00, based on a seven volume appraisal report by James T. Johnson. Johnson was called as an expert witness to testify concerning his appraisal of the closely-held **Bell** Oil corporations.

In his seven volume appraisal of **Bell** Oil, Johnson utilized four methods of valuation: (1) the capitalization of the income stream method, (2) the excess earnings method, (3) the tangible net worth method, and (4) a ratio of "value of stock to sales," a ratio concocted by Johnson that was little more than speculation masquerading as empirical analysis.

A primary basis for Johnson's analysis was industry data appearing in an article by John F. Rosco, "The Annual Dollars Per Day Survey of the Small Food Store Industry." From this publication, the expert developed capitalization rates and industry ratios which he used in appraising petitioner's corporations.[1] No testimony or evidence supported the authority of the information in
1125 the Rosco article. Indeed, another article identified by petitioner reported *1125 different financial information for the same companies for the same periods. The subjects of the articles were all publicly traded companies, but no one compared this conflicting information with annual reports filed with the Securities and Exchange Commission. Moreover, no relationship was shown to exist between the performances of these companies and either **Bell**-Tex or **Bell**-La. The expert did not know the differences or similarities between these companies and the **Bell** Oil companies and thus did not analyze any differences or similarities in his valuation report. This lack of careful analysis undermines our confidence in Johnson's report and in the accuracy of the fundamental information supporting the expert's conclusions.

Johnson's method for choosing a capitalization rate in both the capitalization of income stream method and the excess earnings method was arbitrary. After listing the range and mean average of ratios found in the article of doubtful authority, Johnson chose his capitalization rate of 11 percent for the capitalization of the income stream method without any explanation. In determining the capitalization rate for the excess earnings method, Johnson applied different rates of return to income assumed to be earned by three categories of assets and long-term debt[2] on the balance sheet of each corporation: (1) 12 percent for working capital, (2) 12 percent for equipment and improvements, (3) 10 percent for land, and (4) 13 percent for long-term debt. He assumed, moreover, that an investor would desire a 26 percent rate of return on "good will." He chose these rates of return without explaining how he arrived at these rates or why the rates vary.

The mean average of U.S. Treasury bonds and notes at the time was 12.33 percent according to the expert. This represents the rate of return an investor would expect on risk-free, intermediate and long-term investments generating taxable income. The expert gave no explanation for why the rates applied in his excess earnings method were lower than the U.S. Treasury bond and note rates despite the comparatively higher risk that investment in **Bell** companies' stock presented. The expert's arbitrary choice of rates of return was neither accurate nor realistic.

The inherent flaws in Johnson's methodology are emphasized by the way in which the expert arrived at his bottom line valuation under the excess earnings method. For some unexplained reason the expert added the value of excess earnings, determined using unrealistic rates of return, to the value of the **Bell** Oil companies as determined under the expert's tangible net worth method. The expert gave no rationale for this adjustment. It would appear that this method, as employed by Johnson, results in determining a premium or penalty adjustment to tangible net worth and is not an independent valuation method. If so, no premium exists for either company and a significant penalty should be applied. It is apparent from the actual earnings of **Bell**-Tex and **Bell**-La that the corporations were earning a return on their assets that fell well below market yield. Consequently, we believe that there were no "excess" earnings.

Furthermore, the rates of return applied by Johnson in the excess earnings method bore no relationship to the capitalization

rate Johnson used in the capitalization of income stream method. We believe his choice of varying rates indicates a result-oriented analysis. An appropriate capitalization rate is determined by the comparable investment yield in the market not by the choice of a valuation method. Johnson made little effort to identify comparable investments.

In the tangible net worth method the appraiser valued each asset as if sold individually. While this valuation approach is of interest we do not find it persuasive of the value of the stock in an ongoing, closely held business.

In figuring the ratio of value to sales, Johnson, relying on the industry data found in "The Annual Dollars Per Day Survey of the Small Food Store Industry," divided the gross sales by total stock value of each convenience food store company listed in the article. This produced a list of ratios found on Table III and IV of the expert's summary report from which Johnson somehow derived a multiplier of .20 which he applied to the gross sales of each **Bell** Oil company. This produced a value of $2,100,000.00 for **Bell**-Tex and $760,000.00 for **Bell**-La.[3] Johnson admitted that he "eyeballed" a list of gross sales/stock ratios found in his report to arrive at his multiplier of 20 percent which he applied to the gross sales of each **Bell** Oil company. Not only was this unique method based on arbitrary choice (which Johnson could not articulately defend), the method itself was not reasoned.

Analyzing the results of the valuation methods used, Johnson concluded that the value of the Texas company was
1126 $2,100,000.00 and the *1126 value of the Louisiana company was $1,136,000.00.

Aside from arbitrary and result-oriented analysis, Johnson's report had many errors. During the trial the Court found that a whole column of numbers was misplaced in the report and wrongly used by the expert. The stores owned by **Bell** Oil companies had to be reconsidered during the trial to determine the correct number of them. The Court also had to refigure the breakdown of gas sales and food sales for the **Bell** Oil corporations because of the expert's inaccuracy. Much time was used to correct the mistakes in the report. Consequently, we have no confidence in Johnson's report. We conclude, therefore, respondent has failed to carry his burden of proving the increased deficiency in the amendment to his answer.

Accordingly and because of concessions, we hold that respondent's original determination of deficiency must stand. The appropriate value to be applied to the **Bell** Oil company stock is $1,000,000.00 for the Texas company and $900,000.00 for the Louisiana company.

Decision will be entered for the deficiency originally determined.

[1] There are some mathematical errors in the expert's report on the tables labeled "Data on Convenience Food Stores." The expert developed some of his figures based on these errors.

[2] Johnson never explained how long-term debt of the corporation could earn any return. We assume that he meant a return on the proceeds of the debt. Nevertheless, Johnson failed to identify how the proceeds were invested and failed to explain the difference between the return on the use of the debt proceeds and the return on the assets he chose to categorize into three groups.

[3] Noting the expert's apparent arbitrary methods and some of the errors made by him in calculating the ratio of value to sales, the Court, while not giving any credence to the ratio, recalculated the multiplier used during trial. Applying this new multiplier (.16) to the **Bell** Oil companies, Johnson concluded that **Bell**-Tex should be valued at $1,680,000.00 and **Bell**-La should be valued at $608,000.00.

COMMONWEALTH OF MASSACHUSETTS
THE TRIAL COURT
PROBATE AND FAMILY COURT DEPARTMENT

DUKES, ss. DOCKET NO.: 00D-0037-DV1

JUDITH E. BERNIER, Plaintiff,
Defendant in Counterclaim

v.

STEPHEN A. BERNIER, Defendant,
Plaintiff in Counterclaim

SUPPLEMENTAL JUDGMENT

This matter came before the Court (Kaplan J.) for trial and the issues having been duly heard, and a Judgment of Divorce Nisi having been entered on February 27, 2002, granting a divorce to the parties on the grounds of irretrievable breakdown of the marriage pursuant to G.L. c. 208, § 1B and bifurcating all remaining issues for trial. In consideration of the Findings of Fact and Conclusions of Law entered herewith, it is hereby ORDERED AND ADJUDGED as follows:

PROPERTY DIVISION

1. The Husband shall have the exclusive right of election ("option") to buy out Wife's fifty percent (50%) interest in Bernier's Market, Inc. and Bernier's Up Island Market, Inc. (hereinafter "the Markets") for the sum of $3,925,000, which represents one half of the total value of $7,850,000. The Husband shall have sixty (60) days to notify the Wife in writing, with copies to counsel, of his intent to buy out her interest under the terms of this Judgment.

2. In the event that the Husband elects to buy out the Wife's fifty percent (50%) interest, the Husband shall pay the Wife a lump sum down payment of $1,000,000 within six months from the date of his notice of election. Thereafter, the Husband shall pay the balance due to the Wife, of $2,925,000 in equal installments of $585,000 over a five year period, beginning on January 1, 2005 and on January 1st of each year thereafter until January 1, 2009. The Husband shall also pay interest to the Wife on the balance of $2,925,000, at six percent (6%) simple interest calculated annually. All

interest shall be due at the payment of the last installment.

3. The balance of funds due to the Wife shall be secured by a combination of mortgages on the underlying real estate of the Markets and by perfecting a security interest in the stock of the Markets. The Husband shall cause a legend to be created on the Markets' stock certificates reflecting said interest. The legends shall be deleted in pro rata proportion to the balance then due to the Wife after each annual payment over the five year period. The shares in which a security interest is perfected shall be held in escrow by the Husband's attorney, with copies sent to the Wife's attorney. Additionally the Husband shall grant to the Wife a blanket mortgage on all of the commercial real estate transferred to him pursuant to Paragraphs 4, 5, and 7, except that he shall be able to borrow against said real estate to pay the lump sum payment of $1,000,000 to the Wife. The amount of the mortgage shall be decreased in pro rata proportion to the balance then due to the Wife after each annual payment over the five year period.

4. Within 30 days of the Husband's exercise of his option to buy out the Wife's interest in the Markets, the Wife shall transfer to the Husband her fifty (50%) percent beneficial interest in and to the Bernier Realty Trust, which holds title to the real estate located at 357-369 State Road, Vineyard Haven, MA. The Husband shall be the sole beneficiary of said trust, and the Wife shall have no further rights to such trust property. The Husband shall be exclusively responsible for any and all costs associated with the aforementioned properties, including without limitation the mortgage (principal and interest), taxes, insurance, utilities and repairs. The Husband shall indemnify and hold the Wife harmless from any such expenses.

5. Within 30 days of the Husband's exercise of his option to buy out the Wife's interest in the Markets, the Wife shall forthwith transfer to the Husband all of her right, title and interest in the real estate located at 469 and 479 State Road, West Tisbury, MA. The Husband shall be exclusively responsible for any and all costs associated with his ownership of the aforementioned properties, including without limitation mortgage (principal and interest), taxes, insurance, utilities and repairs. The Husband shall indemnify and hold harmless the Wife from any such expenses.

6. Within 30 days of the Husband's exercise of his option to buy out the Wife's interest in the Markets the Wife shall forthwith transfer to the Husband all of the shares of stock standing in her name in Bernier's Market, Inc. (doing business as Cronig's State Road Market and known as the Down Island Market) and to Bernier's Up Island Market, Inc. (doing business as Cronig's Up Island Market, know as the Up Island Market). From and after the date of the transfer the Husband shall be the sole shareholder in each corporation, and the Wife shall have

no further rights of stock ownership.

7. Within 30 days of the Husband's exercise of his option to buy out the Wife's interest in the Markets the Wife shall forthwith transfer to the Husband all of the shares of stock standing in her name in the Colonial Drive Real Estate Corporation, and shall convey all of her right, title and interest in and to the real estate located at 31 Colonial Drive, Vineyard Haven, MA (title to which is held in the name of Colonial Drive Real Estate Corporation). The Husband shall be exclusively responsible for any and all costs associated with his ownership of the aforementioned properties, including without limitation mortgage (principal and interest), taxes, insurance, utilities and repairs. The Husband shall indemnify and hold harmless the Wife from any such expense.

8. The Husband shall be solely responsible for the preparation of all documents necessary to effectuate the transfers of stock and real estate, and for securing his monetary obligations under this judgment.

9. If the Husband elects not to exercise this option at the expiration of sixty (60) days from the date of this Judgment, then the Wife shall have the next right of election ("option") to buy the Husband's interest in the Markets under the same terms and conditions. She shall have sixty (60) days, from the date that the Husband has advised her in writing of his intention not to exercise his option to purchase, to notify the Husband in writing, with copies to counsel, of her intent to buy out his interest, for the sum set forth in Paragraph 1, above. Upon said notification the Husband shall turn over control of the Markets to the Wife within 60 days.

10. In the event that the Wife elects to buy out the Husband's fifty percent (50%) interest, the Wife shall pay the Husband a lump sum down payment of $1,000,000 within six months from the date of her notice of election. Thereafter, the Wife shall pay the balance due to the Husband, of $2,925,000 in equal installments of $585,000, over a five year period, beginning on January 1, 2005 and on January 1st of each year thereafter until January 1, 2009. The Wife shall also pay interest to the Husband on the balance of $2,925,000, at six percent (6%) simple interest calculated annually. All interest shall be made on or before the first of each month, beginning the month after the Wife makes her election to purchase the Markets.

(11) 10. The balance of funds due to the Husband shall be secured by a combination of mortgages on the underlying real estate of the Markets and by perfecting a security interest in the stock of the Markets. The Wife shall cause a legend to be created on the Market's stock certificates reflecting said interest. The legends shall be deleted in pro rata proportion to the balance then due to the Husband after each annual payment over the five year period. The shares in which a security interest

is perfected shall be held in escrow by the Wife's attorney, with copies sent to the Husband's attorney. Additionally the Wife shall grant to the Husband a blanket mortgage on all of the commercial real estate transferred to her pursuant to Paragraphs 11, 12, and 14, except that she shall be able to borrow up to $1,000,000 to make the lump sum payment to the Husband. The amount of the mortgage shall be decreased in pro rata proportion to the balance then due to the Husband after each annual payment over the five year period.

11. Within 30 days of the Wife's exercise of her option to buy out the Husband's interest in the Markets, the Husband shall transfer to the Wife his fifty (50%) percent beneficial interest in and to the Bernier Realty Trust, which holds title to the real estate located at 357-369 State Road, Vineyard Haven, MA. He shall also resign as trustee and the Wife shall be appointed as successor trustee. The Wife shall be the sole beneficiary of said trust, and the Husband shall have no further rights to such trust property. The Wife shall be exclusively responsible for any and all costs associated with the aforementioned properties, including without limitation the mortgage (principal and interest), taxes, insurance, utilities and repairs. The Wife shall indemnify and hold the Husband harmless from any such expenses.

12. Within 30 days of the Wife's exercise of her option to buy out Husband's interest in the Markets, the Husband shall forthwith transfer to the Wife all of his right, title and interest in the real estate located at 469 and 479 State Road, West Tisbury, MA. From and after the date of such transfer, the Wife shall be exclusively responsible for any and all costs associated with his ownership of the aforementioned properties, including without limitation mortgage (principal and interest), taxes, insurance and utilities and the like. The Wife shall indemnify and hold harmless the Husband from any such expenses.

13. Within 30 days of the Wife's exercise of her option to buy out the Husband's interest in the Markets, the Husband shall forthwith transfer to the Wife all of the shares of stock standing in his name in Bernier's Up Island Market, Inc. and Bernier's Market, Inc. From and after the date of the within Judgment the Wife shall be the sole shareholder in said corporation, and the Husband shall have no further rights of stock ownership.

14. Within 30 days of the Wife's exercise of her option to buy out the Husband's interest in the Markets the Husband shall forthwith transfer to the Wife all of the shares of stock standing in his name in the Colonial Drive Real Estate Corporation, and shall convey all of his right, title and interest in and to the real estate located at 31 Colonial Drive, Vineyard Haven, MA (title to which is held in the name of Colonial Drive Real Estate Corporation). The Wife shall be exclusively responsible for any and all costs associated with her ownership of the

aforementioned properties, including without limitation mortgage (principal and interest), taxes insurance, utilities and repairs. The Wife shall indemnify and hold harmless the Husband from any such expense.

15. The Wife shall be solely responsible for the preparation of all documents necessary to effectuate the transfers of stock and real estate, and for securing her monetary obligations under this judgment.

16. In the event that neither the Husband or Wife exercises their option to buy the other out of the Markets, then Attorney Malcolm Jones shall be appointed as a Special Master to sell the Markets, and the real estate located at 357-369 State Road, Vineyard Haven; 31 Colonial Drive, Vineyard Haven; 469 State Road, West Tisbury; and 479 State Road, West Tisbury. Immediately upon his appointment the Special Master shall place the Markets and the real estate on the open market for sale to a third party. The net proceeds shall be distributed equally, except for the adjustments set forth in Paragraph 25 (C) below. Each party shall be solely responsible for one half of the capital gains taxes attributed to the sale of both the Markets and the underlying real estate. Upon completion of the sale all related corporate entities and realty trusts shall be dissolved.

FURTHER PROPERTY DIVISION

17. The Wife shall forthwith transfer to the Husband all of her right, title and interest in the marital real estate located as follows:

a) 10 Hammett Road, Chilmark, Dukes County, MA;
b) 602 Royal Palm, St. Maarten, West Indies;
c) Unit B231 & B332, Pelican Resort, St. Maarten, West Indies;

From and after the date of such transfer, the Husband shall be exclusively responsible for any and all costs associated with his ownership of the aforementioned properties, including without limitation mortgage (principal and interest), taxes, insurance and utilities and the like. The Husband shall indemnify and hold harmless the Wife from any such expenses.

18. The Wife shall forthwith execute any deeds necessary to transfer to the Husband all of her right, title and interest in and to the properties awarded to the Husband in paragraph fourteen (¶14) above and shall waive and release any claim of right, title and interest in and to the properties that she may now have or may hereafter acquire as spouse under the present and future laws of any jurisdiction. All documents necessary to effectuate the transfers shall be prepared by the Husband.

19. The Husband shall forthwith transfer to the Wife all of his right, title and interest in the marital real estate located as follows:

    a) 147 Stoney Hill Road, West Tisbury, Dukes County, MA;
    b) 155 Stoney Hill Road (known as Rosewood Farm), West Tisbury, Dukes County, MA;
    c) 181 Stoney Hill Road, West Tisbury, Dukes County, MA;
    d) 141 Stoney Hill Road, West Tisbury, Dukes County, MA;
    e) 17 Dodger's Hole Road, Edgartown, Dukes County, MA;
    f) 7 Sparrow Lane, Edgartown, Dukes County, MA.

    From and after the date of such transfers, the Wife shall be exclusively responsible for any and all costs associated with her ownership of the aforementioned properties, including without limitation mortgage (principal and interest), taxes, insurance, utilities and the like. The Wife shall indemnify and hold harmless the Husband from any such expenses.

20. The Husband shall forthwith execute any deeds necessary to transfer to the Wife all of his right, title and interest in and to the properties awarded to the Wife in paragraph seventeen (¶17) above and shall waive and release any claim of right, title and interest in and to the properties that he may now have or may hereafter acquire as spouse under the present and future laws of any jurisdiction. All documents necessary to effectuate the transfers shall be prepared by the Wife.

21. The Wife shall retain any and all interest she may have in and to the following:

    a) Dukes County Savings Bank
    Checking Account No. 23057014

    b) Dukes County Savings Bank
    Savings Account No. 23089114

    c) Dukes County Savings Bank
    Savings Account No. 02-00-029822
    (Dodger's Hole Rental)

    d) Dukes County Savings Bank
    Savings Account No. 03-31551

    e) Salomon Smith Barney
    Account No. 136-002732

f) First Community Credit Union
Account No. 011-11101425

g) American Funds- IRA
Account No. 61245497-16

h) Salomon Smith Barney
Profit Sharing (Bernier's Market)
Account No. 136-01273-18

i) Motor vehicles standing in the name of the Wife, including without limitation: 1999 Chevrolet Suburban SUV, 1995 Sundowner Horse Trailer, 2000 Ford F350 Pick Up Truck, 2001 Sundowner Tagalong horse trailer.

k) Furniture, jewelry, art, antiques, furnishings, cash on hand, horses and personal property located in or about the Wife's residence and/or property.

20. The Husband shall retain any and all interest he may have in and to the following:

a) Martha's Vineyard Cooperative Bank
Checking Account No. 33365753

b) Salomon Smith Barney
Account No. 136-02731-12
[not subject to division]

c) Salomon Smith Barney- IRA
Account No. 136-60387-17-502

d) Salomon Smith Barney- IRA
Account No. 136-01307-18-502

e) Salomon Smith Barney
Profit Sharing (Bernier's Market)
Account No. 136-01273-18

f) Motor vehicles standing in the Husband's name, including without limitation: 1995 Land Rover, 1995 Chevrolet 1500 Pick Up Truck, 1996 Chevrolet Tahoe, 1997 Ford Box Truck, 2000 Chevrolet Malibu.

g) Furniture, jewelry, furnishings and personal property located in or about the Husband's residence and/or property.

21. The Husband shall forthwith transfer to the Wife his interest in the following joint accounts:

a) Dukes County Savings Bank
Account No. 01-35-577202;

b) Dukes County Savings Bank
Checking Account No. 23135205;

c) Dukes County Savings Bank
Savings Account No. 03-21301;

22. The Wife shall forthwith transfer to the Husband her interest in the following joint accounts:

a) 1784 Funds
Account No. 901-40000904472.

b) Salomon Smith Barney
Account No. 1360130817502

23. The Wife shall forthwith transfer to the Husband her ownership interest in the following life insurance policies: Jefferson Pilot Universal Life Policy Numbers 2122903 and 506047069. The Husband shall retain in his individual name the cash surrender value in the following life insurance policies: Jefferson Pilot Universal Life Policy Numbers 2122904, 2122903, and 506047069.

24. The parties shall take all steps necessary to transfer to one another from joint accounts those accounts assigned to each of them pursuant to the foregoing paragraphs.

25. In order to equalize the real estate asset division and non-real estate asset division, exclusive of the Markets, including credits and debits for legal and expert fees, excess operational expenditures for Rosewood Farm advanced by the Markets, capital improvements to the Wife's home and to the Farm, the following division of assets shall apply:

A. If the Husband exercises his option to buy out the Wife interest in the Markets, then he has received real estate assets valued at $5,412,052 and non real estate assets of $1,320,378.50, totaling $6,732,430.50. The Husband has

listed on his financial statement debts to Cronig's Limited Partnership of $865,233 which the Court finds is a debt of the Markets and not a personal obligation of the Husband. This debt shall be the responsibility of the person who retains ownership of the Markets. Under this scenario the Wife is receiving real estate assets valued at $2,994,568 and non-real estate assets of $1,018,661, totaling $4,013,229. The Wife has debts on her financial statement of $23,269, which the Court finds is marital debt. The Wife is therefore receiving net assets of $3,989,966. An equalization of these assets would result in each party receiving assets valued at $5,361,198, and the Husband would owe the Wife the sum of $1,371,232. From this amount the following credits needs to be taken: 1) the amount of legal and expert fees advanced to the Wife from the Markets during the pendency of this litigation; 2) advances made to the Wife for operational expenses for the Farm, as follows: ii. for 2001 any sums paid in excess of $375,000 and ii. for 2002 and 2003 any sums paid for operational expenses, except for the payments for the mortgage, homeowners insurance and real estate taxes; and 3) one half of improvements made to the Wife's home and the Farm, pursuant to the terms of the temporary order. Once this sum has been calculated if the Husband owes the Wife any monies then those shall be paid in 60 days. If the Wife would owe the Husband money then the amount owed shall be deducted from the $1,000,000 lump sum payment due to the Wife.

B. If the Wife exercises her option to buy out the Husband's interest in the Markets then she has received real estate assets valued at $6,905,650 and non real estate assets of $1,018,661, totaling $7,924,311. The Wife has debts of $23,269 which the Court finds is marital debt. The Wife is therefore receiving net assets of $7,901,042. Under this scenario the Husband is receiving real estate assets valued at $1,591,970 and non-real estate assets of $1,320,378.50, totaling $2,912,348.50. The debt to Cronig's, listed on Husband's financial statement shall become the responsibility of the Wife. An equalization of these assets would result in the Wife paying to the Husband the sum of $2,494,346.50. From this amount the total advanced to the Husband for his legal and expert fees should be deducted. Added to this amount are the following: 1) advances to the Wife for operational expenses for the Farm, as follows: ii. f or 2001 any sums paid in excess of $375,000 and ii. for 2002 and 2003 any sums paid for operational expenses, except for the payments for the mortgage, homeowners insurance and real estate taxes; and 3) one half of improvements made to the Wife's home and the Farm, pursuant to the terms of the temporary order. Once this sum has been calculated the Wife shall pay the Husband the amount owed within one year from the date of this Judgment.

C. If the Markets are sold then each party shall repay the company, within 60 days of their election to sell, all monies each has been advanced for legal and expert fees. From the final distribution of the proceeds from the sale of the Markets and commercial real estate, before the proceeds are equalized the following adjustments shall be made: 1) The Wife shall pay the Husband one half of the cost of the improvements paid for her home and the Farm; 2) The Wife shall pay the Husband for the amount of advances made to her for operational expenses for the Farm, as follows: ii. f or 2001 any sums paid in excess of $375,000 and ii. for 2002 and 2003 any sums paid for operational expenses, except for the payments for the mortgage, homeowners insurance and real estate taxes; and 3) the Wife shall pay to the Husband the sum of $538,808.70 which represents the amount necessary to equalize the property division that each will receive under this scenario (Wife receives assets valued at $3,989,966 and Husband receives assets valued at $2,912,348.50).

26. There shall be no further division of personal property between the parties.

HEALTH INSURANCE

27. The Husband shall continue to maintain health insurance for the Wife, or its reasonable equivalent, so long as she remains eligible at no additional cost to the Husband. If there is an additional cost for the Wife to remain on the Husband's plan, the Husband shall provide written notice to the Wife of the cost and effective date. The Wife may elect to continue such coverage and personally pay the cost for the additional coverage, and must notify the Husband in writing of her election within fourteen (14) days of receipt of notice from the Husband. If the Wife exercises her option to purchase the Markets, the provisions of this paragraph shall require the Wife to maintain health insurance for the Husband, under the same terms and conditions.

28. The Husband and Wife shall each be responsible for their own uninsured medical, dental, mental health and hospital expenses.

LIABILITIES AND TAXES

29. The Husband and the Wife shall each be responsible for his or her own liabilities as set forth on their respective Rule 401 Financial Statements filed on February 27, 2002, excluding legal and expert fees and the debt to Cronig's [*see supra.*]. Each party shall indemnify and hold harmless the other of and from any loss, cost or damage, including attorney's fees incurred by such other as a result of any breach of the obligations of the provisions of this Judgment.

30. The Husband shall be solely responsible for the payment of all corporate taxes for the Markets and the other business entities from the date of separation until the date of this Judgment. In the event that the Markets are sold to a third party then the Husband shall continue to be responsible for the payments of all corporate taxes until the sale. If the Wife exercises her option to purchase the Market s then from the date of her election she shall be solely responsible for the payment of all corporate taxes.

ALIMONY AND LIFE INSURANCE

31. Commencing on the first Friday after the date of the Judgment the Husband shall pay $5,288.46 per week in alimony to Wife, commencing on the first Friday after the date of the Judgment. The Husband's alimony obligation shall terminate at the remarriage of the Wife or the death of the Husband, or when he exercises his option not to purchase the Markets, or the Markets and business properties are sold to a third party. In addition, until the Husband has made his final payment to the Wife for her share of the Markets, he shall pay her an additional $3,160.11 per week as alimony. This payment shall commence on the first Friday after the date of the Judgment and continue until January 1, 2009, or sooner if the Husband has completed his payment s to the Wife for her share of the assets or exercised his option not to purchase the Markets, or the Markets are sold to a third party.

32. Providing that the Wife retains the Markets, she shall pay from the Markets, the mortgage and real estate taxes on 10 Hammett Road, the Husband's automobile expenses and provide him with a house account at the Markets to buy groceries. The Wife's obligation to pay these expenses for the Husband's benefit shall continue until January 1, 2009 or sooner if she has completed her payments to the Husband for his share of the assets.

33. If neither party elects to retain the Markets, either party may file a modification on the payment of alimony from the Husband to the Wife after the Markets are sold.

34. For so long as Husband is obligated to provide support under the terms of the Judgment, he shall maintain life insurance insuring his life with a death benefit value of $2,000,000.00, naming Wife as the sole beneficiary.

35. In the event that the Wife purchases the Markets then she shall maintain life insurance, insuring her life, with a death benefit value of $1,000,000.00, naming Husband as the sole beneficiary until she has no further financial obligations to the Husband.

Date: 6/18/03

Probate and Family Court Department

Bernier v. Bernier (2007)

SJC-09836

JUDITH E. BERNIER vs. STEPHEN A. BERNIER (and a companion case[1]).

Dukes. May 7, 2007. - September 14, 2007.

Present: Marshall, C.J., Greaney, Ireland, Spina, Cowin, & Cordy, JJ.

Divorce and Separation, Division of property, Alimony. Corporation, Close corporation, Valuation. Estoppel. Collateral Estoppel.

Complaints for divorce filed in the Dukes Division of the Probate and Family Court Department on June 12, 2000.

The cases were heard by Randy J. Kaplan, J.

Civil action commenced in the Dukes Division of the Probate and Family Court Department on July 28, 2003.

A motion to dismiss was heard by Randy J. Kaplan, J.

After consolidation of the appeals in the Appeals Court, the Supreme Judicial Court on its own initiative transferred the case from the Appeals Court.

David L. Kelston (Theodore Tedeschi with him) for Judith E. Bernier.

Paul M. Kane for Stephen A. Bernier.

MARSHALL, C.J. This appeal by Judith E. Bernier (wife) from decisions of a judge in the Probate and Family Court incident to her divorce from Stephen A. Bernier (husband) presents us with the novel question whether it is proper to discount the value of an S corporation, see 26 U.S.C. §§ 1361-1379 (2000), by "tax affecting" income at the rate applicable for C corporations, where one spouse will receive ownership of all shares of the S corporation after the divorce and the other will be required to relinquish all ownership in the business. See 26 U.S.C. §§ 311, 312 (2000). Also presented by the wife's appeal are whether the judge erred in discounting the fair market value of the S corporations at issue here by applying "key man" and "marketability" discounts; whether the amount of alimony awarded to the wife was proper; and whether the judge improperly dismissed the wife's equity complaint against the husband alleging misuse of marital assets.

On the issue of tax affecting, we conclude that the judge erred in adopting the valuation of the husband's expert witness that tax affected the fair market value of the parties' S corporations at the "average corporate rate," in the words of the husband's expert, of a C corporation.**[2]** As a preliminary matter, where valuation of assets occurs in the context of divorce, and where one of the parties will maintain, and the other be entirely divested of, ownership of a marital asset after divorce, the judge must take particular care to treat the parties not as arm's-length hypothetical buyers and sellers in a theoretical open market but as fiduciaries entitled to equitable distribution of their marital assets. See G. L. c. 208, § 34.

Further, careful financial analysis tells us that applying the C corporation rate of taxation to an S corporation severely undervalues the fair market value of the S corporation by ignoring the tax benefits of the S corporation structure and failing to compensate the seller for the loss of those benefits. On the other hand, in the circumstances of this divorce action, we agree with a recent decision of the Delaware Court of Chancery that failure to tax affect an S corporation entirely artificially will inflate the value of the S corporation by overstating the rate of return that the retaining shareholder could hope to achieve. See Delaware Open MRI Radiology Assocs. v. Kessler, 898 A.2d 290, 327 (Del. Ct. Ch. 2006) (Kessler). Our review of the scant case law and the pertinent literature on the issue leads us to adopt generally the metric employed by the Kessler court, see id. at 328-330, described more fully infra, which most closely achieves the parties' stated intention in this case to divide the value of their S corporations equally, the outcome the judge also sought to achieve. We also conclude that, where the husband testified that he planned to retain control of the S corporations after the divorce, the judge erred in applying key man and marketability discounts, discounts that assume the possible sale of the asset.

On the issue of alimony, we hold that the judge did not err in awarding the wife an amount of alimony sufficient to meet her personal needs, as reflected in her financial statement, exclusive of losses she incurred in owning and operating a horse farm acquired by the parties during the marriage and given to the wife pursuant to the parties' stipulation and the judge's award in the divorce action. See Heins v. Ledis, 422 Mass. 477, 482 (1996) (purpose of alimony is support and maintenance). Finally, we determine that the wife's equity complaint against the husband was not barred by principles of issue preclusion and res judicata and therefore should not have been dismissed. We affirm the portion of the third amended supplemental judgment in the divorce matter concerning alimony, vacate the portion of the third amended supplemental judgment concerning valuation of the parties' S corporations, and remand for further proceedings not inconsistent with this opinion. We vacate the judgment of dismissal in the wife's equity action, which we also remand for further proceedings not inconsistent with this opinion.

1. Background. The parties were married in Massachusetts in 1967. On June 12, 2000, the husband, then fifty-two years old, and the wife, fifty-four years old, filed cross complaints for divorce in the Dukes Division of the Probate and Family Court Department.**[3]** The record indicates, and the judge found, that initially the parties were of modest means. However, in 1986, after they moved from Billerica to Martha's Vineyard, their circumstances improved markedly. The

engine of the parties' financial success was two supermarkets that were subsequently owned by two S corporations, of which the husband and wife each owned one-half.[4] During their marriage, the parties also acquired what the judge termed an "extensive" portfolio of residential, commercial, and undeveloped properties. Among these properties was a thirty-six acre plot of land in West Tisbury, which the parties purchased in 1996, and on which they constructed Rosewood Farm (horse farm), a horse breeding farm under the control and management of their company, Rosewood Farm, Inc.

After they filed for divorce but before trial, the parties voluntarily entered into numerous temporary stipulations governing their financial affairs during the pending proceedings. The stipulations gave the husband sole authority to operate and manage the supermarkets and similar authority for the wife to run the horse farm. Further, the stipulations provided that certain business and personal expenses, and the parties' attorney's fees and costs, be paid from specified joint assets. Additionally, before trial, the parties agreed that all of their assets would be divided equally, and stipulated to the value of most of their assets, approximately $11 million. The parties were unable to reach agreement on two issues: the value of the supermarkets and the amount of alimony due to the wife. On February 27, 2002, a judge in the Probate and Family Court entered a judgment of divorce nisi, bifurcating the trial on the two remaining issues.

Between February and May, 2002, the judge heard eight days of testimony, which centered principally on the value of the supermarkets.[5] During the trial, each party presented the testimony of an expert witness on valuation: Mark Leicester prepared the wife's valuation, and Joel Horvitz prepared that of the husband.[6] Leicester and Horvitz were in broad agreement on key points. Specifically, both agreed that the buyer of the supermarket shares would seek an investment that would yield the buyer's required rate of return. They also agreed that the most accurate estimate of the supermarkets' value would be achieved by employing what both parties refer to as the "income" approach, taking the supermarkets' average adjusted income after expenses for a set number of years, divided by the appropriate capitalization rate.[7]

Despite their areas of agreement, however, the two experts arrived at vastly different appraisals of the supermarkets' fair market value. Leicester testified that the fair market value of the supermarkets was $16,391,000. Horvitz set the fair market value at $7,850,000.

The discrepancy in the experts' valuations was due to several factors, primarily Horvitz's application of tax affecting, as well as certain discounts to his calculations of fair market value[8] and Leicester's omission of those considerations. Specifically, Horvitz tax affected as if the S corporation were a C corporation, at what he termed the "average corporate rate" of thirty-five per cent. But see note 19, infra. He testified that tax affecting the S corporations at the C corporation rate was proper because, among other things, a person contemplating the purchase of an S corporation would factor into his probable rate of return the tax consequences of the purchase. Leicester, on the other hand, did not tax affect the supermarkets' income in his valuation because, as he testified, an S corporation, unlike a C corporation, does not pay taxes at the entity level, and because no sale of the business was contemplated.[9] Horvitz additionally discounted the fair market value of the supermarkets by applying a ten per cent "key man" discount to the adjusted net income of the supermarkets to account for the undisputed fact that the husband was the most important figure in the operation and management of the supermarkets.[10] He then applied an additional ten per cent discount to account for the "lack of marketability" of the S corporation as a closely held business. Leicester maintained that, because the husband planned to maintain ownership and control of the supermarkets after the divorce, key man and marketability discounts should not apply.

On August 18, 2003, the judge entered a supplemental judgment, finding of facts, rationale, and conclusion of law on the valuation of the supermarkets. The judge rejected Leicester's valuation as "unreliable." Specifically, she faulted Leicester on the grounds that he improperly combined

pretax and posttax data in establishing a capitalization rate, improperly applied a rate of growth to his valuation, omitted a marketability discount, and lacked experience valuing S corporations. The judge adopted substantially without change Horvitz's method of applying tax affecting and key man and marketability discounts to the supermarkets, and adopted his conclusion that the fair market value of the supermarkets on the relevant date, see note 5, supra, was $7,850,000. In concluding that the income of the parties' S corporations should be tax affected for valuation purposes, the judge cited Gross v. Commissioner of Internal Revenue, 272 F.3d 333 (6th Cir. 2001), cert. denied, 537 U.S. 827 (2002) (Gross) (affirming United States Tax Court judgment that it was proper to tax affect using zero per cent corporate tax rate, in context of valuing gift of S corporation stock).

On January 22, 2004, nunc pro tunc to October 6, 2003, the judge entered a third amended supplemental judgment, awarding the husband the option to purchase the wife's fifty per cent ownership interest in the supermarkets for $3,925,000 -- one-half of the supermarkets' total value of $7,850,000 -- and providing other relief.[11]

After the close of trial, and while the divorce proceedings were pending, the wife, individually and, in a derivative action, on behalf of the parties' business entities, filed a separate verified complaint in equity against the husband and the business entities. The wife sought fifty per cent of the supermarkets' net income from January 1, 2001, the date of the last reconciliation of the supermarkets' accounts, to February 2, 2004, the date the husband exercised his option to purchase the wife's fifty per cent ownership interest in the supermarkets.[12] Among other things, the wife alleged that the husband had taken the position at a corporate meeting in July, 2003, that he was entitled to all of the income from the supermarkets after the last reconciliation (December 31, 2000), and that he had failed to provide the wife with accountings and distributions as required under the temporary orders. After a hearing, the judge dismissed the wife's equity complaint with prejudice, holding that because the wife's claims should and could have been brought in the divorce action and were resolved by the divorce action, her equity claims were barred by issue preclusion and res judicata.[13] The wife's appeals from the judge's decisions in the divorce action and from the dismissal of her equity complaint were consolidated in the Appeals Court, and we transferred the case from the Appeals Court on our own motion.

2. Tax affecting the valuation of S corporation shares. The parties agree, as the judge found, that the "major difference" in the valuations of Horvitz and Leicester is Horvitz's use of tax affecting. To assess the propriety of the judge's adoption of Horvitz's methodology of tax affecting, it is instructive to summarize the pertinent facts regarding corporate structure and taxation.

The husband and wife, as equal shareholders, elected that the supermarkets be taxed under the provisions of subchapter S of the Internal Revenue Code, 26 U.S.C. §§ 1361-1379. To elect S corporation status, the corporation and its shareholders must meet and maintain several requirements, including, as relevant here, that (1) the corporation may not have more than one hundred shareholders, and (2) only individuals, estates, or certain trusts may hold its shares. 26 U.S.C. § 1361(b). In other words, an S corporation may not have a traditional corporation (known as a "C corporation") as one of its shareholders. The primary advantage of an S corporation over a C corporation is that the S corporation is not Federally taxed at the corporate level,[14] but is "passed through" to the shareholders on a pro rata basis and taxed to the shareholders when earned by the corporation, whether or not the corporation pays dividends. Cf. 26 U.S.C. §§ 707-777 (2000) (taxation of partnerships); 26 U.S.C. § 1363 ("taxable income of an S corporation shall be computed in the same manner as in the case of an individual"). See note 2, supra. Net income from these entities is passed through to owners and taxed at the individual level in the year that it is earned. In contrast, the earnings from a C corporation are taxed twice: once at the corporate level, and then at the individual level as a tax on shareholder dividends, if any, paid by the C corporation. Thus, as we illustrate in the margin, S corporation shareholders enjoy the considerable benefit of avoiding the "double taxation" of corporate dividends that is the hallmark of the C corporation.[15]

To distinguish between S and C corporations, however, does little in itself to clarify the issue of valuation. To begin with, we must acknowledge that the valuation of an S corporation is an inexact science.[16] See, e.g., Gross, supra at 356 (Cohn, J., concurring in part and dissenting in part). Compounding the difficulty in the case of an S corporation is the question whether, and how, to account for tax consequences. The matter has bedeviled the professional appraisers' community for some time, and certainly was the source of some confusion at the time of the trial. See id. at 355 (Cohn, J., concurring in part and dissenting in part). See also Kessler, supra at 326 (valuation of S corporation by tax affecting has "elicited a fair amount of attention from judges, appraisers and academics"). While the Internal Revenue Service (IRS) appears to have endorsed the practice of tax affecting an S corporation in the manner that Horvitz followed, see Gross, supra at 353 (Cohn, J., concurring in part and dissenting in part), quoting IRS Valuation Guide for Income, Estate and Gift Taxes: Valuation Training for Appeals Officers[17] (in valuing S corporations, one "need only to adjust the earnings from the business to reflect estimated corporate income taxes that would have been payable had the Subchapter S election not been made"), both case law and professional scholarship have cast serious doubt on the validity of this practice.[18]

In this case, the debate over tax affecting played out in the diametrically opposed positions taken by the parties' experts. Would the hypothetical purchaser of the supermarkets at fair market value, as the wife's expert maintained, not factor any tax consequences at all into his analysis of the achievable rate of return on his investment, because an S corporation, as an entity, pays no taxes? Or, as the husband's expert asserted, would that purchaser tax affect at the C corporation tax rate,[19] because, in the judge's words, "the value of an entity should not depend on whether the shareholders make the elections to be a C or S Corporation." Or would an alternative to these two extremes better account for the value of the supermarkets in the circumstances of this case?

Valuation of a business is a question of fact. See Demoulas v. Demoulas Super Mkts., Inc., 424 Mass. 501, 541 n.47 (1997). Thus, the standard is whether the judge's findings were clearly erroneous. See Mass R. Civ. P. 52 (a), as amended, 423 Mass. 1402 (1996). When the opinions of valuation experts differ, a judge may "accept one reasonable opinion and reject the other" (emphasis added). Fechtor v. Fechtor, 26 Mass. App. Ct. 859, 863 (1989). The judge may also "reject expert opinion altogether and arrive at a valuation on other evidence." Id. The judge may not, however, reach a valuation that is materially at odds with the totality of the circumstances or, in the case of divorcing spouses, at variance with the requirements of the equitable distribution statute. G. L. c. 208, § 34. See C.P. Kindregan, Jr., & M.L. Inker, Family Law and Practice § 45.8, at 334-335 (3d ed. 2002), citing Fechtor v. Fechtor, supra at 862-867.

In adopting Horvitz's approach over Leicester's in the matter of tax affecting, the judge invoked the Gross case to support her conclusions. That case does not, however, do the work to which the judge assigned it. At issue in Gross was the fair market value of certain gifts of restricted stock of an S corporation.[20] Declining to adopt the position set out in its own valuation guide, see note 17, supra, the IRS opposed the tax affecting of cash flows that the company had employed in estimating fair market value using the income approach. See Gross, supra at 354 (Cohn, J., concurring in part and dissenting in part). The United States Court of Appeals for the Sixth Circuit affirmed that the Tax Court had the discretion to adopt the testimony of the Commissioner of Internal Revenue's expert witness that tax affected the S corporation using a zero per cent corporate tax rate -- effectively meaning no tax affect at all. Id. at 355 (Cohn, J., concurring in part and dissenting in part). The court was unpersuaded by the position taken by the taxpayer's expert, who tax affected at the corporate rate to account for the possibility that the corporation might lose its S corporation status in the future, because, the court noted, the record did not contain sufficient evidence that this was likely to happen. Id. at 353 (Cohn, J., concurring in part and dissenting in part). The court likewise rejected the argument that tax affecting at the C corporation rate was necessary to offset the fact that an S corporation must distribute enough funds to shareholders to pay their tax liability on its earnings; the court noted that the S

corporation at issue had always distributed almost one hundred per cent of its net earnings and there was no evidence this practice would not continue. Id.

The judge in this case cited Gross for the proposition that "[t]ax affecting Subchapter S income for valuation purposes should be reflected in determining the 'cost of capital.'" However, the judge ignored the Gross court's application of a zero per cent corporate tax rate and instead adopted Horvitz's thirty-five per cent "average corporate tax rate."**[21]** See note 19, supra. We conclude there is no support in Gross for the judge's adoption of Horvitz's figure, and moreover, the judge failed to offer a cogent explanation of her choice. See note 21, supra. The husband has cited no cases, nor have we found any, that apply the presumed thirty-five per cent rate of taxation of a C corporation to estimating the fair market value of an S corporation using the income approach.**[22]** We agree with the husband that the judge is free to credit the reasonable opinion of one expert over that of another. See Kendall v. Selvaggio, 413 Mass. 619, 620 (1992) (in reviewing valuation, court should "accept the judge's findings of fact as true unless they are clearly erroneous"); Fechtor v. Fechtor, supra at 863. However, even though the consensus on tax affecting was not entirely clear at the time of trial, and still remains subject to debate, the judge erred in adopting in all material respects Horvitz's valuation that tax affected at thirty-five per cent**[23]** when doing so was not reasonable as it would clearly produce an arbitrary result: a significant undervaluation of the supermarkets. See Fechtor v. Fechtor, supra, citing Caldwell v. Caldwell, 17 Mass. App. Ct. 1032, 1033-1033 (1984).

The difficulty with the judge's position is framed cogently in the decision in Kessler, supra. Kessler concerned a closely held S corporation, where the dealings between the majority and minority shareholders were constrained by fiduciary considerations.**[24]** See Donahue v. Rodd Electrotype Co. of New England, Inc. 367 Mass. 578, 593 (1975), quoting Cardullo v. Landau, 329 Mass. 5, 8 (1952) ("we hold that stockholders in the close corporation owe one another substantially the same fiduciary duty in the operation of the enterprise that partners owe to one another . . . [that standard of duty being defined as] the 'utmost good faith and loyalty'"). Here too, the property division between the husband and wife is constrained by fiduciary considerations. See G. L. c. 208, § 34. In Kessler, three of eight shareholders (Kessler group) of a radiology practice operating as an S corporation wanted the majority shareholders (Broder group), with whom business relations had ruptured, to buy out their shares. Predictably, the value each side attached to the shares differed markedly. The expert for the Broder group treated the S corporation as a C corporation in his valuation, applying forty per cent as the tax rate to the business's earnings. The Kessler group's expert did not tax affect earnings at all. The judge found neither expert's testimony concerning tax treatment to be fair. "The problem with [the] approach of treating [the entity] as a C corporation is obvious. [The entity] is a very small entity. The record reveals no set of circumstances in which it is likely that [the entity] will convert to C corporation status. It is a highly profitable entity that generates and distributes income well in excess of the stockholder level taxes its stockholders must pay. The S corporation tax status is a highly valuable attribute to the shareholders of [the entity], given its profitability and the affluent status of its physician stockholders, who face top marginal tax rates." Kessler, supra at 326. Treating the enterprise effectively as a C corporation, the court held, failed to account for the comparative tax benefits of S corporation ownership -- its signature feature -- and therefore depressed the estimate of the business's fair value. Id. at 327. On the other hand, the judge in Kessler reasoned, not tax affecting at all was also unfair, because it would lead to a windfall for the minority sellers. "[Denying] the reality that each shareholder owes taxes on his proportional interest in [the business] would result in the [Kessler group] receiving a higher per share value from the court than it could ever have realized as a continuing shareholder. . . . This is a simple premise -- no one should be willing to pay for more than the value of what will actually end up in her pocket." Id. at 328-329, citing Fisher, The Sale of the Washington Redskins: Discounted Cash Flow Valuation of

S Corporations, Treatment of Personal Taxes, and Implications for Litigation, 10 Stan. J. L. Bus. & Fin. 18 (2005).

Having rejected the rationale and conclusions of both experts, the Delaware court proposed an alternate approach. This approach attempted to capture the tax benefit to the buyer of S corporation shares (the Broder group) of receiving cash dividends that are not subject to dividend taxes. Id. at 330. The court observed that, as is the case here, the buyout was an "involuntary removal," id., and not an arm's-length purchase. To calculate the effect of taxes on the buyers and the sellers in these circumstances, the judge asked: if the S corporation at issue were a C corporation, at what hypothetical tax rate could it be taxed and still leave to shareholders the same amount in their pockets as they would have if they held shares in an S corporation? In other words, the judge asked what the effective corporate tax rate would be for the S corporation shareholder, although the entity itself paid no corporate tax. Assuming a dividend tax rate of fifteen per cent and a personal income tax rate of forty per cent (the shareholders were wealthy physicians who paid individual taxes at the highest rate),**[25]** the court imputed a "pre-dividend" corporate tax rate of 29.4 per cent to the S corporation. Id.**[26]** The result was to leave the shareholder of an S corporation with the same amount of money in his or her pocket as the shareholder of a C corporation being taxed at a (fictitious) 29.4 per cent corporate tax rate. Id. Applying this rate to the earnings of the entity measures "with the greatest practicable precision the fair value of the . . . interest in the going concern value of" the business. Id.

The Kessler court's trenchant analysis allows us to see that, in this case, applying the presumed thirty-five per cent tax rate applicable to a C corporation to the valuation of the supermarkets understated the value of the supermarkets, while failing adequately to account for the loss of S corporation benefits to the wife.**[27]** The result was particularly misplaced in this case in light of the uncontroverted evidence that the supermarkets would continue to operate as S corporations after the parties' divorce; that they would continue to be owned by one of the existing shareholders**[28]**; and that the supermarkets were profitable and would continue their historic practice of making cash distributions. We emphasize, moreover, that the valuation of the supermarkets was undertaken pursuant to G. L. c. 208, § 34, for purposes of equitable distribution in a divorce matter. Even though the judge did not have the benefit of the Kessler decision at the time she rendered her judgment, these circumstances alone should have prompted the judge to look past the all-or-nothing approach of the parties' experts and pay particular attention to the facts of this case over more abstract considerations.

We conclude that the metric employed by the Kessler court provides a fairer mechanism for accounting for the tax consequences of the transfer of ownership of the supermarkets from one spouse to the other in the circumstances of record. On remand on the issue of valuation, the judge is to employ the tax affecting approach adopted in Kessler.

3. Discounts. The parties' experts agreed that the husband's expertise was critical to the continued success of the supermarkets. On the assumption that after the divorce the supermarkets might be sold to a third party who would replace the husband at the helm of the supermarkets,**[29]** Horvitz (the husband's expert) discounted the value of the two supermarkets by ten per cent each for the "loss of [the husband]" as the "key man" and for the costs of sale (including broker's fees and advertising) of the supermarkets as closely held corporations. In evaluating the supermarkets, the judge adopted Horvitz's key man and marketability discounts. In the circumstances of this case, that was error.

It is appropriate to assess a key man discount when an individual's "continued services are critical to the financial success" of the business being valued and may be or will be lost. See Commonwealth v. Levin, 11 Mass. App. Ct. 482, 485 (1981) (defining term). See also Rev. Rul. 59-60, 1959-1 C.B. 237; Estate of Feldmar v. Commissioner, 56 Tax Ct. Mem. Dec. (CCH) 118, 130 (1988); Nelson v. Nelson, 411 N.W.2d 868, 871 (Minn. Ct. App. 1987). Here, however, given the husband's uncontradicted testimony that he would maintain total ownership and control of the supermarkets, it is beyond reason to conclude that the business's value should be reduced to account for loss of the man who is "the whole show." Indeed, the cases cited by the husband support rather than detract from our analysis. In Estate of Feldmar v. Commissioner, supra, the

court adopted a key man discount because the "key man" in the complex insurance holding company at issue had in fact died; without him, the court reasoned, the company might have no value at all. In Nelson v. Nelson, supra, the court found a key man discount applicable where the heart of the business was the sale of the employee's unique engineering services; the key man and the business were literally inseparable. The husband's role in the supermarkets, in contrast, is that of chief executive; his services are critical but not unique or irreplaceable, and in any event, as we have previously noted, the husband was not likely to be "lost" to the enterprise. In the circumstances of this case, the judge should not have adopted a key man discount in valuing the supermarkets.[30]

Similarly, a marketability discount "adjusts for a lack of liquidity in one's interest in [a closely-held corporation], on the theory that there is a limited supply of potential buyers for stock in a closely-held corporation." Tierney v. John Hancock Mut. Life Ins. Co., 58 Mass. App. Ct. 571, 577 n.8 (2003), cert. denied, 541 U.S. 903 (2004), quoting Lawson Mardon Wheaton, Inc. v. Smith, 160 N.J. 383, 398-399 (1999). See Balsamides v. Protameen Chems., Inc., 160 N.J. 352, 373 (1999). As Horvitz testified, and the judge found, a marketability discount is "the ability to convert the subject company to cash." This discount was not warranted in light of the husband's testimony negating any possibility of a sale. See note 28, supra. The subject companies will continue as going concerns and are not being converted to cash. "[N]either marketability nor a minority discount should be applied absent extraordinary circumstances . . . . Close corporations by their nature have less value to outsiders, but at the same time their value may be even greater to other shareholders who want to keep the business in the form of a close corporation." Brown v. Brown, 348 N.J. Super. 466, 474-476 (2002). Applying a marketability discount in light of the husband's intended, and presumed, acquisition of the supermarkets unfairly deflated their value.

One final issue raised by the wife is the matter of the rate of growth utilized in valuing the supermarkets. Horvitz used no growth rate in his valuation because he testified that doing so was a mere "guess" about the future. However, while he testified that the supermarkets "had a downward trend in sales over the last three years," he also admitted on cross-examination that the supermarkets' revenues were, in fact, growing, and that only the percentage of growth had been trending downward. Leicester testified that his valuation added a two and one-half per cent growth rate to account only for inflation. The judge "[did] not find that the application of a growth rate is appropriate in this matter." We disagree. We are persuaded that the judge abused her discretion by rejecting the two and one-half per cent growth rate advanced by Leicester where the uncontroverted record demonstrated that revenue growth had exceeded that amount in all relevant years, and there was no evidence that future growth would fall short of inflation.[31]

4. Award of alimony. The wife was awarded alimony in the pretax amount of $5,288.46 per week, or $275,000 per year (approximately $165,000 after taxes, assuming forty per cent total rate of taxation).[32] The judge also ordered the husband to pay to the wife as additional alimony the sum of $3,160.11 per week to cover the expenses of the horse farm, until he paid the wife in full for her interests in the supermarkets.[33] The wife claims that the alimony award must be vacated as inadequate to meet her demonstrated needs, because it fails to cover the costs associated with her postdivorce ownership and management of the horse farm, which had always been principally under her management and control, which had never made a profit, and which sustained yearly losses in excess of $600,000.[34] The wife also claims that the award leaves the parties "drastically unequal in terms of income" because the husband will have postdivorce income of almost $2 million yearly while she receives only $275,000 yearly. We decline to vacate the alimony award.

A judge has considerable discretion in fashioning an alimony award, on consideration of all the factors set forth in G. L. c. 208, § 34. See Heins v. Ledis, 422 Mass. 477, 480-481 (1996); Drapek v. Drapek, 399 Mass. 240, 243 (1987); Rice v. Rice, 372 Mass. 398, 400 (1977); Bianco v. Bianco, 371 Mass. 420, 422 (1976). Our review of an alimony award made pursuant to § 34 is essentially a two-step analysis. "First, we examine the judge's findings to determine whether all

relevant factors in § 34 were considered."[35] Bowring v. Reid, 399 Mass. 265, 267 (1987). The second part of our review is to determine whether the reasons for the judge's rulings are apparent in her findings and rulings. Id. If a judge has made findings consistent with her obligations under G. L. c. 208, § 34, indicating that she has fairly considered all factors relevant under § 34 and has not considered any irrelevant matter, her determinations as to alimony may not be reversed unless "plainly wrong or excessive." See Ross v. Ross, 385 Mass. 30, 37-38 (1982).

The judge's findings of fact show that she considered all of the factors under § 34 in reaching her conclusion.[36] Her determination that the alimony award should not be used as a postdivorce subsidy of the horse farm was also sound. "Alimony is an award for support and maintenance . . . ." Heins v. Ledis, supra at 482, quoting Inker, Alimony and Assignment of Property: The New Statutory Scheme in Massachusetts, 10 Suffolk U.L. Rev. 1, 11 (1975). See Keller v. O'Brien, 420 Mass. 820, 827 & n.13 (1995) (award of alimony is improper absent finding of financial need on part of recipient spouse); Gottsegen v. Gottsegen, 397 Mass. 617, 623 (1986) ("§ 34 does not alter the fundamental purpose of alimony: to provide economic support to the dependent spouse" [emphasis in original]). Alimony "has historically been based on the common law duty of the husband to support his wife. Property division, on the other hand, is based on the joint contribution of the spouses to the marital enterprise." Heins v. Ledis, supra, quoting Inker, supra. Neither the court nor the parties may "blur the distinction between alimony and property division." Heins v. Ledis, supra, quoting Inker, supra. "The standard of need is measured by the 'station' of the parties -- by what is required to maintain a standard of living comparable to the one enjoyed during the marriage." Grubert v. Grubert, 20 Mass. App. Ct. 811, 819 (1985). See Sampson v. Sampson, 62 Mass. App. Ct. 366, 369 (2004) (same). There was no evidence that the money-losing horse farm was necessary to maintain the wife's "station" in life. The wife's election to maintain the horse farm is a personal decision concerning the postdivorce use of former marital property; the husband cannot be forced to finance that decision.

The wife relies on Kelley v. Kelley, 64 Mass. App. Ct. 733, 741 (2005), for the proposition that it is error to reduce an alimony award so that a husband may avoid "subsidiz[ing]" for the foreseeable future the wife's "avocation." This case is readily distinguishable. First, the Kelley decision addressed only modification of a judgment for alimony (based on the husband's request to eliminate support), rather than an original alimony award. Therefore, the standard of review was whether there had been a change of circumstances since the entry of the earlier judgment, not whether the wife was entitled to alimony to support her position of underemployment. See id. at 738-739. Second, if we are to extrapolate from the Kelley decision to comment on the actual award of alimony provided to the wife by the Probate and Family Court judge in that case, that award was designed to support the wife's ability to care for three children while working as an artist. The wife here, in contrast, was awarded an amount sufficient to meet her personal expenses without being required to seek any additional employment. Moreover, the judge found that the wife had skills in the management of horse breeding that would permit her to acquire "future capital, assets and income." To require that the husband in this case subsidize a venture that loses on the order of $600,000 per year, regardless whether the horse farm is a vocation or "avocation" for the wife, is a matter different from ordering support of an individual who, for reasons inapplicable here, may not be able to earn up to her full potential. The wife has failed to present persuasive evidence that her desire to continue to run the horse farm at a loss is integral to maintaining an "elaborate life-style." That choice cannot, as the wife urges, be analogized to awards properly designed to maintain a similar standard of living to the marriage, such as allowing an individual to "socialize or entertain" or "purchase clothing" as in the past. See, e.g., Goldman v. Goldman, 28 Mass. App. Ct. 603, 608 (1990); Grubert v. Grubert, supra at 812. We cannot say that the judge's award was "plainly wrong or excessive."

5. Complaint in equity. The parties entered into stipulations for temporary orders during the divorce that provided, among other things, that both would continue to own the supermarkets and equally share their profits during the pendency of the divorce, as well as to account for certain monies from the supermarkets to be used for particular purposes, including their attorney's fees

and costs. The net income of the supermarkets was equalized through the end of 2000, thus leaving "unequalized" income of some $3.6 million yearly for the period of more than three years, from January 1, 2001, to February 2, 2004 (post-2000 period), during which the wife continued to be a fifty per cent shareholder of the supermarkets. The wife appeals from the judge's dismissal of her complaint in equity, filed after the close of evidence but while the case was still pending, seeking an accounting and equalization of income for the post-2000 period. We conclude that the judge's actions in this case effectively deprived the wife of a reasonable opportunity to bring the issue of income equalization during the post-2000 period before the court at an appropriate juncture, and that the equity complaint was therefore wrongly dismissed.

A brief chronology is in order. The wife sought to introduce the matter of income equalization on several occasions. The first was through a contempt claim filed in November, 2002.**[37]** Then, on July 28, 2003, before the divorce or contempt judgments entered, the wife filed an equity complaint against the husband. The impetus for this complaint was the husband's assertion at a corporate meeting of the supermarkets on July 10, 2003, that the income of the supermarkets was entirely his. When it issued, the divorce judgment on the property division did not address equalization of income for the post-2000 period. In September, 2003, the wife moved postjudgment for equalization, to which she appended the complaint in equity.**[38]** The contempt judgment issued in September, 2003, and did not address the issue of income equalization for the post-2000 period.**[39]** On September 30, 2003, during a hearing on the wife's postjudgment motion for equalization, the judge suggested that the wife was entitled to a share of the income ("I don't think there's any dispute that she owned those shares") but nevertheless precluded the claim because the "issue was never presented to me." She noted that the wife's equity complaint was "potentially a remedy for that issue." In July, 2004, the judge dismissed the wife's equity action on the husband's motion to dismiss, giving two reasons for so ruling: first, that the pretrial stipulations of the parties did not specify any entitlement of the wife to equalization of income; and second, that the issue should have been raised and resolved during the pendency of the divorce action, and was therefore barred under the doctrine of claim preclusion.

The judge's actions created a "Catch-22" for the wife, whose various attempts to have the court address the issue of equalization for the post-2000 period were denied as either premature or waived. Before a claim will be barred on the ground of claim preclusion, it must be established that the claim was actually and necessarily decided in a prior action or that there was a full and fair opportunity to have done so that was not taken. See Heacock v. Heacock, 402 Mass. 21, 24 (1988); Massachusetts Prop. Ins. Underwriting Ass'n v. Norrington, 395 Mass. 751, 753 (1985); Ratner v. Rockwood Sprinkler Co., 340 Mass. 773, 775 (1960). Here, the judge erred in concluding that the pretrial stipulations somehow canceled the need to consider equalization for the post-2000 period in her judgment. The stipulations were entered as temporary orders to govern spending (e.g., salary, attorney's fees, and expenses) only until the divorce judgment entered.**[40]** The parties agreed in the stipulations that payments debited to the parties' accounts would be considered loans repayable on "the final division of [the] marital assets." The stipulations were not intended to divest the wife of her fifty per cent share in the supermarkets. If the stipulations respond to the wife's entitlement to income in any way, they weigh in the wife's favor, providing that "[t]he parties agree that neither will draw any funds from any of the corporations for their personal benefit, other than the weekly paycheck to [the husband], except as provided herein in their agreement." The stipulations clearly do not entitle the husband to full ownership of the income distribution.**[41]**

Second, it is clear that the judge's rulings did not provide the wife with a full and fair opportunity to air her claims, which the wife brought in a timely manner. The equity complaint was filed less than two weeks after the husband declared at a corporation meeting that he would henceforward treat the income from the supermarkets as entirely his own. The wife could not have known in advance of the divorce judgment that that judgment would not address equalization for the post-2000 period, a matter that was clearly set before the judge months before the judgment issued. Principles of res judicata and claim preclusion were inapplicable to the wife's complaint in equity.

In regard to equalization, we are also constrained to note one final issue concerning the parties' attorney's fees and costs. In the novel and complex circumstances of this case, we conclude that valuation of the markets and equal distribution of property are not issues that are easily separable. The parties' original stipulations provided that the supermarkets would advance the parties' attorney's fees, with the payments "debited to the party's account who has incurred those expenses," and that such payments would be considered loans repayable by each party on the "final division of [the] marital assets." The parties agreed to an equal division of the marital assets and the supermarkets. Each party has expended a considerable sum for legal representation toward the joint goal of valuing the supermarkets and dividing these assets. A final equalization of the supermarkets should incorporate the fees paid to attorneys for each party, and be treated so that each party is effectively debited with half of the attorney's fees. To fail to do so would leave the wife to pay her entire legal expenses out of her own pocket while the husband effectively would receive a windfall by simply moving money from one source under his control to another. We therefore conclude that the valuation of the supermarkets should be adjusted to take into account advances of legal fees for both parties since the December 31, 2000, reconciliation.

6. Conclusion. The portion of the third amended supplemental judgment in the divorce matter concerning alimony is affirmed. We vacate the portion of the third amended supplemental judgment concerning valuation of the parties' S corporations, and remand for further proceedings not inconsistent with this opinion concerning tax affecting, key man and marketability discounts, the application of a two and one-half per cent growth rate to account for inflation, and the equalization of attorney's fees. We vacate the judgment of dismissal in the wife's equity action, and remand for further proceedings not inconsistent with this opinion.**[42]**

So ordered.

FOOTNOTES:

[1] Judith E. Bernier vs. Stephen A. Bernier; Bernier's Market, Inc., doing business as Cronig's State Road Market; Bernier's Up Island Market Inc., doing business as Cronig's Up Island Market; and Colonial Drive Real Estate Corporation, doing business as Islander.

[2] As we discuss infra, the income of a C corporation is subject to income tax at both the corporate (or entity) level and the shareholder level on dividends, if any, paid to shareholders. In contrast, the income of an S corporation is not subject to Federal tax at the entity level, see note 14, infra, but is passed through and taxed to the shareholder when earned by the corporation, whether or not the corporation pays dividends. In the context of valuation of the stock of an S corporation, "tax affecting" is employed in what the parties refer to as the income

approach to appraising the value of S corporation shares, by which the estimated future earnings of the corporation are discounted by imputed future tax burdens at the entity level, even though the S corporation pays no entity level earnings taxes. See Gross v. Commissioner of Internal Revenue, 272 F.3d 333, 344-347 (6th Cir. 2001), cert. denied, 537 U.S. 827 (2002) (Gross).

[3] Their two children were emancipated at the time the parties filed for divorce.

[4] The corporations were Bernier's Market, Inc., doing business as Cronig's State Road Market, and Bernier's Up Island Market, Inc., doing business as Cronig's Up Island Market. The supermarkets produced substantial yearly cash flow for their owners.

[5] The parties agreed to establish the valuation of the supermarkets as of December 31, 2000, the date of the last reconciliation of accounts prior to trial.

[6] At trial, neither party challenged the qualifications of the other's expert witness.

[7] We understand the term "income" approach to valuation, as used by the parties, to mean the same as the method also referred to as the "capitalization of income" approach, see Dallas v. Commissioner, 92 Tax. Ct. Mem Dec. (CCH) 313, 315 (2006), or the "capitalized economic income" method. For a discussion of these methods utilized for valuation, see generally S.P. Pratt, R.F. Reilly, & R.P. Schweihs, Valuing Small Businesses & Professional Practices (3d ed. 1998) at 236-237, 254-257.

[8] "Fair market value" is generally defined as the "price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of the relevant facts." Gross, supra at 344, quoting Treas. Reg. § 25.2512-1. See United States v. Cartwright, 411 U.S. 546, 551 (1973). See also C.P. Kindregan, Jr., & M.L. Inker, Family Law and Practice § 45:8, at 332-333 (3d ed. 2002) (discussing factors to consider in valuing closely held corporation). But see Dallas v. Commissioner, supra at 318 (distinguishing "fair value" -- fair merger price that stockholder would receive -- and "fair market value" -- price hypothetical willing buyer would pay hypothetical willing seller, both having reasonable knowledge of all relevant facts and neither being under compulsion to buy or sell).

[9] Leicester testified that, in his opinion, the highest and best use of the supermarkets was as an S corporation. He also testified that the application of tax affecting to S corporations depended on the facts of each case and could not be established categorically. Horvitz, the husband's expert, testified that he did not "speculate" on the characteristics of a potential buyer because in a divorce action he considered it appropriate to value the businesses as of a specific date only.

[10] Both experts agreed, and the judge found, that at the time of trial, the husband was the "whole show" for the supermarkets, the person "who makes it all happen." The judge accepted the parties' testimony that they contributed equally to the acquisition and maintenance of their marital estate from the date of their marriage in 1967 until the date of their separation in 2002.

[11] Previously, on August 26, 2003, nunc pro tunc to August 19, 2003, the judge had entered an amended supplemental judgment, and the wife had filed a number of postjudgment motions objecting to the division of assets and alimony award. On the parties' joint motion the judge issued the third amended supplemental judgment, in which the husband was also ordered to pay alimony in the amount of $8,448.57 per week from the date of the judgment until August 17, 2007, and $5,288.46 per week thereafter.

[12] Earlier, in November, 2002, the wife had filed a complaint for contempt against the husband, alleging that he had violated the temporary orders by failing to provide her with financial information concerning the supermarkets and by taking money from the supermarkets for purposes not sanctioned by the temporary orders. In September, 2003, the judge found the husband in contempt for (a) failing to provide monthly accounting of income generated from the rentals to Bernier Realty Trust from May 1, 2002, until November, 2002; (b) failing to deliver copies of weekly cash journals and accounts payable check registers and monthly reports generated by the supermarkets within forty-eight hours of the date the reports were generated; and (c) utilizing corporate assets and pledging the credit of the supermarkets to attempt to start a health food store. The husband was ordered to (a) provide an accounting to the wife for all monies taken for his personal benefit; (b) pay to the wife the sum of $7,500 for

her attorney's fees; and (c) cease making any investments or otherwise utilizing assets of the supermarkets until the wife was paid in full for her share of the supermarkets.

[13] The judge reasoned that the wife's failure to raise her claims for equalization of the income of the supermarkets during the divorce proceedings barred her from raising the claims in a subsequent equity action, where the issue of equalization of income had been addressed in temporary orders pursuant to the parties' stipulations.

[14] Massachusetts has a nominal State tax on the income of S corporations at the entity level, about which there is no dispute. Both parties' experts included this State tax in their valuations.

[15] We demonstrate the cognizable tax benefit to S corporation shareholders by way of an example adapted from the opinion of the Delaware Court of Chancery in Delaware Open MRI Radiology Assocs. v. Kessler, 898 A.2d 290 (Del. Ct. Ch. 2006) (Kessler). Assume that a corporation generates one hundred dollars in net annual earnings. If it is organized as a C corporation, its earnings after tax would be sixty dollars, assuming, as is the usual custom, that the effective corporate tax rate is forty per cent. Then, assume that the entity distributes its posttax earnings to its shareholders in the form of a dividend. Applying the individual tax on dividends at the prevailing rate of fifteen per cent, the shareholder (assuming for the moment one single shareholder) would receive total posttax distributions of fifty-one dollars. Thus, the shareholder's effective tax rate after corporate income and dividend taxes would be forty-nine per cent. If the corporation were organized as an S corporation, its shareholder (again, assuming only one) would receive the entire one hundred dollars in earnings as distributions and be subject only to a shareholder-level tax. Thus, the shareholder would be responsible for paying taxes on the one hundred dollars at his or her individual tax rates, which will vary according to the shareholder's total net income. If we assume the individual tax rate to be forty per cent because the shareholder is in the highest marginal tax rate, the shareholder would pocket sixty dollars after tax if all earnings were distributed. The benefit is thus clear: the shareholder of the S corporation in this example ends up with sixty dollars, while the shareholder of the C corporation ends up with fifty-one dollars. See Kessler, supra at 329.

[16] As counsel for both parties agreed at oral argument, valuation of any closely held corporation is fraught with uncertainties, and thus difficult to accomplish with precision

and consistency. There are several unknown variables present in valuing shares of a company that is not publicly traded and not immediately marketable. See C.P. Kindregan, Jr., & M.L. Inker, Family Law and Practice § 45:8, at 332 (3d ed. 2002), citing B.H. Goldberg, Valuation of Divorce Assets 74 (Supp. 1987) ("Valuations of closely held businesses are 'not an exact science, . . . especially one dealing in services and largely dependent upon the personalities and abilities of its principals'").

[17] The judge in this case improperly relied on the IRS valuation guide as authority to justify the tax affecting advocated by Horvitz. See Gross, supra at 347, quoting IRS Valuation Guide for Income, Estate and Gift Taxes: Valuation Training for Appeals Officers ("This material was designed specifically by the IRS for training purposes only. Under no circumstances should the contents be used or cited as authority for setting or sustaining a technical position").

[18] See, e.g., Dallas v. Commissioner, 92 Tax Ct. Mem. Dec. (CCH) 313, 318 (2006) (tax affecting earnings is not appropriate in valuing gift of stock to determine fair market value; distinguishing Kessler application of "fair value" approach); Estate of Adams v. Commissioner, 83 Tax Ct. Mem. Dec. (CCH) 1421, 1425 (2002), citing Gross, supra ("it is appropriate to use a zero corporate tax rate to estimate net cashflow when the stock being valued is stock of an S corporation"); Estate of Heck v. Commissioner, 83 Tax Ct. Mem. Dec. (CCH) 1181, 1188 n.7

(2002); Wall v. Commissioner, 81 Tax Ct. Mem. Dec. (CCH) 1425, 1432 n.19 (2001) (discussing undervaluation resulting from tax affecting and overvaluation resulting from failure to tax affect, and concluding, "[b]ecause [one expert's] methodology attributes no value to [the entity's] S corporation status, we believe it is likely to result in an undervaluation of [the entity's] stock").

See also Finkel, Is There An S Corporation Premium?, 4 Valuation Strategies 14, 16-17 (2001) (S corporation should not be tax affected if likely buyers are eligible S corporation shareholders); Fisher, The Sale of the Washington Redskins: Discounted Cash Flow Valuation of S Corporations, Treatment of Personal Taxes, and Implications for Litigation, 10 Stan. J. L. Bus. & Fin. 18 (2005); Hawkins & Paschall, A Gross Result in the Gross Case: All Your Prior S Corporation Valuations Are Invalid, 21 Bus. Valuation Rev. 6 (Mar. 2002) (if S election will not be lost, then "tax-affecting may not be the more appropriate valuation method to employ"); Raby & Raby, Tax Affecting -- or Effecting -- S Corporation Stock Valuations, 93 Tax Notes 1315 (2001) (inappropriate to tax affect earnings of S corporation assumed to continue as such).

[19] Throughout his testimony, Horvitz was notably imprecise in explaining his use of a thirty-five per cent tax rate. On direct examination, he said that the figure "represents the after-tax weighted average adjusted earnings in the hands of a new owner," while agreeing that S corporations pay no Federal tax at the entity level. On cross-examination, Horvitz testified both that the thirty-five per cent tax rate represents "the average corporate rate" and that the thirty-five per cent rate was for "personal tax." This discrepancy alone diminished the integrity of Horvitz's analysis. The judge was similarly vague. She stated only that Horvitz "applied an effective tax rate of thirty-five (35%) per cent to arrive at the after-tax weighted average adjusted earnings" and that "the Court believes that a deduction for taxes that will be owed must be made to either earnings or cash flow before an appropriate valuation can be made."

[20] The subject of taxation in Gross was the valuation of a gift of stock. The adverse parties were the government and the gift recipients of S corporation shares. The issue of equitable distribution was not present, as it is here. See Gross, supra.

[21] The judge stated in her findings that Horvitz distinguished the outcome of Gross on the ground that the issue in that case "was the value of a fractional, minority interest in an S Corporation that was to be valued for gift tax purpose[s]." She does not explain how that supposed distinction affects the determination of value here.

The judge also cited the IRS valuation guide to justify tax affecting. However, the IRS valuation guide cannot be cited as authority. See note 17, supra.

The judge's written "Rationale" provides no clearer window on her thinking, perhaps reflecting a confusion about whether corporate or individual taxation rates were being applied. See note 19, supra. The judge stated, "A buyer [of] either entity

has to consider the tax consequences of the income generated. A shareholder of a C corporation only personally pays taxes on the dividend that [it] receive[s]. [It has] actually received the dividend and can utilize those monies to pay the resultant tax. . . . A shareholder of an S corporation pays taxes on [its] proportionate share of the company, whether or not [it] actually receive[s] the cash. If sufficient funds were not received by the shareholder then he would have to utilize personal funds to pay the taxes. When the S corporation distributes additional funds to the shareholders so that the tax can be paid [as was the testimony in this case] the working capital of the company is reduced, and the income available to distribute to the owners is also reduced. Therefore, the Court believes that a deduction for taxes that will be owed must be made to either earnings or cash flow before an appropriate valuation can be made."

[22] Subsequent to Gross, the United States Tax Court also decided in several cases that it was improper to tax affect an S corporation. See cases cited at note 18, supra.

[23] See note 19, supra.

[24] In Kessler, the Delaware court reached its determination noting the presence of both a Delaware "equitable entire fairness claim and a statutory appraisal claim." Kessler, supra at 310.

[25] The Delaware court emphasized, as do we, that a different analysis might apply if the profits of the S corporation were plowed back into the company instead of distributed, or if the shareholders were not individually taxed at the highest bracket. See Kessler, supra at 329 n.101.

[26] The Delaware court determined the 29.4 per cent figure by creating fictional percentages to represent Federal corporate tax at the entity level and dividend tax at the shareholder level, to arrive at the same figure that would be left in the pockets of shareholders of an S corporation after taxing one hundred dollars of earnings (i.e., sixty dollars resulting after taxing one hundred dollars of earnings at the rate of forty per cent as in our example, see note 15, supra). To derive this fictional figure, the court worked in reverse. To achieve a posttax income of sixty dollars (after corporate entity tax and dividend tax), the figure to tax would be $70.60 (fifteen per cent of $70.60 is $10.60, and subtracting the latter from the former arrives at sixty dollars). To arrive at $70.60 from the total one hundred dollars of earnings, the court subtracted 29.4 per cent, the appropriate fictional tax rate. Phrased differently, the court asked at what rate a C corporation would be taxed at the entity level to permit the shareholder to receive a distribution of sixty dollars (as he would from an S corporation) rather than the fifty-one dollars he would have received as a C corporation shareholder. That differential rate captures the benefit of ownership in the S corporation.

[27] The judge stated: "[The wife's expert's] position is that a Subchapter S corporation would be worth substantially more than a Subchapter C corporation to a buyer. This is premised on the notion that an S corporation has an ability to provide greater cash flow to the owner due to the single level of tax paid by the entity. The court does not agree with this argument. Owners of S corporations normally distribute funds to themselves, as additional compensation, in order to pay the taxes arising from the corporate profits." The judge apparently eschewed the common understanding that shareholders in S corporations benefit from not having to pay a tax at the entity level. The fact that the husband paid himself additional money to meet his tax burden only supports the proposition that he benefited from the entity's S corporation status.

[28] The husband testified that the supermarkets were not for sale at any price. The wife made clear that she was willing and able to purchase the husband's one-half share for $8 million. There was additional evidence at trial that two other supermarkets on Martha's Vineyard, each totaling 25,000 square feet of selling space (smaller than the supermarkets at issue), had recently sold for approximately $9 million each. There was evidence that a large supermarket chain had made an overture to the husband to purchase the supermarkets, and that the husband was not open to discussions.

[29] Horvitz testified that he applied the discounts because, "I don't have the luxury in a divorce case of knowing who the owner's going to be and what the person will be able to do" with the supermarkets.

[30] Even if the husband had full control of the supermarkets, of course, his services could be lost due to illness or other catastrophe, to the detriment of the supermarkets' financial

success. Leicester's valuation, as well as Horvitz's, took into account the risk that the businesses could potentially suffer in the event of the husband's incapacity or death. See C.P. Kindregan, Jr., & M.L. Inker, Family Law and Practice § 45:8, at 332-333 (3d ed. 2002).

[31] Leicester testified that revenues grew as follows: 10.3 per cent in 1997; 7.8 per cent in 1998; 7.1 per cent in 1999; and 3.2 per cent in 2000.

[32] Alimony was to terminate on the earliest of the wife's remarriage, the husband's death, or the wife's death.

[33] The husband was ordered to pay $8,448.57 per week in alimony to the wife until August, 2007, at which time alimony would be reduced to $5,288.46 per week, representing the amount necessary to meet the wife's needs exclusive of operating costs of the horse farm, which were factored into the initial, higher alimony award. Originally the court ordered that the husband be given the option to buy the wife's shares through five equal payments of $585,000 over five years, during which time he was to pay interest at the rate of six per cent. By order of the third supplemental judgment, the husband was permitted to buy the wife's ownership of the supermarkets with a single lump sum payment, while continuing to provide the wife with extra alimony until August, 2007.

[34] The judge found that the wife will receive assets from the property settlement that are adequate to provide her with sufficient income to meet the expenses of the horse farm if she continues to run it at a loss.

[35] General Laws c. 208, § 34, contains fourteen mandatory factors that the judge must consider, and four discretionary factors that the judge may consider.

[36] The parties did not submit in the record before us their statements of personal expenses. The wife testified that her personal expenses were $3,364.25 per week and that weekly expenses for the horse farm totaled $12,654.45. We credit the judge's findings on the matter of weekly expenses based on the representations the parties made at trial and the financial statements submitted during the trial.

[37] The contempt action claimed that the husband had failed to provide monthly reports of the supermarkets, as stipulated; had withdrawn funds for personal use; had violated the automatic restraining order; and had caused her to incur a potential tax liability for S corporation income for 2002.

[38] When the divorce judgment entered and the husband did not voluntarily agree to the final reconciliation, the wife filed her motion to amend the judgment to provide for equalization of the supermarkets' net income from January 1, 2001, until the transfer of the wife's ownership to the husband. The wife claimed that she was charged for her "withdrawals" from the supermarkets over the years, while she was not given "credit -- even against those charges -- for her fifty per cent ownership of distributable income during the applicable period." The motion additionally noted that it could be rendered moot if the judge decided to rule on the contempt action.

[39] The judge did, however, find the husband in contempt for failing to render an accounting to the wife and for certain expenditures not provided in the temporary orders.

[40] The stipulations controlled what money the parties could take from the supermarkets' income from January 1, 2001, until judgment entered (which occurred on August 18, 2003): the

horse farm's expenses, $2,100 per week for the wife's basic living expenses, $5,000 per week as a salary for the husband, and various other expenses.

[41] Furthermore, as the wife notes, Federal law requires that S corporation distributions be made strictly based on stock ownership. 26 U.S.C. § 1361(b)(1)(D).

[42] We appreciate that the valuation issues in this case were complex and that the judge did not have the benefit of the Kessler analysis in rendering her decision. We emphasize the judge's role in weighing the parties' necessarily adversary arguments to ensure that the final judgment reflects the statutory requirements of equitable distribution and, here, the parties' agreement to divide assets evenly between them. On remand, we leave to the judge's discretion whether to solicit additional briefs and testimony from the parties on the specific issues presented.

JUDITH E. BERNIER *vs*. STEPHEN A. BERNIER (and a companion case[1]).

No. 11-P-394.
Dukes. January 11, 2012. - June 29, 2012.

Present: GRASSO, FECTEAU, & SULLIVAN, JJ.

Divorce and Separation, Division of property, Attorney's fees. *Corporation,* Close corporation, Valuation. *Damages,* Interest. *Interest.*

The cases were heard by *Randy J. Kaplan*, J.

David L. Kelston (*Max D. Stern* with him) for Judith E. Bernier.
Paul M. Kane (*Joan E. Kolligian* with him) for Stephen A. Bernier.

SULLIVAN, J.

In *Bernier* v. *Bernier*, 449 Mass. 774, 799 (2007) (*Bernier I*), the Supreme Judicial Court vacated that portion of the third amended supplemental judgment of divorce of the Probate and Family Court valuing the parties' S corporations and remanded the matter for further proceedings concerning, among other things, the issue of "tax affecting." More specifically, the court directed the probate judge to employ "the tax affecting approach" adopted in *Delaware Open MRI Radiology Assocs*. v. *Kessler*, 898 A.2d 290, 328-330 (Del. Ct. Ch. 2006) (*Kessler*). *Bernier I*, 449 Mass. at 790. The court also vacated the judgment of dismissal in the wife's equity suit in which the wife had sought an accounting and equalization of income derived from the parties' S corporations during a specified period. *Id*. at 796-799.

On remand, and after separate trials in the divorce and equity proceedings, the probate judge revalued the S corporations and entered a fourth amended supplemental judgment of divorce dividing the assets. By a judgment on the complaint in equity, the judge ordered the husband to pay the wife a certain sum but stated that there shall be no payment of statutory interest on the money owed. The parties' appeals from the divorce and equity judgments have been consolidated in this court.

Notwithstanding the judge's thoughtful analysis of the *Kessler* approach, set out in her supplemental findings of fact and rationale in the divorce case, for the reasons discussed below we are constrained to vacate the fourth amended supplemental judgment of divorce as it pertains to the valuation of the S corporations and remand the matter again to the Probate and Family Court. We affirm the judgment on the complaint in equity.

A. *The divorce case*. 1. *Valuation of the S corporations/tax affecting*. a. *Background*. The general background of the divorce case is set out in *Bernier I* and need not be rehearsed in detail. We concentrate here on the issue of tax affecting of the S corporations and draw liberally, both in our background description and discussion of the law, from the Supreme Judicial Court's opinion. During the marriage the parties achieved financial success through the operation of two supermarkets that were owned by two S corporations, of which the husband and wife each owned one-half. *Bernier I*, 449 Mass. at 777.[2] Before the initial trial

[1] Judith E. Bernier *vs*. Stephen A. Bernier, a suit on an amended complaint in equity.

[2] The husband and wife, as equal shareholders, had elected that the supermarkets be taxed under the provisions of subchapter S of the Internal Revenue Code, 26 U.S.C. §§ 1361-1379 (2000). *Bernier I*,

in 2002, the parties agreed to an equal division of assets. At trial, the testimony centered principally on the value of the supermarkets, with the parties agreeing to establish the valuation of the markets as of December 31, 2000, the date of the last reconciliation of accounts prior to trial. *Id*. at 778 & n.5. Each party presented the testimony of an expert witness on valuation: Mark Leicester prepared the wife's valuation, and Joel Horvitz prepared the husband's valuation. *Id*. at 778. Although "Leicester and Horvitz were in broad agreement on key points," including that "the buyer of the supermarket shares would seek an investment that would yield the buyer's required rate of return," and that the most accurate estimate of the supermarkets' value would be achieved by employing the "income" approach to valuation, the experts arrived at markedly different appraisals of the supermarkets. *Ibid*. Leicester opined that the fair market value of the supermarkets was $16,391,000; Horvitz fixed the fair market value at $7,850,000. *Ibid*.

The discrepancy in the experts' valuations, the Supreme Judicial Court noted, was due primarily to Horvitz's application of "tax affecting,"[3] as well as certain other discounts to his calculations of fair market value,[4] and Leicester's omission of those considerations. *Bernier I*, 449 Mass. at 778-779. The positions of the parties' experts were described by the court as follows:

> "Horvitz tax affected as if the S corporation were a C corporation, at what he termed the 'average corporate rate' of thirty-five per cent.[5] . . . He testified that tax affecting the S corporations at the C corporation rate was proper because, among other things, a person contemplating the purchase of an S corporation would factor into his probable rate of return the tax consequences of the purchase. Leicester, on the other hand, did not tax affect the supermarkets' income in his valuation because, as he testified, an S corporation, unlike a C corporation, does not pay taxes at the entity level, and because no sale of the business was contemplated."

Id. at 779.

---

449 Mass. at 782. Unlike a traditional C corporation, the income of which is "subject to income tax at both the corporate (or entity) level and the shareholder level on dividends, if any, paid to shareholders . . . , the income of an S corporation is not subject to Federal tax at the entity level . . . but is passed through and taxed to the shareholder when earned by the corporation, whether or not the corporation pays dividends." *Id*. at 775 n.2. See *J.S.* v. *C.C.*, 454 Mass. 652, 660 n.10 (2009). The shareholders of an S corporation thus "enjoy the considerable benefit of avoiding the 'double taxation' of corporate dividends that is the hallmark of the C corporation." *Bernier I*, 449 Mass. at 782. The Supreme Judicial Court demonstrated in *Bernier I* the cognizable tax benefit to S corporation shareholders by way of an example adapted from *Kessler*. 449 Mass. at 782 n.15. In Appendix A to this opinion, we have set out and illustrated by chart the court's example.

[3] The Supreme Judicial Court stated that "[i]n the context of valuation of the stock of an S corporation, 'tax affecting' is employed in what the parties refer to as the income approach to appraising the value of S corporation shares, by which the estimated future earnings of the corporation are discounted by imputed future tax burdens at the entity level, even though the S corporation pays no entity level earnings taxes." *Bernier I*, 449 Mass. at 775 n.2, citing *Gross* v. *Commissioner of Int. Rev*., 272 F.3d 333, 344-347 (6th Cir. 2001), cert. denied, 537 U.S. 827 (2002).

[4] Horvitz additionally discounted the fair market value of the supermarkets by applying "key [person]" and "lack of marketability" discounts. *Bernier I*, 449 Mass. at 779. The Supreme Judicial Court ultimately determined that these discounts were not appropriate in the present case. *Id*. at 790-792. On remand, neither of the parties' experts made adjustments for these particular discounts, and the discounts are not implicated in the present appeals.

[5] The Supreme Judicial Court later stated that "[t]hroughout his testimony, Horvitz was notably imprecise in explaining his use of a thirty-five per cent tax rate." *Bernier I*, 449 Mass. at 784 n.19.

The judge in the initial trial rejected Leicester's valuation as "unreliable" and "adopted substantially without change Horvitz's method of applying tax affecting and key [person] and marketability discounts to the supermarkets, and adopted his conclusion that the fair market value of the supermarkets on the relevant date . . . was $7,850,000." *Bernier I*, 449 Mass. at 780. Thereafter, the judge entered a supplemental judgment on August 18, 2003 (which was later the subject of further supplementation), awarding the husband the option to purchase the wife's fifty percent ownership interest in the supermarkets for $3,925,000,[6] and certain other relief. *Ibid*.

On the wife's appeal, the Supreme Judicial Court concluded that the judge erred in adopting Horvitz's valuation that tax affected the fair market value of the parties' S corporations at a presumed "average corporate rate" of a C corporation. *Bernier I*, 449 Mass. at 775.[7] Applying the C corporation rate of taxation to an S corporation, the court stated, "severely undervalues the fair market value of the S corporation by ignoring the tax benefits of the S corporation structure and failing to compensate the seller for the loss of those benefits."[8] *Id*. at 776. The court reasoned that such a result was particularly misplaced in this case in view of the uncontroverted evidence that the supermarkets would continue to operate as S corporations after the parties' divorce; that they would continue to be owned by one of the existing shareholders; and that the supermarkets were profitable and would continue their historic practice of making cash distributions. *Id*. at 790. On the other hand, the court continued, in the circumstances of this divorce case, "failure entirely to tax affect an S corporation artificially will inflate the value of the S corporation by overstating the rate of return that the retaining shareholder could hope to achieve." *Id*. at 776. After review of the scant case law and pertinent literature on the subject, the court decided on an alternative approach to these two extremes and "adopt[ed] generally the metric employed by the *Kessler* court." *Ibid*.

As explained in *Bernier I*, *Kessler* involved a radiology practice, operating as a closely held S corporation, where the dealings between the majority and minority shareholders were constrained by fiduciary considerations. *Bernier I*, 449 Mass. at 787. Three of the eight shareholders of the corporation (the Kessler group) wanted the majority shareholders (the Broder group) to buy out their shares. *Id*. at 787-788. The parties' experts differed markedly in their valuation of the shares -- the expert for the Broder group treated the S corporation as a C corporation in his valuation (applying forty per cent as the tax rate to the business's earnings); the Kessler group's expert did not tax affect earnings at all. The Delaware court found, for reasons similar to those set out by the Supreme Judicial Court, see *supra*,[9] that neither expert's testimony concerning tax treatment was fair. *Id*. at 788.

---

[6] On February 2, 2004, the husband exercised his option to purchase the wife's fifty percent ownership interest in the supermarkets. *Bernier I*, 449 Mass. at 781. The parties agree that on February 4, 2004, the husband paid the wife the then-ordered value for her one-half ownership interest in the markets.

[7] The court emphasized, as a preliminary matter, that "where valuation of assets occurs in the context of divorce, and where one of the parties will maintain, and the other be entirely divested of, ownership of a marital asset after divorce, the judge must take particular care to treat the parties not as arm's-length hypothetical buyers and sellers in a theoretical open market, but as fiduciaries entitled to equitable distribution of their marital assets." *Bernier I*, 449 Mass. at 775-776, citing G. L. c. 208, § 34.

[8] On this point, the court stated, more particularly, that "the judge erred in adopting in all material respects Horvitz's valuation that tax affected at thirty-five per cent when doing so was not reasonable, as it would clearly produce an arbitrary result: a significant undervaluation of the supermarkets" (footnote omitted). *Bernier I*, 449 Mass. at 787.

[9] The Delaware court's rationale is further explicated in note 10, *infra*.

The Supreme Judicial Court then summarized the so-called *Kessler* metric or approach:

"Having rejected the rationale and conclusions of both experts, the Delaware court proposed an alternate approach. This approach attempted to capture the tax benefit to the buyer of S corporation shares (the Broder group) of receiving cash dividends that are not subject to dividend taxes. The court observed that, as is the case here, the buyout was an 'involuntary removal,' and not an arm's-length purchase. To calculate the effect of taxes on the buyers and the sellers in these circumstances, the judge asked: if the S corporation at issue were a C corporation, at what hypothetical tax rate could it be taxed and still leave to shareholders the same amount in their pockets as they would have if they held shares in an S corporation? In other words, the judge asked what the effective corporate tax rate would be for the S corporation shareholder, although the entity itself paid no corporate tax. Assuming a dividend tax rate of fifteen per cent and a personal income tax rate of forty per cent (the shareholders were wealthy physicians who paid individual taxes at the highest rate), the court imputed a 'pre-dividend' corporate tax rate of 29.4 per cent to the S corporation.[10] The result was to leave the shareholder of an S corporation with the same amount of money in his or her pocket as the shareholder of a C corporation being taxed at a (fictitious) 29.4 per cent corporate tax rate. Applying this rate to the earnings of the entity measures 'with the greatest practicable precision the fair value of the . . . interest in the going concern value of' the business." (Citations and footnote omitted.)

Bernier I, 449 Mass. at 788-789. For an illustration of this approach, see the chart in Appendix B to this opinion.

The Supreme Judicial Court stated that although the probate judge did not have the benefit of the *Kessler* decision at the time she rendered her judgment, the judge, in the circumstances, should have looked past the "all-or-nothing" approach of the parties' experts and paid particular attention to the facts of the case over more abstract considerations. *Bernier I*, 449 Mass. at 790. The court concluded that "the metric employed by the *Kessler* court provides a fairer mechanism for accounting for the tax consequences of the transfer of ownership of the supermarkets from one spouse to the other in the circumstances of record." *Ibid*. As we have indicated, the court directed the judge, on remand on the issue of valuation, "to employ the tax affecting approach adopted in *Kessler*." *Ibid*.

[10] In *Bernier I*, 449 Mass. at 789, the Supreme Judicial Court added here its footnote 26, which provides:

"The Delaware court determined the 29.4 per cent figure by creating fictional percentages to represent Federal corporate tax at the entity level and dividend tax at the shareholder level, to arrive at the same figure that would be left in the pockets of shareholders of an S corporation after taxing one hundred dollars of earnings (i.e., sixty dollars resulting after taxing one hundred dollars of earnings at the rate of forty per cent as in our example . . .). To derive this fictional figure, the court worked in reverse. To achieve a posttax income of sixty dollars (after corporate entity tax and dividend tax), the figure to tax would be $70.60 (fifteen per cent of $70.60 is $10.60, and subtracting the latter from the former arrives at sixty dollars). To arrive at $70.60 from the total one hundred dollars of earnings, the court subtracted 29.4 per cent, the appropriate fictional tax rate. Phrased differently, the court asked at what rate a C corporation would be taxed at the entity level to permit the shareholder to receive a distribution of sixty dollars (as he would from an S corporation) rather than the fifty-one dollars he would have received as a C corporation shareholder. That differential rate captures the benefit of ownership in the S corporation."

b. *The proceedings on remand*. The proceedings on remand were marked by some uncertainty, and disagreement between the parties, as to what the Supreme Judicial Court intended when it directed that the *Kessler* metric or the *Kessler* approach be applied. The uncertainty arose in large part from the fact that, as the judge explained and the parties agree, when the *Kessler* valuation was set in 2004 the applicable Federal dividend tax rate was fifteen percent. However, as the judge and the parties also concluded, the applicable dividend tax rate on December 31, 2000, the date the parties agreed was to remain the valuation date of the supermarkets, was forty percent.[11] The probate judge (the same judge who presided at the *Bernier I* proceedings) noted that the Supreme Judicial Court's decision in *Bernier I* did not address the change in the dividend rates.

The wife's business valuation expert, Howard Gordon, testified that he used the formula set forth in *Kessler* but applied the dividend tax rate that was in effect in 2000 (i.e., forty percent). This resulted, as the judge noted, in a zero percent tax affecting rate because the personal dividend tax rate at the time of the stipulated date of valuation was the same as the applicable personal income tax rate, forty percent. For illustration, see the chart contained in Appendix C to this opinion. Utilizing a tax affecting rate of zero percent, Gordon valued the supermarkets at a combined value of $14 million.

David Merfeld, the husband's tax expert,[12] took a different approach. In his report, which was an exhibit at trial, Merfeld stated that S corporation income flowing out to the shareholders of the two markets is subject to Federal and State tax as ordinary income. Merfeld, the judge found, thus applied a 5.85 percent Massachusetts State tax based upon the tax on income allocable to an individual residing in Massachusetts in 2000, and a 39.6 percent Federal tax rate as in effect for tax year 2000. The judge stated that, in total, Merfeld tax affected the value of the markets at approximately forty-six percent by combining the State and Federal individual tax rates.[13] Merfeld ultimately valued the markets at $9,349,193.

Finding that both parties "took unreasonable positions in regards to their interpretation of the [Supreme Judicial Court's] ruling" in *Bernier I*, the judge rejected both experts' new valuations for the markets. More specifically, the judge found that the Gordon valuation, which utilized a zero percent tax affecting rate, overlooked the Supreme Judicial Court's "clear mandate[]" that "not tax affecting the valuation was unfair."[14] The judge stated that

---

[11] There was a change in the Federal taxation of dividends between 2000 and 2004. See Jobs and Growth Tax Relief Reconciliation Act of 2003, Pub. L. No. 108-27, 117 Stat. 752. See generally Bank, Dividends & Tax Policy in the Long Run, 2007 U. Ill. L. Rev. 533, 533-534 & nn.1, 11; Internal Revenue Service Publication No. 553, at 2 (rev. Jan. 2004). See also Internal Revenue Service Publication No. 550, at 19 (2000); Internal Revenue Service Publication No. 550, at 19-21 (2004).

[12] Merfeld is a certified public accountant who does primarily tax planning and tax return preparation with some financial statement preparation and litigation support. He has no experience in business valuation or the valuation of S corporations. The judge qualified him as a tax expert.

[13] The exhibits reflect that Merfeld also applied a Massachusetts S corporation tax at the entity level (as in effect in the year 2000) of 4.50 percent.

[14] In support of her position, the probate judge pointed, among other things, to the following language in the Supreme Judicial Court's discussion of *Kessler* in *Bernier I*: "On the other hand, the judge in *Kessler* reasoned, not tax affecting at all was also unfair, because it would lead to a windfall for the minority sellers. '[Denying] the reality that each shareholder owes taxes on his proportional interest in [the business] would result in the [Kessler group] receiving a higher per share value from the court than it could ever have realized as a continuing shareholder.' " *Bernier I*, 449 Mass. at 788, quoting from *Kessler*, 898 A.2d at 328-329. This would be the result, the probate judge stated, were she to accept Gordon's valuation.

she did not agree that the intent of the Supreme Judicial Court "was to literally plug in the formula utilized in *Kessler* if in fact the tax rate was substantially different and would have resulted in a [zero percent] tax [affecting] rate." Similarly, the judge found that Merfeld's valuation ignored the import of the court's decision in *Bernier I* that (in the probate judge's view) any tax affecting rate above the rate of thirty-five per cent would undervalue the markets. The judge stated that to adopt a tax affecting rate of forty-six percent, which is higher than the husband's originally proposed "corporate tax rate" of thirty-five percent[15] (a percentage, the judge indicated, the Supreme Judicial Court determined to be "too high") "would lead to an even more significant undervaluation of the supermarkets."

Having rejected the opinions of valuation of the parties' experts, the judge arrived at a different valuation of the supermarkets. Stating that the Supreme Judicial Court, in adopting the metric of the *Kessler* court, found that the application of a tax affecting rate of 29.4 percent was appropriate, the judge determined that she would use that tax rate in order to calculate the value of the markets. Indeed, the judge stated that the tax affecting rate of 29.4 percent was the only rate that she could apply to the valuation of the markets in the light of the Supreme Judicial Court's reliance on *Kessler*. Using a tax affecting rate of 29.4 percent, the judge found that the supermarkets had a combined total value of $11,366,129.

By a fourth amended supplemental judgment of divorce dated September 1, 2009, the judge ordered that the husband purchase the wife's fifty percent interest in the markets for the sum of $5,683,065. The husband was provided sixty days in which to pay the wife the sum of $1,758,065, representing the difference between the fifty percent payment under the third amended supplemental judgment ($3,925,000)[16] and fifty percent of the value of the markets as found by the court on remand ($5,683,065).[17] The judge also ordered the husband to pay the wife the sum of $328,529, in order to equalize certain attorney's fees and costs paid by the markets.

c. *Analysis*. On appeal, each party claims error in the judge's valuation of the supermarkets. The wife takes the position that the judge, on remand, was required to follow strictly the mandate of the Supreme Judicial Court to apply, in valuing the supermarkets, the method defined by the *Kessler* court, and that the judge "essentially ignored *Kessler's* method and the formula it and the Supreme Judicial Court adopted, and instead . . . , and incorrectly, used the tax rate that the *Kessler* court applied in the case before it," a rate which was predicated on a valuation date of 2004, not 2000. The husband, while acknowledging that a strict application of the *Kessler* metric (applying tax rates for the year 2000) results in a zero percent tax affecting rate,[18] argues that *Bernier I* (and *Kessler*), and the Supreme Judicial Court's later decision in *Adams* v. *Adams*, 459 Mass. 361, 388-390 (2011) (involving partnership interests), stand for the proposition that subchapter S corporation earnings must be tax affected to avoid an inequitable result in the valuation process. In the husband's view, the "accident of timing" with respect to applicable tax rates should not control the outcome of this case. The husband argues that to avoid the "apparent inequities when the '*Kessler* metric' is applied strictly on the basis of pure mathematics," the "tax rate

[15] See note 5, *supra*, and accompanying text.
[16] See note 6, *supra*, and accompanying text.
[17] The parties agree that the husband paid the wife the sum of $1,758,065 on March 1, 2010, and appear to be in substantial agreement that the husband paid the wife interest on that sum (for the period from about October, 2009, to March 1, 2010), as calculated by the Probate and Family Court in a subsequent judgment of contempt dated May 17, 2010.
[18] The husband states in his brief that "this result would be technically accurate strictly on the basis of mathematics."

to be applied by the trial court in tax affecting the valuation" of the supermarkets should be the Federal and State tax rates that were in effect in 2000 (i.e., an entity level tax of 4.5 percent [see note 13, *supra*], the Massachusetts individual income tax of 5.85 percent, and the Federal individual income tax of 39.6 percent).

While resolution of the issue is not a foregone conclusion, in interpreting *Bernier I*, we think the wife presents the more cogent position. Consequently, we reject the approaches taken by the judge on remand and by the husband, both on remand and on the appeal.

As we have stated, the Supreme Judicial Court adopted generally the metric employed by the *Kessler* court and directed the judge, on remand on the issue of valuation, to apply the tax affecting approach adopted in *Kessler*. The wife's expert, Gordon, as both the judge and the husband appear to acknowledge, utilized the *Kessler* metric in valuing the markets. Strictly speaking, the valuation proffered by Gordon is consistent with the Supreme Judicial Court's mandate.[19] Furthermore, application of the *Kessler* metric, even if it results (as in the present case) in a zero percent tax affecting rate, does not necessarily lead to an inequitable result. There is a distinction to be drawn between failing to tax affect at all the earnings of the supermarkets because an S corporation does not pay Federal taxes at the entity level (a basis for the approach taken by the wife's expert, Leicester, in *Bernier I*), and utilizing a zero percent tax affecting rate arrived at through application of "all applicable rates, as [the Supreme Judicial Court] ordered in *Bernier [I]*." *Adams* v. *Adams*, 459 Mass. at 390. See note 21, *infra*. The *Kessler* metric, as we have stated, attempts to capture the tax benefit to the buyer of S corporation shares of receiving taxable cash dividends that were not already taxed at the corporate level. *Bernier I*, 449 Mass. at 788. It does so by "calculat[ing] the effect of taxes on the buyers and the sellers," to wit, the judge asks: "if the S corporation at issue were a C corporation, at what hypothetical tax rate could it be taxed and still leave to shareholders the same amount in their pockets as they would have if they held shares in an S corporation?" *Id*. at 789. In the instant matter, because the dividend tax rate in effect in 2000 was forty percent, a tax affecting rate of zero percent was necessary to achieve that result.[20]

At best, the husband's argument is that *Bernier I* requires generally a tax affecting *Kessler* "approach," not literal application of the *Kessler* metric. Putting to one side the fact that such an argument ignores much of the Supreme Judicial Court's tax affecting discussion in *Bernier I*, there was no evidence that the methodology proposed by the husband on remand, i.e., the combination of personal income tax rates, constituted an accepted form of tax affecting for purposes of valuing an S corporation. As we have stated, Merfeld, the husband's sole expert, was a tax expert who had never valued a business or S corporation. The husband on remand offered no expert testimony from a business valuation expert concerning tax affecting. To the extent the husband claims additional support for his

[19] The husband indicated in his brief, and he conceded specifically at oral argument, that his approach to valuation does not adhere to the *Kessler* metric.

[20] The parties agreed at the first trial in this matter, and in the proceedings on remand, that the valuation date of the supermarkets was to be December 31, 2000. *Bernier I*, 449 Mass. at 778 n.5. Data in the case were calculated as of that date. The flaw in the probate judge's use on remand of a 29.4 percent tax affecting rate (the precise figure adopted by the *Kessler* court and discussed in *Bernier I*) is that that figure assumes a dividend tax rate of fifteen percent, the rate that was in effect in 2004. *Id*. at 789. While the probate judge clearly sought to reach what she viewed as an equitable result in this difficult and complex case, her ultimate determination of the value of the supermarkets, which utilizes a 29.4 percent tax affecting rate, cannot stand, because the 29.4 percent tax rate bears no relationship to, and is contrary to, the parties' stipulated valuation date of December 31, 2000.

valuation/tax affecting position in *Adams* v. *Adams*, *supra*, we fail to discern anything in that case that would cause us to reach a different result.[21]

2. *Postjudgment interest on new valuation of markets*. The Supreme Judicial Court's orders for remand in *Bernier I* contain no direction with respect to the calculation of interest on the judgment.[22] In various papers filed at the proceedings on remand, the wife requested interest on the new valuation of the markets, citing at one point to G. L. c. 235, § 8 (providing, inter alia, "[e]very judgment for the payment of money shall bear interest from the day of its entry . . ."), as appearing in St. 1983, c. 652, § 2. See *Karellas* v. *Karellas*, 54 Mass. App. Ct. 469, 471 (2002) ("A judgment is the act of the trial court finally adjudicating the rights of the parties including a decision by the court that a party shall recover a sum certain"). Interest under the statute is paid as "compensation for delay." *Trinity Church in the City of Boston* v. *John Hancock Mut. Life Ins. Co*., 405 Mass. 682, 684 (1989). Although the fourth amended supplemental judgment of divorce is silent with respect to interest, the judge, as the wife points out, stated at the hearing on the husband's later motion to stay judgment, "[T]hat's why I did not award interest on this money, which normally I would have, I think, because of the uniqueness of the issue."[23] It would appear that the wife's request for interest was implicitly denied by the judge.

The wife, invoking both Massachusetts and Federal authority,[24] argues that the probate judge erred in failing to order postjudgment interest on the $1,758,065 award to her pursuant to the new valuation of the markets for the period from the initial supplemental judgment on August 18, 2003, to the entry of the fourth amended supplemental judgment

---

[21] In *Adams*, 459 Mass. at 388, the special master tax affected (by deducting 20.3 percent to reflect the combined Federal and Massachusetts capital gains tax rates) the transfer of the wife's portion of the present value of the partnership interest in issue. The special master did not tax affect at the effective income tax rates suggested by the experts for the parties. While noting that it was not necessarily error that the special master tax affected at a rate different from the rates advanced by both experts, the court stated that it was not clear why the special master had "applied a combined capital gains tax rate in lieu of the effective income tax rates suggested by [the parties' experts], *or some amalgamation of all applicable rates, as this court ordered in [*Bernier I*, 449 Mass. at 787-790], in the context of the transfer of an interest in a close corporation*" (emphasis supplied). *Adams*, 459 Mass. at 390. The court remanded for further explication. It is implicit in the language of *Adams* that what was contemplated and ordered by the court in *Bernier I* was something different from a combination, or stacking, of personal tax rates.

[22] We note that Rule 37 of the Federal Rules of Appellate Procedure, as amended effective Dec. 1, 1998, provides: "(a) When the Court Affirms. Unless the law provides otherwise, if a money judgment in a civil case is affirmed, whatever interest is allowed by law is payable from the date when the district court's judgment was entered[;] (b) When the Court Reverses. If the court modifies or reverses a judgment with a direction that a money judgment be entered in the district court, the mandate must contain instructions about the allowance of interest." Rule 37(a) finds expression in our case law. See *Thomas O'Connor & Co*. v. *Medford*, 20 Mass. App. Ct. 761, 765 n.6 (1985), and cases cited. There is no Massachusetts analogue for rule 37(b). *Ibid*.

[23] The parties disagree as to the meaning of the judge's comment, in context, and what the judge was referring to when she explained that she did not award interest.

[24] See, e.g., *Thomas O'Connor & Co*. v. *Medford*, 20 Mass. App. Ct. 761, 765 n.6 (1985); *Cordero* v. *De Jesus-Mendez*, 922 F.2d 11, 16 (1st Cir. 1990) ("In general, where a first judgment lacks an evidentiary or legal basis, post-judgment interest accrues from the date of the second judgment; where the original judgment is basically sound but is modified on remand, post-judgment interest accrues from the date of the first judgment"). See also *Loughman* v. *Consol-Pennsylvania Coal Co*., 6 F.3d 88, 97 (3d Cir. 1993) ("The standard for determining whether post-judgment interest should run from the original judgment is well established. . . . [T]he decision turns on the degree to which the original judgment was upheld or invalidated on appeal").

on September 1, 2009[25] (see the discussion in part A.1.b, *supra*). The wife asserts that this court should reverse and remand the matter to the Probate and Family Court with an order that she is entitled to postjudgment interest on any payment "attributable to the valuation of the markets made pursuant to appellate and/or remand proceedings."

As we are vacating that portion of the fourth amended supplemental judgment concerning the valuation of the supermarkets (under which the figure of $1,758,065 was derived) and remanding the matter for additional adjustments, we also treat as vacated the implicit denial of postjudgment interest on the specific amount awarded. In the circumstances presented here, where (among other things) new orders concerning the valuation of the markets and the payments to be made by the husband have yet to enter, there are uncertainties with respect to the time frame in which the wife seeks interest (see note 25, *supra*), and there is no indication the probate judge was afforded the opportunity to consider the specific arguments (and authorities) now advanced by the parties, we think the question of postjudgment interest should be revisited by the probate judge at the proceedings on further remand.

B. *The equity case*. 1. *Background*. As explained in *Bernier I*, the parties entered into stipulations for temporary orders during the divorce that provided, among other things, that both "would continue to own the supermarkets and equally share their profits during the pendency of the divorce." *Bernier I*, 449 Mass. at 796. The net income of the supermarkets was equalized through the end of 2000, leaving unequalized income of about $3.6 million yearly for the period from January 1, 2001 (the day after the last reconciliation of the parties' accounts), to February 2, 2004 (the date the husband exercised his option to purchase the wife's ownership interest in the supermarkets), "during which the wife continued to be a fifty per cent shareholder of the supermarkets." *Ibid*. Following a corporate meeting of the supermarkets on July 10, 2003, at which the husband asserted that the income of the supermarkets was entirely his, the wife, on July 28, 2003, filed a complaint in equity (later amended) seeking, among other things, "an accounting and equalization of income for the post-2000 period."[26] *Ibid*. In July, 2004, the judge dismissed the wife's equity action, stating, inter alia, that the wife's claims were barred under the doctrine of claim preclusion. *Id*. at 797. On the wife's appeal, the Supreme Judicial Court vacated the judgment of dismissal and remanded for further proceedings. *Id*. at 799. More specifically, the court concluded that the judge's actions and rulings in the case "effectively deprived the wife of a reasonable opportunity to bring the issue of income equalization

[25] There is some uncertainty in the wife's brief as to the time frames in which she is asserting her entitlement to postjudgment interest. Notwithstanding her statement in the "argument" section of her brief that the judge erred by failing to order interest on the $1,758,065, from August 18, 2003, the wife indicates in the "conclusion" section of her brief that she is entitled to interest from February 4, 2004. Similarly, although the wife indicates at one point in her brief, as we have stated, that postjudgment interest should run to September 1, 2009, she states at another point that it should run to March 1, 2010.

[26] The amended complaint in equity contained four counts: (1) request for an accounting and an order for appropriate payment to the wife; (2) breach of fiduciary duty; (3) waste of corporate assets; and (4) constructive trust.

The Supreme Judicial Court noted that the wife had also sought, unsuccessfully, to introduce the matter of income equalization through a complaint for contempt and a motion to amend the divorce judgment on property division. See *Bernier I*, 449 Mass. at 796-797, for a full description of the chronology and actions taken by the wife.

during the post-2000 period before the court at an appropriate juncture, and that the equity complaint was therefore wrongfully dismissed." *Id*. at 796.

Following a trial on the amended complaint in equity, where the issue was the equalization of the net income of the markets during the period in question,[27] the probate judge, by a judgment dated September 1, 2009, ordered the husband to pay the wife the sum of $762,375.30 on her claim for an accounting, and stated that there shall be no payment of statutory interest on the money owed. The judge dismissed with prejudice the remaining counts of the amended complaint (see note 26, *supra*). Both parties have appealed.

2. *Tax liability*. In arriving at the amount to be paid to the wife, the judge considered "what deduction should be made from the market[s'] net distributable income for income taxes between 2002 [and] 2004."[28] The husband and wife filed individual tax returns in those years, and the husband paid the taxes on all of the income for all of the business entities, including the markets. It was the wife's position at trial that the judge should not deduct the actual taxes paid by the husband for 2002, 2003, and 2004. Rather, the wife argued that the deduction for taxes should be based on a hypothetical tax she would have paid if her share of the distributable income had been paid to her in each calendar year. The parties agreed that, if the judge were to utilize the wife's tax rate for her one-half of the income in the years at issue, her taxes would have been $245,279 less than the husband actually paid.[29] The wife claimed that this was a loss for which she should be compensated, a claim the judge rejected.

Contrary to the wife's assertion, we fail to discern error in the judge's failure to, essentially, credit her with the additional sum of $245,279. Among other things, the judge noted that the parties had entered into various stipulations that became orders of the court, which required the husband to make tax payments for the supermarkets. Those stipulations were in effect until August 18, 2003, when the supplemental judgment of divorce was entered. The judge found specifically that the husband relied on these stipulations, as well as various judgments of the court that did not change his obligation to pay all corporate taxes, in paying estimated and final taxes (the taxes accrued in 2002 and 2003).[30] That the husband's final tax returns for 2002 and 2003 were actually filed after the wife filed her complaint in equity on July 28, 2003, and after the divorce judgment entered on August 18, 2003, does not, in our view, require a different result.

3. *Prejudgment interest*. The wife argues that she was entitled to, and the judge erred in failing to order, statutory prejudgment interest pursuant to G. L. c. 231, § 6C (interest added to damages in contract actions), § 6H (interest on damages not otherwise provided

[27] At trial, the wife claimed that she was owed $1,082,785.80; the husband put the figure at $509,816.30.
[28] The parties filed joint tax returns in 2001.
[29] The $245,279 figure represents "excess taxes" purportedly paid by the husband in the amount of $50,848 for the tax year 2002, $190,142 for the tax year 2003, and $4,289 for the tax year 2004. The amount for the 2004 tax year borders on de minimis.
[30] The judge noted also that the wife did not seek an order for instructions as to how the taxes were to be paid.

by law), and § 6B (interest added to damages in specified tort actions),[31] on the equalization payment of $762,375.30, from July 28, 2003, to the date of the equity judgment, September 1, 2009. See *O'Malley* v. *O'Malley*, 419 Mass. 377, 381 (1995) (section 6C, concerning prejudgment interest in contract actions, commands a ministerial act in which interest attaches automatically). In the wife's view, the husband was found to have long owed her the sum of $762,375.30, and the accounting and payment could only be ordered as a result of breach of agreement (the parties' stipulations or the parties' S corporation agreements) or "breach of fiduciary duty/restitution." We fail to discern error, for the reasons set out below.

As the husband suggests in his brief, the complaint in equity in this case cannot be viewed in a vacuum; it arises from the marital relationship and the divorce proceedings, which called for a division of the marital assets. As we have indicated, the Supreme Judicial Court in *Bernier I* set out the chronology of the wife's attempts, through different procedural vehicles filed within a short period of time, to introduce the matter of income equalization. See note 26, *supra*. Among other things, the wife moved specifically to amend the divorce judgment on the property division after her complaint in equity had been filed (appending to her motion a copy of the equity complaint) to provide for equalization of the supermarkets' income.[32] *Bernier I*, 449 Mass. at 796-797. Such an approach would presumably call for the income equalization to be effectuated through a property division -- it would not constitute an award of damages. Had the wife been successful on her motion, it is difficult to perceive how she would have been entitled to prejudgment interest on the equalization amount. See *Karellas* v. *Karellas*, 54 Mass. App. Ct. at 474.

Through her alternate request for an accounting and an order for payment in her equity action (the dismissal of all other counts is not challenged on the appeal) the wife sought, similarly, to equalize the markets' income. However, the wife now appears to characterize the judge's income equalization award as damages under the prejudgment interest statutes. In the peculiar circumstances of the case, and the context in which the matter of income equalization arose, we are not persuaded that the judge's accounting and order for payment constitute an award of damages on which prejudgment interest is to be added.

C. *Equalization of attorney's fees and costs*. At the close of its discussion of the complaint in equity in *Bernier I*, the Supreme Judicial Court commented with respect to the equalization of attorney's fees:

"In the novel and complex circumstances of this case, we conclude that valuation of the markets and equal distribution of property are not issues that are easily separable. The parties' original stipulations provided that the supermarkets would advance the parties' attorney's fees, with the payments 'debited to the party's account who has incurred those expenses,' and that such payments would be considered loans repayable by each party on

[31] "Damages" has been defined as "the word which expresses in dollars and cents the injury sustained by a plaintiff." *Rood* v. *Newberg*, 48 Mass. App. Ct. 185, 195 (1999), quoting from *Turcotte* v. *DeWitt*, 333 Mass. 389, 392 (1955).

[32] In discussing why principles of res judicata and claim preclusion were not applicable to the wife's complaint in equity, the Supreme Judicial Court also suggested that the issue of income equalization might have been an appropriate subject in the divorce action: "The wife could not have known in advance of the divorce judgment that that judgment would not address equalization for the post-2000 period, a matter that was clearly set before the judge months before the judgment issued." *Bernier I*, 449 Mass. at 798.

the 'final division of [the] marital assets.' The parties agreed to an equal division of the marital assets and the supermarkets. Each party has expended a considerable sum for legal representation toward the joint goal of valuing the supermarkets and dividing these assets. A final equalization of the supermarkets should incorporate the fees paid to attorneys for each party, and be treated so that each party is effectively debited with half of the attorney's fees. To fail to do so would leave the wife to pay her entire legal expenses out of her own pocket while the husband effectively would receive a windfall by simply moving money from one source under his control to another."

Bernier I, 449 Mass. at 798-799.

The court concluded that "the valuation of the supermarkets should be adjusted to take into account advances of legal fees for both parties since the December 31, 2000, reconciliation." *Id*. at 799.

At the proceedings on remand, the parties disagreed as to the meaning and intent of the Supreme Judicial Court's directive with respect to the "time frame" over which the attorney's fees were to be equalized. The husband argued that the probate judge was to equalize the attorney's fees through the date of the entry of the supplemental divorce judgment dated August 18, 2003. The wife took the position that the end date for the equalization period, although not specified by the Supreme Judicial Court, must be the termination of the proceedings before the Probate and Family Court, including the appeal and remand proceedings. The wife also asserted that the equalization of attorney's fees should apply to the equity case as well as the divorce case.

The judge ultimately concluded that it was the intention of the Supreme Judicial Court that the equalization of attorney's fees occur as of August 18, 2003, and, in the fourth amended supplemental judgment of divorce, ordered the husband to pay the wife, as an additional payment for her share of the business, the sum of $328,529.[33] The judge stated in her findings in the divorce case that there was nothing in *Bernier I* that would entitle the wife to an equalization of postjudgment fees and fees for the equity action.

Seizing upon the language of the Supreme Judicial Court that the parties agreed to an equal division of the marital assets and the supermarkets and that "[a] final equalization of the supermarkets should incorporate the fees paid to attorneys for each party," *Bernier I*, 449 Mass. at 799, the wife argues that "where a critically important part of the equalization could only occur well after the initial judgment, it was error for the court to impose an August 18, 2003 cutoff date." Put another way, the wife asserts that the Supreme Judicial Court's rationale -- the parties' equal sharing of the cost of getting a right result in these cases -- logically extends the equalization through the present appeal. The wife also argues that the probate judge erred by failing to equalize the attorney's fees from the equity case, particularly where the Supreme Judicial Court ordered equalization specifically as part of its discussion in the equity case.

[33] The judge found that from the commencement of the divorce through August 18, 2003, the supermarket entities paid legal fees, costs, and expert and professional fees in the amount of $1,202,651 on behalf of the wife. No further fees were paid for her benefit after that date. During that same period the supermarket entities paid fees and costs on behalf of the husband in the amount of $545,594.36. Any legal fees incurred after August 18, 2003, and even through January 22, 2004, the date of the third supplemental judgment of divorce, were not paid by the corporations but by the parties individually. As the total legal and other fees amounted to $1,748,246, the judge determined that a payment by the husband to the wife of $328,529 "would have each party pay $874,123 of legal fees, costs and expert fees."

We agree with the probate judge that the probable intent of the Supreme Judicial Court was to equalize the attorney's (and other) fees as of August 18, 2003. At the outset, the Supreme Judicial Court made reference to the parties' original stipulation concerning the advancement to the parties of attorney's fees and the payment of those fees. That stipulation, as the probate judge noted, was dated January 10, 2001. The Supreme Judicial Court indicated that the stipulations of the parties "were entered as temporary orders to govern spending (e.g., salary, attorney's fees, and expenses) only until the divorce judgment entered."[34] *Bernier I*, 449 Mass. at 797-798. Furthermore, the court's specific concern that the husband might benefit unfairly (i.e., receive a "windfall") by simply moving "money from one source under his control to another," *id*. at 799, appears directed toward a period prior to a division of the parties' property. Finally, as the probate judge stated, the Supreme Judicial Court's directive, that the valuation of the supermarkets should be adjusted to take into account *advances* of legal fees for both parties, does not order the parties to equalize all attorney's fees and expenses incurred after monies were no longer advanced from the corporation. In the circumstances, we also agree with the judge that the wife was not entitled to an equalization of attorney's fees for the equity action.[35]

D. *Conclusion*. We vacate the portion of the fourth amended supplemental judgment of divorce concerning valuation of the parties' S corporations (as well as the implicit denial of the wife's request for postjudgment interest) and remand the matter to the Probate and Family Court for further proceedings and amendment to the judgment not inconsistent with this opinion. On remand, the judge may hold such hearings as she deems necessary. That judgment is otherwise affirmed. The judgment on the complaint in equity is affirmed.

So ordered.

[34] In a footnote in its discussion of the equity action, the court stated: "The stipulations controlled what monies the parties could take from the supermarkets' income from January 1, 2001, until judgment entered (which occurred on August 18, 2003): the horse farm's expenses, $2,100 per week for the wife's basic living expenses, $5,000 per week as a salary for the husband, and various other expenses." *Bernier I*, 449 Mass. at 798 n.40.

[35] The husband argues on appeal that the judge erred in calculating the adjustments to be made for payment of attorney's fees and costs. He claims that under the equalization methodology employed by the judge, the wife owes *him* the sum of $328,529. As the husband's notice of appeal was limited to the provision of the fourth amended supplemental judgment concerning the valuation and division of the supermarkets, we do not address his contention. See *Sturges* v. *Chilmark*, 380 Mass. 246, 262 (1980) ("Of course, that portion of the judgment from which no appeal was taken stands").

OPINION:

MEMORANDUM OPINION

LAMB, Vice Chancellor

I. PRELIMINARY STATEMENT

In this appraisal action, filed pursuant to Section 262 of the Delaware General Corporation Law ("DGCL"), I am called upon to determine the fair value of the shares of common stock of WXL International, Inc. ("WXL"), a Delaware corporation, as of December 16, 1997, the date on which WXL was merged with and into its parent corporation, Communications Telesystems International ("CTS") (the "Merger"). As of that date, petitioners were the holders of 500,000 shares (or five percent) of WXL common stock, CTS being the holder of the other 95 percent of the WXL shares. It is conceded that petitioners made a timely demand for appraisal in accordance with the requirements of Section 262.

Although the parties and their experts differ widely in their conclusions as to the appraised value of the shares, the issues in contention at this point of the proceeding are quite limited in scope. The parties' testifying experts both used the same method of analysis (the "comparable company method") and both testified that it was the only method properly relied upon for this case. The experts also agreed that using total revenues as the multiplicand was the only appropriate iteration of that method. Moreover, the two experts each identified eight companies as "comparable," five of which companies were used by both experts. As a result of examination at trial, there is now agreement to include a sixth company as a "comparable."

The experts' analyses differed materially in only a few respects: (i) whether, in deriving a multiplier for WXL from the data generated as to comparable companies, a premium should be added to reflect WXL's better than average rate of growth over the 12-month period leading up to the merger, (ii) at what point in the analysis the information derived should be adjusted to eliminate the minority discount inherent in the comparable company method, and (iii) whether the value derived from that analysis should, in this case, be reduced to account for any observed "private company" discount.

In summary, I conclude as follows: (a) no growth premium is warranted, (b) a control premium should be added to adjust the market value of the equity derived from the comparable company method, and (iii) on the record before me, no "private company discount" is appropriate. Based on these conclusions, and for the other reasons explained in this opinion, I find that the fair value of the shares of common stock of WXL, as of December 16, 1997, was $ 0.6253 per share, or a total of $ 312,650 for the 500,000 shares subject to appraisal. I will allow interest on this sum at the legal rate, compounded quarterly, through the date judgment is entered in accordance with these findings.

II. BACKGROUND

A. WXL's Creation

CTS is a facilities-based long-distance telephone company that operates throughout most of the United States and has been attempting to expand internationally. Founded in 1991, it offers to its customers direct dial long-distance services as well as prepaid calling card, Internet and other communications services.

In 1994, petitioner Carl Borruso ("Borruso") approached Roger Abbott, Chairman and CEO of CTS, and presented a business plan to begin long-distance telecommunications operations in the United Kingdom, France and Germany. At the time, CTS had no European operations. Thereafter, in November 1994, CTS and Borruso entered into a Formation Agreement and a Shareholders Agreement with respect to the to-be-formed WXL. The Shareholders Agreement attached the business plan proposed by Borruso, including financial projections. The business plan provided that CTS would fund WXL for two years, estimated to include $ 2 million in "seed money," with the expectation that at the end of that

period, WXL would be cash flow positive. Monthly pre-tax losses were expected until the spring of 1996. On the projected balance sheets, WXL was expected to have retained earnings of nearly $ 2 million by September, 1996.

At WXL's formation, Borruso received 400,000 shares, or 4%, of the company's stock; the other petitioner, William Lee received 100,000 shares, or 1%. CTS received the remaining 9,500,000 shares, or 95% of the common equity.

B. WXL's Operations

WXL began operations sometime in the first half of 1995. It had revenues of $ 0.6 million for the fiscal year ("FY") ended September 30, 1995. Revenues increased to $ 5.2 million in FY'96. These revenue figures were far lower than the $ 7 million and $ 39 million revenues projected in the business plan attached to the Shareholders Agreement for FY'95 and FY'96, respectively. Revenues grew to $ 10.7 million in FY '97, $ 11.9 for the 12 months ended December 31, 1997, and were $ 2.8 million in the first quarter of FY'98 (ended December 31, 1997).

Over this period, the mix of WXL's revenue streams changed rapidly. Commercial revenue amounted to 72.4% of revenues in FY'95 but only 14.7% in FY'97. Carrier revenue represented 17.4% of revenues in FY'96, 68.5% in FY'97 and only 17.9% in the first quarter of FY'98. Finally, intercompany revenue grew from 6.1% of total revenue in FY'96 to 48.0% of total revenue in the first quarter of FY'98. These radical changes in revenue sources reflected quickly changing competitive pressures and opportunities. For example, when WXL initially failed to attain the projected amount of revenues from residential or commercial end-users, it sought to enter the more "niche" calling card market. This foray was successful at first but revenues shrank when competitive pressures mounted. WXL then identified "call shops" as a potential source of revenues. n1 WXL was, at first, successful in generating substantial revenues in this business. But WXL was quickly forced to change its credit and collection procedures when bad debt charges rose to unacceptable levels. These procedural changes caused the call shop revenue flow to dry up.

n1 Call shops are store-front facilities with multiple telephone booths for placing international calls.

WXL's revenues were derived principally from operations in the United Kingdom. WXL had other, less substantial, operations in France and Germany. The United Kingdom had voluntarily deregulated its market for telecommunications services in the early 1990's, which led to greater opportunities for WXL in those markets. Deregulation of the markets in France and Germany did not occur until after the effective date of the merger. Even then, the actual process and timetable for deregulation in those and other European countries remained uncertain. The key element of deregulation is the ability of newly competing companies to interconnect with the dominant telephone company in each country. At the time of trial, WXL had still not achieved interconnection in Germany.

Operating income (loss) before interest, taxes, depreciation, and amortization ("operating EBITDA") was ($ 2.6) million in FY'95, ($ 2.9) million in FY'96 and ($ 4.5) million in FY'97. For the first quarter of FY'98 the operating EDITDA was ($ 0.4) million. By contrast, the projections attached to the Shareholders Agreement called for operating EBITDA of ($ 1.6 million) in FY'95 (on revenues of $ 7 million) and of $ 3.6 million in FY'96 (on revenues of $ 39 million).

By early 1997, CTS began to consider its options with regard to WXL, including the possibility of shutting it down. Ultimately, CTS decided not to shut WXL down, reflecting the concern that doing so would adversely affect CTS' operations in other countries in which CTS was having greater success. Also, CTS hoped that, with an infusion of needed additional capital, WXL's operations in the UK and Europe could prove to be profitable.

C. The Merger

On December 16, 1997, CTS, as the owner of 95% of WXL's common shares (the only class of shares outstanding), was able unilaterally to effect a short form merger with WXL, pursuant to Section 253 of the DGCL. In the Merger, CTS fixed the consideration to be paid to Borruso and Lee at $ .02 per share. The method by which that price was determined had none of the attributes that would justify giving it any consideration in this proceeding. n2 No outside financial analysis of WXL was obtained by CTS. Instead, the $ 0.02 per share price was developed informally by the principal officers or owners of CTS, who did not retain their original work papers. That proposed price was then approved by the CTS board. It would appear from the record that the directors of CTS concluded that there was no positive value to WXL.

n2 Indeed, CTS went out of its way to make clear that Anthony Kern, its valuation expert, performed his work independently of the methods followed by CTS in setting the Merger price.

Petitioners point out several flaws in the procedure followed by CTS in arriving at a fair price for the WXL shares. First, the valuation was done at the end of 1996 or the beginning of 1997--up to a year before the merger became effective (Tr. at 252, 256). According to Mr. Abbott, CTS' Chairman and CEO, the most recent financial numbers for WXL at his disposal were the first or second quarter of fiscal 1997 n3--when WXL was much smaller than on the Merger date. n4 Moreover, CTS used revenue multiples derived from the prices at which United States telecommunications companies were selling at the time. By using these multiples, of course, CTS' owners failed to take into account that WXL was a European - based telecommunications company, which CTS acknowledged would expect to enjoy higher revenue, margins and growth rates than its American counterparts. Additionally, the fair value analysis performed by CTS may have improperly included a minority discount, not appropriately applied under the law of this State. See Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1144-45 (1989).

n3 WXL's fiscal year began October 1 of each year. Accordingly, the first quarter of fiscal 1997 began October 1, 1996.

n4 For example, revenues for the first quarter of fiscal 1997 were $ 1,542,722, while revenues for the first quarter of fiscal 1998 (which ended only 15 days after the Merger) were $ 2,767,000. In addition, as of October 1, 1996, the bulk of WXL's business was in the United Kingdom, with France and Germany producing relatively little revenue at that time.

Petitioners also point out that CTS did not comply with the requirements of 8 Del. C. § 262, in that it delayed in mailing notice of the merger to petitioners until January 12, 1998--17 days beyond the statutorily permitted time. In addition, the notice violated § 262(d)(2) by not including a copy of the appraisal statute.

II. DISCUSSION

The parties' experts were in agreement about significant aspects of the method properly employed in this case to determine the fair value of Petitioners' shares. I find no reason to deviate from the process they jointly followed. Thus, I make the following findings, based on the record before me in this matter:

1. It is proper to rely on the comparable company method of analysis in determining the fair value of WXL.

2. No other method of valuation is appropriately relied upon here. n5

3. Because no single comparable company's profile and operations is more indicative of the value of WXL than any other's, the median multiple exhibited by the comparable companies is the best indication of value for WXL.

4. The median unadjusted multiple for the basket of the five common comparable companies is 2.6x. Including the sixth comparable, about which there is no dispute, the unadjusted median multiple is 2.5x.

5. The adjusted multiple (after it is derived) should be applied to WXL's latest pre-Merger 12-month revenues of $ 11,480,945 to derive the market value of invested capital ("MVIC").

n5 Because of the limited financial history of WXL available as of the Merger date, neither expert was comfortable using a discounted cash flow analysis to determine WXL's appraised value. Also, due to the limited number of comparable transactions available as of the Merger date, neither expert relied on that method of valuation.

Thus, I will turn to that analysis and the parties' points of disagreements.

A. The Comparable Companies

Petitioners' testifying expert was Peter S. Huck, P.E., ASA. Mr. Huck is Assistant Vice President and Principal for the Milwaukee Financial Valuation Group of American Appraisal Associates, Inc. ("AAA"). He is a Professional Engineer and and is certified as an Accredited Senior Appraiser by the American Society of Appraisers. Respondent CTS called Mr. Anthony P. Kern of Price Waterhouse Coopers, LLP to testify on its behalf. Mr. Kern is Partner-in-Charge of that firm's FAS Information, Communications and Entertainment Industry Group in Washington, D.C.

To perform their analyses, Huck and Kern both identified a set of eight companies judged by them to be sufficiently comparable to CTS. Five of the eight were common to both sets of comparables. The comparables used were as follows:

Five Common Comparables	Huck's Distinct Comparables	Kern's Distinct Comparables
Pacific Gateway Exchange, Inc. (PGEX)	IDT Corporation (IDTC)	ACC Corp. (ACC)
Primus Telecomm. Group, Inc. (PRTL)	Esprit Telecom Group plc (ESPRY)	Startec Global Comm. Corp.(STARTEC)
RSL Comm., Ltd. (RSLC)	Colt Telecom Group plc (COLTY)	Telegroup (TELEGROUP)
Viatel, Inc. (VYTL)		

Star Telecomm., Inc.

(STRX)

Respondent concedes that Esprit is appropriate to use as a comparable company, but continues to object to the inclusion of Colt and IDT. I agree that Colt and IDT are not useful comparables and should be eliminated from the analysis. Colt is a local exchange carrier in the UK. It is not a long-distance company, but rather the company that owns the wires that connect homes or offices to the local switch. Thus, it does not compete with WXL or the other comparable companies. Its lack of comparability is also apparent from the great variation of its derived revenue multiplier (10.5x) from those of the other guideline companies utilized by Huck (ranging from 1.2x to 4.5x). I also agree that IDT should be disregarded in the analysis due to the fact that a substantial portion of its revenues is derived from its operations of an Internet network. The growth of that segment of IDT's business is very strong and, as is commonly known, current valuations of all Internet related businesses are unusually high. While Petitioners are correct that IDT also competes in the European long-distance market and might otherwise be a good comparable, its participation in the Internet market offers too great a chance of distortion to allow its inclusion.

Petitioners continue to object to the inclusion of any of Kern's distinct comparables: ACC, Startec and Telegroup. I agree with Petitioners that the inclusion of any one of these three companies presents substantial issues. ACC was, at the relevant time, subject to an announced agreement for its acquisition by another company. Thus, reliable information about its stock trading activity during the pertinent period of time could not be directly observed. Because there is otherwise a sufficiently large group of other companies to use, this is a sufficient reason to reject ACC as a comparable. Startec derives most of its revenue from non-European markets and only 2.2% from Western Europe and, thus, was not significantly involved in the same market as WXL. Telegroup has a highly concentrated share ownership, with 85% of its stock held by founders or otherwise in private hands. On the record before me, I am not able to discern whether there is a sufficiently active market for its shares from which to derive reliable information for valuation purposes. For these reasons, I will exclude Startec and Telegroup from the basket of companies used for purposes of comparison.

For the foregoing reasons, I find that the group of comparables should consist of the five companies identified by both experts plus Esprit.

B. The Derived Multiple

As stated above, the unadjusted median multiple for the five common guideline companies plus Esprit is 2.5x. n6 The next issue to be addressed is the downward adjustments made by the experts to that multiple.

n6 I will use Huck's derived multiples, as the parties have both done in post-trial briefing, because they are derived from data that correlates to the WXL revenue figure to be used in calculating WXL's value.

Huck applied his adjustments directly to the median multiple (and not to individual comparable company multiples) to account for three factors: size, profitability and growth. He concluded that WXL's small size and lack of profitability relative to the guideline companies, together justified a downward adjustment of 25% to 35%. He also determined that WXL's superior latest-12-month growth rate justified a 15% to 20% upward adjustment to the median. On balance, he discounted the median multiple by 15% to adjust for differences between WXL and the guideline companies.

Kern compared WXL to each guideline company individually to assess the appropriate level of discounting. In doing so, he factored in revenue (size), profitability, and operating markets/product diversity. In my view, Kern's company-specific discount methodology more reliably correlates WXL to the guideline companies. Nevertheless, I conclude that Kern's decision to discount PGEX's multiple by 15% on account of profitability is excessive and will reduce that discount to 10%, which correlates better with his treatment of STRX.

Huck, but not Kern, adjusted the median multiple upward due to WXL's superior FY'97 revenue growth rate. For several reasons, I conclude that Kern properly rejected such adjustment. There is nothing in the record to show that WXL's rate of growth was sustainable. Even the FY'97 growth rate is in question, as it does not reflect the substantial bad debt booked in FY'97, since it appears on the income statement "below" the net revenue line. n7 Moreover, WXL's failure to meet its business plan, its heavy indebtedness, its lack of access to capital and its unstable mix of business leave me unable to conclude that anyone would pay a premium to acquire WXL on account of its higher than median growth rate in FY'97.

n7 If FY'97 revenues are reduced by the amount of bad debts booked in FY'97, WXL's rate of growth is reduced to the median of the comparable companies. It is also worth mentioning WXL's high level of intercompany revenue in the final quarter of 1997, which also has a distortive effect on revenue growth rates during that period.

The resulting analysis is summarized in the following chart:

Market Multiples

(Based on Earnings Streams and MVIC)

Multiple	ESPRY	PGEX	PRTL	RSLC	STRX	VYTL	Median
Inv. Cap./Net Rev.	2.4	2.6	1.7	4.5	1.2	3.3	2.5
Adjustments							
Revenue	(10%) *	(20%)	(20%)	(20%)	(20%)	(10%)	
Profitability	(0%) *	(10%)	(5%)	(0%)	(10%)	(0%)	
Operating Markets							
& Product Diversity	(10%) *	(10%)	(10%)	(10%)	(10%)	(10%)	
Adjusted Multiple	1.92	1.56	1.11	3.05	.72	2.64	1.74

* Kern did not include ESPRY in his analysis. Because ESPRY most

closely resembles VYTL, in terms of revenue and profitability,

I have applied for ESPRY the same adjustments as Kern applied for VYTL.

From this, I derive a median adjusted multiple for the six guideline companies of 1.74x.

C. Application of a Control Premium

The parties sharply disagree about the proper application of a control premium. There is no dispute between them that the comparable company method produces a minority valuation of the shares subject to appraisal, as has been recognized in decisions of this court. See, e.g., Kleinwort Benson Ltd. v. Silgan

Corp., 1995 Del. Ch. LEXIS 75, *9, Del. Ch., C.A. No. 11107, Chandler, V.C., (June 15, 1995). Rather, the dispute is over the point in the analysis at which to apply a control premium and, to a lesser degree, the amount of that premium.

Huck added a 30% equity control premium to the median multiple used to determine MVIC for WXL. He then subtracted the value of WXL's long term debt to derive the fair value of the equity. Kern also used a 30% equity control premium figure but applied that premium only after he had completed the steps of comparable company method and determined MVIC for WXL. Having determined WXL's MVIC, Kern (i) subtracted the fair market value of WXL's long term debt, and then (ii) increased the result by 30% to eliminate the minority share discount that inheres in the comparable company method. Respondent argues that Huck's method improperly applies a control premium to WXL's debt and, in doing so, inflates the value of the equity. I agree with Respondent on this point and will apply the control premium only to the equity market value derived from the comparable company method.

I first observe that the difference in methodology has a significant impact on the result in this case. Using an adjusted median multiple of 1.74, an equity premium of 30% and a value of $ 15.17 million for long term debt, Huck's approach yields a fair value of the appraised shares equal to $ 540,000, while Kern's approach yields a fair value of $ 312,650. n8 Huck's result is approximately 85% higher than Kern's. n9

n8 Huck would adjust the median multiple to 2.262 (1.74 plus 30%) then apply it to the latest 12 months revenues ($ 11.48 million) to derive MVIC of $ 25.97 million. Huck would derive a total equity value of $ 10.8 million ($ 25.97 million minus $ 15.17 million long term debt), or $ 540,000 for the Petitioners' shares ($ 10.78 million x 5%). Kern's method of analysis, by contrast, would derive MVIC of $ 19.98 million (1.74 x $ 11.48 million), a total market value of the equity of $ 4.81 million ($ 19.98 million minus $ 15.2 million long term debt), a total fair value of the equity of $ 6.253 million ($ 4.81 million plus 30%), and a value of $ 312,650 for Petitioners' shares ($ 6.253 million x 5%).

n9 In fact, Huck derives an even higher value because he employs a higher adjusted median multiple (2.47x) and a lower value ($ 13.7 million) for long-term debt.

The problem that both Huck and Kern sought to address is, as I have said, that the comparable company method of analysis produces an equity valuation that inherently reflects a minority discount, as the data used for purposes of comparison is all derived from minority trading values of the comparable companies. Because that value is not fully reflective of the intrinsic worth of the corporation on a going concern basis, this court has applied an explicit control premium in calculating the fair value of the equity in an appraisal proceeding. See id. at 6. It would seem to me to be particularly appropriate to do so where, as is true here, the comparable company method is the only method available to me to value the shares in question.

I am persuaded that Petitioners' approach to the control premium is wrong. The observation that the comparable company method of analysis produces a minority equity value does not require that I change the methodology of that analysis. Rather, it requires only that I adjust the result derived from it to eliminate the implicit minority discount. Instead of adjusting the result, Huck undertook to alter, in a significant way, the methodology itself. Doing so, in my view, introduced an analytical distortion that, in this case, significantly overstates the value of the WXL equity. Neither Petitioners nor Huck has supplied authority in the valuation literature justifying this change in the accepted methodology. Because Huck's

methodology is inconsistent with the methodology followed in Harris v. Rapid-American Corp., 1992 Del. Ch. LEXIS 75, *9, Del. Ch., C.A. No. 6462, Chandler, V.C., (April 1, 1992), and because it is otherwise hard to square with the comparable company method, n10 I will not adopt it.

n10 The comparable company method is based on a "debt-free" analysis that permits one to use publicly available data relating to companies with differing capital structures to derive the MVIC of the subject of the appraisal. Equity value is then determined by subtracting from MVIC the fair market value of the long term debt of the subject company. Adjusting the multiples used to derive MVIC to account for a control premium (at least as was done here) is inconsistent with this debt-free approach because such premiums are typically only observed in equity transactions and the multiples are used to derive a combined equity and debt value. Huck tried to compensate for this fact by adjusting his premium to reflect the average debt-to-equity ratio in the industry, but doing so can only dampen and never eliminate the distortional power of the adjustment he made. This distortion is particularly important in the case of a highly leveraged entity such as WXL, which deviates substantially from the observed industry average debt-to-equity ratio. Ironically, Petitioners criticize Kern by arguing that his approach produces a different value for MVIC depending on the debt-to-equity ratio of the company being valued, a result they claim is inconsistent with the debt-free approach underlying the comparable companies method. This argument is fallacious for the simple reason that, as this court has recognized in the past, the value of MVIC derived using the comparable companies approach does not reflect any element of value for control. Computing MVIC without adjusting for control, Huck and Kern employ the same methodology and, given a consistent set of assumptions, would reach the same result without regard to the structure of WXL's balance sheet. It is only when Petitioners try to adjust the method to reflect a control premium that the inconsistencies noted by Petitioners appear.

In Rapid-American, the court valued the three wholly-owned subsidiaries of Rapid-American Corporation by multiplying the equity values of the three (in each case, derived by the comparable company method) times the indicated control premiums for each. Unlike Huck, the court in that case did not calculate the equity value of the subsidiaries by adjusting the multiple used to derive MVIC. Rather, MVIC was derived from the comparable company analysis. That amount was reduced by the value of the debt to determine the value of the equity. Only then was the control premium calculation performed. That is the method Kern used and the one I find appropriate to apply in this case.

D. Appropriate Amount of a Control Premium

Kern identified and used 30% as the appropriate control premium. Huck identified a 40% premium from his review of available information, which he reduced (as a part of his rejected methodology) from 40% to 30% to reflect the average debt-to-equity ratio in the industry. n11 He also recognized that, under our law, I must exclude from that amount elements of value to be realized from the Merger and opined that a small portion of the total was reflective of such amounts. He then testified that, at most, his premium calculation should be reduced to 25% to eliminate impermissible elements of post-merger value. Because I reject Huck's method for applying the control premium, it is unnecessary to follow the first step of this process. Instead, I will reduce Huck's 40% premium to 30% to reflect the elimination of impermissible elements of post-merger value. See Hintmann v. Fred Weber, Inc., 1998 Del. Ch. LEXIS 26, *31, n.52, Del. Ch., C.A. No. 12839, Steele, V.C., (Feb. 17, 1998); Kleinwort Bensen Ltd. V. Silgan, Del. Ch., C.A. No. 11107, Chandler, V.C., mem. op. at 6-10 (June 15, 1995). Because Kern's testimony also supports my use of the 30% figure, I determine to employ that figure. n12

n11 Huck derived his information about the appropriate equity control premium from published data about change of control transaction involving telecommunications companies and total transactions in 1997. He calculated the equity premium paid for control in those transactions by comparing the "tender price in each transaction to the closing price three days prior to the announcement of each transaction."

n12 Respondent argues that there is a failure of proof as to the appropriate level of premium because neither expert was able to testify to the existence of studies analyzing the amount of impermissible post-merger synergies reflected in data on control premiums. Although Huck did express an opinion on this subject, I recognize that there remains some uncertainty about the actual amount of impermissible post-merger values reflected in the gross figures for control premiums. Nevertheless, I conclude that it is more appropriate to apply the 30% control premium used by the experts in order to eliminate the inherent minority discount than to make no adjustment at all. See Kleinwort Bensen at 9.

E. Private Company Discount

In his analysis, Kern applied a final 20% discount, which is described in his report as a "Discount for Lack of Liquidity". His report states that this discount is "based on market observations" and "reflects the fact that WXL International's common stock is not publicly traded." Respondent acknowledges that in Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1144 (1989), the Supreme Court held that it is wrong to apply a discount "at the shareholder level" for a lack of marketability of shares. Nevertheless, Respondent argues that a discount "for lack of marketability that affects all shares equally is an appropriate corporate level discount," and claims that Kern "applied his liquidity discount to all the equity of WXL because WXL was not a publicly traded company."

To the extent Respondent is arguing for the application of a "corporate level" discount to reflect the fact that all shares of WXL shares were worth less because there was no public market in which to sell them, I read Cavalier Oil as prohibiting such a discount. This is simply a liquidity discount applied at the "corporate level." Even if taken "at the corporate level" (in circumstances in which the effect on the fair value of the shares is the same as a "shareholder level" discount) such a discount is, nevertheless, based on trading characteristics of the shares themselves, not any factor intrinsic to the corporation or its assets. It is therefore prohibited.

Respondent argues, alternatively, that Kern's discount is justified on the basis of Kern's testimony about the existence of studies showing that privately held corporations sell at valuation multiples substantially lower than publicly held corporations. I agree with Respondent that, if the record supported this assertion, Cavalier Oil would not prevent taking such studies into account in determining the fair value of shares of a privately held corporation. Unquestionably, it would be appropriate to use a lower control premium than I have because the size of that premium is based substantially or entirely on data derived from sales of publicly traded companies.

The record in this matter is not adequate, however, to support the application of such a discount. The parties refer to Shannon P. Pratt, et al., Valuing a Business: The Analysis and Appraisal of Closely Held Companies, 355-56 (3d ed. 1996). There, Dr. Pratt discusses a study published in Mergerstat Review 1994 (Los Angeles: Houlihan Lokey Howard & Zukin, 1995) at 107, which shows that for certain years during the period 1985-1994, private companies were acquired at lower median price/earnings ratios than were public companies. I note, however, as does he, that during the last two years of the study, 1993 and 1994, the opposite effect is observed, i.e., private companies sold for higher median p/e ratios

than private companies. Discussing the general trend in earlier years, Dr. Pratt suggests that the relatively smaller size of the private companies may partly explain the observation. Here, of course, I have already discounted the median multiple derived from the comparable company method to account for WXL's small size. Dr. Pratt also refers to an article discussing the issue. Z. Christopher Mercer, Should "Marketability Discounts" Be Applied to Controlling Interests of Private Companies?, in Business Valuation Review, June 1994. Mr. Mercer argues against the application of such a discount based on the available data.

Considering this evidence as a whole, I am unable to conclude that there is presently a sufficient theoretical support for the private company discount for which Respondent contends.

F. The Fair Market Value of WXL's Long Term Debt

The parties do not agree on the correct way to account for WXL's debt. Although I conclude that the difference between them is immaterial to my decision, I conclude that Respondent's approach is more consistent with the valuation of WXL as a going concern. Kern used a figure of $ 15,169,057 (or $ 15.17 million) as the fair market value of WXL's long term debt. This figure is taken from WXL's 12/31/97 balance sheet, where it appears as "Intercompany Loan Payable." Huck reduced long term debt by the amount of an asset also reflected on that balance sheet appearing as "Intercompany Loan Receivable" in the amount of $ 1,468,080 (or $ 1.47 million). Because he concluded that the elimination of this asset resulted in a working capital deficit of approximately $ 2.0 million, Huck subtracted that amount from his final result to derive the ultimately fair value of the equity. As I understand it, this difference in methodology between the experts results in a negligible difference in outcome. Using the parameters I have established in this opinion, the outcome changes from $ 310,500 using Kern's approach to $ 308,200, using Huck's approach. n13 Because I believe it is more consistent with the valuation of WXL on a going concern basis, I will adopt Kern's approach.

n13 The size of the change is minimized by the fact that Kern then applies the control premium, which nearly eliminates the difference. Huck applied the control premium earlier in his analysis.

G. Interest

Section 262(i) provides, in pertinent part, that after appraising the shares:

The Court shall direct the payment of the fair value of the shares, together with interest, if any, by the surviving or resulting corporation to the stockholders entitled thereto. Interest may be simple or compound, as the Court may direct.

8 Del. C. § 262(i).

The statute gives the Court of Chancery "discretion to award simple or compound interest. Cede & Co. v. Technicolor, Inc., Del. Supr., 684 A.2d 289, 301 (1996); Grimes v. Vitalink Communications Corp., 1997 Del. Ch. LEXIS 124, *35, n.65, Del. Ch., C.A. No. 12334, Chandler, V.C., (Aug. 26, 1997).

The parties are in agreement that the legal rate of interest is the correct rate to apply in this matter. The issues are whether interest should be simple or compound and, if compound, the period of compounding. Respondent's opposition to compound interest is only half-hearted and, in any case, is inconsistent with the trial testimony of its own expert. Mr. Kern, on cross-examination, gave the following testimony:

Q. To your understanding, all financial investments carry compound as opposed to simple interest; correct?

A. As far as I know, yes. Well, all - I'd like to restate that. "All" is pretty inclusive. I don't know if that's the case all over the world.

Q. In the United States you're not aware of any financial investment that carries simple interest?

A. Generally, speaking, that's correct.

This verity was recently recognized by Chancellor Chandler in Onti, Inc. v. Integra Bank, 1999 Del. Ch. LEXIS 130, *63, Del. Ch., Consol. C.A. No.14514, Chandler, C., (May 26, 1999), wherein he said: "it is simply not credible in today's financial markets that a person sophisticated enough to perfect his or her appraisal rights would be unsophisticated enough to make an investment at simple interest." To the extent it is necessary to look beyond Mr. Kern's testimony, I also note that CTS did not make a good faith effort to value WXL in the merger, instead offering only $ 0.02 per share, or a nominal value of $ 10,000 for all of Petitioners' shares. I find the appraised value of those shares to be 32 times as much and judge that compound interest on that amount is required fairly to compensate Petitioners for having to wait to be paid fair value.

The only testimony in the record about the period of compounding is Huck's, who opined that quarterly compounding is most appropriate. Huck reached this conclusion because he thought the legal rate of interest (10%) most nearly resembles a return on a bond which, he stated, typically compounds quarterly. On cross-examination, Huck also stated that annual compounding is often used in certain methods of appraisal, such as the discounted cash flow analysis. He did not, however, abandon his view that quarterly compounding is appropriate here.

Giving weight to Huck's testimony, I will award interest at the legal rate, compounded quarterly from the date of the merger until the date of final judgment.

IV. CONCLUSION

For all the foregoing reasons, I determine that the fair value of each share of WXL common stock, as of the date of the Merger, was $ 0.6253 and, thus, will enter an order awarding Petitioners a total of $ 312,650 plus interest at the legal rate, compounded quarterly. The parties are directed to present an order of final judgment in conformity with this opinion.

SUPERIOR COURT OF NEW JERSEY
APPELLATE DIVISION
A-985-00T5

ELLEN BROWN,

Plaintiff-Respondent,

v.

JAMES BROWN,

Defendant-Appellant.

Argued September 20, 2001 - Decided February 28, 2002

Before Judges Cuff, Wecker and Winkelstein.

On appeal from Superior Court of New

Jersey, Chancery Division, Family Part,

Essex County, FM-07-1163-98.

Sheldon A. Weiss and Richard Diamond

argued the cause for appellant

(Diamond & Diamond, attorneys;

Mr. Weiss, of counsel and on the brief;

Mr. Diamond, on the brief).

Howard B. Felcher argued the cause for

respondent.

The opinion of the court was delivered by

WECKER, J.A.D.

Defendant James Brown ("James") appeals from the financial terms of a divorce judgment, challenging the amounts awarded to plaintiff Ellen Brown ("Ellen") as permanent alimony, child support, equitable distribution, counsel fees, and expert witness fees. In this appeal, we hold that under the rationale of Balsamides v. Protameen Chemicals, Inc., 160 N.J. 352, 368 (1999), and Lawson Mardon Wheaton, Inc. v. Smith, 160 N.J. 383, 397 (1999), which adopt the position of the American Law Institute as set forth at 2 ALI Principles of Corporate Governance § 7.22(a) and comment e thereto, neither marketability nor minority discounts apply to the valuation of defendant's 47½% interest in a closely-held corporation for purposes of equitable distribution. For this and other reasons, we remand for reconsideration and further findings with respect to the equitable distribution of James's interest in his family's business, as well as the counsel fee and experts' fee awards to Ellen.

We briefly summarize the relevant background. The parties were married on August 21, 1975, when James was twenty-two years old and Ellen was twenty-three. After twenty-two years of marriage, the parties separated in October 1997. The divorce complaint was filed in November 1997. The trial took place on five days between June and November 1999, and the trial judge issued a thirty-two-page written decision on July 20, 2000. The judgment of divorce was entered on September 7, 2000.

When the parties married, James had recently graduated from college and immediately went to work in his family's wholesale florist business, Union County Florist Supplies, Inc. (Florist), eventually acquiring a 47½% interest in the firm and becoming an officer. He has continually been employed by Florist. Ellen worked full-time as a dental assistant during virtually all of the marriage and continues in the position she has held for many years. The parties' only child, Matthew, was born September 6, 1985 and adopted as an infant. The parties agreed to joint legal custody of Matthew, with Ellen as the primary residential custodial parent.

The parties owned their own home in Bloomfield, which they improved over the years. They sent Matthew to a private school, Montclair Kimberley Academy, as well as to summer camp; generally took vacations three times per year; and each drove a leased car supplied by Florist and replaced every three years. In 1998, James reported W-2 income of $75,000, 1099 income of $75,000, and interest income of $7,131, all from Florist, and "passive income" of $8,514 from both Florist and PRJ, a real estate partnership in which James, his brother Richard, and his mother Patricia each held a one-third interest. Thus James's income reported in 1998 was in excess of $165,645. Ellen reported W-2 income of $27,194.99 for 1998. Each party's reported income in 1997 and 1996 was similar to that reported for 1998.

With respect to equitable distribution, the trial judge adopted Ellen's expert's valuation of James's interest in Florist as $561,925, which excluded discounts for lack of marketability and lack of control that James's expert included, and which omitted any reduction for James's claim that he received his interest as a gift. The judge awarded Ellen 40% of James's interest, $225,000, in equitable distribution. The parties agreed on the appraised value of PRJ's real property and the partnership's equity therein. After rejecting James's claim that his one-third interest was a gift and therefore immune from equitable distribution, the judge awarded Ellen $67,000, 40% of James's share of the equity in the property.

The parties stipulated the fair market value of the marital residence at $182,500 and the mortgage balance at $94,000. The judge awarded James $35,500, approximately 40% of the equity in the house. Ellen received title to the house subject to the mortgage and responsibility for repairs to the roof and windows and for water damage, thus receiving net value of approximately $49,700.

In addition to the house and to James's holdings in Florist and PRJ, the parties' assets subject to equitable distribution and valued as of the date of the complaint, were:

James's Paine Weber Investment Account	$27,000.00
James's Paine Weber Retirement Account	$29,536.82
Ellen's IRA Account	$ 6,464.00
Ellen's Employer's Pension Account	$37,284.00
Household Furnishings	$15,000.00
Ellen's Jewelry	$15,320.00

These assets were ordered divided equally between the parties. In awarding Ellen 50% of the filing-date balances in James's Paine Weber accounts, plus "accumulated dividends, interest and growth . . . to the date of distribution . . . ," the trial judge found that although James had invaded those accounts during the course of the litigation with permission of the court, the orders allowing those withdrawals had reserved a final accounting to the conclusion of trial, and James "had the financial ability to pay the

attorney fees, reasonable Bar Mitzvah costs; camp and temple expenses from his income and/or from his mother who paid the camp and temple costs prior to the parties' marital problems." The judge applied the following legal principles:

> Marital liabilities as well as marital assets must be considered when awarding equitable distribution. Monte v. Monte, 212 N.J. Super. 557 (App. Div. 1986). "However, if the debt resulted because the husband intentionally dissipated marital assets such intentional dissipation is no more than a fraud on marital rights and the debt will not be charged to the wife." Monte, supra. If the defendant depleted marital assets to discharge his obligations, he would be charged with the amount of the depletion. Weiss v. Weiss, [226 N.J. Super. 281 (App. Div. 1988).] Moreover, a party may not use marital assets to defray support from current earnings and thereby defeat a spouse's interest in the asset at the time of equitable distribution. Lynn v. Lynn, 165 N.J. Super. 328 (App. Div. 1979).

The parties' only marital debts as of the filing date were found to be an $18,000 credit card debt and James's $1,500 dental bill. The trial judge rejected James's claim that he owed his brother $2,300 and his mother $21,850 as a result of loans he claimed he needed in order to comply with his support obligations. The total $19,500 debt subject to equitable distribution was allocated 24% to Ellen and 76% to James, thus rejecting James's contention that the credit card debt was not marital. As James summarizes the award of equitable distribution, his net cash obligation to Ellen under the divorce judgment is $261,500.

With respect to alimony, the judge properly considered the statutory factors, N.J.S.A. 2A:34-23b; the parties' marital standard of living, consistent with the subsequent decision of the Supreme Court in Crews v. Crews, 164 N.J. 11 (2000); the parties' projected budgets; and their respective earnings and earnings potential. After finding that Ellen had little likelihood of substantially increasing her earnings in the future, whereas James had the potential for increasing his income from Florist, the judge awarded Ellen "permanent alimony in the amount of $62,500 payable $1,200 weekly," consistent with our subsequent decision in Cox v. Cox, 335 N.J. Super. 465 (App. Div. 2000). James did not dispute the appropriateness of a permanent alimony award to Ellen, but only the amount. In setting the amount of alimony, the judge noted that although James's "household consists of another 'family' which [he] is substantially subsidizing from his current income," he did not provide any information respecting his contribution to his new partner's living expenses and those of her children.

The judge calculated James's child support obligation under the Child Support Guidelines at $194 per week. Matthew's private school expenses of $16,500 per year were allocated 25% to Ellen and 75% to James, with James to be responsible for 100% of Matthew's approximately $6,700 in annual hockey expenses and summer camp. James was to provide medical and dental coverage for Matthew, and unreimbursed expenses above $250 were to be allocated 44% to Ellen and 56% to James.

James was to provide security for alimony and child support by maintaining life insurance in the amount of $500,000 with plaintiff as the irrevocable beneficiary to secure his alimony obligation, and by maintaining $150,000 with plaintiff as trustee for Matthew to secure child support until his emancipation. The insurance obligation is not challenged on this appeal.

Finally, the judge cited R. 5:3-5(c), Williams v. Williams, 59 N.J. 229 (1971), and D'Onofrio v. D'Onofrio, 200 N.J. Super. 361 (App. Div. 1985), as the basis for a discretionary award of counsel fees to Ellen based upon "the plaintiff's needs, the defendant's financial ability to pay, and the parties' good faith in instituting or defending the action." In addition to the disparity in income between the parties, the judge emphasized as a rationale for the fee award that a sizeable portion of the legal work performed by the plaintiff's attorney was the result of the defendant's bad faith in raising or prolonging issues related to income, alimony, child support, and equitable distribution . . . . [and finding] that the defendant acted in bad faith in misrepresenting his income, his "immunized" family business assets (subject to equitable distribution); his claim of business discounts not permitted in equitable distribution evaluations without exceptional circumstances and his use of marital assets to pay "expenses" with the intent to deprive the plaintiff of her right to equitable distribution . . . .

The judge found Ellen's attorney's certification of services reasonable and necessary both in the hourly rates and time expended, and awarded plaintiff $40,250 (less $7,500 previously paid by defendant pendente lite) against the $65,987.50 claimed by her attorney for legal fees plus $1,894.90 costs. The judge also awarded Ellen $18,500 (less $3,500 previously paid pendente lite) against her accounting expert's total invoice of $25,050.90, plus $580.90 costs and noted the balance owed to defendant's accounting expert, $23,000, from which he "infer[red] that the plaintiff's expert's fees were both reasonable as to time and hourly charges."

I.

We do not interfere with the judge's determinations respecting alimony, child support, or the equitable distribution of assets other than defendant's interest in Florist. The judge's findings and allocation of marital assets and liabilities, other than Florist, are supported by substantial credible evidence, and we defer to those findings. See Pascale v. Pascale, 113 N.J. 20, 33 (1988); Rova Farms Resort, Inc. v. Investors Ins. Co. of Am., 65 N.J. 474, 484 (1974); Borodinsky v. Borodinsky, 162 N.J. Super. 437, 443-44 (App. Div. 1978). The trial judge's determinations of alimony and child support are likewise supported by credible evidence in the record, and we defer to those determinations. We recognize however, the interrelationship of equitable distribution, alimony, child support, and fee awards. See John D. Miller v. Margaret C. Miller, 160 N.J. 408, 420 (1999); Gladys Miller v. Jay Miller, 97 N.J. 154, 171 (1984); Stamberg v. Stamberg, 302 N.J. Super. 35, 42 (App. Div. 1997); Koelble v. Koelble, 261 N.J. Super. 190, 192 (App. Div. 1992); Slayton v. Slayton, 250 N.J. Super. 47, 50 (App. Div. 1991). We therefore leave it to the discretion of the Family Part Judge on remand to reconsider alimony and child support determinations in light of any significant changes in equitable distribution to Ellen arising from James's holdings in Florist. See Dotsko v. Dotsko, 244 N.J. Super. 668, 682 (App. Div. 1990); Borodinsky v. Borodinsky, 162 N.J. Super. at 448.

II.

We now address equitable distribution with respect to James's 47½% interest in Florist. In this appeal, James challenges the trial judge's refusal to credit evidence that his interest was a gift from his parents and to exclude from the marital estate that portion of James's interest in Florist, representing the value of his shares as of the various dates when they were received from his father or his mother. James concedes that as an active asset, the increase in the value of shares that he received as gifts would be subject to equitable distribution. Scherzer v. Scherzer, 136 N.J. Super. 397, 400 (App. Div. 1975), certif. denied, 69 N.J. 391 (1976). James also challenges the trial judge's adoption of Ellen's expert's valuation

and rejection of James's expert's valuation, particularly the judge's holding that neither marketability nor minority discounts were appropriate in evaluating James's interest in Florist. Finally, James challenges Ellen's entitlement to 40% of this marital asset because she did not play an active role in the business.

A.

Each party presented the testimony of a certified public accountant with expertise in business valuation. Ellen's expert was Stephan C. Chait, C.P.A., of the firm Morrison & Company. James's expert was Kalman A. Barson, C.P.A., of the firm Rosenberg Rich Baker Berman & Company. Each expert testified from his own written report, which was admitted into evidence.

Chait valued the entire business of Florist, as of the date of the complaint, at $1,183,000, and James's 47½% interest at $561,925, taking no discount for marketability or lack of control and assuming that the full value of James's interest was subject to equitable distribution. Barson valued James's 47½% interest in the business as of the date of the complaint at $339,000, after applying discounts of 25% for lack of marketability and 15% for lack of control. Using the same methodology and the same discounts, Barson also valued the shares James acquired from his parents as of the six separate dates of acquisition between 1980 and 1996. Barson then subtracted the $121,000 value he placed on James's shares when acquired, from the $339,000 value he had placed on James's shares at the date of the complaint, leaving $238,000 as the incremental value of James's shares to be included in the marital estate. Neither Chait nor Barson offered an opinion with respect to whether the shares were gifts; each adopted the assumption of the party who retained him.

As the Court recently observed in Balsamides v. Protameen Chemicals, Inc., 160 N.J. 352, 368 (1999) ("Balsamides"), and Lawson Mardon Wheaton, Inc. v. Smith, 160 N.J. 383, 397 (1999) ("Lawson"), valuation is not an exact science. See also Bowen v. Bowen, 96 N.J. 36, 44 (1984) (quoting Lavene v. Lavene, 162 N.J. Super. 187, 193 (Ch. Div. 1978) (on remand) (Lavene II)); John R. MacKay, II, 2 New Jersey Business Corporations § 14-6(d)(1) (2d ed. 1996) ("MacKay"). Careful analysis on a case by case basis is required, with sensitivity and adjustment for the particular circumstances and the flexibility to deal with extraordinary circumstances. In Lavene v. Lavene, 148 N.J. Super. 267 (App. Div.), certif. denied, 75 N.J. 28 (1977) (Lavene I), where we held that the husband's 43% interest in a closely-held corporation "constitute[d] a distributable asset" and remanded for valuation, Judge Pressler noted:

> There are probably few assets whose valuation imposes as difficult, intricate and sophisticated a task as interests in close corporations. They cannot be realistically evaluated by a simplistic approach which is based solely on book value, which fails to deal with the realities of the good will concept, which does not consider investment value of a business in terms of actual profit, and which does not deal with the question of discounting the value of a minority interest.

[Id. at 275.]

With the exception of brief mention in Bowen v. Bowen, 96 N.J. at 51-52, where the parties' experts disagreed respecting the application of a minority discount to the husband's minority interest in a closely-held corporation, and where the wife's expert testified to having "built in a discount" by lowering the multiple of earnings used to determine value; in Lavene I, quoted above; and in Lavene II, 162 N.J. Super. at 202 ("It would not be appropriate to discount defendant's interest in the corporation,

notwithstanding the fact that he has only a minority interest"), we find no reported case in New Jersey that addresses the applicability of either minority or marketability discounts in valuing shares in a closely-held corporation for purposes of equitable distribution.

A trial court is free to accept or reject the testimony of either side's expert, and need not adopt the opinion of either expert in its entirety. Carey v. Lovett, 132 N.J. 44, 64 (1993). In fact, the trial judge adopted the Chait valuation with the following explanation:

> The court finds that the conclusions of Stephan C. Chait [are] more credible than the conclusions of Kalman A. Barson based on the assumptions each made in arriving at their respective conclusions. After reviewing the testimony of Mr. Barson and the documentary evidence relied upon by him and evaluating his demeanor and credibility as to evaluation conclusion, the court finds his opinion of value not sufficiently reliable and too speculative as to his assumptions to be acceptable. While the court acknowledges the approaches used by both experts as methods of evaluation, the court accepts Mr. Chait's valuation conclusions as more credible as it related to the financial analysis of "Florist"; his adjustments; officer compensation; reasonable compensation; normalization earnings; tax rate; discount rate; discretionary expenses, disuse of discounts, and disuse of "gifting".

Both experts took similar approaches to valuing the business. Each used a weighted average of the results of two valuation methods, the market approach (comparable sales of similar companies) and the capitalization of income approach (placing a present value on the anticipated future income stream). Both gave the income approach substantially more weight than the market approach, Chait using relative weights of 80% for income and 20% for market (a four-to-one ratio), and Barson using 75% for income and 25% for market (a three-to-one ratio). The experts differed somewhat in the capitalization rates they adopted in their income approach valuations (20% for Chait and 25% for Barson). The inverse of the capitalization rate is the multiple applied to a projected future income stream to place a value on the business. Thus Chait's 20% capitalization rate translates to a multiple of five times annual income, whereas Barson's 25% capitalization rate translates to a multiple of four.

Chait and Barson also differed somewhat in the extent to which they added back to income excess business expenses of the company (largely for excess officer compensation and personal expenses paid for officers) to calculate true net income. It is plain, however, that the magnitude of the disparity between the values these two experts placed on James's interest in Florist arose largely out of their respective approaches to the two legal issues we have identified – (1) application of marketability and minority discounts and (2) gifting.

When we eliminate the marketability and minority discounts from Barson's valuation, we find the two experts' conclusions as to the value of James's interest as of the filing date substantially closer than originally appears. Whereas Chait valued James's interest at $561,925, Barson's value, if we add back the twenty-five percent marketability discount and the fifteen percent minority discount that he applied, would have been $500,000. The difference between Ellen's 40% share under Chait's valuation (rounded to $225,000) and under Barson's valuation (rounded to $200,000) is accounted for by the several

judgment calls involved in each expert's approach. We are hard-pressed to interfere with the trial judge's adoption of Chait's judgments, separate and apart from the gift issue – on which each expert merely adopted the assumption of his own client.

The trial judge's overall conclusion with respect to the weight and credibility to be given to the experts' respective opinions – that Chait's opinion should be adopted in its entirety and Barson's disregarded – actually reflects the judge's view of the discounting and gift issues, which we now address.

B.

James maintains that the credible evidence in the record does not support the trial judge's conclusion that James failed to prove that his interest in Florist was acquired by gift. We agree. The trial judge correctly placed upon James the burden of establishing that his interests in Florist and in PRJ were exempt in whole or in part as gifts. See Pascale v. Pascale, 140 N.J. at 609; Landwehr v. Landwehr, 111 N.J. 491, 504 (1988); Painter v. Painter, 65 N.J. 196, 214 (1974); Dotsko v. Dotsko, 244 N.J. Super. at 676; Weiss v. Weiss, 226 N.J. Super. 281, 291 (App. Div.), certif. denied, 114 N.J. 287 (1988). But the judge ignored significant evidence that supports the claimed gifts of 47½ shares in Florist, when he concluded that James "failed to produce any evidence of an unequivocal donative intent on the part of the donor, actual or symbolic delivery of the subject matter of the gift, and an absolute and irrevocable relinquishment of ownership by the donor," citing In re Dodge, 50 N.J. 192 (1967). The judge found that James's father "continued to exercise 'ownership' control" over both the business itself and the brothers' relationship as co-owners "long after he transferred his shares of stock." That analysis might apply to a dispute between the sons and their parents over ownership; it does not assist us in determining whether James acquired his 47½ shares as gifts from his parents or in exchange for past or future services.

James, his brother Richard, and his mother each testified that the elder Browns, as the original owners of all 100 shares of Florist, intended to give the business to their sons; gave their shares away without compensation as part of their own estate plan; and never intended anyone else, including their daughters-in-law, to own the business. In light of that testimony, which was not contradicted by Ellen, it is impossible to accept the trial judge's conclusion that James offered no evidence of a gift. On the contrary, we are satisfied that James met his burden of proving by a preponderance of the evidence that his shares were gifts, and that their values when received must be excluded from equitable distribution.

In reaching that conclusion, we note the absence of any substantial evidence to rebut James's evidence that his shares were received as gifts from his parents as part of their own estate planning. Ellen argues on appeal that modest salary payments to James's father and mother after the stock transfers, payments that were unrelated to their actual work in the business, contradict the claimed gifts. We fail to see the logic in that argument. Moreover, our conclusion is influenced by Ellen's acquiescence in the gifting plan. The record establishes that the elder Browns gradually divested themselves of their 100 shares in Florist by directly and indirectly giving an equal number of shares to James and to Richard on six separate dates, totaling 47½ to each. It is undisputed that their father, Albert Brown, first transferred twenty-two shares to each of them; that in 1990, 1991 and 1992, Patricia Brown, their mother, transferred three shares each to James, to Ellen, to Richard, and to Richard's wife, Gloria; that each of the wives then transferred the shares she received to her husband; that in 1993, Patricia Brown transferred one share each to James, Ellen, Richard and Gloria, and again Ellen transferred the share she received to James, and Gloria transferred her share to Richard; and finally, that in 1996, Patricia Brown transferred 3½ shares each to James and to Richard.

Barson admitted that there was no evidence that either James's father or his mother ever filed a gift tax return, which would have been required for any gift with a value in excess of $10,000. He also admitted that Patricia Brown's transfers to James's and Richard's wives were intended to keep the gifts under the maximum allowed free of gift tax. Whether James's parents breached any tax reporting or tax payment obligation arising from those transfers does not affect the character of the transfers as between parent and child, absent evidence that the shares were acquired as anything other than gifts.

The value of James's shares as of the dates they were received as gifts must be deducted from the complaint-date value to calculate that portion of James's interest in Florist that is subject to equitable distribution. We stress that the valuation of Florist, and thus of the shares when received by James, must be determined in accordance with our holding that neither marketability nor minority discounts are appropriate. In other words, the valuation approaches for each date must be consistent with the approaches taken for the complaint-date valuation.

In light of our conclusion respecting the gift issue, James's litigation posture on that issue does not support the finding of bad faith on his part nor a lack of credibility on the part of his expert.

C.

James contends that the trial judge erred in rejecting the applicability of marketability and minority discounts in valuing his interest in Florist. We disagree.

The Supreme Court recently addressed the applicability of marketability and minority discounts in valuing a less than controlling interest in a closely-held corporation. See Balsamides, 160 N.J. at 352, and Lawson, 160 N.J. at 383. "A minority discount adjusts for lack of control over the business entity on the theory that non-controlling shares of stock are not worth their proportionate share of the firm's value because they lack voting power to control corporate actions. . . . A marketability discount adjusts for a lack of liquidity in one's interest in an entity, on the theory that there is a limited supply of potential buyers for stock in a closely-held corporation." Lawson, 160 N.J. at 398-99. Whether marketability or minority discounts are appropriate to the valuation of a less than controlling interest in the entity are questions of law which we review de novo, giving no special deference to the trial judge's determination. Balsamides, 160 N.J. at 372-73; Lawson, 160 N.J. at 398.

The general rule we deduce from Lawson and Balsamides is that in a statutory appraisal for purposes of determining the fair value of shares owned by a dissenting shareholder, N.J.S.A. 14A:11-1 to -11 (as in Lawson), or for valuing shares in a court-ordered buy-out resulting from an oppressed shareholder situation, N.J.S.A. 14A:12-7(1)(c) (as in Balsamides), neither a marketability nor a minority discount should be applied absent extraordinary circumstances. See MacKay § 14-6(d)(2)(d) (Supp. 2001). The functional similarity of these two discounts has been recognized by the American Law Institute. 2 ALI Principles of Corporate Governance § 7.22(a) ("ALI Principles").

Although in Balsamides the Court found a 35% marketability discount appropriate, whereas in Lawson the Court disallowed any discount, the Court enunciated its application of "the same guiding principle" in both cases – "a marketability discount cannot be used unfairly by controlling or oppressing shareholders to benefit themselves to the detriment of the minority or oppressed shareholders." Lawson, 160 N.J. at 407-08; accord Balsamides, 160 N.J. at 378-79. The unfairness of using those discounts lies in the

potential for depriving minority shareholders of the full proportionate value of their shares and enriching majority shareholders by allowing a buy-out of minority interests at bargain prices. Lawson, 160 N.J. at 402.

In Balsamides, the extraordinary circumstance that warranted use of a marketability discount was that it was the oppressing 50% shareholder who was to acquire the shares of the oppressed 50% shareholder, and equity demanded that the oppressor not be rewarded for his conduct by allowing a buy-out at a discounted price. In Lawson, the Supreme Court found no comparably extraordinary circumstance and rejected use of the discounts where discounting would have allowed the oppressive majority shareholder to buy out minority owners at less than full value.

The ALI's rationale for the fair value, no-discount rule, a rationale adopted in Lawson and Balsamides, is that neither the dissenting (minority) shareholder, nor the oppressive (majority) shareholder, nor a veto-wielding (50%) shareholder, can be allowed to exploit the very situation that triggered the right to an appraisal, thereby capturing more than a proportionate share of the corporation's value and depriving other shareholders of their fair share.

In Lawson, the Court expressly adopted the approach of § 7.22(a) of the ALI Principles:

> "The fair value of shares [subject to statutory appraisal rights] should be the value of the eligible holder's . . . proportionate interest in the corporation, without any discount for minority status or, absent extraordinary circumstances, lack of marketability."
>
> [160 N.J. at 403.]

That position is elaborated in comment e to ALI Principles,

§ 7.22(a):

> Some decisions have upheld the subtraction of a minority discount from the value of shares held by small stockholders on the theory that non-controlling stock is worth less than its proportionate share of the corporation's fair value. Other decisions have accepted a functionally similar adjustment to reflect the non-marketability of minority shares. However, both Delaware and Maine have recently and properly rejected the use of any such discount. See Cavalier Oil Corp. v. Harnett, 564 A.2d 1137 (Del. 1989); In re Valuation of Common Stock of McLoon Oil Co., 565 A.2d 997 (Me. 1989). See Reporter's Note 4. Section 7.22(a) follows these jurisdictions in requiring the appraisal court to value the firm as a whole, not specific shares, and to allocate that value proportionately, absent extraordinary circumstances. Any contrary rule would require the court to undertake a complicated and ultimately speculative inquiry, which could produce disparate awards depending on the number of shares held by otherwise similarly situated dissenting shareholders. Similarly, the status of shares as "restricted securities" for purposes of the federal securities laws should not affect their valuation under the proportionate interest standard of § 7.22(a).

It has been said that the very purpose of the appraisal remedy for dissenting shareholders would be undermined by application of a minority discount to the value of their shares. Robert B. Heglar, Rejecting the Minority Discount, 1989 Duke L.J. 258, 266-75 (1989). There is a recognized risk of double-counting

by an expert, that is, of duplicative reductions in the value of a minority interest in a closely-held business, as a result of increasing the capitalization rate (and decreasing the valuation multiple) to account for limited marketability, and then in addition applying a "marketability discount" to the value derived from capitalizing income. See Balsamides, 160 N.J. at 379-81; McKay, § 14-6(d)(2)(d) at 36 (Supp. 2001).

In his capitalization of income approach to valuation, Chait took into account an "equity risk" over a "safe," "risk-free" investment, such as a twenty-year United States Treasury bond; a "small company risk" (based upon a comparison of small and large company public stocks); and a "specific company risk," all of which he factored into his determination that a twenty percent capitalization rate was appropriate. Barson's income approach to valuation also took into account both small company risk and a "small company risk premium" when he determined to use a twenty-five percent capitalization rate. Thus the additional twenty-five percent discount Barson applied for lack of marketability appears to double-count the same risk, a factor that further justifies eliminating that discount.

Although the Court's holdings in Lawson and in Balsamides directly addressed the use of a marketability discount, in each case the Court also discussed the use of a minority discount. Lawson, 160 N.J. at 401-03; Balsamides, 160 N.J. at 373-75. We recently denied the application of both marketability and minority discounts where no extraordinary circumstances were proven. Casey v. Brennan, 344 N.J. Super. 83 (App. Div.), certif. granted, ___ N.J. ___ (2001), and certif. denied, ___ N.J. ___ (2001). We held in Casey that dissenting shareholders exercising their right to a statutory appraisal pursuant to N.J.S.A. 14A:11-7(1), as well as those dissenting shareholders whose rights on being cashed out arose under common law, all were entitled to their proportionate shares of the value of the whole corporation, and not merely a discounted price for their minority holdings. 344 N.J. Super. at 111-12.

In Casey, after discussing the holdings of Lawson and Balsamides with respect to the marketability discount, and relying in part upon the reasoning of the Delaware Supreme Court in Cavalier Oil Corp. v. Harnett, 564 A.2d 1137, 1144 (Del. 1989) (the object of the statutory appraisal is "to value the corporation itself, as distinguished from a specific fraction of its shares as they may exist in the hands of a particular shareholder"), we found "no reason to distinguish, for these purposes between marketability and minority discounts and . . . conclude[d] that minority discounts likewise are not to be applied in a valuation proceeding." 344 N.J Super. at 112.

Statutory appraisal rights accorded to dissenting shareholders in New Jersey (and in most states) include the right to a determination of the "fair value" (not "fair market value") of their shares. N.J.S.A. 14A:11-3; see Bobbie J. Hollis, II, The Unfairness of Applying Lack of Marketability Discounts to Determine Fair Value in Dissenter's Rights Cases, 25 J. Corp. L. 137, 139 (1999), explaining the distinction between "fair value" and "fair market value":

> "Fair value" is not the same as, or short-hand for, "fair market value." "Fair value" carries with it the statutory purpose that shareholders be fairly compensated, which may or may not equate with the market's judgment about the stock's value. This is particularly appropriate in the close corporation setting where there is no ready market for the shares and consequently no fair market value.
>
> A closely-held corporation is one that has few shareholders and little market for the stock, or one that has an integration of ownership and management. When appraising shares of a close corporation, fair value cannot be fairly equated with the company's fair market value. Close corporations by their nature have less value to outsiders, but at the same time their value may be even greater to other shareholders who want to keep the business in the form of a close corporation.
>
> [Footnotes omitted.]

The "fair value" concept is inherently inconsistent with discounting value to reflect limited marketability. That which has been labeled a "marketability discount" reflects the theoretically limited market for the sale of a privately-held, small business. That which has been labeled a "minority discount" reflects a theoretically more limited market for sale of a non-controlling interest in such a business. The significance of a limited market is that the asset is illiquid. Both discounts represent an attempt to account for the fact that unlike shares in a publicly-traded company, shares in a closely-held corporation have limited liquidity.

But liquidity is of little consequence here. As between James and his brothers, the only other shareholders, there is no evidence of a contemplated sale of all or part of the business, forced or otherwise. All of the evidence supports the likelihood that the business will continue under the present ownership for the foreseeable future, with James and Richard each continuing to be the active owners and officers, each holding 47½% of the outstanding shares, and Gilbert holding the remaining 5%. The distinction between fair value and fair market value appears to us equally applicable in the valuation of one spouse's interest in his family's closely-held corporation for purposes of equitable distribution.

Given the Court's adoption of the "proportionate share" approach to valuing the interest held by a dissenting or an oppressed shareholder, any dispute among the existing shareholders would presumably see James either buying out his brothers' interests or selling his own at a proportionate share of fair value, with no discount for lack of control. Indeed, the statutory protections for dissenting shareholders, as interpreted in Lawson, demonstrate that the value of James's minority interest in Florist, vis-à-vis his brothers (the only other shareholders), is protected by the fair value rule itself. That is, if he were to find himself at irreconcilable odds with his brothers, he could force a statutory appraisal in which each bloc would be valued at a proportionate share of the whole.

Unlike Balsamides, Lawson, and Casey, no actual transfer of shares is involved in this equitable distribution case. That distinction makes the marketability discount even less appropriate than in the statutory appraisal or deadlock contexts, since no sale of the business appears likely in the foreseeable future. We see no reason to reward the spouse who holds title to the shares by allowing him to retain the value of the entire bloc at a bargain "price," that is, crediting the non-owner spouse with less than the owner's proportionate share of full value when determining equitable distribution of the marital assets. Here, allowing the marketability or minority discounts would unfairly minimize the marital estate to

Ellen's detriment and is inconsistent with the concept of equitable distribution. While "there is no ready market for the shares and consequently no fair market value" of Florist, James's shares in the going concern have value to him and to his co-owners that does not depend upon a theoretical sale to an outsider and has not changed as a result of the divorce complaint or judgment.

The ALI cautions that valuation contexts other than dissenting shareholder appraisal rights, such as tax valuations, may warrant a different approach to discounting, ALI Principles § 7.22, comment e at 325-26. However, we see no reason for a different approach in equitable distribution. Even James's expert, Barson, admitted that the value of a minority bloc of stock is not to be discounted for lack of control under New Jersey's "fair value" statutes. He did not offer any explanation for adopting a different rule for purposes of equitable distribution. While Barson cited a controlling shareholder's "power to change the bottom line" as one rationale for applying a discount here, no single shareholder controlled Florist or its officers' bottom line.

The record before us reveals no extraordinary circumstances related to the operation or control of Florist to warrant a discount from the fair value of the company for lack of marketability, or a discount from the value of James's interest for his minority bloc. Under these circumstances, and consistent with the reasoning of our Supreme Court, we see no reason to reduce the proportionate value of James's 47½ shares (47½%) for lack of liquidity (marketability discount) or lack of control (minority discount).

Given the purpose of equitable distribution to fairly divide the accumulated wealth of a marital partnership, and that the purpose of valuing the shareholder spouse's interest is to determine the non-owner spouse's fair share of other marital assets; where the shareholder will retain his shares and the divorce will not trigger a sale of those shares, lack of liquidity does not affect the fair value of the minority interest. Neither discount is appropriate.

We therefore find no legal error in the judge's holding marketability and minority discounts inapplicable in this case, and we affirm the trial judge's determination that there are no "extraordinary circumstances" to warrant use of those discounts. However, because there has been little in the way of case law respecting that issue in the context of equitable distribution, we cannot agree with the judge's finding that Barson's use of those discounts or defendant's contentions respecting the discounts amount to "bad faith" as a factor in awarding Ellen professional fees.

D.

We find no merit in James's contention that Ellen is not entitled to 40% of Florist because she was not active in the business. See R. 2:11-3(e)(1)(E). The theory of equitable distribution is that marriage is a partnership whose assets should be fairly and equitably distributed when the partnership breaks up. E.g., Pascale v. Pascale, 140 N.J. at 609; Portner v. Portner, 93 N.J. 215, 219 (1983); Rothman v. Rothman, 65 N.J. 219, 229 (1974). There is ample support for the trial judge's finding that Ellen fulfilled that partnership role:

> Although the defendant was the primary wage earner, it is clear that the plaintiff made substantial contributions to both the defendant's earning power and to the acquisition and preservation of the marital property. . . . In light of both the plaintiff's financial and non-financial contributions, the court finds that she was not only a partner, but an equal force, in the marriage and made substantial contributions to the economic betterment of the parties' marriage.

Indeed, in his written summation, James proposed allocating to Ellen an amount equal to 45% of the $238,000 incremental value that Barson placed upon James's interest in Florist. Allowing Ellen 40% of that portion of James's interest in Florist that is determined to be part of the marital estate is well within a reasonable exercise of judicial discretion, and we will not interfere.

III.

We now address equitable distribution of James's one-third interest in the real estate partnership, PRJ, which owns the property in Linden that is now occupied by Florist. PRJ's three equal partners are James, his brother Richard, and Patricia Brown (James's and Richard's mother).

James contends that his interest in PRJ was received as a gift from his father and is therefore immune from equitable distribution. The trial judge rejected that contention. James argues that the Linden property owned by PRJ was purchased in PRJ's name with the proceeds of the sale of the Staten Island property formerly occupied by Florist and allegedly owned by James's father. We agree with the trial judge that the record does not support that argument.

The testimony and the documentary evidence are inconsistent, and neither supports the gift claim. The RESPA statement for the July 10, 1987 purchase of the PRJ property in Linden reflects a purchase price of $1,099,400, plus closing costs and related expenses that bring the total to $1,115,351. The purchase was financed by PRJ's assumption of an Economic Development Authority (EDA) loan of $602,996, a $300,000 mortgage loan from the seller, and the balance paid in cash. The source of the cash portion of the purchase price is not identified in the record.

The Staten Island property apparently consisted of three parcels, each of which was titled in the name of Florist when it was sold to a third party. Florist sold the first parcel, 87 Grove Avenue, on September 22, 1987, for $285,000 in an all cash sale, two-and-one-half months after PRJ took title to the Linden property. Florist sold the second parcel, 78 Faber Street, for $150,000 on September 1, 1988, receiving $30,000 as a cash deposit and taking back a mortgage to secure the remaining $120,000 due. Florist sold the third parcel, 97-99 Grove Avenue, on January 26, 1996, taking back a mortgage for the entire purchase price, $60,000. These two mortgages are carried as assets on Florist's books.

James himself testified that he considered Florist and PRJ as a single entity. If corporate funds or corporate credit was used to purchase the partnership property, then James's acquisition of a one-third interest in PRJ was not a gift, but a distribution from Florist. Apparently based upon these facts, the trial judge concluded that James "produced no credible evidence as to immunize his interest in PRJ Associates from equitable distribution." In other words, the trial judge found that James did not meet his burden of proving that the real estate purchased by PRJ in 1987 constituted a gift from his father. We defer to that finding, which is supported by the record, and we affirm the trial judge's conclusion that James failed to prove that his interest in PRJ was acquired by gift.

The parties agreed on the equity in the property, and thus on the value of James's one-third share. That share was properly included in the marital estate, and we are satisfied that distributing 40% ($67,000) to Ellen was a reasonable exercise of discretion.

IV.

The trial judge's award of counsel fees and expert witness fees was grounded largely upon a finding of bad faith on James's part in regard to equitable distribution of his interests in Florist and PRJ. Because we do not find support in the record for the judge's findings that James acted in bad faith respecting those two assets, the fee awards must be vacated and considered anew on remand. By vacating these awards, we do not suggest that no fee award to Ellen is appropriate, or that the Court may not have grounds for a substantially similar award. The court must, however, consider all of the Williams factors in light of the entire record and its final decision on all other financial issues.

V.

We reject defendant's request that we exercise our original jurisdiction to determine the disputed valuation issues other than the gift and discounting issues addressed in Parts II B, II C, and III of this opinion. We also reject defendant's request in the alternative that any issues remanded to the Family Part be assigned to a different judge. The mere fact that a judge has issued legal rulings or made factual findings in a case does not warrant reassignment in the event of reversal and remand. However, where findings of credibility respecting the testimony of key witnesses have been made, and where a significant portion of those findings have been found unsupported by the record, fairness dictates a fresh look. See Luedtke v. Shobert, 342 N.J. Super. 202, 219 (App. Div. 2001) ("[I]t would place the court in an untenable position to now have to reevaluate a case in which it had already expressed a preference for one of the experts over the other.")

As we have explained, we view the judge's adoption of Chait's valuation testimony as largely a result of his view of the two legal issues which we have now determined. On balance, we are satisfied that the trial judge will be guided by our decision and can fairly reconsider the valuation of the marital portion of James's interest in Florist, as well as counsel and expert fees. Alimony or child support may warrant modification in light of the final decision on equitable distribution. See Bowen v. Bowen, 96 N.J. at 52-53; Dotsko v. Dotsko, 244 N.J. at 682. The trial judge will be in the best position to consider any such modification.

Affirmed in part, reversed in part, and remanded for further proceedings consistent with this opinion.

Cede & Cinerama v. Technicolor

Full Text of Court Cases

Cede & Cinerama v. Technicolor

Case name: Cede and Cinerama v. Technicolor
Citation: 684 A.2d 289, 1996 Del. LEXIS 386
Date of decision: October 14, 1996
Country: US
State or Federal: State
State/Jurisdiction: Delaware
Court: Supreme Court
Type of action: Dissenting Shareholder
Judge: Holland
Experts: John Torkelsen (for plaintiff)
Alfred Rappaport (for defendant)
SIC: 7812 Motion Picture and Video Tape Production
NAICS: 512110 Motion Picture and Video Production
155

Counsel: Robert K. Payson, Esquire, and Arthur L. Dent, Esquire, of Potter, Anderson & Corroon, Wilmington, Delaware, and Gary J. Greenberg, Esquire (argued), New York, New York, for appellants.

Rodman Ward, Jr., Esquire, Thomas J. Allingham, II, Esquire (argued), and R. Michael Lindsey, Esquire, of Skadden, Arps, Slate, Meagher & Flom, Wilmington, Delaware, for appellee.

Judges: Walsh, Holland, and Horsey. n1

n1 Sitting by designation pursuant to Del. Const. art. IV, § § 12, 38.

Opinion by: Holland

This appeal is from a final judgment of the Court of Chancery in an appraisal action. The proceeding arises from a cash-out merger of the minority shareholders of Technicolor Incorporated ("Technicolor"), a Delaware corporation. With the approval from a majority of Technicolor's shareholders, MacAndrews & Forbes Group Incorporated ("MAF") merged its wholly-owned subsidiary, Macanfor Corporation ("Macanfor"), into Technicolor. The only defendant-appellee in this appraisal action is Technicolor, the surviving corporation of the merger. The plaintiffs-appellants are Cinerama, Incorporated, the beneficial owner of 201,200 shares of Technicolor common stock, and Cede & Company, the record owner of those shares (collectively "Cinerama.")

Cinerama contends, inter alia, that the Court of Chancery erred, as a matter of law, in appraising the fair value of its Technicolor shares. According to Cinerama, that legal error was a refusal to include in the valuation calculus "MAF's new business plans and strategies for Technicolor, which the Court [of Chancery] found were not speculative but had been developed, adopted and implemented" between the date of the merger agreement and the date of the merger. That contention is correct and dispositive of

this appeal. Weinberger v. UOP, Inc., Del. Supr., 457 A.2d 701 (1983). Accordingly, the appraisal action will be remanded for further proceedings in accordance with this opinion. Cinerama's other contentions are addressed only to the extent they are relevant to the remand.

Procedural History

This is the fourth appeal by Cinerama relating to the same companion litigation: a first-filed Delaware statutory appraisal proceeding (the "appraisal action"), and a later-filed shareholder rescissory damages lawsuit for "fraud" and unfair dealing (the "personal liability action"). Cinerama's first appeal was taken from an interlocutory judgment. In that appeal, this Court concluded the Court of Chancery had erred, as a matter of law, in requiring Cinerama to make an election of remedies before trial. Cede & Co. v. Technicolor, Inc., Del. Supr., 542 A.2d 1182 (1988) ("Technicolor I"). This Court held that Cinerama was entitled to pursue its appraisal action and its personal liability action concurrently, through trial. Id. at 1192. Both proceedings were remanded to the Court of Chancery. Id.

The consolidated trial of the personal liability and appraisal actions lasted forty-seven days. The Court of Chancery announced its decision in the appraisal action on October 19, 1990. In its "appraisal opinion," the Court of Chancery found the fair value of Cinerama's Technicolor stock to be $ 21.60 per share as of the date of the merger, January 24, 1983. Cede & Co. v. Technicolor, Inc., 1990 Del. Ch. LEXIS 259, Del. Ch., C.A. No. 7129 (Oct. 19, 1990).

The Court of Chancery issued its "personal liability opinion" in June 1991. Cinerama, Inc. v. Technicolor, Inc., 1991 Del. Ch. LEXIS 105, Del. Ch., C.A. No. 8358 (June 24, 1991), reprinted in 17 DEL. J. CORP. L. 551 (1992). The Court of Chancery held that, even if the defendant-directors had not exercised due care in approving the merger, Cinerama had not been damaged. It reached that conclusion on the basis that the $ 21.60 per share valuation in its appraisal opinion was less than the merger agreement price of $ 23 per share. The Court of Chancery entered judgment for the defendants in the personal liability action.

Cinerama's second appeal to this Court was from the final judgments entered in both the appraisal action and the personal liability action. Cede & Co. v. Technicolor, Inc., Del. Supr., 634 A.2d 345 (1993) ("Technicolor II"), modified on reargument, 636 A.2d 956 (1994). Technicolor cross-appealed from the judgment in the appraisal action. Id. This Court affirmed in part, reversed in part, and remanded the personal liability action to the Court of Chancery for an application of the entire fairness standard to the challenged transaction and to resolve certain additional issues relating to the duty of loyalty. Technicolor II, 634 A.2d at 373. This Court also concluded that the issues raised by the appeal and cross-appeal in the appraisal action were "moot" as a result of our decision in the liability action. Id. at 351.

Following this Court's decision in Technicolor II, the parties agreed to submit the remanded issues in the personal liability action to the Court of Chancery for a decision without presenting any additional evidence. After reconsideration, the Court of Chancery issued an opinion which initially resolved the loyalty issues identified by this Court in Technicolor II and then concluded that the defendants had met their burden of showing entire fairness. Cinerama, Inc. v. Technicolor, Inc., Del. Ch., 663 A.2d 1134, 1144 (1994). The Court of Chancery entered another judgment for the defendants in the personal liability action.

Cinerama filed its third appeal. This Court affirmed the Court of Chancery's final judgment in the personal liability action. Cinerama, Inc. v. Technicolor, Inc., Del. Supr., 663 A.2d 1156, 1180 (1995) ("Technicolor III"). Although the liability action had been concluded in favor of the defendants, Cinerama was still entitled to receive the fair value of its Technicolor shares. Technicolor I, 542 A.2d at 1191. Consequently, the appraisal action, which had remained in abeyance following this Court's remand in Technicolor II, was no longer moot.

The Court of Chancery entered a Restated Modified Order and Final Judgment in the appraisal action on October 27, 1995. That judgment set the fair value of a share of Technicolor stock at $ 21.60. The judgment awarded Cinerama: the principal amount of $ 4,345,920; pre-judgment interest on that amount at the rate of 10.32%, compounded annually from January 24, 1983 (the date of the merger) to August 2, 1991 (the date of the original appraisal action judgment); and post-judgment interest thereafter, at the rate of 10.5% simple interest, accruing only on the principal award of $ 4,345,920.

Cinerama filed a timely appeal with this Court. Technicolor did not cross-appeal. Cinerama's fourth appeal is the subject matter of this opinion.

Facts

The history of this litigation has been recounted at length. Technicolor II, 634 A.2d at 351-58; Technicolor I, 542 A.2d at 1185-86; Cinerama, Inc. v. Technicolor, Inc., Del. Ch., 663 A.2d 1134, 1135-37 (1994). We will rely upon those comprehensive recitations of the entire facts. Only the operative facts that are relevant to this appeal in the appraisal action will be recounted. Technicolor was a corporation with a long and prominent history in the film/audio-visual industries. By the early eighties, Technicolor's increase in market share had leveled off. The company's core business earnings had stagnated.

Technicolor engaged in a number of distinct businesses through separate operating units. Technicolor's Professional Services Group was its main source of revenue and profit. The Videocassette Duplicating Division operated one of the largest duplicating facilities in the world. The Consumer Services Group operated film processing laboratories ("Consumer Photo Processing Division" or "CPPD"), which provided film processing services to other photofinishers. CPPD also operated the Standard Manufacturing Company ("Standard"), which manufactured film splicers and associated equipment. The Government Services Group ("Government Services") provided photographic and non-photographic support and management services under contract to governmental agencies. Technicolor's Gold Key Entertainment Division ("Gold Key"), licensed motion pictures and other programs for television exhibition. The Audio Visual Division ("Audio Visual") distributed film and video equipment.

Morton Kamerman ("Kamerman"), Technicolor's Chief Executive Officer and Board Chairman, concluded that Technicolor's principal business, theatrical film processing, did not offer sufficient long-term growth for Technicolor. Kamerman proposed that Technicolor enter the field of rapid processing of consumer film by establishing a network of stores across the country offering one-hour development of film. The business, named One Hour Photo ("OHP"), would require Technicolor to open approximately 1,000 stores over five years and to invest about $ 150 million.

In May 1981, Technicolor's Board of Directors approved Kamerman's plan. The following month, Technicolor announced its ambitious venture with considerable fanfare. On the date of its OHP announcement, Technicolor's stock had risen to a high of $ 22.13.

In the months that followed, Technicolor fell behind on its schedule for OHP store openings. The few stores that did open reported operating losses. At the same time, Technicolor's other major divisions were experiencing mixed, if not disappointing, results.

As of August 1982, Technicolor had opened only twenty-one of a planned fifty OHP retail stores. Its Board was anticipating a $ 5.2 million operating loss for OHP in fiscal 1983. On August 25, 1982, the Technicolor Board "authorized the company's officers to seek a buyer for Gold Key." During 1982, Technicolor also decided to terminate the Audio Visual Division. Nevertheless, Kamerman remained committed to OHP. In Technicolor's Annual Report, issued September 7, 1982, Kamerman stated, "We remain optimistic that the One Hour Photo business represents a significant growth opportunity for the Company."

Technicolor's September 1982 financial statements, for the fiscal year ending June 1982, reported an eighty percent decline of consolidated net income - from $ 17.073 million in fiscal 1981 to $ 3.445 million in 1982. Profits had declined in Technicolor's core business, film processing. Technicolor's management also attributed the decline in profits to write-offs for losses in its Gold Key and Audio Visual divisions, which had already been targeted for sale. By September 1982, Technicolor's stock had reached a new low of $ 8.37 after falling by the end of June to $ 10.37 a share.

In the late summer of 1982, Ronald O. Perelman ("Perelman"), MAF's controlling stockholder, concluded that Technicolor would be an attractive candidate for a takeover or acquisition by MAF. Kamerman and Perelman met for the first time on October 4, 1982 at Technicolor's offices in Los Angeles. Perelman informed Kamerman that MAF would be willing to pay $ 20 per share to acquire Technicolor. Kamerman replied that he would not consider submitting the matter to Technicolor's Board at a price below $ 25 a share.

Perelman met with Kamerman in Los Angeles for a second time on October 12, 1982. MAF's Chief Financial Officer also attended the meeting. The meeting's principal purposes were: (1) to allow MAF's Chief Financial Officer to review Technicolor financial data; and (2) to give Perelman a tour of Technicolor's Los Angeles facilities.

On October 27, Kamerman and Perelman reached an agreement by telephone. Perelman initially offered $ 22.50 per share for Technicolor's stock. Kamerman countered with a figure of $ 23 per share. He also stated that he would recommend its acceptance to the Technicolor Board. Perelman agreed to the $ 23 per share price.

The Technicolor Board convened on October 29, 1982 to consider MAF's proposal. All nine directors of Technicolor attended the meeting. Kamerman outlined the history of his negotiations with Perelman. Kamerman explained the basic structure of the transaction: a tender offer by MAF at $ 23 per share for all the outstanding shares of common stock of Technicolor; and a second-step merger with the remaining outstanding shares converted into $ 23 per share, with Technicolor becoming a wholly owned subsidiary of MAF. Kamerman recommended that MAF's $ 23 per share offer be accepted in view of the present market value of Technicolor's shares. Kamerman stated that accepting $ 23 a share was "advisable rather than shooting dice" on the prospects of Technicolor's OHP venture.

On October 29, 1982, the Technicolor Board agreed to the acquisition proposal by MAF. The Technicolor Board: approved the Agreement and Plan of Merger with MAF; recommended to the stockholders of Technicolor the acceptance of the offer of $ 23 per share; and recommended the repeal of the

supermajority provision in Technicolor's Certificate of Incorporation. Technicolor filed forms 14D-9 and 13D with the Securities and Exchange Commission which reflected those Board actions and recommendations.

In November 1982, MAF commenced an all-cash tender offer of $ 23 per share to the shareholders of Technicolor. When the tender offer closed on November 30, 1982, MAF had gained control of Technicolor. n2 By December 3, 1982, MAF had acquired 3,754,181 shares, or 82.19%, of Technicolor's shares. Thereafter, MAF and Technicolor were consolidated for tax and financial reporting purposes.

n2 As stipulated by the parties, the Court of Chancery's opinion is mistaken when it states that MAF gained control "by December 31, 1982."

The Court of Chancery made a factual finding that, "upon acquiring control" of Technicolor, Perelman and his associates "began to dismember what they saw as a badly conceived melange of businesses." Perelman testified: "Presumably we made the evaluation of the business of Technicolor before we made the purchase, not after." That evaluation assumed the retention of the Professional and Government Services Groups and the disposition of OHP, CPPD, Gold Key and Audio Visual.

Consequently, immediately after becoming Technicolor's controlling shareholder, MAF "started looking for buyers for several of the [Technicolor] divisions." Bear Stearns & Co. was also retained by MAF in December 1982 to assist it in disposing of Technicolor assets. A target date of June 30, 1983 was set for liquidating all of Technicolor's excess assets. As of December 31, 1982, MAF was projecting that $ 54 million would be realized from asset sales.

In December 1982, the Board of Technicolor notified its stockholders of a special shareholders meeting on January 24, 1983. At the meeting, the Technicolor shareholders voted to repeal the supermajority amendment and in favor of the proposed merger. MAF and Technicolor completed the merger.

Valuation of Technicolor

Perelman Plan or Kamerman Plan

The merger was accomplished on January 24, 1983. The parties agree that the appraised value of Technicolor must be fixed as of that date. See Alabama By-Products Corp. v. Neal, Del. Supr., 588 A.2d 255, 256-57 (1991). There is a fundamental disagreement between the litigants, however, concerning the nature of the enterprise to be appraised.

Cinerama argues that the Court of Chancery should have valued Technicolor as it existed on the date of the merger and, in particular, with due regard for the strategies that had been conceived and implemented following the merger agreement by MAF's controlling shareholder, Ronald O. Perelman ("Perelman Plan"). Technicolor argues that the Court of Chancery properly considered Technicolor without regard to the Perelman Plan and only as it existed on or before October 29, 1982, with the then extant strategies that had been conceived and implemented by Technicolor's Chairman, Morton Kamerman ("Kamerman Plan"). According to Cinerama:

Reduced to its simplest form, the dispute was whether the trial court should value Perelman's Technicolor - a company whose business plans and strategies focused on the processing and duplication of film and videotape and the provision of services to the United States Government and which planned and expected to generate $ 50 million in cash during 1983 from the sale of unwanted and/or unsuccessful businesses, namely, OHP, CPPD, Gold Key and Audio Visual; or Kamerman's Technicolor - a company whose business plans and strategies assumed diversification away from a concentration on film processing and videotape duplication for the professional market toward consumer oriented businesses, especially OHP.

The economic experts for both parties used a form of discounted cash flow methodology to value Technicolor. Cinerama's expert was John Torkelsen ("Torkelsen"), a financial analyst with Princeton Venture Research, Inc. Technicolor's primary expert witness was Alfred Rappaport ("Rappaport"), a professor at Northwestern University Graduate Business School and a consultant with The Alcar Group ("Alcar"). The fundamental nature of the disagreement between the parties about the Perelman Plan and the Kamerman Plan, however, resulted in different factual assumptions by their respective experts.

Question of Law

Perelman Plan or Kamerman Plan

The Court of Chancery recognized that the parties' disagreement about valuing Technicolor based upon either the Perelman Plan or the Kamerman Plan presented a question of law with regard to the proper interpretation of the appraisal statute. See 8 Del. C. § 262(h). According to the Court of Chancery, that legal

issue is whether in valuing Technicolor as of January 24, 1983, the court should assume the business plan for Technicolor that MAF is said by [Cinerama] to have had in place at that time [Perelman Plan], or whether a proper valuation is premised upon ignoring such changes as Mr. Perelman had in mind because to the extent they create value they are "elements of value arising from the accomplishment or expectation of the merger. " 8 Del. C. § 262(h).

The Court of Chancery also recognized that legal issue was "particularly pertinent when considering One Hour Photo, Standard Manufacturing and [the Consumer Photo Processing Division]." Torkelsen's valuation assumed each of those businesses would be sold by MAP. Rappaport assumed that, but for the MAF acquisition, those businesses would have continued operating. Therefore, the Rappaport valuations included those businesses as going concerns. Predictably, the different assumptions factored into each expert's discounted cash flow model yielded disparate valuation results. n3

n3 Cinerama's expert opined that the statutory appraisal fair value of Technicolor on a per share basis as of January 24, 1983 was $ 62.75. Technicolor's expert opined that the statutory appraisal fair value of Technicolor at the time of the merger was $ 13.14 per share.

The Parties' Contentions

Perelman Plan or Kamerman Plan

In the Court of Chancery, Cinerama argued that the Perelman Plan - which contemplated the sale of several businesses, focusing the company on film processing, and the new videocassette duplication business - was governing the operation of Technicolor on January 24, 1983. Consequently, Cinerama argued Perelman's Plan had to govern any expert's projection of net cash flow. For example, according to Cinerama, Technicolor's previous projections of negative cash flow from OHP's operation would be irrelevant in the appraisal valuation. In support of its position, Cinerama presented evidence that, prior to the merger date, Perelman had not only formulated, but had also implemented, a plan for how OHP and certain other Technicolor assets would be sold.

Technicolor argued to the Court of Chancery that the Perelman Plan, which it admitted called for the liquidation of OHP and a number of its other businesses, was not sufficiently defined on the date of the merger to form the factual premise for the Cinerama expert's cash flow projections from asset sales. The Court of Chancery unequivocally rejected that assertion by Technicolor. The Court of Chancery made a specific factual finding that "the record supports the conclusion that MAF intended from the outset to realize by one technique or another the capital value of One Hour Photo and to terminate that division's drain on the company's cash flow. Insofar as sale of that enterprise is involved, the 'Perelman Plan' was fixed by the merger date." n4

n4 In Technicolor II, Technicolor filed a cross-appeal which contended that the Court of Chancery erred in "finding that MAF's strategic plan was sufficiently definite as of the Merger" to be valued. Technicolor did not file a cross-appeal on any issue in this appeal.

In view of that adverse factual determination, Technicolor's alternative contention was a legal argument. According to Technicolor, any value attributable to the Perelman Plan as of the merger date had to be excluded as arising from the expectation of the merger. See 8 Del. C. § 262(h). Thus, Technicolor argued that the net cash flows which followed from the Perelman Plan should be excluded from the statutory appraisal valuation, as a matter of law.

In response, Cinerama argued to the Court of Chancery that this Court had construed the statutory phrase "exclusive of any element of value arising from the accomplishment or expectation of the merger" to exclude "only the speculative elements of value that may arise from the 'accomplishment or expectation' of the merger. . . . But elements of future value . . . which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered." Weinberger v. UOP, Inc., Del. Supr., 457 A.2d 701, 713 (1983). Thus, Cinerama argued any nonspeculative element of future value that could be proven may be considered in a statutory appraisal proceeding, even if it is an "element of value arising from the accomplishment or expectation of the merger." See 8 Del. C. § 262(h).

Court of Chancery's Holding

Majority Acquiror Principle/Proximate Cause Exception

The Court of Chancery acknowledged that, based upon the quoted language from Weinberger, Cinerama's legal argument appeared to be persuasive. The Court of Chancery concluded, however, "that reading [of Weinberger] is too difficult to square with the plain words of the statute to permit the

conclusion that that is what was intended." The Court of Chancery then stated "in order to understand the quoted passage [from Weinberger] when read together with the statutory language, I assume an unexpressed phrase to the effect 'unless, but for the merger, such elements of future value would not exist.'" According to the Court of Chancery, the language in Weinberger would read: "But elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered [unless, but for the merger, such elements of future value would not exist]." Weinberger v. UOP, Inc., Del. Supr., 457 A.2d 701, 713 (1983).

In explaining the "but for" caveat that it had superimposed upon this Court's holding in Weinberger, the Court of Chancery reasoned that, as a matter of policy, the valuation process in a statutory appraisal proceeding should be the same irrespective of whether a merger is accomplished in one or two steps:

Delaware law traditionally and today accords to a dissenting shareholder "his proportionate interest in a going concern" and that going concern is the corporation in question, with its asset deployment, business plan and management unaffected by the plans or strategies of the acquiror. When value is created substituting new management or by redeploying assets "in connection with the accomplishment or expectation" of a merger, that value is not, in my opinion, a part of the "going concern" in which a dissenting shareholder has a legal (or equitable) right to participate.

If one accepts this principle, the question arises how is it to be applied in a two-step arms'-length acquisition transaction. In such a transaction there will be a period following close [to] the first-step tender offer in which the [majority] acquiror may, as a practical matter, be in a position to influence or change the nature of the corporate business, or to freeze controversial programs until they are reviewed following the second-step merger.

Accordingly, the Court of Chancery concluded that "future value that would not exist but for the merger . . . even if it is capable of being proven on the date of the merger," is irrelevant in a Delaware statutory appraisal proceeding. (Emphasis added.) Consequently, the Court of Chancery held "that value added to [Technicolor] by the implementation or the expectation of the implementation of Mr. Perelman's new business plan for [Technicolor] is not value to which, in an appraisal action, [Cinerama] is entitled to a pro rata share, but is value that is excluded from consideration by the statutory exclusion for value arising from the merger or its expectation."

Legal scholars have written extensively with regard to the economic desirability of including or excluding certain valuation elements in an appraisal proceeding, n5 especially with regard to cash-out two-step mergers. See, e.g., John C. Coffee, Jr., Transfers of Control and the Quest for Efficiency: Can Delaware Law Encourage Efficient Transactions While Chilling Inefficient Ones? 21 DEL. J. CORP. L. 359 (1996); Robert B. Thompson Exit, Liquidity, and Majority Rule: Appraisal's Role in Corporate Law, 84 GEO. L.J. 1 (1993). n6 The Court of Chancery's construction of "fair value" followed logically from its concept of what was economically desirable and efficient. However, the majority acquiror principle and correlative proximate cause exception for two-step mergers, upon which the Court of Chancery premised its holding, are inconsistent with this Court's interpretation of the appraisal statute in Weinberger.

n5 See, e.g., FRANK H. EASTEREROOK & DANIEL R. FISCHEL, THE ECONOMIC STRUCTURE OF CORPORATE LAW (Harvard Univ. Press 1991); Benjamin Hermalin & Alan Schwartz, Buyouts in Large Companies, 25 J. LEGAL STUD. 351 (1996); Lynn A. Stout, Are Takeover Premiums Really Premiums? Market Price, Fair Value, and Corporate Law, 99 YALE L.J. 1235 (1990); Angie Woo, Note, Appraisal Rights in Mergers of Publicly-Held Delaware Corporations: Something Old, Something New, Something Borrowed, and Something B.L.U.E., 68 S. CAL. L. REV. 719 (1995).

n6 See also Bate C. Toms, III, Compensating Shareholders Frozen Out in Two-Step Mergers, 78 COLUM. L. REV. 548 (1978).

All Relevant Factors

Only Speculation Excluded

An appraisal proceeding is a limited statutory remedy. Technicolor I, 342 A.2d at 1186. Its legislative purpose is to provide equitable relief for shareholders dissenting from a merger on grounds of inadequacy of the offering price. Id. The appraisal statute affords the dissenters the right to a judicial determination of the fair value of their shareholdings. Id. (citing Weinberger v. UOP, Inc. Del. Supr., 457 A.2d 701, 714 (1983)); accord Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1142 (1989). We summarized the nature of the proceeding in Technicolor I, as follows:

in a section 262 appraisal action the only litigable issue is the determination of the value of the appraisal petitioners' shares on the date of the merger, the only party defendant is the surviving corporation and the only relief available is a judgment against the surviving corporation for the fair value of the dissenters' shares.

Technicolor I, 542 A.2d at 1187.

The seminal decision by this Court regarding an appraisal proceeding is Weinberger v. UOP, Inc., Del. Supr., 457 A.2d 701 (1983). n7 In Weinberger, this Court broadened the process for determining the "fair value" of the company's outstanding shares by including all generally accepted techniques of valuation used in the financial community. Weinberger v. UOP, Inc., 457 A.2d at 712-13; see Technicolor I, 542 A.2d at 1186-87. The result of that expansion was the holding in Weinberger that "the standard 'Delaware block' or weighted average method of valuation, formerly employed in appraisal and other stock valuation cases, shall no longer exclusively control such proceedings." Weinberger v. UOP, Inc., 457 A.2d at 712-13.

n7 Although Weinberger did not involve an appraisal action per se, this Court has recognized Weinberger's interpretation of the appraisal statute as definitive in subsequent appeals from appraisal proceedings. See, e.g., Rapid-American v. Harris, Del. Supr., 603 A.2d 796 (1992); Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137 (1989); see also Technicolor I, 542 A.2d at 1186-87.

The Delaware appraisal statute provides that the Court of Chancery:

shall appraise the shares, determining their fair value exclusive of any element of value arising from the accomplishment or expectation of the merger or consolidation, together with a fair rate of interest, if any, to be paid upon the amount determined to be the fair value. In determining such fair value, the Court shall take into account all relevant factors.

8 Del. C. § 262(h). In Weinberger, this Court construed the appraisal statute. That construction required this Court to reconcile the dual mandates of Section 262(h) which direct the Court of Chancery to: determine "fair" value based upon "all relevant factors;" but, to exclude "any element of value arising from the accomplishment or expectation of the merger." In making that reconciliation, the ratio decidendi of this Court was, as follows:

Only the speculative elements of value that may arise from the "accomplishment or expectation" of the merger are excluded. We take this to be a very narrow exception to the appraisal process, designed to eliminate use of pro forma data and projections of a speculative variety relating to the completion of a merger. But elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered. When the trial court deems it appropriate, fair value also includes any damages, resulting from the taking, which the stockholders sustain as a class. If that was not the case, then the obligation to consider "all relevant factors" in the valuation process would be eroded. We are supported in this view not only by [Tri-Continental Corp. v. Battye, Del. Supr., 31 Del. Ch. 523, 74 A.2d 71, 72 (1950)], but also by the evolutionary amendments to section 262.

Weinberger v. UOP, Inc., 457 A.2d at 713 (emphasis added).

After examining the evolution of the statutory text in Section 262(h), this Court concluded "there is a legislative intent to fully compensate shareholders for whatever their loss may be, subject only to the narrow limitation that one can not take speculative effects of the merger into account." Id. at 714 (emphasis added). Therefore, in Weinberger, this Court held that the more liberal methodology we had just authorized in appraisal and other stock valuation cases "must include proof of value by any techniques or methods which are generally considered acceptable in the financial community and otherwise admissible in court, subject only to our [narrow] interpretation of [the exclusionary language in] 8 Del. C. § 262(h)," i.e., requiring that only speculative elements of value, which may arise from the accomplishment or expectation of the merger, be disregarded. Weinberger v. UOP, Inc., 457 A.2d at 713 (emphasis added); see also Kahn v. Household Acquisition Corp., Del. Supr., 591 A.2d 166, 174 (1991); Rosenblatt v. Getty Oil Co., Del. Supr., 493 A.2d 929, 940 (1985).

This Court's final holding in Weinberger was to overrule the trilogy of cases that had adopted the business purpose test for mergers. Weinberger v. UOP, Inc., 457 A.2d at 715. We explained that the final holding followed logically from the entire fairness test, the expanded appraisal remedy being made available to dissenting shareholders, and the Court of Chancery's broad discretion to fashion equitable relief. Id. Consequently, we concluded that no "additional meaningful protection is afforded minority shareholders by the business purpose requirement." Id. Accordingly, the majority may now cash-out the minority by a merger without a business purpose, but must pay the dissenters fair value for "whatever their loss may be, subject only to the narrow limitation that one can not take speculative effects of the merger into account." Id. at 714 (emphasis added).

Perelman Plan

Susceptible of Proof/Non-Speculative

The underlying assumption in an appraisal valuation is that the dissenting shareholders would be willing to maintain their investment position had the merger not occurred. Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1145 (1989). Accordingly, the Court of Chancery's task in an appraisal proceeding is to value what has been taken from the shareholder, i.e., the proportionate interest in the going concern. Id. at 1144 (citing Tri-Continental Corp. v. Battye, Del. Supr., 31 Del. Ch. 523, 74 A.2d 71, 72 (1950)). To that end, this Court has held that the corporation must be valued as an operating entity. Id. We conclude that the Court of Chancery did not adhere to this principle.

The Court of Chancery determined that Perelman "had a fixed view of how [Technicolor's] assets would be sold before the merger and had begun to implement it" prior to January 24, 1983. Consequently, the Court of Chancery found that the Perelman Plan for Technicolor was the operative reality on the date of the merger. Nevertheless, the Court of Chancery held that Cinerama was not entitled to an appraisal of Technicolor as it was actually functioning on the date of the merger pursuant to the Perelman Plan.

The Court of Chancery reached that holding by applying its majority acquiror principle and correlative proximate cause exception. The Court of Chancery excluded any value that was admittedly part of Technicolor as a going concern on the date of the merger, if that value was created by substituting new management or redeploying assets during the transient period between the first and second steps of this two-step merger, i.e., Perelman's Plan. The Court of Chancery reasoned that valuing Technicolor as a going concern, under the Perelman Plan, on the date of the merger, would be tantamount to awarding Cinerama a proportionate share of a control premium, which the Court of Chancery deemed to be both economically undesirable and contrary to this Court's holding in Bell v. Kirby Lumber Corp., Del. Supr., 413 A.2d 137, 140-42 (1980). n8 See also Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 805-07 (1992). Thus, the Court of Chancery concluded "that value [added by a majority acquiror] is not . . . a part of the 'going concern' in which a dissenting shareholder has a legal (or equitable) right to participate."

n8 Although the Court of Chancery's analysis preceded our decision explaining Kirby in Rapid-American Corp., it is also inconsistent with our explanation of the concept "proportionate interest in the going concern" vis-a-vis a minority's "lack of control" in Cavalier. See Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 806 n.2 (1992); Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1145 (1989).

In Kirby and its progeny, including Technicolor I, this Court has explained that the dissenter in an appraisal action is entitled to receive a proportionate share of fair value in the going concern on the date of the merger, rather than value that is determined on a liquidated basis. Bell v. Kirby Lumber Corp., 413 A.2d at 142; see also In re Shell Oil Co., Del. Supr., 607 A.2d 1213, 1219 (1992); Technicolor I, 542 A.2d at 1186; Rosenblatt v. Getty Oil Co., Del. Supr., 493 A.2d 929, 942 (1985); Rothschild Int'l. Corp. v. Liggett Group Inc., Del. Supr., 474 A.2d 133, 137 (1984); accord Rapid-American Corp. v. Harris, 603 A.2d at 802-03. n9 Thus, the company must first be valued as an operating entity. Cavalier Oil Corp. v.

Harnett, 564 A.2d at 1144. In that regard, one of the most important factors to consider is the "nature of the enterprise" that is the subject of the appraisal proceeding. Rapid-American Corp. v. Harris, 603 A.2d at 805; see Weinberger v. UOP, Inc., 457 A.2d 701, 713 (1983).

n9 See DAVID A. DREXLER ET AL., DELAWARE CORPORATION LAW AND PRACTICE § 36.07 (1996).

In a two-step merger, to the extent that value has been added following a change in majority control before cash-out, it is still value attributable to the going concern, i.e., the extant "nature of the enterprise," on the date of the merger. See Rapid-American Corp. v. Harris, 603 A.2d at 805. The dissenting shareholder's proportionate interest is determined only after the company has been valued as an operating entity on the date of the merger. Cavalier Oil Corp. v. Harnett, 564 A.2d at 1144; cf. Walter W.B. v. Elizabeth P.B., Del. Supr., 462 A.2d 414, 415 (1983). Consequently, value added to the going concern by the "majority acquiror," during the transient period of a two-step merger, accrues to the benefit of all shareholders and must be included in the appraisal process on the date of the merger. See Rapid-American Corp. v. Harris, 603 A.2d 796; Cavalier Oil Corp. v. Harnett, 564 A.2d 1137; cf. Walter W.B. v. Elizabeth P.B., 462 A.2d at 415.

In this case, the question in the appraisal action was the fair value of Technicolor stock on the date of the merger, January 24, 1983, as Technicolor was operating pursuant to the Perelman Plan. The Court of Chancery erred, as a matter of law, by determining the fair value of Technicolor on the date of the merger 'but for" the Perelman Plan; or, in other words, by valuing Technicolor as it was operating on October 29, 1982, pursuant to the Kamerman Plan. By failing to accord Cinerama the full proportionate value of its shares in the going concern on the date of the merger, the Court of Chancery imposed a penalty upon Cinerama for lack of control. Cavalier Oil Corp. v. Harnett, 564 A.2d at 1145; accord Rapid-American Corp. v. Harris, 603 A.2d at 805-07 n10; Bell v. Kirby Lumber Corp., 413 A.2d at 140-42.

n10 The mandate to value the dissenters' proportionate share in the corporation as a "going concern" taking into account all other relevant factors affecting value precludes an adjustment of valuation "to reflect a shareholder's individual interest in the enterprise." Rapid-American Corp. v. Harris, 603 A.2d at 805.

The "accomplishment or expectation" of the merger exception in Section 262 is very narrow, "designed to eliminate use of pro forma data and projections of a speculative variety relating to the completion of a merger." Weinberger v. UOP, Inc., 457 A.2d at 713. That narrow exclusion does not encompass known elements of value, including those which exist on the date of the merger because of a majority acquiror's interim action in a two-step cash-out transaction. Cf. In re Shell Oil Co., 607 A.2d at 1218-19. "Only the speculative elements of value that may arise from the 'accomplishment or expectation' of the merger" should have been excluded from the Court of Chancery's calculation of fair value on the date of the merger. Weinberger v. UOP, Inc., 457 A.2d at 713 (emphasis added); cf. In re Shell Oil Co., 607 A.2d at 1219.

The Court of Chancery's determination not to value Technicolor as a going concern on the date of the merger under the Perelman Plan, resulted in an understatement of Technicolor's fair value in the appraisal action. That result was inevitable when the Court of Chancery valued Technicolor pursuant to a discounted cash flow model with the negative factual input and assumptions from the Kamerman Plan rather than the Perelman Plan. Consequently, the Court of Chancery permitted MAF to "reap a windfall from the appraisal process by cashing out a dissenting shareholder [Cinerama]," for less than the fair value of its interest in Technicolor as a going concern on the date of the merger. Cavalier Oil Corp. v. Harnett, 564 A.2d at 1145.

Cinerama has asked this Court to make an appraisal of the fair value of its Technicolor shares on the date of the merger, rather than remand this protracted litigation to the Court of Chancery. This Court will not make an independent determination of value on appeal. Rapid-American Corp. v. Harris, 603 A.2d at 799. This appraisal action will be remanded to the Court of Chancery for a recalculation of Technicolor's fair value on the date of the merger. See id.

Upon remand, it is within the Court of Chancery's discretion to select one of the parties' valuation models as its general framework, or fashion its own, to determine fair value in the appraisal proceeding. See Rapid-American Corp. v. Harris, 603 A.2d at 804. The Court of Chancery has properly recognized that its choice of a framework does not require it to adopt any one expert's model, methodology, or mathematical calculations in toto. See id. The undervaluation in this appraisal proceeding resulted from negative factual assumptions that originated from an erroneous legal theory, not from either the valuation framework selected or adaptions to it by the Court of Chancery. In that regard, however, we have concluded that the Court of Chancery's erroneous majority acquiror principle and proximate cause exception permeated its factual assumptions so pervasively, that the Court of Chancery's attribution of only a $ 4.43 per share value difference between the Perelman Plan and the Kamerman Plan should not be considered the law of this case upon remand.

Law of Case

Perelman Plan is Valuation Element

The Court of Chancery's majority acquiror principle and proximate cause exception for two-step mergers are also contrary to the law of this case, as set forth in Technicolor I. See Technicolor I, 542 A.2d at 1186-87 & n.7. In Technicolor I, this Court provided specific guidance regarding the application of Weinberger's holdings to the trial of Cinerama's consolidated appraisal and personal liability actions. Id. at 1186-88. We began by emphasizing that upon remand, the Weinberger "'liberalized approach' to appraisal shall be used to determine the value of a cashed-out minority's [Cinerama's] share interest on the day of the merger, reflecting all relevant information regarding the company [Technicolor] and its shares." Id. at 1187 (emphasis added).

In an effort to convey this Court's comprehensive interpretation of the statutory "all relevant information," we recognized in Technicolor I "that the majority [MAF] may have insight into their company's [Technicolor's] future based primarily on bits and pieces of nonmaterial information that have value as a totality." Id. at 1187 n.8. Consequently, in Technicolor I, we said "it is this information that, if available in a statutory appraisal proceeding, the Court of Chancery must evaluate to determine if future earnings will affect the fair value of shares on the day of the merger." Id." n11 (emphasis added) (citing 8 Del. C. § 262(h)). This Court reinforced the relevance of such information to the appraisal action, independent of

the personality liability action, stating "the issue we are addressing is not the manipulation of the transaction, nor the suppression or misstatement of material information by insiders defrauding the market." Id. n12 (citations omitted). Thus, the law of this case required the Court of Chancery to consider nonspeculative information about the Perelman Plan.

n11 In Technicolor I, recognizing the potential for investor harm in cash-out transactions, this Court held that Cinerama was entitled to discovery in the appraisal proceeding to obtain this information. Technicolor I, 542 A.2d at 1187 n.8; cf. Randall S. Thomas, Improving Shareholder Monitoring of Corporate Management by Expanding Statutory Access to Information, 38 ARIZ. L. REV. 331 (1996).

n12 In Technicolor I, this Court noted that a "determination of fair value does not involve an inquiry into claims of wrong-doing in the merger." Technicolor I, 542 A.2d at 1189; accord Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1143 (1989).

The record is replete with information about Technicolor's future that was known on the date of the merger. Cf. Rosenblatt v. Getty Oil Co., Del. Supr., 493 A.2d 929, 941-42 (1985). MAF's October 18, 1982 financing package presented to the lending banks, Chase Manhattan Bank and Bank of America, contemplated that MAF would realize $ 50 million in net proceeds from the sale of assets by the end of 1983. Moreover, the loan agreement between MAF and the banks specifically identified OHP, CPPD, Gold Key and Audio Visual as assets which could be sold by MAF on behalf of Technicolor.

The Court of Chancery found that as of the date of the merger one "would not have projected" that Technicolor would retain OHP and the other businesses (CPPD, Gold Key and Audio Visual) that Perelman had designated for elimination. Following this remand, Technicolor must be viewed and valued "as an on-going enterprise, occupying a particular market position in the light of future prospects." In re Shell Oil Co., Del. Supr., 607 A.2d 1213, 1218 (1992). All "elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may [and should] be considered." Weinberger v. UOP, Inc., Del. Supr., 457 A.2d 701, 713 (1983); accord Rosenblatt v. Getty Oil Co., 493 A.2d at 940; cf. In re Shell Oil Co., 607 A.2d at 1219.

Evidentiary Issues

Cinerama has raised several evidentiary contentions which we will address briefly because this matter will be remanded for further proceedings. Cinerama argues that the Court of Chancery's reliance upon the stock market price of Technicolor's shares in September 1982 was improper for two reasons: first, that price reflected the market's negative opinion of the Kamerman Plan; and, second, the market never had an opportunity to price Technicolor stock in the context of the Perelman Plan. This Court has recognized that the "market price of shares may not be representative of true value." Paramount Communications, Inc. v. Time Inc., Del. Supr., 571 A.2d 1140, 1150 n.12 (1989). Moreover, in this case, we noted that "information and insight not communicated to the market may not be reflected in stock prices." Technicolor I, 542 A.2d at 1187 n.8. Nevertheless, Cinerama's objection goes to the weight, if any, to be given to the stock market price for Technicolor stock in September 1982, rather than its admissability. See In re Delaware Racing Ass'n, Del. Supr., 42 Del. Ch. 406, 213 A.2d 203, 211 (1965);

cf. Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 806 (1992) (rejecting "exclusive reliance upon market value in an appraisal action"). Upon remand, Cinerama can renew its argument that the September 1982 stock market price was of little significance to the issue of fair value on the date of the merger in January 1983.

Cinerama also argues that the Court of Chancery "erroneously considered the decision of the Technicolor directors to accept MAF's offer and the fairness opinion solicited by Technicolor from its investment banking firm in response to that offer in determining Technicolor's fair value." We have concluded that, given the statutory mandate to consider "all relevant factors," these objections are also directed at the weight, rather than the admissibility, of this evidence. 8 Del. C. § 262(h); see Rosenblatt v. Getty Oil Co., 493 A.2d at 940. Upon remand, Cinerama can renew its argument that this evidence should be given little weight because of its temporal remoteness to the date of the merger.

Cinerama's last two evidentiary contentions both relate to the "inputs" relied upon by the Court of Chancery in its valuation framework. We are unable to determine from the record how much of the "input" accepted by the Court of Chancery was predicated upon its erroneous legal theory and how much was properly attributable to its assessment of credibility or a weighing of the evidence. See Cavalier Oil Corp. v. Harnett, Del. Supr., 564 A.2d 1137, 1146 (1989); cf. Rapid-American Corp. v. Harris, 603 A.2d at 802; Alabama By-Products Corp. v. Neal, Del. Supr., 588 A.2d 255, 259 (1991). Therefore, upon remand, Cinerama should be afforded an opportunity to renew all of its formulaic and factual arguments regarding valuation before the recalculation of fair value is made by the Court of Chancery.

Interest Rate and Costs

Cinerama argues that it should have been awarded compound interest from the date of the merger until the date of payment. The Court of Chancery is vested with discretion to award simple or compound interest. 8 Del. C. § 262(i). The record reflects no abuse of discretion in the Court of Chancery's decision to award simple interest. See Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 808 (1992). Like any other discretionary act, that matter may be reconsidered upon remand.

Cinerama also argues that the Court of Chancery erred by denying full reimbursement of its expert witness costs. Section 262(j) provides that "the costs of the [appraisal] proceeding may be determined by the Court [of Chancery] and taxed upon the parties as the Court deems equitable in the circumstances." 8 Del. C. § 262(j). In the absence of an equitable exception, the plaintiff in an appraisal proceeding should bear the burden of paying its own expert witnesses and attorneys. In re Radiology Assocs., Inc. Litig., Del. Ch., 611 A.2d 485, 501 (1991); see also Goodrich v. E.F. Hutton Group, Inc., Del. Supr., 681 A.2d 1039 (1996); S. Samuel Arsht & Lewis S. Black, Analysis of the 1976 Amendments to the Delaware General Corporation Law, 3 Corporation 387, 393 (Prentice-Hall 1976). The record supports the Court of Chancery's decision not to invoke its equitable authority to award expert witness fees to Cinerama.

Conclusion

The judgment of the Court of Chancery in the appraisal action is reversed. This matter is remanded for further proceedings in accordance with this opinion.

Upon Motion for Reargument

Cinerama filed a Motion for Limited Reargument. In that motion, Cinerama urges this Court to supplement its opinion by holding that there is no legal bar to an award of post-judgment compound interest in an appraisal. Technicolor filed a response, at the Court's request. In its response, Technicolor acknowledges that it construes this Court's opinion to hold that the Court of Chancery is vested with discretion to award either simple or compound post-judgment interest.

Technicolor's construction of this Court's holding is correct. An award of compound post-judgment interest is the exception rather than the rule. Nevertheless, the Court of Chancery may, in the exercise of its discretion, award compound post-judgment interest in an appraisal proceeding, See Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 808 (1992); Summa Corp. v. Trans World Airlines, Inc., Del. Supr., 540 A.2d 403 (1988). This restatement of the law will constitute the Court's action on the Motion for Limited Reargument and will be added to the original opinion.

Full Text of Court Cases

Central Trust Co. v. United States

Case name: Central Trust Co. v. United States
Citation: 158 Ct. Cl. 504, 305 F.2d 393, 1962 U.S. Ct. Cl. LEXIS 16
Date of decision: July 18, 1962
Country: US
State or Federal: Federal
State/Jurisdiction: Federal Circuit
Court: United States Court of Federal Claims
Type of action: Estate and Gift Taxation
Judge: Gamer
SIC: 3411 Metal Cans
NAICS: 332431 Metal Can Manufacturing

Keywords: Book value, Gift tax

COUNSEL:

Thomas L. Conlan, for the plaintiffs in No. 196-58. Kyte, Conlan, Wulsin & Vogeler, were on the briefs.

John W. Warrington, for the plaintiffs in No. 199-58 and No. 200-58. Graydon, Head & Ritchey, were on the briefs.

Earl L. Huntington, with whom was Assistant Attorney General Louis F. Oberdorfer, for the defendant.

OPINION:

These cases were referred by the court, pursuant to Rule 45, to Saul Richard Gamer, a trial commissioner of the court, with directions to make findings of fact and recommendations for conclusions of law. The commissioner has done so in a report filed April 17, 1962. Plaintiffs in case No. 196-58 filed their notice of intention to except to the commissioner's findings and recommendations on May 2, 1962, and on June 18, 1962, moved to withdraw this notice. Plaintiffs in case No. 199-58 and case No. 200-58 filed their notices to except to the commissioner's findings and recommendations on May 1, 1962, and on June 13, 1962, moved to withdraw these notices. On June 15, 1962, the defendant filed its reply advising the court that it had no objection to the withdrawal of the notices and on June 22, 1962, the court allowed plaintiffs' motions to withdraw the notices of intention to except in all three cases.

Plaintiffs in their motions to withdraw their notices of intention to except also moved, pursuant to Rule 46(a), that the court adopt the commissioner's report as the basis for its judgment in the cases. Defendant's reply filed June 15, 1962, concurred in these motions. Since the court agrees with the recommendations and findings of the commissioner, as hereinafter set forth, it hereby adopts the same as the basis for its judgment in these cases. Plaintiffs are therefore entitled to recover and judgment is entered to that effect. The amounts of recovery will be determined pursuant to Rule 38(c).

It is so ordered.

OPINION OF THE COMMISSIONER

These suits are for the refund of federal gift taxes. They involve the common question of the value of shares of stock of the same company. A joint trial was therefore conducted.

On August 3, 1954, Albert E. Heekin made gifts totaling 30,000 shares of stock of The Heekin Can Company. The donor had formerly, for 20 years, been president of the Company and at the time of the gifts was a member of its board of directors. The gifts were composed of 5,000 shares to each of six trusts created for the benefit of his three sons, each son being the beneficiary under two trusts. Following his death on March 10, 1955, the executors of his estate filed a gift tax return in which the value of the stock was fixed at $ 10 a share. On October 28, 1957, however, they filed an amended gift tax return and a claim for refund, contending that the correct value of the Heekin Company stock on August 3, 1954 was $ 7.50 a share.

On October 25, 1954, James J. Heekin made gifts totaling 40,002 shares of Heekin Can Company stock. This donor, a brother of Albert E., had also formerly been, for 23 years, the president of the Company and at the time of the gifts was chairman of the board. The gifts were composed of 13,334 shares to each of three trusts created for the benefit of his three children and their families. Separate gift tax returns with respect to these (and other) gifts were filed by both James J. Heekin and his wife, Alma (who joined in the stock gifts), in which the value of the stock was similarly declared to be $ 10 a share. However, on January 21, 1958, James filed an amended gift tax return and a claim for refund, also contending that the correct value of the stock on October 25, 1954, was $ 7.50 a share, and on the same day, the executor of Alma's estate (she having died on November 9, 1955) filed a similar amended return and claim for refund.

On February 5, 1958, the District Director of Internal Revenue sent to James J. Heekin and the executors of the estates of Alma and Albert E. Heekin notices of deficiency of the 1954 gift taxes. Each of the three deficiencies was based on a determination by the Commissioner of Internal Revenue that the value of the Heekin Company stock on the gift dates was $ 24 a share.

Consistent with his deficiency notices, the District Director, on May 15, 1958, disallowed the three refund claims that had been filed, and in July 1958 payment was made of the amounts assessed pursuant to the deficiency notices. After the filing in August and September 1958 of claims for refund concerning these payments, the claims again being based on a valuation of $ 7.50, and the rejection thereof by the District Director, these three refund suits were instituted in the amounts of $ 169,876.19, $ 95,927.08, and $ 94,753.70 with respect to the Albert E. Heekin, James J. Heekin and Alma Heekin gifts, respectively, plus interest.

The Heekin Can Company is a well-established metal container manufacturer in Cincinnati, Ohio. In 1954, the year involved in these proceedings, its principal business consisted of manufacturing two kinds of containers, its total production being equally divided between them. One is known as packer's cans, which are generally the type seen on the shelves of food markets in which canned food products are contained. The other is referred to as general line cans, which consist of large institutional size frozen fruit cans, lard pails, dairy cans, chemical cans, and drums. This line also includes such

housewares as canisters, bread boxes, lunch boxes, waste baskets, and a type of picnic container familiarly known by the trade names of Skotch Kooler and Skotch Grill. On the gift dates its annual sales, the production of five plants, were approximately $ 17,000,000.

The Company was founded in 1901 in Cincinnati by James Heekin, the father of the donors Albert and James. In 1908, it built a six-story 250,000 square foot factory in Cincinnati, which is still its headquarters and one of its main operating plants, producing general line cans. In 1917 it acquired a plant in Norwood, a suburb of Cincinnati, which has since become entirely surrounded by the city, and entered the packer's can business. By 1954, it was a multistory plant with about 275,000 square feet, having grown irregularly throughout the years, one section having four floors, another three, and another only one.

In 1946, the Company branched out from Cincinnati and established a packer's can plant at Chestnut Hill, Tennessee, on property leased from and contiguous to the plant of its largest customer, which used the entire output of the Heekin plant. The cans were run by conveyor directly into the customer's packing plant.

In 1949, the Company built a 100,000 square foot plant in Springdale, Arkansas, to supply its customers in the Ozark area on a more competitive basis concerning freight costs, a large part of which, under the industry's freight-equalization practice, it had therefore absorbed.

In 1952, the Company established its fifth plant, constituting an operation at Blytheville, Arkansas, similar to the one at Chestnut Hill, Tennessee. The plant was on leased property adjacent to the customer's plant, with the cans running directly into such plant. By 1954 this concept of installing can-making lines immediately adjacent to customer's packing plants was a recognized practice in the industry. Thus, the Company was progressively adapting itself to the modern practices of its industry.

From the beginning, the Heekin family has dominated the enterprise. James, the founder, was its president from 1901 to 1905. He was succeeded by his son, James J., one of the donors herein, who served as president for 23 years. In 1928, another son, Albert E., another donor herein, then became president, serving for 20 years. He was succeeded in 1948 by still another son, Daniel M., who served for 6 years. In March 1954, Albert E. Heekin, Jr., the son of donor Albert E. and the grandson of the founder, succeeded to the presidency. A lawyer, he had served the Company up to 1950 as its legal counsel, joining the Company in that year as assistant to the president. On August 3, 1954, of the ten-member board of directors, eight were members of the Heekin family, five of whom were sons of the founder, and three his grandsons. Both donors were members of the board, James J. being chairman. On October 25, 1954, the board was similarly constituted, except for the death of one son in August. Despite this family domination, there was no indication on the gift dates that the enterprise was not capably managed or that salaries were in any way excessive.

On the gift dates, the Company had 254,125 shares of common stock outstanding, there being no restrictions on their transferability or sale. There was no other class of stock. Including the 70,002 shares involved in these cases, a total of 180,510 shares were owned by 79 persons who were related to James Heekin, the founder. Thus, the Heekin family owned approximately 71 percent of all of the outstanding stock. The remaining 73,615 shares were owned by 54 unrelated persons, most of whom were employees of the Company and friends of the family.

Six major customers accounted for almost one-half of Heekin's 1954 business. Relations with these important customers were long-standing and excellent. One of these customers, the Hamilton Metal Products Company, which placed over $ 2,000,000 worth of business with Heekin in 1954, and for whom Heekin manufactured the Skotch Kooler and Grill, had, prior to the gift dates, advised Heekin of its need for certain new products, and on August 3, 1954 (one of the gift dates), Heekin's board of directors authorized the expenditure of approximately $ 90,000 for new tooling and equipment at its Cincinnati plant for the manufacture of such products. Another major customer was the Reynolds Tobacco Company, which placed almost $ 1,500,000 of business with Heekin in 1954 and with whom Heekin had dealt since 1908.

As indicated, freight costs play an important part in Heekin's business. These costs are significant in two aspects. One is the cost of transporting raw material to Heekin's plants. In this respect Heekin was quite favorably located. It has a dock on the Ohio River in Cincinnati, permitting it to take advantage of inexpensive water transportation of steel shipped from Pittsburgh, with a consequent advantage over some of its competitors in the same area who receive their raw materials by rail. The other important freight aspect is, as above noted, the cost of shipping the final product to the customer, and which factor motivated the establishment of its Springdale, Arkansas, plant. The Hamilton Metal Products Company was located only 25 miles from Cincinnati, giving Heekin an important freight advantage. And also, on August 3, 1954, Heekin's board of directors authorized the expenditure of about $ 650,000 for new tooling, machinery and equipment for its Norwood plant so that Heekin could enter the new field of manufacturing beer cans. At that time no other company in the Cincinnati area was engaged in the production of such cans, and Heekin concluded that, with the freight advantage it would have over its competitors in serving the brewers of the Cincinnati area, a profitable new source of business would be developed.

In 1954, favorable economic conditions generally prevailed in the can-manufacturing industry, and demand was at a record level. Indeed, this was the condition throughout the container and packaging industry, and optimism generally prevailed about the continuation of the then current high demand.

But Heekin had its problems too. It is a relatively tiny factor in a highly competitive industry dominated by two giants, the American Can Company and the Continental Can Company. In 1954, these two companies, each with over $ 600,000,000 of annual sales produced from 76 and 40 plants respectively, together accounted for about 75 percent of the country's total can sales. Three other can manufacturing companies, the National Can Corporation, the Pacific Can Company, and Crown Cork & Seal Co., Inc., together made about 8 percent of the sales. Heekin, with its five plants, did a little less than 1 percent of the total business. Prices in the can-making industry are for practical purposes established by American and Continental. When they announce prices, Heekin goes up or down with them. Unable to compete on a price basis, Heekin strives to give its customers better personal service, which, because it is smaller and closer knit, it can frequently do.

Probably Heekin's major problem is the age, and the resulting relative inefficiency, of a large part of its plant and equipment, and its inability to finance a large-scale program of modernization. This again is in part a problem of its small size. The relatively small amounts it can use for this purpose are generated by retained earnings, and it has consequently fallen behind the giants of the industry in erecting efficient plants and installing modern, high-speed, automatic can-making lines. During the war, Heekin was unable to buy new equipment. However, such competitors as American, Continental, and Pacific

manufactured their own can-making equipment and were able to forge ahead, and such equipment as Heekin was able to buy after the war from other companies could not match American and Continental's modern automatic packer's can equipment, which produced 500 cans a minute. Heekin's older packer's can equipment could turn out only about 300 cans a minute, and even the new equipment it was able to buy after the war could attain, with difficulty, speeds of only 400 cans a minute. In 1954, about 90 percent of Heekin's equipment had been acquired in the middle 1930's or prior thereto. In all its plants, the Company had 37 can-making lines, 11 of which were very old and still hand operated.

Similarly, Heekin's Cincinnati and Norwood multistory plants, which accounted for about 75 percent of Heekin's total 1954 production, were less efficient than modern, single-story buildings. The can-making business is primarily a material-handling one, requiring a rapid and efficient flow of large amounts of material through the plant, from the receipt of the raw materials to the shipment of finished products. In a single-story building, materials can freely be moved horizontally with fork-lift trucks and conveyors, whereas in its six-story Cincinnati and four-story Norwood plants, elevators are used for the vertical movement of materials, resulting in excessive labor and handling costs and more difficult production controls. The proceeds of a $ 3,000,000 long-term loan which Heekin secured in 1950 were for the most part not available for such a plant and equipment modernization program.

However, the competitive disadvantage of lack of modern equipment was reflected more on the packer's can phase of its business than on the general line cans, which are produced both by Heekin and its competitors on only semiautomatic equipment. Such equipment does not lend itself as readily to the speed and automation required with respect to packer's cans. Heekin's semiautomatic lines were capable of producing around 300 cans a minute.

The Heekin stock was not listed on any stock exchange, and trading in it was infrequent. There was some such activity in 1951 and 1952 resulting from the desire of certain minority stockholders (the descendants of a partner of James Heekin, the founder) to liquidate their holdings, consisting of 13,359 shares. One individual alone had 10,709 shares. Arrangements were privately made in early 1951 by these stockholders with Albert E. Heekin and his son, Albert E. Heekin, Jr., to sell these holdings at the prearranged price of $ 7.50 a share. These shares were all sold, commencing March 22, 1951, and ending April 16, 1952, in 44 separate transactions, 35 of which took place in 1951 and 9 in 1952. No attempt was made to sell the shares to the general public on the open market. All sales were made to Heekin employees and friends of the Heekin family at such $ 7.50 price. Other than these 1951 and 1952 sales, the only sales of stock made prior to the gift dates consisted of one sale of 100 shares in 1953 by one Heekin employee to another, and one sale in 1954 of 200 shares, again by one Heekin employee to another, both sales also being made for $ 7.50 a share.

Against these background facts, the valuation question in dispute may be approached. Section 1000 of the Internal Revenue Code of 1939 (26 U.S.C. 1952 Ed., § 1000, 53 Stat. 144), the applicable statute, imposed a tax upon transfers of property by gift, whether in trust or otherwise. Section 1005 provided that "If the gift is made in property, the value thereof at the date of the gift shall be considered the amount of the gift."

Section 86.19(a) of the Regulations issued with respect thereto (Treasury Regulations 108, 8 Fed. Reg. 10858) defines such property value as the price at which the property "would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell. * * * Such value is to be determined by ascertaining as a basis the fair market value at the time of the gift of each unit of

the property. For example, in the case of shares of stock * * *, such unit of property is a share * * *. All relevant facts and elements of value as of the time of the gift should be considered." With respect to determining the fair market value per share at the date of the gift, subsection (c)(6) stated that, if actual sales or bona fide bid and asked prices are not available, the value should be arrived at "on the basis of the company's net worth, earning power, dividend-paying capacity, and all other relevant factors having a bearing upon the value of the stock."

Further, a lengthy Revenue Ruling (54-77, 1954-1 Cum. Bull. 187), entitled "Valuation of stock of closely held corporations in estate tax and gift tax returns," was in effect at the time of these gifts which outlined "the approach, methods and factors to be considered in valuing shares of the capital stock of closely held corporations for estate tax and gift tax purposes." After warning in section 3 that fair market value, "being a question of fact," depends on the "circumstances in each case," and that "No formula can be devised that will be generally applicable to the multitude of different valuation issues arising in estate and gift tax cases," and that there is ordinarily "wide differences of opinion as to the fair market value of a particular" closely held stock, section 4 goes on to enumerate the following factors which "are fundamental and require careful analysis in each case": (1) the nature of the business and its history, (2) the general economic outlook of business in general and the specific industry in particular, (3) the book value of the stock and the company's financial condition, (4) the company's earning capacity, (5) its dividend-paying capacity, (6) its goodwill, (7) such sales of the stock as have been made as well as the size of the block to be valued and (8) "the market price of stocks of corporations engaged in the same or similar line of business which are listed on an exchange." After discussing each factor in detail, the Ruling goes on to consider such matters as (a) the weight to be accorded the various factors, concluding that, in a product selling company, primary consideration should normally be given to the earnings factor, and (b) the necessity of capitalizing the earnings and dividends at appropriate rates.

There appears to be no dispute between the parties concerning the validity, or the propriety of applying the principles, of the Regulations and the Ruling to these cases. The dispute arises from the differences of opinion which are inherent in the Ruling's statement that "A sound valuation will be based upon all the relevant facts, but the elements of common sense, informed judgment and reasonableness must enter into the process of weighing those facts and determining their aggregate significance."

Where, as in the present cases, the problem is the difficult one of ascertaining the fair market value of the stock of an unlisted closely held corporation, it is not surprising that, in assisting the court to arrive at an "informed judgment," the parties offer the testimony of experts. In such a situation, the opinions of experts are peculiarly appropriate. Bader v. United States, 172 F. Supp. 833 (D.C.S.D.Ill.). At the trial, the taxpayers produced three experts, and the Government one.

One of plaintiffs' experts was the senior partner of a firm of investment bankers and brokers. He felt that the limited prior sales of the stock at $ 7.50 warranted the consideration of the other factors listed in the Revenue Ruling applicable to closely held corporations. There were four major factors which he considered in arriving at his conclusion. The first was book value. Utilizing the Company's balance sheet as of December 31, 1954 (a date subsequent to the gift dates), the book value came to about $ 33 a share. In this connection he noted that the Company's financial position at that time was sound, with a ratio of current assets to current liabilities of about 4.3 to 1. However, principally because of the age and multistoried inefficiency of the Company's two main plants at Cincinnati and Norwood, he reduced the book value factor by 50 percent. The second factor was earnings. The Company's audited annual

statements for 1952, 1953 and 1954, which he accepted without adjustment, showed that the average of its earnings for these 3 years was $ 1.77 a share. He felt that, in the case of this Company, a price earnings ratio of 6 to 1 would be appropriate, but, recognizing that this was the most important factor, he weighted it to give it double value. The third factor was dividend yield. In said 3 years, the Company paid an annual dividend of 50 cents. Accepting this figure as the dividend the Company would be likely to pay in the future, he concluded that an investor would look for a 7 percent yield on this stock, and capitalized it on that basis. The fourth factor was the prior sales at $ 7.50. Adding and weighting these figures, he derived a value of $ 10.50 a share. However, because the stock was not listed on any exchange, and was closely held, with sales being infrequent, he discounted that value by 25 percent to reflect the stock's lack of marketability, and came out with an ultimate valuation of $ 7.88 a share. n1 This is the value plaintiffs now rely on in these cases. This value was applied to the entire block of 70,002 shares and to both dates, a block which, he noted, would give a purchaser only a minority position. Considering the Revenue Ruling's suggestion to investigate "the market price of stocks of corporations engaged in the same or similar line of business which are listed on an exchange," this witness felt that there were no listed companies that could properly be compared with Heekin.

n1

Book value =	$ 33.20, less 50%	$ 16.60
Earnings =	Average 3 years = 1.77; price to earnings	
	ratio = 6:1 = $ 10.62. Weighted to two factors	21.24
Dividends =	To give yield of 7% at rate of 50 cents per	
	annum, would have to sell at	7.14
Prior Sales		7.50
	Total all factors	52.48
	Divided by 5 to obtain weighted average	52.48/5 = $ 10.50
	Less 25% for lack of marketability	2.62
		7.88

Plaintiffs' second expert, a certified public accountant who had experience in and was familiar with the principles involved in valuing stocks of closely held corporations, arrived at the somewhat higher valuations of $ 9.50 per share for the 30,000 shares given on August 3, 1954, and $ 9.65 for the 40,002 given on October 25, 1954. He recognized that the previous sales of the stock in 1951, 1952, 1953 and 1954 at $ 7.50 could not be determinative because, being all at the same selling price, they could not have reflected the month-to-month or year-to-year fluctuations of actual value, which was the problem herein involved. He concluded that that price was predicated primarily to give a yield of 6 2/3 percent based on an annual dividend rate of 50 cents, which the Company had paid each year from 1946 through 1954, except for a 1 1/2-year period in 1950 and 1951. In 1950, the Company suffered

extraordinary losses and dividends were suspended, and in 1951, only 25 cents was paid. Accordingly, he considered the situation appropriate for the application of the principles enunciated in the Revenue Ruling.

In so doing, he too concluded that the four major factors to be considered were earnings, dividend yield, book value, and the price of the prior sales. As to earnings, he computed, from the Company's audited statements for the years 1950-54, without adjustment, average annual earnings of $ 1.68. Using the comparative method of calculating price-earnings ratios of listed companies in the same or similar business and then correlating such results to Heekin, he selected 11 leading corporations in the container industry (only two of which, American Can and Continental Can, were can companies), and computed their average price-earnings ratio over the similar 5-year period at 10 to 1, with 1954 alone producing a ratio of 11.6 to 1 because of the rise in prices of container industry stocks in that year. n2 However, he capitalized Heekin's 5-year average earnings of $ 1.68 at an earnings multiple of only eight times which he considered appropriate for a "marginal" company like Heekin. Since this produced a value of $ 13.44 based only on earnings, as of December 31, 1954, due to his using the figures for the full year 1954, he adjusted the figure to August 3, 1954, the first gift date, by reducing the figure by 14.1 percent, a figure derived by calculating the general rise in a relatively large group of certain other industry stocks between August 3 and December 31. Thus, on the basis of earnings alone, he calculated a value of $ 11.55 as of August 3.

n2 He noted that this 10-to-1 ratio was higher than the Dow-Jones average of 9.9 for 30 industrials, the Standard & Poor average of 9.3 for 50 industrials, and the Moody average of 9.7 for 125 industrials for the same 5-year period.

As to dividends, this witness then calculated Heekin's average for the 5 years ended December 31, 1954, at 35 cents per share and capitalized that figure at 6 percent, which he considered to be appropriate in Heekin's case in view of the 5-year average dividend yield of 5.1 percent for the 11 leading companies in the container industry which he used as comparatives, and the even higher returns, on a 5-year average basis, afforded by general groups of leading industrials during that period. Thus, on the basis of a 6 percent dividend yield alone, he calculated a value of $ 5.83.

Using as factors the value figures derived as described on the bases of price earnings ($ 11.55) and dividend yield ($ 5.83) ratios, together with a book value figure of $ 33.23 as of December 31, 1954, and a $ 7.50 figure as the price of the prior sales, the witness then weighted these four factor figures, giving the earnings and dividend factors 40 percent each (i.e. each figure multiplied by 4), and the book value and prior sales figure 10 percent each (i.e. each figure multiplied by 1). This total figure was then reduced by 15 percent to reflect the stock's lack of marketability (which was equated to the underwriting cost of floating 30,000 shares) which, after dividing by the weight factor (10), gave the market price as of August 3 as $ 9.37, n3 which he rounded out to $ 9.50.

n3

	Weight	Total

Price earnings ratio	$ 11.55	4	$ 46.20
Dividend -- 35 cents capitalized at 6%	5.83	4	23.32
Stock sales	7.50	1	7.50
Book value	33.23	1	33.23
			110.25
Less 15% -- amount for nonmarketability (flotation cost			16.51
Divided by factor 10			9.37

Using the same criteria and method, the witness valued the 40,002 shares given on October 25, 1954, at the slightly higher price of $ 9.65, the price of listed stocks having generally risen between the two dates.

The taxpayers' third expert, a senior officer in a firm specializing in valuing the stocks of closely held corporations, came out with the still higher valuation of $ 11.41 per share on August 3, in blocks of 10,000 ($ 11.76 in a block of 30,000 shares). For the shares given on October 25, however, his value was only $ 9.40 per share in blocks of 13,334 shares ($ 9.47 in a block of 40,002 shares).

This witness also used the technique of selecting comparable companies traded on a national exchange, ascertaining, by a very comprehensive study, the relationship between their market prices and their earnings, "earnings paid out," and return on invested capital (to which he added long-term debt), and then correlating the data to Heekin. Unlike the other two experts, he did not accept the exact figures of the audited statements of annual earnings, but studied them with a view to detecting and eliminating abnormal and nonrecurring items of loss or profit in order to obtain a better picture of the Company's normal operation and of what an investor, therefore, might reasonably conclude the Company's future performance would be. With such adjustments and eliminations, he thus recasted the Company's earnings for the years 1949-1953. He selected eight companies in both the can and glass container fields to use as comparatives.

In calculating Heekin's earnings, the witness used a 5-year average, as adjusted. One of the adjustments was to the Company's abnormal profits in 1951 as a result of the Korean war, which he eliminated and reduced to more normal levels. Another was to eliminate, as abnormal and nonrecurring, rather large losses the Company suffered in 1950, 1951 and 1952 as a result of the operations of a subsidiary which was liquidated. By applying a price-earnings ratio of 11.82, as derived from the comparative companies, he determined a value of the Heekin stock on August 3, based only on earnings, of $ 13.78 per share; a value based on earnings paid out (in which he included not only dividends but also interest on long-term debt) on the capital invested in the business of $ 9.59 per share; and a value based on invested capital of $ 31.34 per share. To these three determinants of value, he added the fourth factor of $ 7.50 derived from the prior sales price. He too then weighted these figures, assigning a weight of 33 1/3 percent each to the values based on earnings and earnings-paid-out, and 16 2/3 percent each to the values based on invested capital and the prior stock sales. This gave a total

weighted value of $ 14.26. He then too applied a 20-percent reduction for lack of marketability, which he also equated with flotation costs for blocks of 10,000 shares, resulting in the net figure of $ 11.41 as of August 3. n4

n4

Value based on earnings -- 13.78 at 33 1/3%	$ 4.59
Value based on earnings paid out -- 9.59 at 33 1/3%	3.20
Value based on invested capital -- 31.34 at 16 2/3%	5.22
Value based on stock sales -- 7.50 at 16 2/3%	1.25
100%	14.26
Less 20% for lack of marketability (flotation cost in blocks of 10,000 shares)	2 85
Net value	11.41
Less 17.5% reduction if in a block of 30,000 shares	11.76

The same technique produced a figure of $ 9.40 per share as of October 25, 1954, in blocks of 13,334 shares. n5 This lower valuation is attributable to the drop in the market prices of the comparative companies between August 3 and October 25, 1954. One of the comparatives (Pacific Can Company) which had been used for the August 3 valuation was dropped since it enjoyed a rather atypical sharp rise after such date due to a proposed merger.

n5 $ 9.47 per share in a block of 40,002 shares.

Various major criticisms can fairly be made of these three appraisals offered by plaintiffs. First, they all give undue weight as a factor to the $ 7.50 price of the prior stock sales. Almost all of these sales occurred in the relatively remote period of 1951 and early 1952. Only one small transaction occurred in each of the more recent years of 1953 and 1954. Such isolated sales of closely held corporations in a restricted market offer little guide to true value. Wood, Adm. v. United States, 89 Ct. Cl. 442, 29 F. Supp. 853; First Trust Co. v. United States, 5901 U.S. Tax Cas. (CCH) 11843, 3 A.F.T.R.2d (P-H) 1726 (D.C.W.D.Mo.); Drayton Cochran v. Commissioner, T.C.Mem.(P-H) 48094, 7 T.C.M. (CCH) 325; Schnorbach v. Kavanagh, 102 F. Supp. 828 (D.C.W.D.Mich.). In an evaluation issue, this court recently even gave little weight to the sale of shares on a stock exchange when the amount sold was "relatively insignificant." American Steel Foundries v. United States, 153 Ct. Cl. 234, 237. To the same effect is Heiner v. Crosby, 24 F.2d 191 (C.C.A. 3d) in which the court rejected stock exchange sales as being determinative and upheld the resort to "evidence of intrinsic value" (p. 194). Furthermore, the $ 7.50 price of the 1951 and 1952 sales evolved in early 1951 during a period when the Company was experiencing rather severe financial difficulties due to an unfortunate experience with a subsidiary which

caused a loss of around $ 1,000,000, and when, consequently, the Company found itself in a depleted working capital position and was paying no dividends. Further, there is no indication that the $ 7.50 sales price evolved as a result of the usual factors taken into consideration by informed sellers and buyers dealing at arm's length. Fair market value presupposes not only hypothetical willing buyers and sellers, but buyers and sellers who are informed and have "adequate knowledge of the material facts affecting the value." Robertson v. Routzahn, 75 F.2d 537, 539 (C.C.A. 6th); Paul, Studies in Federal Taxation (1937), pp. 193-4. The sales were all made at a prearranged price to Heekin employees and family friends. The artificiality of the price is indicated by its being the same in 1951, 1952, 1953 and 1954, despite the varying fortunes of the Company during these years and with the price failing to reflect, as would normally be expected, such differences in any way.

Secondly, in using the Company's full 1954 financial data, and then working back from December 31, 1954, to the respective gift dates, data were being used which would not have been available to a prospective purchaser as of the gift dates. "The valuation of the stock must be made as of the relevant dates without regard to events occurring subsequent to the crucial dates." Bader v. United States, supra, at p. 840. Furthermore, in the working-back procedure, general market data were used although it is evident that the stocks of a particular industry may at times run counter to the general trend. This was actually the situation here. Although the market generally advanced after August 3, 1954, container industry stocks did not.

Thirdly, the converse situation applies with respect to the data used by the third expert. His financial data only went to December 31, 1953, since the Company's last annual report prior to the gift dates was issued for the year 1953. But the Company also issued quarterly interim financial statements, and by the second gift date, the results of three-quarters of 1954 operations were available. In evaluating a stock, it is essential to obtain as recent data as is possible, as section 4 of the Revenue Ruling makes plain. Naturally, an investor would be more interested in how a corporation is currently performing than what it did last year or in even more remote periods. Although the use of interim reports reflecting only a part of a year's performance may not be satisfactory in a seasonal operation such as canning, it is possible here to obtain a full year's operation ending on either June 30 or September 30, 1954, which would bring the financial data up closer to the valuation dates.

Fourth, it is accepted valuation practice, in ascertaining a company's past earnings, to attempt to detect abnormal or nonrecurring items and to make appropriate eliminations or adjustments. As shown, only the plaintiffs' expert who came out with the highest August 3 valuation attempted to do this by adjusting the excessive Korean war earnings and by eliminating the unusual losses suffered in 1950, 1951 and 1952 arising from the operations of a financing subsidiary (Canners Exchange, Inc.) that had been liquidated in 1952. The reason this is important is that past earnings are significant only insofar as they reasonably forecast future earnings. The only sound basis upon which to ground such a forecast is the company's normal operation, which requires the elimination or adjustment of abnormal items which will not recur. Plaut v. Smith, 82 F. Supp. 42 (D.C. Conn.), aff'd., sub. nom. Plaut v. Munford, 188 F.2d 543 (Ct.App.2d Cir.). In American Steel Foundries v. United States, supra, the court similarly viewed the "earning prospects" of the company whose stock was being evaluated in light of its past earnings "as constructed by the accountants, eliminating or adjusting losses due to strikes or other nonrecurring events." And the court in White & Wells Co. v. Commissioner, 50 F.2d 120 (C.C.A. 2d), also held that: "*

* * past earnings * * * should be such as fairly reflect the probable future earnings" and that to this end "abnormal years" may even be entirely disregarded. The Revenue Ruling (sec. 4.02(d)) specifically points out the necessity of separating "recurrent from nonrecurrent items of income and expense."

Fifth, in deriving a past earnings figure which could be used as a reasonable basis of forecasting future earnings, none of plaintiffs' experts gave any consideration to the trend of such past earnings. They simply used the earnings of prior years and averaged them. But such averages may be deceiving. Two corporations with 5-year earnings going from the past to the present represented by the figures in one case of 5, 4, 3, 2, and 1, and in the other by the same figures of 1, 2, 3, 4, and 5, will have the same 5-year averages, but investors will quite naturally prefer the stock of the latter whose earnings are consistently moving upward. The Revenue Ruling specifically recognizes this in providing (sec. 4.02(d)) that: "Prior earnings records usually are the most reliable guide as to the future expectancy, but resort to arbitrary five-or-ten-year averages without regard to current trends or future prospects will not produce a realistic valuation. If, for instance, a record of progressively increasing or decreasing net income is found, then greater weight may be accorded the most recent years' profits in estimating earning power."

And further, since the most recent years' earnings are to be accorded the greatest weight, care must be taken to make certain that the earnings figures for such years are realistically set forth. For instance, in Heekin's case, profits for 1952-54 were understated because a noncontributory retirement plan for hourly employees was established in 1951 for which the costs attributable to 1950 and 1951 were borne in the later years of 1952-54. Similarly, 1954 profits were further understated because they reflected (1) a renegotiation refund arising out of excess profits made in 1951, and (2) they were subjected to a charge of $ 174,203.54 ($ 83,617.70 after taxes) as a result of a deduction from 1954 profits only of certain expenses attributable to both 1954 and 1955. This abnormal doubling up of 2 years' expenses in one year was permitted by a change in the tax laws which became effective in 1954 (and which was later revoked retroactively) which allowed taxpayers such as Heekin to change their methods of accounting so as to effect the accrual in 1954 of these 1955 expenses. If proper adjustments are made in Heekin's 1954 statements for these items, the earnings for the 1954 period prior to the gift dates would be realistically increased and given due weight insofar as earning trends are concerned.

None of plaintiffs' experts made any of these adjustments in connection with a trend study or otherwise.

Sixth, it is generally conceded that, as stated by the Revenue Ruling, in evaluating stocks of manufacturing corporations such as Heekin, earnings are the most important factor to be considered. Bader v. United States, supra. Yet only one of plaintiffs' experts, who assigned double value to this factor, gave it such weight. As shown, the other two assigned the dividend factor equal weight. Some investors may indeed depend upon dividends. In their own investment programs, they may therefore stress yield and even compare common stocks with bonds or other forms of investment to obtain the greatest yields. However others, for various reasons, may care little about dividends and may invest in common stocks for the primary purpose of seeking capital appreciation. All investors, however, are primarily concerned with earnings, which are normally a prerequisite to dividends. In addition, the declaration of dividends is sometimes simply a matter of the policy of a particular company. It may bear no relationship to dividend-paying capacity. Many investors actually prefer companies paying little or no dividends and which reinvest their earnings, for that may be the key to future growth and capital appreciation.

And further, in capitalizing the dividend at 6 and 7 percent, as did two of the experts, rates of return were used which well exceeded those being paid at the time by comparable container company stocks. And still further, one of the experts used a 35-cent dividend rate as the basis for his capitalization because that was the average paid for the 5 years ended December 31, 1954. However, it seems clear that an annual dividend rate of 50 cents a share would be the proper rate to capitalize since that was the dividend paid by Heekin every year since 1945 except for the year 1950 and the first half of 1951 when, as shown, dividends were temporarily suspended. By the end of 1951 the Company had recovered from the situation causing the suspension and the normal dividend (quarterly payments of 12 1/2 cents per share) was then resumed. By August and October 1954, Heekin's demonstrated earning capability and financial position were such that there was little doubt it would at least continue its 50-cent annual dividend, which represented only about 25 percent of its current earnings per share. To dip back into this 1950-51 a typical period to compute an "average" of dividends paid for the past 5 years is unrealistic.

Finally, the record indicates that all three experts took too great a discount for lack of marketability. Defendant disputes the propriety of taking this factor into consideration at all. It seems clear, however, that an unlisted closely held stock of a corporation such as Heekin, in which trading is infrequent and which therefore lacks marketability, is less attractive than a similar stock which is listed on an exchange and has ready access to the investing public. This factor would naturally affect the market value of the stock. This is not to say that the market value of any unlisted stock in which trading is infrequent would automatically be reduced by a lack of marketability factor. The stock of a well-known leader in its field with a preeminent reputation might not be at all affected by such a consideration, as was the situation with Ford Motor Company stock before it was listed. Couzens v. Commissioner, 11 B.T.A. 1040. But the stock of a less well-known company like Heekin which is a comparatively small factor in its industry is obviously in a different position. In such a situation, a consideration of this factor is appropriate, especially where, as here, only a minority interest is involved. Bader v. United States, supra; Baltimore National Bank v. United States 136 F. Supp. 642 (D.C. Md.); Schnorbach v. Kavanagh, supra; Cochran v. Commissioner, supra; First Trust Co. v. United States, supra. But see Couzens v. Commissioner, supra; Estate of Katharine H. Daily v. Commissioner, T.C.Mem.(P-H) 47025, 6 T.C.M. (CCH) 114.

Defendant concedes that if such a factor is appropriate in these cases, a reasonable method of determining the diminution in value attributable to lack of marketability is to determine how much it would cost to create marketability for the block of stock in question. This was the method used by the court in First Trust Co. v. United States, supra. The record shows that for a company of Heekin's size, and for blocks of 30,000 and 40,000 shares, which would appear to be the appropriate considerations, flotation costs would amount to about 12.17 percent of the gross sales prices. However, as shown, the discounts taken by plaintiffs' experts for this factor ranged from 15 to 25 percent.

For all the above reasons, the opinions of plaintiffs' experts are not wholly acceptable.

Defendant produced one expert, an employee of a recognized appraisal company. His primary work over many years was the valuation of intangibles, including closely held stock. His opinion was that the value of the Heekin stock in question on August 3 and October 25, 1954, was $ 16 and $ 15.25 per share, respectively. This witness also used the comparative appraisal method, considering a group of stocks in the can and glass container industries. As part of a very comprehensive study, he selected eight container companies, six engaged in can production and two in glass container production, glass container enterprises being similar to those engaged in can production. He considered net assets as a

key factor in the determination of a stock price, and one which keeps a stock price from declining to zero when earnings become zero or even when losses are suffered and when a price-to-earnings ratio would therefore become meaningless. He therefore developed for the comparative companies percentage ratios of profits and dividends to net worth as well as market value to net worth. In developing figures for the profits and dividends of the comparative companies for the past 5 years, he gave weight to the trends thereof. He then developed Heekin's profits over the period 1950 through September 1954, making adjustments for the retirement plan costs, the losses from subsidiaries, the renegotiation refund, and the abnormal 1951 profits, in order to reflect the more nearly normal operations over the period. Adjusted profits were developed for the 12-month periods ending June 30 and September 30, 1954. Before correlating the percentages developed for the comparative companies to Heekin, however, he concluded that only two of such companies, United Can and Glass Company and Crown Cork & Seal Company, Inc., could be considered conformable to Heekin. The others, including the giants of their industries, such as American Can, Continental Can, and Owens Illinois Glass Company which, because of acquisitions, diversification, premium investment quality position, and mere size, were not considered fairly comparable, were eliminated. Correlating the data developed with respect to such two companies, he concluded that, as of August 3, Heekin would be worth 59.5 percent of net worth, or $ 19.72 per share, a stock exchange equivalent of 19 3/4 per share. The similar method produced $ 18.78 per share as the value as of October 25, 1954, or a trading equivalent of 18 3/4.

This witness too felt that the correlation process resulted in comparing Heekin with seasoned listed stocks enjoying marketability, and that an adjustment should be made for the closely held nature of the Heekin stock with its resultant lack of marketability, especially where only a minority interest was involved. Similarly equating this adjustment to deductions a seller would experience through floating the shares through an underwriter, which he calculated to be almost 20 percent, resulted in net valuations of 16 and 15 1/4 as of August 3 and October 25, 1954, respectively. Since these values approximate Heekin's current assets (including inventories) less all of its liabilities, without giving any value at all to any of its plants, equipment, or other noncurrent assets, he concluded they were extremely conservative. Employing the common tests of price-to-earnings ratio and yield on the basis of the current 50-cent dividend, these values would result in a price-to-earnings ratio of 7.24:1 as of August 3, based on $ 2.21 adjusted net profit per share for the 12 months ending June 30, as well as a 3.13 percent dividend yield, and a ratio of 8.29:1 as of October 25, based on $ 1.84 adjusted net profit per share for the 12 months ending September 30, as well as a 3.28 percent dividend yield.

This witness' study has certain meritorious features. It is based on justifiable adjustments in Heekin's earnings records to eliminate abnormal and nonrecurring items (although he made no adjustment for the 1954 doubling up of certain expenses). It considers earnings trend. It disregards the prior $ 7.50 sales prices as a major factor. And in employing the Company's financial data going up to June 30 and September 30, 1954, it is based on its most recent performance. However, it has certain weaknesses too, the principal one being the limitation of the comparative companies to two, one of which, Crown Cork & Seal, leaves much to be desired as a comparative because its principal business is the manufacture of bottle caps and bottling machinery, an entirely different business. Only 40 percent of its business is in can production. On the basis of size too there are great differences. At that time, Crown, including its foreign subsidiaries, was doing about $ 115,000,000 worth of business as against Heekin's $ 17,000,000. And the other comparative, United Can and Glass, presents the complication that it declared periodic stock dividends to which the witness gave no consideration, although it seems that

some element of value should fairly be attributed to them. n6 Although no two companies are ever exactly alike, it being rare to have such almost ideal comparatives as were present in Cochran v. Commissioner, supra, so that absolute comparative perfection can seldom be achieved, nevertheless the comparative appraisal method is a sound and well-accepted technique. In employing it, however, every effort should be made to select as broad a base of comparative companies as is reasonably possible, as well as to give full consideration to every possible factor in order to make the comparison more meaningful.

n6 "In theory, of course, the additional stock certificate gives him [the stockholder] nothing that he would not own without it * * *. But in actuality the payment of periodic stock dividends produces important advantages. Among them are the following: * * * 4. Issues paying periodic stock dividends enjoy a higher market value than similar common stocks not paying such dividends." Graham & Dodd, Security Analysis, Principles and Technique (3d ed. 1951) pp. 444-5.

Further, in compiling Heekin's financial data for correlation purposes, this witness used Heekin's average dividends for the 4 1/2 years preceding the valuation dates, thus including the atypical period when no dividends were paid.

Defendant, considering its own expert's valuations to be unduly conservative, and disagreeing as a matter of law with any deduction for lack of marketability (and in any event with the amount deducted by its expert for such factor), now offers valuations on what it claims to be a more realistic basis. It also adjusts and redistributes Heekin's profits, including the "doubling up" expenses in 1954, the renegotiation refund, and the retirement plan. As comparatives, it uses for the purpose of developing a price-earnings ratio 11 can and glass container manufacturing companies, including American Can and Continental Can (although it concedes that with respect to the stock of such companies in this field, the investing public affords "some extra value coincident with size"), as well as Crown Cork & Seal and United Can. The dividend yield of seven comparative companies, based on their 1954 dividend payments, was 3.77 percent. Defendant too gives no cognizance to United Can's stock dividends, although it concedes that "stock dividends have some effect on market value." On Heekin's 50-cent dividend, the market price of Heekin stock would be $ 13.33, based solely on a 3.75 (the figure used by defendant) percent dividend yield.

Defendant then computes representative earnings for Heekin as $ 1.89 per share, based on 1953 and 1954 adjusted earnings. The average price to current earnings ratio of the 11 comparative companies in 1954 was 13 to 1. On this formula, Heekin's stock would sell for $ 24.57 per share if earnings were the sole factor. However, defendant reduces this figure to $ 22.50 for the purpose in question.

On the basis of the book value of Heekin stock being $ 33.15 as of June 30, 1954, and comparing the market prices of various alleged comparable companies to their book value (i.e., the stocks of 11 unidentified comparatives used by the Commissioner of Internal Revenue in making his valuation sold for 1.4 times book value), defendant concludes that Heekin stock would not sell for less than $ 33 per share.

The three factors of earnings, dividend yield, and book value are then weighted, earnings, considering their recognized importance for valuation purposes and the upward trend thereof, being assigned 50 percent weight, and dividend yield and book value receiving 30 percent and 20 percent respectively. On this basis, defendant arrives at a fair market value figure of $ 21.85 as of August 3, 1954. n7

n7

Earnings	$ 22.50 X .5 = $ 11.25
Dividend yield	13.33 X .3 = 4.00
Book value	33.00 X .2 = 6.6
	21.85

Since there was a slight drop in the market price of can manufacturing stocks between August 3 and October 25, 1954, defendant concludes the fair market value on the latter date would be about 50 cents less per share, or $ 21.35.

Thus, defendant now seeks a fair market value determination as of the gift dates of $ 21.85 and $ 21.35 respectively, in lieu of the $ 24 value fixed by the Commissioner of Internal Revenue. n8

n8 This $ 24 value resulted from a study by the Commissioner of 11 comparatives. Their price to book value ratio was 1.4; price to average earnings, 14.3; price to current earnings, 13; and price to current dividends, 31.1.

Applying these ratios to Heekin, 1.4 times book value of $ 33.23 as of December 31, 1954, equals $ 46.52 per share. Average earnings for a 5-year period of $ 1.68 per share times 14.3 equals $ 24.02 per share. Current earnings times 13 equals $ 17.16 a share. Price to current dividend equals $ 15.55 per share.

In addition, in 1954 National Can purchased Pacific Can and the Commissioner analyzed the sale price for comparative purposes. The sales price came to 12.5 times Pacific's earnings. Application of that ratio to Heekin's 1953 earnings would price Heekin's stock at $ 24.38 per share. Pacific's price also represented 17 times its average 1949-1953 earnings. Application of such ratio to Heekin would price its stock at $ 28.39 per share. Further, Pacific's price bore a ratio of 1.6 to book value. Application of such ratio to Heekin's stock would price it at $ 53.17 per share.

In its selection of the three basic factors to be considered in determining fair market value, the weights to be assigned to these factors, the earnings adjustments, and the use of 50 cents per annum as the proper dividend basis, this estimate has merit. However, the selection of such companies as American Can and Continental Can as comparatives -- companies held in esteem in the investment world -- will obviously give an unduly high result. It simply is not fair to compare Heekin with such companies and to adopt their market ratios for application to Heekin's stock. Furthermore, defendant's use of the comparatives is confusing. The employment of different comparatives for different purposes is

unorthodox. When the comparative appraisal method is employed the comparatives should be clearly identified and consistently used for all purposes. And the refusal to make any allowance for lack of marketability contributes further to the unrealistic nature of defendant's fair market value estimate.

To summarize, Heekin's stock has been valued as of August 3 and October 25, 1954, in blocks of 30,000 and 40,002 shares respectively, as follows: $ 10, originally, by two donors and the executor of the third; $ 7.50, in amended returns; $ 7.88 by one expert of plaintiffs (upon which valuation plaintiffs now stand); $ 9.50 and $ 9.65 respectively by plaintiffs' second expert; $ 11.76 and $ 9.47 respectively by plaintiffs' third expert; $ 16 and $ 15.25 respectively by defendant's expert; $ 21.85 and $ 21.35 respectively by defendant in these proceedings; and $ 24 by the Commissioner of Internal Revenue.

The proper use of the comparative appraisal method, applying the principles already indicated, should provide a reasonably satisfactory valuation guide in these cases. n9 In its application, it would under all the circumstances herein involved appear appropriate to select the three factors of (1) earnings, (2) dividends and dividend-paying capacity, and (3) book value, as being the important and significant ones to apply. First Trust Co. v. United States, supra; Cochran v. Commissioner, supra; Bader v. United States, supra.

n9 In the related estate tax area, § 2031(b) of the Internal Revenue Code of 1954 specifically provides that: "In the case of stock and securities of a corporation the value of which, by reason of their not being listed on an exchange and by reason of the absence of sales thereof, cannot be determined with reference to bid and asked prices or with reference to sales prices, the value thereof shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange." 26 U.S.C. (1958 Ed.) § 2031(b).

As to earnings, an examination of them for the periods from 1950 to June 30 and September 30, 1954, which are the most recent periods in relation to the gift dates, would be most representative. For this purpose, the annual profit and loss statements, plus the Company's interim balance sheets, from which can be derived with reasonable accuracy the Company's earnings for the 12-month periods ending June 30 and September 30, 1954 (thus eliminating distortions due to seasonal factors), are the starting points. As stated, it would then be proper to make such adjustments therein as would be necessary to eliminate abnormal and nonrecurring items and to redistribute items of expense to their proper periods. In these cases, this normalizing process would require (a) the elimination from the years 1950 to 1952 of the abnormal, nonrecurring losses incident to its financing subsidiary, which had been completely liquidated by 1952; (b) the elimination of the abnormally large 1951 profits due to the Korean war; (c) the redistribution of the expenses attributable to the establishment subsequent to 1951 of a retirement plan, which expenses, although borne in later years, were also applicable to 1950 and 1951, thereby overstating 1950 and 1951 profits and similarly depressing 1953 and 1954 profits; (d) the shift from 1954 to 1951 of a renegotiation refund paid with respect to excessive 1951 profits; (e) the elimination from 1954 of the abnormally large charge relating to the accrual in 1954 of certain expenses actually attributable to 1955, as hereinabove explained, and which resulted in the doubling up of 2 years of such expenses in 1954, as permitted by a then recent change in the tax laws. The method adopted in making these adjustments, and the adjusted profit figures resulting therefrom, are set forth in detail in finding 47.

As indicated, it would then be appropriate to give due consideration and weight to the trend of such earnings. Greater weight should fairly be given to the most recent years and periods. The method adopted in finding 48 of assigning greater weight to the later periods is a reasonably accurate one, and indicates that as of June 30 and September 30, 1954, Heekin's reasonably expected annual earnings per share would be $ 1.93 and $ 1.79, based on average annual earnings of $ 491,460.86 and $ 454,492.82, respectively.

As to dividends and dividend-paying capacity, it has already been indicated that as of the gift dates, it could reasonably be expected that Heekin would continue to pay in the foreseeable future its usual 50-cent annual dividend. Indeed, on its aforesaid earnings basis, this would appear to be a conservative distribution. However, while the declaration by the board of directors of a small increase might have been considered a possibility -- a 10-cent increase would, for instance, result in a corporate outlay of only $ 25,412 on the 254,125 shares outstanding -- it seems clear, nevertheless, that no substantially larger payment, at least for some time to come, could reasonably have been anticipated. Heekin's equipment was, as shown, not modern and the Company was in need of relatively large sums for equipment and plant modernization if it hoped to continue to be a competitive factor in the industry. For such a program, the Company would have to depend almost entirely on retained earnings. A further limitation on the Company's dividend-paying capacity was its repayment obligations on its long-term debt. Annual installments on principal of $ 150,000 had to be made through 1965, plus 20 percent of the net income (less $ 150,000) for the preceding year.

As to book value, the Company's balance sheets showed the book value per share to be, conservatively, $ 33.15 and $ 33.54 as of June 30 and September 30, 1954, respectively (findings 51-53). These statements also showed the Company to be in a current sound financial condition. As of June 30, 1954, current assets alone, amounting to almost $ 8,700,000, far exceeded its total liabilities of approximately $ 4,700,000, including its long-term debt. Its ratio of current assets to current liabilities was 3.17 to 1.

With the above basic data applicable to Heekin, it is then appropriate to select as closely comparable companies as is possible whose stocks are actively traded on an exchange, and to ascertain what ratios their market prices bear to their earnings, dividends, and book values. The application of such ratios to Heekin would then give a reasonable approximation of what Heekin's stock would sell for if it too were actively traded on an exchange.

A study of all the numerous companies considered by the experts as proper comparatives indicates that five of them, i.e., Pacific Can Company, United Can and Glass Company, National Can Corporation, Brockway Glass Co., Inc., and Thatcher Glass Manufacturing Co., Inc., are, while by no means perfect comparables, certainly at least reasonably satisfactory for the purpose in question. The detailed reasons for their selection are set forth in finding 57. In size they all fall generally into Heekin's class, and the nature of their operations is also comparable. In addition, five companies give a sufficiently broad base. Such companies as American Can, Continental Can, and Crown Cork & Seal, for the reasons already indicated, are eliminated (finding 56).

After similarly computing the earnings, as adjusted, of the comparatives for the same periods as for Heekin (finding 58), and similarly weighting them to give effect to the trend factor (finding 59), the average ratio of their market prices to their adjusted earnings as of August 3 and October 25, 1954 (the

"price-earnings" ratio), was 9.45 and 9.84 to 1, respectively (finding 62). Thus, on the basis only of earnings, Heekin's stock would similarly sell for $ 18.24 and $ 17.61 per share on such dates.

Similarly, the comparatives' dividend payments for the 12 months ending June 30 and September 30, 1954, after making some allowance for United's stock dividend, show an average percent yield of 3.50 and 3.56 respectively (finding 64). Thus, on the basis only of dividend yield, Heekin's stock would similarly sell for $ 14.29 and $ 14.05 per share on August 3 and October 25, 1954, respectively (finding 65).

As to book value, the average market prices of the comparatives were 83.96 and 86.39 percent, respectively, of the book values of their common stocks on said dates (finding 66). Thus, on the sole basis of the average relationship between such book values and market prices, Heekin's comparable market prices on said dates would be $ 27.83 and $ 28.98 (finding 67).

However, since the three factors of earnings, dividends, and book value are not entitled to equal weight, it becomes necessary to consider their relative importance in the case of a company such as Heekin. In this connection, plaintiffs' contention that in these cases no factor is to be considered of greater importance than dividend yield and that no investor would reasonably be expected to buy Heekin stock at a price which would afford a yield of less than 7 percent, cannot be accepted, not only for the reasons set forth above concerning the general relative importance of this factor but also because it is not supported by the specific data relating to the container industry as shown by the comparatives' yields. Investors were purchasing the stocks of comparable container companies which were yielding much less return than 7 percent. As shown, the average dividend yield of the five comparative companies was only around 3 1/2 percent. Investors were purchasing Pacific Can at a price which afforded a yield of less than 3 percent. Indeed, they were purchasing National Can at more than $ 13 a share although it was paying no dividend at all.

Considering all the circumstances, it would appear appropriate to accept defendant's proposals in this respect and to consider earnings as entitled to 50 percent of the contribution to total value, and to give dividend yield (which in this case would appear to be substantially equivalent to dividend-paying capacity) 30 percent, and book value 20 percent, thereof. Cf. Bader v. United States, supra, in which the court gave 50 percent weight to earnings, and dividend the remaining 50 percent equally between the dividend yield and book value factors. Book value indicates how much of a company's net assets valued as a going concern stands behind each share of its stock and is therefore an important factor in valuing the shares. As defendant's expert pointed out, this is the factor that plays such a large part in giving a stock value during periods when earnings may vanish and dividends may be suspended. However, principally because book value is based upon valuing the assets as a going concern, which would not be realistic in the event of a liquidation of the corporation, a situation which a minority stockholder would be powerless to bring about in any event, and for the additional reasons set forth in finding 50, this factor is, in the case of a manufacturing company with a consistent earnings and dividend record, normally not given greater weight than the other two factors.

On the above percentage bases, the fair market value of Heekin's stock on August 3 and October 25, 1954, would be $ 18.98 and $ 18.83 respectively (finding 69).

These prices, however, assume active trading for Heekin's stock on an exchange, as was the situation with the comparatives. As shown, the closely held nature of, and the infrequent trading in, Heekin's stock resulted in a lack of market-ability which would affect its market value. Equating the proper discount to be taken for this factor with the costs that would be involved in creating a market for the stock, a method which defendant concedes is reasonable, results in a deduction of approximately 12.17 percent for a company of Heekin's size and for blocks of 30,000 and 40,000 shares. On this basis, the fair market values of the Heekin stock as of August 3 and October 25, 1954, would be $ 16.67 and $ 16.54 respectively.

These are the values resulting largely from strictly formula and statistical applications. While such use of figures and formulas produces, of course, results which are of important significance, and may in certain instances be given conclusive weight, it is nevertheless recognized that determinations of fair market value can not be reduced to formula alone, but depend "upon all the relevant facts," including "the elements of common sense, informed judgment and reasonableness." Revenue Ruling, sec. 3.01. The question of fair market value of a stock "is ever one of fact and not of formula" and evidence which gives "life to [the] figures" is essential. Estate of James Smith v. Commissioner, 46 B.T.A. 337, 341-2. The selection of comparatives has been a particularly troublesome problem in these cases. National Can's erratic earnings record, even though adjustments are attempted to normalize its situation (findings 57-58), and its nonpayment of dividends (finding 64), certainly weaken its position as a comparative, and suggest the desirability of an adjustment in the final market value figures set forth above. Pacific Can's sharp rise in price after August 3, 1954, justifies a similar adjustment for the October 25, 1954, valuation. While the inclusion of the glass container manufacturers with their higher dividend yields tends to neutralize somewhat the National Can situation, an adjustment downward would, in fairness to plaintiffs, nevertheless guard against their being prejudiced by the aforementioned selections of comparatives. Furthermore, while the sales of Heekin stock at $ 7.50 warrant, as hereinabove pointed out, only minimal consideration, the figures derived from the above formula give them no cognizance whatsoever.

Giving important weight to the figure of $ 16.67 produced by the application of the comparative appraisal method as applied herein, but viewing it in light of all the facts and circumstances involved in these cases, it is concluded that the fair market value of the 30,000 shares given on August 3, 1954, was $ 15,50 per share.

The market for stocks of the can and glass container manufacturing companies fell somewhat between August 3 and October 25, 1954, so that ordinarily on that basis as well as on the basis of Heekin's own financial and operating positions on October 25 as compared with August 3, a slightly lower value would be justified as of October 25 (although one of plaintiffs' experts felt that, insofar as Heekin stock is concerned, the same value should be applied to both dates, and another came out with a higher value for the second date). It seems clear, however, that the brightened prospects for increased business and profits resulting from the Company's decision in August 1954 to embark upon the beer can business and to satisfy further the demands of its largest customer for new products would, in Heekin's instance, tend to neutralize the market decline and to make its stock at least as valuable on October 25 as it had been on August 3. Accordingly, it is concluded that the fair market value of the 40,002 shares given on October 25, 1954, was also $ 15.50 per share.

A $ 15.50 valuation represents a price to adjusted earnings ration on the gift dates of between 8 and 9 percent (somewhat less than the 9-10 percent average of the comparatives (finding 62)), a dividend yield of 3.23 percent (slightly less than the 3.5 percent average of the comparatives (finding 64)), and only 46 percent of book value (considerably less than the approximately 85 percent of the comparatives (finding 66)). On these bases, it is a figure that is fair to both sides.

Plaintiffs should consider that such a valuation prices the stock only at an amount representing the difference between current assets and total liabilities, including its long-term debt, as shown by its June 30, 1954, balance sheet. Thus, at such price, the value of the stock would be represented in whole by current assets, with no consideration whatsoever given to plant, equipment, or any other assets. As such, it would appear to be a conservative price indeed. Despite the difficulties under which it is laboring in a highly competitive industry, Heekin was, as of the valuation dates, a profitable, dividend-paying company, in sound financial condition, in an industry in which demand was at record levels, and in which it was forging ahead with relatively large investments in new fields holding bright prospects. Only a disregard of these favorable factors would warrant any lower valuation.

On the other hand, defendant should consider that such a valuation would give an investor a dividend yield of less than 3.5 percent on his investment, with little prospect of any significant increase in the foreseeable future. The fact that the Company was, on the gift dates, a relatively small one competing, with a comparatively old plant, against the giants of the industry operating at high efficiency with the most modern equipment, makes unwarranted a valuation of this closely held stock representing only a minority interest on any significantly higher basis. For these reasons also the $ 15.50 valuation is considered to be fair and just to both plaintiffs and defendant.

On this valuation basis, plaintiffs are entitled to recover, the amount of the recovery to be determined in accordance with Rule 38(c).

FINDINGS OF FACT

1. Plaintiffs sue to recover alleged overpayments of gift taxes on gifts of stock of The Heekin Can Company, an Ohio corporation. These gifts consisted of 30,000 shares given by Albert E. Heekin on August 3, 1954, and 40,002 shares given by James J. Heekin on October 25, 1954. Gift taxes paid were based on an Internal Revenue Service valuation of $ 24 a share. On the gift tax returns, as amended, a value on such dates of $ 7.50 a share was placed.

2. On August 3, 1954, Albert E. Heekin of Cincinnati, Ohio, created six trusts for the benefit of his three sons, George E., Charles L., and Albert E., Jr., each son being the beneficiary of two trusts. On the same date, he transferred by gift 5,000 shares of the common stock of The Heekin Can Company to each of the six trusts, resulting in total gifts of 30,000 shares, 10,000 shares to each son. The Central Trust Company, an Ohio banking corporation, was designated as cotrustee under all six trusts, with the two sons other than the particular beneficiary of the trusts being designated as the other cotrustees in each instance.

3. On October 25, 1954, James J. Heekin of Cincinnati, Ohio (the brother of Albert E. Heekin hereinabove mentioned), created three trusts for the benefit of his three children, James R., Katharine Heekin Herrlinger, and Donald J., and their families, each child and family being the beneficiary of one of the trusts. On the same date, he transferred by gift 13,334 shares of the common stock of The Heekin

Can Company to each of the three trusts, resulting in total gifts of 40,002 shares. The Central Trust Company was designated as cotrustee under all three trusts, with the two children other than the particular beneficiary of the trusts being designated as the other cotrustees in each instance.

4. Albert E. Heekin died on March 10, 1955. On or before March 15, 1955, there was filed in the office of the District Director of Internal Revenue, Cincinnati, Ohio, the 1954 gift tax return of the Estate of Albert E. Heekin. This return listed thereon the six gifts of shares of The Heekin Can Company stock referred to above. The gift tax liability shown on the return, in the amount of $ 81,695.10, was paid to the District Director of Internal Revenue, Cincinnati, Ohio, on March 18, 1955. In reporting the amount of total gifts and computing net gifts for the year 1954 as shown on such return, The Central Trust Company, as Coexecutor of the Estate of Albert E. Heekin, used a value of $ 50,000 for each of the six gifts, constituting a value of $ 10 a share.

On or before March 15, 1955, James J. Heekin filed in the office of said District Director a 1954 gift tax return showing a gift tax liability of $ 33.75, which amount was paid on March 8, 1955. Similarly, on or before March 15, 1955, Alma R. Heekin, the wife of James J. Heekin, filed in the office of the District Director a 1954 gift tax return reflecting a gift of $ 7,000 to one of her children and showing that no tax was due.

6. On March 16, 1955, James J. Heekin filed in the office of the District Director an amended 1954 gift tax return listing thereon the gifts of the shares of The Heekin Can Company stock above described and further listing an additional gift to one of his children of cash in the amount of $ 4,500. Similarly, on March 16, 1955, Alma R. Heekin filed in the office of the District Director an amended 1954 gift tax return and, in accordance with the applicable provisions of the Internal Revenue Code, reported one-half of the gifts of her husband, and deducted one-half of the value of her gifts. In reporting the amount of total gifts and computing their gift tax liability, James J. Heekin and his wife, Alma, used a value of $ 10 per share for the stock of The Heekin Can Company, or $ 133,340 for each of the three gifts. In computing his gift tax liability, James J. Heekin deducted one-half of his gifts which were reported by his wife and included one-half of the value of the gifts made in 1954 by his wife. The gift tax liability of James J. Heekin shown on this amended return in the amount of $ 41,482.57, less the sum of $ 33.75 previously paid, was paid to the said District Director on March 18, 1955. The gift tax liability shown on Alma R. Heekin's amended return in the amount of $ 32,796 was paid to the said District Director on March 18, 1955.

7. On October 28, 1957, The Central Trust Company and Albert E. Heekin, Jr., as Coexecutors of the Estate of Albert E. Heekin, deceased, filed in the office of said District Director an amended gift tax return and a claim for refund in which the claimants alleged that the value of the shares of The Heekin Can Company stock given by Albert E. Heekin on August 3, 1954, was $ 7.50 per share and that his 1954 gift tax was overstated by the sum of $ 19,875.55. The claim requested refund of that amount.

8. On January 21, 1958, James J. Heekin filed in the office of said District Director a claim for refund of the 1954 gift tax in the amount of $ 11,216.82, alleging that the value of The Heekin Can Company stock given by him on October 25, 1954, was $ 7.50 per share, rather than $ 10 per share as set forth on the amended return he had previously filed. On the same day, The Central Trust Company, Successor Executor and Trustee of the Estate of Alma R. Heekin, who had died on November 9, 1955, filed a similar claim for refund with said District Director in the amount of $ 11,250.56.

9. On May 15, 1958, the District Director gave notice by registered mail of the disallowance of each of the three aforementioned claims for refund. More than 6 months had elapsed since the filing on October 28, 1957, by the Coexecutors of the Estate of Albert E. Heekin for refund prior to the decision rendered by the District Director on May 15, 1958.

10. On February 5, 1958, the District Director sent The Central Trust Company and Albert E. Heekin, Jr., Coexecutors of the Estate of Albert E. Heekin, deceased, by registered mail a notice of deficiency in gift tax for the year 1954 in the amount of $ 119,288.04. He assessed such tax on May 15, 1958. On July 30, 1958, the Estate of Albert E. Heekin paid such deficiency to the Internal Revenue Service, together with interest thereon in the amount of $ 30,712.60, a total of $ 150,000.64.

11. On February 5, 1958, the District Director sent James J. Heekin, by registered mail, a notice of deficiency in gift tax for the year 1954 in the amount of $ 68,484.22. He assessed such tax on May 5, 1958. On July 23, 1958, James J. Heekin paid such deficiency with interest thereon in the amount of $ 16,778.63. On August 11, 1958, James J. Heekin paid an additional $ 763.66 in interest. All such payments, totaling $ 86,026.51, were made to the Internal Revenue Service.

12. On February 5, 1958, the District Director sent The Central Trust Company, Successor Executor of the Estate of Alma R. Heekin, deceased, by registered mail, a notice of deficiency in gift tax for the year 1954 in the amount of $ 67,544.76. On July 23, 1958, such deficiency, with interest thereon of $ 16,548.47, was paid. On August 11, 1958, an additional amount of $ 753.16 in interest was paid. All such payments, totaling $ 84,846.39, were made to the Internal Revenue Service.

13. Each of the three aforementioned deficiencies in 1954 gift taxes was based on a determination by the Commissioner of Internal Revenue that the value of the stock of The Heekin Can Company, on the dates of the aforementioned gifts, was $ 24 per share.

14. On August 1, 1958, the Estate of Albert E. Heekin filed in the office of said District Director a claim for refund of 1954 gift tax in the amount of $ 150,000.64. On September 23, 1958, James J. Heekin and the Estate of Alma R. Heekin filed in the office of said District Director claims for refund of 1954 gift tax in the amount of $ 95,927.08 and $ 94,753.70, respectively. Each of such claims for refund alleged that the value of the stock of The Heekin Can Company, the subject of the aforementioned gifts, had a value of $ 7.50 per share on the date of the gifts. On October 15, 1958, the District Director notified the Estate of Albert E. Heekin, by registered mail, of the disallowance in full of its claim for refund. On March 2, 1959, the District Director notified James J. Heekin and the Estate of Alma R. Heekin, respectively, by registered mail, of the disallowance in full of their claims for refund.

15. James J. Heekin died September 7, 1959, and Katharine Heekin Herrlinger, James R. Heekin, Jr., and The Central Trust Company were duly appointed executors under the will of James J. Heekin and are now so acting.

16. Since Alma R. Heekin's death on November 9, 1955, her original executors have died, and The Central Trust Company has qualified as successor executor and trustee under the will of Alma R. Heekin and is now so acting.

17. The claims asserted by the plaintiffs have not been assigned and are still owned by them.

18. The Heekin Can Company (hereinafter sometimes referred to as the "Company" or "Heekin") was incorporated on August 1, 1901. Its founder was James Heekin who was the father of several children, including Albert E. Heekin (whose estate is plaintiff in case No. 196-58), James J. Heekin (whose estate and that of his wife are plaintiffs in cases Nos. 199-58 and 200-58), Daniel M. Heekin, Robert E. Heekin and Walter V. Heekin (now also deceased).

19. The founder of the Company, James Heekin, was its president from 1901 to about 1905. His son, James J. Heekin, was president of the Company from 1905 to 1928; another son, Albert E. Heekin, was president from 1928 to 1948; and Daniel M. Heekin, another son, was president from 1948 to March 1954. In that month, Albert E. Heekin, Jr., the son of Albert E. Heekin, became president of the Company. Prior to 1950 he had been a practicing attorney in Cincinnati, Ohio, and from 1946 to 1950 served as counsel to the Company. In January 1950, he came to the Company as assistant to the president (Daniel M. Heekin, his uncle), and in 1952, he became executive vice president.

20. On August 3, 1954, the board of directors of the Company was composed of the following ten members: Albert E. Heekin, James J. Heekin (chairman of the board), Daniel M. Heekin, Robert E. Heekin and Walter V. Heekin, all of whom were brothers and the sons of the founder, James Heekin; Albert E. Heekin, Jr. and Charles L. Heekin, both of whom were sons of Albert E. Heekin; Donald J. Heekin, the son of James J. Heekin; and Clarence A. Rolfes and Thomas L. Conlan, neither of whom was related to the Heekin family. On October 25, 1954, the membership of the board remained the same, except for Walter V. Heekin, who died in August 1954.

21. In 1954, the following salaries were paid to the following officers who were members of the Heekin family: James J. Heekin, chairman of the board, $ 5,000; Albert E. Heekin, Jr., president, $ 35,000; Charles L. Heekin, vice president, $ 15,000; and Donald J. Heekin, vice president, $ 11,100. Another Heekin employed by the Company was John G. Heekin (a son of Walter V. Heekin), who earned $ 4,980 as a salesman. No officer received any bonus or other type of compensation. The salaries paid in prior years did not exceed those set forth for 1954, except that in 1953, Daniel M. Heekin, the then president, received $ 40,000. There is no showing or any contention that any of these salaries were excessive. None of the other descendants of James Heekin, the Company's founder, numbering over 300, was employed by the Company. As of the gift dates, the Company was well managed.

22. On August 3 and October 25, 1954, the total number of common shares of the Company outstanding was 254,125. There was no other class of stock outstanding. The shares were not listed on any stock exchange. There were no restrictions on the transferability and sale of Company stock. Including the 70,002 shares involved in these cases, a total of 180,510 shares were owned by 79 persons who in some fashion were related to James Heekin, the founder of the Company. Thus, the Heekin family owned approximately 71 percent of all of the outstanding stock. The remaining amount, a total of 73,615 shares, was owned by 54 persons who were not related to James Heekin. Some of these non-related persons were employees of the Company. At the time of Walter V. Heekin's death in August 1954, he owned 9,145 shares.

23. Prior to 1901 James Heekin, the founder of the Company, was engaged in the business of selling coffee, tea and spices. In that year he decided to form his own can-making company. The original can-making factory, located at Third and Eggleston Avenue, Cincinnati, Ohio, was operated by water power from the canal that ran through the area at that time. In 1908 the Company built a six-story factory at the corner of Sixth and Culvert Streets, Cincinnati, which it has occupied to the present time. This plant has

approximately 250,000 square feet of floor area and is still one of the main operating plants of the Company. It is referred to as a general line plant, producing so-called "general line" cans, as distinguished from cans referred to as packer's cans, which are the type seen on the shelves of a grocery store. The general line cans manufactured by Heekin include such products of institutional size as 4-50-pound lard pails, 10-30-pound frozen fruit cans, dairy cans in gallon sizes, chemical cans and drums, as well as such housewares as canisters, bread boxes, lunch boxes, waste baskets, and picnic containers familiarly known as Skotch Koolers and Skotch Grills. Both plain and lithographed metal containers are manufactured in this plant. Lithography on metal is accomplished by offset presses. The lithographic work is sometimes performed on uncut flat sheets of tin plate, the fabrication of the can being done by others, as for instance, the lithography performed for the Prince Albert tobacco cans, the fabrication of which is performed by the Reynolds Tobacco Company itself.

24. In 1917 the Company acquired a plant in Norwood, a suburb of Cincinnati, which is wholly surrounded by the city, and commenced manufacturing packer's cans. In 1954 this plant had an overall footage of about 275,000 square feet. It was multistory, having grown irregularly through the years, so that one section had four floors, another three floors, and another one floor.

25. In 1949 the Company built a plant at Springdale, Arkansas. By 1954, this plant comprised about 100,000 square feet. It was built because of the freight-equalization practice in the can-making industry, which required a manufacturer to absorb the freight costs to his customer to the extent they exceeded the cost of freight to the nearest can-making plant. The American Can Company had built a plant at Fort Smith, Arkansas, about 60 miles from Springdale. Had Heekin continued to supply its customers in the Ozark area from its Norwood plant, it would have had to absorb the freight from Norwood to Fort Smith, and could charge the customer the freight only from the American Can plant at Fort Smith to the customer's place of business.

26. In 1946, the Company established a plant at Chestnut Hill, Tennessee, on property leased from and contiguous to the plant of Bush Brothers & Company, a dog food manufacturer, which is Heekin's largest customer. Bush used the entire output of Heekin's adjacent plant. The lease had a term of 10 years. Heekin installed its own equipment in the plant. The cans were run by conveyor directly into the Bush plant. The Heekin plant originally had only one line of can-making equipment but by 1954 the plant had two can-making production lines.

27. An operation similar to that at Chestnut Hill, Tennessee, was located at a plant in Blytheville, Arkansas, in a 5,000 square foot area under a 10-year lease and with the intent to eliminate material-handling by running the cans directly into the customer's plant. This Heekin plant, which was a one-line operation, was established in 1952. By August 1954, the concept of installing can-making lines immediately adjacent to customers' packing plants was a recognized practice in the industry. n1

n1 In 1956, another operation similar to that at Chestnut Hill was located at a plant in Clinton, Tennessee. Defendant's exhibit 12, p. 9. Plaintiffs' exhibit 8, p. 12, also refers to the operation of only five plants by Heekin in 1954.

28. Heekin manufactures only its general line of cans and its packer's cans, as hereinabove described. It does not manufacture any glass, plastic, wood, paper or fiber containers.

29. Prior to World War II, can-making equipment was made by two companies, Max Am's and the E. W. Bliss Company. However, these two companies ceased making such equipment at the beginning of the war. During the war Heekin was, consequently, unable to buy new equipment. After the war Bliss returned to the business, and another company, the Baldwin-Lima-Hamilton Company, also entered the field. During this entire period, the American Can Company, the Continental Can Company and the Pacific Can Company, which companies also manufacture cans, made their own can-making equipment, but neither American nor Continental, the two largest companies in the industry, nor Pacific, sell such equipment to others. The modern equipment of American and Continental used for making packer's cans has a speed of 500 cans a minute. In 1954, about 90 percent of Heekin's equipment had been acquired or built in the middle 1930's or prior thereto. In all its plants, the Company had 37 can-making lines, 11 of which were very old and still hand operated. The new packer's can equipment Heekin was able to purchase after the war from Bliss and Baldwin-Lima-Hamilton was able to attain a speed of but 400 cans a minute, and could attain such speed only with difficulty. The remainder of Heekin's packer's can equipment could generate speeds only up to 300 cans per minute. Heekin is in direct competition with American, Continental and Pacific.

30. About 50 percent of Heekin's total production consisted of packer's cans, the type wherein Heekin's largest competitors had the advantage of more efficient equipment, as hereinabove set forth. The remainder consisted of general line cans, a type of can which is produced, both by Heekin as well as its competitors, on semiautomatic lines. Although Heekin's semiautomatic equipment was also not modern, its disadvantage with respect thereto was not as great as with the packer's cans, since the semiautomatic equipment does not lend itself as readily to the speed and automation required with respect to packer's cans. Heekin's semiautomatic lines were capable of producing approximately 300 cans a minute.

31. The can-making business is primarily a material-handling one. It involves a rapid and efficient flow of a large amount of materials through a plant, from the receipt of raw materials to the shipment of finished products. Accordingly, multistory buildings are less efficient than single-story buildings, where material can be freely moved with such equipment as fork-lift trucks and conveyors. Heekin's Cincinnati and Norwood plants, its two largest, are multistory buildings, while its Springdale, Blytheville and Chestnut Hill plants are single story. The Cincinnati plant (which also serves as the Company's headquarters) with six stories, and the Norwood plant, with four, use elevators for the vertical movement of materials, which necessitates excessive labor and handling costs and tends to make production control more difficult. These two plants accounted for approximately 75 percent of the Company's total sales volume in 1954, the Cincinnati plant accounting for approximately 45 percent. The Springdale plant accounted for approximately 17 percent of such total volume, and the Chestnut Hill and Blytheville plants together accounted for approximately 8 percent of the Company's 1954 sales.

32. Heekin has a dock on the Ohio River in Cincinnati, permitting it to take advantage of inexpensive water transportation of steel shipped down the river from Pittsburgh, Pennsylvania. Thus, Heekin has an advantage on freight costs for its raw material over some of its competitors in the same area who receive their raw materials by rail. However, some can manufacturers are located adjacent to or in the vicinity of the steel mills from which they obtain their raw materials, and, consequently, pay little or no freight at all.

33. As of the 1954 valuation dates herein involved, there was no indication that the Company would not continue in business for the foreseeable future. During the year 1954, the Company acquired not less than $ 309,650 in new assets, of which $ 280,610 was in machinery, fixtures and dies, and $ 23,447 in seamer machinery and equipment. The indications were that its performance would continue to be at least equal to that of the past 2-3 years, during which operations were on a substantially normal basis. Prior to August 3, 1954, the Hamilton Metal Products Company, one of the Company's important customers, and for whom Heekin manufactured the Skotch Kooler and Grill, had advised the Company of Hamilton's need for certain new products, and on that date the Company, by unanimous vote of its board of directors, authorized the expenditure of approximately $ 90,000 for new tooling and equipment at its Cincinnati plant for the manufacture of said products. Also prior to that date, the Company had investigated the desirability of entering into the manufacture of beer cans, and, again by the unanimous vote of its board of directors at said meeting, there was authorized the expenditure of approximately $ 650,000 for new tooling, machinery and equipment at the Norwood plant for the manufacture of such cans. The Company was fully cognizant of the need of modernizing its Norwood and Cincinnati plants and equipment. In 1953, it engaged an engineering firm to make a survey and develop costs for an efficient one-story plant to replace these two multistoried plants. However, this firm's report to the Company had not been completed prior to October 25, 1954.

34. In 1954 no other company in the Cincinnati area was engaged in the production of beer cans. Heekin decided to enter this field because it would have a freight advantage over American and Continental plants outside the Cincinnati area. Thus, the brewers of the Cincinnati area could be served more economically by Heekin. Heekin thus anticipated that the venture would be a profitable one. Accordingly, in August 1954, Heekin hired a man from Continental and, as set forth above, appropriated money for this program. No beer cans were, however, manufactured in 1954.

35. In 1954 the domination of the industry by American and Continental was such that they made about 75 percent of the total can sales in the country. Three other can manufacturing companies, the National Can Corporation, the Pacific Can Company, and Crown Cork & Seal Co., Inc., together made about 8 percent of the sales. Heekin did a little less than 1 percent of the total business. In that year American's sales were about $ 652,000,000, Continental's about $ 616,000,000, and Heekin's about $ 16,300,000. American had 76 plants in operation, Continental had 40, and Heekin had 5. The prices in the can-making industry are in effect established by American and Continental. When they announce prices, Heekin goes up or down with them. Heekin competes with American and Continental in its trade area. In addition, National has a plant in Hamilton, Ohio, and Crown a plant in Chicago.

36. On June 22, 1950, the United States District Court for the Northern District of California, Southern Division, in a civil action entitled United States of America vs. American Can Company, entered an order adopting its opinion of November 10, 1949, which found and adjudged the American Can Company to have violated the Sherman Antitrust Act and the Clayton Act. By such order, American was enjoined from continuing certain practices, including the practice of requiring that lessees of certain American machines could not purchase for use in connection with such machines cans made or sold by anyone other than American, as well as from continuing certain quantity discount practices. Thereafter, new areas of business with larger packers were to some extent opened up for Heekin, benefiting Heekin's business to some degree. Although Heekin cannot compete with the industry's giants on a price basis, Heekin often can, because it is smaller and closer knit, offer customers better personal service than its larger competitors.

37. During 1953 and 1954, conditions generally in the container and packaging industry, including the production of metal cans, were good, and demand was at a record level. The general business outlook in the industry was favorable, and can manufacturers were optimistic about the continuation of the high demand. These favorable conditions prevailed also in the Middle Atlantic States, which comprise Heekin's trade area.

38. Heekin's Norwood plant was first unionized in 1941. As of 1954, Heekin had fairly good relations with the Norwood plant employees. In 1950 the Cincinnati plant was unionized. Both plants were unionized throughout 1954. Heekin's other plants were not unionized.

39. Heekin encountered some labor trouble at the Cincinnati plant between 1950 and 1954. One of the factors contributing to such trouble was the higher wages paid by American Can. In 1952 Heekin was struck for 8 weeks. In 1953 there was a work stoppage of about a week, and in May 1954 of about 4 weeks. Heekin's union contracts were on a different time basis from most of the industry. Heekin's strikes, therefore, were usually at different times than its competitors. The industry as a whole, other than Heekin, was struck during the latter part of 1953, helping Heekin's 1953 earnings. However, 1954 earnings were somewhat depressed because of the 4-week strike in May of that year.

40. In 1954 Heekin's sales totaled approximately $ 16,355,000, of which six customers represented about $ 7,636,000. Relations with these major customers were excellent and in 1954 there was every reason to believe they would continue to deal with Heekin. These customers included Bush Brothers & Company ($ 2,494,000), hereinabove mentioned; Hamilton Metal Products Company ($ 2,288,000), also mentioned above, and which was located only 25 miles from Cincinnati, with a consequent freight advantage to Heekin; and the Reynolds Tobacco Company ($ 1,403,000), with whom Heekin had been dealing since 1908.

41. In 1950 Heekin secured a $ 3,000,000 3 3/4 percent loan from New York Life Insurance Company, payable in annual installments through 1965 of $ 150,000 on principal, plus interest on the unpaid balance. In addition, there was required to be paid each year 20 percent of the net income of the Company (less $ 150,000) for the preceding year. Part of this loan was used to refinance a $ 1,000,000 loan from The Mutual Benefit Life Insurance Company of New York. $ 1,500,000 of the proceeds of the loan were paid to Weirton Steel Company to retire certain debts. The $ 500,000 balance was added to working capital. As of June 30, 1954, the net amount due on this long-term debt was $ 1,924,000, and as of September 30, 1954, such amount was $ 1,891,000. The Company has bank lines of credit for current borrowing. It did not have to rely on factoring its receivables. The Company has never engaged in public financing.

42. Prior to 1950, Heekin organized a wholly owned subsidiary, Canners Exchange, Inc., to finance small packers in the Ozark area, whose accounts were supposedly secured by sufficient collateral. In 1950 Heekin experienced substantial difficulties as a result of the activities of this subsidiary. After Albert E. Heekin, Jr., entered the management, company officials determined that much of the collateral taken by the subsidiary was of little value. Consequently, Heekin suffered a loss of more than $ 1,000,000. The discovery of this situation in the affairs of its subsidiary and the incurrence of this large loss was made shortly after the aforementioned loan from New York Life Insurance Company had been negotiated. This situation strained Heekin's relations with this lender. New York Life required both Daniel M. Heekin, then the president, and Heekin's treasurer, to put up $ 35,000 and $ 10,000, respectively, from their personal funds to supplement Heekin's working capital. By 1954, however, this situation had been overcome. All

losses arising from this activity had been written off through 1952. The personal funds advanced to supplement working capital had, with New York Life's consent, been withdrawn and the subsidiary had been liquidated.

43. (a) James Heekin, the founder of the Company, had a partner whose descendants hold minority interests in Heekin stock. In 1951, certain of these minority stockholders made arrangements through Albert E. Heekin, Albert E. Heekin, Jr., and the aforementioned Rolfes (finding 20), who was also Heekin's sales vice president, to sell certain of their holdings. Sales of this stock were made to Heekin employees and friends of the Heekin family. No attempt was made to sell the stock to the public on the open market. A total of 13,359 shares was sold in this manner during 1951 and early 1952 in 44 separate transactions, 35 of which took place in 1951, commencing March 22, and 9 in 1952, ending on April 16. The smallest amount sold in these transactions was 50 shares and the largest 1,400. About three-quarters of these transactions resulted from the liquidation of a block of 10,709 shares by one individual. All sales were for $ 7.50 per share, which by previous agreement was satisfactory to the sellers. This price was arranged during the time when Heekin was experiencing its difficulties with Canners Exchange, Inc., and during a period when the payment of dividends had been suspended by the Company. When the price was arranged, the Company's last annual financial report was for the year 1950. In 1950 Heekin had paid no dividends, the payment of its usual quarterly dividends at the annual rate of 50 cents per share having been omitted. Dividends were not resumed until August 1, 1951, with the payment of a quarterly dividend of 12 1/2 cents a share.

In 1953, there was only one sale of Heekin stock, consisting of 100 shares by an employee of the Company who had purchased them in 1951, to another Heekin employee. In 1954, there was similarly only one sale of Heekin stock, consisting of 200 shares sold on August 6 to a Heekin employee by another employee who had also previously purchased this stock in 1951. These 1953 and 1954 sales were also on the basis of $ 7.50 a share.

(b) An analyst or investor attempting, as of the valuation dates herein involved, to determine the fair market value of Heekin stock would reasonably give only minimal weight to the above-mentioned sales. As shown, the predetermined price for the bulk of the sales occurred in 1951 during the difficult Canners Exchange episode and when the payment of dividends had been suspended. These sales were in point of time relatively remote from said 1954 valuation dates. Only one sale was made in 1953 and one in 1954. These isolated transactions would not be considered sufficient to establish a market price. Further, there is no indication that the $ 7.50 sales price of all these transactions evolved as a result of the usual factors taken into consideration by informed sellers and buyers dealing at arm's length.

44. The prospective earnings of a manufacturer type of corporation such as Heekin is normally the most important factor to be considered in determining the fair market value of its stock. One important element to consider in attempting to forecast such future earnings is the corporation's past earning during a representative period which is brought up to a date as close to the valuation date as is possible. Further, the later earnings during such period are the more important in that they reflect trend, and are therefore more likely to indicate future prospects than a simple average of past earnings throughout such period. In calculating such past earnings for the purpose in question, it is also important to consider and make appropriate adjustments for any abnormalities or nonrecurring items. In this manner, a picture

of the past normal operations of the corporation is, insofar as is reasonably possible, reconstructed and then used as a more accurate basis for a forecast of the earnings that future operations of the corporation will generate on a presumed normal basis.

45. The Company's operations were audited and analyzed annually by a competent firm of certified public accountants which furnished financial statements, including balance sheets and profit and loss statements. Without adjustment, these financial statements indicated net profits after taxes as follows:

Year	Amount
1950	$ 34,806.71
1951	852,427.30
1952	422,414.11
1953	495,978.83
1954	335,929.17

Analysis of these profits indicate there were certain abnormalities therein, as follows:

(a) As indicated, the Company suffered abnormal, nonrecurring losses of over $ 1,000,000 on the Canners Exchange venture. These losses were completely liquidated by the end of 1952. Thus, the 1950-52 profits inclusive were charged with these losses. Over $ 570,000 of these losses were charged against 1950 profits alone.

(b) Despite a loss of almost $ 360,000 charged against 1951 profits because of the Canners Exchange venture, the Company's 1951 profits were abnormally large due to the effects of the Korean war. Because of the shortages during that period, created in part by can users building up their inventories, competitive conditions in the can manufacturing industry temporarily eased, resulting in a seller's market and permitting an increase in the Company's normal profit margin.

(c) Profits for 1950 and 1951 were overstated because of a noncontributory retirement plan instituted subsequent to 1951 for hourly employees, for which the costs attributable to 1950 and 1951 were borne in later years. In like manner, profits for 1952 through 1954 were abnormally depressed because a portion of the payments during these years was applicable to previous years. That portion of the 1952-54 cost of the plan applicable to earlier years was as follows:

Year	Total payment	Applicable to other years
1952	$ 101,240	$ 45,9
1953	114,357	61,573
1954	160,106	61,540

40

On the basis of these 1952-54 payments, a reasonable estimate of the expense of this plan attributable to 1951 and 1950 would be approximately $ 50,000 and $ 40,000, respectively. n2

n2 In June 1953 Heekin also instituted a contributory plan for salaried employees. However, the portion of the payments thereafter made for this plan which are attributable to earlier years cannot be determined. Payments for this plan in 1953 were $ 46,293, and in 1954, $ 45,367.73. The amount of decrease in 1950-52 profits and increase in 1953 and 1954 profits as a result of this situation are thus unavailable, nor can they be reasonably estimated. They would, however, be insignificant in the overall picture.

(d) Profits shown for 1954 were abnormally depressed additionally because (1) they reflected payment to the Government in 1954 of a renegotiation refund of $ 35,437.50 arising out of excess profits made in 1951 (the 1951 profits being therefore similarly overstated by such amount), and (2) they are subjected to a charge of $ 174,203.54, which amounted to $ 83,617.70 after taxes, as a result of a deduction from 1954 profits only of both 1954 and 1955 expenses of such items as vacation pay, sales allowances and cash discounts. This abnormally large charge was permitted by a change in the tax laws which became effective in 1954 (Section 462 of the 1954 Internal Revenue Code) and which allowed a taxpayer such as Heekin to change this method of accounting so as to effect the accrual in 1954 of these 1955 expenses, thereby doubling up these types of expenses in 1954. The accrual of these 1955 expenses in the 1954 tax year was effected by a year-end book entry made after the valuation dates herein involved and was not reflected in Heekin's 1954 interim financial statements prepared prior to such dates.

46. The Company's interim financial statements which were available on August 3 and October 25, 1954, reflected net profits after taxes as follows:

6 months ended June 30, 1954	$ 218,606.47
9 months ended September 30, 1954	382,967.20

However, because the canning industry is a seasonal one, an entire year's operation as reflected by the Company's interim and annual statements, as hereinafter set forth, would give a more complete picture of profits than the results of 6 and 9 months operations.

47. (a) In accordance with the considerations set forth above concerning adjusting the past earnings records so as to eliminate or properly reflect the abnormalities and nonrecurring items hereinabove referred to, there are set forth below the adjusted profits of the Company for the years 1950 through June 30 and September 30, 1954, in accordance with such financial data as were available at the valuation dates herein involved. The reasonably accurate method adopted for the purpose of recomputing what the earnings would have been without such abnormalities and nonrecurring items is to calculate, on the basis of the Company's sales and other income, less its costs and operating expenses, what its pretax profits were and then to make the adjustments. Because the interim statements hereinabove referred to for the 6 and 9 months periods in 1954 may not allow for seasonal changes in the canning industry, the latest 12-month periods based on interim and annual statements are used.

(b) For the Calendar Year 1950

Sales	$ 12,099,267.25
Pretax Profit n3	706,989.10
Applicable Retirement Fund Expense	40,000.00

Adjusted Pretax Profit	666,989.10
Federal Income Tax -- Recomputed n4	341,334.33
Adjusted Net Profit	325,654.77

n3 This figure and the comparable ones for the subsequent years is taken from the Company's profit and loss statement. In this instance, the statement reflects this figure prior to a subsequent "Provision for Loss on Investments in and Receivables from Subsidiary Companies" in said amount of $ 573,880.74.

n4 This is estimated at $ 5,500 less than 52 percent of pretax profit.

For this year, the loss of $ 573,880.74 charged by the Company on account of the Canners Exchange operation has been eliminated, and the retirement expense hereinabove referred to properly applicable to this year's operations has been charged against profits.

(c) For the Calendar Year 1951

Sales	$ 15,040,705.83
Pretax Profit	1,714,131.44
Applicable Retirement Fund Expense	50,000.00
Adjusted Pretax Profit	1,664,131.44
Federal Income Tax -- Recomputed	859,848.34
	804,283.10
Renegotiation Refund	35,437.50
	768,845.60
Adjustment to eliminate abnormally high profits due to Korean war	347,254.62
Adjusted Net Profit	421,590.98

As for the previous year, the loss of $ 358,272.72 charged by the Company to this year's operations on account of the Canners Exchange operation has been eliminated, and the retirement fund expense properly applicable to the year's operations has been charged against profits. In addition, since 1951 net income was, as hereinabove noted, abnormally high due to the Korean conflict, it becomes necessary to adjust the profit to a more normal level if a reasonable comparison with other years' operations is to be

obtained. A reasonable method of properly adjusting 1951 profits so as to be in line with the Company's normal operations would be to compute the Company's average profit (as adjusted) as a percent of sales for 1950, 1952, 1953, and the portions of 1954 herein involved (6 and 9 months) and to apply the same percentage to 1951 sales. The average profit as a percent of sales for the other 3 1/2 and 3 3/4 years was 2.803. The application of such percentage figure to 1951 sales gives an adjusted net profit of $ 421,590.98, thus causing the elimination from the aforementioned $ 768,845.60 adjusted net profit figure the sum of $ 347,254.62 as excessive profits due to the Korean war.

(d) For the Calendar Year 1952

Sales	$ 14,571,742.65
Pretax Profit	583,714.65
Retirement Expense Overcharge	45,973.00
Adjusted Pretax Profit	629,687.65
Federal Income Tax -- Recomputed	321,937.58
Adjusted Net Profit	307,750.07

For this year, the loss of $ 46,788.19 charged by the Company on account of the Canners Exchange operation has been eliminated and the retirement expense charged to 1952 operations but which was applicable to prior years, as hereinabove explained, has been added to 1952 profits.

(e) For the Calendar Year 1953

Sales	$ 17,018,346.54
Pretax Profit	1,066,668.40
Retirement Expense Overcharge	61,540.00
Adjusted Pretax Profit	1,128,208.40
Federal Income Tax -- Recomputed	581,168.37
Adjusted Net Profit	547,040.03

The only adjustment for this year is the retirement expense charged to 1953 operations but which was applicable to prior years, as hereinabove explained. This overcharge has been added to 1953 profits.

(f) For the 12 months ended June 30, 1954

Sales	$ 17,939,205.05
Pretax Profit	1,179,195.74
Retirement Expense Overcharge	61,540.00
Renegotiation Charge Applicable to 1951	n5 36,000.00

Adjusted Pretax Profits	1,276,735.74
Federal Income Tax -- Recomputed	658,402.57
Adjusted Net Profit	618,333.17

n5 The Company's Financial Statement for the 6 months ended June 30, 1954, carried this amount as a "Provision for Renegotiation Refund for 1951." The amount actually paid prior to September 30, 1954, was, as previously mentioned, $ 35,437.50.

(g) For the 12 months ended September 30, 1954

Sales	$ 17,267,183.68
Pretax Profit	948,708.04
Retirement Expense Overcharge	61,540.00
Renegotiation Charge Applicable to 1951	35,437.50
Adjusted Pretax Profit	1,045,685.54
Federal Income Tax -- Recomputed	538,256.48
Adjusted Net Profit	507,429.06

(h) On the above bases, the following is a summary of the adjusted net profit of the Company for the periods indicated:

Year	Adjusted net profit
1950	$ 325,654.77
1951	421,590.98
1952	307,750.07
1953	547,040.03
12 months ending June 30, 1954	618,333.17
12 months ending Sept. 30, 1954	507,429,06

Thus, the Company's adjusted earnings over the 4 1/2 and 4 3/4 periods prior to the valuation dates herein involved were generally in a favorable upward trend.

48. (a) Since past earnings are analyzed only as a guide to forecasting future earnings, the later earnings in the past period examined are the more important. The future prospects of a company whose earnings have been growing consistently for 5 years would be better than the prospects of a company whose earnings have been diminishing for those 5 years, even though the average earnings for each company over this 5-year period may be the same. This growth trend in earnings would favor a higher valuation for the company showing such growth. A reasonable method of forecasting, as of the valuation

dates herein involved, Heekin's prospective yearly earnings, giving increased weight to these later earnings, and yet giving appropriate consideration to all earnings (as adjusted) during the last 4 1/2 and 4 3/4 years for the Company would be as follows:

Unit of weight	Year	Adjusted earnings
1	1950	$ 325,654.77
2	1951	421,590.98
3	1952	307,750.07
4	1953	547,040.03
5	12 months ending June 30, 1954	618,333.17
5	12 months ending September 30, 1954	507,429.06
Total		

Unit of weight	Year	Weighted value as of June 30, 1954	Weighted value as of Sept. 30, 1954
1	1950	$ 325,654.77	$ 325,654.77
2	1951	843,181.96	843,181.96
3	1952	923,250.21	923,250.21
4	1953	2,188,160.12	2,188,160.12
5	12 months ending June 30, 1954		3,091,665.85
5	12 months ending September 30, 1954		2,537,145.30
Total		7,371,912.91	6,817,392.36

Upon dividing these weighted totals by the total units of weight (15), a value of representative average annual earnings is obtained of $ 491,460.86 as of June 30, 1954, and $ 454,492.82 as of September 30, 1954. As of such dates, it could be reasonably expected that such amounts would be the approximate annual earnings that would result from the Company's normal operations for a reasonable period in the future.

(b) On the above basis, Heekin's reasonably expected annual earnings per share would, as of June 30, 1954, be $ 1.93 and, as of September 30, 1954, $ 1.79.

49. (a) Although some investors may care little about the receipt of dividends, while others may depend upon them and therefore give them greater significance, the amount of dividends which a stock is likely to yield, as a result of its dividend-paying capacity or corporate policy, is normally considered to be an important factor in determining its fair market value. As with earnings, the forecast of future dividends is generally based to a large extent upon the past dividend record of the stock.

(b) On August 3 and October 25, 1954, Heekin's annual dividend yield was 50 cents a share. Heekin paid such annual dividends each year since 1945 except for the 1 1/2-year period of 1950 and the first half of 1951 when, as previously shown, dividends were suspended. This was the period during which Heekin experienced substantial losses in connection with the operations of Canners Exchange. In view of this abnormal loss and the terms of its loan agreement with the New York Life Insurance Company, Heekin's surplus was restricted so that as of December 31, 1950, only $ 30,386.81 was available for dividend distribution. In August 1951, however, the Company, as a result of the large profits it was making due to the effects of the Korean war, felt it could resume its 50-cent annual dividend payments in the form of 12 1/2 cents quarterly distributions.

As of December 31, 1953, the restriction imposed by the loan agreement (finding 41) left $ 840,444.78 available for dividends, which was equivalent to more than $ 3 a share. As of August 3 and October 25, 1954, therefore, this restriction placed no real burden on the normal 50-cent annual dividend. Consequently, Heekin's demonstrated earning capability and financial position were such that in August and October 1954 it could reasonably be anticipated that Heekin would continue its 50-cent annual dividend. On this basis, Heekin's expected dividend payments would amount to approximately 25 percent of its reasonably expected earnings as of those dates. The general tendency is for publicly held companies to pay out a greater percentage of their earnings in dividends than privately held companies.

(c) Although, considering only its prospective earnings, the prospective dividend rate would appear to be a conservative one, no significant increase in such rate for some time to come could have reasonably been anticipated on the valuation dates. As shown, the bulk of Heekin's equipment was not modern, and the Company was in need of relatively large sums for modernization of equipment and plant if it hoped to continue to be a competitive factor in the industry. The Company would have to depend primarily on retained earnings for such a program. A further limitation on the Company's dividend-paying capacity was the requirement of its loan agreement covering its long-term indebtedness, which called for annual payments of $ 150,000 upon principal plus such amount as was owing as a result of applying the 20 percent formula. Such payments were not tax deductible and could be made only out of earnings after payment of income taxes, if paid out of earnings at all. Thus, these demands upon earnings would restrict the Company's dividend-paying capacity to such an extent that it could not reasonably be anticipated that the 50-cent annual rate would be increased to any substantial extent.

50. In the evaluation of the worth of a stock, it is recognized that the so-called "book value" of the stock is an important consideration, although there are considerable differences of opinion concerning the weight to be given this factor in the overall analysis. Book value is determined by ascertaining the corporation's net worth (assets less liabilities) and then dividing such worth by the number of shares outstanding. It indicates how much of the Company's net assets valued as a going concern is applicable to each share. The corporation's net worth is normally ascertained from its balance sheet. Some of the differences in opinion as to the relative weight to be given the factor of book value arise from the recognized fact that, absent a sale of the corporation or a merger or consolidation, "book value" could not be translated into realization except in the event of liquidation, and that in such event many of the assets reflected in the balance sheet, such as equipment and inventory, could not be sold at their stated values, which are based upon their going concern and not their liquidation value. In this connection, therefore, the factor of "current assets," such as cash and accounts receivable, is given special attention because in the event of a liquidation, their stated value would not normally be materially affected. However, in the event of a sale, merger, or consolidation (although there was no prospect of such on the

valuation dates with respect to Heekin), an ascertainment of the Company's net worth and the resulting book value of the outstanding stock is often of primary importance in the determination of the price to be paid for, or the value to be placed upon, such stock. Further in this connection there is normally considered the soundness of the company's financial condition as reflected by its current asset and current liability position.

51. On the pertinent gift dates, Heekin was in a current sound financial condition. Its balance sheet as of June 30, 1954, showed the following:

ASSETS	
Current Assets	
Cash	$ 1,942,469.64
Notes and Accounts Receivable	$ 2,176,025.13
Less: reserve for doubtful accounts	131,043.19
Net notes and accounts receivable	2,044,981.94
Mortgage notes receivable -- current portion	46,000.00
Inventories at lower of cost or market:	
Raw Materials and Supplies	2,271,681.81
Goods in process and finished products	2,391,172.72
Total inventories	4,662,854.53
Total current assets	$ 8,696,306.11
Other Assets	
Notes receivable -- portion not current	127,008.97
Investments -- at cost:	
Stocks and bonds	335,829.11
Less reserve for losses	25,000.00
Investments -- net	310,829.11
Property, plant and equipment -- at cost	8,948,515.48
Less reserve for depreciation	5,040,107.53
Property, plant and equipment -- net	3,908,407.95
Deferred charges	113,041.21
Total assets	$ 13,155,593.35

LIABILITIES	
Current Liabilities	
Notes payable -- current portion of long-term debt	$ 163,000.00
Trade acceptances and accounts payable	1,826,021.67
Accrued accounts	749,625.39
Total current liabilities	$ 2,738,647.06
Other Liabilities	
Long-term debt, less current portion	1,924,000.00
Deferred rental income	33,494.97
Reserve for workmen's compensation insurance	35,825.45
	1,993,320.42
Total liabilities	4,731,967.48
Capital stock, 254,125 shares issued -- stated value	1,569,596.00
Earned surplus	6,854,029.87
Total net worth	8,423,625.87
Total liabilities and net worth	$ 13,155,593.35

Thus, its current assets alone, amounting to almost $ 8,700,000, far exceeded its total liabilities of approximately $ 4,732,000, including its long-term debt to New York Life. Its ratio of current assets to current liabilities was 3.17 to 1.

There was no significant change in the Company's financial condition reflected in its September 30, 1954, balance sheet.

52. The values used in the foregoing balance sheet reflect inventory at the lower of cost or market. No provision was made for reserve for obsolescence in inventory because it was not considered that there was any such obsolescence. The plant, property and equipment were carried on the balance sheet at acquisition cost less depreciation despite the acquisition of the Cincinnati and Norwood plants as long ago as 1908 and 1917, respectively, and the subsequent rise in real estate values throughout the years. The reserve for doubtful accounts was increased substantially at the end of 1953 after a detailed analysis of the notes and accounts receivable outstanding as of December 31, 1953. Despite the

possibility that certain bonds included in the "Investments" entry may have been somewhat overvalued, the balance sheet as above set forth generally represents a conservative approach and fairly presents the Company's financial condition. Without making any adjustments either upward or downward in the assets or liabilities shown therein, it reasonably reflects the net worth of the Company as of June 30, 1954.

53. On the basis of the balance sheet figures set forth above, the book value for each share of the Company's 254,125 shares of common stock outstanding was $ 33.15 on June 30, 1954. On the similar basis of the Company's balance sheet figures for September 30, 1954, the book value of each share of its stock on September 30, 1954, was $ 33.54.

54. In ascertaining the fair market value of the stock of a closely held corporation, a reasonable guide, frequently employed by analysts and investors, is to consider the relationship that the market prices of actively traded stocks of companies in the same or closely similar lines of business bear to their earnings, dividends, and book values. In this manner, some indication may be obtained concerning the relative weights accorded by the investing public to these factors in the fixing of a fair market value. Such similar enterprises are normally affected by the same general economic factors as the stock being valued.

55. As of the valuation dates, can manufacturing companies in all respects comparable to Heekin did not exist. Such giants in the industry as American Can and Continental Can are so much larger, and had diversified into so many other products and other types of containers, such as fiber and plastic, as to disqualify them as reasonable comparables. Since eliminations based on such considerations would leave so few can manufacturing companies to compare with Heekin, some manufacturers of glass containers may reasonably be considered as appropriate comparatives. The long-term sales trends of can and glass container manufacturers are fairly parallel. The glass container companies are in competition with the can companies and are affected by similar economic factors. However, other companies in the packaging area, such as manufacturers of corrugated containers, are less desirable for comparative purposes because they are not as closely competitive with can companies and their pattern of long-term growth has been dissimilar to that of the can companies.

56. In both the can and glass container manufacturing fields, the large and highly diversified companies are considered of greater value by investors, and the stocks of such companies sell higher on the basis of such factors as earnings, dividends, and book value than those of the smaller, less diversified competitors. For this reason, American Can and Continental Can, the two largest can manufacturers, are, as noted, not fairly comparable with Heekin. For the same reason, Owens Illinois Glass Company, the largest glass container manufacturer, is also not reasonably comparable. Similarly, Hazel Atlas Glass Company, the industry's second largest glass container manufacturer, which is also well diversified in other lines, and the Crown Cork & Seal Company, which manufactures cans (40 percent of total production) but is also well diversified, with its principal business being the manufacture of bottle caps and bottling machinery, are to a large extent not comparable.

57. The following companies, despite certain differences and factors which make them less than ideal comparatives, may reasonably be considered as bearing such sufficient fundamental similarities to Heekin as to warrant their use as comparables for the purpose herein involved:

(1) Pacific Can Company manufactured plain, lithographed and lacquered cans, as well as other metal containers. Like Heekin, it made general line cans although its packer's cans were more important. This company designed, built and serviced its own can-making equipment. Its annual sales for the 4 1/2-year period prior to June 30, 1954, averaged approximately $ 23,500,000.

(2) United Can and Glass Company manufactured cans and glass containers. It was a large supplier of the requirements of Hunt Foods, Inc., which owned a controlling interest in it. General line cans represented a small portion of its total can output, packer's cans being its primary can production. Its glass containers were largely for food and dairy products, for which products Heekin also manufactured metal containers. This company too manufactured its own can-making equipment and also manufactured peach-pitting machinery. Its annual sales for the 4-year period prior to June 30, 1954, averaged approximately $ 15,000,000.

(3) National Can Corporation was primarily a manufacturer of cans, metal containers, and housewares. From the standpoint of the nature of its business, it is thus an excellent comparable. Its annual sales for the 4 1/2-year period prior to June 30, 1954, averaged approximately $ 32,500,000. However, other factors make this company less desirable as a comparative. During the pertinent period its earnings fluctuated more erratically than those of other can or glass container companies. In 1952 it suffered a large loss which could reasonably be considered to be of a nonrecurring nature. In addition, it experienced changes in management in early 1953 and at the same time acquired another can company. n6 Nevertheless, considering the closely similar nature of its business, and because of the paucity in the number of comparables available, National's use as a comparable is justified if certain adjustments are made in its erratic earnings record in order to arrive at figures which could be considered as being more normal. Such adjustments are hereinafter made. As noted, Heekin too suffered a large nonrecurring loss, for which appropriate adjustments, as set forth above, are made in computing its more normal earnings, and Heekin also had a change in management affecting operations in the years immediately preceding 1954.

n6 Because of its earnings' irregularities and the special condition described, the only plaintiffs' expert who made a detailed analysis of his selection of comparable companies and the consideration he gave them, as well as the defendant's expert, both excluded this company as a comparable.

(4) Brockway Glass Co., Inc. made a general line of glass containers, including food and Mason jars. Its annual sales for the 5-year period 1949-1953 averaged approximately $ 13,300,000. However, each year's sales during this period increased, with sales in 1953 totaling approximately $ 21,000,000.

(5) Thatcher Glass Manufacturing Co., Inc. was one of the principal manufacturers of glass containers. Its products included bottles and containers of all types for food, beverages and chemicals. Its annual sales for the 4-year period prior to June 30, 1954, averaged approximately $ 23,500,000.

58. The adjusted earnings on the common stock of the above five companies for the years 1950 through 1953 and for the 12-month periods ending June 30 and September 30, 1954, are as follows:

Year	Brockway	Pacific	Thatcher	United	National

	Glass	Can	Glass	Can	Can
1950	$ 602,000	$ 562,000	$ 446,500	$ 715,000	$ 303,000
1951	603,000	850,000	1,179,000	954,000	618,000
1952	520,000	743,000	630,000	737,000	475,000
1953	623,000	965,000	974,000	511,000	1,205,000
12 months ending					
June 30, 1954	* 912,500	* 1,076,000	1,035,000	* 693,000	1,039,000
12 months ending					
Sept. 30, 1954	* 1,057,250	* 1,131,500	941,000	* 784,000	891,000

* Interim profit unavailable. Profit at June 30, 1954 computed as one-half of 1953 earnings and one-half of 1954 earnings. Profit at September 30, 1954 computed as one-fourth of 1953 earnings and three-fourths of 1954 earnings.

These earnings reflect the following adjustments:

(1) Thatcher's reported profits for 1950-52 included large nonrecurring items, primarily for gain or loss on sale of equipment. These items have been eliminated in order to reflect the company's more normal earnings.

(2) United's 1950 and 1951 profits have been adjusted to exclude a $ 130,000 nonrecurring gain in 1950 and a $ 218,000 nonrecurring loss in 1951.

(3) National suffered unusual losses in 1952 and incurred a deficit of approximately $ 1,475,000. The major reasons for the deficit (a strike and costly litigation) were at least largely of nonrecurring character. The profits of container manufacturers were somewhat depressed in 1952. This followed the generally unusually good results of 1951 for can manufacturers due to the Korean conflict, as hereinabove set forth. Orders in 1951 were high due to customers' building up inventory. The effects of the 1951 inventory build-up was, however, felt in 1952, when orders decreased. Had National's situation been more normal in 1952 and had it not suffered the nonrecurring types of losses referred to, it would be reasonably assumed, based on the earnings of other container manufacturers during that year and the relationship that such year's earnings bore to 1951 earnings, that National's profit for 1952 would have been approximately $ 475,000.

59. Using the same technique as was adopted with respect to Heekin, and giving greater weight to the earnings of the later periods of time, in order to give proper consideration to the factor of trend, the reasonably anticipated annual earnings of the above-mentioned five companies selected as comparables, would, as of June 30 and September 30, 1954, be as follows:

12 months ending --	Brockway Glass	Pacific Can	Thatcher Glass	United Can	National Can

			1954		
June 30	$ 694,833	$ 915,400	$ 917,700	$ 689,533	$ 865,267
Sept. 30	743,083	933,900	886,367	719,867	815,933

60. The market prices of the common stock of the five comparable companies on the applicable dates were as follows:

	Price Aug. 3, 1954	Price Oct. 25, 1954
Brockway Glass	$ 50	$ 49
Pacific Can	21 5/8	n7 25 7/8
Thatcher Glass	18	15 3/8
United Can and Glass	13	13 1/2
National Can	13 3/4	13 7/8

n7 The sharp rise in price in this stock resulted from the then pending negotiations for the merger of Pacific Can with National Can. This special circumstance weakens its use as a comparable on this date and warrants consideration of this factor in the ultimate determination of a fair market price of the Heekin stock.

61. Earnings per share of the common stock of the five comparable companies, based on representative annual earnings as similarly computed for Heekin, were as follows:

	Number of shares common stock outstanding	Earnings per share Aug. 3, 1954	Earnings per share Oct. 25, 1954
Brockway Glass	65,219	$ 10.65	$ 11.39
Pacific Can	463,050	1.98	2.02
Thatcher Glass	495,303		1.85
	535,303		1.66
United Can and Glass	438,543	1.57	1.64
National Can	859,584	1.01	.95

62. The market prices of the five comparable companies bear the following ratios to the above computed annual earnings per share of common stock:

	Price-earnings ratio Aug. 3, 1954	Price-earnings ratio Oct. 25, 1954
Brockway Glass	4.69:1	4.30:1

Pacific Can	10.92:1	12.81:1
Thatcher Glass	9.73:1	9.26:1
United Can and Glass	8.28:1	8.23:1
National Can	13.61:1	14.61:1

Such ratio is commonly referred to as the "price-earnings ratio." The average price-earnings ratio for the above companies was 9.45 to 1 on August 3, 1954, and 9.84 to 1 on October 25, 1954.

63. On the basis of the earnings alone, as hereinabove computed, Heekin's stock would, as compared with the above five companies, and assuming Heekin's stock was similarly listed on a national stock exchange and was actively traded, be priced at $ 18.24 a share on August 3, 1954, and at $ 17.61 a share on October 25, 1954.

64. (a) Dividend payments for the 12 months ending June 30, 1954, and September 30, 1954, n8 reflect the following rates of yield on the common stock of the five comparable companies based on their market prices on such dates:

	Percent yield June 30, 1954	Percent yield Sept. 30, 1954
Brockway Glass	5.61	5.93
Pacific Can	2.78	2.32
Thatcher Glass	5.66	6.19
United Can and Glass	3.43	3.37
National Can	0	n9 0

The average percent yield for these companies was 3.50 as of June 30, 1954, and 3.56 as of September 30, 1954.

n8 Dividends for the 12 months ending June 30, 1954, computed as one-half of 1953 and one-half of 1954 dividends. For the 12-month period ending September 30, 1954, the dividends are computed as one-fourth of 1953 and three-fourths of 1954 dividends.

n9 National Can paid no dividends after its large 1952 deficit. Its use as a comparable for this purpose is thus weakened, and warrants consideration of this factor in the ultimate determination of a fair market price of the Heekin stock.

(b) For the years 1951 through 1954, United Can and Glass paid a 5 percent stock dividend in addition to a cash dividend. While stock dividends do not result in any increase by a stockholder in his percent of ownership in the corporation, and do not afford any actual cash yield, investors do commonly consider them to be of some value, a consideration which frequently is reflected in the market price of the stock. However, stock dividends are normally not considered as valuable as cash dividends. The appraisal of the value of a stock dividend would differ depending upon the company concerned. A reasonable approximation for the purpose herein involved would be to consider the 5 percent stock dividend for this

particular company as being worth approximately 25 percent as much as a cash dividend. On this basis, United's 5 percent stock dividend would be considered equivalent to a 1 1/4 percent cash dividend, and has been so treated in the above computation.

65. On the sole basis of the average of the latest 12 months dividends of the above five companies (as hereinabove computed) as compared with Heekin (and again assuming Heekin's stock would have equally wide access to the investing public), the market price of Heekin's stock on August 3, 1954, would, on the basis of Heekin's 50-cent annual dividend payment, be $ 14.29 a share, and on October 25, 1954, $ 14.05 a share. These prices would produce the dividend percentage yields of 3.50 and 3.56 above referred to.

66. The book value of the common stock of the above five companies as of June 30 and September 30, 1954, and its relation to market price on August 3 and October 25, 1954, were as follows:

As of June 30, 1954

	Book value June 30, 1954	Price Aug. 3, 1954	Price as a percentage of book value
Brockway Glass *	$ 93.99	$ 50	$ 53.20
Pacific Can *	18.05	21 5/8	119.81
Thatcher Glass	18.66	18	96.46
United Can and Glass	16.55	13	78.55
National Can	19.16	13 3/4	71.76

* Interim book value for Brockway Glass and Pacific Can was not available. Therefore, book value on June 30, 1954, was computed as one-half of 1953 year-end book value, and one-half of 1954 year-end book value. Book value on September 30, 1954, was computed as one-fourth of 1953 year-end book value and three-fourths of 1954 year-end book value.

Thus, on August 3, 1954, the average market price was 83.96 percent of book value.

As of September 30, 1954

	Book value Sept. 30, 1954	Price Oct. 25, 1954	Price as a percentage of book value
Brockway Glass *	$ 97.85	$ 49	$ 50.01
Pacific Can *	18.44	25 7/8	140.32
Thatcher Glass	17.39	15 3/8	88.41
United Can and Glass	16.98	13 1/2	79.51
National Can	18.83	13 7/8	73.69

Thus, on October 25, 1954, the average market price was 86.39 percent of book value.

67. On the sole basis of the average relationship that the book value of the common stock of the above five companies bore to their market prices, Heekin's comparable market price would be $ 27.83 on August 3, 1954, and $ 28.98 on October 25, 1954 (again assuming active trading in Heekin's stock).

68. As hereinabove set forth, earnings are normally the most important factor in the determination of the fair market price of a stock, and this is particularly true when they indicate trends and, therefore, future prospects. Dividend yield and book value are also important factors in such determination. In evaluating the Heekin stock, it would be reasonable, insofar as strictly statistical considerations are concerned, to confine the determinants to these three factors. In valuations of this kind, it is, after the selection of the value determinants, common practice to consider the relative importance or weight to be given each one. Although analysts and investors differ in such appraisal, a reasonable conclusion of their relative importance in Heekin's situation would be to consider earnings as contributing approximately 50 percent to the total determination, dividend yield, as the second most important factor, as contributing approximately 30 percent, and book value, as the least important of the three, as contributing approximately 20 percent.

69. On the bases set forth in finding 68, the fair market value of Heekin stock on the pertinent gift dates, would, were it an actively traded stock, be as follows:

	Aug. 3, 1954	Oct. 25, 1954
Earnings (finding 63):		
($ 18.24 X 50%		$ 9.12
($ 17.61 X 50%)		$ 8.81
Dividend yield (finding 65):		
($ 14.29 X 30%)		4.29
($ 14.05 X 30%)		4.22
Book value (finding 67):		
($ 27.83 X 20%)		5.57
($ 28.98 X 20%)		5.80
Fair market value	18.98	18.83

70. (a) As hereinabove noted, Heekin stock was for the most part closely held. It was not listed on any stock exchange and trading in it was infrequent. As shown by finding 43, there was only one transaction involving 100 shares in the entire year 1953, and only one involving 200 shares in the entire year 1954. Consequently, the stock lacked marketability. A closely held stock of such a corporation as Heekin which lacks marketability is less attractive to investors than a similar stock which has ready access to the general public, a consideration which affects the market value of Heekin stock. This is especially true when, as here, each block of stock involved in the gifts made on each valuation date represented only a minority interest, as distinguished from the situation where a block of stock large enough to give a purchaser control of the corporation is offered. Such control of a profitable, going, concern represents an added element of value to a block of stock.

(b) One reasonable method sometimes employed to determine the diminution in value attributable to a stock's lack of marketability is to determine how much it would cost to create marketability for the stock. Had Albert E. Heekin sold the 30,000 shares which were the subject of his gifts on August 3, 1954 through a public underwriting at the gross sales price of $ 18.98 a share, referred to in finding 69, the underwriter's compensation and other expenses would have amounted to approximately $ 2.31 a share. Similarly, had James J. Heekin sold the 40,002 shares which were the subject of his gifts on October 25, 1954 through such a public underwriting at the gross sales price of $ 18.83 a share also referred to in said finding, the underwriter's compensation and expenses would have amounted to approximately $ 2.29 a share. The reduction from the gross sales prices in both cases would amount to 12.17 percent. The net proceeds would thus have been $ 16.67 a share on the 30,000 shares given by Albert E. Heekin on August 3, 1954 and $ 16.54 a share on the 40,002 shares given by James J. Heekin on October 25, 1954.

71. (a) Considering all the facts and circumstances as herein set forth, the fair market value of the 30,000 and 40,002 shares which were the subject of the gifts on August 3 and October 25, 1954 was $ 15.50 a share.

(b) Although the market for stocks of the can and glass container manufacturing companies fell somewhat between August 3 and October 25, 1954, so that ordinarily a slightly lower value would be justified as of the latter date, the brightened prospects for increased business and profits resulting from the Company's decision in August 1954 to embark upon the beer can business and to satisfy further the demands of its largest customer for new products, would, in the instance of this particular Company, tend to neutralize the general market decline and make the stock at least as valuable on October 25 as it had been on August 3.

(c) The value of $ 15.50 would represent a price to adjusted earnings ratio of 8.03:1 on August 3 and 8.66:1 on October 25, 1954, a dividend yield (based upon a 50-cent annual dividend rate) of 3.23 percent, and 46.76 and 46.21 percent of book value on such dates respectively.

CONCLUSION OF LAW

Upon the foregoing findings of fact, which are made a part of the judgment herein, the court concludes as a matter of law that the plaintiffs are entitled to recover, the amount of recovery to be determined in accordance with Rule 38(c).

In accordance with the opinion of the court and on a memorandum report of the commissioner as to the amounts due thereunder, it was ordered on August 17, 1962, that judgment for plaintiffs in case No. 196-58 be entered for $ 94,942.74, together with interest thereon as provided by law from July 30, 1958; that judgment for plaintiffs in case No. 199-58 be entered for $ 53,046.17, together with interest as provided by law to be computed on $ 763.66 from August 11, 1958, and on $ 52,282.51 from July 23, 1958; that judgment be entered for plaintiff in case No. 200-58 for $ 52,719.96, together with interest as provided by law to be computed on $ 753.16 from August 11, 1958, and on $ 51,966.80 from July 23, 1958.

JUDGES:

STEVENSON, J., DELL and POLEN, JJ., concur.

OPINIONBY:

STEVENSON

OPINION:

STEVENSON, J.

Grace Christians appeals the final judgment dissolving her nine-year marriage to her former husband, Robert Christians, and challenges the equitable distribution of the couple's marital assets and the court's failure to award her attorney's fees. We reverse in part because the trial court failed to include the value of a corporate bank account in its valuation of the husband's business, Flying Trapeze, Inc., but affirm on all other issues raised in the wife's appeal.

The valuation of a business is calculated by determining the fair market value of the business,

which is the amount a willing buyer and a willing seller would exchange assets absent duress. See Makowski v. Makowski, 613 So. 2d 924, 926 (Fla. 3d DCA 1993). Typically, fair market value measures the value of the assets of the business plus the value of goodwill. See id.

Flying Trapeze is a business whereby the husband primarily constructs and services trapeze equipment for lease or sale exclusively to Club Med. The husband acquired five trapeze units prior to the marriage and thirteen additional units during the marriage. Based upon evidence presented at trial by the couple's experts, the trial court found that the fair market value of Flying Trapeze included only its tangible assets and inventory and that the business had no goodwill value for the purposes of marital distribution. The court valued the marital portion of the business at $ 137,450 by assigning a value of $ 10,000 to each trapeze unit acquired during the marriage, adding the value of other inventory, and then subtracting the debt. The trial court, however, failed to include a corporate bank account worth $ 15,924 in the valuation of the husband's business. Because the trial court used a net asset method to value the business, we find that the court erred in failing to tally the corporate bank account in the valuation.

Additionally, we find that the trial court's failure to assign a goodwill value to Flying Trapeze was not error. Goodwill may be a marital asset subject to division in a dissolution proceeding if it developed during the marriage and it exists separate and apart from the reputation or continued presence of the marital litigant or the tangible asset. See Williams v. Williams, 667 So. 2d 915, 916 (Fla. 2d DCA 1996); Young v. Young, 600 So. 2d 1140, 1141 (Fla. 5th DCA 1992). The record contains competent evidence to support the trial court's conclusion that any goodwill of Flying Trapeze "rests solely on the Husband's well-known reputation and abilities and his continued existence and involvement [in the business]."

Accordingly, we reverse in part and remand to allow the trial court to readjust the equitable distribution consistent with the holding in this opinion.

Affirmed in part, reversed in part and remanded.

DELL and POLEN, JJ., concur.

Judge: Garcia

FINDINGS OF FACT AND CONCLUSIONS OF LAW

Following trial on the merits and submission of post-trial briefs (docket nos. 60, 63, 64, and 67), and pursuant to the February 17, 1999 agreement of the parties to withdraw this case from the jury and submit it to the Court for decision, the Court enters its findings of fact and conclusions of law. FED. R. CIV. P. 52. To the extent any finding of fact is made in the Conclusions of Law section, or vice versa, the section headings will be disregarded.

Jurisdiction and Venue

1. This court has jurisdiction over this matter pursuant to 28 U.S.C. § 1346(a)(1) because this suit arose under the Internal Revenue laws of the United States for a refund of estate taxes that were allegedly erroneously assessed and collected.

2. Venue for this action properly lies in the Western District of Texas pursuant to 28 U.S.C. § 1391(e).

Findings of Fact

1. Elsie S. Church ("Mrs. Church") died on October 24, 1993, at the age of about 72. (Tr. 166, 223).

2. Mrs. Church was the mother of plaintiffs Marshall B. Miller, Jr. and Mazy Elsie Newton. (Tr. 110).

3. On October 22, 1993, Mrs. Church, Marshall B. Miller, Jr., and Mary Elsie Newton signed an agreement entitled, "Agreement of Stumberg Ranch Partners, Ltd." ("Partnership Agreement"). (Tr. 131, 409, PX 1). The execution of this document resulted in the formation of a Texas limited partnership ("the Partnership"), subject only to substantial compliance with the Texas Revised Limited Partnership Act then in effect, TEX. REV. CIV. STAT. ANN. art. 6132a-1, and the Texas Uniform Partnership Act. TEX. REV. CIV. STAT. ANN. art. 6132b.

4. The purpose of the Partnership was twofold. Most importantly, the partners wished to consolidate their undivided interests in a family ranch known as the W.R. Stumberg Ranch ("the Ranch") to provide for centralized management of their interests and preserve the Ranch as an on-going enterprise for future generations. (Tr. 121-22, 126-27, 141, 148, 225-27). In addition, as she aged, Mrs. Church became concerned about protection of her substantial assets from judgment creditors in the event of a catastrophic tort claim against her. (Tr. 128-29).

5. The Ranch, located in West Texas, consists of approximately 23,000 acres. (Tr. 114). The ranch supports grazing of cattle, sheep, and goats. (Tr. 112. 115-17). Since about 1979, the Ranch has been leased for grazing and hunting. (Tr. 115-17, 126). There is currently an oil and gas lease on the Ranch. (Tr. 121).

6. Mrs. Church was a limited partner in the Partnership. (PX 1). While she had actively managed the Ranch on behalf of all of the owners in years past under an informal agreement, she had largely relinquished this role to her two children after her remarriage to William Church in 1984. (Tr. 118, 121, 124-25). The other undivided interest owners in the Drake family had never been active in the management of the Ranch. (Tr 118, 137).

7. Miller and Newton were also limited partners in the Partnership. Stumberg Ranch, L.C. was designated as the general partner, and was to be owned 50-50 by Miller and Newton to reflect their active roles in managing the Ranch. (Tr. 136, PX 1). This corporation, however, had not yet been formed when Marshall Miller signed the Partnership Agreement on its behalf on October 22, 1993. (PX 1 at 17, PX 5, PX 6).

8. The capital contributions to the Partnership consisted of each limited partner's undivided interest in the Ranch. In addition, Mrs. Church contributed approximately $ 1 million in securities inherited from her mother and from her husband Bill Church that were held in street name in an account at Paine Webber. (Tr. 131-32, 139, 192, PX 1 at 2, Ex. A, PX 11). At this time, the limited partners owned 57% of the Ranch while members of the Drake family owned the remaining 43%. Of the 57% interest owned by the Partnership, Mrs. Church owned 62% in her individual capacity, and Miller and Newton each owned 18%. Mrs. Church owned the remaining 2% as a trustee. (Tr. 123, 136. PX 1 at 3). The undisputed market value of the interest in the Ranch contributed by Mrs. Church was $ 380,038, while the value of her children's interests was $ 232,927. (Tr. 131-32, 154, PX 1, PX 9 at Ex. B).

9. The Agreement allocated profit or loss from Ranch operations in proportion to the interests contributed by the limited partners. Ninety-nine percent of the taxable income from the securities contributed by Mrs. Church was specially allocated to her after expenses. (Tr. 133, 136, 187, PX 1 at 2-3). Mrs. Church also received 62% of the income attributable to the operation of the Ranch. (Tr. 136). The result was that the Partnership was a pro rata partnership in the sense that profits, losses; and income were allocated in proportion to each partner's capital contribution, and no partner experienced an economic benefit from the contribution of another.

10. The limited partners conveyed their interest in the Ranch to the Partnership in a Special Warranty Deed signed on October 22, 1993. (PX 4). On the same day, Miller signed an Assignment Separate from Certificate conveying Mrs. Church's securities to the Partnership. (PX 3). He did so under a power of attorney Mrs. Church had given him in July of 1992. (PX 7).

11. Two days after these transactions, on October 24, 1993. Mrs. Church died suddenly and unexpectedly of cardiopulmonary collapse. (PX 8).

12. At the time she died, Mrs. Church had breast cancer. She had first been treated for this condition by Dr. Stephen Cohen in July of 1990. (Tr. 165). Dr. Cohen is an eminently qualified oncologist. (Tr. 163-65). Although the Court finds the cause and timing of Mrs. Church's death is largely irrelevant to this case, the Court accepts as true the testimony of Dr. Cohen that Mrs. Church's death was unexpected and unrelated to her cancer. (Tr. 169-70). After diagnosis and initial treatment, Dr. Cohen initially treated Mrs. Church with chemotherapy that was very debilitating but successful in destroying signs of the disease. (Tr. 165-66). After 1 1/2 years, the cancer recurred and Mrs. Church was again treated with chemotherapy that had to be stopped because of the side effects. (Tr. 166). This course of treatment nevertheless was successful in the sense that Mrs. Church went into clinical remission for the last six months of her life. (Tr. 171-72).

13. Notwithstanding her cancer, Mrs. Church was living a normal life at the time of her death. She had her own apartment where she lived without assistance, drove a car, visited family and friends, and did not exhibit any signs of a belief that she would die soon. Indeed, she had purchased new clothing shortly before her death, which is not the act of one on her deathbed. (Tr. 146-47, 167, 223-24). I thus accept as true the conclusion of Dr. Cohen that Mrs. Church had no reason to believe that she would soon die. Moreover, there were many available treatments for Mrs. Church's breast cancer that she had not yet undergone because she did not need them. Any estimate of how long she could or would have lived with her cancer would be a guess, with no factual support or probative value. (Tr. 173).

14. While the Partnership was formed on October 22, 1993, the organization of its affairs was not completed prior to Mrs. Church's death, The Certificate of Limited Partnership was not filed in the Office of the Texas Secretary of State until October 26, 1993. (PX 2). This Certificate states it was signed and executed on July 1, 1993 by Marshall B. Miller, Jr. Miller indicated at trial that this was incorrect, and that he probably signed it on October 22 with the other Partnership documents. He attributed this mistake to the fact that the Partnership Agreement, while not signed until October 22, has an effective date of July 1, 1993. Since the date on the Certificate was typed, I find that this was a clerical error that Miller did not notice when he signed the Certificate. Miller made no effort to conceal this mistake, and it is immaterial when the Certificate was signed.

15. The corporate general partner of the Partnership was not actually organized until March of 1994. (PX 5, 6). The Paine Webber account in the name of Elsie Church was not changed to a Partnership account until the same month. To the limited extent that a determination of relevance involves findings of fact, common experience tells us that it is not unusual that all of the paperwork associated with the formation of a business entity was not completed in a single day, or in the short interval of two days between execution of the Partnership Agreement and Mrs. Church's death. Indeed, the failure to complete the paperwork on Friday, October 22, 1993 lends credence to the testimony that the state of Mrs. Church's health arid her possible death were not motivating factors in the decision to form the Partnership. After Mrs. Church's death, it was obviously immaterial whether paperwork was completed in a day or a month. The legal consequences, if any, arising from the failure to complete the paperwork prior to death were fixed.

16. I find that the Primary purpose of the partners in forming the Partnership was a desire to preserve the family ranching enterprise for themselves and their descendants. Both Miller arid Newton testified to, and I accept as true, their feelings that their and their mother's association with a working ranch was an important and beneficial influence on their otherwise urban lives that would also benefit their descendants. Bringing organization to the Ranch would remove it from the control of one or more fractional, undivided-interest owners who could use the property at will, interfere with operations, and ultimately force a partition or sale of the Ranch. (Tr. 120-122, 126-27, 141-45, 148, 225-27).

17. The evidence of this motivation is concrete and persuasive. [10] In the first instance, Mrs. Church and her children had already experienced the consequences of undivided ownership in a real-estate-based business enterprise. Prior to formation of the Partnership, Mrs. Church's nephew, Rod Drake, had exercised his rights as an undivided owner by moving onto the Ranch, interfering with operations, threatening legal action, and almost driving off the grazing lessee who was the major source of the Ranch's income. (Tr. 122). Mrs. Church, her two children, and their cousin had to solve this threat by borrowing money to purchase the nephew's interest. (Tr. 122, 225), Moreover, they knew this nephew would likely inherit additional interest in the Ranch through his father and would likely have to be bought out again. (Tr. 123). This in fact occurred after formation of the Partnership. The securities contributed to the Partnership by Mrs. Church provided the $ 200,000 in capital necessary for this second buy-out that increased the Partnership's interest in the Ranch from 57% to its present 75%. It also was, and is, the intention of the Partnership to purchase the outstanding 25% undivided interest of Whit Drake when, and if, the Partnership has accumulated [11] sufficient capital to do so. (Tr. 144-45).

18. The Partnership was also formed with an eye towards the possibility of actively engaging in raising cattle. The Ranch was in the midst of a prolonged and continuing drought. The grazing lease expired in 1994, and there was a question whether it would be renewed. The Partnership was prepared, if necessary, to replace this lost income through active operations. (Tr. 184-85). Working capital over and above income from the Ranch would have been necessary to engage in this activity.

19. The Government contends that while the formation of the Partnership took the form of a bona fide business transaction, the transaction had no substance and was entered into for no purpose other than to reduce the taxation of Mrs. Church's estate. I do not find this to be the case. The character of the interests owning a majority of the Ranch changed dramatically as a result of the Partnership. Prior to its formation, Plaintiffs and their descendants would have owned undivided interests in the Ranch, with each interest carrying the right to use and enjoy the property, or force a partition or possible sale. The Partnership eliminated these individual [12] rights and placed ownership of a majority of the Ranch in a Partnership that was not controlled by any single person.

20. I find as a matter of fact that the Partnership had bona fide business purposes and was not a sham as that term is used in estate taxation.

21. I also find that the Partnership was not formed solely to reduce estate taxes.

22. Mrs. Church intended to, and did, convey her interest in the securities held by Paine Webber on October 22, 1993. This intent to relinquish her interest is explicitly expressed in the Partnership Agreement she signed on that date.

23. There is no ambiguity in the Partnership Agreement with respect to the power to amend it, and no claim of ambiguity has been brought to the attention of the Court. Even if such a claim had been made, no extrinsic evidence was offered to explain any claimed ambiguity.

24. Mrs. Church did not have the unilateral right to alter, amend, revoke, or terminate the Partnership Agreement. Section 29 of the Partnership Agreement provides that it may be amended "only upon the written agreement of the Partners then entitled to eighty percent (80%) or more of the Partnership interests in profits [13] from operations." The reference to "profits from operations" can logically refer only to Ranch operations, and therefore Mrs. Church was entitled to only 62% of those profits. Nor could Mrs. Church dissolve the Partnership through the use of her amendment power, even if she could cast more than 80% of the vote to do so. As Texas partnership law provides, no act in contravention of the agreement (such as dissolution) may be done without the consent of all the partners. TEX. REV. CIV. STAT. ANN. art. 6132b, § 18(h). Such a unilateral act would also contravene sections 15(a) and 22 of the Partnership Agreement.

25. There was no expressed or implied agreement between the partners in the Partnership that Mrs. Church could continue to use, possess, or enjoy partnership property, or retain the right to income from Partnership property, within the meaning of I.R.C. § 2036.

26. To the extent that the safe harbor exceptions to application of I.R.C. § 2703 involve issues of fact, I find that the Partnership was a bona fide business arrangement, and not a device to transfer property to members of Mrs. Church's family for less than full and adequate consideration in money or money's [14] worth. I also accept as true the uncontradicted testimony of Charles Hornberger that the terms and restrictions in the Partnership Agreement were comparable to similar arrangements entered into by persons in arms-length transactions. With respect to the issue of consideration, I reject the Government's contention that the difference in value between the Partnership interest Mrs. Church received on formation and the value of the assignee interest transferred upon her death is the appropriate measure of the consideration she received for her contribution of assets to the Partnership. These are two different interests that are not comparable. My finding that she received full and adequate consideration is premised upon the fact that whatever the value of her Partnership interest on the date of formation, it was directly proportionate to the contributions and Partnership interests of the other partners to a Partnership that had a bona fide business purpose.

27. The fair market value of the assets contributed by Mrs. Church to the Partnership, as of the date of her death or the alternate valuation date of April 24, 1994, was $ 1,467,748 (Tr. 410). Of this figure, the value of the Ranch [15] accounted for $ 380,038, and the value of the cash and securities contributed by Mrs. Church was $ 1,087,710.

28. The fair market value of Mrs. Church's limited partnership interest in the Partnership, as of the date of her death or the alternate valuation date of April 24, 1994, was $ 617,591. (PX 13 at i). While this is precisely the estimate of Plaintiffs' valuation expert, Mr. Bruce Johnson, and presumably could have been challenged given that the valuation of such interests are ultimately a matter of opinion, the Government chose not to present any valuation evidence of its own. Since the Court must find facts based on the record before it, it accepts Mr. Johnson's uncontradicted estimate.

29. On July 25, 1994, the Estate of Elsie Church timely filed a Form 706, United States Estate Tax Return. (Tr. 410).

30. On February 16, 1996, the Internal Revenue Service served a Notice of Deficiency proposing to assess against the estate a deficiency of $ 212,503 plus interest. (Tr. 410).

31. After adjustments, the estate made full payment of the deficiency on April 8, 1996 in the amount of $ 230,100, representing the principal sum of $ 197,221 and statutory interest [16] of $ 32,879. (Tr. 410).

32. On October 9, 1996, Plaintiffs filed a claim for refund that the IRS denied. (Tr. 411).

33. On March 3, 1997, the IRS refunded $ 14,631.65 to the estate. This refund was attributable to additional deductible attorney's fees of $ 43,769 and appraisal fees of $ 5,594 incurred in connection with this matter and necessary in the administration of the estate. (Tr. 411).

34. This lawsuit was filed on June 26, 1997. (Tr. 411).

35. Since March 3, 1997, Plaintiffs have actually and necessarily incurred the sum of $ 101,442.71 in additional attorney's fees and expenses in seeking a refund through this suit. I find that these attorney's fees and expenses were necessary in the administration of the estate because they were actually incurred in the collection of assets within the meaning of Treas. Reg. 20.2053-3. This sum is accordingly an additional deduction from the federal estate tax heretofore paid.

36. Plaintiffs are entitled to a refund based on the proper valuation of Mrs. Church's Partnership in the amount of $ 617,591. In accordance with the parties' stipulation, the Government shall calculate the refund and submit its calculation [17] to Plaintiffs for approval within thirty (30) days of this decision. Any dispute thereafter as to the amount of the refund shall be submitted to the Court, which shall include the dollar amount of the refund in its final judgment

Conclusions of Law

1. For the reasons stated in its order on the Government's motion in limine (docket no. 44), the Court concludes that the formation of Stumberg Ranch Partners, Ltd. was in substantial compliance in good faith with the Texas Revised Limited Partnership Act, and TEX. REV. CIV. STAT. ANN. art. 6132a-1, and the Texas Uniform Partnership Act. TEX. REV. CIV. STAT. ANN. art. 6132b.

2. Accordingly, the Partnership was a valid Texas limited partnership as of October 22, 1993, and Mrs. Church's limited partnership interest must be taxed as such under I.R.C. § § 2033 and 7701(a)(2).

3. The Government contends that prior to her death, Mrs. Church did not effectively convey to the partnership legal title to the securities in her Paine Webber account. Based on the undisputed facts, the Court concludes this contention is without merit. Mrs. Church did not hold legal title to these securities; hers was an equitable beneficial interest [18] and legal title was held by Paine Webber. It would make no difference even if this were not the case because neither Texas law nor the federal law of estate taxation concern themselves with legal title in determining ownership of partnership property Under well-established principles of Texas law, ownership of property intended to be a partnership property is not determined by legal title, but rather by the intention of the parties. Logan v. Logan, 138 Tex. 40, 156 S.W.2d 507, 512 (Tex. 1941); Foust v. Old Am. County Mut. Fire Ins. Co., 977 S.W.2d 783, 786 (Tex App.-- Fort Worth 1998, no writ). Mrs. Church's intention to relinquish her beneficial interest in the securities held by Paine Webber was clearly expressed by her executions of the Partnership Agreement in which these securities are specifically described. This intention governs without regard to legal title to the securities and the securities were the property and assets of the Partnership.

4. If Mrs. Church effectively conveyed the securities in her Paine Webber account to the Partnership, as the Court has concluded, the Government next contends that there was a taxable gift on formation [19] of the Partnership. The taxable value of this gift is represented to be the difference between the $ 1,467.748 in assets contributed by Mrs. Church to the Partnership, and what the Government claims was the value of the Partnership interest she received in return. This latter sum is the $ 617,591 estimated market value of Mrs. Church's interest in the Partnership at death.

5. Initially, the Government's contention confuses the market value of the assignee interest passing at death with the value of the Partnership interest Mrs. Church received in return for her contribution. The two interests are not comparable. More importantly, the Government ignores the fact that this was a pro rata partnership that did not confer a financial benefit on, or increase the wealth of, any partner. Implicit in the Government's argument is the notion that since the value of Mrs. Church's Partnership interest was less than the assets she contributed, someone must have received a gratuitous transfer of the difference. This was not the case, and never could be in the formation of a business entity in which each investor's interest is proportional to the capital contributed.

6. A gift can be made [20] in many guises, and it is the intention of I.R.C. § 2501, et. seq. to tax them whatever their form. Nevertheless, a taxable gift must involve a gratuitous transfer, which by definition requires a donee. Dickman v. Commissioner, 465 U.S. 330, 334, 104 S. Ct. 1086, 79 L. Ed. 2d 343 (1984). There was none in this case. Kincaid v. United States, 682 F.2d 1220 (5th Cir. 1982) and the other cases cited by the Government reinforce this point rather than contradict it. Each involved an attempt to donatively pass property to others through the formation of business entities in which the donor did not receive an interest proportionate to his or her capital contribution.

7. I.R.C. § § 2036 and 2038 likewise require a "transfer" as a predicate to their application. Shafer v. Commissioner, 749 F.2d 1216, 1221 (6th Cir. 1984); Estate of Harrison v. Commissioner, 1987 T.C. Memo 8, 52 T.C.M. (CCH) 1306, 1309 (1987). Since the gift and estate taxes are considered in pari materia, Wheeler v. United States, 116 F.3d 749, 761 (5th Cir. 1997), the term

"transfer" must be given the same meaning in construing [21] sections 2036 and 2038 as it is in the taxation of gifts. Having previously concluded that there was no gratuitous donative transfer in the formation of Stumberg Ranch Partners, Ltd. in connection with the Government's contention of a gift on formation, I likewise conclude that sections 2036 and 2038 do not apply to the transaction in issue. Estate of Harrison v. Commissioner, 1987 T.C. Memo 8, 52 T.C.M. (CCH) 1306, 1309 (1987); Estate of Michelson v. Commissioner, 1978 T.C. Memo 371, 37 T.C.M. (CCH) 1534, 1538 (1978).

8. The Government makes two contentions with respect to the application of I.R.C. § 2703 to this case. It first suggests that the term "property" refers to the assets Mrs. Church contributed to the Partnership prior to death, rather than her Partnership interest. There is no statutory basis for this contention. Mrs. Church did not own the assets she contributed to the Partnership on the date of her death; she owned a Partnership interest. The estate tax is imposed on that which a decedent transfers at death without regard to the nature of the property interest before or after death. I.R.C. § 2033; Estate of Bright v. United States, 658 F.2d 999, 1001 (5th Cir. 1981) [22] (en banc). I.R.C. § 2033 provides that the gross estate shall include any partnership interest owned by a decedent as defined by I.R.C. § 7701 (a)(2). Lusthaus v. Commissioner, 327 U.S. 293, 66 S. Ct. 539, 90 L. Ed. 679 (1946); Estate of Winkler v. Commissioner,73 T.C.M. (CCH) 1657, 1997 T.C. Memo 4 (1997), I.R.C. § 2703 does not define the term "property" in any matter inconsistent with these provisions, or indeed at all, and cannot have a meaning attributed to it without Congressional authorization that would make it unique in the estate tax provisions of the Code.

9. The Government alternatively contends that if I.R.C. § 2703 does require taxation of Mrs. Church's Partnership interest, it may nonetheless disregard the term restriction, and restrictions on sale in the Partnership Agreement that serve to reduce its market value. No case supports the Government's position, and nothing in the legislative history, or the regulations adopted by the IRS itself, convince this Court to read into Section 2703 something that is not there. By its very nature, a partnership is voluntary association of those who wish [23] to engage in business together, and upon whom the law imposes fiduciary duties. Term restrictions, or those on the sale or assignment of a partnership interest that preclude partnership status for a buyer, are part and parcel of the property interest created by state law. These are not the agreements or restrictions Congress intended to reach in passing I.R.C. § 2703. Reviewing the legislative history, and construing I.R.C. § 2703 with its companion statute, I.R.C. § 2704, it is clear that the former was intended to deal with below-market buy-sell agreements and options that artificially depress the fair market value of property subject to tax, and are not inherent components of the property interest itself.

10. The Court concludes that Plaintiffs have carried their burden of proof and are entitled to the refund prayed for in the amount set out in the findings of fact.

11. Interest on the Court's judgment shall run in accordance with the provisions of 28 U.S.C. § 2411.

SIGNED and ENTERED this 18th day of January, 2000.

ORLANDO L. GARCIA

UNITED STATES TAX COURT

ESTATE OF ELMA MIDDLETON DAILEY, DECEASED, DONOR,

K. ROBERT DAILEY, II, EXECUTOR, Petitioner v.

COMMISSIONER OF INTERNAL REVENUE, Respondent

ESTATE OF ELMA MIDDLETON DAILEY, DECEASED,

K. ROBERT DAILEY, II, EXECUTOR, Petitioner v.

COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 6251-00, 6262-00. Filed October 3, 2001.

Harold A. Chamberlain and Michael C. Riddle, for

petitioners.

Richard T. Cummings, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

FOLEY, Judge: By notices dated March 15, 2000, respondent

determined a 1992 Federal gift tax deficiency of $53,808 and

section 6651(a) addition to tax of $13,452 relating to docket No..- 2 -6251-

00, and a Federal estate tax deficiency of $143,932 relating

to docket No. 6262-00. Unless otherwise indicated, all section references are to the Internal Revenue Code as amended, and all Rule references are to the Tax Court Rules of Practice and Procedure. The issues are the valuation of certain retained and gift interests in a Family Limited Partnership (FLP) and liability for the section 6651(a) addition to tax.

FINDINGS OF FACT

When the petitions were filed, K. Robert Dailey II was a resident of Harris County, Texas, where, in 1997, his mother, Elma Middleton Dailey, had died, and Mr. Dailey had received an appointment to be her executor. On December 2, 1982, Mrs. Dailey's husband died, leaving to her, among other things, the following:

Company	Number of Shares	Value per Share	Total Value
Exxon Corp.	11,108	$33.63	$373,562
American Telephone & Telegraph Co. (AT&T)	400	65.75	26,300

On October 20, 1992, Mrs. Dailey executed a will, a Revocable Living Trust (Trust), and an Agreement of Limited Partnership (Agreement) of Elma Middleton Dailey FLP. The will provided that Mrs. Dailey's residuary estate would pass to the Trust, from which her son would receive the corpus outright. Upon execution of the Agreement, Mrs. Dailey took a 1-percent general and a 98-percent limited partnership interest,.- 3 -and Mr. Dailey received a 1-percent limited partnership interest.

On November 13, 1992, Mrs. Dailey contributed, to the FLP, 400 AT&T, 20,000 Exxon, and 895 Bell South Corp. shares. Mr. Dailey did not contribute any assets to the FLP. On December 4, 1992, the Texas Secretary of State filed the FLP's Certificate of

Limited Partnership.

On December 8, 1992, Mrs. Dailey signed a letter which stated that by "the terms of the Elma Middleton Dailey Family Limited Partnership, this letter shall be sufficient evidence of my transfer and conveyance to you of the following limited partnership interest", giving 45-, 15-, and 38-percent interests to Mr. Dailey, his wife, and the Trust, respectively. On that date, the FLP had $1,267,619, consisting of:

Company	Number of Shares	Value per Share	Total Value
Exxon Corp.	20,000	$60.19	$1,203,750
AT&T	400	47.94	19,175
Bell South	895	49.94	44,694

On March 16, 1995, Mrs. Dailey appointed Mr. Dailey as the FLP managing partner. On July 26, 1995, he replaced her as the trustee of the Trust and FLP general partner, and her 1-percent general partnership interest became a limited one.

On January 10, 1997, Mrs. Dailey died, when the FLP had $1,047,603, consisting of:.- 4 -

Company	Number of Shares	Value per Share	Total Value
Exxon Corp.	10,000	$102.88	$1,028,750
American Veterinary Corp.	1,000	10.88	10,875
Olde Money Market Fund	7,978	1.00	7,978

The FLP had substantial unrealized capital gains due to the increase in the value of the Exxon stock. On April 17, 1997, Mrs. Dailey's attorney filed, and respondent received, a gift tax return reflecting the gifts of the 45- and 15-percent limited

partnership interests to Mr. Dailey and his wife. On the gift tax return, Mrs. Dailey reported a 40-percent discount from the net asset value (NAV) of the partnership's assets.

OPINION

The FLP was validly formed pursuant to Texas law, and we do not disregard it for tax purposes. See Estate of Strangi v. Commissioner, 115 T.C. 478, 487 (2000); Knight v. Commissioner, 115 T.C. 506, 513-515 (2000).

The parties agree that, pursuant to section 7491(a), petitioners have introduced credible evidence, and respondent shall have the burden of proof, relating to the valuation issue. Fair market value is the price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts. Sec. 20.2031-1(b), Estate Tax Regs.; sec. 25.2512-1, Gift Tax Regs. On brief, the.- 5 -estate further contends that a "hypothetical, willing buyer may only become an assignee under this Partnership Agreement and Texas law", and Mrs. Dailey "actually transferred" assignee interests, but there is "no evidence in the record before this Court regarding the fair market value of any assignee * * * interests". Article IX of the Agreement provides for "Sale of a Partner's Interest", and the Texas Revised Limited Partnership Act, Tex. Rev. Civ. Stat. Ann. art. 6132a-1 (Vernon 1993), provides for assignments but does not prohibit sales. The plain language of Mrs. Dailey's December 8, 1992, letter states that she was transferring partnership interests pursuant to the Agreement. See Kerr v. Commissioner, 113 T.C. 449, 463-465 (1999) (rejecting donors' contention that Texas partnership transfers were mere assignments). In addition, the lack of

evidence of the value of any purported assignment supports our rejection of the estate's contention.

Mrs. Dailey gave Mr. Dailey a 1-percent limited partnership interest on formation, but the FLP had no assets on that date. Mrs. Dailey made gifts of 45- and 15-percent limited partnership interests to her son and daughter-in-law, respectively, and thus retained 39 percent in the trust at death. The parties stipulated, however, that Mrs. Dailey retained 40 percent. Respondent inexplicably does not contend that the initial 1-.- 6 -percent limited partnership interest transferred to Mr. Dailey had gift tax consequences at formation or funding.

Both parties agree that the given and retained interests were, on December 8, 1992, and January 10, 1997, worth their proportionate share of the NAV of $1,267,619 and $1,047,603 for gift and estate tax purposes, respectively. They disagree, however, about the size of the minority and marketability discounts. Both parties' experts compared the FLP to closed-end mutual funds, which trade at a discount to NAV, but disagreed on the amounts of the discounts. Petitioners' expert, citing published data, opined that the aggregate discount is 40 percent for lack of marketability, control, and liquidity and testified that he considered the significant amount of unrealized capital gains relating to the Exxon stock.

Respondent's expert, on the other hand, relied in part on an unpublished study that he coauthored and, in a revised report submitted at trial, increased the marketability discount purportedly substantiated by his unpublished study from 12.5 percent to 14.1 percent. Respondent's expert opined that an aggregate discount of 15.72 percent on December 8, 1992, and 13.51 percent on January 10, 1997, should be applied. At trial,

respondent's expert testified that he could not recall reviewing the Agreement and, although he believed that unrealized capital gains are "an important source of discounts", he did not review.- 7 -the documents to determine if the FLP had any such gains.

Respondent's expert's testimony was contradictory, unsupported by the data, and inapplicable to the facts.

We are "not bound by the opinion of any expert witness when that opinion is contrary to our own judgment." Estate of Gilford v. Commissioner, 88 T.C. 38, 56 (1987). Although neither expert was extraordinary, petitioners' expert provided a more convincing and thorough analysis than respondent's expert. We conclude that an aggregate marketability and minority discount of 40 percent is warranted and is applicable to the aforementioned interests.

Section 6651(a)(1) imposes an addition to tax for failure to file a required return on the date prescribed. This addition to tax is imposed on the amount of tax required to be shown on the return. Although decedent's gift tax return was filed after the prescribed due date, the property valuation on the return was correct and, after application of decedent's unified credit, no gift tax was due. Accordingly, the estate is not liable for the section 6651(a)(1) addition to tax.

Contentions we have not addressed are moot, irrelevant, or meritless.

To reflect the foregoing,

Decisions will be entered for petitioners.

T.C. Memo. 2006-212

UNITED STATES TAX COURT

ROBERT DALLAS, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 7493-04. Filed September 28, 2006.

John M. Elias, Peter J. Ulrich, Rita M. Danylchuk, and Laura Lavie, for petitioner.*

Wendy D. Gardner and Brian E. Derdowski, Jr., for respondent.

* Kenneth N. Laptook was substituted as counsel for John M. Elias after trial, and all briefs except respondent's response to petitioner's supplement to reply brief were filed.

MEMORANDUM FINDINGS OF FACT AND OPINION

COLVIN, Chief Judge: Respondent determined deficiencies in petitioner's gift tax of $1,715,526 for 1999 and $823,160 for 2000.[1]

Petitioner transferred about 55 percent of the nonvoting stock of the Dallas Group of America, Inc. (DGA), an S corporation the stock of which is not publicly traded, to trusts established for the benefit of his sons (the trusts) in exchange for cash and promissory notes signed by his sons. The transfers occurred on November 29, 1999 and 2000. Petitioner and his sons agreed to be bound by a value for DGA stock as estimated in a third-party appraisal. Each promissory note used to pay for the stock at issue in 1999 provides it is deemed paid if petitioner dies before it is paid. Respondent determined that the transactions were bargain sales and thus were gifts. The issues for decision are:

1. Whether the value of the DGA stock at issue on November 29, 1999, was $907 as respondent determined or $620 as petitioner contends; and whether the value of the DGA stock at issue on November 29, 2000, was $906 as respondent determined or $650 as petitioner contends. We hold that the fair market value of the

[1] Amounts are rounded to the nearest dollar.

DGA stock was $751 per share on November 29, 1999, and $801 per share on November 29, 2000.

2. Whether the value of each 1999 note was $2,232,000, as petitioner contends, or $1,687,704 as respondent determined. We hold that it was $1,687,704.

Unless otherwise specified, section references are to the Internal Revenue Code as in effect for 1999 and 2000, and Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found.

A. Petitioner

Petitioner resided in Whitehouse, New Jersey, when he filed the petition in this case. He was 84 years old at the time of trial.

B. Dallas Group of America

1. Reagent Chemical & Research., Inc.

In 1959, petitioner and Thomas Skeuse (Skeuse) formed Reagent Chemical & Research, Inc. (Reagent), in Texas. Reagent initially processed elemental sulfur and later distributed hydrochloric acid. In the 1970s, Reagent expanded into the ammonium chloride and magnesium silicate businesses.

2. Formation of Dallas Group of America, Inc.

In February 1989, petitioner and Skeuse decided to split their interests in Reagent. Reagent spun off its ammonium

chloride and magnesium silicate divisions to form Dallas Group of America, Inc. (DGA), the stock of which petitioner received in exchange for his interest in Reagent. DGA manufactures and distributes ammonium chloride and synthetic magnesium silicate. Its headquarters is in Whitehouse, New Jersey. It is an S corporation for Federal income tax purposes.

DGA had nonoperating assets including 79 percent of Trenton Liberty Insurance Co.,[2] Unity Bankcorp, Inc. stock, land in New Jersey, and split-dollar insurance receivables in 1999 and 2000.

3. Ammonium Chloride and Magnesium Silicate Production

In the mid-1990s, DGA sold ammonium chloride to about 130 different distributors in volumes of at least one truckload. Ammonium chloride is used as an ingredient in fertilizer, cattle feed, cough medicine, and intravenous solutions, and in personal products such as cosmetics and shampoo. It is also used in galvanizing metal, producing dry cell batteries, growing baker's yeast, and servicing oil wells. As of September 1999, DGA supplied about 90 percent of the ammonium chloride used in the United States and Canada, or 18,000 tons per year, and exported about 5,000 tons per year. About 29 percent of DGA's gross revenue from 1998 to 2000 was from sales of ammonium chloride.

[2] Trenton Liberty Insurance Co. was formed to provide product liability insurance for DGA.

DGA also manufactures synthetic magnesium silicate. DGA is the only manufacturer of synthetic magnesium silicate in the Western Hemisphere. It markets this product under the trade name Magnesol.

About 50 percent of DGA's sales of Magnesol are to fast food chains such as McDonald's (DGA's largest customer), which use Magnesol to filter frying oil from other compounds to extend the life of the frying oil. About 40 percent of DGA's sales of Magnesol are for use in the manufacture of polymers. Ten to twenty percent of DGA's sales of Magnasol are to international food services and industries. About 70 percent of DGA's gross revenue in 1999-2000 was from sales of Magnasol.

4. Financial Status and Senior Management

Petitioner chairs DGA's board. His son, Robert Dallas II (Robert), is president, his son, David Dallas (David), is chief executive officer, and John Felowitz (Felowitz) is chief financial officer and executive vice president. David has worked for Reagent or DGA since 1974, and Robert has worked for either Reagent or DGA since 1972. DGA paid petitioner and his two sons salaries and bonuses in the following amounts in 1998, 1999, and 2000:

	1998	1999	2000
Petitioner			
Salary	$873,224	$983,164	$733,229
Robert			
Salary	833,851	785,709	821,253
Bonus	250,000	--	--
David			
Salary	831,238	785,275	820,931
Bonus	250,000	--	--
Total	3,038,313	2,554,148	2,375,413

Petitioner originally owned all of DGA's series A voting stock and series B nonvoting stock. Paul Rosenberg (Rosenberg) and Steven Holt (Holt) were petitioner's estate planning counsel. They recommended that petitioner use grantor retained annuity trusts (GRATs) and an estate freeze as part of his estate plan.

In 1992, petitioner and his wife, Fay Dallas (Fay), formed two GRATs and contributed 4,100 shares of DGA's series B stock to each trust. Petitioner transferred another 7,000 shares to Fay in 1998. Fay died on January 24, 1999. At that time she owned the 7,000 shares.

Rosenberg recommended that Fay's estate retain Empire Valuation Consultants, Inc. (Empire), a business appraiser, to appraise the stock as of the date Fay died. Empire appraised the stock in a report dated October 28, 1999.

Empire used a capitalization of income approach to estimate the value of DGA stock. In doing so, Empire opined that a

reasonable buyer would assume that DGA's net income would be reduced by 40 percent due to tax-affecting.[3]

Empire also assumed that executive compensation for petitioner and his sons would be set at about $1.4 million per year, causing DGA's future annual earnings to increase. Empire applied a 15-percent discount for lack of control and a 35-percent discount for lack of marketability. Empire concluded that the fair market value of a minority interest of DGA stock was $610 per share as of January 24, 1999.

The GRATs terminated in 1999, and 4,100 shares of DGA stock were transferred to Robert and David. Also in 1999, petitioner acquired 78 additional shares of series B stock.

DGA used retained earnings to expand. DGA paid enough dividends to its shareholders (petitioner, his sons, and the trusts established for his sons) to pay income tax that resulted from dividend distributions.

[3] Generally speaking, in the context of valuation of stock of an S corporation, "tax-affecting" is the discounting of estimated future corporate earnings on the basis of assumed future tax burdens imposed on those earnings, such as from the loss of S corporation status and imposition of corporate-level tax. See Gross v. Commissioner, T.C. Memo. 1999-254, affd. 272 F.3d 333 (6th Cir. 2001); Bogdanski, Federal Tax Valuation, par. 6.03[6][e][i], at S-36-38 (2006 & Supp. 2006).

C. Stock Transfers to Petitioner's Children

1. 1999 Stock Transfers From Petitioner to His Sons

On a date not stated in the record, Rosenberg advised petitioner to transfer stock of DGA to trusts established for the benefit of his sons in exchange for cash and notes signed by his sons as trustees of the trusts for their benefit promising to pay for the stock. Petitioner wanted the notes to be deemed paid in full if he died before all payments were made.[4]

Rosenberg and Holt chose Empire to appraise DGA's series B stock to determine the price for a sale of the stock by petitioner to the trusts. Petitioner and his sons agreed that the trusts would buy the stock at the price set by Empire.

Empire prepared a report dated November 15, 1999, and sent it to Felowitz. Empire concluded that the fair market value of the series B shares was $620 as of September 30, 1999. Empire used the same methodology that it had used to appraise the DGA shares held by Fay's estate. See par. B-4, above.

On November 29, 1999, petitioner transferred 4,000 shares of series B stock to the trust established for the benefit of Robert and 4,000 shares to the trust established for the benefit of David. In return, each trust transferred to petitioner $248,000 in cash and a promissory note for $2,232,000 (collectively the

[4] If the notes were deemed prepaid when petitioner died, the value of the notes would not be included in his estate.

1999 notes), on the basis of Empire's estimate of the value of the DGA stock at issue in 1999 ($620).

Petitioner and his sons signed the sale agreements and promissory notes. The sale agreements included the following share adjustment clause:

> In the event that the value of the Shares is finally determined in any IRS proceeding to be greater than $620 per share, the number of shares purchased and sold hereunder shall be reduced to the number which is the quotient of $2,480,000 divided by the value per share determined in such proceeding. In such event, Buyer shall transfer to Seller, for no additional consideration, the number of Shares which is equal to the difference between 4,000 minus the quotient determined under this Section 1.2.

The 1999 notes[5] include the following self-canceling clause:

> In the event that Holder shall die before the Maturity Date, this note shall be deemed to have been paid, satisfied and discharged on the day before the date of the Holder's death.

In 1999, Fay's estate distributed 544 shares of series B stock to Robert and 544 shares to David.

2. 2000 Stock Transfers From Petitioner to His Sons

On November 29, 2000, Fay's estate and the trusts signed an agreement under which the estate transferred 2,956 shares of series B stock to each of the trusts, and each trust transferred to the estate $192,140 in cash and a promissory note for $1,729,260 (collectively the 2000 notes), on the basis of

[5] The maturity date of the 1999 notes is Nov. 29, 2004.

Felowitz's estimate that the stock was worth $650 per share.[6] Felowitz assumed that Empire had correctly valued DGA stock at $620 per share as of November 29, 1999, and estimated that the value had increased to $650 per share as of November 29, 2000.

The 2000 sale agreements between Fay's estate and the trusts had the following share adjustment clause:

> In the event that the value of the Shares is finally determined in any IRS proceeding to be greater than $650 per share, the number of shares purchased and sold hereunder shall be reduced to the number which is the quotient of $1,921,400 divided by the value per share determined in such proceeding. In such event, Buyer shall transfer to Seller, for no additional consideration, the number of Shares which is equal to the difference between 2,956 minus the quotient determined under this Section 1.3.

The 2000 notes did not have a self-canceling clause.

Respondent audited petitioner's 1999 gift tax return in 2001. During the audit, respondent's tax examiner told Rosenberg that the 1999 notes were self-canceling and thus were worth less than face value because the notes were canceled if the holder of the notes died before payment.

On June 21, 2001, after respondent's tax examiner told Rosenberg about the self-canceling 1999 notes, petitioner and the trustees of the trusts executed new promissory notes that were

[6] The parties do not dispute that the transfers on Nov. 29, 2000, are treated as made by petitioner because the shares of DGA transferred in the 2000 transaction would have passed to him if Fay's estate had not transferred them to the trusts.

substantially identical to the original notes except that they did not contain the self-canceling clauses.

After all of the above transactions, the 25,078 shares of series B stock were owned as follows:

Individual	Number of shares
Petitioner	1,878
Robert	4,644
David	4,644
Robert's trust	6,956
David's trust	6,956

D. Respondent's Determinations

Respondent determined: (1) The DGA stock at issue had a fair market value of $907 per share on November 29, 1999, and $906 per share on November 29, 2000; (2) each of the 1999 notes, which had a face value of $2,232,000, had a fair market value of $1,687,704; and (3) petitioner is liable for gift tax as a result of these transfers because he received consideration worth less than the fair market value of the transferred stock.

OPINION

A. Contentions of the Parties

Petitioner contends that the fact that the price paid for the DGA stock at issue in November 29, 1999, was set by Empire, an unrelated third-party appraiser, means the price was the fair market value. Petitioner also contends that testimony of his expert witnesses supports Empire's estimate of the value. Respondent disagrees with petitioner's contentions.

B. Whether the Price for the DGA Stock at Issue Was an Arm's-Length Price

Petitioner points out that the 1999 price paid for the DGA stock at issue was set by Empire and contends that the parties properly structured and documented the sales of stock at issue as arm's-length transactions, thus establishing the fair market value of the DGA stock at issue. We disagree.

Intrafamily transfers are presumed to be gifts. Frazee v. Commissioner, 98 T.C. 554, 561 (1992); Harwood v. Commissioner, 82 T.C. 239, 258 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986). While the presumption may be overcome with evidence, see, e.g., Estate of Stone v. Commissioner, T.C. Memo. 2003-309, we conclude that petitioner has not done so.

The transactions were designed by petitioner's counsel to serve petitioner's estate planning goals. The facts that payment of the 1999 notes need not have been made if petitioner had not survived until they were due[7] and that the 1999 and 2000 notes contain a share adjustment clause show that the transactions were for estate planning purposes.

Petitioner's sons were not represented by their own counsel in the transactions. Petitioner's sons did not negotiate the terms of the agreements, and while that is not dispositive, see Estate of Thompson v. Commissioner, 382 F.3d 367, 382 (3d Cir.

[7] See discussion of the self-canceling clauses below at par. D.

2004), affg. T.C. Memo. 2002-246, it is a factor suggesting the lack of arm's-length transactions in these circumstances. See Harwood v. Commissioner, supra at 259 (family transaction structured by the family accountant with no arm's-length bargaining did not overcome the family transaction presumption); cf. Estate of Stone v. Commissioner, supra (arm's-length transaction where each member of the Stone family negotiated the transaction through his or her own independent counsel).

We conclude that the prices petitioner's sons agreed to pay for the DGA stock at issue were not arm's-length prices.

C. Expert Testimony

1. Introduction

We next consider the matters disputed by the expert witnesses who testified as to the value of the DGA stock at issue. Empire and Management Planning, Inc. (MPI), each submitted an expert report for petitioner. Scott A. Nammacher (Nammacher) testified for Empire, and Robert P. Oliver (Oliver) and Joseph C. Hassan (Hassan) testified for MPI. Appraisal Economics, Inc. (AE), submitted an expert report for respondent. T. Scott Vandervliet (Vandervliet) and Joseph G. Kettell (Kettell) testified for AE.

The primary points of disagreement among the expert witnesses were: (1) Whether to decrease the assumed income stream from DGA because of tax burdens imposed on DGA or its

shareholders after the hypothetical sale (i.e., tax-affecting); (2) whether to increase DGA's assumed income stream on the assumption that DGA's executive compensation will decrease after the hypothetical sale; and (3) whether, and if so, to what extent, to apply discounts for lack of control, lack of voting power, and lack of marketability.

The following chart summarizes the positions taken in the expert reports:

	Empire (Nammacher)	MPI (Oliver, Hassan)	AE (Vandervliet, Kettell)
Valuation methods	Capitalization of income	Discounted cash flow; guideline company	Capitalization of income; guideline company; guideline transactions
Capitalization rates	15.57% for 1999	16.5% for 1999; 15.5% for 2000	16% for 1999; 15% for 2000
Tax-affecting	Reduced net earnings by 40%	Reduced net earnings by 35%	None
Executive compensation adjustment	Reduced expenses by $1.4 million for 1998; compensation adjusted 8% per year for 1994-98	None	Reduced expenses by $1.3 million for 1999, compensation adjusted 5% per year for 1994-2000
Discounts	15% minority interest and lack of control for nonoperating assets; 35% lack of marketability	40% lack of marketability; 5% lack of voting power	20% minority interest and lack of control for operating assets; 15% minority interest and lack of control for nonoperating assets; 20% lack of marketability
1999 per-share value	$620	$528	$1,004
2000 per-share value	None given	$584	$1,026

We may accept or reject expert testimony according to our own judgment, and we may be selective in deciding what parts of an expert's opinion, if any, we accept. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938). In general, we found AE's report and the testimony of Vandervliet and Kettell to be more

convincing than Empire's and MPI's reports and the testimony in support of those reports. AE's report and the testimony of Vandervliet and Kettell were cogent and thorough. Vandervliet and Kettell wrote the AE report and explained it clearly. Empire's letter report was, by its terms, limited. Nammacher's testimony in support of Empire's report was unconvincing for reasons stated at paragraph C-2-b-ii, below. MPI copied portions of its report verbatim from the Empire report.

2. Tax-Affecting

a. Background

Petitioner's expert witnesses reduced DGA's projected income by 40 percent (Empire) and 35 percent (MPI) based on "tax-affecting". Empire reduced DGA's projected profits by 40 percent on the assumption that, after a sale, the corporation will lose its S corporation status.[8] See, e.g., Gross v. Commissioner, T.C. Memo. 1999-254, affd. 272 F.3d 333 (6th Cir. 2001). MPI reduced DGA's projected profits by 35 percent because a shareholder is

[8] The income of a C corporation is subject to income tax at the corporate level, and shareholders are taxed on dividends paid by a C corporation. Secs. 11, 61. In contrast, the income of an S corporation generally is not taxed at the corporate level, but is passed through to the shareholder and taxed to the shareholder when earned, whether or not the corporation pays dividends. Sec. 1366.

Nammacher's testimony suggests that Empire tax-affected DGA's earnings on the assumption that DGA would lose its S corporation status after or as a result of the hypothetical sale of its stock. Oliver testified that this is why MPI tax-affected DGA's earnings.

liable for income tax on S corporation profits even if those profits are not distributed to the shareholder.

b. Whether To Assume DGA Would Cease Being an S Corporation

Petitioner points out that DGA's S corporation election could be ended at any time. Petitioner also points out that some potential buyers (e.g., C corporations) of DGA stock are not qualified to be S corporation shareholders. See secs. 1361(b)(1), 1362(d)(2).

There is no evidence in the record that DGA expects to cease to qualify as an S corporation. DGA has a history of distributing enough earnings for shareholders to pay their individual income tax liabilities on DGA's earnings. There is no evidence that DGA intends to change its practice of distributing enough to cover individual income tax liability.[9] See Davis v.

[9] Petitioner contends that DGA's practice of distributing only enough to cover individual income tax liability distinguishes this case from Gross v. Commissioner, T.C. Memo. 1999-254, in which the corporation distributed substantially all of its income, and thus tax-affecting is appropriate here. Whether tax-affecting applies turns on valuation principles including consideration of the hypothetical willing seller and buyer, the experts, and specific facts of the case, Gross v. Commissioner, 272 F.3d at 351-352, and not necessarily on formulas and opinions proffered by an expert witness, see Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957), affg. in part and remanding in part on another ground T.C. Memo. 1956-178; Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); Estate of Hall v. Commissioner, 92 T.C. 312, 338 (1989). In addition, petitioner misunderstands our analysis of the effect of a shareholder-level tax in Gross v. Commissioner, supra. Our analysis did not depend on the proportion of corporate income

(continued...)

Commissioner, 110 T.C. 530, 559 (1998). The assumptions of petitioner's witnesses that a hypothetical buyer and seller would assume without any supporting evidence that those events would occur detracts from the credibility of their opinions. See Gross v. Commissioner, 272 F.3d at 351-355.

Petitioner contends that the testimony of Oliver and Nammacher establishes that a hypothetical willing buyer would tax-affect earnings in valuing DGA stock. We disagree.

i. Oliver's Testimony

Oliver initially testified that MPI tax-affected DGA's earnings to apply C corporation tax rates and later testified that MPI reduced DGA's earnings to reflect individual income tax rates. Oliver was substantially unfamiliar with the MPI report.[10] The MPI report contained passages lifted verbatim from the Empire report. We give Oliver's testimony little weight.

[9](...continued)
distributed. We said that, in determining the present value of an expected stream of earnings, any tax-affecting to reflect the shareholder-level tax burden should be done equally (or not at all) to both the discount rate and the expected cashflows, with the result that, in either case, the present value determined would be the same. That analysis is independent of the proportion of earnings distributed.

[10] Petitioner also called Hassan, another MPI employee, as a witness. However, Hassan did not testify about tax-affecting, executive compensation, or discounts.

ii. Nammacher's Testimony

Nammacher testified that: (1) He has always tax-affected S corporation income for the past 20 years;[11] (2) an informal poll at a recent conference showed 90 to 95 percent of responding appraisers tax-affect S corporation income; (3) the American Society of Appraisers (ASA) Board of Review rejects any application for certification if the candidate submits test answers or reports for review that do not tax-affect S corporation income; (4) his experience is that all bankers, investment bankers, and business brokers use tax-affecting in estimating the value of S corporation stock; and (5) Empire uses tax-affecting in valuing S corporation stock held by employee stock ownership plans (ESOP) that it submits to the Department of Labor.

We give little weight to Nammacher's testimony about an informal poll at an unidentified conference held on a date not stated in the record. Nammacher admitted that ASA has never issued an official directive or recommendation on tax-affecting S corporations' earnings.

Nammacher's claim that ASA's Board of Review rejects test answers or reports by a candidate applying for ASA certification

[11] Nammacher's testimony about whether the tax-affecting adjustment was based on individual or corporate income tax rates was vague and suggests that Empire applied tax-affecting based on C corporation income tax rates.

which do not apply tax-affecting is unpersuasive because Kettell testified that ASA's Board of Examiners approved Kettell for ASA certification even though he submitted a report to the board that did not tax-affect S corporation income. Respondent's expert witnesses do not automatically tax-affect all S corporation earnings.

Nammacher's testimony about valuing ESOP stock for the Department of Labor is not convincing because there is no evidence that the Department of Labor's definition of value is similar to the definition of fair market value in this case.

c. Del. Open MRI Radiology Associates, P.A. v. Kessler

Petitioner contends that the reasoning in Del. Open MRI Radiology Associates, P.A. v. Kessler, 898 A.2d 290 (Del. Ch. 2006), supports application of tax-affecting in this case. We disagree. The issue in Del. Open MRI was whether the minority stockholders of Delaware Open MRI Radiology Associates, P.A., received fair value of the going concern in a merger (fair merger price). Id. at 299, 310. The court of chancery said the fair merger price had to take into account the loss of the favorable tax treatment for the S corporation shareholders. Id. at 326. The fair merger price reflected equitable considerations including the possibility that in a merger minority shareholders might be squeezed out. Id. at 311-312.

"Fair value" in minority stock appraisal cases is not equivalent to "fair market value". Swope v. Siegel-Robert, Inc., 243 F.3d 486, 492-493 (8th Cir. 2001); Union Ill. 1995 Inv. L.P. v. Union Fin. Group, Ltd., 847 A.2d 340, 355 (Del. Ch. 2003); see Cavalier Oil Corp. v. Harnett, 564 A.2d 1137 (Del. 1989); see also JPMorgan Chase & Co. v. Commissioner, 458 F.3d 564, 569 (7th Cir. 2006), affg. in part, vacating in part and remanding Bank One Corp. v. Commissioner, 120 T.C. 174 (2003). In Del. Open MRI the court of chancery used a method to estimate the fair merger price that considered the difference between the value that a stockholder of Delaware Radiology would receive in Delaware Radiology as a C corporation and the value that a stockholder would receive in Delaware Radiology as an S corporation and applied a type of tax-affecting. Id. at 327. However, the court of chancery did not decide the price that a hypothetical willing buyer would pay a hypothetical willing seller, both having reasonable knowledge of all the relevant facts and neither being under compulsion to buy or to sell that we use in this case.

d. Conclusion

We conclude that there is insufficient evidence to establish that a hypothetical buyer and seller would tax-affect DGA's earnings and that tax-affecting DGA's earnings is not appropriate.

3. Whether To Assume DGA Would Reduce Executive Compensation

Respondent contends that DGA's projected net income should be increased on the assumption that the Dallas family officers are receiving unreasonable compensation and that those amounts would be reduced voluntarily or as a result of litigation brought by a minority shareholder if a minority block of DGA shares were sold to an unrelated investor. Respondent relies on AE's report to support this position. Petitioner contends that AE is incorrect and that DGA's compensation to petitioner and his sons would not decrease after the hypothetical sale, leading to higher income for DGA.

The record does not contain the quality of factual analysis customarily used by courts in deciding whether compensation is reasonable. Further, there is nothing in the record to suggest that DGA is planning to change how it pays petitioner and his sons. See Davis v. Commissioner, 110 T.C. 530 (1998). Thus, we have no more reason to assume changes in DGA's executive compensation policies than we have to assume changes in dividend paying policies or a change in its S corporation status.[12] On this record we, unlike AE and Empire,[13] do not assume DGA's

[12] We disagree with petitioner's expert Empire on all of these points.

[13] Empire's position on executive compensation is more (continued...)

projected profits will increase as a result of reduced compensation to petitioner and his sons after the hypothetical sale of DGA stock.[14]

4. Discount for Lack of Control or Minority Interest

a. Discount for Lack of Voting Power

MPI did not apply a discount for lack of control or minority interest because it estimated the value of a minority interest of the DGA stock at issue. However, MPI applied a 5-percent discount for lack of voting power. Petitioner contends that this discount for lack of voting power is warranted because the stock at issue is nonvoting stock. Petitioner contends that nonvoting stock is worth less than a minority interest because minority shareholders could pool their votes to influence the S corporation. Any anticipation of minority shareholders' pooling

[13](...continued)
favorable to respondent than MPI's position and fairly similar to AE's position. One may ask whether respondent viewed Empire's analysis as a concession of the matter. The record makes clear that respondent did not. At the start of the trial, petitioner's counsel listed valuation matters in dispute, including the executive compensation issue. Respondent's counsel concurred that it remained in dispute. Thus, it is clear that both parties understood that the executive compensation issue remained in dispute and thus were on notice of the need to present evidence relating to that issue.

[14] We do not consider AE's guideline company and transaction methods because the application of those methods is based on an incorrect assumption that adjustments must be made for executive compensation. Thus, AE's guideline companies and transaction methods are not comparable to DGA and its methods.

their votes is speculative. We conclude that no additional discount is warranted for lack of voting power.

b. Minority Interest Discount for Nonoperating Assets

AE and Empire estimated minority interest discounts of 15 percent for nonoperating assets.[15] Petitioner does not dispute the appropriateness of a minority interest discount of 15 percent for nonoperating assets.

c. Minority Interest Discount for Operating Assets

AE applied a 20-percent minority interest discount for operating assets.[16] Petitioner contends that amount is too low because AE computed it using a formula based on a control premium, and, in estimating the control premium, AE adjusted for excessive executive compensation. We disagree. There is no indication that AE based its selection of the control premium on excessive executive compensation.

5. Discount for Lack of Marketability

Each expert concludes that some discount for lack of marketability is appropriate because there was no ready market for DGA stock on the valuation dates.

[15] MPI did not use a separate minority interest discount for nonoperating assets because MPI used a net asset value approach to value a minority interest and because MPI's method assumed that the DGA stock at issue was for a minority interest.

[16] MPI did not use a minority interest discount for operating assets because MPI's method assumed that the DGA stock at issue was for a minority interest.

Respondent defends AE's conclusion that a lack of marketability discount of 20 percent is correct. Petitioner agrees with MPI that a lack of marketability discount of 40 percent is correct. We disagree with petitioner.

MPI compiled information from Private Equity Week, a weekly newsletter, on comparable private placements in recent years and found that the mean discount for lack of marketability for restricted stock like DGA's before 1990 was 34.2 percent, from 1990 to 1997 was 20.7 percent, and from 1997 to the present has been 13 percent. MPI used the 34.2-percent discount and adjusted it to 40 percent because DGA stock had no prospect of becoming public in more than 2 years. We believe MPI should have used the discount studies from the period that includes the transactions at issue. The valuation dates are in 1999 and 2000 when, according to MPI, the median lack of marketability discount rate was 13 percent. We conclude that a 20-percent discount for lack of marketability is appropriate.

6. Conclusion as to Fair Market Value of DGA Stock

We calculated the fair market value of DGA stock as follows:[17]

[17] This computation is based on AE's capitalization of income approach adjusted for executive compensation. Earnings before interest and tax (EBIT) are adjusted by $1,300 for 1999 and $1,100 for 2000 to correct the adjustment for executive compensation. Each amount (other than percentages and number of shares) in this calculation is multiplied by one thousand.

Total Equity

	1999	2000
Net sales	$30,867	$33,225
Adjusted EBIT:		
$4,600 less $1,300 for 1999	3,300	
and $1,100 for 2000		3,500
Long-term growth rate	3%	3%
EBIT (next 12 months)	3,399	3,605
Less incremental operating working capital	(148)	(159)
Net operating cashflow for capitalization	3,251	3,446
Capitalization rate (16%-3%; 15%-3%)	13%	12%
Indicated enterprise value (excl. nonoperating assets)	25,008	28,717
Indicated enterprise value (rounded)	25,000	28,700
Plus excess working capital	1,108	623
Fair market value of business enterprise	26,108	29,323
Nonoperating assets	3,253	3,199
Total equity value	29,361	32,522
Total equity value (rounded)	29,400	32,500

Discounted Equity

Total equity value	29,400	32,500
Discounts for lack of control:		
Operating assets (20%)	(5,222)	(5,865)
Nonoperating assets (15%)	(488)	(480)
As-if freely traded value	23,690	26,155
Discount for lack of marketability (20%)	(4,738)	(5,231)
Fair market value of equity	18,952	20,924

Fair Market Value Per Share

Number of shares	25,250	25,328
Fair market value per share	751	801

The fair market value of the DGA stock at issue was $751 per share on November 29, 1999, and $801 per share on November 29, 2000.

D. Fair Market Value of the 1999 Notes

Respondent determined that the fair market value of each of the 1999 notes was $1,687,704, which is less than face value because they were self-canceling. Petitioner contends that the

value of each 1999 note was its face value of $2,232,000[18] and the self-canceling clauses should be given no effect.

Petitioner contends generally that the promissory notes used to pay for the stock were not self-canceling because they were ambiguous on that point. We disagree. The notes unambiguously provided that they were self-canceling.

Petitioner contends that we should reform the 1999 notes because inclusion of the self-canceling clauses was a drafting mistake. We disagree. Rosenberg testified that he drafted the 1999 notes and that he meant for the self-canceling clauses to require the 1999 notes to be deemed paid if petitioner died before they were paid. Holt testified that the intent of the clauses was to treat the unpaid portion of the notes as a gift from petitioner to his sons in the event of petitioner's death. Holt's testimony is corroborated by a memorandum to his file dated September 28, 1999.

Petitioner cites cases which involve typographical errors. See, e.g., Woods v. Commissioner, 92 T.C. 776 (1989); Buchine v. Commissioner, T.C. Memo. 1992-36, affd. 20 F.3d 173 (5th Cir. 1994); Atkinson v. Commissioner, T.C. Memo. 1990-37. Those cases have no bearing here because this case involves no typographical errors. Petitioner may not disavow the self-canceling clauses.

[18] Petitioner offered no evidence about the value of the 1999 notes.

They are not the result of mistake, undue influence, fraud, or duress.

We conclude on the basis of the foregoing that the self-canceling clauses must be given effect, and that the value of each of the 1999 notes is $1,687,704 as determined by respondent.[19] To reflect the foregoing,

Decision will be entered under Rule 155.

[19] In the opening brief, respondent contended that the share adjustment clauses are void because they are against public policy. Petitioner did not respond to respondent's argument. We deem this issue conceded because petitioner made no argument about it on brief. See Chevron Corp. v. Commissioner, 104 T.C. 719, 758 (1995); Remuzzi v. Commissioner, T.C. Memo. 1988-8, affd. without published opinion 867 F.2d 609 (4th Cir. 1989).

DAUBERT ET UX., INDIVIDUALLY AND AS GUARDIANS AD LITEM FOR DAUBERT, ET AL. *v.* MERRELL DOW PHARMACEUTICALS, INC.

CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

No. 92–102. Argued March 30, 1993—Decided June 28, 1993

Petitioners, two minor children and their parents, alleged in their suit against respondent that the children's serious birth defects had been caused by the mothers' prenatal ingestion of Bendectin, a prescription drug marketed by respondent. The District Court granted respondent summary judgment based on a well-credentialed expert's affidavit concluding, upon reviewing the extensive published scientific literature on the subject, that maternal use of Bendectin has not been shown to be a risk factor for human birth defects. Although petitioners had responded with the testimony of eight other well-credentialed experts, who based their conclusion that Bendectin can cause birth defects on animal studies, chemical structure analyses, and the unpublished "reanalysis" of previously published human statistical studies, the court determined that this evidence did not meet the applicable "general acceptance" standard for the admission of expert testimony. The Court of Appeals agreed and affirmed, citing *Frye* v. *United States*, 54 App. D. C. 46, 47, 293 F. 1013, 1014, for the rule that expert opinion based on a scientific technique is inadmissible unless the technique is "generally accepted" as reliable in the relevant scientific community.

Held: The Federal Rules of Evidence, not *Frye*, provide the standard for admitting expert scientific testimony in a federal trial. Pp. 585–597.

(a) *Frye*'s "general acceptance" test was superseded by the Rules' adoption. The Rules occupy the field, *United States* v. *Abel*, 469 U. S. 45, 49, and, although the common law of evidence may serve as an aid to their application, *id.*, at 51–52, respondent's assertion that they somehow assimilated *Frye* is unconvincing. Nothing in the Rules as a whole or in the text and drafting history of Rule 702, which specifically governs expert testimony, gives any indication that "general acceptance" is a necessary precondition to the admissibility of scientific evidence. Moreover, such a rigid standard would be at odds with the Rules' liberal thrust and their general approach of relaxing the traditional barriers to "opinion" testimony. Pp. 585–589.

(b) The Rules—especially Rule 702—place appropriate limits on the admissibility of purportedly scientific evidence by assigning to the trial

Syllabus

judge the task of ensuring that an expert's testimony both rests on a reliable foundation and is relevant to the task at hand. The reliability standard is established by Rule 702's requirement that an expert's testimony pertain to "scientific . . . knowledge," since the adjective "scientific" implies a grounding in science's methods and procedures, while the word "knowledge" connotes a body of known facts or of ideas inferred from such facts or accepted as true on good grounds. The Rule's requirement that the testimony "assist the trier of fact to understand the evidence or to determine a fact in issue" goes primarily to relevance by demanding a valid scientific connection to the pertinent inquiry as a precondition to admissibility. Pp. 589–592.

(c) Faced with a proffer of expert scientific testimony under Rule 702, the trial judge, pursuant to Rule 104(a), must make a preliminary assessment of whether the testimony's underlying reasoning or methodology is scientifically valid and properly can be applied to the facts at issue. Many considerations will bear on the inquiry, including whether the theory or technique in question can be (and has been) tested, whether it has been subjected to peer review and publication, its known or potential error rate and the existence and maintenance of standards controlling its operation, and whether it has attracted widespread acceptance within a relevant scientific community. The inquiry is a flexible one, and its focus must be solely on principles and methodology, not on the conclusions that they generate. Throughout, the judge should also be mindful of other applicable Rules. Pp. 592–595.

(d) Cross-examination, presentation of contrary evidence, and careful instruction on the burden of proof, rather than wholesale exclusion under an uncompromising "general acceptance" standard, is the appropriate means by which evidence based on valid principles may be challenged. That even limited screening by the trial judge, on occasion, will prevent the jury from hearing of authentic scientific breakthroughs is simply a consequence of the fact that the Rules are not designed to seek cosmic understanding but, rather, to resolve legal disputes. Pp. 595–597.

951 F. 2d 1128, vacated and remanded.

BLACKMUN, J., delivered the opinion for a unanimous Court with respect to Parts I and II–A, and the opinion of the Court with respect to Parts II–B, II–C, III, and IV, in which WHITE, O'CONNOR, SCALIA, KENNEDY, SOUTER, and THOMAS, JJ., joined. REHNQUIST, C. J., filed an opinion concurring in part and dissenting in part, in which STEVENS, J., joined, *post*, p. 598.

Counsel

Michael H. Gottesman argued the cause for petitioners. With him on the briefs were *Kenneth J. Chesebro*, *Barry J. Nace*, *David L. Shapiro*, and *Mary G. Gillick*.

Charles Fried argued the cause for respondent. With him on the brief were *Charles R. Nesson*, *Joel I. Klein*, *Richard G. Taranto*, *Hall R. Marston*, *George E. Berry*, *Edward H. Stratemeier*, and *W. Glenn Forrester*.*

JUSTICE BLACKMUN delivered the opinion of the Court.

In this case we are called upon to determine the standard for admitting expert scientific testimony in a federal trial.

I

Petitioners Jason Daubert and Eric Schuller are minor children born with serious birth defects. They and their parents sued respondent in California state court, alleging that the birth defects had been caused by the mothers' ingestion of Bendectin, a prescription antinausea drug marketed by respondent. Respondent removed the suits to federal court on diversity grounds.

After extensive discovery, respondent moved for summary judgment, contending that Bendectin does not cause birth defects in humans and that petitioners would be unable to come forward with any admissible evidence that it does. In support of its motion, respondent submitted an affidavit of Steven H. Lamm, physician and epidemiologist, who is a well-credentialed expert on the risks from exposure to various chemical substances.[1] Doctor Lamm stated that he had reviewed all the literature on Bendectin and human birth defects—more than 30 published studies involving over 130,000 patients. No study had found Bendectin to be a human teratogen (*i. e.*, a substance capable of causing malformations in fetuses). On the basis of this review, Doctor Lamm concluded that maternal use of Bendectin during the first trimester of pregnancy has not been shown to be a risk factor for human birth defects.

---

by *Donald N. Bersoff;* for Alvan R. Feinstein by *Don M. Kennedy, Loretta M. Smith,* and *Richard A. Oetheimer;* and for Kenneth Rothman et al. by *Neil B. Cohen.*

[1] Doctor Lamm received his master's and doctor of medicine degrees from the University of Southern California. He has served as a consultant in birth-defect epidemiology for the National Center for Health Statistics and has published numerous articles on the magnitude of risk from exposure to various chemical and biological substances. App. 34–44.

Petitioners did not (and do not) contest this characterization of the published record regarding Bendectin. Instead, they responded to respondent's motion with the testimony of eight experts of their own, each of whom also possessed impressive credentials.[2] These experts had concluded that Bendectin can cause birth defects. Their conclusions were based upon "in vitro" (test tube) and "in vivo" (live) animal studies that found a link between Bendectin and malformations; pharmacological studies of the chemical structure of Bendectin that purported to show similarities between the structure of the drug and that of other substances known to cause birth defects; and the "reanalysis" of previously published epidemiological (human statistical) studies.

The District Court granted respondent's motion for summary judgment. The court stated that scientific evidence is admissible only if the principle upon which it is based is "'sufficiently established to have general acceptance in the field to which it belongs.'" 727 F. Supp. 570, 572 (SD Cal. 1989), quoting *United States* v. *Kilgus*, 571 F. 2d 508, 510 (CA9 1978). The court concluded that petitioners' evidence did not meet this standard. Given the vast body of epidemiological data concerning Bendectin, the court held, expert opinion which is not based on epidemiological evidence

[2] For example, Shanna Helen Swan, who received a master's degree in biostatistics from Columbia University and a doctorate in statistics from the University of California at Berkeley, is chief of the section of the California Department of Health and Services that determines causes of birth defects and has served as a consultant to the World Health Organization, the Food and Drug Administration, and the National Institutes of Health. *Id.*, at 113–114, 131–132. Stuart A. Newman, who received his bachelor's degree in chemistry from Columbia University and his master's and doctorate in chemistry from the University of Chicago, is a professor at New York Medical College and has spent over a decade studying the effect of chemicals on limb development. *Id.*, at 54–56. The credentials of the others are similarly impressive. See *id.*, at 61–66, 73–80, 148–153, 187–192, and Attachments 12, 20, 21, 26, 31, and 32 to Petitioners' Opposition to Summary Judgment in No. 84–2013–G(I) (SD Cal.).

is not admissible to establish causation. 727 F. Supp., at 575. Thus, the animal-cell studies, live-animal studies, and chemical-structure analyses on which petitioners had relied could not raise by themselves a reasonably disputable jury issue regarding causation. *Ibid.* Petitioners' epidemiological analyses, based as they were on recalculations of data in previously published studies that had found no causal link between the drug and birth defects, were ruled to be inadmissible because they had not been published or subjected to peer review. *Ibid.*

The United States Court of Appeals for the Ninth Circuit affirmed. 951 F. 2d 1128 (1991). Citing *Frye* v. *United States*, 54 App. D. C. 46, 47, 293 F. 1013, 1014 (1923), the court stated that expert opinion based on a scientific technique is inadmissible unless the technique is "generally accepted" as reliable in the relevant scientific community. 951 F. 2d, at 1129–1130. The court declared that expert opinion based on a methodology that diverges "significantly from the procedures accepted by recognized authorities in the field . . . cannot be shown to be 'generally accepted as a reliable technique.'" *Id.*, at 1130, quoting *United States* v. *Solomon*, 753 F. 2d 1522, 1526 (CA9 1985).

The court emphasized that other Courts of Appeals considering the risks of Bendectin had refused to admit reanalyses of epidemiological studies that had been neither published nor subjected to peer review. 951 F. 2d, at 1130–1131. Those courts had found unpublished reanalyses "particularly problematic in light of the massive weight of the original published studies supporting [respondent's] position, all of which had undergone full scrutiny from the scientific community." *Id.*, at 1130. Contending that reanalysis is generally accepted by the scientific community only when it is subjected to verification and scrutiny by others in the field, the Court of Appeals rejected petitioners' reanalyses as "unpublished, not subjected to the normal peer review process and generated solely for use in litigation." *Id.*, at 1131. The

court concluded that petitioners' evidence provided an insufficient foundation to allow admission of expert testimony that Bendectin caused their injuries and, accordingly, that petitioners could not satisfy their burden of proving causation at trial.

We granted certiorari, 506 U. S. 914 (1992), in light of sharp divisions among the courts regarding the proper standard for the admission of expert testimony. Compare, *e. g., United States* v. *Shorter*, 257 U. S. App. D. C. 358, 363–364, 809 F. 2d 54, 59–60 (applying the "general acceptance" standard), cert. denied, 484 U. S. 817 (1987), with *DeLuca* v. *Merrell Dow Pharmaceuticals, Inc.*, 911 F. 2d 941, 955 (CA3 1990) (rejecting the "general acceptance" standard).

II

A

In the 70 years since its formulation in the *Frye* case, the "general acceptance" test has been the dominant standard for determining the admissibility of novel scientific evidence at trial. See E. Green & C. Nesson, Problems, Cases, and Materials on Evidence 649 (1983). Although under increasing attack of late, the rule continues to be followed by a majority of courts, including the Ninth Circuit.[3]

The *Frye* test has its origin in a short and citation-free 1923 decision concerning the admissibility of evidence derived from a systolic blood pressure deception test, a crude precursor to the polygraph machine. In what has become a famous (perhaps infamous) passage, the then Court of Appeals for the District of Columbia described the device and its operation and declared:

> "Just when a scientific principle or discovery crosses the line between the experimental and demonstrable stages

[3] For a catalog of the many cases on either side of this controversy, see P. Giannelli & E. Imwinkelried, Scientific Evidence § 1–5, pp. 10–14 (1986 and Supp. 1991).

> is difficult to define. Somewhere in this twilight zone the evidential force of the principle must be recognized, and while courts will go a long way in admitting expert testimony deduced from a well-recognized scientific principle or discovery, *the thing from which the deduction is made must be sufficiently established to have gained general acceptance in the particular field in which it belongs.*" 54 App. D. C., at 47, 293 F., at 1014 (emphasis added).

Because the deception test had "not yet gained such standing and scientific recognition among physiological and psychological authorities as would justify the courts in admitting expert testimony deduced from the discovery, development, and experiments thus far made," evidence of its results was ruled inadmissible. *Ibid.*

The merits of the *Frye* test have been much debated, and scholarship on its proper scope and application is legion.[4]

[4] See, *e. g.*, Green, Expert Witnesses and Sufficiency of Evidence in Toxic Substances Litigation: The Legacy of *Agent Orange* and Bendectin Litigation, 86 Nw. U. L. Rev. 643 (1992) (hereinafter Green); Becker & Orenstein, The Federal Rules of Evidence After Sixteen Years—The Effect of "Plain Meaning" Jurisprudence, the Need for an Advisory Committee on the Rules of Evidence, and Suggestions for Selective Revision of the Rules, 60 Geo. Wash. L. Rev. 857, 876–885 (1992); Hanson, James Alphonzo Frye is Sixty-Five Years Old; Should He Retire?, 16 West. St. U. L. Rev. 357 (1989); Black, A Unified Theory of Scientific Evidence, 56 Ford. L. Rev. 595 (1988); Imwinkelried, The "Bases" of Expert Testimony: The Syllogistic Structure of Scientific Testimony, 67 N. C. L. Rev. 1 (1988); Proposals for a Model Rule on the Admissibility of Scientific Evidence, 26 Jurimetrics J. 235 (1986); Giannelli, The Admissibility of Novel Scientific Evidence: *Frye* v. *United States*, a Half-Century Later, 80 Colum. L. Rev. 1197 (1980); The Supreme Court, 1986 Term, 101 Harv. L. Rev. 7, 119, 125–127 (1987).

Indeed, the debates over *Frye* are such a well-established part of the academic landscape that a distinct term—"*Frye*-ologist"—has been advanced to describe those who take part. See Behringer, Introduction, Proposals for a Model Rule on the Admissibility of Scientific Evidence, 26 Jurimetrics J. 237, 239 (1986), quoting Lacey, Scientific Evidence, 24 Jurimetrics J. 254, 264 (1984).

Petitioners' primary attack, however, is not on the content but on the continuing authority of the rule. They contend that the *Frye* test was superseded by the adoption of the Federal Rules of Evidence.[5] We agree.

We interpret the legislatively enacted Federal Rules of Evidence as we would any statute. *Beech Aircraft Corp.* v. *Rainey*, 488 U. S. 153, 163 (1988). Rule 402 provides the baseline:

> "All relevant evidence is admissible, except as otherwise provided by the Constitution of the United States, by Act of Congress, by these rules, or by other rules prescribed by the Supreme Court pursuant to statutory authority. Evidence which is not relevant is not admissible."

"Relevant evidence" is defined as that which has "any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence." Rule 401. The Rules' basic standard of relevance thus is a liberal one.

Frye, of course, predated the Rules by half a century. In *United States* v. *Abel*, 469 U. S. 45 (1984), we considered the pertinence of background common law in interpreting the Rules of Evidence. We noted that the Rules occupy the field, *id.*, at 49, but, quoting Professor Cleary, the Reporter,

---

[5] Like the question of *Frye*'s merit, the dispute over its survival has divided courts and commentators. Compare, *e. g.*, *United States* v. *Williams*, 583 F. 2d 1194 (CA2 1978) (*Frye* is superseded by the Rules of Evidence), cert. denied, 439 U. S. 1117 (1979), with *Christophersen* v. *Allied-Signal Corp.*, 939 F. 2d 1106, 1111, 1115–1116 (CA5 1991) (en banc) (*Frye* and the Rules coexist), cert. denied, 503 U. S. 912 (1992), 3 J. Weinstein & M. Berger, Weinstein's Evidence ¶ 702[03], pp. 702–36 to 702–37 (1988) (hereinafter Weinstein & Berger) (*Frye* is dead), and M. Graham, Handbook of Federal Evidence § 703.2 (3d ed. 1991) (*Frye* lives). See generally P. Giannelli & E. Imwinkelried, Scientific Evidence § 1–5, at 28–29 (citing authorities).

explained that the common law nevertheless could serve as an aid to their application:

> "'In principle, under the Federal Rules no common law of evidence remains. "All relevant evidence is admissible, except as otherwise provided . . . ." In reality, of course, the body of common law knowledge continues to exist, though in the somewhat altered form of a source of guidance in the exercise of delegated powers.'" *Id.*, at 51–52.

We found the common-law precept at issue in the *Abel* case entirely consistent with Rule 402's general requirement of admissibility, and considered it unlikely that the drafters had intended to change the rule. *Id.*, at 50–51. In *Bourjaily* v. *United States*, 483 U. S. 171 (1987), on the other hand, the Court was unable to find a particular common-law doctrine in the Rules, and so held it superseded.

Here there is a specific Rule that speaks to the contested issue. Rule 702, governing expert testimony, provides:

> "If scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, a witness qualified as an expert by knowledge, skill, experience, training, or education, may testify thereto in the form of an opinion or otherwise."

Nothing in the text of this Rule establishes "general acceptance" as an absolute prerequisite to admissibility. Nor does respondent present any clear indication that Rule 702 or the Rules as a whole were intended to incorporate a "general acceptance" standard. The drafting history makes no mention of *Frye*, and a rigid "general acceptance" requirement would be at odds with the "liberal thrust" of the Federal Rules and their "general approach of relaxing the traditional barriers to 'opinion' testimony." *Beech Aircraft Corp.* v. *Rainey*, 488 U. S., at 169 (citing Rules 701 to 705). See also Weinstein, Rule 702 of the Federal Rules of Evidence is

Sound; It Should Not Be Amended, 138 F. R. D. 631 (1991) ("The Rules were designed to depend primarily upon lawyer-adversaries and sensible triers of fact to evaluate conflicts"). Given the Rules' permissive backdrop and their inclusion of a specific rule on expert testimony that does not mention "general acceptance," the assertion that the Rules somehow assimilated *Frye* is unconvincing. *Frye* made "general acceptance" the exclusive test for admitting expert scientific testimony. That austere standard, absent from, and incompatible with, the Federal Rules of Evidence, should not be applied in federal trials.[6]

B

That the *Frye* test was displaced by the Rules of Evidence does not mean, however, that the Rules themselves place no limits on the admissibility of purportedly scientific evidence.[7] Nor is the trial judge disabled from screening such evidence. To the contrary, under the Rules the trial judge must ensure that any and all scientific testimony or evidence admitted is not only relevant, but reliable.

The primary locus of this obligation is Rule 702, which clearly contemplates some degree of regulation of the subjects and theories about which an expert may testify. "*If scientific*, technical, or other specialized *knowledge will assist the trier of fact* to understand the evidence or to determine a fact in issue" an expert "may testify *thereto*." (Emphasis added.) The subject of an expert's testimony must

[6] Because we hold that *Frye* has been superseded and base the discussion that follows on the content of the congressionally enacted Federal Rules of Evidence, we do not address petitioners' argument that application of the *Frye* rule in this diversity case, as the application of a judge-made rule affecting substantive rights, would violate the doctrine of *Erie R. Co.* v. *Tompkins*, 304 U. S. 64 (1938).

[7] THE CHIEF JUSTICE "do[es] not doubt that Rule 702 confides to the judge some gatekeeping responsibility," *post*, at 600, but would neither say how it does so nor explain what that role entails. We believe the better course is to note the nature and source of the duty.

be "scientific . . . knowledge."[8] The adjective "scientific" implies a grounding in the methods and procedures of science. Similarly, the word "knowledge" connotes more than subjective belief or unsupported speculation. The term "applies to any body of known facts or to any body of ideas inferred from such facts or accepted as truths on good grounds." Webster's Third New International Dictionary 1252 (1986). Of course, it would be unreasonable to conclude that the subject of scientific testimony must be "known" to a certainty; arguably, there are no certainties in science. See, *e. g.*, Brief for Nicolaas Bloembergen et al. as *Amici Curiae* 9 ("Indeed, scientists do not assert that they know what is immutably 'true'—they are committed to searching for new, temporary, theories to explain, as best they can, phenomena"); Brief for American Association for the Advancement of Science et al. as *Amici Curiae* 7–8 ("Science is not an encyclopedic body of knowledge about the universe. Instead, it represents a *process* for proposing and refining theoretical explanations about the world that are subject to further testing and refinement" (emphasis in original)). But, in order to qualify as "scientific knowledge," an inference or assertion must be derived by the scientific method. Proposed testimony must be supported by appropriate validation—*i. e.*, "good grounds," based on what is known. In short, the requirement that an expert's testimony pertain to "scientific knowledge" establishes a standard of evidentiary reliability.[9]

---

[8] Rule 702 also applies to "technical, or other specialized knowledge." Our discussion is limited to the scientific context because that is the nature of the expertise offered here.

[9] We note that scientists typically distinguish between "validity" (does the principle support what it purports to show?) and "reliability" (does application of the principle produce consistent results?). See Black, 56 Ford. L. Rev., at 599. Although "the difference between accuracy, validity, and reliability may be such that each is distinct from the other by no more than a hen's kick," Starrs, *Frye v. United States* Restructured and Revitalized: A Proposal to Amend Federal Evidence Rule 702, 26 Jurimet-

Rule 702 further requires that the evidence or testimony "assist the trier of fact to understand the evidence or to determine a fact in issue." This condition goes primarily to relevance. "Expert testimony which does not relate to any issue in the case is not relevant and, ergo, non-helpful." 3 Weinstein & Berger ¶ 702[02], p. 702–18. See also *United States* v. *Downing*, 753 F. 2d 1224, 1242 (CA3 1985) ("An additional consideration under Rule 702—and another aspect of relevancy—is whether expert testimony proffered in the case is sufficiently tied to the facts of the case that it will aid the jury in resolving a factual dispute"). The consideration has been aptly described by Judge Becker as one of "fit." *Ibid.* "Fit" is not always obvious, and scientific validity for one purpose is not necessarily scientific validity for other, unrelated purposes. See Starrs, *Frye v. United States* Restructured and Revitalized: A Proposal to Amend Federal Evidence Rule 702, 26 Jurimetrics J. 249, 258 (1986). The study of the phases of the moon, for example, may provide valid scientific "knowledge" about whether a certain night was dark, and if darkness is a fact in issue, the knowledge will assist the trier of fact. However (absent creditable grounds supporting such a link), evidence that the moon was full on a certain night will not assist the trier of fact in determining whether an individual was unusually likely to have behaved irrationally on that night. Rule 702's "helpfulness"

---

rics J. 249, 256 (1986), our reference here is to *evidentiary* reliability—that is, trustworthiness. Cf., *e. g.,* Advisory Committee's Notes on Fed. Rule Evid. 602, 28 U. S. C. App., p. 755 (" '[T]he rule requiring that a witness who testifies to a fact which can be perceived by the senses must have had an opportunity to observe, and must have actually observed the fact' is a 'most pervasive manifestation' of the common law insistence upon 'the most reliable sources of information' " (citation omitted)); Advisory Committee's Notes on Art. VIII of Rules of Evidence, 28 U. S. C. App., p. 770 (hearsay exceptions will be recognized only "under circumstances supposed to furnish guarantees of trustworthiness"). In a case involving scientific evidence, *evidentiary reliability* will be based upon *scientific validity.*

standard requires a valid scientific connection to the pertinent inquiry as a precondition to admissibility.

That these requirements are embodied in Rule 702 is not surprising. Unlike an ordinary witness, see Rule 701, an expert is permitted wide latitude to offer opinions, including those that are not based on firsthand knowledge or observation. See Rules 702 and 703. Presumably, this relaxation of the usual requirement of firsthand knowledge—a rule which represents "a 'most pervasive manifestation' of the common law insistence upon 'the most reliable sources of information,'" Advisory Committee's Notes on Fed. Rule Evid. 602, 28 U. S. C. App., p. 755 (citation omitted)—is premised on an assumption that the expert's opinion will have a reliable basis in the knowledge and experience of his discipline.

C

Faced with a proffer of expert scientific testimony, then, the trial judge must determine at the outset, pursuant to Rule 104(a),[10] whether the expert is proposing to testify to (1) scientific knowledge that (2) will assist the trier of fact to understand or determine a fact in issue.[11] This entails a preliminary assessment of whether the reasoning or method-

[10] Rule 104(a) provides:

"Preliminary questions concerning the qualification of a person to be a witness, the existence of a privilege, or the admissibility of evidence shall be determined by the court, subject to the provisions of subdivision (b) [pertaining to conditional admissions]. In making its determination it is not bound by the rules of evidence except those with respect to privileges." These matters should be established by a preponderance of proof. See *Bourjaily* v. *United States*, 483 U. S. 171, 175–176 (1987).

[11] Although the *Frye* decision itself focused exclusively on "novel" scientific techniques, we do not read the requirements of Rule 702 to apply specially or exclusively to unconventional evidence. Of course, well-established propositions are less likely to be challenged than those that are novel, and they are more handily defended. Indeed, theories that are so firmly established as to have attained the status of scientific law, such as the laws of thermodynamics, properly are subject to judicial notice under Federal Rule of Evidence 201.

ology underlying the testimony is scientifically valid and of whether that reasoning or methodology properly can be applied to the facts in issue. We are confident that federal judges possess the capacity to undertake this review. Many factors will bear on the inquiry, and we do not presume to set out a definitive checklist or test. But some general observations are appropriate.

Ordinarily, a key question to be answered in determining whether a theory or technique is scientific knowledge that will assist the trier of fact will be whether it can be (and has been) tested. "Scientific methodology today is based on generating hypotheses and testing them to see if they can be falsified; indeed, this methodology is what distinguishes science from other fields of human inquiry." Green 645. See also C. Hempel, Philosophy of Natural Science 49 (1966) ("[T]he statements constituting a scientific explanation must be capable of empirical test"); K. Popper, Conjectures and Refutations: The Growth of Scientific Knowledge 37 (5th ed. 1989) ("[T]he criterion of the scientific status of a theory is its falsifiability, or refutability, or testability") (emphasis deleted).

Another pertinent consideration is whether the theory or technique has been subjected to peer review and publication. Publication (which is but one element of peer review) is not a *sine qua non* of admissibility; it does not necessarily correlate with reliability, see S. Jasanoff, The Fifth Branch: Science Advisors as Policymakers 61–76 (1990), and in some instances well-grounded but innovative theories will not have been published, see Horrobin, The Philosophical Basis of Peer Review and the Suppression of Innovation, 263 JAMA 1438 (1990). Some propositions, moreover, are too particular, too new, or of too limited interest to be published. But submission to the scrutiny of the scientific community is a component of "good science," in part because it increases the likelihood that substantive flaws in methodology will be detected. See J. Ziman, Reliable Knowledge: An Exploration

of the Grounds for Belief in Science 130–133 (1978); Relman & Angell, How Good Is Peer Review?, 321 New Eng. J. Med. 827 (1989). The fact of publication (or lack thereof) in a peer reviewed journal thus will be a relevant, though not dispositive, consideration in assessing the scientific validity of a particular technique or methodology on which an opinion is premised.

Additionally, in the case of a particular scientific technique, the court ordinarily should consider the known or potential rate of error, see, *e. g.*, *United States* v. *Smith*, 869 F. 2d 348, 353–354 (CA7 1989) (surveying studies of the error rate of spectrographic voice identification technique), and the existence and maintenance of standards controlling the technique's operation, see *United States* v. *Williams*, 583 F. 2d 1194, 1198 (CA2 1978) (noting professional organization's standard governing spectrographic analysis), cert. denied, 439 U. S. 1117 (1979).

Finally, "general acceptance" can yet have a bearing on the inquiry. A "reliability assessment does not require, although it does permit, explicit identification of a relevant scientific community and an express determination of a particular degree of acceptance within that community." *United States* v. *Downing*, 753 F. 2d, at 1238. See also 3 Weinstein & Berger ¶ 702[03], pp. 702–41 to 702–42. Widespread acceptance can be an important factor in ruling particular evidence admissible, and "a known technique which has been able to attract only minimal support within the community," *Downing*, 753 F. 2d, at 1238, may properly be viewed with skepticism.

The inquiry envisioned by Rule 702 is, we emphasize, a flexible one.[12] Its overarching subject is the scientific valid-

[12] A number of authorities have presented variations on the reliability approach, each with its own slightly different set of factors. See, *e. g.*, *Downing*, 753 F. 2d, at 1238–1239 (on which our discussion draws in part); 3 Weinstein & Berger ¶ 702[03], pp. 702–41 to 702–42 (on which the *Downing* court in turn partially relied); McCormick, Scientific Evidence: Defin-

ity—and thus the evidentiary relevance and reliability—of the principles that underlie a proposed submission. The focus, of course, must be solely on principles and methodology, not on the conclusions that they generate.

Throughout, a judge assessing a proffer of expert scientific testimony under Rule 702 should also be mindful of other applicable rules. Rule 703 provides that expert opinions based on otherwise inadmissible hearsay are to be admitted only if the facts or data are "of a type reasonably relied upon by experts in the particular field in forming opinions or inferences upon the subject." Rule 706 allows the court at its discretion to procure the assistance of an expert of its own choosing. Finally, Rule 403 permits the exclusion of relevant evidence "if its probative value is substantially outweighed by the danger of unfair prejudice, confusion of the issues, or misleading the jury . . . ." Judge Weinstein has explained: "Expert evidence can be both powerful and quite misleading because of the difficulty in evaluating it. Because of this risk, the judge in weighing possible prejudice against probative force under Rule 403 of the present rules exercises more control over experts than over lay witnesses." Weinstein, 138 F. R. D., at 632.

III

We conclude by briefly addressing what appear to be two underlying concerns of the parties and *amici* in this case. Respondent expresses apprehension that abandonment of "general acceptance" as the exclusive requirement for admission will result in a "free-for-all" in which befuddled juries are confounded by absurd and irrational pseudoscientific as-

---

ing a New Approach to Admissibility, 67 Iowa L. Rev. 879, 911–912 (1982); and Symposium on Science and the Rules of Evidence, 99 F. R. D. 187, 231 (1983) (statement by Margaret Berger). To the extent that they focus on the reliability of evidence as ensured by the scientific validity of its underlying principles, all these versions may well have merit, although we express no opinion regarding any of their particular details.

sertions. In this regard respondent seems to us to be overly pessimistic about the capabilities of the jury and of the adversary system generally. Vigorous cross-examination, presentation of contrary evidence, and careful instruction on the burden of proof are the traditional and appropriate means of attacking shaky but admissible evidence. See *Rock* v. *Arkansas*, 483 U. S. 44, 61 (1987). Additionally, in the event the trial court concludes that the scintilla of evidence presented supporting a position is insufficient to allow a reasonable juror to conclude that the position more likely than not is true, the court remains free to direct a judgment, Fed. Rule Civ. Proc. 50(a), and likewise to grant summary judgment, Fed. Rule Civ. Proc. 56. Cf., *e. g.*, *Turpin* v. *Merrell Dow Pharmaceuticals, Inc.*, 959 F. 2d 1349 (CA6) (holding that scientific evidence that provided foundation for expert testimony, viewed in the light most favorable to plaintiffs, was not sufficient to allow a jury to find it more probable than not that defendant caused plaintiff's injury), cert. denied, 506 U. S. 826 (1992); *Brock* v. *Merrell Dow Pharmaceuticals, Inc.*, 874 F. 2d 307 (CA5 1989) (reversing judgment entered on jury verdict for plaintiffs because evidence regarding causation was insufficient), modified, 884 F. 2d 166 (CA5 1989), cert. denied, 494 U. S. 1046 (1990); Green 680–681. These conventional devices, rather than wholesale exclusion under an uncompromising "general acceptance" test, are the appropriate safeguards where the basis of scientific testimony meets the standards of Rule 702.

Petitioners and, to a greater extent, their *amici* exhibit a different concern. They suggest that recognition of a screening role for the judge that allows for the exclusion of "invalid" evidence will sanction a stifling and repressive scientific orthodoxy and will be inimical to the search for truth. See, *e. g.*, Brief for Ronald Bayer et al. as *Amici Curiae*. It is true that open debate is an essential part of both legal and scientific analyses. Yet there are important differences between the quest for truth in the courtroom and the quest

for truth in the laboratory. Scientific conclusions are subject to perpetual revision. Law, on the other hand, must resolve disputes finally and quickly. The scientific project is advanced by broad and wide-ranging consideration of a multitude of hypotheses, for those that are incorrect will eventually be shown to be so, and that in itself is an advance. Conjectures that are probably wrong are of little use, however, in the project of reaching a quick, final, and binding legal judgment—often of great consequence—about a particular set of events in the past. We recognize that, in practice, a gatekeeping role for the judge, no matter how flexible, inevitably on occasion will prevent the jury from learning of authentic insights and innovations. That, nevertheless, is the balance that is struck by Rules of Evidence designed not for the exhaustive search for cosmic understanding but for the particularized resolution of legal disputes.[13]

IV

To summarize: "General acceptance" is not a necessary precondition to the admissibility of scientific evidence under the Federal Rules of Evidence, but the Rules of Evidence—especially Rule 702—do assign to the trial judge the task of ensuring that an expert's testimony both rests on a reliable foundation and is relevant to the task at hand. Pertinent evidence based on scientifically valid principles will satisfy those demands.

The inquiries of the District Court and the Court of Appeals focused almost exclusively on "general acceptance," as gauged by publication and the decisions of other courts. Ac-

[13] This is not to say that judicial interpretation, as opposed to adjudicative factfinding, does not share basic characteristics of the scientific endeavor: "The work of a judge is in one sense enduring and in another ephemeral. . . . In the endless process of testing and retesting, there is a constant rejection of the dross and a constant retention of whatever is pure and sound and fine." B. Cardozo, The Nature of the Judicial Process 178–179 (1921).

cordingly, the judgment of the Court of Appeals is vacated, and the case is remanded for further proceedings consistent with this opinion.

It is so ordered.

CHIEF JUSTICE REHNQUIST, with whom JUSTICE STEVENS joins, concurring in part and dissenting in part.

The petition for certiorari in this case presents two questions: first, whether the rule of *Frye* v. *United States*, 54 App. D. C. 46, 293 F. 1013 (1923), remains good law after the enactment of the Federal Rules of Evidence; and second, if *Frye* remains valid, whether it requires expert scientific testimony to have been subjected to a peer review process in order to be admissible. The Court concludes, correctly in my view, that the *Frye* rule did not survive the enactment of the Federal Rules of Evidence, and I therefore join Parts I and II–A of its opinion. The second question presented in the petition for certiorari necessarily is mooted by this holding, but the Court nonetheless proceeds to construe Rules 702 and 703 very much in the abstract, and then offers some "general observations." *Ante*, at 593.

"General observations" by this Court customarily carry great weight with lower federal courts, but the ones offered here suffer from the flaw common to most such observations—they are not applied to deciding whether particular testimony was or was not admissible, and therefore they tend to be not only general, but vague and abstract. This is particularly unfortunate in a case such as this, where the ultimate legal question depends on an appreciation of one or more bodies of knowledge not judicially noticeable, and subject to different interpretations in the briefs of the parties and their *amici*. Twenty-two *amicus* briefs have been filed in the case, and indeed the Court's opinion contains no fewer than 37 citations to *amicus* briefs and other secondary sources.

The various briefs filed in this case are markedly different from typical briefs, in that large parts of them do not deal with decided cases or statutory language—the sort of material we customarily interpret. Instead, they deal with definitions of scientific knowledge, scientific method, scientific validity, and peer review—in short, matters far afield from the expertise of judges. This is not to say that such materials are not useful or even necessary in deciding how Rule 702 should be applied; but it is to say that the unusual subject matter should cause us to proceed with great caution in deciding more than we have to, because our reach can so easily exceed our grasp.

But even if it were desirable to make "general observations" not necessary to decide the questions presented, I cannot subscribe to some of the observations made by the Court. In Part II–B, the Court concludes that reliability and relevancy are the touchstones of the admissibility of expert testimony. *Ante,* at 590–592. Federal Rule of Evidence 402 provides, as the Court points out, that "[e]vidence which is not relevant is not admissible." But there is no similar reference in the Rule to "reliability." The Court constructs its argument by parsing the language "[i]f scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, . . . an expert . . . may testify thereto . . . ." Fed. Rule Evid. 702. It stresses that the subject of the expert's testimony must be "scientific . . . knowledge," and points out that "scientific" "implies a grounding in the methods and procedures of science" and that the word "knowledge" "connotes more than subjective belief or unsupported speculation." *Ante,* at 590. From this it concludes that "scientific knowledge" must be "derived by the scientific method." *Ibid.* Proposed testimony, we are told, must be supported by "appropriate validation." *Ibid.* Indeed, in footnote 9, the Court decides that "[i]n a case involving scientific evidence, *eviden-*

tiary reliability will be based upon *scientific validity.*" *Ante*, at 591, n. 9 (emphasis in original).

Questions arise simply from reading this part of the Court's opinion, and countless more questions will surely arise when hundreds of district judges try to apply its teaching to particular offers of expert testimony. Does all of this *dicta* apply to an expert seeking to testify on the basis of "technical or other specialized knowledge"—the other types of expert knowledge to which Rule 702 applies—or are the "general observations" limited only to "scientific knowledge"? What is the difference between scientific knowledge and technical knowledge; does Rule 702 actually contemplate that the phrase "scientific, technical, or other specialized knowledge" be broken down into numerous subspecies of expertise, or did its authors simply pick general descriptive language covering the sort of expert testimony which courts have customarily received? The Court speaks of its confidence that federal judges can make a "preliminary assessment of whether the reasoning or methodology underlying the testimony is scientifically valid and of whether that reasoning or methodology properly can be applied to the facts in issue." *Ante*, at 592–593. The Court then states that a "key question" to be answered in deciding whether something is "scientific knowledge" "will be whether it can be (and has been) tested." *Ante*, at 593. Following this sentence are three quotations from treatises, which not only speak of empirical testing, but one of which states that the "'criterion of the scientific status of a theory is its falsifiability, or refutability, or testability.'" *Ibid.*

I defer to no one in my confidence in federal judges; but I am at a loss to know what is meant when it is said that the scientific status of a theory depends on its "falsifiability," and I suspect some of them will be, too.

I do not doubt that Rule 702 confides to the judge some gatekeeping responsibility in deciding questions of the admissibility of proffered expert testimony. But I do not think

it imposes on them either the obligation or the authority to become amateur scientists in order to perform that role. I think the Court would be far better advised in this case to decide only the questions presented, and to leave the further development of this important area of the law to future cases.

110 T.C. No. 35

UNITED STATES TAX COURT

ESTATE OF ARTEMUS D. DAVIS, DECEASED, ROBERT D. DAVIS, PERSONAL REPRESENTATIVE, Petitioner v. COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 9337-96. Filed June 30, 1998.

Held: In determining the fair market value on a valuation date after the repeal of the doctrine established in General Utils. & Operating Co. v. Helvering, 296 U.S. 200 (1935), of each of two minority blocks of common stock of company A, the Court is not precluded on the record presented from giving consideration to A's built-in capital gains tax as of that date of about $26.7 million. Held, further, the fair market value on the valuation date of each block of stock at issue is $10,338,725, determined by first ascertaining A's net asset value on that date without regard to any discount or adjustment attributable to blockage and/or 17 C.F.R. sec. 230.144 (1992) or A's built-in capital gains tax, reducing that value by a 15-percent minority discount to which the parties agree, and reducing the resulting value by a lack-of-marketability discount of $28 million which the Court arrived at by giving consideration to, inter alia, A's built-in capital gains tax and including as part of that discount $9 million attributable to such tax.

Gregory V. Nelson, John W. Porter, and Richard A. Husseini, for petitioner.

Victoria J. Sherlock, Norman N. Pickett, and Harve M. Lewis, for respondent.

CHIECHI, Judge: Respondent determined a deficiency of $5,283,894 in the Federal gift tax of Artemus D. Davis (decedent) who died on June 11, 1995, after he made the two gifts to which that deficiency pertains. The sole issue for decision is the fair market value on November 2, 1992, of each of two blocks of 25 shares of common stock of A.D.D. Investment and Cattle Company (ADDI&C), one of which decedent gave to his son Robert D. Davis (Robert Davis) and the other of which decedent gave to his son Lee W. Davis (Lee Davis).

FINDINGS OF FACT

Some of the facts have been stipulated and are so found.

Decedent, who was one of the founders of Winn-Dixie Stores, Inc. (Winn-Dixie), died testate on June 11, 1995, while he was a legal resident of Florida. Robert Davis, the personal representative of decedent's estate, resided in Jacksonville, Florida, at the time the petition was filed.

On or about November 2, 1992 (the valuation date), ADDI&C, a closely held Florida corporation that was incorporated on December 22, 1947, had a total of 97 shares of common stock issued and outstanding, all of which were owned by a trust (Davis

trust) for the benefit of decedent and none of which was subject to any restrictive sale provisions or buy-sell agreements. On the valuation date, decedent transferred 25 shares of such stock to his son Robert Davis and 25 shares of such stock to his son Lee Davis. On that date, each of those two blocks of ADDI&C common stock constituted 25.77 percent of the issued and outstanding common stock of ADDI&C.

As of the valuation date, ADDI&C was primarily a holding company for various assets of decedent, although ADDI&C also had certain cattle operations (both feeder and breeding cattle) as of that date. Specifically, on the valuation date, ADDI&C owned 1,020,666 shares, or 1.328 percent, of the issued and outstanding common stock of Winn-Dixie, which was at all relevant times traded on the New York Stock Exchange (NYSE); 3,456 shares, or .0737 percent, of the issued and outstanding common stock of D.D.I., Inc. (DDI), which was a holding company for various assets of decedent and his family and the stock of which was at all relevant times not publicly traded; various feeder and breeding cattle; certain equipment; and certain other unidentified assets.

As of the valuation date, ADDI&C's management group consisted of the following individuals who were serving in the positions indicated: Artemus D. Davis, chairman of the board of directors, president, and director; James E. Davis, executive

vice president and director; Robert Davis, vice president, assistant secretary, and director; H. J. Skelton, vice president, treasurer, and director; Harry D. Francis, vice president and assistant secretary; and G. P. Bishop, Jr., secretary and assistant treasurer.

On or before the valuation date, decedent, James E. Davis, and Robert Davis were directors of Winn-Dixie. For the 12-month period prior to the valuation date, the average daily trading volume of Winn-Dixie stock was 47,400 shares. For the 4-week period prior to the valuation date, the average weekly trading volume of Winn-Dixie stock was 310,675 shares.

As of the valuation date, decedent, ADDI&C, and the Davis trust were affiliates within the meaning and for purposes of 17 C.F.R. sec. 230.144 (1992)[1] with respect to the sale of Winn-Dixie stock. Pursuant to SEC rule 144, shares of Winn-Dixie stock held by affiliates were subject to certain restrictions, including restrictions on the sale of such shares prescribed by SEC rule 144(e)(1).

ADDI&C received the following dividends during its fiscal years ended October 31, 1988, 1989, 1990, 1991, and 1992:

[1] We shall refer to 17 C.F.R. sec. 230.144 (1992), which was promulgated by the Securities and Exchange Commission (SEC), as SEC rule 144. All references to SEC rule 144 are to the Code of Federal Regulations in effect on the valuation date.

Fiscal Year Ended October 31	Dividends Received
1988	$888,330
1989	996,584
1990	1,044,926
1991	1,145,370
1992	1,272,699

Over $1.2 million of the dividends that ADDI&C received during its fiscal year ended October 31, 1992, were dividends received on the Winn-Dixie stock that it owned.

DDI declared and paid dividends with respect to all of its issued and outstanding stock, including the shares of such stock owned by ADDI&C, in the following aggregate amounts during its fiscal years ended November 30, 1989, 1990, 1991, 1992:

Fiscal Year Ended November 30	Aggregate Dividends Paid
1989	$21,093,694
1990	21,796,815
1991	23,437,435
1992	23,906,184

Subject to the caveats stated below, the following table shows as of the valuation date ADDI&C's assets and liabilities, the historical cost basis and the fair market value of each such asset, and ADDI&C's net asset value:

Asset	Historical Cost Basis	Fair Market Value
Feeder cattle, cost	$6,474,368	$8,074,368
Breeding herd, net	1,072,843	1,894,400
Winn-Dixie stock	338,283	70,043,204
DDI stock	120,263	535,162
Total equipment, net	172,999	130,294
Other assets	1,295,539	1,295,539
Total assets	9,474,295	81,972,967
Total liabilities	1,832,698	1,832,698
Net asset value	7,641,597	80,140,269

The fair market value of ADDI&C's Winn-Dixie stock and its net asset value that are shown in the foregoing table do not reflect any type of discount or adjustment with respect to that stock which is attributable to blockage and/or SEC rule 144 (blockage and/or SEC rule 144 discount). Nor do the fair market value of each of ADDI&C's assets and its net asset value that are shown in the foregoing table reflect any type of discount or adjustment which is attributable to, inter alia, lack of a controlling interest, lack of marketability, or the Federal and State income tax (ADDI&C's built-in capital gains tax) that ADDI&C would have incurred at a combined tax rate of 37.63 percent on the gains as of the valuation date on ADDI&C's assets (i.e., the difference between the historical cost basis and the fair market value of each of its assets, hereinafter referred to as ADDI&C's built-in-

capital gains) if on that date each such asset had been sold or otherwise disposed of or ADDI&C had liquidated.

During 1990, ADDI&C paid $252,602 to an affiliated company as reimbursement for the use of an airplane by one of its shareholders. For Federal income tax purposes, ADDI&C reported that payment as a shareholder dividend. With the exception of that dividend, ADDI&C has not declared or paid any dividends to its shareholders.

On the valuation date, ADDI&C had not adopted a formal plan of liquidation, nor was there any intention by that corporation or decedent to liquidate ADDI&C or to dispose of its Winn-Dixie stock.

On October 31, 1992, ADDI&C's net operating loss carry-forwards totaled $1,580,217.

On or about April 15, 1993, decedent timely filed for 1992 Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return (gift tax return). In that return, decedent reported that the value on the valuation date of each of the two 25-share blocks of ADDI&C stock that he transferred to his sons was $7,444,250, or $297,770 a share. The value reported by decedent in the gift tax return was based on an appraisal by Alex W. Howard (Mr. Howard) of Howard Frazier Barker Elliott, Inc. (Mr. Howard's appraisal).

Respondent determined in the notice of deficiency (notice) that on the valuation date the fair market value of each of the

two 25-share blocks of ADDI&C stock that decedent transferred to his sons was $12,046,975, or $481,879 a share.

OPINION

Petitioner modified the position reflected in decedent's gift tax return as to the value on the valuation date of each of the two blocks of stock in question and now claims that the fair market value of each of those blocks on that date was $6,904,886, or $276,195 per share. Respondent modified the determination in the notice as to that value and now contends that the fair market value on the valuation date of each of the two blocks of ADDI&C stock in question was $13,518,500, or $540,740 per share.[2]

If a gift is made in property, its value at the date of the gift is considered the amount of the gift. Sec. 2512(a);[3] sec. 25.2512-1, Gift Tax Regs. The value of the property for Federal gift tax purposes is

> the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts. * * * All relevant facts and elements of value as of the time of the gift shall be considered. * * * [Sec. 25.2512-1, Gift Tax Regs.]

The willing buyer and the willing seller are hypothetical persons, rather than specific individuals or entities, and the individual

---

[2] Respondent is not, however, claiming an increased gift tax deficiency.

[3] All section references are to the Internal Revenue Code in effect on the valuation date. Unless otherwise indicated, all Rule references are to the Tax Court Rules of Practice and Procedure.

characteristics of these hypothetical persons are not necessarily the same as the individual characteristics of the actual seller or the actual buyer. Estate of Curry v. United States, 706 F.2d 1424, 1428, 1431 (7th Cir. 1983); Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981). The hypothetical willing buyer and the hypothetical willing seller are presumed to be dedicated to achieving the maximum economic advantage. Estate of Curry v. United States, supra at 1428; Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990).

In the case of unlisted stock, like the ADDI&C stock in question, the price at which sales of stock are made in arm's-length transactions in an open market is the best evidence of its value. Champion v. Commissioner, 303 F.2d 887, 893 (5th Cir. 1962), revg. and remanding T.C. Memo. 1960-51. In the instant case, the record does not disclose any such sales of ADDI&C stock.

Where the value of unlisted stock cannot be determined from actual sale prices, its value generally is to be determined by taking into consideration the company's net worth, prospective earning power, and dividend-paying capacity, as well as other relevant factors, including the company's good will, its position in the industry, its management, the degree of control of the business represented by the block of stock to be valued, and the values of securities of corporations engaged in the same or similar lines of business that are listed on a stock exchange. Sec. 25.2512-2(f)(2), Gift Tax Regs. Section 4 of Rev. Rul. 59-

60, 1959-1 C.B. 237, 238-242, sets forth criteria that are virtually identical to those listed in section 25.2512-2(f)(2), Gift Tax Regs., and "has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value". Estate of Newhouse v. Commissioner, supra at 217. Section 5 of Rev. Rul. 59-60, 1959-1 C.B. at 242-243, which addresses the determination of the fair market value of the stock of a closely held investment company, provides in pertinent part:

> (b) The value of the stock of a closely held investment or real estate holding company, whether or not family owned, is closely related to the value of the assets underlying the stock. For companies of this type the appraiser should determine the fair market values of the assets of the company. Operating expenses of such a company and the cost of liquidating it, if any, merit consideration when appraising the relative values of the stock and the underlying assets. The market values of the underlying assets give due weight to potential earnings and dividends of the particular items of property underlying the stock, capitalized at rates deemed proper by the investing public at the date of appraisal. A current appraisal by the investing public should be superior to the retrospective opinion of an individual. For these reasons, adjusted net worth should be accorded greater weight in valuing the stock of a closely held investment or real estate holding company, whether or not family owned, than any of the other customary yardsticks of appraisal, such as earnings and dividend paying capacity.

There is no fixed formula for applying the factors that are to be considered in determining the fair market value of unlisted stock. See Estate of Goodall v. Commissioner, 391 F.2d 775, 786 (8th Cir. 1968), vacating and remanding T.C. Memo. 1965-154. The weight to be given to the various factors in arriving at fair market value depends upon the facts of each case. Sec. 25.2512-

2(f), Gift Tax Regs. As the trier of fact, we have broad discretion in assigning the weight to accord to the various factors and in selecting the method of valuation. Estate of O'Connell v. Commissioner, 640 F.2d 249, 251-252 (9th Cir. 1981), affg. on this issue and revg. in part T.C. Memo. 1978-191; sec. 25.2512-2(f), Gift Tax Regs.

The determination of the value of closely held stock, like each of the two 25-share blocks of ADDI&C stock at issue, is a matter of judgment, rather than of mathematics. Hamm v. Commissioner, 325 F.2d 934, 940 (8th Cir. 1963), affg. T.C. Memo. 1961-347. Moreover, since valuation is necessarily an approximation, it is not required that the value that we determine be one as to which there is specific testimony, provided that it is within the range of figures that properly may be deduced from the evidence. Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285; Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957), affg. in part and remanding in part T.C. Memo. 1956-178.

As is customary in valuation cases, the parties rely extensively on the opinions of their respective experts to support their differing views about the fair market value on the valuation date of each of the two 25-share blocks of ADDI&C stock in question. The estate relies on (1) Mr. Howard, who is an accredited senior appraiser of the American Society of Appraisers and a principal in the business valuation firm of Howard Frazier

Barker Elliott, Inc., and (2) Shannon Pratt (Mr. Pratt), who is an accredited senior appraiser and fellow of the American Society of Appraisers and a founder and managing director of the business valuation firm of Willamette Management Associates. Respondent relies on John A. Thomson (Mr. Thomson), who is an accredited senior appraiser of the American Society of Appraisers and a vice president and the managing director of the Long Beach, California, office of the business valuation firm of Klaris, Thomson & Schroeder, Inc. Each of the experts prepared an initial expert report (expert report)[4] and a rebuttal expert report (rebuttal report).[5]

We evaluate the opinions of experts in light of the demonstrated qualifications of each expert and all other evidence in the record. Anderson v. Commissioner, supra at 249; Parker v. Commissioner, 86 T.C. 547, 561 (1986). We have broad discretion to evaluate "'the overall cogency of each expert's analysis.'" Sammons v. Commissioner, 838 F.2d 330, 334 (9th Cir. 1988)(quoting Ebben v. Commissioner, 783 F.2d 906, 909 (9th Cir. 1986), affg. in part and revg. in part T.C. Memo. 1983-200), affg. in part and

[4] The expert report of petitioner's expert Mr. Howard is identical to Mr. Howard's appraisal on which the value reported in the gift tax return for each of the two gifts in question was based. Hereinafter, we shall refer to Mr. Howard's appraisal as his expert report.

[5] Each of petitioner's experts prepared a rebuttal report with respect to the expert report of respondent's expert, and respondent's expert prepared separate rebuttal reports with respect to the expert reports of petitioner's two experts.

revg. in part T.C. Memo. 1986-318. We are not bound by the formulae and opinions proffered by expert witnesses, especially when they are contrary to our judgment. Silverman v. Commissioner, supra; IT&S of Iowa, Inc. v. Commissioner, 97 T.C. 496, 508 (1991). Instead, we may reach a determination of value based on our own examination of the evidence in the record. Lukens v. Commissioner, 945 F.2d 92, 96 (5th Cir. 1991)(citing Silverman v. Commissioner, supra at 933), affg. Ames v. Commissioner, T.C. Memo. 1990-87. The persuasiveness of an expert's opinion depends largely upon the disclosed facts on which it is based. See Tripp v. Commissioner, 337 F.2d 432, 434 (7th Cir. 1964), affg. T.C. Memo. 1963-244. Where experts offer divergent estimates of fair market value, we shall decide what weight to give those estimates by examining the factors used by those experts to arrive at their conclusions. Casey v. Commissioner, 38 T.C. 357, 381 (1962). While we may accept the opinion of an expert in its entirety, Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), we may be selective in the use of any part of such an opinion, Parker v. Commissioner, supra at 562. We also may reject the opinion of an expert witness in its entirety. Palmer v. Commissioner, 523 F.2d 1308, 1310 (8th Cir. 1975), affg. 62 T.C. 684 (1974); Parker v. Commissioner, supra at 562.

For convenience, the following chart (chart) shows the respective positions of the experts[6] and the parties on brief with respect to the net asset value of ADDI&C on the valuation date and the discounts or adjustments that each believes should be applied to such value in order to arrive at the fair market value on that date of each of the two 25-share blocks of ADDI&C stock in question:[7]

[6] The respective positions of the experts that are shown in the chart reflect the agreement of the parties as to the fair market value of each of ADDI&C's assets and the aggregate amount of its liabilities as of the valuation date without taking into account any type of discount or adjustment attributable to blockage and/or SEC rule 144, lack of a controlling interest, lack of marketability, or ADDI&C's built-in capital gains tax. However, those positions do not reflect the agreement of the parties at trial that the applicable minority discount should be 15 percent. Despite that agreement, the respective dollar amounts of a 15-percent minority discount urged on brief by petitioner and by respondent differ. That is because of the differences between them as to whether a blockage and/or SEC rule 144 discount and a discount or adjustment attributable to ADDI&C's built-in capital gains tax should be taken into account in arriving at ADDI&C's net asset value on the valuation date.

[7] All dollar amounts in the chart are rounded to the nearest dollar.

	Petitioner's Expert Mr. Howard	Petitioner's Expert Mr. Pratt	Respondent's Expert Mr. Thomson	Petitioner[1]	Respondent
Blockage and/or SEC rule 144 discount	4.9 percent or $3,432,117	10 percent or $7,004,320	-$0-	10 percent or $7,004,320	-$0-
Discount or adjustment attributable to ADDI&C's built-in capital gains tax	25,395,109	Factored in as part of lack-of-marketability discount	Factored in as part of lack-of-marketability discount	24,645,525	-0-
Net asset value of ADDI&C	51,313,043	73,135,976	80,140,269	49,490,424	80,140,269
Minority discount	15 percent or 7,696,956	20 percent or 14,627,195	12 percent or 9,616,832	15 percent or 7,273,564	15 percent or 12,021,040
Lack-of-marketability discount	35 percent or 15,265,630	50 percent or 29,254,391	38 percent or 26,798,906	35 percent or 14,425,901	23 percent or 15,667,423
Portion of lack-of-marketability discount attributable to ADDI&C's built-in capital gains tax	-0-	15 percent or 8,776,317	15 percent or 10,578,516	-0-	-0-
Total dollar amount of discounts or adjustments	51,789,812	50,885,906	36,415,738	53,349,310	27,688,463
Fair market value of each 25-share block of ADDI&C common stock	7,306,825	7,539,800	11,250,000	6,904,886	13,518,500
Fair market value of each share of each 25-share block of ADDI&C common stock	292,273	301,592	450,000	276,195	540,740

[1] This column reflects petitioner's position on brief regarding all of the items reflected in the chart except for ADDI&C's net asset value. The Court had to calculate petitioner's position with respect to the amount of ADDI&C's net asset value because nowhere on brief does petitioner state what that figure should be. The Court calculated petitioner's position as to that amount, which is shown in the chart, based on petitioner's contentions that a 10-percent blockage and/or SEC rule 144 discount on the NYSE price of ADDI&C's Winn-Dixie stock (viz., $7,004,320) and a discount or adjustment equal to the full amount of ADDI&C's built-in capital gains tax, which petitioner calculates to be $24,645,525, should be applied in determining ADDI&C's net asset value on the valuation date. Even assuming arguendo that petitioner's contentions regarding a blockage and/or SEC rule 144 discount and a discount or adjustment for the full amount of ADDI&C's built-in capital gains tax were correct, we believe that petitioner erroneously calculated the amount of that tax to be $24,645,525. It appears that in calculating that amount petitioner improperly failed to take into account the $1,580,217 of net operating loss carryforwards that ADDI&C had as of Oct. 31, 1992. That error had a domino effect; as a result, the dollar amounts of the minority and the lack-of-marketability discounts that petitioner advocates are slightly less than they would have been if petitioner had not made that error.

The parties and all of the experts agree that the initial step in ascertaining the fair market value on the valuation date of each of the two 25-share blocks in question is to determine as of that date the fair market value of each of ADDI&C's assets and the aggregate amount of its liabilities in order to calculate its net asset value on that date. All of them also are in agreement that, without taking into account any discounts or adjustments (including but not limited to a blockage and/or SEC rule 144 discount, a minority discount for lack of a controlling interest, a lack-of-marketability discount, and a discount or adjustment attributable to ADDI&C's built-in capital gains tax), on the valuation date the aggregate fair market value of ADDI&C's assets was $81,972,967, its liabilities totaled $1,832,698, and its net asset value was $80,140,269.

Petitioner and petitioner's experts agree that, in determining the fair market value of ADDI&C's Winn-Dixie stock and its net asset value on the valuation date, it is necessary to reduce the fair market value of that stock and ADDI&C's net asset value to which the parties in this case have stipulated by applying a blockage and/or SEC rule 144 discount to that stock. Petitioner and petitioner's expert Mr. Pratt believe that a blockage and/or SEC rule 144 discount of 10 percent is proper, and petitioner's expert Mr. Howard concludes that such a discount of

4.9 percent is appropriate.[8] Respondent and respondent's expert maintain that no blockage and/or SEC rule 144 discount is warranted.

The parties and their experts agree that the Winn-Dixie stock held by ADDI&C on the valuation date was subject to the volume limitation on the sale of that stock prescribed by SEC rule 144(e)(1) (SEC rule 144(e)(1) volume limitation). That rule limited the amount of restricted or other securities that could have been sold by an affiliate during a given 3-month period generally to the greater of (a) one percent of the shares of the outstanding class of stock or (b) the average weekly reported trading volume during the 4-week period preceding the filing of a notice of proposed sale which was required under SEC rule 144(h).

The parties and their respective experts also are in agreement that as of the valuation date there were two ways in which ADDI&C could have disposed of its Winn-Dixie stock. One such method was for ADDI&C to have sold its entire block of that stock in a private placement to a nonaffiliated investor. Unless that block of stock were registered, that investor would have been subject to a 2-year holding period for that stock under SEC rule 144(d)(1) and thereafter would have been subject for 1 year to the volume

[8] In his rebuttal report, Mr. Howard modified the amount of the blockage and/or SEC rule 144 discount that he believed should be applied in determining as of the valuation date the fair market value of ADDI&C's Winn-Dixie stock and its net asset value. Mr. Howard made that change because of matters brought to his attention after he had prepared his expert report. See infra note 10.

limitation on the sale of that stock prescribed by SEC rule 144(e)(2).[9] See SEC rule 144(k). The other method by which ADDI&C could have sold its Winn-Dixie stock was through the sale of that stock over a period of time consistent with the SEC rule 144(e)(1) volume limitation (dribble-out method).

The parties and their respective experts further agree that (1) because of the size of the block of Winn-Dixie stock owned by ADDI&C on the valuation date, ADDI&C could not have disposed of all of its Winn-Dixie stock at the same time without depressing the market value of such stock; and (2)(a) in order to dispose of its Winn-Dixie stock without depressing its market value and at the same time selling that stock in compliance with the restrictions in SEC rule 144, it would have taken ADDI&C 5 to 6 months after the valuation date to dispose of its Winn-Dixie stock under the dribble-out method, and (b) a purchaser of that stock would not have been subject to the 2-year holding period under SEC rule 144(d)(1) or the volume limitation in SEC rule 144(e)(2), see SEC rule 144.

Petitioner's expert Mr. Howard and respondent's expert Mr. Thomson agree that ADDI&C probably would have sold its Winn-Dixie stock pursuant to the dribble-out method.[10] Mr. Pratt opined that

---

[9] The volume limitation in SEC rule 144(e)(2) is identical to the SEC rule 144(e)(1) volume limitation.

[10] Mr. Howard opined in his expert report that a sale by private placement would have been a "more efficient" way for ADDI&C to have disposed of its Winn-Dixie stock than the dribble-out

(continued...)

it was likely that ADDI&C would have disposed of its Winn-Dixie stock through a private placement. On the record before us, we find that ADDI&C probably would have used the dribble-out method to sell its Winn-Dixie stock, since it was likely that such a sale would have resulted in a higher value for ADDI&C's Winn-Dixie stock than would have been yielded if that stock had been sold in a private placement. That is because a nonaffiliated investor who purchased that stock in a private placement would have been subject to a 2-year holding period under SEC rule 144(d)(1) and thereafter would have been subject for one year to the volume limitation in SEC rule 144(e)(2). See SEC rule 144(k).

Although respondent's expert Mr. Thomson acknowledges that ADDI&C's Winn-Dixie stock was subject to the SEC rule 144(e)(1) volume limitation and that, as we have found, ADDI&C probably

[10](...continued)
method. However, after Mr. Howard prepared that report, he learned that a purchaser of ADDI&C's Winn-Dixie stock in a private placement would have been required to hold that stock for 2 years under SEC rule 144(d)(1) and thereafter would have been subject for 1 year to the volume limitation in SEC rule 144(e)(2). Consequently, Mr. Howard changed the view reflected in his expert report regarding ADDI&C's sale of its Winn-Dixie stock by private placement and took the position in his rebuttal report and at trial that it was more likely that ADDI&C would have disposed of its Winn-Dixie stock through the dribble-out method because that method would have yielded a greater value for that stock than would have been obtained through its sale by private placement. We reject any contention by respondent that Mr. Howard should not be permitted to change in his rebuttal report and at trial the position that he had taken in his expert report with respect to ADDI&C's Winn-Dixie stock. See Rule 143(f). The Court is interested in reaching the proper result, aided by witnesses who will recognize and correct an error. We are not interested in attempts to force a party to maintain an erroneous or unreasonable position for strategic advantage.

would have used the dribble-out method to sell its Winn-Dixie stock over a 5-to-6 month period, he did not discount or adjust the NYSE price of that stock on the valuation date in order to arrive at its fair market value and ADDI&C's net asset value on that date. That is because, inter alia, Winn-Dixie's NYSE price "was on a rising trend line" from January 3, 1992, through November 2, 1992, the valuation date, and, in fact, "increased 72 percent during that period."[11]

To counter Mr. Thomson's view that no blockage and/or SEC rule 144 discount is warranted because, inter alia, the NYSE price of Winn-Dixie stock "was on a rising trend line" during the 10-month period preceding the valuation date, petitioner points out that a Value Line Investment Survey report (Value Line report) dated August 21, 1992, which was approximately 3 months before the valuation date, reported that "[the NYSE price of Winn-Dixie] stock has risen about 15% in the past few months. As a result, long-term total return prospects have been diminished". We do not believe that the opinion expressed in the Value Line report

[11] Nor did Mr. Thomson apply a premium to the NYSE price of ADDI&C Winn-Dixie stock. That is because, even though ADDI&C owned 1,020,666 shares of the outstanding Winn-Dixie stock, Mr. Thomson considered that block of stock, which represented only about 1.33 percent of the total outstanding shares of Winn-Dixie, to be "too small" to represent a "swing block of shares." It is noteworthy that petitioner's expert Mr. Pratt acknowledges that ADDI&C's stock interest in Winn-Dixie on the valuation date "is generally considered to be a significant investment. An investor would likely find it difficult to quickly accumulate such a large investment without some (typically upward) affect [sic] on the quoted market price on the subject security."

regarding "long-term total return prospects" for Winn-Dixie stock addressed the short-term prospects as of the valuation date regarding the NYSE price of that stock over the relatively short 5-to-6 month period after that date over which the parties and all the experts agree it would have taken ADDI&C to sell its Winn-Dixie stock under the dribble-out method.

Mr. Pratt determined that a 10-percent blockage and/or SEC rule 144 discount should be applied to the NYSE price of Winn-Dixie on the valuation date. However, as stated above, we disagree with Mr. Pratt's view that it was likely that ADDI&C would have sold its Winn-Dixie stock in a private placement, rather than under the dribble-out method. In addition, Mr. Pratt did not explain in his expert report, as required by Rule 143(f), how he arrived at a 10-percent blockage and/or SEC rule 144 discount, and we did not find his limited explanation in his rebuttal report and at trial of how he determined the amount of that discount to be particularly helpful. See Rule 143(f)(1). On the record before us, we shall not rely on Mr. Pratt's opinion as to whether a blockage and/or SEC rule 144 discount should be applied to the NYSE price of ADDI&C's Winn-Dixie stock on that date, nor shall we rely on his view regarding the amount of any such discount that should be applied in the event that we were to find that use of such a discount is warranted in the instant case.

Mr. Howard determined in his rebuttal report that a 4.9-percent blockage and/or SEC rule 144 discount should be applied to

Winn-Dixie's NYSE price on the valuation date in determining the fair market value of ADDI&C's Winn-Dixie stock and its net asset value on that date. He arrived at that percentage discount based on the Black-Scholes options pricing model (Black-Scholes model), which is used to calculate the cost of a call or put option. Mr. Howard used the Black-Scholes model to value a put option, which gives the holder the right to sell a specified asset at a specified price on (or before) a specified date. Mr. Howard explained in his rebuttal report that the cost of a put option can be used to determine the cost of "locking-in" the price of a stock when the future price of that stock cannot be known with certainty. Mr. Howard determined that the Black-Scholes model was a good measure of the discount associated with ADDI&C's exposure to the market risk that the NYSE price of its Winn-Dixie stock would have fallen during the 5-to-6 month period that would have been required to sell that stock under the dribble-out method.

Mr. Howard explained in his rebuttal report that the Black-Scholes model takes into account the following variables in arriving at the value of an option: (1) Current stock price per share, (2) exercise price per share, (3) time to maturity, (4) risk-free interest rate, (5) volatility, and (6) continuous dividend yield. Using the Black-Scholes model, Mr. Howard calculated that the cost of a 3-month put option on Winn-Dixie stock as of the valuation date would be $3.37, or 4.9 percent of Winn-Dixie's NYSE price on that date.

Respondent argues that use of the Black-Scholes model will always result in a blockage and/or SEC rule 144 discount. Mr. Howard agrees, and so do we. The Black-Scholes model takes into account, inter alia, a “risk-free interest rate” variable. Mr. Howard acknowledges in his rebuttal report that "there is always a cost to locking-in the value of a stock price to protect against market risk no matter what the specific inputs of the model", and he testified at trial that it would have taken 5 to 6 months for ADDI&C to sell its Winn-Dixie stock under the dribble-out method "without moving the market, [thereby] exposing that stock to market risks which always results in a decreased value, if for no other reason than present value purposes." On the instant record, we are not persuaded by Mr. Howard’s use of the Black-Scholes model that a blockage and/or SEC rule 144 discount is warranted or that, even if such a discount were warranted, the amount of any such discount should be 4.9 percent.

Petitioner has the burden of establishing that a blockage and/or SEC rule 144 discount should be applied to the NYSE price on the valuation date of ADDI&C’s Winn-Dixie stock and the amount of any such discount. Based on our examination of the entire record before us, we find that petitioner has failed to satisfy that burden. We further find that on the valuation date the fair market value of ADDI&C's Winn-Dixie stock was $70,043,204 and the net asset value of ADDI&C without taking into account any other discounts or adjustments was $80,140,269.

Petitioner and all of the experts, including respondent's expert, agree that, in determining the fair market value on the valuation date of each of the two blocks of ADDI&C stock at issue, it is necessary to reduce ADDI&C's net asset value on that date by applying a discount or adjustment attributable to ADDI&C's built-in capital gains tax. However, there are disagreements as to the amount of such a discount or adjustment. In addition, petitioner and petitioner's expert Mr. Howard disagree with petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson as to the point at which such a discount or adjustment should be taken into account in the valuation process. Petitioner and petitioner's expert Mr. Howard believe that, in calculating ADDI&C's net asset value on the valuation date, the full amount of ADDI&C's built-in-capital gains tax should be subtracted before any minority and lack-of-marketability discounts are applied. Petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson believe that a 15-percent discount or adjustment attributable to ADDI&C's built-in capital gains tax should be taken into account as part of the lack-of-marketability discount that each agrees should be applied to ADDI&C's net asset value on the valuation date after that net asset value has been reduced by a minority discount. Of the 50 percent lack-of-marketability discount equal to $29,254,391 that Mr. Pratt determined should be applied, $8,776,317 is attributable to ADDI&C's built-in capital gains tax. Of the 38-percent lack-of-marketability discount equal to $26,798,906 that Mr. Thomson

determined should be applied, $10,578,516 is attributable to that tax.[12]

It is respondent's position that no discount or adjustment attributable to ADDI&C's built-in capital gains tax should be applied in determining the fair market value on the valuation date of each of the two blocks of stock in question. Respondent thus not only rejects the views of petitioner and petitioner's two experts, but also the opinion of respondent's expert Mr. Thomson, that such a discount or adjustment is warranted. In support of respondent's rejection of Mr. Thomson's opinion, respondent asserts on brief:

> Respondent recognizes that her own expert included the potential capital gains in his determination of an appropriate marketability discount; nevertheless, this inclusion is contrary to Federal tax law.

In support of respondent's position that a discount or adjustment attributable to ADDI&C's built-in capital gains tax is "contrary to Federal tax law", respondent advances the following argument in respondent's opening brief:

---

[12] There are differences between the respective dollar amounts of the 15-percent discount or adjustment attributable to ADDI&C's built-in capital gains tax, which both petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson included as part of the respective lack-of-marketability discounts that they concluded should be applied to ADDI&C's net asset value on the valuation date after that net asset value has been reduced by a minority discount. That is because of the differences between those two experts (1) as to whether a blockage and/or SEC rule 144 discount is warranted and (2) as to the amount of the minority discount that each believed should be applied. See chart above showing, inter alia, those differences.

In an established line of cases, this Court has held that projected capital gains taxes do not reduce the value of closely held stock when liquidation is speculative. Ward v. Commissioner, 87 T.C. 78, 104 (1986); Estate of Andrews v. Commissioner, 79 T.C. 938, 942 (1982); Estate of Piper v. Commissioner, 72 T.C. 1062, 1086-1087 (1979); Estate of Cruikshank v. Commissioner, 9 T.C. 162, 165 (1947); Estate of Luton v. Commissioner, T.C. Memo. 1994-539, 68 T.C.M. (CCH) 1044, 1052 (1994); Estate of Bennett v. Commissioner, T.C. Memo. 1993-34, 65 T.C.M. (CCH) 1816, 1825 (1993). These cases reach that conclusion for two reasons.

First, prior to 1986, former I.R.C. §§ 336 and 337 allowed the tax-free liquidation of a corporation; the corporation could thereby completely avoid capital gains taxes upon a subsequent sale of all its assets. Courts reasoned that the corporation's ability to avoid taxes upon liquidation rendered the projected liability so speculative as to be irrelevant. Estate of Piper, 72 T.C. at 1087.

The repeal of those provisions, in the Tax Reform Act of 1986, P.L. 99-514, §§ 631-633, 100 Stat. 2269-2282, as reprinted in 1986-3 C.B. (Vol. 1) 186-199, did not foreclose the possibility of avoiding capital gains taxes at the corporate level upon sale of all assets. A subchapter C corporation can convert to a corporation described in subchapter S (I.R.C. § 1361, et. seq.) and avoid recognition of any gain, if the corporation retains the assets for a period of ten years from the date of conversion to an S corporation. See I.R.C. § 1374(d)(7). One of petitioner's experts recognized this possible alternative. Since Artemus D. Davis was a long term investor in Winn-Dixie stock, electing subchapter S appears to be a reasonable method to avoid the corporate level capital gains tax.

Although the willing buyer might incorporate a reduction in his price for costs of a subsequent liquidation, the willing seller has no incentive to accommodate that reduction. Why would the willing seller, knowing that the capital gains taxes can be deferred or avoided, agree to that reduction? Why would the willing seller, knowing further that the buyer controls the incidence of tax, agree to any reduction based on the buyer's purely speculative tax burden? See Mandelbaum v. Commissioner, T.C. Memo. 1995-254, 69 T.C.M. (CCH) 2852, 2866 (1995), aff'd, 91 F.3d 124 (3d Cir. 1996).

> Second, and more importantly, when the actual facts do not suggest that the shareholders intended to liquidate the corporation, this Court has refused to assume that the hypothetical buyer would do so. Estate of Ford v. Commissioner, T.C. Memo. 1993-580, 66 T.C.M. (CCH) 1507, 1517 (1993), aff'd, 53 F.3d 924 (8th Cir. 1995); Estate of Bennett v. Commissioner, T.C. Memo. 1993-34, 65 T.C.M. (CCH) 1816, 1825 (1993). Here, petitioner stipulated that no liquidation was contemplated at the time of the subject gifts.
>
> * * * * * * *
>
> Petitioner will no doubt argue that the Tax Court has not unequivocally stated that the potential capital gains taxes cannot be considered as a legal matter. Respondent recognizes that valuation is inherently a factual consideration. Nevertheless, this Court has consistently held that when liquidation is speculative, projected capital gains taxes do not reduce value, Ward v. Commissioner, 87 T.C. 78, 104 (1986); Estate of Luton v. Commissioner, T.C. Memo. 1994-539; Estate of Ford v. Commissioner, T.C. Memo. 1993-580; and that unforeseen future events cannot affect value, Messing v. Commissioner, 48 T.C. 502, 509 (1967); Mandelbaum v. Commissioner, T.C. Memo. 1995-255. The only proper construction of this conclusory language is that consideration of these speculative future events, including capital gains taxes, is improper as a legal matter. [Fn. ref. omitted.]

We reject respondent's position that, as a matter of law, no discount or adjustment attributable to ADDI&C's built-in capital gains tax is allowable in the instant case. Indeed, it appears that even respondent abandons, or at least contradicts, that position when respondent acknowledges in respondent's answering brief that

> if a sale or liquidation of ADDI&C's assets was in fact contemplated on the valuation date or if, in fact, avoidance of a corporate level capital gains tax was not available, some reduction in value would be appropriate. * * * [Emphasis added.]

Respondent thus concedes that, irrespective of whether a liquidation of ADDI&C or sale of its assets was planned or contemplated on the valuation date, "some reduction in value would be appropriate if, in fact, avoidance of a corporate level capital gains tax was not available". However, respondent argues that although ADDI&C would have been required under the Federal income tax law in effect on the valuation date to recognize gains on its assets if it had liquidated and distributed those assets, sec. 336(a), made a nonliquidating distribution of one or more of those assets, sec. 311, or sold or otherwise disposed of those assets, sec. 1001(c), it could have avoided the tax on such gains.[13] That is because, according to respondent, ADDI&C could have converted to S corporation status and retained its assets for 10 years from the date of such conversion, see sec. 1374(a), (d)(7), and petitioner's expert Mr. Pratt acknowledged that possibility in his expert report.

[13] The Tax Reform Act of 1986 (1986 Act), Pub. L. 99-514, sec. 631-633, 100 Stat. 2269-2282, inter alia, modified sec. 336(a) in effect prior to passage of the 1986 Act, thereby repealing the doctrine (General Utilities doctrine) that had been established in General Utils. & Operating Co. v. Helvering, 296 U.S. 200 (1935). Under the General Utilities doctrine, corporations generally did not recognize gain on certain distributions of appreciated property to their shareholders and on certain liquidating sales of property. See H. Rept. 99-426 at 274-275 (1985), 1986-3 C.B. (Vol. 2) 274-275. The change to sec. 336(a) that was effected by the 1986 Act was intended "to require the corporate level recognition of gain on a corporation's sale or distribution of appreciated property, irrespective of whether it occurs in a liquidating or nonliquidating context." H. Conf. Rept. 99-841, 1986-3 C.B. (Vol. 4) 204.

Although Mr. Pratt recognized in his expert report that as of the valuation date it would have been possible for ADDI&C to convert to an S corporation, he did not consider conversion to S corporation status to be likely as of that date for several reasons. First, according to Mr. Pratt, it is improper to assume, as respondent does, that ADDI&C would have been able to make an S corporation election. That is because such an assumption would have impermissibly limited the hypothetical willing buyer of each of the two blocks of stock at issue to certain individuals and entities who were permitted as of the valuation date to be shareholders of an S corporation, see sec. 1361(b)(1)(B) and (C), thereby improperly excluding as a hypothetical willing buyer of each such block, for example, a C corporation, see sec. 1361(b)(1)(B). In addition, Mr. Pratt believes that the assumption by respondent that none of ADDI&C's assets would be sold for 10 years would have reduced the marketability of each block of ADDI&C stock at issue, and such a requirement would have made it unlikely that ADDI&C's stockholders would have consented to an S corporation election. Mr. Pratt also notes that section 1362(d)(3) could be a problem for an investment company, like ADDI&C, unless ADDI&C were to retain its cattle operations or engage in some other operating business that generated substantially more gross income than the passive income generated by ADDI&C's other assets. That is because pursuant to section 1362(d)(3) an otherwise valid S corporation election will be

terminated if ADDI&C (1) had earnings and profits at the close of each of 3 consecutive taxable years that had been accumulated prior to the S corporation election, see sec. 1362(d)(3)(A) and (B), and (2) had more than 25 percent of its gross receipts for each of those taxable years from passive investment income, which includes dividend income, see sec. 1362(d)(3)(A), (D)(i).

Although we agree with Mr. Pratt that section 1362(d)(3) could have caused an otherwise valid S corporation election by ADDI&C to be terminated if ADDI&C were not to maintain its cattle operations or engage in some other operating business, there are no facts established by the record to indicate that as of the valuation date ADDI&C intended to curtail or eliminate its cattle operations. Nonetheless, we agree with the other two reasons advanced by Mr. Pratt in support of his view that as of the valuation date it was unlikely that ADDI&C would have converted to an S corporation. Based on the record before us, we reject respondent's unwarranted assumptions that ADDI&C could have avoided all of ADDI&C's built-in capital gains tax by having it elect S corporation status and by not permitting it to sell any of its assets for 10 years thereafter, and the record does not establish that there was any other way as of the valuation date by which ADDI&C could have avoided all of such tax.

We turn now to respondent's position in respondent’s opening brief, which, as discussed above, we believe was contradicted by the position in respondent’s answering brief. The former position

was that, irrespective of whether as of the valuation date ADDI&C could have avoided all of ADDI&C's built-in capital gains tax, no discount or adjustment attributable to that tax is permissible, as a matter of law, because as of that date no liquidation of ADDI&C or sale of its assets was planned or contemplated. The record shows that as of the valuation date ADDI&C's built-in capital gains tax relating to ADDI&C's built-in capital gains on all its assets was $26,686,614.[14] The record also establishes that as of the valuation date ADDI&C's Winn-Dixie stock constituted more than 85 percent of the aggregate fair market value of all of its assets; the portion of ADDI&C's built-in capital gains attributable to that stock (viz, $69,704,921) constituted more than 96 percent of such gains; and the portion of ADDI&C's built-in capital gains tax attributable to that stock (viz, approximately $25,660,000) constituted more than 96 percent of such tax. Petitioner and all of the experts believe that a hypothetical willing seller and a hypothetical willing buyer of each of the two 25-share blocks of ADDI&C stock at issue would have taken ADDI&C's built-in capital gains tax into account in

[14] We calculated ADDI&C's built-in capital gains tax by multiplying (1) the stipulated combined Federal and State capital gains tax rate of 37.63 percent by (2) ADDI&C's built-in capital gains reduced by $1,580,217 of net operating loss carryforwards that ADDI&C had as of the valuation date. In computing the amount of such gains, we utilized the stipulated historical cost basis and the fair market value of each of ADDI&C's assets, including its Winn-Dixie stock, as of the valuation date, since we have found on the instant record that petitioner has not established that any blockage and/or SEC rule 144 discount to the NYSE price on the valuation date of that stock is permissible.

arriving at the price on the valuation date at which each such block of stock would have changed hands and that therefore a discount or adjustment attributable to that tax should be applied in determining the fair market value of each such block.[15] On the record before us, we agree.

We are convinced on the record in this case, and we find, that, even though no liquidation of ADDI&C or sale of its assets was planned or contemplated on the valuation date, a hypothetical willing seller and a hypothetical willing buyer would not have agreed on that date on a price for each of the blocks of stock in question that took no account of ADDI&C's built-in capital gains tax. We are also persuaded on that record, and we find, that such a willing seller and such a willing buyer of each of the two blocks of ADDI&C stock at issue would have agreed on a price on the valuation date at which each such block would have changed hands that was less than the price that they would have agreed upon if there had been no ADDI&C's built-in capital gains tax as of that date. Respondent's position to the contrary is inconsistent with the record in this case.[16] We have found

---

[15] As discussed herein, there are disagreements as to the amount of any such discount or adjustment and the point at which such a discount or adjustment should be taken into account in the valuation process.

[16] Moreover, it is contrary to the record in this case to assume, as respondent apparently does, (1) that a hypothetical willing seller and a hypothetical willing buyer would not have been aware on the valuation date that Winn-Dixie stock, which constituted over 96 percent of ADDI&C's assets on that date,

(continued...)

nothing in the following cases on which respondent relies that requires us, as a matter of law, to alter our view: Ward v. Commissioner, 87 T.C. 78 (1986); Estate of Andrews v. Commissioner, 79 T.C. 938 (1982); Estate of Piper v. Commissioner, 72 T.C. 1062 (1979); Estate of Cruikshank v. Commissioner, 9 T.C. 162 (1947); Estate of Luton v. Commissioner, T.C. Memo. 1994-539, supplemented by T.C. Memo. 1996-181; Estate of Ford v. Commissioner, T.C. Memo. 1993-580, affd. 53 F.3d 924 (8th Cir. 1995); Estate of Bennett v. Commissioner, T.C. Memo. 1993-34.

We note initially that one of the cases on which respondent relies, Estate of Bennett v. Commissioner, supra, involved a valuation date that preceded the repeal of the General Utilities doctrine and did not involve a request by the taxpayer for a reduction in valuing the stock interest in question for the capital gains tax that would have been due upon liquidation of the corporation whose stock was at issue, absent tax planning to avoid that tax which was permissible as of the valuation date in that case. Instead, the taxpayer in the Estate of Bennett case asked the Court to reduce the value of the stock interest in question there by the "estimated costs of liquidation" which consisted of a "discount for commissions", a "discount for losses on

[16](...continued)
could be sold and bought on the open market with none of ADDI&C's built-in capital gains tax being applicable to that stock and (2) that that knowledge would not have affected the price to which they would have agreed on the valuation date for each of the blocks of stock at issue.

liquidation", and a "discount for the costs of overhead and sales costs". Estate of Bennett v. Commissioner, supra.

Turning to the remaining cases on which respondent relies, it is significant to us that, except for Estate of Luton v. Commissioner, supra, none of the cases on which respondent relies indicates that any of the expert witnesses who testified in those cases considered corporate built-in capital gains tax as a factor in appraising the respective stock interests at issue in those cases. In the Estate of Luton case, one of the taxpayer's experts, but not respondent's expert, reduced the asset value of each of the corporations at issue by liquidation costs that included, inter alia, Federal and State capital gains taxes that would have been incurred on liquidation of those corporations. Estate of Luton v. Commissioner, supra. In contrast, in the present case, all of the experts for both parties are of the view that ADDI&C's built-in capital gains tax must be taken into account as a factor in ascertaining the fair market value of each of the two blocks of ADDI&C stock in question.

Except for Estate of Luton v. Commissioner, supra, and Estate of Ford v. Commissioner, supra, the other cases on which respondent relies (like Estate of Bennett v. Commissioner, supra) involved valuation dates that preceded the repeal of the General Utilities doctrine. As we read all of those cases, including Estate of Luton and Estate of Ford, the taxpayers requested the Court for a reduction in valuing the respective stock interests in

question equal to the full amount of capital gains taxes that would have been due upon liquidation of the respective corporations whose stock was at issue in those cases, absent tax planning to avoid those taxes which was permissible as of the respective valuation dates in those cases. The Court denied each of those requests for a reduction for the full amount of such capital gains taxes where there was no evidence as of those respective valuation dates that a liquidation of the corporation in question or sale of corporate assets was planned or contemplated or that the full amount of such taxes could not have been avoided.[17]

In the present case, petitioner and all of the experts, including respondent's expert, believe, and we have found, that, in determining the fair market value on the valuation date of each of the blocks of stock at issue, it is necessary to apply a discount or adjustment attributable to ADDI&C's built-in capital

[17] See Estate of Welch v. Commissioner, T.C. Memo. 1998-167, and Eisenberg v. Commissioner, T.C. Memo. 1997-483, which were decided after the parties filed their briefs in this case and which involved valuation dates that occurred after the repeal of the General Utilities doctrine. In neither of those cases was a liquidation of the corporation in question or a sale of its assets planned or contemplated as of the respective valuation dates. In valuing the respective stock interests at issue in those cases, the taxpayers asked the Court for a reduction equal to the full amount of capital gains taxes that would have been due upon liquidation of the respective corporations involved there, absent tax planning to avoid those taxes which was permissible as of the respective valuation dates. In neither of those cases does the Court indicate that any expert believed that such a reduction was warranted. The Court denied the taxpayers' requests.

gains tax because that is what a hypothetical willing seller and a hypothetical willing buyer would have done under the facts and circumstances existing on that date. Petitioner adopts the view of petitioner's expert Mr. Howard and argues that the full amount of such tax should reduce ADDI&C's net asset value in making that determination. On the record before us, we reject petitioner's position and Mr. Howard's opinion. On that record, we find that, where no liquidation of ADDI&C or sale of its assets was planned or contemplated on the valuation date, the full amount of ADDI&C's built-in capital gains tax may not be taken as a discount or adjustment in determining the fair market value on that date of each of the two blocks of stock in question, even though we have found that as of that date it was unlikely that ADDI&C could have avoided all of ADDI&C's built-in capital gains tax, and the record does not show that there was any other way as of that date by which ADDI&C could have avoided all of such tax. See Ward v. Commissioner, 87 T.C. 78 (1986); Estate of Andrews v. Commissioner, 79 T.C. 938 (1982); Estate of Piper v. Commissioner, 72 T.C. 1062 (1979).

We thus are in agreement with petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson that in the present case it is not appropriate in valuing each of the two blocks of ADDI&C stock in question to apply a discount or adjustment equal to the full amount of ADDI&C's built-in capital gains tax. Nonetheless, on the instant record, we find that on the valuation date there was

even less of a ready market for each of those two blocks because of ADDI&C's built-in capital gains tax than there would have been for each such block without such a tax. We thus also agree with and accept the views of petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson that a discount or adjustment for some amount of ADDI&C's built-in capital gains tax should be taken into account in valuing each block of stock at issue and that such a discount or adjustment should be part of the lack-of-marketability discount that the parties and all of the experts concluded should be applied in that valuation process.[18]

Petitioner's expert Mr. Pratt included $8,776,317 of the total ADDI&C's built-in capital gains tax as part of the lack-of-marketability discount that he applied in valuing each of the

---

[18] See Estate of Luton v. Commissioner, T.C. Memo. 1994-539, which involved, inter alia, valuation of a stock interest in a corporation for which an election to be taxed as an S corporation had been made and which was subject to the transitional rules in the Subchapter S Revision Act of 1982, Pub. L. 97-354, sec. 2, 96 Stat. 1669, 1683. Consequently, that corporation was required to recognize certain of its net capital gain for the 3 taxable years immediately following the date of that S corporation election. Although we refused to allow a reduction equal to the full amount of the Federal and State capital gains taxes that would have been incurred if that corporation had liquidated on the valuation date involved in the Estate of Luton case, we found:

> Accordingly, with the exception of the 14-month period from the valuation date until December 31, 1988, RSJ, Inc.,'s built-in capital gains could be recognized without a corporate level tax. Notwithstanding the potential elimination of any corporate level tax, we do recognize that some discount is in order. We believe such discount is appropriately considered in the discount for lack of marketability, discussed below. * * * [Emphasis added.]

Estate of Luton v. Commissioner, supra.

blocks of stock at issue, and respondent's expert Mr. Thomson included $10,578,516 of that total tax as part of the lack-of-marketability discount that he applied in that valuation process. Although those dollar amounts vary because of other differences that those experts have in the valuation process, see chart above, each of those experts independently concluded that a 15-percent discount or adjustment attributable to ADDI&C's built-in capital gains tax should be included as part of the respective lack-of-marketability discounts that they determined. We have examined the manner in which petitioner's expert Mr. Pratt and respondent's expert Mr. Thomson determined the respective amounts attributable to ADDI&C's built-in capital gains tax that they believe should be included as part of the total lack-of-marketability discount which should be applied in valuing each of the blocks of stock at issue. We are satisfied on the record before us that those amounts (i.e., $8,776,317 to $10,578,516) set the appropriate range from which we may determine the amount attributable to ADDI&C's built-in capital gains tax that should be included as part of the lack-of-marketability discount to be applied in determining the value of each such block. Bearing in mind that valuation is necessarily an approximation and a matter of judgment, rather than of mathematics, Hamm v. Commissioner, 325 F.2d at 940, on which petitioner has the burden of proof, Rule 142(a), we find on the instant record that $9 million which is attributable to ADDI&C's built-in capital gains tax should be included as part of the lack-

of-marketability discount that is to be applied in valuing each of the two blocks of ADDI&C's stock at issue.

We now turn to the balance of the lack-of-marketability discount attributable to factors other than ADDI&C's built-in capital gains tax that the parties and all of the experts agree should be applied in ascertaining the fair market value on the valuation date of each of the blocks of stock in question. Petitioner and petitioner's experts believe that the percentage amount thereof should be 35 percent, while respondent's expert Mr. Thomson believes that it should be 23 percent. Because of other differences among them, see chart above, the dollar amount of the lack-of-marketability discount that each determined without regard to any amount included therein that is attributable to ADDI&C's built-in capital gains tax ranges from $15,265,630 (Mr. Howard's determination) to $20,478,074 (Mr. Pratt's determination). Mr. Thomson's determination thereof was $16,220,390.

Mr. Howard determined to apply a 35-percent lack-of-marketability discount[19] by relying on a number of so-called restricted stock studies that are cited in his expert report. Those studies show the amounts of discounts at which private transactions in restricted stock (i.e., stock of public companies

[19] Hereinafter, unless otherwise stated, all references to a lack-of-marketability discount are to such a discount determined without regard to ADDI&C's built-in capital gains tax that we have found should be taken into account in arriving at the total amount of the lack-of-marketability discount that should be applied in this case.

that is restricted from trading on the open market for a certain period) took place compared to the prices on the open market of identical but unrestricted stock (i.e., stock of public companies that is freely tradable on the open market). Mr. Howard also relied on one so-called initial public offering (IPO) study cited in his expert report that shows the amounts of discounts at which private transactions in stock occurring shortly before an IPO took place compared to the prices of such stock after an IPO. In other words, that IPO study analyzed the prices of stock in private transactions compared to the prices of subsequent public offerings of stock of the same companies.

Mr. Pratt determined to apply a 35-percent lack-of-marketability discount by relying on the same restricted stock studies and the same IPO study on which Mr. Howard relied as well as on an additional restricted stock study and an additional IPO study.[20] In addition, Mr. Pratt considered ADDI&C's history as of the valuation date of not paying dividends in determining that discount. In order to ascertain whether the aggregate amount of the minority discount and the lack-of-marketability discount that he separately determined was reasonable, Mr. Pratt also examined certain transactions involving the trading of units of various publicly registered limited partnerships (limited partnership units) that were not trading on a formal exchange such as the

[20] In his rebuttal report, Mr. Howard also considered the additional restricted stock and IPO studies on which Mr. Pratt relied in his expert report.

NYSE. Most of those partnerships were making distributions to their partners (distributing limited partnerships) as of the valuation date. In examining the trading transactions of the limited partnership units, Mr. Pratt focused on those transactions involving publicly registered limited partnerships that, like ADDI&C, were not making distributions to partners (nondistributing limited partnerships) as of the valuation date. After studying the data relating to the trading transactions of the limited partnership units, Mr. Pratt made a number of different calculations regarding the amounts of discounts from net asset value at which those units were trading, including separate calculations of the median amounts of the discounts from net asset value at which limited partnership units of distributing limited partnerships and nondistributing limited partners were trading. Although Mr. Pratt reproduced in an exhibit to his expert report the data from the document (source document)[21] that he had used in making those calculations, he did not use the average discount that was printed in the source document and that was based on the average of the range of trading prices for each of those units that were reflected in that document. Instead, Mr. Pratt admitted

[21] Mr. Thomson included in his rebuttal report a copy of the source document from which Mr. Pratt obtained data with respect to the publicly registered limited partnership units that he examined. That document provided the name of the limited partnership, the value per limited partnership unit, the range of prices at which that unit traded, and the average discount reflected in the trading price from the value of that unit, which was computed by using the average of that range of prices.

at trial that he calculated the amounts of discounts from net asset value at which the limited partnership units were trading based on the lowest trading prices listed in the source document, which resulted in his generating slightly higher discounts (about 3 percent higher) than would have been produced if he had used the average of the range of trading prices for each limited partnership unit that were reflected in the source document.

Mr. Thomson determined to apply a 23-percent lack-of-marketability discount. He stated in his expert report and at trial that the starting point for that discount was 33 to 36 percent (base range), which he identified as the discount for lack of marketability applicable to relatively small minority interests in companies that were for the most part operating companies. In arriving at the base range for his lack-of-marketability discount, Mr. Thomson reviewed certain, but not all, of the restricted stock studies considered by Mr. Howard and/or Mr. Pratt. Mr. Thomson found that the restricted stock studies that he examined showed that the discounts for restricted stock ranged from 26.5 percent to 36 percent, and he used the upper end of that range, i.e., 33 to 36 percent, as the base range for determining the lack-of-marketability discount for each of the blocks of ADDI&C stock at issue. Mr. Thomson also relied on the following factors to determine the specific lack-of-marketability discount applicable to each of those blocks: (1) The size of each block of ADDI&C stock at issue and its ability to influence management decisions;

(2) the swing block potential of each such block; (3) the public awareness or exposure of the business or assets of ADDI&C; (4) the type of business in which ADDI&C was engaged and the composition and relative attractiveness of its assets; (5) the financial strength of ADDI&C and its potential for paying dividends; (6) the basis of value and the method of value used to determine the asset value of ADDI&C; and (7) any other relevant factors that could influence the marketability of each of the blocks of stock at issue. Mr. Thomson concluded that the first six of the foregoing factors tended to lower the lack-of-marketability discount that should be applied to each of those blocks.[22] Consequently, he lowered the base range of 33 to 36 percent that he had used as a starting point to 20 to 24 percent. He then selected 23 percent as an appropriate lack-of-marketability discount.[23]

Respondent points out that neither Mr. Howard nor Mr. Pratt specifies in their respective expert reports and rebuttal reports how each used the restricted stock and IPO studies as well as factors specific to ADDI&C and each of the blocks of stock in question in order to arrive at a 35-percent lack-of-marketability

[22] Mr. Thomson determined that the seventh and last factor, which gives consideration to ADDI&C's built-in capital gains tax, should increase the lack-of-marketability discount that he otherwise determined by $10,578,516.

[23] Taking account of all the factors, including ADDI&C's built-in capital gains tax, that Mr. Thomson concluded were proper in arriving at the lack-of-marketability discount to be applied in valuing each of the two blocks of stock at issue, he determined a 38-percent lack-of-marketability discount.

discount. We agree. Nonetheless, we found those reports and the additional testimony at trial of Mr. Pratt to be quite helpful in ascertaining the lack-of-marketability discount that we shall apply in this case.

Petitioner contends that the 23-percent lack-of-marketability discount determined by Mr. Thomson is too low because, inter alia, Mr. Thomson failed to consider the IPO studies relied on by Mr. Howard and/or Mr. Pratt. In Mr. Thomson's rebuttal report and at trial, he explained that, to the extent that the IPO studies examined data with respect to stock prices subsequent to the valuation date, he believed that those data could not be considered in valuing each of the two blocks of stock at issue because the Uniform Standards of Professional Appraisal Practice provide that the cutoff date for data used in a retrospective appraisal is the valuation date. We agree. However, Mr. Thomson admitted at trial that, to the extent that the IPO studies considered data with respect to stock prices prior to the valuation date, those data were readily available on the valuation date and could have been considered in valuing each such block.[24] We agree and find that Mr. Thomson should have considered the pre-

[24] At trial, Mr. Thomson indicated that he believes that at least one of the IPO studies may be biased because it was based on “insider transactions”. However, Mr. Thomson’s rebuttal report, which was submitted to the Court well before trial, did not reflect any such criticism of that IPO study (or of the other IPO study), which means to us that Mr. Thomson does not consider his criticism at trial about the possible bias of one of the IPO studies to be significant.

valuation date price data reflected in those IPO studies because they, together with the restricted stock studies, would have provided a more accurate base range and starting point for determining the appropriate lack-of-marketability discount than the base range that he determined. Mr. Howard and Mr. Pratt both explained in their rebuttal reports that the restricted stock studies examine stock that, although restricted for a period of time, is freely tradable after that period expires. They point out that the IPO studies, rather than the restricted stock studies, may be more indicative of the lack-of-marketability discount to be applied in the present case because the IPO studies examine the price differences between stock, like ADDI&C stock, that is not freely tradable and stock of the same corporations after it becomes freely tradable in an IPO. The average median price discount (adjusted for industry price/earnings multiples) for years prior to the valuation date (viz, 1975 through 1991) only, based upon an IPO study undertaken by Willamette Management Associates for those years as well as 1992 and 1993, was approximately 52 percent. The average median price discount for years prior to the valuation date (viz, 1980 through 1991) only, based upon an IPO study undertaken by Robert W. Baird & Company for those years as well as 1992 through 1995, was approximately 47 percent. On the record before us, we find that, in determining the lack-of-marketability discount that is applicable here without regard to ADDI&C's built-in capital gains tax, the prevaluation

date data in the IPO studies are relevant and provide some insight into the price differences between stock that is freely tradable and stock, like ADDI&C stock, that is not freely tradable.

Mr. Thomson stated in his expert report that, because each block of ADDI&C stock at issue represented 25.77 percent of the outstanding stock of ADDI&C, no shareholder had control of that corporation on the valuation date. However, Mr. Thomson concluded that each of those blocks could influence management and represented a swing block. Petitioner contends, Mr. Pratt believes, and Mr. Thomson acknowledged at trial that, in determining the value of each of the two blocks of stock in question, the actual owner of the other such block and the actual owner of the remaining ADDI&C stock on the valuation date should be considered. We agree. On that date, one of decedent's sons, who received the other block of stock from his father, and decedent, respectively, were the actual owners of that other block and that remaining stock. Petitioner contends that as of the valuation date it was unlikely that a member of decedent's family would join with an outsider to compel ADDI&C to act or not to act in a specified matter. We agree. On the record before us, we find that Mr. Thomson made invalid assumptions about, and gave undue weight to, the ability of each 25-share block of ADDI&C stock in question to influence management and to be a swing block.

Both Mr. Howard and Mr. Pratt criticize Mr. Thomson for, inter alia, his emphasis in determining a lack-of-marketability discount

on ADDI&C's capacity to pay dividends and his disregard of its 45-year history as of the valuation date of not paying dividends.[25] As of that date, each of those blocks of stock constituted a minority interest, and neither represented a swing block. On the instant record, we find that a hypothetical willing seller and a hypothetical willing buyer would have no reason to believe on the valuation date that ADDI&C's 45-year history of not paying dividends was likely to change. See also Rev. Rul. 59-60, sec. 5, 1959-1 C.B. at 242-243 ("adjusted net worth should be accorded greater weight in valuing the stock of a closely held investment * * * company, whether or not family owned, than any of the other customary yardsticks of appraisal, such as earnings and dividend paying capacity.").

On the record before us, we are satisfied that the respective amounts of the lack-of-marketability discounts determined by the experts without regard to ADDI&C's built-in capital gains tax (i.e., $15,265,630 determined by Mr. Howard, $16,220,390 determined by Mr. Thomson, and $20,478,074 determined by Mr. Pratt) set the appropriate range from which we may determine the lack-of-marketability discount without regard to such tax. In making that determination, we bear in mind that valuation is necessarily an approximation and a matter of judgment, rather than

[25] Both of petitioner's experts point out that, except for a shareholder's use of an airplane during 1990 that was treated for that year as a dividend for Federal income tax purposes, ADDI&C had neither declared nor paid any dividends to its shareholders throughout its 45-year history as of the valuation date.

of mathematics, Hamm v. Commissioner, 325 F.2d at 940, on which petitioner has the burden of proof, Rule 142(a). Based on our examination of the entire record in this case, and using the figures in the restricted stock and IPO studies cited in the expert reports of Mr. Howard and Mr. Pratt as benchmarks of the lack-of-marketability discount without regard to ADDI&C's built-in capital gains tax and evaluating various factors specific to ADDI&C and each of the blocks of stock in question, including the factors listed in the expert report of Mr. Thomson, we find that the lack-of-marketability discount without regard to that tax should be $19 million. We further find that the total lack-of-marketability discount that should be applied in this case and that we have found should include $9 million which is attributable to ADDI&C'S built-in capital gains tax is $28 million.

Based on our examination of the entire record in this case, we find that on the valuation date the fair market value of each of the two 25-share blocks of ADDI&C stock in question was $10,338,725, or $413,549 per share.

To reflect the foregoing,

Decision will be entered under Rule 155.

OPINION

Date Submitted: February 18, 2006
Date Decided: April 26, 2006

Cathy L. Reese, Esquire, Titania R. Mack, Esquire, GREENBERG TRAURIG, LLP, Wilmington, Delaware; Douglas Evan Ress, Esquire, KAUFMAN, COREN & RESS, PC, Philadelphia, Pennsylvania, *Attorneys for Respondents/Plaintiffs.*

David E. Wilks, Esquire, Thad J. Bracegirdle, Esquire, BUCHANAN INGERSOLL PC, Wilmington, Delaware; Howard D. Scher, Esquire, Steven E. Bizar, Esquire, Eliot G. Long, Esquire, BUCHANAN INGERSOLL PC, Philadelphia, PA, *Attorneys for Petitioner/Defendants.*

STRINE, Vice Chancellor.

This case is another progeny of one of our law's hybrid varietals: the combined appraisal and entire fairness action. In this case, the key question is whether the minority stockholders of Delaware Open MRI Radiology Associates, P.A. ("Delaware Radiology") received fair value in a squeeze-out merger with an acquisition vehicle of the majority stockholders, Delaware Open Acquisition, P.A. ("Delaware Acquisition"). The majority and minority stockholders were all radiologists who formed Delaware Radiology to capture additional revenues by owning the centers at which patients would be scanned by MRI machines (the "MRI Centers"). The squeeze-out merger at Delaware Radiology occurred after the radiologists' underlying radiology practice split up, turning the eight Delaware Radiology stockholders into two discrete blocks. The majority group, the "Broder Group," was comprised of five of the stockholders and controlled 62.5% of the Delaware Radiology shares. The minority group, the "Kessler Group," was comprised of three of the stockholders and owned the remaining 37.5% of the Delaware Radiology shares.

Although the dispute requires me to apply both the principles applicable under the appraisal statute and under the common law governing conflicted mergers, the two primary questions of interest to the parties do not differ by the nature of the claim. Those questions are: was the merger price was fair and, if not, what was the extent of the underpayment to the minority stockholders?

In this opinion, I conclude that the merger price of $16,228.55 per share of Delaware Radiology was not fair. Finding no difference between the award the Kessler Group should receive in appraisal or in equity, I award them the amount that I find to be

equivalent to their pro rata share of Delaware Radiology's appraisal value on the date of the merger, $33,232.26 per share, or a total consideration of $4,984,838.71. That award will be supplemented by an award of pre- and post-judgment interest at the 6.9% rate requested by the Kessler Group, compounded monthly.

I. The Procedural Status Of The Litigation

Before describing the relevant facts that are central to this dispute, the procedural underbrush must be cleared away. The merger giving rise to this dispute was effected on January 20, 2004.

The first lawsuit brought in response to the merger was actually filed by Delaware Radiology, as the surviving corporation in the merger, in February 2004. The members of the Kessler Group had expressly preserved their appraisal rights in a letter to the Broder Group, and the members of the Broder Group, through Delaware Radiology, wanted to bring the dispute about value to a head.

In June 2004, the members of the Kessler Group filed a complaint, alleging that the members of the Broder Group (all of whom were directors of Delaware Radiology and Delaware Acquisition, the acquisition vehicle) had breached their fiduciary duties by effecting the merger in a procedurally and substantively unfair manner.

Rather than confuse the reader with references to "respondents/plaintiffs" and "petitioners/defendants," I will generally refer to the minority stockholders, who are seeking damages based upon a determination that the merger was unfair, as simply the Kessler Group. The Kessler Group is comprised of three radiologists: Drs. Howard Kessler, Andrew Shaer, and Locke Barber. Each member of the Kessler Group owned 50

of the 400 outstanding shares of Delaware Radiology. The Kessler Group's cumulative ownership therefore was 37.5%, or three-eighths, of Delaware Radiology.

Likewise, I will refer to the parties seeking to vindicate the fairness of the merger as the Broder Group.[1] The Broder Group is comprised of five radiologists: Drs. George Broder, Michael Clair, William Hartz, Phillip Moldofsky, and Jay Rosenblum. As was the case with the Kessler Group, each member of the Broder Group owned 50 shares of Delaware Radiology. The Broder Group, then, collectively owned 62.5%, or five-eighths, of Delaware Radiology. As a result of the merger, the Broder Group acquired total ownership of Delaware Radiology.

II. Factual Background

A. The Radiology Practice Of The Kessler And Broder Groups

This case has its origins in the common radiology practice in which the Kessler and Broder Groups had interests. Before Delaware Radiology was formed, the members of the Broder and Kessler Groups were practicing together in a radiology practice in Rockledge, Pennsylvania known as Fox Chase Medical Center Radiology Associates, P.C. ("Fox Chase"). Fox Chase was originally formed by four members of the Broder Group: Broder, Hartz, Moldofsky, and Rosenblum. The remaining member of the Broder Group, Clair, joined Fox Chase in September 1985. Kessler joined Fox Chase in

[1] Tri-State Imaging Consultants, L.L.C. ("Tri-State"), which served as the management company of the MRI Centers beginning in 2001, also was named as a defendant in this action based upon its alleged aiding and abetting of Delaware Radiology's fiduciary breaches, but that portion of the litigation was dismissed after summary judgment motion practice. In addition, Delaware Acquisition, the entity used by the Broder Group to merge with Delaware Radiology, also is listed as a defendant in this action.

January 1985, and the remaining two Kessler Group members, Shaer and Barber, joined in approximately 1989-1990.

Each of these doctors had an equal interest in Fox Chase, which derived a large portion of its business from providing radiology services for two Philadelphia-area hospitals: Fox Chase Cancer Center and Jeanes Hospital. Fox Chase also provided radiology services for a small imaging clinic owned by Jeanes Hospital.

B. The Partners Of Fox Chase Decide To Invest In MRI Centers

In 1996, the partners in Fox Chase began considering a strategy to capture more of the total revenue stream flowing from patients who required radiology services.[2] Specifically, they wanted to capture the portion of the revenue stream that went to the entity owning the patient-scanning equipment, in particular, MRI machines. By owning the MRI Centers and doing the diagnostic "reads" of the patient images, the partners at Fox Chase would collect more of the total treatment revenue. As important, because they would own the MRI Centers, the partners at Fox Chase would have control over who did the patients' MRI reads, thus providing them with a more assured stream of this radiology work. As Broder put it, owning the MRI Centers would make radiologists the "masters of [their] own destiny" by allowing them to control the profits of the MRI Centers.[3]

This strategy of opening multiple MRI centers is feasible because a radiologist can read the MRI over the internet at a location remote from the location of the MRI

[2] Shaer was the driving force behind the idea to branch out into the entrepreneurial enterprise of owning MRI Centers. Tr. 678-84.
[3] Tr. 15.

machine. The partners in Fox Chase opened their first MRI Center in 1998 in northeast Philadelphia, through Jeanes Radiology Associates, P.C., which was owned in equal shares by the eight partners of Fox Chase. Jeanes Radiology, essentially the Pennsylvania precursor to Delaware Radiology, was founded to own at least one of the Pennsylvania MRI Centers the partners of Fox Chase hoped to open.

The formation of the entity whose value is at issue in this litigation — Delaware Radiology — resulted from the desire of the partners in Fox Chase to take advantage of the more favorable insurance reimbursement and medical malpractice rates then available in Delaware. To enter the Delaware market, the partners had to form a Delaware entity and obtain licenses to practice medicine in Delaware.[4]

For business reasons, the partners also wanted to join up with a respected Delaware physician who could help secure patients for the MRI Centers they would open in Delaware. To that end, the partners enlisted a locally-renowned doctor, Steven Edell, as a joint venturer. Kessler had a social relationship with Edell, and Kessler and Shaer apparently convinced Edell that investing in the MRI Centers would be beneficial.[5] The division of responsibility was relatively clear. Delaware Radiology would put up capital to form the MRI Centers and would ensure that high-quality MRI reading services were provided to the patients coming through the Centers. Meanwhile, Edell would provide input into possible locations for MRI Centers and use his plentiful contacts in the

[4] For regulatory reasons, it appears that insurance payments for MRI reading fees had to flow through a Delaware-based entity. Likewise, it was necessary for the radiologists diagnosing patients receiving MRI scans in Delaware to be licensed to practice medicine in Delaware.
[5] Tr. 686.

Delaware medical community to ensure that the MRI Centers would benefit from patient referrals. Together, Delaware Radiology and Edell would own, in varying percentages, the MRI Centers that would be opened in Delaware and would share control under the terms of the LLC agreements governing the Centers.

Delaware Open MRI, L.L.C. ("Delaware I"), a Delaware limited liability company, was the first MRI Center they opened. It opened in Newark, DE in 1998. Delaware Radiology received a 70% ownership in Delaware I. Edell received the remaining 30%. Delaware I was profitable quickly, which led Delaware Radiology and Edell to open a second center, Delaware Open MRI II, L.L.C. ("Delaware II"), in Wilmington, DE in 1999. Edell received a higher 40% share of Delaware II, with Delaware Radiology receiving 60%. Delaware Radiology was named as the managing member in the LLC agreements for both Delaware I and Delaware II.

C. The Initial Allocation Of The Revenues For Reading MRI Scans

As has been explained, a central purpose of the formation of the MRI Centers was to enable the partners in Fox Chase to secure a more certain flow of patients needing radiology services. But Fox Chase itself could not directly perform the reads for the Delaware-based MRI Centers because, for various regulatory reasons, a Delaware entity comprised of Delaware-licensed physicians had to be responsible for that function. As a result, not all of the partners in Fox Chase were even shareholders in Delaware Radiology at its formation. Initially, Shaer was named as the sole director, President, Secretary, and

Treasurer of Delaware Radiology because he was already licensed in Delaware.[6] Eventually, all members of the Broder and Kessler Groups became shareholders, and all eventually were added to the board of directors.

Under the operating agreements of Delaware I and Delaware II, Delaware Radiology was assigned the responsibility for providing "MRI diagnostic radiology services."[7] These radiology services were to be provided pursuant to a professional services agreement entered into between each MRI Center and Delaware Radiology. Essentially, these agreements called for Delaware Radiology to provide the reads of the MRI scans that were generated at the MRI Centers. As compensation for these radiology reading services, Delaware Radiology was to be paid 15% of the total revenues of Delaware I and II (the "Reading Fees"). Like Delaware Radiology, Edell got a payment from Delaware I and II for his marketing and administrative work, which, pursuant to the Delaware I operating agreement signed in October 1998, was 5% of the revenues of Delaware I and, pursuant to the Delaware II operating agreement signed in May 1999, was 7.5% of the revenues from Delaware II.

Although the professional services agreements made Delaware Radiology the entity responsible for providing the reads, the actual reads for Delaware I and II upon their opening were performed by radiologists then practicing at Fox Chase. The radiologists who did the work either did the read at Fox Chase or from a home computer. When Delaware I began operating in 1998, there were only three radiologists at Fox

[6] Because he did so much work in connection with opening Delaware I and II, Shaer was paid a development fee. *Id*. at 700.
[7] Op. Agmt. § 6.1.

Chase qualified to provide MRI reads: (i) one member of the Broder Group, Clair; (ii) one member of the Kessler Group, Shaer; and (iii) one employee of Fox Chase, Brumberger. The other members of the Kessler and Broder Groups, at that time, were not qualified to read MRI scans. That reality was not significant then as a business matter. Delaware Radiology simply passed the 15% fee it was entitled to receive through to Fox Chase, and all the read work was performed at Fox Chase by its three qualified readers. Because the eight stockholders of Delaware Radiology were the eight partners of Fox Chase, the reading profits from the Centers were shared equitably among the eight owners — the members of the eventual Kessler and Broder Groups.

D. The Beginning Of The Schism

The stability of this arrangement was short-lived. In June 1999, Kessler, Shaer and Barber — i.e., the Kessler Group — left the Fox Chase practice to form their own radiology practice, Bucks County Radiology Associates, P.C. ("Bucks County"). Bucks County was formed to provide radiology services to two Philadelphia-area hospitals: Graduate Hospital and Warminster Hospital. Brumberger, one of the qualified MRI readers at Fox Chase, also took his services to Bucks County with the Kessler Group. As a result, two of the three MRI readers at Fox Chase — Shaer and Brumberger — were now at Bucks County.

This posed an obvious problem for Delaware Radiology and Fox Chase. Five of the eight owners of Delaware Radiology were now at Fox Chase, while three were at Bucks County. Only one of the qualified MRI readers, Clair, was left at Fox Chase. Thus, the simple funneling of the 15% Reading Fee to Delaware Radiology through to

Fox Chase would no longer result in an equitable distribution of read revenue to the eight Delaware Radiology stockholders, as only five of them remained partners in Fox Chase.

This split created issues for the allocation of MRI reads from the MRI Centers. In contemplation of the Kessler Group leaving Fox Chase, the Kessler Group's attorney proposed that, initially, Fox Chase would be allocated five-eighths of the reads and Bucks County would receive three-eighths.[8] The Kessler Group proposal also contemplated that upon Brumberger becoming a full partner in Bucks County, the MRI Centers would allocate 50% of the reads to Bucks County and 50% of the reads to Fox Chase. But the Broder and Kessler Groups never came to agreement on this proposal.

Instead, immediately after the Kessler Group left Fox Chase, Clair, a Broder Group member, took over the responsibility for allocating the MRI reads. Initially, the Broder and Kessler Groups agreed that two-thirds of the MRI reads would be allocated to Bucks County, because Bucks County had two of the three physicians who had been performing the reads. That is, the number of reads allocated tracked the relative reading capacity of Bucks County and Fox Chase at that time.

In early 2000, Fox Chase's capacity for MRI reads increased when it hired a new radiologist, Dr. Kofsky, who was competent to provide reads, and when Hartz, a Broder Group member, acquired the necessary proficiency to provide MRI reads. Therefore, the

[8] Jt. Ex. 27 at p. 4. This letter also recognized the possibility that Fox Chase would not have adequate personnel to handle five-eighths of the reads and would need to enter into a cross-coverage agreement with Bucks County. *Id*. at 5. Similarly, in May 1999, the Broder Group drafted a proposal to get the Kessler Group to stay on at Fox Chase, which discussed dividing Reading Fees equally. This proposal was not accepted by the Kessler Group. Jt. Ex. 20.

Broder Group, as the controlling block of Delaware Radiology,[9] decided to change the allocation of MRI reads, without apparent complaint from the Kessler Group. Clair, then, began referring 50% of the reads generated by the MRI Centers to Bucks County, and the remaining 50% of the reads went to Fox Chase. This allocation remained in place until November 2001, when Brumberger left the Kessler Group and returned to Fox Chase to work with the Broder Group.[10] At this time, the Broder Group decided to reduce the Kessler Group's reads again, and Clair began referring only one-third of the MRI reads to the Kessler Group. When the reads allocated to Bucks County were reduced to one-third, the Kessler Group's allocation of reads fell slightly below their pro rata ownership, which was three-eighths, of Delaware Radiology.[11] The Kessler Group did not object to this new allocation that began in November 2001.

E. The Broder And Kessler Groups Muddle Through For Awhile

For those with a half-full perspective on life, it is uplifting that the Broder and Kessler Groups were able to muddle through in operating Delaware Radiology until the summer of 2002 without a major meltdown in relations. Having left Fox Chase, the Kessler Group should have recognized that there would be some hard feelings and that its economic interests were now aligned less than perfectly with the Broder Group's.

[9] Broder was less than clear as to the capacity in which the Broder Group acted when determining how to allocate the reads. Initially, he stated it was in the Broder Group's capacity at Delaware Radiology. Tr. 85-86. In response to rather obvious prompting from his own counsel to change his testimony, Broder later stated that the allocation decision was made at Fox Chase. Tr. 335-36. I find that the Broder Group used its majority status to dictate the allocation.
[10] Tr. 806.
[11] Tr. 85.

Nonetheless, the parting of ways at Fox Chase did not initially affect the ability of the Kessler and Broder Groups to conduct the business of Delaware Radiology. All shareholders continued to sit on Delaware Radiology's board of directors.[12] Shaer, a Kessler Group member, continued to serve as President of Delaware Radiology and Medical Director of Delaware I and II. In fact, after the split, the Kessler and Broder Groups opened more jointly-owned MRI Centers in Pennsylvania using various Pennsylvania entities and discussed the possibility of opening a third MRI Center in Delaware through Delaware Radiology.

In addition, in April 2001, the Broder Group retained Michael Carr "to consult and help restructure the management of the non-medical aspects" of Delaware Radiology's business.[13] Initially, Carr was hired as an employee of Fox Chase, and the Kessler Group agreed to "try out" Carr to see if Delaware Radiology would benefit from his management.[14] Carr began providing services to the MRI Centers, including those managed by Delaware Radiology, while he was still on the Fox Chase payroll. Within three to four months of joining Fox Chase, Carr officially became the first employee of Tri-State. Tri-State is an entity that was formed by the Broder Group in 2001, which the Broder Group envisioned would provide management to its Centers. When Carr became an employee, Tri-State then became the entity responsible for the day-to-day, non-

[12] Rosenblum was not yet a shareholder or on the board of directors, presumably because he was not yet a Delaware-licensed physician.
[13] Jt. Ex. 33.
[14] Tr. 737.

medical management of the MRI Centers.[15] Tri-State's responsibilities to the MRI Centers included performing all accounting functions, all human resource functions, facilities management, oversight of information technology, marketing, and business development.[16] Before Tri-State handled the management, the Delaware Radiology shareholders had done that themselves. On December 12, 2001, Delaware Radiology proposed to Edell that Tri-State be paid 1% of the MRI Centers' cash collections in order to compensate it for providing management services. Edell agreed.

After Tri-State began managing Delaware Radiology, it implemented a new system of cash collections and revenue distribution. Before June 2002, insurance reimbursements payable for services rendered at Delaware I and II would go into a Delaware Radiology account. The revenue was then dispersed — 15% for MRI reads, 5% or 7.5% to Edell in the case of Delaware I and II, respectively, 1% to Tri-State, and the remainder to the MRI Center where the scan was performed.[17] The 15% read revenue was passed on to Fox Chase and Bucks County in proportion to the then-existing allocation of reads.

In June 2002, while the Kessler Group still was actively involved in Delaware Radiology and Shaer served as President, Tri-State formed a "concentration account," which received all the incoming reimbursements and collections from the various MRI Centers and sent them up to Fox Chase and the individual MRI Center. The insurance companies, then, made payments directly to the Tri-State concentration account. This

[15] *Id.* at 366.
[16] Jt. Ex. 272.
[17] Tr. 456-57.

essentially commingled the funds of a number of MRI Centers, including the funds of some non-Delaware MRI Centers co-owned by the two Groups and of some MRI Centers owned exclusively by the Broder Group, in one account until the distributions were made. The creation of this concentration account was not a matter of controversy among the directors of Delaware Radiology at that time.

F. The Schism Between The Broder And Kessler Groups Rips Open

The rift between the Kessler and Broder Groups became a chasm in August 2002. On August 13, the Broder Group decided that Fox Chase had "ramped up enough" to handle more reads, and Clair presented Shaer with a schedule of reads, which indicated that the Kessler Group's reads would be reduced from one-third to one-sixth.[18] Now, the Kessler Group objected.

In response to this news, Kessler called Broder on August 15 to express his dismay at the MRI read reduction and to request a meeting. On August 16, Kessler sent a letter to the attorney who represented Delaware Radiology, Arthur Brandolph, requesting "all of the important legal documents for each entity in which [the Kessler Group] own[s] an interest" and "an independent audit of each entity" as well.[19]

Kessler then met with Broder on August 21 in Brandolph's office. After exchanging niceties, Kessler asked Broder, again, to reconsider the reduction in reads. Broder maintained that the reduction in reads was a logical progression and that the

[18] *Id.* at 85.
[19] Jt. Ex. 47.

reduction would occur.[20] Next, they discussed the "divorce" that had occurred when the Kessler Group left Fox Chase, and, for the first time, Broder indicated that the Broder Group would be interested in buying out the Kessler Group's interest in the MRI Centers.[21] Kessler, though, informed Broder that the Kessler Group would prefer to be a buyer, not a seller.[22] Finally, Kessler shared that the Kessler Group would be competing with the Broder Group for the contract to provide radiology services to Jeanes Hospital.

The decision to bid for the Jeanes Hospital contract clinched the mutual enmity between the two Groups. Although the Kessler Group says that it bid only after learning that the Broder Group had no chance of retaining the business, the Kessler Group had to know that this competition would wound the Broder Group, which had provided services at Jeanes Hospital through Fox Chase for nearly twenty years. According to Broder, he had been told in July by the Kessler Group that it would not be bidding on the contract in competition with Fox Chase. Therefore, when Broder learned at the August 21 meeting that the Kessler Group would in fact bid, Broder was "probably . . . the most shocked [he had] ever been in [his] life."[23]

Within a week of learning that the Kessler Group was competing with Fox Chase, Broder received even worse news. On August 26, he met with a representative of Jeanes Hospital who informed him that the Broder Group would lose the contract and that the Kessler Group likely would be awarded the contract. The Broder Group officially

[20] Tr. 109.
[21] *Id.*
[22] *Id.*
[23] *Id.* at 110-11.

received word on October 15 that it would not receive the Jeanes Hospital contract, and the Broder Group ceased providing radiology services for Jeanes Hospital on November 15, the same day that the Kessler Group began providing the services. After losing that contract, the Broder Group's MRI readers had more time on their hands, and within a month, the Broder Group, through Clair, completed the trend in reducing the Kessler Group's reads and no longer allocated any read work to the Kessler Group. As Broder candidly stated at trial, his view was that the Kessler Group's entitlement to read work had ended when the three radiologists left Fox Chase.[24]

Litigation between the Broder Group and the Kessler Group erupted. In November 2002, the Broder Group sued the Kessler Group over its competition for the Jeanes Hospital contract. The Kessler Group responded by suing the Broder Group in Pennsylvania for wrongfully reducing its share of the MRI reads from the commonly-owned MRI Centers in Pennsylvania and Delaware.[25]

The feud also resulted in corporate governance changes at Delaware Radiology. On November 6, in his role as President of Delaware Radiology, Shaer called a special stockholders meeting to discuss financial and ownership matters. In lieu of attending the

[24] *Id*. at 203-04.

[25] Neither party has asserted that findings in the Pennsylvania litigation have any collateral effect on the issues presented to me at trial. The Pennsylvania litigation resulted in an injunction that required the Broder Group to provide one-third of the reads generated by the commonly-owned entities in Pennsylvania and Delaware to the Kessler Group. *See Kessler v. Broder*, 851 A.2d 944 (Pa. Super. 2004); *Kessler v. Broder*, 2003 WL 21782433, at *1 (Pa. Com. Pl. July 28, 2003). Perhaps for that reason, the Kessler Group has not sought a remedy for any allocation of work before the merger in this case, and it does not appear that its expert's valuation was increased by Reading Fees from prior years. But the scope and duration of that injunction is not clear to me. The parties have not expended any effort to elucidate me on the precise status of the Pennsylvania litigation and have proceeded as if it has no effect on this case. Any inefficient overlap, therefore, is a burden they have assumed voluntarily.

stockholders meeting, on November 20, the Broder Group issued written stockholder consents removing the Kessler Group from Delaware Radiology's board of directors and postponing the annual board of director meeting.[26] The Broder Group also installed one of its own, Broder, in place of Shaer as President of Delaware Radiology, and replaced Shaer with Clair as Medical Director of the MRI Centers, including Delaware I and II. The Kessler and Broder Groups next interacted at a contentious Delaware Radiology shareholder meeting held on December 23, 2002.[27]

G. The Final Year Of Joint Ownership

During 2003, a period in which they were battling in litigation, the Broder and Kessler Groups continued to be shareholders in Delaware Radiology. Although they had informally discussed a separation of their interests in Delaware Radiology in August 2002, by spring 2003, the Broder Group began planning for such a division in earnest, albeit in an erratic and confusing manner.

By March 2003, the Broder Group was functioning as a coherent majority block at Delaware Radiology. Using that power, it increased, retroactively to September 2002, Tri-State's management fee to 2% of total cash collections. That same month, the Reading Fees for Delaware I were increased from 15% to 17.5% of revenues; in exchange for this, Edell extracted an increase in his take from 5% to 7.5% of revenues from Delaware I, consistent with his original take from Delaware II.

[26] Jt. Ex. 58.
[27] Jt. Ex. 64.

At a special shareholder meeting of Jeanes Radiology on May 28, 2003,[28] the Broder Group expressed its intent to pursue a valuation of the various MRI Centers, including Delaware I and II, with a view towards some sort of separation. The Broder Group retained Timothy C. Reed of Diversified Medical Management to perform the valuation. On July 15, the Broder Group formed the entity, Delaware Acquisition, that it intended to use as its acquisition vehicle in a squeeze-out merger with Delaware Radiology, although the Kessler Group was unaware of this occurrence. What the Kessler Group did know was that the Broder Group was thinking about a transaction that would eliminate the Kessler Group's ownership in the entities that controlled the various MRI Centers. For example, on July 30, the Broder Group's attorney, Douglas Coopersmith, wrote a letter to the Kessler Group's attorney, Eric Wilenzik, informing him that the Kessler Group could provide information to Reed to assist in the valuation.[29] The Kessler Group apparently declined this invitation.

But the Broder Group's desire to eliminate the Kessler Group's interest was less than firm. In the same time period, Tri-State was performing serious business development work for Delaware Radiology on the opening of new MRI Centers. In May, the Delaware Radiology board of directors — which by then was exclusively comprised of the Broder Group members — discussed the idea of opening a third Delaware MRI Center with Edell in Middletown, DE ("Delaware III"). In July, Delaware III entered into a lease for space that it would use in Middletown. Meanwhile, Tri-State, through

[28] Jt. Ex. 91.
[29] Jt. Ex. 106.

Carr, had also been working for Delaware Radiology on the concept of opening yet a fourth MRI Center with Edell, in this instance in Dover, DE ("Delaware IV"). Planning for Delaware IV was well under way by late autumn of 2003.

By late 2003, the ambiguity about the Broder Group's desires was piquant. In October, while Reed was valuing Delaware Radiology and the Broder Group had begun the steps to squeeze out the Kessler Group, the Broder Group's attorney sought personal guarantees from the Kessler Group, at the request of the Wilmington Savings Fund Society, in connection with financing an expansion of Delaware I.[30] In the exchange of communications, the Kessler Group's attorney developed the impression that the Broder Group was also seeking guarantees from the Kessler Group in connection with a new MRI Center and requested more information.[31] In response, the attorney for the Broder Group sent the pro forma projections for both this new MRI Center, which was Delaware III, and the expansion of Delaware I to the Kessler Group. But his letter otherwise only mentioned the expansion of Delaware I. The Kessler Group then proposed that the Delaware Radiology shareholders and Edell loan the money necessary for the financing, rather than seeking it from a third-party lender. The negotiation over financing continued, albeit in a manner that appears only to have concerned Delaware I, until mid-November, and it appears that the Broder Group and Edell ultimately provided the loans for the expansion.[32]

[30] *See* Jt. Ex. 403 for the various communications.
[31] Jt. Ex. 390.
[32] Jt. Ex. 124.

During this time frame, the Broder Group must have been actively planning the merger because, on December 10, the Broder Group members executed consents in their capacity as directors of Delaware Radiology to approve the merger. On December 15, the Broder Group first formally notified the Kessler Group of a merger whereby the Kessler Group would be squeezed out of Delaware Radiology. By October 31, Reed had finished his valuation work, and his valuation of Delaware Radiology was included in this December 15 notice along with the merger agreement. The merger agreement indicated that Delaware Radiology would merge with Delaware Acquisition, and Delaware Radiology would be the surviving corporation. Using Reed's work as a premise for the merger terms, the merger agreement called for merger consideration of $16,257.33 per share.[33]

Along with the merger agreement, the Broder Group also sent notice of a special meeting of shareholders that would be held on January 5, 2004 to vote on the proposed merger. At the Kessler Group's request, the meeting was postponed until January 19.

On January 9, the individual members of the Kessler Group submitted written demands for appraisal of their shares pursuant to 8 *Del. C.* § 262. In addition, they agreed not to attend the special meeting to be held on January 19. In a January 16 letter, the Broder Group's attorney confirmed the arrangement whereby the Broder Group would meet on January 19 to approve the merger, and the Kessler Group would not attend but still preserved "all of its claims against the Broder Group" except for any

[33] Pursuant to the merger agreement, this price was adjusted downward to $16,228.55, which became the final merger price, based on excess working capital and distributions.

claims "arising out of or related to the propriety of the Notices, the presence of a quorum at the Meeting, the sufficiency of the vote to approve and adopt the merger and the other action items, other needed corporate action to approve, adopt and make the merger legally binding and other claims arising from or related to the manner in which the Meeting was conducted."[34] As contemplated, the Broder Group met and approved the merger, and the merger became effective the next day — January 20. The final per share merger consideration, after adjustments, was $16,228.55, which would have provided each minority stockholder with $811,427.50.

[34] Jt. Ex. 151. In prior summary judgment motion practice, the Broder Group argued that the Kessler Group, through this letter, waived its right to bring any action other than an action for appraisal. Waiver, of course, only occurs when a party voluntarily and knowingly relinquishes a known right. *See Realty Growth Inv. v. Council of Unit Owners*, 453 A.2d 450, 456 (Del. 1982); DONALD J. WOLFE, JR. & MICHAEL A. PITTENGER, CORPORATE AND COMMERCIAL PRACTICE IN THE DELAWARE COURT OF CHANCERY § 11.2 (2005). I agreed with the Broder Group that the Kessler Group's agreement that it would not challenge actions required "to approve, adopt and make the merger legally binding" clearly waived any claims for rescission or rescissory damages. Essentially, the Kessler Group recognized that the Broder Group had the necessary number of votes to effect the merger and waived any argument that the merger should be unwound for procedural reasons. But the Broder Group also argued that the January 16 letter precluded an entire fairness claim. I rejected that argument, determining that the January 16 letter did not clearly waive the right to bring equitable claims, such as an entire fairness action, as a matter of law. I did so because the January 16 letter could also reasonably be read, in light of its text and particularly the Kessler Group's reservation of "all of its claims" with certain defined exceptions arguably relating only to the formalities of the merger approval process, as merely waiving any objection to the procedures used to effect the formal approval of the merger and not any equitable claims addressing the merger's substantive fairness. I did leave open the possibility that through extrinsic evidence introduced at trial, the January 16 letter could potentially be proven to foreclose an entire fairness claim. The Broder Group, though, did not address this issue at trial or in its trial briefs in more than a cursory manner, and I therefore permit the progression of the Kessler Group's entire fairness claims.

G. After The Merger, Three New Delaware MRI Centers Open

Soon after the merger, the Broder Group capitalized on the substantial planning already underway for the new MRI Centers in Middletown and Dover. Indeed, as to the Middletown Center, the Broder Group did not even wait until the merger was effected.

In December 2003, Delaware Open MRI III L.L.C. (what was previously defined as "Delaware III") was formed to own the Middletown MRI Center, and in July 2003, Delaware III had leased the space where this Center would be located.[35] The ownership structure of Delaware III was a bit different from Delaware I and II. Delaware Radiology was accorded ownership of 51.4%, Edell 40%, and Carr, of Tri-State, was granted an 8.6% interest. Delaware III became operational in April 2004.

The Dover MRI Center — which was owned through Dover Open MRI LLC (what was previously defined as "Delaware IV") — was opened in July or August 2004. Delaware IV was formed eight days before the merger. Although the Delaware IV lease was not formalized until January 27, the lease was essentially ready for signature before the merger.

No doubt, the decision to hold off the lease signing was tactical and influenced by legal risk. Those tactics also influenced the ownership structure for Delaware IV. Rather than participate in Delaware IV through Delaware Radiology, the Broder Group participated in Delaware IV through a new entity, Tri-State G.P. LLC. Tri-State G.P.

[35] Carr somehow signed this lease on behalf of Delaware III though that entity was not formed until months later. I have little doubt that, had Delaware III somehow defaulted under its lease obligations, the landlord would have had the ability to recover against Delaware Radiology directly because Carr executed the lease on behalf of Delaware III before that entity which Delaware Radiology intended to create even existed.

LLC was owned by the Broder Group, along with Carr. Like the other Delaware MRI Centers, Delaware IV was a joint venture with Edell, who received 40% of Delaware IV.

The southern movement of the MRI Centers continued beyond Dover. In September 2004, Open MRI of Seaford, LLC ("Delaware V") was formed as the entity that would own an MRI Center in Seaford, DE. A lease for the Seaford Center was signed in February 2005, over a year after the merger. As of trial, the Seaford Center was not yet operational. The ownership structure of Delaware V is slightly different than even Delaware IV. Delaware V is owned individually by the members of the Broder Group, along with Brumberger (who is now a partner of Fox Chase), Carr, and Edell. Edell owns 40% of Delaware V, and the remaining individuals each own 8.57%.

As with Delaware I and II, payments for the read work are a substantial portion of the total revenues the Broder Group receives from its investments in Delaware III, IV, and V. In the operating agreements for those new MRI Centers, 17.5% of the total revenues were to be paid to the provider of MRI reading services. In the case of Delaware III, that provider was to be Delaware Radiology. In the case of Delaware IV and V, due to a change in Delaware law that dropped the requirement for a Delaware professional corporation to provide this type of medical service, the operating agreements provided that Fox Chase would receive the Reading Fees.

III. Framework For Analysis

The resolution of this case is complicated by the presence of both an equitable entire fairness claim and a statutory appraisal claim. The key issues relevant to each type

of claim are common, and the differing rubrics have relatively little influence on the bottom line outcome of the case, which turns on whether the merger was financially fair.

Nonetheless, it is required that I address each claim on its own distinct terms. My task in addressing the appraisal aspect of the case is easy enough to state, if more difficult in practice to accomplish with any genuine sense of reliability. Put simply, I must determine the fair value of Delaware Radiology's shares on the merger date and award the Kessler Group a per share amount consistent with their pro rata share of that value, supplemented by a fair rate of interest, regardless of whether that amount is greater or less than the merger price.[36] Fair value is, by now, a jurisprudential concept that draws more from judicial writings than from the appraisal statute itself. In simple terms, to reach a fair value award, I must determine Delaware Radiology's value as a going concern on the merger date and award the Kessler Group the percentage of that value that tracks its members' pro rata interest in Delaware Radiology on that date.[37] In valuing Delaware Radiology, I may consider all relevant, non-speculative factors bearing on its value as of the merger date.[38] That includes the input provided to me by the contending parties' experts.[39] But I cannot shirk my duty to arrive at my own independent determination of value, regardless of whether the competing experts have provided widely divergent estimates of value, while supposedly using the same well-established

[36] *E.g.*, *Cede & Co. v. Technicolor, Inc.*, 684 A.2d 289, 299 (Del. 1996) (hereinafter "*Technicolor*").
[37] *Andaloro v. PFPC Worldwide, Inc.*, 2005 WL 2045640, at *8 (Del. Ch. Aug. 19, 2005).
[38] *See Union Illinois 1995 Inv. Ltd. P'ship v. Union Fin. Group, Ltd*., 347 A.2d 340, 356-57 (Del. Ch. 2004).
[39] *Technicolor*, 684 A.2d at 299 (citations omitted).

principles of corporate finance.[40] Such a judicial exercise, particularly insofar as it requires the valuation of a small, private company whose shares do not trade in a liquid and deep securities market, using a record shaped by adversaries whose objectives have little to do with reaching a reliable valuation, has at best the virtues of a good faith attempt at estimation. That is what I endeavor here.

Unlike a statutory appraisal action, the success of an equitable action premised on the assertion that a conflicted merger is unfair ultimately turns on whether the court concludes that the conflicted fiduciaries breached their duties.[41] Here, there is no question that the merger implicates the entire fairness doctrine, as the Broder Group comprised all the members of the Delaware Radiology board and the acquiring company's board, and used its majority control to vote through the merger. Nor did the Broder Group use any of the procedural devices that could temper (or in some contexts, eliminate) the application of the entire fairness standard, such as a special negotiating committee of disinterested and independent directors or a majority-of-the-minority stockholder vote provision.

Therefore, the Broder Group bears the burden to prove that the merger was entirely fair. That burden has been said to require that the proponents of a conflicted merger demonstrate that they proceeded in a manner that was both procedurally and substantively fair.[42] That is more than a bit of a misnomer, as the overriding consideration is whether the substantive terms of the transaction were fair. Thus, it has

[40] *Gonsalves v. Straight Arrow Publishers*, 701 A.2d 357, 361-62 (Del. 1997).
[41] *Onti, Inc. v. Integra Bank*, 751 A.2d 904, 930 (Del. Ch. 1999).
[42] *See Weinberger v. UOP, Inc.*, 457 A.2d 701, 711 (Del. 1983).

been said that the two-part fairness test is not a bifurcated one; rather, all aspects of the transaction are examined as a whole in order to aid in coming to the bottom-line conclusion of whether the transaction was fair.[43] In a non-fraudulent transaction, therefore, "price may be the preponderant consideration outweighing other features of the merger."[44]

Given the nature of the merger at issue here, it makes sense to examine the process by which the merger was accomplished as an initial matter. Then, once that is examined, I will consider whether the merger was effected at a fair price, because that inquiry is common to both the entire fairness and appraisal claims.

IV. The Fairness Of The Merger Process

The Kessler Group naturally alleges that the merger process was unfair because the Broder Group did not use any traditional fairness-enhancing procedures in the merger process. The most that the Broder Group did was to commission Reed to conduct a valuation of Delaware I and II so that his valuation could be used to set the price at which the Broder Group would cash-out the Kessler Group.

Unlike the Kessler Group, I am not shocked by this method of proceeding. The record is replete with futile exercises in negotiation between the Broder and Kessler Groups. Moreover, the Kessler Group was invited to submit information to Reed but chose not to participate in Reed's valuation exercise.

[43] *Weinberger*, 457 A.2d at 711.
[44] *Id*. *See also Onti*, 751 A.2d at 930 n.108 ("[W]here the claims of unfair dealing do not rise to the level of fraud . . . the Court should primarily focus on whether the price was unfair.").

But the fact that the Broder Group decided to use its power to cash-out the Kessler Group does not mean, in itself, that it acted unfairly. Assume, for example, that the Broder Group had appointed Warren Buffett and Robert Rubin to act as a special committee, with a distinguished and unconflicted investment bank as their advisor, to value the Kessler Group's interests in Delaware Radiology as fairly as they could, based on full and fair access to company information. Assume further that the Broder Group used the resulting valuation as the basis for setting the Kessler Group's exit price. In that scenario, it would be difficult to perceive any procedural unfairness. I know of no requirement that a controller actually bargain with the minority or give a representative of the minority veto power in order to meet its burden of proving entire fairness; rather, the forsaking of such techniques is what imposes the burden of demonstrating fairness squarely on the controller. In such a circumstance, what will be determinative is whether the chosen appraiser actually came up with a fair exit price for the minority.

What is therefore critical in a case like this is whether the appraiser chosen by the Broder Group, Reed, in fact came up with a fair valuation. If Reed failed in that endeavor and the Broder Group used too low a valuation to set the merger consideration, then the Broder Group will not have met its burden to prove that the merger was fair.

Playing into this analysis are two issues that have both equitable and pure valuation implications. As the factual rendition indicates, one of the principal reasons for this dispute is the Kessler Group's objection to the Broder Group's ascending and eventual total allocation of the Reading Fees to itself, to the exclusion of the Kessler Group. In his valuation that was the premise for the merger price, Reed simply accepted

that Delaware Radiology should be valued on the basis that it had to pay 17.5% of the revenues from Delaware I and 15% of the revenues from Delaware II in Reading Fees. Reed did not consider whether either the 17.5% or even the 15% fee were true market rates, given that the founders of Delaware Radiology intended to benefit not only from owning the MRI Centers but from providing the reading services. Similarly, Reed simply took it as given that the Broder Group's unilateral decision to double the management fees paid to Tri-State was a fair one, which reflected a reasonable market price for the services Tri-State provided.

In evaluating the fairness of the merger, therefore, it becomes essential for me to determine whether the allocation of all the reads by the Broder Group to itself was a breach of fiduciary duty or breach of contract. Even if the allocation was not in itself a breach of duty, I must determine whether the Broder Group used its control of Delaware Radiology to obtain for itself an above-market rate for the Reading Fees and for management services. These inquiries are necessary because the Kessler Group was actively disputing the Broder Group's handling of these issues as of the time of the merger. If the merger terms did not adequately account for the value of these potential claims, then the merger would not be fair. Likewise, in appraising Delaware Radiology, it is relevant to consider the value of claims belonging to the entity, as they are an asset of the firm that is part of its value.[45]

[45] *See, e.g.*, *Cavalier Oil Corp. v. Harnett*, 564 A.2d 1137, 1142-44 (Del. 1989); *Nagy v. Bistricer*, 770 A.2d 43, 55 (Del. Ch. 2000).

There is another even more important issue that does not turn solely on an exercise in valuation. Reed seemed to view his task as valuing particular MRI Centers that the Broder Group brought to his attention. Consistent with that narrow prism and, as shall we see, his very incomplete understanding of the nature of Delaware Radiology, Reed did not even consider whether Delaware Radiology was more valuable as of the time of the merger because of the plans it had developed to open Delaware III and IV. His valuation included no value for those expansion plans.

The decision of the Broder Group to cash out the Kessler Group at a price that did not afford it any of the value of the gains expected from Delaware III, IV, and possibly V clearly bears on the fairness of the merger.[46] Not only that, if the concept of opening Delaware III, IV, and V was part of the business plans of Delaware Radiology as of the merger date, then the value of those expansion plans must be taken into account in valuing Delaware Radiology as a going concern, under the teaching of our Supreme Court in *Technicolor* and other precedent.[47]

---

[46] *See, e.g.*, *Onti*, 751 A.2d at 910-11 (discussing the need to include value for a company's development plans in order to prevent the majority stockholder from unfairly denying the minority any value by unfairly timing the merger); Lawrence A. Hamermesh and Michael L. Wachter, *The Fair Value of Cornfields in Delaware Appraisal Law* (U. of Penn, Inst. For Law & Econ Research, Paper No. 05-24, 2005) *available at* http://ssrn.com/abstract=810908 ("If the controller could simply choose the moment to squeeze-out the minority when the fortune of the firm was about to improve, the result would be to discourage minority shareholders from becoming minority shareholders and upset the balance that protects minority shareholders while allowing the controller to retain the benefits of control.").

[47] *Technicolor*, 684 A.2d at 300; *see Weinberger*, 457 A.2d at 713 ("Thus, market value, asset value, dividends, earning prospects, the nature of the enterprise and any other facts which were known or which could be ascertained as of the date of merger and which throw any light on future prospects of the merged corporation are not only pertinent to an inquiry as to the value of the dissenting stockholders' interest, but must be considered by the agency fixing the value."); *Onti*, 751 A.2d at 911 ("I would suggest to you that a valuation of that company as of the date of

As will be seen, after considering these issues, I determine that the Broder Group's handling of these issues fell well short of what was necessary for them to satisfy their burden of fairness. For that reason, principles of equity infuse my valuation analysis, because I have endeavored to resolve doubts, at the margins, in favor of the Kessler Group, the minority stockholders who were involuntarily squeezed out of Delaware Radiology.[48] By doing so, I attempt to come up with an award that equals what the Kessler Group would have received in a merger negotiated at arm's-length between parties with equal bargaining strength.

V. The Fairness Of The Merger Price

With this framework in mind, I will now resolve the key disputes over value. There are three major issues that divide the parties. The first two I will examine are the ones I have just mentioned: (1) the reading and management fee dispute and (2) the expansion plans. The other major issue involves the proper way to address the reality that Delaware Radiology was an "S" corporation before the merger[49] and that there was no likelihood that it would ever be other than an S corporation, irrespective of the merger.

These three issues account for most of the differences in value found in the reports of the testimonial experts. At trial, the Broder Group relied on the same expert it used to

---

the merger that doesn't take into consideration the nonspeculative possibilities of developing this cornfield into something other than a cornfield is not a realistic valuation of the company. The minority shareholders, under those circumstances, are entitled to a valuation that reflects the value of a company that owns a cornfield that can be developed into a major office center."); *Allenson v. Midway Airlines Corp.*, 789 A.2d 572, 585 (Del. Ch. 2001) (stating that even value added by an acquiror's business plan can become cognizable in an appraisal proceeding if it is actually being implemented).

[48] *See Andaloro*, 2005 WL 2045640, at *9.

[49] *See* 26 U.S.C.A. § 1363 (2005) ("The taxable income of an S corporation shall be computed in the same manner as in the case of an individual . . . .").

set the merger price in the first instance, Timothy Reed of Diversified Medical Management. Reed premised his opinion of value on a discounted cash flow analysis that attributed no value to Delaware III, IV, or V, that accepted the reading and management fees as proper expenses of the MRI Centers, and that tax affected Delaware Radiology's earnings as if it were a C, rather than S, corporation. After doing all this, and using high discount rates of 21.4% for Delaware I and 22.4% for Delaware II, Reed came to a value of $6,815,400, or $17,038.67 per share, which translated to $2,555,800 overall to the Kessler Group. This was slightly higher than the value offered to the Kessler Group in the merger, which was a value set in reliance on Reed's earlier work.

For its part, the Kessler Group employed John Mitchell of Gocial Gerstein, LLC as its valuation and damages expert. Like Reed, Mitchell relied on a DCF analysis. But Mitchell: (1) included in his valuation an estimate of the value of Delaware III and IV; (2) treated the majority of Reading Fees entirely as profit to Delaware Radiology rather than as proper expenses to the MRI Centers; (3) reduced the management fee to Tri-State, as well as the fees to Edell, as being excessive; and (4) did not tax affect Delaware Radiology's future earnings at all. Mitchell also used a lower discount rate. Using these inputs, Mitchell arrived at a value for Delaware Radiology on the merger date of $26,429,722, which translates into $66,074 per share or $9,911,100 to the Kessler Group for its 37.5% share.

In determining which side is closer to the mark, I will proceed as follows. For the sake of clarity, I begin by determining how the expansion plans affected Delaware Radiology's value on the merger date. I then address the dispute over reading and

management fees. I next confront the question of whether to tax affect Delaware Radiology's earnings. Finally, I endeavor to put all the pieces together and come to a bottom-line determination of the value of Delaware Radiology as of the merger date, for the purposes of making a determination of fairness and shaping the Kessler Group's award.

A. Should The Value Of Delaware III, IV, And V Have Been Accounted For In The Merger Price?

Delaware law is clear that "elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered."[50] Obviously, when a business has opened a couple of facilities and has plans to replicate those facilities as of the merger date, the value of its expansion plans must be considered in the determining fair value. To hold otherwise would be to subject our appraisal jurisprudence to just ridicule. The dangers for the minority arguably are most present when the controller knows that the firm is on the verge of break-through growth, having gotten the hang of running the first few facilities, and now being well-positioned to replicate its success at additional locations — think McDonald's or Starbucks. Here, the business plan of Delaware Radiology involved the strategy of opening additional MRI Centers in Delaware with Edell. This strategy was part of what the Supreme Court would call the "operative

[50] *Weinberger*, 457 A.2d at 713. *See also Technicolor*, 684 A.2d at 300.

reality" of Delaware Radiology on the merger date and must be considered in determining fair value.[51]

On this record, it is easy to conclude that the value of the expansion plans for Delaware III and IV must be considered in valuing Delaware Radiology as of the merger date. The only hard question is whether there was any non-speculative value for Delaware V as of the merger date to take into account, given the circumstances. Regrettably, the Broder Group did not content itself with fighting about the inclusion of value for Delaware V, but rather insisted that it was perfectly appropriate to attribute no value at all to the expansion plans of Delaware Radiology as of the merger date. For that reason, I must address each of the new MRI Centers that logically arose out of Delaware Radiology's prior efforts in entering Delaware and opening Delaware I and II. Pervading this analysis is an obvious point: Delaware I through V are all premised on the same model of operation and all involve a partnership with Edell, whereby he will stimulate client flow and the stockholders of Delaware Radiology will bring their radiology

[51] In essence, when the court determines that the company's business plan as of the merger included specific expansion plans or changes in strategy, those are corporate opportunities that must be considered part of the firm's value. *See Technicolor*, 684 A.2d at 298-99 (discussing that the company's value should take into account the new strategy implemented by a majority shareholder before the minority was cashed-out). *See also Montgomery Cellular Holding Co., Inc. v. Dobler*, 880 A.2d 206, 222 (Del. 2005). As a thoughtful academic paper notes, there is an obvious relation between the need to evaluate what the business plans of the company being valued in appraisal were as of the merger date, and the equitable corporate opportunity doctrine. *See generally* Hamermesh and Wachter, *The Fair Value of Cornfields in Delaware Appraisal Law*. Conceived this way, the court's task in appraisal incorporates the equitable concerns traditionally policed by the corporate opportunity doctrine. Indeed, the Supreme Court previously has held that corporate opportunity claims can be valued in the context of an appraisal action. *See Cavalier Oil*, 564 A.2d 1137. The Chancellor's decision in *Onti v. Integra* illustrates well the interaction of these concerns. In that case, the Chancellor took into account a corporation's similar plans to expand in shaping his remedy in a combined appraisal/entire fairness proceeding. *Onti*, 751 A.2d at 925-26.

expertise to bear, in order to run profitable MRI Centers in State of Delaware on a consistent model.

1. Delaware III

As was detailed earlier, Delaware Radiology began considering the possibility of opening a third MRI Center in Middletown at least as early as June 2002.[52] At a board meeting in May 2003, after the Groups were feuding, the Delaware Radiology board approved proceeding with Delaware III. In July 2003, a location in Middletown was found and Delaware III, which was not even formed yet, entered into a commercial lease. The Delaware III entity was formed in December 2003, which was before the merger. The MRI magnet for Delaware III was leased on January 9, 2004. All of these events occurred before the January 20, 2004 merger.

Similarly, Delaware Radiology paid Tri-State management fees that were, in part, to compensate Tri-State for business development, including "[evaluating] potential growth sites within current markets" and "[negotiating] possible facility leases."[53] Carr spent considerable time working on Delaware III, consistent with the fees Tri-State was being paid. What is inconsistent and unfair is the Broder Group's insistence that his work on Delaware III, which bore fruit, did not produce value that was part of Delaware Radiology's worth as a going concern on the merger date.

For all these reasons, it is abundantly clear that the plans for Delaware III were part of the operative reality that was Delaware Radiology as of the merger date.

[52] Tr. 399.
[53] Jt. Ex. 272.

The best that the Broder Group can do to defend against the obvious fact that the Delaware III opportunity was Delaware Radiology's is to advance hearsay testimony from Broder and Carr that Edell was supposedly unwilling to go forward with other MRI Centers until Delaware Radiology's owners ended their feud.[54] Frankly, I do not credit that self-serving testimony. Edell lives in Delaware and knows where King Street is. Edell did not testify at trial or in deposition. He has long-standing relations with members of the Kessler Group, closer it appears than his relations with the Broder Group. If Edell had come to court and said that he only wanted to work with the Broder Group, the Broder Group's argument would have had some force. The testimony of Broder and Carr is no substitute for such a clear expression by Edell himself.

What is likely is that Edell was sick of the jejune jousting of his business partners and did not want to be caught between the competing Groups. That understandable sentiment is no safe harbor for the Broder Group to attribute no value to the expansion plans. No doubt Edell would have been equally as happy or even happier to work with Delaware Radiology if the Kessler Group was in charge of it. Likewise, Edell would have been more than happy to work with Delaware Radiology if the Groups healed their relationship. Edell just wanted to make money and not become enmeshed in disputes within the community of healers.

If that was Edell's sentiment, that reality did not grant the Broder Group a license to squeeze-out the minority and usurp all of the value of the expansion plans for itself. The expansion plans for Delaware III were clearly part of the operative reality of

[54] Tr. 133-35.

Delaware Radiology as of the merger date and under *Technicolor* and its progeny must be valued in the appraisal.[55] Although the Broder Group could use the brute power of its majority block to control Delaware Radiology and its opportunities on a future basis, the price of that exercise of clout is the allocation to the minority of its fair share of all the expected gains from the company's business plans. The majority cannot justify its usurpation of those plans by reference to an unresolved dispute with the minority.[56]

It is undisputed that the Broder Group accorded no value to Delaware III in setting the merger terms. That was unfair and resulted in an undervaluation of Delaware Radiology. Even at trial, when faced with the possibility that the court would say that the value of Delaware III had to considered, the Broder Group presented no helpful evidence. Despite the fact that projections for Delaware III had been presented to federally-regulated financial institutions for financing purposes[57] and, even more importantly, that Delaware III represented an extension of a business model that Delaware Radiology already had used successfully twice, the Broder Group's expert Reed testified that it was his "fundamental belief that the projections [for Delaware III] were not relevant for an entity that had not yet opened."[58] In fact, he stated that "it never really even occurred to [him] that there was any value there at all."[59] If that is true, Reed has a jarringly novel

[55] *See Technicolor*, 684 A.2d at 297.
[56] *See Onti*, 751 A.2d at 910-11 (stating that minority shareholders could not be deprived of the development value of undeveloped "cornfields" in a cash-out merger based on the majority shareholder's argument that a transaction would not occur without cashing out the minority).
[57] By federal statute, it is a felony to knowingly obtain any funds from a financial institution by false or fraudulent pretenses or representations. 18 U.S.C.A. § 1344 (2006).

view of corporate finance, in which the value of McDonald's does not include the revenues it expects to make from the new franchises it will open.

2. Delaware IV

The analysis regarding Delaware IV is similar. Delaware IV was formed as a Delaware limited liability company on January 12, 2004 — eight days before the merger. Its location in Dover was leased on January 27, 2004 — seven days after the merger — and the terms of the lease were finalized before the merger but simply not executed. Of course, the Broder Group was careful to invest in Delaware IV through an entity other than Delaware Radiology for tactical reasons, but that conduct actually tends to prove rather than refute the Kessler Group's argument. That is, the use of an alternate vehicle was designed to facilitate the Broder Group's desire to accord the Kessler Group no value for the Delaware IV opportunity in the merger price. Put bluntly, that desire is evidence of substantive unfairness, as it meant that the merger price did not include the complete value of Delaware Radiology's business opportunities.

Delaware IV was an obvious southward expansion for Delaware Radiology and Edell, which built off their prior plans. Put in traditional corporate opportunity terms, Delaware IV was an opportunity that was: (1) in the line of the corporation's business and is of practical advantage to it; (2) within the corporation's financially ability to capture; and (3) one in which the corporation has an interest or a reasonable expectancy.[60]

[60] *Guth v. Loft*, 5 A.2d 503, 511 (Del. 1939). These requirements have been restated and discussed numerous times. *See, e.g.*, *Broz v. Cellular Info. Sys., Inc.*, 673 A.2d 148 (Del. 1996);

The planning for Delaware IV was simply a continuation of the hope of Delaware Radiology and Edell to fill out a statewide network of MRI Centers. Carr was paid by Delaware Radiology for business development work and performed much of the legwork for Delaware IV before the merger.[61] For all these reasons, I have little difficulty concluding that the plans for Delaware IV constituted part of the operative reality of Delaware Radiology as of the date of the merger. There was nothing speculative about the plans to open an additional MRI Center in Dover using the proven model, and the Broder Group's refusal to include in the merger price any value attributable to Delaware IV was unfair.

3. Delaware V

The harder question that arises relates to Delaware V, which was created at a time more remote from the merger. Delaware V is the Seaford MRI Center that the Broder Group has opened with Edell, using the same model as Delaware I and II. The Delaware V entity was not formed until September 15, 2004. The financing needed for Delaware V to progress was not secured until late October 2004,[62] the lease was not entered into for a

---

Kaplan v. Fenton, 278 A.2d 834 (Del. 1971); *Equity Corp. v. Milton*, 221 A.2d 494 (Del. 1966); *In re eBay, Inc. S'holders Litig.*, 2004 WL 253521 (Del. Ch. Feb. 11, 2004); *Martha Stewart Living Omnimedia, Inc. v. Stewart*, 833 A.2d 961 (Del. Ch. 2003); *see also* R. FRANKLIN BALOTTI & JESSE A. FINKELSTEIN, DELAWARE LAW OF CORPORATIONS & BUSINESS ORGANIZATIONS § 4.36 (3d ed. 2006). The Kessler Group, of course, lost standing to bring a corporate opportunity claim on behalf of Delaware Radiology when the merger became effective, but this derivative corporate opportunity claim can be valued in an appraisal action. *See Kohls v. Duthie*, 765 A.2d 1274 (Del. Ch. 2000). Moreover, the Broder Group's failure to value expected cash flows from expansion is a proper challenge in this case to the fairness of the merger itself as that omission is alleged to have materially tainted the merger price. *See Parnes v. Bally Entm't Corp.*, 722 A.2d 1243, 1245-47 (Del. 1999).

[61] Jt. Ex. 272.

[62] Tr. at 418.

location in Seaford until February 9, 2005,[63] and the Delaware V facility did not open until January 2006, after trial in this matter was over.[64]

The reason I find this issue difficult has less to do with when Delaware V actually began to operate than with the question of when the idea of opening another MRI Center in Delaware began. Although Carr denies that he had begun formulating plans for a Sussex County MRI Center before the merger, I do not find that testimony credible. Carr's trial testimony was more redolent of total loyalty to the Broder Group, with whom his financial interests are aligned, than of a careful attempt to be as accurate as possible.

In this respect, it would ordinarily be comforting to me that the paper record is devoid of evidence that the Broder Group was planning for a Sussex County facility before the merger. But the reality is that the Broder Group resisted discovery into the planning for Delaware III and IV deep into the litigation, and the Kessler Group has raised non-frivolous arguments regarding the absence of production of documents relating to the formation of Delaware V. In the equitable part of this case, the Broder Group bears the burden of showing that its actions are entirely fair. Given its failure to accord any weight to the value of even Delaware III in setting the merger price, the Broder Group's less than forthcoming attitude about the production of evidence regarding Delaware V is disturbing. The Broder Group should have embraced the opportunity to convince me that Delaware V was an initiative completely distinct from Delaware

[63] Jt. Ex. 261.
[64] Tr. 418.

Radiology's previous strategy. It did not but instead left me harboring serious doubts about the bona fides of its document production.

As or more important are the objective business circumstances. The procession of the MRI Centers southward to encompass the entirety of Delaware is, it seems to me, not at all coincidental. By this method, Delaware Radiology and Edell can replicate the successful Delaware I and II model on a statewide basis. In doing so, they are able to capture economies of scale and capitalize on their prior work. To that point, I would note that the operating agreement for Delaware V looks much like that for Delaware I and II. Equally likely is that the Broder Group and Edell were able to obtain much easier access to health insurance and health maintenance organization provider networks for Delaware V precisely because they had already established Delaware I, II, III, and then IV as network providers. Delaware V could then be pitched as an extension and build off the prior contractual relationships.

Stated directly, the creation of Delaware V simply finished off the obvious strategy of creating a statewide network of MRI Centers. That the ultimate success of that strategy was not assured when Delaware Radiology was first formed, or is even guaranteed now, is not the determinative issue. The gravitational direction of Delaware Radiology toward statewide expansion has been clear from the beginning, and is made even more obvious by the business expansion duties given to Tri-State. To keep with the prior analogy, assume that the Broder Group was the majority stockholder of an entity that had the first McDonald's franchise in Delaware and the right to open the rest as the

brand expanded statewide. If it squeezed out the minority, the value would have had to recognize the company's plans to go statewide.

This case presents the same situation. Delaware V is the natural culmination of the Delaware Radiology-Edell business strategy, a strategy that was in active implementation before the merger. Although the plans for a Sussex County MRI Center were more inchoate than the plans for the Middletown and Kent County Centers, I believe that the goal of a Sussex County Center was established before the merger. The greater uncertainty about when a Sussex County Center would open and its value will be taken into account when shaping the award, but I believe it requires that some value be attributed, to address the Broder Group's decision to usurp for itself the exclusive right to control the statewide network for itself.

B. Is Each Shareholder Entitled To A Share Of The Reading Fees Proportionate To His Ownership Interest In Delaware Radiology?

Because the members of the Broder and Kessler Groups are all radiologists, it is not surprising that the allocation of read work from the MRI Centers was a major issue at trial. Both sides took positions that did not have the ring of truth.

For its part, the Kessler Group claimed that there had been an agreement among the original stockholders of Delaware Radiology that entitled them to receive read work, and the corresponding reading fees, in proportion to their stock ownership in Delaware Radiology. To buttress this argument, the Kessler Group cites to a provision in the operating agreements for Delaware I and II that gives Delaware Radiology the exclusive

right to perform the MRI reads for fifteen years.[65] In addition, § 2.1.4 of the Professional Services Agreement between Delaware Radiology and Delaware I states that Delaware Radiology is "solely responsible for the MRI Diagnostic Radiology Services rendered by it or its radiologist employees."[66]

The problem for the Kessler Group is that Delaware Radiology never provided any radiology services for patients at Delaware I and II. Rather, from the get-go, Delaware Radiology farmed out the read work to Fox Chase. As an attorney for the Kessler Group described it:

> Notwithstanding that JRA, Fox Chase Radiology, and Delaware Radiology have provider agreements relating to various facilities, it appears that all of the net income from physician services at all of the facilities is funneled into Fox Chase Radiology which appears further to distribute all of its net income . . . among the Shareholders pursuant to their respective employment agreements. While this arrangement appears to be undocumented, it appears to be based upon a mutual agreement and understanding among the Shareholders . . . .[67]

At trial, Shaer testified that he knew "[Delaware Radiology] itself would not do the reads."[68] Shaer and the other members of the Kessler Group were complicit in that strategy and cannot complain now that Delaware Radiology is not providing the read services itself.[69]

---

[65] *See* Jt. Ex. 6 at § 6.3; Jt. Ex. 21 at § 6.3.
[66] Jt. Ex. 7.
[67] Jt. Ex. 19 at 3.
[68] Tr. 707.
[69] *Cf. Balin v. Amerimar Realty Co.*, 1996 WL 684377, at *19 (Del. Ch. Nov. 15, 1996) ("Balin asserts that because the Master Agreement is now the definitive governing document, the Denver fees must flow directly to Amerimar Realty. The fatal infirmity in this argument is that Balin never put the Master Agreement into effect. Instead, he disregarded that agreement and acquiesced in the quite different present fee flow structure . . . . Having disregarded . . . the

The arrangement whereby Delaware Radiology would contract out its right to perform the read work is not at all surprising. Delaware Radiology was the Delaware-based entity that the partners at Fox Chase set up to enter the Delaware market and to meet the regulatory requirements necessary for practice. One of those requirements was that Reading Fees be paid to a Delaware entity in the first instance. When Delaware I and II were opened, Delaware Radiology shareholders were all partners in Fox Chase. Thus, Delaware Radiology's reliance upon Fox Chase to do the read work did not cause any economic controversy, as that arrangement essentially resulted in pro rata treatment of the Delaware Radiology stockholders through their distributions from Fox Chase.

It was only after the Kessler Group left Fox Chase and the Broder Group acted to reduce the Kessler Group's share of the read work from Delaware I and II to one-sixth and then zero that the pro rata argument arose. The Kessler Group believed that it was being cut out of one of the primary economic justifications for the formation of Delaware Radiology. Its argument that read work was supposed to be distributed pro rata to stockholder holdings is a manifestation of their belief that they were being treated unfairly.

But that precise argument lacks merit. As was discussed previously, the read work was never allocated to each stockholder personally in proportion to his or her ownership interest. Indeed, not all the Delaware Radiology stockholders were or are even qualified to do the read work. And the so-called Kessler Group did not even exist as a group as of

---

Master Agreement, Balin cannot now be permitted to resurrect it and then attack the very fee structure in which he has acquiesced.").

the formation of Delaware Radiology. Thus, before the Kessler Group left Fox Chase, Delaware Radiology passed on all the read work to Fox Chase, where three of the radiologists did the work, and all of the Delaware Radiology stockholders benefited pursuant to the Fox Chase partnership arrangements.[70]

After the Kessler Group opened Bucks County, it received a disproportionate share of the read work, because it had two of the three MRI readers.[71] As Fox Chase gained additional capacity, it is clear that the Broder Group sought to capture as much of the read work for itself as it could, as is reflected in the steadily decreasing share of the work it allocated to the Kessler Group. Once the Jeanes Hospital contract issue arose, the Broder Group sought to eliminate the Kessler Group's role in read work altogether. From this history, it is impossible to conclude that there was a specific agreement for pro rata allocation of the read work.

But contrary to the Broder Group's hopes, that does not mean that the Kessler Group's claim of unfairness has no force at all. Rather, when properly conceptualized, that claim is meritorious.

Delaware Radiology secured a valuable right in its negotiations with Edell over the MRI Centers. It was the managing partner for the MRI Centers and could direct the read work. The original 15% fee it negotiated with Edell was a healthy one that was intended to allow the provider of the read work to reap healthy gains from doing the

[70] Tr. 46-47.
[71] *Id*. at 841-82.

reads. For his part, Edell was granted a 5% fee for his marketing work at Delaware I and 7.5% for his marketing work at Delaware II.

So long as the Delaware Radiology board was dealing with its right to receive the Reading Fees in a manner that was fair to all of its stockholders, it did not need to consider whether passing on the entire 15% fee was fair to Delaware Radiology as an entity. If the pass-through worked roughly pro rata treatment, then the stockholders' legitimate interests were protected.

The problem arose when the Broder Group began to use its majority control of Delaware Radiology to advance its own interests. As Broder was honest to admit at trial, after the Kessler Group left Fox Chase, Broder wanted Fox Chase to do all the read work and for the Kessler Group to do none of it.[72] By no later than December 2002, Broder had fully implemented that desire.

As a matter of majority control, there is nothing intrinsically wrong with the Broder Group's decision to cut the Kessler Group out of the read work. But the Broder Group could not arrogate all the reads to itself unless it did so in a manner that was entirely fair to Delaware Radiology. And that is where it fell far short of the mark.

The Broder Group failed to demonstrate at trial that the 15% rate that was originally used was a market rate. More likely is that it was a rate that allowed the founders, all of whom were partners at Fox Chase, to make a very nice profit from doing read work for the MRI Centers. After all, the desire to guarantee a profitable flow of captive work was a primary purpose behind the creation of Delaware Radiology. Even

[72] Tr. 203-04.

less debatable is that the 17.5% rate that the Broder Group charged Delaware III and IV pursuant to their operating agreements and charged Delaware I as of March 2003 was not a market rate. It was simply a profit-sharing arrangement with Edell, who was granted an increase in his Delaware I marketing fees from 5% to 7.5% at the same meeting.

By the end of 2002, the Broder Group had assumed firm and exclusive control of the Delaware Radiology board. Rather than consider any other providers of read work, the Broder Group simply chose to allocate as much of the read work as it could to Fox Chase at a price that was higher than Delaware Radiology could have secured after a market check. The record leaves me no doubt that the Broder Group saw no reason for it to look for other sources or to examine the price of the services rendered; it viewed the Kessler Group members as defectors whose voluntary decision to leave Fox Chase left them in no equitable position to complain. In Broder's view, the Kessler Group cut itself out — had its members stayed at Fox Chase, they would still have been sharing in the read revenues, as they had when Delaware I and II were first formed.

Broder's very human reaction, however, is inconsistent with fiduciary principles. Just as there was no contractual obligation for the Delaware Radiology to pass the benefits of the read work to its stockholders on a pro rata basis, there was no contractual obligation for stockholders of Delaware Radiology to remain as partners in Fox Chase. The Kessler Group's decision to leave Fox Chase did not grant the Broder Group a

license to profit at the expense of Delaware Radiology as an entity, but that is what the Broder Group did.[73]

Although the record on this point is not as clear as I would like, I am convinced that Delaware Radiology could obtain a provider of reading services of a quality equal to Fox Chase for a rate lower than 15% and certainly for a rate lower than 17.5%. In so concluding, I want to make the point about equal quality absolutely clear. The Kessler Group pointed to what I would call "bargain-basement" options of contracting work out to radiologists who work at their homes, reading MRIs from home computers, in isolation from other practitioners. I do not premise my ruling on that type of service. As the board majority, the Broder Group was within its legitimate rights to seek to provide patients at the MRI Centers with high-quality read services from radiologists practicing in a group, who could, in debatable situations, call on colleagues to help provide the most accurate diagnosis possible. The Broder Group could also decide to provide those services itself, so long as it did so at a fair market rate.

At trial, the Broder Group put on anecdotal evidence suggesting that a fee of 15-20% of an MRI Center's revenues was a fair fee for reading work. That evidence was flimsy and insubstantial, lacking any reliable basis in actual contracts for comparable work or empirical surveys of market rates for reading work. In this context — where the Broder Group has allocated valuable read work to itself without a market check — it

[73] *Cf. Telxon Corp. v. Meyerson*, 802 A.2d 257, 265 (Del. 2002) ("Like any other interested transaction, directorial self-compensation decisions lie outside the business judgment rule's presumptive protection, so that, where properly challenged, the receipt of self-determined benefits is subject to an affirmative showing that the compensation arrangements are fair to the corporation.").

bears the burden of showing that it was receiving a rate fair to Delaware Radiology. The Broder Group has fallen well short of the mark. It has left me with the firm impression that the original 15% rate had a healthy profit margin in it for the read provider and did not reflect the rate that Delaware I and II could have secured after a real market check. The 17.5% rate now at Delaware I, III, and IV is even more plush from the reader's perspective.

In coming to that conclusion, I consider a few important factors. Initially, I note that one of the reasons Delaware Radiology was formed was to give the founding radiologists a more certain source of work in a competitive market in which margins were being squeezed. The margin pressure, as of the merger date, was increasing. This was illustrated by the competition between the Broder and Kessler Groups for the Jeanes Hospital contract, as well as the emerging trend of offshoring radiology work. In that latter respect, the reality that radiologists can read most MRI scans from remote computer terminals meant that margins were not likely to widen and that competitive pressures would increase. Although I do not adopt the Kessler Group's view that the Delaware Radiology had to seek a bargain-basement price, I do credit the testimony it put on that qualified radiology reads from a practice group similar in quality to the Broder Group could be procured for rates far less than the 15% rate originally secured for Delaware Radiology.[74] Clinching my conclusion is the Broder Group's own behavior. By

[74] In fact, leading up to this litigation (and no doubt for the purpose of this litigation) the Kessler Group offered to perform the read work at a lower rate. Jt. Ex. 183. Shaer testified that the Kessler Group's best contract rate for performing reads was $72.50 per read, which, based on the reimbursement rate for Delaware I and II, would be a fee of approximately 12%. In addition, the

formulating and acting on a plan to take *all* of the read work for Fox Chase, the Broder Group's conduct demonstrates their belief that this work is very profitable to the readers.

The difficult question in the end is really one of measurement: how big is the gap between a fair market rate and the 15% and 17.5% rates that Delaware Radiology was paying to the Broder Group as of the merger? In a regrettably fulsome record, there is only one piece of genuinely reliable evidence on this important topic. At trial, the Broder Group provided a detailed breakdown of the current Medicare reimbursement rate for MRI professional services, which is equivalent to a 13.7% fee.[75] Although one cannot be certain that it would have cost Delaware Radiology somewhat more or less than the Medicare rate to obtain reading services equivalent in quality to that provided by the Broder Group as of the merger, that uncertainty results from the Broder Group's decision not to do a market check and to allocate all the read work to its Fox Chase entity, using its majority power. By using the objective Medicare rate, I base my award on the most reliable evidence of a market rate in the record, which is premised on what is paid by one of the most important market payers in American health care.

I factor that rate into my award in the following manner. I assume for purposes of my valuation of Delaware Radiology as of the merger date that it could have obtained read services for 13.7%, leaving the difference between the 17.5% it received from Delaware I, III, and IV, and the 15% it received from Delaware II, and that figure as profit that would be available to Delaware Radiology as an entity. That is, the 3.8%

Kessler Group discusses certain reading rates, which start around $45 per read, it pays to contract readers.

[75] Rebuttal Report of Reed Ex. A (hereinafter "Reed Rebuttal").

difference at Delaware I, III, and IV and the 1.3% difference at Delaware II is what I find to be the unfair profit the Broder Group diverted from Delaware Radiology to itself, so that amount will be returned to the value of Delaware Radiology.

This conclusion involves me including my estimate of the value of Delaware Radiology's claims against the Broder Group in the fair value of the Delaware Radiology on the merger date. Because the overage paid to the Broder Group in excess of market reduced the balance sheet profitability of Delaware Radiology, the claim belonged to Delaware Radiology and was surfaced by the Kessler Group as a derivative claim. Whether as a matter of appraisal or a fairness challenge to the merger, the overage is relevant to determining whether the Kessler Group was treated fairly in the merger.

D. Are The Management Fees Paid To Tri-State And Edell Fair To The Minority Shareholders Of Delaware Radiology?

There are two other points of contention between the Broder and Kessler Groups about alleged self-dealing. These points involve whether the management fees paid to Tri-State, a wholly-owned Broder entity, and to Edell, the influential Delaware physician whose marketing efforts were critical to the success of the MRI Centers, were fair to Delaware Radiology. The Kessler Group argues that the fees of 2% and 7.5% of revenues to Tri-State and Edell, respectively, constitute excessive payments resulting from log-rolling between Edell and the Broder Group. The Broder Group contends they are reasonable and fair rates that reflect the important managerial and marketing tasks performed by Edell and Tri-State on behalf of the MRI Centers.

The magnitude of the dispute is actually rather confined. The Kessler Group does not challenge Edell's entire cut, simply that above 5%. Moreover, Tri-State's take is only 2% at maximum and is therefore not very material to the overall valuation determination. But money is money, and the dispute must be decided. I will do so tersely.

As to Tri-State, there is no evidence that it does not perform its duties competently. Although I found the testimony of its principal, Carr, to be more redolent of an overly zealous advocate for his bosses, the Broder Group, than of the core truth, there is nothing in the record to suggest that he is not a competent administrator of the MRI Centers. Before Tri-State's involvement in 2001, the MRI Centers were managed by the doctors themselves, and Carr's involvement took those duties off their hands. Tri-State was retained while the Kessler Group was still on the board of Delaware Radiology and Shaer of the Kessler Group was its President. The 1% management fee payable to Tri-State was proposed by Broder in a memorandum to Edell.[76] At trial, Shaer testified that "[i]n terms of management, while I was intimately involved in the operations of Delaware, at some point, Tri-State began receiving one percent of collections for management."[77] Additionally, Shaer indicated that he spoke with the other members of the Kessler Group and communicated to the Broder Group that Carr, while an employee of Fox Chase, was "doing a pretty good job with the centers . . . and we should go forward with him."[78] Further, Shaer said that the memorandum informing Edell of the 1% management fee was something "that collectively, the board or . . . the shareholders

[76] Jt. Ex. 37.
[77] Tr. 838.
[78] *Id*. at 738.

had decided would be implemented at Delaware Open MRI" and the Kessler Group was apprised that "the Broder group were the shareholders in Tri-State."[79] There is no rational basis, therefore, to question the 1% fee to Tri-State, given that it was approved by the Kessler Group on full information.[80]

The problem is that the fee for Tri-State changed. In 2003, after the Broder Group booted the Kessler Group off the board and out of management, the Broder Group raised the management fee payable to Tri-State, its wholly-owned entity, to 2%. This was an interested transaction that was not ratified or acquiesced to by the Kessler Group, and the business judgment rule does not apply when a decision is made "by a board a majority of whom have a material conflict of interest in the transaction."[81] The Broder Group introduced no reliable evidence indicating the fairness of this increase to the Kessler Group, and I, therefore, will reduce the management fee to the 1% previously agreed upon. In reaching this determination, I am also mindful of the behavior of the Broder Group during this period relating to the read work — behavior that evinces a desire to capture as much of the profit of Delaware Radiology as possible for itself, to the exclusion of the Kessler Group.

---

[79] *Id*. at 738-41.
[80] *E.g.*, *In re Cox Comm'n, Inc. S'holders Litig.*, 879 A.2d 604, 615 (Del. Ch. 2005) (recognizing that Delaware law typically "gives ratification effect to approval of the interested transaction by a majority of the disinterested stockholders.").
[81] *E.g.*, *Ryan v. Tad's Enters.*, 709 A.2d 682, 689 (Del. Ch. 1996), *aff'd*, 693 A.2d 1082 (Del. 1997).

The issue involving Edell is a little more subtle.[82] In essence, the Kessler Group argues that Edell exploited the rift between the Broder and Kessler Groups to get a bigger cut for himself in March 2003. In exchange for accommodating the Broder Group's desire for a higher percentage for Reading Fees and for Tri-State, Edell simultaneously extracted an increase to 7.5% for his cut of Delaware I.[83] In fact, at the same March 2003 meeting when these changes were made, the billing services work for the MRI Centers was transferred from an independent entity that received 3% of revenues to an entity controlled by the Broder Group at the same rate.[84] The smell of a deal remains pungent.[85]

Even so, I do not believe that there is a reasonable basis to question the fairness of what Edell extracted. At trial, the Broder and Kessler Groups agreed that Edell's involvement was a boon to Delaware Radiology because both perceived him as having a uniquely valuable relationship with Delaware's community of physicians, which enabled him to generate referrals for the MRI Centers, thereby ensuring their success. In addressing Edell's demands, the Broder Group had an incentive to keep his share down while balancing the need to retain his commitment to the success of the MRI Centers. From what I heard from both groups at trial, the 7.5% fee to Edell was well justified by

[82] Ordinarily, as the directors of Delaware Radiology from the Broder Group would not receive any benefit from an increase in Edell's fees, their decision would be subject to the protection of the business judgment rule.
[83] As was mentioned, Edell already was entitled to 7.5% of the revenues from Delaware II. He had been receiving that cut since it began operating in 1999.
[84] Jt. Ex. 79.
[85] *Ryan*, 709 A.2d at 689-90 (indicating that when a controlling shareholder provides a benefit to a third party in order only to secure a benefit for itself, or has a material interest in the transaction, that decision is not protected by the business judgment rule).

the marketing and development work he did. Moreover, having redressed the Broder Group's extraction of value, at the expense of the Kessler Group, through increased payments to Fox Chase for read work and to Tri-State for management, I have ensured that the Broder Group did not extract any unfair value from its bargaining with Edell. The reduction of the read work percentage to 13.7% and the management fee to 1% in valuing Delaware Radiology accomplishes that result. In other words, I have addressed the "interested" side of the dealings between the Broder Group and Edell directly and do not believe that the record warrants going further.

E. Is It Appropriate To Tax Affect The Earnings Of Delaware Radiology In Order To Determine Its Fair Value?

The proper manner to tax affect the earnings of Delaware Radiology is the next major issue that must be addressed. The Broder Group's expert, Reed, treated Delaware Radiology as if it were a "subchapter C" corporation[86] when he performed the valuation that the Broder Group used to set the merger price. Reed stuck by this approach at trial. To be specific about Reed's methodology, he made the standard move of applying a 40% tax to Delaware Radiology's earnings, the common estimate of federal and state income taxes used in valuing a C corporation.

By contrast, the Kessler Group's expert, Mitchell, asserted the proposition that because Delaware Radiology was an S corporation, it faced no corporate-level income taxes. Relying on this as Delaware Radiology's operative reality, Mitchell did not tax affect its earnings in performing his valuation. Any taxes, Mitchell reasoned, would be

[86] *See* 26 U.S.C.A. § 301 *et. seq.* (2005) (Subchapter C dealing with corporate taxation issues).

paid at the stockholder level and should not be considered in valuing Delaware Radiology as an entity.

This dispute raises an interesting question of valuation, which has elicited a fair amount of attention from judges, appraisers, and academics.[87] After careful consideration, I conclude that neither of the experts has taken the most reasonable approach to valuing Delaware Radiology.

The problem with Reed's approach of treating Delaware Radiology as a C corporation is obvious. Delaware Radiology is a very small entity. The record reveals no set of circumstances in which it is likely that Delaware Radiology will convert to C corporation status. It is a highly profitable entity that generates and distributes income well in excess of the stockholder level taxes its stockholders must pay. The S corporation tax status is a highly valuable attribute to the shareholders of Delaware Radiology, given its profitability and the affluent status of its physician stockholders, who face top marginal tax rates.

Under Delaware law, an appraisal petitioner is "entitled to be paid for that which has been taken from him . . . ."[88] In this case, the Kessler Group was involuntarily deprived of the benefits of continuing as stockholders in a profitable S corporation —

[87] *See, e.g.*, *In re Radiology Assocs.*, 611 A.2d 485 (Del. Ch. 1991); *Adams v. Commissioner of Internal Revenue*, 2002 WL 467235 (U.S. Tax Ct. Mar. 28, 2002); *Heck v. Commissioner of Internal Revenue*, 2002 WL 180879 (U.S. Tax Ct. Feb. 5, 2002); *Gross v. Commissioner of Internal Revenue*, 1999 WL 549463 (U.S. Tax Ct. July 29, 1999); Franklin M. Fisher et. al., *The Sale of the Washington Redskins: Discounted Cash Flow Valuation of S-Corporations, Treatment of Personal Taxes, and Implications for Litigation*, 10 Stan. J.L. Bus. & Fin. 18 (2005) (hereinafter "Fisher"); Z. Christopher Mercer, *S Corporation Valuation Issues*, The American Society of Appraiser's 22nd Annual Business Valuation Conference (Oct. 17, 2003) (hereinafter "Mercer").

[88] *Tri-Continental Corp. v. Battye*, 74 A.2d 71, 72 (Del. 1950).

benefits that were comprised materially of the favorable tax treatment that accompanies S corporation status. As a matter of fairness, the merger price had to take into account these benefits and provide fair compensation for the Kessler Group's loss. Reed's approach denied the Kessler Group members the value they would have received as continuing S corporation stockholders in Delaware Radiology and, therefore, ensured that the merger price was lower than fair value.

At the same time, Mitchell's approach is equally flawed and overstates the value fairly belonging to the Kessler Group. The value of the S corporation structure is one that is experienced at the stockholder level and that is easy to overstate. If an S corporation is to be sold, for example, it will receive no premium over a C corporation if the universe of buyers is principally comprised of C corporations.[89] There is an obvious reason for this: unless the buyer of the S corporation can retain and benefit from that tax status, then the buyer will value an S corporation at the value it would have as a C corporation. Therefore, it would be highly misleading to do a market-based comparable acquisition valuation of an S corporation using sales of comparable C corporations to C corporations, and then assume that the S corporation would be sold at a higher price because of its tax status. In other words, I am not trying to quantify the value at which Delaware Radiology would sell to a C corporation; I am trying to quantify the value of Delaware Radiology as a going concern with an S corporation structure and award the Kessler Group their pro rata share of that value.

[89] *See* Mercer 9-14.

In this case, then, the more relevant problem with Mitchell's approach is that his failure to tax affect Delaware Radiology's earnings at all results in an artificial inflation of the value of S corporation status to the Kessler Group. To capture the precise advantage of the S corporation structure to the Kessler Group, it is necessary to use a method that considers the difference between the value that a stockholder of Delaware Radiology would receive in Delaware Radiology as a C corporation and the value that a stockholder would receive in Delaware Radiology as an S corporation. By using that method, I can make my best estimate of the value that is relevant in this case — the going concern value in an S corporation that was taken from the Kessler Group in the merger.

In undertaking this analysis, I embrace the reasoning of prior decisional law that has recognized that an S corporation structure can produce a material increase in economic value for a stockholder and should be given weight in a proper valuation of the stockholder's interest.[90] That reasoning undergirds not only holdings of the *Adams*, *Heck*, and *Gross* cases in the U.S. Tax Court, but an appraisal decision of this court, which coincidentally also involved a radiology business.[91] The opinion in *In re Radiology Associates* noted that "under an earnings valuation analysis, what is important to an investor is what the investor ultimately can keep in his pocket."[92] In that case, on the record before it, the court held that the way to implement that insight was to ignore tax completely.[93] The *In Re Radiology Associates* decision comported with decisions of

[90] *See Adams*, 2002 WL 467235; *Heck*, 2002 WL 180879; *Gross*, 1999 WL 549463.
[91] In re Radiology Assocs., 611 A.2d at 495.
[92] *Id*.
[93] *Id*.

the U.S. Tax Court, which has given life to the advantages of S corporation status by refusing to tax affect the corporation's earnings at all.[94]

My difference with these prior decisions is at the level of implementation, rather than at the level of principle. Certainly, in this context when minority stockholders have been forcibly denied the future benefits of S corporation status, they should receive compensation for those expected benefits and not an artificially discounted value that disregards the favorable tax treatment available to them. But the minority should not receive more than a fair S corporation valuation. Refusing to tax affect at all produces such a windfall, as I next explain.

The Internal Revenue Code states that "[t]he taxable income of an S corporation shall be computed in the same manner as in the case of an individual . . . ."[95] This tax, though assessed at individual rather than corporate tax rates, is dependent solely upon the corporation's net earnings. Even if Delaware Radiology were to retain 100% of its earnings annually, its stockholders still would owe taxes on Delaware Radiology's income even though they received no distributions. Affording a remedy to the Kessler Group that denies the reality that each shareholder owes taxes on his proportional interest

[94] In this regard, the case of *Gross v. Commissioner* is a good example. In *Gross*, the Tax Court held that "[w]e believe that the principal benefit that shareholders expect from an S corporation election is a reduction in the total tax burden imposed on the enterprise. The owners expect to save money, and we see no reason why that savings ought to be ignored as a matter of course in valuing the S corporation." *Gross*, 1999 WL 549463 (page reference unavailable on WL). The Tax Court refused to allow a "hypothetical corporate tax rate in excess of the zero-percent actual corporate tax rate" to be considered in valuing an S corporation and instead required that no corporate tax be applied to the S corporation's earnings. *Id.*

[95] 26 U.S.C.A. § 1363 (2005).

in Delaware Radiology would result in the Kessler Group receiving a higher per share value from the court than it could ever have realized as a continuing shareholder.[96]

The amount that should be the basis for an appraisal or entire fairness award is the amount that estimates the company's value to the Kessler Group as S corporation stockholders paying individual income taxes at the highest rates — an amount that is materially more in this case than if Delaware Radiology was a C corporation. In coming to a determination of how the Kessler Group's interest in Delaware Radiology would be valued in a free market comprised of willing buyers and sellers of S corporations, acting without compulsion, it is essential to quantify the actual benefits of the S corporation status. That is also essential in order to determine the value of what was actually taken from the Kessler Group as continuing stockholders.

Assessing corporate taxes to the shareholder at a personal level does not affect the primary tax benefit associated with an S Corporation, which is the avoidance of a dividend tax in addition to a tax on corporate earnings.[97] This benefit can be captured

[96] *See, e.g.*, Fisher.

[97] *See, e.g.*, *Byrne v. Commissioner of Internal Revenue*, 361 F.2d 939, 942 (7th Cir. 1966) ("We agree with the observation of the Tax Court that the [S Corporation] statute is designed to permit a qualified corporation and its shareholders to avoid the double tax normally paid when a corporation distributes its earnings and profits as dividends and this is accomplished in a specified manner which does not involve ignoring the corporate entity."); Practising Law Institute, 546 PLI/Tax 249 *Organizing the Corporate Venture* § 1301 (2002) ("This re-inversion of rates lessened the S corporation shareholder's advantage of being taxed directly on corporate income. Yet, the primary tax advantage of being an S corporation shareholder — i.e., the ability to receive corporate income with only a single level of tax imposed — remains intact. This must be compared to the double tax paid on a C corporation's income (i.e., once at the corporate level, and again at the shareholder level when distributed) in considering the tax benefit of using an S corporation, rather than a C corporation, for business operations."); Mercer 9 ("The S election relieves one layer of taxation at the corporate level, providing the potential for greater cash flow at the shareholder level.").

fully while employing an economically rational approach to valuing an S corporation that is net of personal taxes.[98] To ignore personal taxes would overestimate the value of an S corporation and would lead to a value that no rational investor would be willing to pay to acquire control.[99] This is a simple premise — no one should be willing to pay for more than the value of what will actually end up in her pocket — that can best be firmly grasped through a concrete example.

Assume that Delaware Radiology receives $100 in annual earnings. If Delaware Radiology was organized as a C corporation, its earnings after tax would be $60, assuming, as is the usual custom, that the effective corporate tax rate is 40%. Then, assume that Delaware Radiology distributes all of its post-tax earnings to its shareholders in the form of a dividend. The shareholders would receive total post-tax distributions of $51, after an assumed dividend tax of 15% is applied to the $60 after-tax earnings. That is, a shareholder would experience an effective tax rate of 49% after corporate income and dividend taxes.

Now, consider the post-tax benefits of $100 in income to Delaware Radiology's stockholders, using its actual status as an S corporation. In that scenario, the shareholders would receive all $100 in earnings as distributions and be subject only to one shareholder-level tax. Thus, the shareholders would be responsible for paying taxes on the $100 at their individual tax rates. I will also assume that rate to be 40% because the

[98] Fisher 22.
[99] *Id.* at 18 ("[W]e demonstrate that ignoring taxes in a DCF analysis when valuing an S corporation potentially leads to an overestimation of value."); *id.* at 22 ("A rational investor will only pay up to the present value of an investment's expected cash flows, net of personal taxes.").

Broder and Kessler Groups are comprised of affluent physicians who pay at the highest marginal rate.[100] Therefore, every dollar of Delaware Radiology's earnings would be taxable at the stockholder level at the highest marginal tax rate. The shareholders in Delaware Radiology, an S corporation, would be able to pocket $60 after tax if all earnings were distributed. The difference is clear: Delaware Radiology's status as an S corporation allowed the shareholders to pocket $60 of $100, whereas if Delaware Radiology was a C corporation, the shareholders could pocket only $51 of the $100.[101]

In valuing Delaware Radiology, therefore, it would overstate the value taken from the Kessler Group to require the Broder Group to pay the Kessler Group $37.50 for its share of every $100 of future pre-tax earnings. That cash flow, after the favorable S corporation tax treatment, would not be worth $37.50 to the Broder Group, but only $22.50. The issue, though, is that tax affecting Delaware Radiology at a 40% level (or C corporation level) would not recognize any S corporation value that flowed to the Kessler

[100] Currently, at the federal level, the highest personal tax rate is 35%, and the highest corporate tax rate is 38%. Thus, taking into account state taxes, it is reasonable to assume a 40% personal tax rate.

[101] This would not be the case if 1) no distributions were being paid by the S corporation to its shareholders or 2) distributions only sufficient to cover tax liability were being distributed to shareholders. The relative value of an S corporation, vis-à-vis a C corporation, to its shareholders is dependent upon the level of distributions paid. For a useful model and analysis, *see, e.g.*, Chris Treharne, *et. al.*, *Valuation of Pass-Through Entities*, American Society of Appraisers 23d Annual Advanced Business Valuation Conference (Oct. 8, 2004). As recognition of the fact that their stockholders must pay taxes on non-distributed earnings, most if not all S corporations distribute a sufficient amount of their profits to cover shareholder tax obligations. Mercer at 17 ("S corporations who attempt to retain all earnings and not pass through the shareholders' tax distributions will likely find themselves C corporations again, as their shareholders arrange to become ineligible to hold S corporation stock."). This makes intuitive and commercial sense. If all earnings are retained, the S corporation's shareholders must dig into their own pockets to fund the tax liability. If all earnings are retained in a C corporation, the entity is responsible for the corporate level tax. If S corporation shareholders elect to receive no distributions, that can be viewed as a reinvestment of their tax savings in that enterprise.

Group or compensate the Kessler Group for its involuntarily removal as shareholders in a profitable S corporation. To be consistent with Delaware law, I must tax affect Delaware Radiology's future cash flows at a lower level that recognizes the full effect of the Kessler Group's ability to receive cash dividends that are not subject to dividend taxes.

In order to accurately capture the value to the Kessler Group of Delaware Radiology's S corporation status, I have estimated what an equivalent, hypothetical "pre-dividend" S corporation tax rate would be. The following table presents that calculation:

	C Corp	S Corp	S Corp Valuation
Income Before Tax	$100	$100	$100
Corporate Tax Rate	40%	--	29.4%
Available Earnings	$60	$100	$70.60
Dividend or Personal Income Tax Rate	15%	40%	15%
Available After Dividends	$51	$60	$60

This calculation allows me to treat the S corporation shareholder as receiving the full benefit of untaxed dividends, by equating its after-tax return to the after-dividend return to a C corporation shareholder. I will, therefore, apply an effective tax rate of 29.4% to the earnings of Delaware Radiology to measure with the greatest practicable precision the fair value of the Kessler Group's interest in the going concern value of Delaware Radiology.

VI. The Appraisal Valuation And Fair Value Determination

The preceding analysis addresses most of the major value-affecting issues in the record. The results of that analysis will provide some of the more important inputs I will

use in reaching a determination of the fair value of Delaware Radiology on the merger date. That appraisal determination will also determine my award of damages for the purpose of the Kessler Group's entire fairness claim.

Both of the experts in the case used a discounted cash flow analysis as the foundation for their valuations of Delaware Radiology. The basic elements of a DCF analysis are not novel and need not be repeated here.[102] In computing my own DCF value for Delaware Radiology on the merger date, I will focus on the major remaining differences between the testimonial experts, then use the resolution of those differences along with the inputs formerly determined to reach a final determination of fair value.

Before I complete that work, a few factors that influence my approach are worth noting. Delaware Radiology is a small, privately owned entity. As shall be seen, using even an income-based approach such as a DCF model to value such an entity has its challenges, principally in the area of calculating a proper cost of capital. In this situation, the absence of both market information about the subject company and good public comparables force the court to rely even more than is customary on the testimonial experts. That reality is inescapable.

That has led me to consider carefully which of the two experts, the Broder Group's expert Reed or the Kessler Group's expert Mitchell, was the more reliable. Although I have done my own independent analysis and reach a conclusion materially

[102] For the standard classroom description, *see* RICHARD A. BREALEY & STEWART C. MYERS, PRINCIPLES OF CORPORATE FINANCE 75-80 (7th ed. 2003); BRADFORD CORNELL, CORPORATE VALUATION: TOOLS FOR EFFECTIVE APPRAISAL AND DECISION MAKING 100-41(1993). For a good judicial summary, *see Onti*, 751 A.2d at 917.

different than either expert, when there is doubt and there is not a more reliable basis to decide a question, I will use the approach advocated by the expert whose testimony I found more credible and well-grounded in finance and fact. As a general matter, I easily conclude that Mitchell's testimony was far closer to the mark in all respects. Mitchell approached his task in a conservative and restrained manner that, although still reflecting a desire to advance his clients' objectives, reasonably took into account factors limiting the value of Delaware Radiology.

By contrast, Reed's testimony seemed more aggressively driven by his goal of reducing what the Broder Group would be ordered to pay. Moreover, Reed was given marching orders in his work before and after the merger that led him to undervalue Delaware Radiology. Indeed, those orders were such that Reed did not even know he was valuing Delaware Radiology itself before he finished his valuation in October 2003. Rather, he thought he was valuing Delaware I and II until some time between November 2003 and January 2004.[103]

Even when he realized that the value of Delaware III and IV might be considered in this case, Reed took the position that it was impossible to value businesses that were soon to, but not yet, open using a DCF analysis. That position would come as a revelation to finance professors, owners of franchisable retail establishments, and businesspersons of all kinds. Put simply, this did not instill confidence in me and seemed to be a posture designed simply to advance the Broder Group's interest in not according the Kessler Group any share of the value of Delaware III and IV. Likewise, Reed's

[103] Tr. 596.

knowledge of the relevant facts regarding Delaware Radiology seemed unduly constrained by his clients, and his blinkered view of the business impaired his ability to reach a reasoned determination of value. For these reasons, I give more weight to Mitchell's testimony and lean on his analysis when there is no better method to break an impasse.

A. Calculating Net Cash Flows

The most important input necessary for performing a proper DCF is a projection of the subject company's cash flows. Without a reliable estimate of cash flows, a DCF analysis is simply a guess. Fortunately, Delaware Radiology was not engaged in a complex business and the operations of Delaware I and II provided a foundation for making some reasonable estimates of future performance. Of even greater utility, Carr of Tri-State made detailed projections of the performance of Delaware I, III, and IV for non-litigation use.[104] Specifically, the following projections existed on the merger date.

The projections for Delaware I were used in contemplation of securing financing from the Wilmington Savings Fund Society when Delaware I was being expanded and adding a second MRI magnet. The pro forma projections present the anticipated performance for Delaware I, including scan volume projections, for the two years from October 2003 through September 2005. These were provided to the Kessler Group in October 2003 when the Broder Group was requesting personal guarantees for Delaware

[104] Carr also claims that projections for Delaware II were provided to PNC to secure a loan to buy-out the Kessler Group, but no detailed projections are in the record. The only "projections" for Delaware II in the record detail anticipated scan volume and resulting revenue. *See* Jt. Ex. 233. No breakdown of expenses or net income is included in the projections, and Mitchell did not have the Delaware II projections available to him in performing his valuation.

I's expansion. The projections for Delaware III also were disclosed to the Kessler Group in October 2003, and these projections were used to secure financing for the equipment to be used at the Center.[105] The projections for Delaware III, then, were prepared by October 2003.[106] Similarly, Carr prepared two-year projections for Delaware IV to secure financing for that Center's equipment, which was provided by PNC Bank on March 9, 2004.[107] Traditionally, this court has given great weight to projections of this kind because they usually reflect the best judgment of management, unbiased by litigation incentives.[108] That is especially so when management provides estimates to a financing source and is expected by that source (and sometimes by positive law) to provide a reasonable best estimate of future results.[109] Therefore, we have regarded with rightful suspicion attempts by parties who produced such projections to later disclaim their reliability, when that denial serves their litigation objective.

Here, the Broder Group has done that in material ways, especially with respect to Delaware III and IV, by claiming that Carr spent minimal time on those projections and

[105] Jt. Ex. 384 at 44-45 (Deposition of Carr).
[106] At his deposition, Carr recalled coming up with the projections between October 2003 and April 2004, but because the Broder Group provided them October 16, 2003, it is clear the projections were in existence at that time. *Id*. at 47-48.
[107] Jt. Ex. 174.
[108] *See Doft & Co. v. Travelocity.com Inc.*, 2004 WL 1152338, at *5 (Del. Ch. May 20, 2004) ("Delaware law clearly prefers valuations based on contemporaneously prepared management projections because management ordinarily has the best first-hand knowledge of a company's operations.").
[109] Again, it is a felony to knowingly obtain any funds from a financial institution by false or fraudulent pretenses or representations. 18 U.S.C.A. § 1344 (2006). Lenders extract projections as a basis for their lending decision and expect reasonable best estimates, not an acronym bringing to mind the tail of a dog.

that all the projections were merely "throw-ins" after financing was secured.[110] Reed's valuation is evidence of the disavowal of these projections as he used more pessimistic assumptions regarding the volume of scans that the MRI Centers would produce and the amount of revenue the MRI Centers would receive for each scan. Indeed, as to Delaware III and Delaware IV, Reed did not even come up with cash flow projections, as he considered it impossible to value businesses that had not begun to operate.

For his part, Mitchell used the extant projections as the beginning for his analysis and built off of them in a manner that I find to be reasonable and conservative. In fact, in projecting a reimbursement rate, Mitchell took a more conservative approach than the Broder Group's projections — he assumed a $601 reimbursement rate as opposed to the $611 rate used by the Broder Group for Delaware I. Also, Mitchell's scan volume projection mirrors the Broder Group's projections for Delaware I. At the end of the Broder Group's projection period, Mitchell chose to employ a month-to-month approach to scan volume growth for Delaware I, which had added a second MRI machine near the end of 2003. Mitchell assumed, for Delaware I, that scans on the first magnet would

[110] Much was made at the trial that the projections and pro formas were not used to secure financing but rather were "throw-ins" after the deal had been approved on the basis of the personal guarantees of the Broder Group and Edell. Tr. 421-24. Carr, though, testified that even though these were throw-ins, he put together the pro formas and projections "based on the best of [his] knowledge, that [he] thought these things would do." *Id*. at 424. Also, the expansion of Delaware Radiology into Middletown and Dover was not a speculative, new business venture in a new industry — Tri-State was managing several entities and knew the competitive, business, and regulatory landscape. Delaware Radiology explored these opportunities and did its diligence before making the decision to pursue them. *See, e.g.*, Jt. Ex. 83. Carr was instrumental in pursuing the business opportunities for Delaware III and IV and had as much knowledge as anyone as to their prospects and expectations for profitability. Given his role and his fealty to the Broder Group, the Broder Group is in a poor position to disclaim his projections as having no utility.

increase by two per month until it reached its capacity of 435 scans per month. He further assumed that scans on the second magnet at Delaware I would increase by ten per month until its capacity of 435 scans per month was reached.[111] Those assumptions struck me as reasonable and achievable ones.[112]

Mitchell lacked management projections for Delaware II.[113] But Mitchell did know that Delaware II would experience competition from an MRI Center that opened in the Delaware II market area and that this could dampen Delaware II's volume. Mitchell, therefore, projected that any increase in Delaware II's scans would be offset by

[111] Expert Report of Mitchell 24 (hereinafter "Mitchell Report"). It is worth noting that at the end of Carr's two-year projections, Carr assumed a scan volume increase of ten scans per month. Mitchell's approach after the end of the Broder Group's projections resulted in a monthly increase of twelve scans, which is not markedly different.

[112] In contrast, Reed was much more pessimistic. Despite the addition of a second magnet at Delaware I, Reed only projected 23% growth in scans in year one and 24% growth in year two. For the rest of the five-year projection, he assumed 3% annual growth. Expert Report of Reed 34 (hereinafter "Reed Report"). His projection for Delaware II was even more pessimistic — decreasing scans by 14% in year one and 15% in year two. *Id*. He then assumed 3% annual growth. As he did not value Delaware III and IV, there was no scan volume assumption in his original valuation. In order to address the court's desire to have projections that included reading fees at certain rates, he made some basic assumptions in order to complete the post-trial projections, but his methodology is not described at length. Rather, he provided a table of expected monthly scans for the first eighteen months and then increased volume at the rate of inflation.

[113] The record does contain a skeleton projection for Delaware II prepared by Carr. Jt. Ex. 233. As opposed to the projections for Delaware I, III, and IV, that projection does not contain detailed financial projections. Instead, only scan volume and revenue are projected. I should note that this projection uses a reimbursement rate of $720 per scan for the first year — $119 more than any rate used in this litigation. The second year is projected at $620. Mitchell apparently never received this projection. Reed had the projections but did not rely on them. Tr. 493.

competition in year one and then grow at 3.5% annually in years two through five of the five-year projection period.[114] That relatively modest growth rate was achievable.

Finally, Mitchell used the Delaware III and IV estimates prepared by Carr for lenders in determining his scan volume projections used to value these entities. He used Carr's projected growth through month eighteen of the twenty-four month projections and then increased scan volume at Delaware III and IV by five per month through the end of year two and then by two per month until the end of the five-year projection period.[115] Again, Mitchell's projected reimbursement rate was more conservative than Carr's projections — he assumed a $601 rate as opposed to $625 used by Carr.

Overall, I find Mitchell's estimated growth realistic and appropriate when compared to the historic scan volume of the MRI Centers and the management projections for new MRI Centers. The more rapid increase in scans at Delaware I is reasonable, given its increased capacity beginning in 2003. Mitchell also properly took into account the competition Delaware II faced from the entrance of a new, competing center in Delaware II's market by assuming more modest growth for it. Finally, Mitchell's reliance on Carr's estimates for Delaware III and IV as the basis for his projection-period growth estimate was reasonable.

I also find that Mitchell made reasonable assumptions regarding the revenues that Delaware Radiology would receive for doing scans. Mitchell began by using the same

[114] *Id.* It should be noted, as to competition, that a previous center opened less than one-half mile from Delaware II shortly after Delaware II opened, but this center closed within eighteen months because Delaware II "was capturing the market share" due to its "name recognition." Tr 786-87.
[115] Mitchell Report 24-25.

base reimbursement rates as Reed for Delaware I ($601 per scan) and Delaware II ($571 per scan).[116] Mitchell used those reimbursement rates because they were the numbers the Broder Group provided to Reed for the purpose of performing a valuation, and Mitchell found them reasonable. Mitchell held these rates constant throughout his projection period. Reed, by contrast, assumed reductions in reimbursement rates of 9% for Delaware I and II in year two, or 2005, and then increased them at 3%, the rate of inflation, annually.[117] Essentially, the basis for Reed's reduction was speculation by Carr, and Reed's own opinion that Delaware reimbursement rates were high relative to neighboring states and that they were likely to fall. But the record is devoid of information from more objective sources to substantiate that viewpoint, which, like other elements of Reed's and Carr's testimony, fits with the self-interest of the Broder Group.

Notable in this regard is the assumption that Carr made before this litigation about the reimbursement rates that Delaware III and IV would achieve. The projections Carr prepared for the Broder Group to provide to PNC Bank indicated that Delaware III and Delaware IV would receive approximately $625 per scan.[118] As mentioned, Mitchell reduced this rate to $601 per scan in his projections for Delaware III and IV, which was consistent with Delaware I's reimbursement rate.[119] Carr's pre-merger estimates, prepared for financing purposes, of a $625 per scan reimbursement rate are telling

[116] Reed uses $601/scan for Delaware I even though, in testimony, he claimed that by December 2003 that "had dropped to $567 per scan," but he "questioned . . . Mr. Carr . . . and [] could not get a satisfactory answer." Tr. 493.
[117] Reed Report 34.
[118] Mitchell Report 25; Jt. Ex. 232. Again, Carr even projected a reimbursement rate of $720 for Delaware II. Jt. Ex. 233.
[119] *Id.*

evidence of the reasonableness of Mitchell's decision to use a constant reimbursement rate for Delaware I and II, given that reimbursement rates had not been reduced previously, and to use that same reimbursement rate of $601 for Delaware III and IV.[120]

By employing Mitchell's reimbursement rates and scan volume growth, I estimate that the MRI Centers would realize the following revenues throughout the five-year projection period from the merger date:

	Year 1	Year 2	Year 3	Year 4	Year 5
Delaware I	$4,041,725	$4,814,010	$5,661,420	$6,256,410	$6,274,440
Delaware II	2,245,172	2,323,970	2,405,052	2,488,989	2,576,352
Delaware III	549,915	1,544,570	1,860,696	2,033,784	2,206,872
Delaware IV	204,340	1,320,998	1,716,456	1,889,544	2,062,632

Consistent with my conclusion that Mitchell's estimates of cash flows during the five-year projection period are reasonable, I also find his calculation of operating expenses a reliable and accurate representation of Delaware Radiology's historic expense structure. Previously, I addressed my resolution of the parties' dispute about Reading Fees. Because I adopt an approach different from Mitchell's, I deviate from him in handling the Reading Fee expense. To address that issue, I return the excess Reading Fee profit of 3.8% — the difference between the 17.5% the Broder Group paid itself and the market rate of 13.7% — from Delaware I, III, and IV to the value of Delaware Radiology. Similarly, I return the 1.3% excess Reading Fee profit from Delaware II to

[120] It is worth noting that Delaware I's reimbursement rate, if found by dividing gross revenues by the number of scans, appeared to be around $680 per scan in 2003 and Delaware II's reimbursement rate was approximately $686 per scan in 2003. If anything, the reimbursement rates appear to have increased since Delaware I and II were opened. *See* Mitchell Report 11-12.

the value of Delaware Radiology. On this basis, the MRI Centers' operating expenses are:

	Year 1	Year 2	Year 3	Year 4	Year 5
Delaware I	$2,181,146	$2,567,557	$2,975,169	$3,334,909	$3,464,063
Delaware II	1,326,364	1,371,949	1,436,135	1,522,849	1,638,663
Delaware III	376,027	838,327	1,020,320	1,120,355	1,232,720
Delaware IV	257,030	779,713	1,009,823	1,105,131	1,223,999

I then calculate the EBITDA for each MRI Center. To do so, I subtract the income, amortization, and depreciation expenses used by Mitchell in his DCF analysis to calculate earnings before taxes.[121] Consistent with my prior analysis, I also tax affect these earnings — as Mitchell did not — in a manner consistent with Delaware Radiology's status as an S corporation and the shareholder-level benefit received as a result. I apply a tax rate of 29.4% to the before-tax earnings of each MRI Center. The following table states each MRI Center's net income:

	Year 1	Year 2	Year 3	Year 4	Year 5
Delaware I	$1,168,118	$1,450,479	$1,772,360	$1,946,814	$1,915,057
Delaware II	614,067	661,264	680,335	679,059	658,973
Delaware III	26,934	389,689	491,242	549,577	599,153
Delaware IV[122]	($169,566)	186,670	309,336	370,430	415,054

[121] I accept Mitchell's recalculation of amortization and depreciation on a straight-line basis in order to restate the balance sheet on an accrual accounting basis. I should note that in Reed's rebuttal report, he did not indicate any technical errors in Mitchell's calculation of the MRI Centers' expense structure or reformulation of depreciation on a straight-line basis. Reed's only complaints involved the propriety and inclusion of certain expenses, including those already discussed, e.g. Reading Fees and Tri-State management fees. *See generally* Reed Rebuttal.

[122] I should note that, in calculating this negative net income, I did not apply a carryforward on the loss to lessen tax burdens for future years' positive net income. Rather, because the pro rata reporting of a loss would have an effect on the shareholders' individual reported income in this year, I apply the entire 29.4% tax benefit to year one's earnings for Delaware IV. So, earnings before tax was ($240,178).

Using these net income figures, I reconcile the cash flow determinations by adding back in the non-cash expenses of each entity — interest, depreciation, and amortization — and the increases or decreases in cash attributable to that year's change in working capital. The figures used to perform this reconciliation all come from Mitchell because, having used his non-cash expense numbers to calculate income, I use the same numbers to reconcile the cash flows. I also make one adjustment to address a disagreement between Reed and Mitchell about the propriety of adding in an annual capital expenditure during the projection period. Reed, in his DCF model, projected an annual capital expenditure of $75,000 per year for Delaware I and $37,500 per year for Delaware II.[123] Mitchell included no capital expenditures at all.[124] I include a nominal capital expenditure each year of $5,000 for Delaware I and II, given the age of their equipment, and no annual capital expenditure for Delaware III and IV. I find that Reed's addition of very heavy assumed capital investments was unreasonable but also find unrealistic Mitchell's assumption that Delaware I and II would make no capital investments during the projection period.

This results in annual cash flows to invested capital as follows:

	Year 1	Year 2	Year 3	Year 4	Year 5
Delaware I	$1,720,018	$1,513,428	$1,805,757	$2,015,424	$2,015,004
Delaware II	935,897	661,187	671,278	670,393	652,112
Delaware III	75,801	345,667	612,430	658,142	699,250
Delaware IV	(89,921)	317,092	558,054	603,334	640,934

[123] Reed Report 35.
[124] Expert Rebuttal Report of Mitchell 10-11 (hereinafter "Mitchell Rebuttal").

B. Calculating Terminal Value

Both experts use a form of the capitalization method to calculate a terminal value for the MRI Centers.[125] Mitchell assumed a constant perpetuity growth rate of 4%. Reed assumed a perpetuity growth rate of 3%. As between the two, I find Mitchell's rate more realistic. Reed essentially assumes no real growth in the value of Delaware Radiology after the projection period, which I believe is unduly pessimistic. Mitchell captures a modest increment of growth for the MRI Centers above the growth in the entire economy that is realistically achievable, and I adopt his perpetuity assumption.

I depart from Mitchell in one material respect in calculating Delaware Radiology's terminal value. Mitchell assumed no capital expenditures during the terminal period in an alleged attempt to capture value from his assumption that the MRI equipment would last well beyond the end of its period of financing, which would allow the MRI Centers to have a period where they would be making no payments on their equipment.[126] Essentially, I find credible the trial testimony that the useful life of the MRI equipment does exceed the period of financing, but I also find that, at some point, replacement will become necessary. In order to capture both the value of the debt-free period and the future leases, I use a terminal period expense of $130,500 per magnet that is intended to reflect a future operating lease on equipment. This is 75% of the deduction of $174,000 per magnet that Reed proposed, taking into account my determination that Delaware

[125] *See* SHANNON P. PRATT, ET. AL., VALUING A BUSINESS: THE ANALYSIS AND APPRAISAL OF CLOSELY HELD COMPANIES 215-16 (4th ed. 2000) (discussing the two basic methods of calculating terminal value) (hereinafter, "VALUING A BUSINESS").
[126] Tr. 893-94.

Radiology is likely to enjoy periods of relatively greater profitability because of the durability of its paid-off MRI machines.[127] Using these assumptions, the undiscounted terminal value for each entity is:

	Terminal Value
Delaware I	$11,750,133
Delaware II	3,716,104
Delaware III	3,349,820
Delaware IV	2,557,786

C. Calculating The Weighted Average Cost Of Capital ("WACC")

The experts also haggle over the correct discount rate to calculate the value of the future expected cash flows of Delaware Radiology on the merger date. Testimonial feuds about discount rates often have the quality of a debate about the relative merits of competing alchemists. Once the experts' techniques for coming up with their discount rates are closely analyzed, the court finds itself in an intellectual position more religious than empirical in nature, insofar as the court's decision to prefer one position over the other is more a matter of faith than reason.

This unfortunate reality flows from the status of principles of corporate finance. Even as to public companies, there is much dispute about how to calculate the discount rate to use in valuing their future cash flows, even when one tries to stick as closely as possible to the principles undergirding the capital asset pricing model and the semi-strong form of the efficient capital markets hypothesis. Witness the serious academic debate about whether the so-called size premium received by investors in smaller public companies is a durable indicia of their greater risk, or whether there are attributes of

[127] Reed Report 36.

stocks with a low book-to-market ratio that require the consideration of that factor in estimating a discount rate.[128] And not all public companies have a sufficient public float for trading in their shares to provide a reliable beta for use in calculating their cost of capital, forcing a resort to the use of data from the industry or so-called comparable companies.

Situations like this one inspire even less confidence, when experts are required to calculate a cost of capital for a very small, non-public company, for which neither of the experts has identified reliable public comparables. In this context, the ability of the experts or the court to hew literally to the teaching of the high church of academic corporate finance is essentially non-existent. At best, the experts and the court can express their reverence by trying to come up with a proxy that takes into account concerns addressed by CAPM and ECMH.

The experts in this case have used the proxy that has found the most favor among professional appraisers: the so-called "build-up model." The build-up model begins with the core factors considered by CAPM, a risk-free rate and an equity premium rate. From there, however, the build-up model begins to diverge from CAPM. Under the build-up method, beta is not considered. A size premium, used consistently with the practice of

[128] *See* BREALEY & MYERS 201-02, 356-57 (discussing the academic debate about the empirical evidence regarding the relationship of stock returns, firm size, and book-to-market ratio on the proper way to calculate cost of capital); Eugene F. Fama & Kenneth R. French, *The Cross-Section of Expected Stock Returns*, 47 J. FIN. 427 (1992) (hereinafter "Cross Section"); Eugene F. Fama & Kenneth R. French, *Size and Book-to-Market Factors in Earnings and Returns*, 50 J. FIN. 131 (1995).

most current users of CAPM in the appraisal and valuation context,[129] is de rigueur under the build-up model. Much more heretical to CAPM, however, the build-up method typically incorporates heavy dollops of what is called "company-specific risk," the very sort of unsystematic risk that the CAPM believes is not rewarded by the capital markets and should not be considered in calculating a cost of capital. The calculation of a company specific risk is highly subjective and often is justified as a way of taking into account competitive and other factors that endanger the subject company's ability to achieve its projected cash flows. In other words, it is often a back-door method of reducing estimated cash flows rather than adjusting them directly. To judges, the company specific risk premium often seems like the device experts employ to bring their final results into line with their clients' objectives, when other valuation inputs fail to do the trick.

That reality manifests itself in this case, where both Mitchell and Reed used the build-up method to estimate Delaware Radiology's cost of capital.[130] The table below

[129] In other words, there are many adherents of CAPM who believe that the superior performance of small stocks over time is a relevant factor to be considered in calculating a cost of capital. The magnitude of this superiority is a question of great debate, as are the questions of whether the gap is eroding, has eroded to insignificance, or was never significant, when all factors are considered. What appears clear is that serious adherents to the essential reasoning behind ECMH and CAPM — *e.g.*, Fama & French — believe the small stock factor to be important. From my experience, most testimonial experts and investment bankers using CAPM tend to accept the size factor as relevant.

[130] That is, both experts essentially calculated the discount rate consistent with the leading non-academic treatise. *See* PRATT, VALUING A BUSINESS 163. Interestingly, Pratt does not use the precise nomenclature of the "build-up method" in his larger treatise. *See id*. at 160-65 (discussing the build-up method, while never using that name). But, in his valuation text for lawyers, he specifically refers to this method of calculating a discount rate as "the build-up model." SHANNON PRATT, THE LAWYER'S BUSINESS VALUATION HANDBOOK: UNDERSTANDING FINANCIAL STATEMENTS, APPRAISAL REPORTS, AND EXPERT TESTIMONY 120 (2000). To be fair,

shows their application of the build-up method to come up with a cost of capital for Delaware I:

Mitchell's Discount Rate		Reed's Discount Rate	
Risk free rate	5.01%	Risk free rate	4.93%
Equity premium risk	7.20%	Equity risk premium	7.00%
Industry risk premium	(4.51%)	Size risk effect	9.16%
Size premium	9.82%	Specific company risk	3.50%
Specific company risk	2.00%	Equity discount rate	24.59%
Equity discount rate	19.52%	Cost of Debt	3.95%
WACC[131]	18.64%	WACC (84.7% equity, 15.3% debt)[132]	21.4%

As can be seen, the disparity in equity discount rates primarily results from Mitchell's use of a negative industry risk premium, based on Ibbotson's data, of 4.51%. Absent this industry risk, Reed and Mitchell would be approximately 0.5% apart in their equity discount rates. But that difference overstates the similarity of their analyses. After all, Reed uses a company specific risk premium of 3.5% and Mitchell uses only a 2% figure. Neither explained their estimates with any confidence-inspiring precision. Even as to the small stock premium, there is more than a 0.6% difference.

In view of the unavoidable imprecision of the exercise, I adopt Mitchell's approach for use in my remedy award. I do so in large part because of my determination that his analysis is, on balance, the more reliable. I also do so because his approach to

---

Pratt recognizes the inherent subjectivity of the specific company risk factor, though, by stating that this factor is a matter of the analyst's judgment. PRATT, VALUING A BUSINESS 163.

[131] This is the WACC for Delaware I only, given the different debt-equity structures of the various MRI Centers.

[132] This is Reed's cost of capital for Delaware I. The cost of capital he used for Delaware II was 22.4%, which was a result of factoring in specific company risk at 4.50% and a slightly higher cost of debt component. Similarly, Reed increased the equity discount rate by an additional 1% for Delaware III and an additional 2% for Delaware IV.

calculating the discount rate comes the closest to putting into practice the thinking behind the CAPM, in circumstances when CAPM cannot be applied in its pure form. Mitchell's inclusion of a small stock premium is consistent with a good deal of academic and practitioner thinking about CAPM.[133]

More important, I regard Mitchell's consideration of the lower industry risk for companies like Delaware Radiology to be a fair proxy for beta in a circumstance when beta cannot be measured directly. Under the CAPM, the equity risk premium is not used in isolation to estimate the subject company's cost of capital. Rather the equity risk premium is adjusted by an estimate of the systematic risk of the subject company reflected by its actual or estimated beta. The industry return data that Mitchell uses is an acceptable substitute for that adjustment in this situation when a beta cannot be estimated.[134] Mitchell testified that the negative risk premium he employed was consistent with market return data from Ibbotson's indicating that investments in a health care industry business present less market risk than average.[135]

---

[133] *E.g.*, Rolf W. Banz, *The Relationship between Return and Market Value of Common Stocks*, 9 J. FIN. ECON. 3 (1981); Fama & French, *Cross Section*; PRATT, VALUING A BUSINESS 170.

[134] Essentially, the industry risk is used in place of calculating a beta, and Shannon Pratt states that the equity risk premium "[m]ay be modified by one or more coefficients, such as beta, based on the capital asset pricing model . . . ." *See* MICHAEL BARAD & TARA MCDOWELL, IBBOTSON ASSOCIATES, CAPTURING INDUSTRY RISK IN A BUILDUP MODEL 1 (2002) *available at* http://www.ibbotson.com/download/research/Capturing%20Industry%20Risk%20in%20a%20Buildup%20Model.pdf ("Most appraisers make an industry-based adjustment in calculating a firm's cost of equity. A practitioner using the Capital Asset Pricing Model already includes industry risk through a beta measure; however, when using the buildup method, it must be added in the form of a risk premium.").

[135] Tr. 891-92. Reed does not challenge the industry risk number that Mitchell obtained from Ibbotson's. Rather, he challenges the use of an industry premium for Delaware Radiology because of its size. Tr. 646. Mitchell, though, notes that in Ibbotson's calculation of the industry risk premium, one of the companies analyzed generates approximately $17 million annually in

When viewed as a whole, the equity discount rate that Mitchell calculated for Delaware I, II, III, and IV is quite reasonable, reflecting a substantial rate of over 19%. In coming to his cost of capital determination for each of the MRI Centers, then, Mitchell kept all factors constant except for their various borrowing rates and levels of debt. I find that approach more reasonable than Reed's approach of varying his company specific risk premium MRI Center by MRI Center, largely for reasons already taken into account by his reduction in the projections he used in his DCF analysis.[136] Mitchell's own analysis also contains a subjective specific company risk premium of 2%, the quantification of which cannot be explained by reference to objective factors. I will not quibble with including that factor, which reinforces the conservatism of Mitchell's final cost of capital.

The exhibits to Mitchell's expert report suggest that Mitchell correctly weighted the debt of the MRI Centers and the equity in the MRI Centers as of December 2003.[137] He ran several iterations in order to achieve the correct WACC value, so I will apply his values to determine present value.[138] Those values are:

---

revenue, which is not out of line with the revenue achieved cumulatively by the MRI Centers and other Broder Group centers. Tr. 891-92.

[136] *See* PRATT, VALUING A BUSINESS 181 ("The analyst must be especially careful to avoid undue double counting, such as reflecting a negative factor fully by a reduction in the same economic income projection, and then magnifying the effect by an increase in the discount rate.").

[137] *See* Mitchell Report Exs. 18, 31, 43, 54. His initial WACC values were modified slightly after the trial in a submission dated January 31, 2006. I apply the new WACC values detailed in that letter. Gocial Gerstein Letter to Cathy Reese, Esq., Jan. 31, 2006.

[138] Admittedly, the WACC numbers are no longer precisely correct because, in performing my own valuation and arriving at different entity values than Mitchell, the relative debt and equity weights will have changed. These changes, at most, are relatively insignificant, result from the natural imperfect nature of the appraisal inquiry, and do not alter the reality that the use of Mitchell's WACC numbers will provide a responsible present value of Delaware Radiology. This court is not an investment bank and does not have a store of DCF software available to

	WACC
Delaware I	18.64%
Delaware II	18.79%
Delaware III	18.55%
Delaware IV[139]	15.57%

D. Calculating The Fair Value Of Delaware I, II, III, And IV

The projected cash flows and terminal value stated in present value terms result in each MRI Center having the following total enterprise value as of January 20, 2004.

	Total Entity Value
Delaware I	$10,480,021
Delaware II	3,840,299
Delaware III	2,739,876
Delaware IV	2,410,842

E. What To Do About Delaware V?

The preceding analysis leaves one question unresolved: what to do about the value of Delaware V? Because Delaware V was not formed until several months after the merger, no pre-merger projections were available. But the facts convince me that a future Sussex County MRI Center was envisioned by the Broder Group and Edell as the logical next step in the southward movement of Delaware Radiology — indeed, that concept was discussed with Edell as early as 1998.[140] Although Mitchell performed a valuation of Delaware V based on projections calculated by Carr, I find that Mitchell's valuation did not have the same reliability as his valuations of Delaware III and IV based

allow us to run iterative exercises. Instead, as judges, we must do the best we can with the record the parties provide us.

[139] The Delaware IV WACC is significantly lower because of its presumed initial reliance on debt that is available at a lower cost than equity and because that debt comprises a higher proportion of its capital structure in comparison to the other MRI Centers.

[140] *See* Tr. 703.

on the remoteness in time of Delaware V to the merger. That leaves me with a remedial gap, which I fill conservatively. I will set the value of the Delaware V opportunity at a conservative 33% of Delaware IV's total value to Delaware Radiology, including the excess profit from Reading Fees. This gives the Kessler Group value for the Sussex County opportunity open to Delaware Radiology, while taking into account the more inchoate nature of that opportunity. Although this remedy is necessarily imprecise, it is a fitting and conservative one, given the lack of procedural safeguards employed by the Broder Group in effecting the merger, and the refusal to accord the Kessler Group value even for Delaware III.[141] Delaware V's value to Delaware Radiology, then, is $358,845, which is one-third of the total value of Delaware IV.

F. The Total Value Of Delaware Radiology

From the total enterprise value, I deduct each MRI Center's debt as of December 31, 2003. In addition, as Delaware Radiology was not the 100% owner of any MRI Center, each entity value is multiplied by Delaware Radiology's ownership percentage.[142] I then added back the 3.8% above-market profit from the Reading Fees for Delaware I,

[141] In a belated renewal of an earlier application, the Kessler Group seeks fee-shifting on the basis that the Broder Group's conduct was in extreme bad faith. In support of that position, the Kessler Group points to concerns about the adequacy of the Broder Group's production of evidence regarding Delaware V. Given the circumstances in which the claim for fee shifting was raised, I believe the Kessler Group's application was inexcusably tardy. Moreover, in considering the application, I would also have to consider whether the Kessler Group's own overly-aggressive and time-consuming approach to the litigation made the process unduly expensive at times, which I believe it did. Most important, by making an award that includes the value of the Delaware V opportunity, I take into account the concerns raised by the Kessler Group in a fair manner. For all these reasons, I will not shift attorneys' fees. I will, however, award costs to the Kessler Group as the prevailing party.

[142] When determining Delaware Radiology's ownership percentage of Delaware III and IV, I include any percentage owned by a Tri-State entity or Carr.

III, and IV and the 1.3% from Delaware II. This table[143] details the value of each MRI Center, including excess Reading Fee profit:

	Delaware I	Delaware II	Delaware III	Delaware IV	Delaware V
Entity Value	$10,480,021	$3,840,299	$2,739,876	$2,410,842	
Debt at Dec. 31, 2003	(1,153,200)	(421,746)	(442,730)	(1,343,333)	
Control Equity Value	$9,326,821	$3,418,553	$2,297,146	$1,067,509	
DE Radiology Ownership	70%	60%	60%	60%	
Value to DE Radiology	$6,528,774	$2,051,132	$1,378,288	$640,505	$213,502
Excess Read Profit to DE Radiology	$1.291.285	$190,033	$418,009	$436,031	$145,343

As is indicated below, my analysis results in a value of Delaware Radiology of $13,292,903.22, which results in a per share value of $33,232.26. The Kessler Group's 37.5% ownership of Delaware Radiology has a total value, then, of $4,984,838.71.

Total Value of MRI Centers	$13,292,903.22
Shares Outstanding	400
Value per Share	$33,232.26
Kessler Group Shares	150
Delaware Radiology's Value to Kessler Group	$4,984,838.71

The results of this analysis not only serve as the foundation for my appraisal award but as the basis for a conclusion that the merger was not financially fair to the squeezed-out minority, the Kessler Group, as a matter of equity.

[143] The results of this table are rounded.

VII. Pre-Judgment Interest

Of course, no remedial decision would be complete without resolving an expensive debate (in terms of the use of judicial time and the payment of attorneys' and experts' fees) over the rate and frequency of pre- and post-judgment interest. The human energy spent on these disputes is wasteful and dispiriting. But until there is a statutory solution, there is no choice.

The Broder Group sought to resolve this dispute unilaterally by depositing an amount of funds equal to the merger consideration payable to the Kessler Group in an escrow account, which paid a very low money market rate of interest of 2.5%. The Broder Group advocates an award of interest at that rate, or, in the alternative, a combination of the weighted average of that rate and an estimate of Delaware Radiology's weighted borrowing rate, which it estimates at prime minus 0.25%, or 4.64%. This results in a pre-judgment interest rate of 3.57%, which the Broder Group suggests that I compound monthly.[144] The Kessler Group advocates a different approach — one that averages a prudent investor rate, 6.4%,[145] and Delaware Radiology's actual cost of borrowing for the MRI Centers, 7.46%, to come up with a rate of 6.9%, which it seeks to have compounded monthly and stated on an annual basis.[146]

[144] Reed Rebuttal 13-14.
[145] Mitchell's prudent investor portfolio consisted of 20% 91-day U.S. Treasury bills, 20% 10-years to maturity U.S. Treasury notes, 30% investment grade corporate bonds, and a 30% diversified portfolio of stocks using the return on the Standard & Poors 500 Stock Index as a proxy. Mitchell Report 39.
[146] *Id.* at 38-39.

This court is said to have "broad discretion to determine the appropriate rate of interest."[147] Using that discretion I award interest at the rate advocated by the Kessler Group.[148] The Broder Group's placement of funds in escrow might have been well-meaning, but it falls short of convincing me to use a money market rate of interest as a factor. The Broder Group placed the funds in escrow without agreement from the Kessler Group on the nature of the investment vehicle or the amount of funds to be escrowed. As it turns out, the amount of funds escrowed falls well short of my award.

Given those realities and the remedial purposes to be served by this proceeding, I adopt the Kessler Group's approach, which is one that is consistent with this court's precedents. In appraisal cases, prejudgment interest is "typically awarded on the basis of a combination of the plaintiffs' lost opportunity cost, measured by a prudent investor rate; and the benefit realized by the defendant, measured in terms of the reduction in defendants' borrowing costs."[149] The formula employed by Mitchell comports fully with that approach,[150] as does the use of monthly compounding.[151] As a further matter, given the self-interested nature of the merger and my finding that the terms were financially unfair, my discretion is properly exercised in favor of the more generous, but still responsible, rate of interest proposed by the Kessler Group.

---

[147] *Montgomery Cellular*, 880 A.2d at 226.
[148] In that regard, I find that Mitchell's use of the actual borrowing rates for the MRI Centers to be permissible.

[151] *Id.*

VIII. Conclusion

For the foregoing reasons, I find that the merger was unfair and that the Kessler Group therefore prevails on its fiduciary duty claim. The remedy for that claim, however, is identical to my appraisal award. Thus, the Kessler Group shall receive a judgment equal in amount to $33,232.26 per share of Delaware Radiology it owned, or a total of $4,984,838.71. The appraisal award is the obligation of Delaware Radiology, as the surviving entity in the merger, but the equitable award is the obligation of the members of the Broder Group, jointly and severally. Interest shall run on that award from the merger date at a rate of 6.9%, compounded monthly until the date of full payment. The defendants shall pay the Kessler Group's costs. The Kessler Group shall present a conforming final judgment, upon notice as to form by the Broder Group, within ten days.

DeMasi v. DeMasi

Case name: DeMasi v. DeMasi
Citation: 366 Pa. Super. 19, 530 A.2d 871, 1987 Pa. Super. LEXIS 8840
Date of decision: August 10, 1987
Country: US
State or Federal: State
State/Jurisdiction: Pennsylvania
Court: Superior Court
Type of action: Marital Dissolution
Judge: Hester
SIC: 8011 Offices and Clinics of Doctors of Medicine (except mental health specialists, HMO medical centers, and ambulatory surgical and emergency centers)
NAICS: 621111 Offices of Physicians (except Mental Health Specialists)

Keywords: Marital dissolution, Sole proprietorship

COUNSEL:

Kenneth J. Sparler, York, for Rocco DeMasi.

Carolyn Lasky, York, for Tanya DeMasi.

JUDGES:

Cirillo, President Judge, and Tamilia and Hester, JJ.

OPINIONBY:

HESTER

OPINION:

These are four consolidated appeals: three filed by Rocco J. DeMasi, and one filed by Tanya J. DeMasi. As both parties are appellant and appellee, we shall refer to Rocco J. DeMasi as "husband" and to Tanya J. DeMasi as "wife." The orders under review concern child support, spousal support, alimony pendente lite, equitable distribution of marital property, counsel fees and litigation expenses. n1

n1 We note several errors in the form of wife's brief: omission of the statement of jurisdiction (Pa.R.A.P. 2111(a)(1)); statement of questions not set forth on a separate page nor limited to one page (Pa.R.A.P. 2116(a)); brief exceeds maximum length (Pa.R.A.P. 2135(1)). Wife's preamble requesting this court's indulgence in studying her lengthy brief is procedurally incorrect; parties shall present a motion for leave of court to file briefs exceeding maximum length.

Husband and wife were married on November 25, 1967. Two children were born of their marriage: Vincent M. DeMasi, born December 14, 1970, and John M. DeMasi, born November 23, 1974.

Husband is a medical doctor who graduated from Temple Medical School in 1969. Following an internship and residency, he earned board certification in internal medicine in 1972. He is a 50% shareholder in Associated Internists, Inc., where he primarily practices rheumatology. The owner of the remaining shares is his practicing colleague, William Lampe, M.D.

Wife is a registered nurse and worked in that capacity from 1967 to 1970. From 1970 to 1982, she raised the parties' children and served as a full-time homemaker. She returned to work as a registered nurse in 1982 when the parties separated.

Husband and wife separated on September 10, 1982, and wife filed a support complaint on September 17, 1982. On September 28, 1982, husband filed a complaint in divorce to which wife responded with an answer and claims for alimony pendente lite, counsel fees, costs, alimony and equitable distribution.

Following numerous and lengthy hearings, the trial court, on July 9, 1985, ordered husband to pay wife $ 130.00 per week as alimony pendente lite and $ 264.00 per week as support for sons Vincent and John. Vincent moved in with his father on October 26, 1984, and child support was reduced to $ 130.00 per week as of that date. Husband appealed from the July 9, 1985 order for alimony pendente lite and child support. The parties were divorced on August 6, 1984, while alimony and equitable distribution claims were pending.

On September 4, 1985, the court entered an order disposing of the remaining claims. Husband was awarded his entire interest in Associated Internists, Inc. Wife was awarded husband's entire pension interest, the net equity in the marital residence, all household goods in the marital residence, the personal property in her possession, an automobile, a private life insurance policy, alimony of $ 7,500.00, partial payment of counsel fees and full payment of expert fees and court costs. Both parties appealed from the order of September 4, 1985.

Finally, on March 4, 1986, after appeals were filed from the two orders outlined above, the trial court denied husband's petition to reduce or to terminate alimony pendente lite on grounds that wife had remarried. Husband appealed from the March 4 order.

Husband raises eight arguments in his appeals; wife raises three arguments in her appeal. Husband argues that 1) the trial court entered its order for spousal support, child support and alimony pendente lite without giving him the opportunity to testify concerning his income and earning capacity; 2) the trial court failed to consider the needs of the children and financial abilities of husband and wife in establishing support; 3) the trial court failed to consider wife's income and earning capacity in establishing support; 4) the trial court erred in viewing husband's business perquisites as income; 5) the trial court erred in ordering husband to pay mortgage installments and other expenses on the marital residence after wife moved from the premises; 6) the trial court erred by including good will in the value of husband's medical practice; 7) the trial court erred in continuing alimony pendente lite without considering wife's income, earning capacity and remarriage; and 8) the trial court erred in awarding spousal support and alimony pendente lite in excess of one-third of husband's income.

Wife argues in her cross appeal that 1) the trial court erred in not finding $ 19,800.00 in medical insurance proceeds to be marital property; 2) the trial court erred in valuing husband's pension interest at $ 26,960.00; 3) the trial court erred in holding that it lacked jurisdiction to distribute certificates of deposit which wife owned jointly with her children; and 4) wife remained entitled to lump sum alimony of $ 7,500.00 despite her remarriage.

HUSBAND'S APPEAL

Support and Alimony Pendente Lite

First, husband complains that during the hearing on child support, spousal support and alimony pendente lite, he was not permitted to testify concerning his income and earning capacity. According to husband, the support and alimony pendente lite orders were based on the master's report, not on the court's separate findings.

Pennsylvania Rule of Civil Procedure 1910.11 states that actions for support may begin by an office conference conducted by a hearing officer. Following a review of income tax returns, pay stubs and income and expense statements, the officer may make a recommendation. If an agreement is not reached at the conference, the court may enter an order on the recommendation. Thereafter, if the aggrieved party files a written demand, a hearing de novo shall be held before the court.

An office conference was conducted on December 2, 1982. A recommendation was made, an order was entered and both parties demanded a de novo hearing. The hearing was conducted on April 25, 1983. Wife was the only witness, and it is not clear whether husband elected to forgo testifying or was precluded from testifying.

The support and alimony pendente lite order under review is dated July 9, 1985. That order was not based solely on the hearing of April 25, 1983. Four hearings concerning reconsideration or modification of support and alimony pendente lite followed the April, 1983 hearing. Moreover, seven hearings concerning equitable distribution had been conducted by a master. During the subsequent hearings, husband had an opportunity to testify, call witnesses, offer documentary evidence and cross-examine witnesses. In fact, husband and other witnesses provided exhaustive information concerning his income and the income and expenses of his professional corporation. Among the corporate expenses examined were pension plan contributions, salaries, insurance premiums, travel and entertainment, seminars, automobiles, equipment, taxes, depreciation and general overhead expenses. This information sufficiently defined husband's income and earning capacity.

Husband incorrectly states that the court merely adopted the master's findings and report in establishing support and alimony pendente lite. Transcripts from the seven equitable distribution hearings were part of the record and available for the court's review. The court made its own findings after a review of testimony taken at the support hearings and the hearings before the master. The court did not adopt the master's findings and report. Moreover, the fact that husband had filed exceptions from the master's report, which were pending when the order for support and alimony pendente lite was entered, did not preclude the court from relying on the evidence elicited at the master's hearings.

Husband cites Groner v. Groner, 328 Pa.Super. 191, 476 A.2d 957 (1984), and Agosti v. Agosti, 319 Pa.Super. 426, 466 A.2d 233 (1983), to support his argument that he was entitled to present evidence of his income and earning capacity at the hearing de novo. In Agosti, supra, child support was ordered

following a hearing on divorce, alimony, custody and equitable distribution. The court had not notified the parties that child support would be considered with these other claims; therefore, the parties did not present evidence relevant to child support. Accordingly, the Agosti court remanded for an evidentiary hearing on child support.

In Groner, supra, child support was determined without a hearing even though a de novo hearing had been requested by the father. We held that Pa.R.C.P. 1910.11(i) provided an absolute right to a de novo hearing on child support once properly requested. We also held that a trial court may not rely on the record of other claims in lieu of a hearing de novo on child support.

Here, husband requested a hearing de novo on child support and alimony pendentelite, and such a hearing was conducted on April 25, 1983. Husband was present at the hearing with counsel, but he complains that he was precluded from testifying. The record does not indicate that husband moved to provide testimony or that he was denied the opportunity. It appears that husband's strategy was not to testify.

Although the trial court relied upon evidence from hearings on claims other than child support, these hearings addressed income and earning capacity. In Agosti, child support issues were not addressed to any extent in the hearings. In Groner, the parties' son was mentally retarded, and there was no evidence regarding the extent of his retardation or the effect it had on the amount of support. The hearing on claims other than child support did not address the child's mental retardation; therefore, a de novo hearing was the last opportunity to do so. Here, all issues relevant to child support were addressed in numerous hearings. The court properly relied on evidence from those other hearings to determine child support because husband already had the opportunity to testify on his income and earning capacity at the de novo hearing on April 25, 1983.

Next, husband argues that the trial court failed to follow the guidelines enunciated in Melzer v. Witsberger, 505 Pa. 462, 480 A.2d 991 (1984), in determining child support. In Melzer, the supreme court summarized guidelines for calculating child support: 1) reasonable needs of the children which reflect the needs, custom and financial status of the parents; 2) respective abilities of the parents to provide support which are identified in part by reasonable living expenses; 3) use of a formula to calculate each parent's total support obligation; and 4) credit for support provided directly to the children.

Husband maintains that Melzer was not followed because the court allegedly based the support order on the master's equitable distribution report without conducting a comprehensive support hearing covering the Melzer guidelines. As discussed above, the support and equitable distribution hearings were exhaustive; the needs of the children and the financial abilities of husband and wife were fully addressed. Wife testified concerning utilities, clothing, automobile maintenance, indebtedness, insurance, taxes, medical and dental treatment, food, entertainment, subscriptions and other typical and special living expenses for her and the children. Similarly, husband's expenses were fully covered. Finally, the parties' health, education, skills, actual and prospective incomes, and career plans and opportunities were addressed. This information was gleaned from the record. It was not, as husband maintains, taken from the master's report.

Third, husband argues that the trial court erred in not considering wife's income and earning capacity in determining child support and alimony pendente lite. According to husband, wife can earn in excess of $ 24,000.00 annually as a registered nurse.

Both parents are equally responsible for supporting their children, and the extent of their respective support obligations is determined by their capacity and ability. Fee v. Fee, 344 Pa.Super. 276, 496 A.2d 793 (1985). A parent's ability to pay support is determined primarily by financial resources and earning capacity. Hesidenz v. Carbin, 354 Pa.Super. 610, 512 A.2d 707 (1986); Commonwealth ex rel. Cochran v. Cochran, 339 Pa.Super. 602, 489 A.2d 804 (1985). The obligation of support, then, is measured more by earning capacity than by actual earnings. Hesidenz, supra.

Wife testified at length concerning her employment history and qualifications. She graduated from Temple University School of Nursing in 1967 as a registered nurse. From September, 1967, to October, 1970, she served several hospitals and one school district as a nurse. In October, 1970, she left the workforce in anticipation of Vincent's birth in December, 1970.

From October, 1970, to September, 1982, wife remained in the home to rear the parties' sons and to serve as full-time homemaker. Due to husband's substantialincome, the parties had the opportunity to provide their children with fulltime parental care during the nurturing years. Also during this twelve-year period, wife entertained other physicians in her home and served the Women's Medical Auxiliary, Junior League, Young Women's Club and Parent Teacher Organization. Wife explained that she entertained house guests and joined these organizations to create and maintain good public relations for husband.

In 1983, her first full year back in the work force, wife earned $ 15,000.00. On May 1, 1984, she began employment as the director of nursing for a nursing home and rehabilitation center at $ 22,000.00 annually. Her director's position would continue provided she completed a bachelor's degree in behavioral science. As of June 1, 1984, wife had to complete thirty-five credits to earn this degree.

In Ritter v. Ritter, 359 Pa.Super. 12, 518 A.2d 319 (filed December 5, 1986, at 283 Philadelphia 1986), we iterated the scope of review in child support proceedings: a child support order will not be reversed unless the evidence was insufficient or the court abused its discretion in awarding that amount of support. An abuse of discretion is proven only by clear and convincing evidence. Koller v. Koller, 333 Pa.Super. 54, 481 A.2d 1218 (1984).

With this standard in mind, we find no abuse of discretion. Wife's earning capacity was thoroughly reviewed. It was established by three years of employment during the early years of marriage and by nearly three years of employment following the separation. She earned a customary salary, and her pursuit of a bachelor's degree indicated a willingness to earn maximum income. She cannot be penalized for having remained in the home for twelve years; the nurturing of young children may supersede the economic benefits of full-time employment. Hesidenz, supra; Butler v. Butler, 339 Pa.Super. 312, 488 A.2d 1141 (1985).

These same factors apply to a review of that portion of the order addressing alimony pendente lite. Earning capacity is relevant whether the proceedings concern child support or alimony pendente lite. Pacella v. Pacella, 342 Pa.Super. 178, 492 A.2d 707 (1985).

Fourth, husband argues that the trial court erred in adding the value of certain business perquisites to his actual income. In 1983, husband earned $ 45,189.00 in net income from his medical practice. The trial court added $ 15,000.00 to his net income because of the following perquisites provided by Associated Internists, Inc. on behalf of both shareholders: 1) contributions of $ 37,749.00 to a defined benefit pension plan; 2) $ 2,347.00 in prepaid rent; 3) $ 3,726.00 for automobile expenses; 4) $ 4,329.00

for travel and entertainment; 5) $ 5,903.00 for telephone expenses; 6) $ 4,032.00 for dues and subscriptions; and 7) $ 15,920.54 for premiums on health, disability, life, malpractice, liability, fire and accident insurance.

Husband maintains that only those perquisites which raised his standard of living can be attributed to income. He argues that all of these expenses either benefited the corporation solely or did not raise his standard of living.

When actual earnings do not reflect earning capacity, the trial court is free to investigate a variety of sources to determine a party's true wealth. In Pacella v. Pacella, supra, 342 Pa.Super. at 187, 492 A.2d at 712, we illustrated some factors in addition to actual earnings which determine income:

See e.g., Commonwealth ex rel. Maier v. Maier, 274 Pa.Super. 580, 418 A.2d 558 (1980) (where supporting spouse is sole stockholder of corporation and determines his own salary, court may pierce corporate veil and use corporate income as basis for determining earning capacity); Commonwealth v. Miller, 202 Pa.Super. 573, 198 A.2d 373 (1964) (where supporting spouse is self-employed, net income, as it appears on income tax forms, is not "infallible" measure of real wealth; court accordingly may add back portion of depreciation deduction in calculating amount of support owed); Commonwealthex rel. Gutzeit v. Gutzeit, 200 Pa.Super. 401, 189 A.2d 324 (1963) (in determining supporting spouse's earning capacity, court should consider not only salary paid by wholly owned corporation, but all prerequisites [sic] provided by corporation.)

In McCurry v. McCurry, 279 Pa.Super. 223, 420 A.2d 1113 (1980), we remanded for a hearing to determine the nature of husband's business ventures and assets. We directed the trial court "to consider to what extent [husband's] ability to pay support may be enhanced by corporate perquisites . . . ." Id., 279 Pa.Superior Ct. at 232, 420 A.2d at 1118. Similarly, in Commonwealth ex rel. Swank v. Swank, 266 Pa.Super. 94, 403 A.2d 109 (1979), and Commonwealth ex rel. Gitman v. Gitman, 428 Pa. 387, 237 A.2d 181 (1967), it was held that perquisites derived from part ownership in corporations shall be considered income.

Husband agrees that perquisites affect ability to pay; however, he maintains that the corporate expenses here were not perquisites which enhanced his income. The benefits were allegedly enjoyed by the corporation alone.

We have reviewed the testimony of Leon Butler, a certified public accountant who was employed by wife to value Associated Internists, Inc. Butler testified that several corporate deductions were added to the value of the corporation because they were solely for husband's benefit. Therefore, according to Butler, husband enjoyed the following perquisites which did not directly benefit the corporation: 1) 50% of expenses for maintaining two corporateowned automobiles; 2) 50% of payments for loans on those automobiles;3) certain travel and entertainment expenses; 4) dues to a social organization; 5) insurance premiums for a life insurance policy which funded a buy/sell agreement; 6) contributions to the corporate pension plan; and 7) certain dining expenses.

The master's findings and Butler's testimony indicate that several corporate expenses reduced corporate profits and husband's take-home income. Three employees participated in the defined benefit pension plan, and husband's one-third share of 1983 corporate contributions was $ 12,650.00. Husband and his partner, Dr. Lampe, each operated a corporate automobile. The evidence indicated that husband did not use his vehicle for house calls or other medical business; he used it primarily to drive to his place of

employment and for personal reasons. Husband's one-half share of the automobile expenses was $ 1,242.00. Husband's one-half share of corporate expenses for dues and subscriptions was $ 2,016.00, and his one-half share of insurance premiums was $ 7,960.27.

It is not clear what portion of travel and entertainment expenses of $ 4,329.00 and telephone expenses of $ 5,903.00 were attributable to husband's personal use. Nevertheless,there was testimony that husband did indeed charge some personal travel, entertainment and telephone expenses to the corporation. Also, wife testified that household expenses for drugs, laundry, dry cleaning and books were charged to the corporation.

Irrespective of the travel, entertainment, telephone and household expenses, husband's share of the aforementioned identifiable expenses for 1983 was $ 23,868.27. Considering husband's reported income and tax bracket for 1983, assigning another $ 15,000.00 of net income to his net income of $ 45,189.00 was not an abuse of discretion. Therefore, we find no error in raising husband's 1983 net income by $ 15,000.00 in perquisites.

Husband's fifth attack on the support and alimony pendente lite order concerns his obligation to pay the mortgage and household expenses. Husband alleges that burdening him with these expenses was inequitable, because wife had moved from the premises, and the master had awarded the house to her.

Wife moved from the marital residence in October, 1982; husband lived there until October, 1984. Wife's right to receive the benefit of husband maintaining the marital residence was not affected by her moving. Alimony pendente lite continues pending resolution of all economic issues. Desch v. Desch, 329 Pa.Super. 22,477 A.2d 883 (1984); Wolk v. Wolk, 318 Pa.Super. 311, 464 A.2d 1359 (1983). Wife was not financially able to maintain the marital residence while she supported two children and defrayed rental and utility expenses on her new residence. Wife needed husband's support to preserve the marital residence pending its equitable distribution.

In Gee v. Gee, 314 Pa.Super. 31, 460 A.2d 358 (1983), the wife was entitled to one-half of the fair market rental value of the marital residence while the husband resided there alone. The wife's absence from the home did not affect her right to rental compensation. Similarly, wife's absence from the marital residence here should not affect her right to husband's maintenance of the house until equitable distribution.

Husband overlooks the fact that he resided in the home for two years following wife's departure. Therefore, his payment of the mortgage, taxes and insurance was not entirely for wife's benefit; he enjoyed the house for two years as he had shelter and preserved a valuable asset for equitable distribution.

Husband's contention that the trial court erred in ordering him to maintain the home after the master had awarded it to wife is equally meritless. Husband had filed exceptions from the master's recommendation which prevented an order awarding the house to wife. As long as husband's exceptions were pending, neither party had sole control over the residence. Therefore, it was appropriate and equitable for husband, earning a higher income, to maintain the residence.

Husband's final argument concerning alimony pendente lite involves the order of March 4, 1986. This order was entered after husband had appealed from the child support and alimony pendente lite order and from the equitable distribution order. The March 4, 1986 order responded to husband's petition to

reduce or terminate alimony pendente lite. Husband alleges that alimony pendente lite should have been reduced or terminated because wife had been awarded $ 10,000.00 in attorney fees and had remarried on October 12, 1985.

An award of alimony pendente lite is designed to enable the dependent spouse to prosecute or to defend a divorce action. Orr v. Orr, 315 Pa.Super. 168, 461 A.2d 850 (1983). It is also designed to help the dependent spouse maintain the standard of living enjoyed while living with the independent spouse. McNulty v. McNulty, 347 Pa.Super. 363, 500 A.2d 876 (1985). Therefore, a dependent spouse may be entitled to alimony pendente lite and counsel fees because both are necessary to maintain the divorce proceeding and a certain standard of living. This is particularly true when the dependent spouse is employed and attempting to complete an education.

Even with awards for counsel fees and alimony pendente lite, wife did not reach the standard of living that she had enjoyed with husband. She purchased a modest home with financial assistance from her parents and grandmother. Her absence from the nursing workforce for twelve years limited her employment opportunities and forced her to accept entry level positions. She could no longer enjoy a large residence with a custom-designed interior, frequent entertainment and an extensive wardrobe.

Wife's remarriage similarly did not affect the alimony pendente lite award. This identical issue was addressed in Miller v. Miller, 352 Pa.Super. 432, 508 A.2d 550 (1986). Section 507 of the Divorce Code, 23 P.S. § 101 et seq., provides that cohabitation precludes "any award of alimony . . . ." We held in Miller that § 507 refers only to alimony; cohabitation or remarriage does not bar an award of alimony pendente lite. Contrary to husband's suggestion, then, "any award" does not include alimony pendente lite. n2

n2 Husband also maintains that the award of spousal support and alimony pendente lite was confiscatory because it exceeded one-third of his income. As discussed earlier, husband's income included perquisites which added $ 15,000.00 of annual net income. When considering husband's actual income and the value of his perquisites, the support and alimony pendente lite award does not exceed one-third of his income.

Equitable Distribution

Husband raises one argument concerning the trial court's distribution of marital property. He claims that the trial court erred by including good will of $ 47,666.00 in the value of his medical practice. n3

n3 Husband actually argues that good will was valued at $ 70,245.00. That figure was husband's one-half share of the entire medical practice; $ 47,666.00 is the good will portion of husband's interest.

We note that husband does not challenge the valuation of good will; he argues that good will should not be considered marital property regardless of its worth. Therefore, this is not a valuation question.

Husband supports his contention with several theories: 1) good will is essentially reputation, and he has no reputation in the community as most of his patients are referred by other physicians; 2) good will is earning capacity, not marital property; 3) if good will were marital property, wife would be awarded a

double recovery as it would then be a factor in determining alimony and equitable distribution; and 4) the buy/sell agreement which husband executed with his partner did not value good will.

Wife's experts testified that good will can be valued as property and distributed equitably. Wife cites several opinions from other jurisdictions where good will of a professional practice was held to be marital property. See Hurley v. Hurley, 94 N.M. 641, 615 P.2d 256 (1980); In Re Marriage of White, 98 Ill.App.3d 380, 424 N.E.2d 421 (1981). She also argues that the buy/sell agreement was not admissible evidence because the absence of the original precluded admission into evidence of a copy.

Although Pennsylvania courts have not addressed whether the good will of a medical practice is marital property, we have recently decided that the good will of a law practice, operated as a sole proprietorship, is not marital property. See Beasley v. Beasley, 359 Pa.Super. 20, 518 A.2d 545 (1986).

In Beasley, the husband was an individual practitioner. He employed fifteen attorneys, and earned a substantial annual income. The husband and his associates were trial attorneys, and their compensation was determined by contingent fees.

Several factors led us to hold in Beasley that good will of a law practice, operated as a sole proprietorship, was not marital property. First, the value of a sole proprietor's good will is placed on his person, whereas the value of good will in a partnership, professional corporation or general corporation is placed on the firm. Good will does not survive the death of a sole proprietor, but the good will of a partnership or corporation survives its owners. Second, the value of an ownership interest in a corporation or partnership is measured by contract or the market, whereas the work effort of a sole proprietor determines the value of his interest. Third, while owners of a partnership or corporation have share arrangements, the sole proprietor has only his professional reputation.

In addition to the aforementioned distinctions between sole proprietorships and other business entities, we stated in Beasley that good will of a sole proprietor relates only to future earnings; it is an expectancy only, with no present value and no guarantee of future income. As it related to future earnings only, it was a factor in determining the amount and duration of alimony. If good will diminished, thereby reducing income, alimony could be modified to ease the payor's burden. If, however, good will were also marital property to be paid in installments, declining good will would reduce income but would not affect the payments. An equitable distribution order is nonmodifiable. In Beasley, we refused to allow good will to cause a double charge on future earnings, which would occur if it were both marital property distributed by installments and income for determining alimony.

Finally, the Beasley court noted the contingent fee arrangement that the lawyer husband and his associates had with clients. Contingent fees are collected when a settlement is reached or when the litigantcollects on a judgment. Before collection, no value can be assigned to the attorney's work as payment of the fee is uncertain.

In addition to the opinions and articles concerning good will discussed in Beasley, several other cases from foreign jurisdictions are deserving of comment. In Dugan v. Dugan, 92 N.J. 423, 457 A.2d 1 (1983), the New Jersey Supreme Court held that an attorney's good will in an exclusively owned professional corporation was marital property. Although the business entity in Dugan was a professional corporation, the New Jersey court implied that good will in a sole proprietorship may constitute marital property. In finding good will present in a partnership, corporation, joint venture or individual proprietorship, the

Dugan court seemed less concerned with the form of the business entity and more concerned with the probability of future earnings. If future earnings were probable, there was good will with present value capable of equitable distribution.

The Dugan court was not troubled by the fact that an individual practitioner is generally unable to sell a law practice. Once an attorney retires or dies, only his tangible business assets remain for sale. Although good will or personal reputation cannot be sold by an attorney, the Dugan court held that that "does not eliminate existence of goodwill and its value as an asset to be considered in equitable distribution." Id. at 434, 457 A.2d at 6.

In Beasley, we did not agree with Dugan's approach. We found it significant that once a sole proprietor terminates his practice, nothing is transferable except tangible personal property. Clients could not be sold as they had the unconditional right to choose an unaffiliated attorney for future representation. We concluded that the nontransferable nature of a law practice diminishes the value of good will.

In Levy v. Levy, 164 N.J.Super. 542, 397 A.2d 374 (1978), the New Jersey court held that the good will generated by an attorney who operated a professional association was marital property capable of being valued. In fact, the Levy court quickly identified the good will as marital property and discussed in detail the method of valuing good will.

New York was confronted with a factual situation similar to the matter sub judice in Nehorayoff v. Nehorayoff, 108 Misc.2d 311, 437 N.Y.S.2d 584 (1981). Nehorayoff and another physician were the owners of a closely held professional corporation which provided medical services for the termination of pregnancies. In holding Nehorayoff's share of good will to be marital property, the New York court noted that the physicians operated a clinic which attracted patients by advertisement, reputation or referral. The reputation was generated by the clinic and not by the physicians because there was no personal relationship between doctor and patient. The court also found that there would be no appreciable decline in business if Nehorayoff or his colleague left the clinic. Finally, it was noted that Nehorayoff's skills were not unique; they were shared by many other physicians in the area. The Nehorayoff court focused on the nature of the business at issue and not on whether it was a sole proprietorship, partnership or corporation.

In Geesbreght v. Geesbreght, 570 S.W.2d 427 (Tex.Civ.App., 1978), the husband was a physician who shared equal ownership with another physician in a professional corporation which provided emergency room service for several hospitals. The firm contracted with hospitals to treat emergency room patients, but it did not have patients of its own. The Geesbreght court first stated that had the husband's medical practice been a sole proprietorship, good will would have no value for purposes of partition. However, it was a professional corporation having good will capable of being valued and divided. Had the husband sold his stock to another physician and left the firm, the firm would have retained the service contracts with the hospitals. There were no patients for the husband to take with him.

The Geesbreght court commented on the difference in good will of a sole proprietorship and of a professional corporation.

"Good will" is sometimes difficult to define. In a personal service enterprisesuch as that of a professional person or firm, there is a difference in what it means as applied to "John Doe" and as applied to "The Doe Corporation" or "The Doe Company." If "John Doe" builds up a reputation for service there may be a change in personnel performing the service upon a sale of its business, but the sale of such business

naturally involves the right to continue in business as "The Doe Company." The "good will" built up by the company would continue for a time and would last while the new management performing the same personal services, would at least have the opportunity to justify confidence in such management while it attempted to retain the "good will" of customer clients of the former operator.

At least the opportunity to have time to try to preserve the "good will" already existent and to use it as an entrance into the identical field of operations in a personal service type of business would be present where the name of the business is a company name as distinguished from the name of an individual. Therein does it have value, plus the value of the opportunity to justify confidence in the new management by the customer/clients of the predecessor owners.

570 S.W.2d at 435-36.

Beasley and the aforementioned opinions discussed the distinction between professional practices operated as sole proprietorships and as corporations. They considered the distinction to be critical in deciding whether good will was marital property. Although all agree that the form of the practice is critical,only Geesbreght held it to be conclusive. Presumably, special circumstances may justify holding that the good will of a professional sole proprietorship is marital property while the good will of a professional corporation is not. In Beasley, we discussed at length the importance of contingent fees in determining whether good will has present value. If the outcome had depended exclusively on the form of the professional practice, we would have disregarded the contingent fees factor and held simply that good will is not marital property because the husband practiced law as a sole proprietor. In fact, we implied in Beasley that the form of the law practice was not dispositive: "We, therefore, hold that good will of a sole proprietorship under these facts is not an element of present value [which can be considered marital property]." Id. 359 Pa.Super. at 42, 518 A.2d at 556 (emphasis added).

Our factual analysis compels us to hold that good will has no present value for equitable distribution purposes in this case. Accordingly, the trial court erred by including good will in the value of husband's share of the professional practice.

Husband practices medicine with Dr. Lampe, and they are each 50% shareholders of Associated Internists, Inc. No other physicians are associated with the firm. Husband and Lampe are board certified in internal medicine. After becoming a board certified internist in 1972, husband earned a rheumatology fellowship in 1973. Eighty-five percent of husband's patients are treated for rheumatism, and 70% of his rheumatology patients are derived from physician referrals. Husband is the only rheumatologist in the area of York, Pennsylvania. Since Dr. Lampe does not practice rheumatology, the physicians infrequently treat each other's patients.

With the exception of an informal arrangement with nursing homes which produces only a few patients, husband and Dr. Lampe do not have contracts to provide services for any hospital or medical group. Their patients are privately acquired.

We believe that if husband left the professional corporation, at least his rheumatology patients would follow. It was husband, not the professional corporation, who attracted the rheumatology patients. Therefore, upon his death, retirement or resignation, there would be no other physician at the corporation who could retain husband's patients.

Due to husband's specialty, his minimal sharing of patients with Dr. Lampe, the physician referrals and the absence of competition from other rheumatologists, we hold that husband's practice is similar to that of a sole practitioner. It is similar tothe individual proprietor in Beasley and requires the same treatment: the good will of husband's practice has no present value, is not marital property and cannot be equitably divided.

We recognize that husband performed medical treatment for standard fees unlike the husband in Beasley who was compensated by contingent fee. We further note that Beasley explained that present value of work in progress can be determined when fees are standard and fixed, whereas contingent fees prevent a reliable valuation of pending work. Nevertheless, this factual distinction is not sufficient to overcome the common element that husband here and the husband in Beasley were the essence of any good will in their business interests.

WIFE'S APPEAL

Equitable Distribution

Wife raises four arguments in her appeal, three of which take issue with the equitable distribution of marital property.First, wife argues that the trial court erred in ruling that $ 19,800.00, which was placed in trust for the parties' sons, was not marital property.

In June, 1982, before the parties separated, their older son, Vincent, was seriously injured in an automobile accident. Since Vincent's medical and hospital expenses were covered by separate health and automobile insurance policies, husband and wife received $ 19,800.00 from one policy which was the amount paid to providers of medical treatment under the other policy.

On October 18, 1982, husband placed $ 10,000.00 of these insurance proceeds in a certificate of deposit in trust for son Vincent. On September 24, 1982, another $ 3,000.00 from the same source was placed in a similar account for Vincent. On October 18, 1982, $ 5,000.00 of the insurance proceeds were placed in a trust account for son John. These three accounts were titled in husband's name and created under the Uniform Gifts to Minors Act. 20 Pa.C.S. § 5301 et seq. All three trusts were created after separation. The balance of $ 1,500.00 was used for unrelated expenses.

Wife alleges that husband acquired the certificates without her knowledge. She claims that they had planned to use the money for travel or to redecorate the house, and that husband unilaterally changed those plans by placing the funds in trust for the children. According to wife, husband did so to place these funds beyond her control and outside the realm of marital property.

In Hurley v. Hurley, 342 Pa.Super. 156, 492 A.2d 439 (1985), the wife sued a third party for personal injuries sustained prior to separation, but the verdict was entered and payment received after separation. The Hurley court first noted § 401(f) of the Divorce Code which states that all property "acquired by either party during the marriage is presumed to be marital property regardless" of the form of title, whether it be individual, joint or by tenancy in common or by the entirety. The court then noted the exceptions enumerated in § 401(e) to this general rule. Of these exceptions, the court focused on § 401(e)(4) which provides that "[property] acquired after separation until the date of divorce . . ." is not marital property.

Following these references to the Divorce Code, the Hurley court held that a tort cause of action is unliquidated until either verdict or settlement.While unliquidated, a tort claim is not a property right nor is it assignable. To distribute a tort claim while it remains unliquidated requires speculation and conjecture. Accordingly, the Hurley court held that because the tort claim became liquidated after separation it was property acquired after separation. Under § 401(e)(4), then, it was not marital property.

Here, wife acknowledges that the insurance proceeds were not paid until after separation. She argues, however, that Hurley is not applicable because it was limited to tort causes of action. She maintains that the proceeds here were paid under a contract of insurance that she and husband had with the carrier.

The nature of the wife's accident in Hurley is not stated in the opinion. Since herclaim proceeded to a jury trial, and a verdict was returned for pain, suffering and disfigurement, it may be presumed that payment on the verdict was made by a third person with whom the wife did not contract. Evidently, the wife in Hurley did not have the opportunity to submit her claim to her insurance carrier.

Regardless of who was liable for Vincent's injuries, payment to his parents for the amount of his medical expenses was guaranteed. This guarantee was due to identical coverage provided by the parties' automobile and medical insurance carriers. One carrier paid the provider of the medical services; the other paid the parties for those same services. The amount received did not compensate Vincent for pain, suffering or disability as was done at least in part in Hurley. Furthermore, the amount of the claim was ascertainable as the $ 19,800.00 represented medical services rendered before separation. Therefore, there was nothing conjectural, speculative or nebulous about the validity and amount of Vincent's claim.

We agree with wife's position that Hurley is not applicable. Title to the insurance proceeds was acquired prior to separation. Vincent's medical treatment, which was rendered prior to separation, guaranteed that one carrier would pay the parties for the value of that treatment. n4

n4 Our holding does not extend to medical treatment administered after separation. The need for and amount of medical treatment after separation would be unknown; therefore, the amount collected for such treatment may not be marital property. This may be so even though the parties know before separation that double coverage assures payment to them of the value of medical treatment if administered.

The fact that Hurley is inapposite, however, does not dispose of whether the amount collected for Vincent's injuries is marital property. Two more inquiries remain: 1) whether the insurance proceeds were property acquired by the parties; and 2) if so, whether they were "disposed of in good faith and for value prior to the time" divorce proceedings were commenced. See 23 P.S. § 401(e)(5).

We hold that title to the insurance proceeds passed to the parties despite the fact they were paid for Vincent's injuries. Husband and wife were the owners of the insurance policies and were obligated to pay the premiums. Vincent was merely a subject of coverage. The details of the trusts are not in the record; nevertheless, it is clear that husband maintains title to the trusts and exclusive right to control the funds until Vincent and John reach majority. Therefore, the presumption of § 401(f) is met: the insurance proceeds are marital property because they were acquired by the parties during marriage. n5

n5 An equitable distribution of the insurance proceeds to husband and wife in this context does not necessarily mean that they have the unconditional right to dispose of the assets. Laws protecting minors may limit the parties' use, enjoyment and disposition of these proceeds.

Finally, the exception provided by § 401(e)(5) is inapplicable. Husband may have disposed of the insurance proceeds in good faith by establishing trusts for his sons; however, the trusts were not established in exchange for value. Section 401(e)(5) requires a disposition that brings some value, yet husband disposed of the proceeds as gifts.

Wife's second attack on equitable distribution concerns the valuation of husband's pension benefits. The trial court ruled that the value of husband's share of the corporation's defined benefit plan was $ 26,960.00; wife maintains that the value was $ 51,236.00.

Husband called George Taylor, a consulting actuary, to testify concerning the value of husband's interest in the pension plan. Taylor was enrolled as a member of the Society of Pension Actuaries, and was certified to perform actuarial services under the Employee Retirement Income Security Act (ERISA). Taylor's employer administered the retirement program for husband's professional corporation.

Taylor computed the value of husband's benefit to be $ 26,960.00 as of September 1, 1982, a few days prior to separation. Thisvalue was calculated by applying 5 1/2% interest and 1965 mortality tables to the accrued retirement benefit payable at age sixty-five. Taylor testified that the interest rate of 5 1/2% and the mortality tables were applied to discount the retirement benefit in order to reach a present value.

Wife's expert, Harry Leister, was also a fully qualified actuary. He testified that the asset value of the plan as of June 1, 1982, was $ 197,962.78 and that husband's share was $ 51,236.00. Leister then testified that had the plan terminated on June 1, 1982, the total assets would have been disbursed and husband would have received $ 51,236.00. That is the amount wife believes is marital property.

The retirement plan created for Associated Internists, Inc. was a defined benefit plan. Husband's expert explained that a defined benefit plan provides the employee with a fixed amount per month at retirement for life. In that regard, it is an annuity, and is unlike a defined contribution plan which does not guarantee a specific monthly payment upon retirement. A defined contribution plan may be a profit-sharing plan or stock bonus plan where the employer makes the contributions and the interest earned fluctuates with market conditions.

Valuation is affected by the method of distribution. In Braderman v. Braderman, 339 Pa.Super. 185, 488 A.2d 613 (1985), we adopted two methods of distributing retirement benefits: 1) immediate offset method; and 2) deferred distribution method. The immediate offset method is properly used when the present value of the benefit is sufficient to make a present distribution. Conversely, a deferred distribution does not employ present value because many variables make it too difficult to determine. Instead, the court retains jurisdiction and allocates benefits when they mature or are paid. Deferred distribution is also the preferred method when the parties' other assets are insufficient to offset a pension award.

Here, the immediate offset method is more appropriate because present value can be ascertained, and the parties have sufficient assets to coordinate with a pension award. It is also the preferred method as both parties are prepared to value the pension benefits and to make one lump-sum distribution.

Present value of husband's interest in the defined benefit plan as of September 1, 1982, is the amount available for equitable distribution. The Braderman court adopted a formula for calculating present value. See Troyan, Pension Evaluation and Equitable Distribution, 10 Fam.L.Rep. 3001 (1983). Present value is to be calculated as follows:

1. Calculate the amount of husband's monthly pension benefit, assuming he was at age sixty-five on September 10, 1982, the date of separation.

2. Find husband's life expectancy at the time of separation and subtract his normal retirement age to determine the expected number of months of pension benefits.

3. Select an appropriate discount rate.

4. Find the value of the annuity at age 65.

5. Discount the value at age 65 to present value accounting for mortality, disability and termination.

6. Reduce present value of the plan if it has not yet vested.

7. Apply the coverture fraction if a portion of the pension was earned before marriage.

Step number six is not applicable as husband is fully vested. Similarly, step number seven does not apply because the parties were married five years before the pension plan was created in 1972; their marriage spanned the life of the plan to the date of separation.

Returning to the expert testimony of record, we hold that husband's expert, George Taylor, properly applied the formula in calculating present value. He explained that

. . . the accrued benefit is a benefit which is payable at age 65 or at retirement and to find its present value, you must takethe value of that benefit at retirement and apply appropriate discount factors.

N.T., February 23, 1984, at 152. Taylor then testified that he applied a discount factor of 5 1/2% interest, which is a rate expected over the life of the plan, and 1965 mortality tables. This testimony indicates that Taylor covered steps one through five in arriving at a present value of $ 26,960.00.

Wife values husband's pension interest on date of separation by dividing the total assets in the plan, $ 197,262.78, by three, the number of participants. The result of $ 51,236.00 is unrealistic and inequitable. As husband's expert explained, husband may receive retirement benefits only if he were

eligible for retirement or [he terminates] employment or [he] were to pass away. This is a requirement of law in order to have a plan approved by the Internal Revenue Service . . . .

N.T., February 23, 1984, at 149. If husband had died or terminated his interest in the plan on the date of retirement, he would have received only $ 26,960.00.

The total value of all assets in a defined benefit plan and the employee's proportionate share thereof, do not determine value. Valuation must consider discount rates, mortality and tax penalty laws. Wife's approach to valuation may be more appropriate in a defined contribution plan where an account is assigned to an employee and is composed of the employer's contributions, plus earnings.

Wife's final argument concerning equitable distribution is that the trial court erred in ruling that it had no jurisdiction to distribute three certificates of deposit held in her name and her children's. These three certificates were separate and apart from those established with the insurance proceeds. They

represented funds accumulated over the years. Wife does not want these funds equitably divided between the parties; however, she wants to regain possession of the certificates from husband.

Husband and wife agree that these certificates were established by periodic deposits of savings, titled in wife's name and held for the children's benefit.The evidence is further incontrovertible that husband possesses the certificates.

We agree that wife should be given possession and control of the three certificates, but only for the benefit of the children. Section 401(c) of the Divorce Code provides:

In all matrimonial causes, the court shall have full equity power and jurisdiction and may issue injunctions or other orders which are necessary to protect the interests of the parties or to effectuate the purposes of this act, and may grant such other relief or remedy as equity and justice require against either party or against any third person over whom the court has jurisdiction and who is involved in or concerned with the disposition of the cause.

It is apparent that the parties made gifts of these certificates to their children and that they agreed that wife should control the funds. With the authority provided by § 401(c), we order husband to release possession of these certificates to wife for the sole benefit of the children.

Alimony

Wife's final argument is that the award of alimony of $ 7,500.00 should continue despite her remarriage on October 12, 1985. This argument is not properly before us. Wife raises this argument as a precaution in the event we rule that her remarriage terminated her right to alimony pendente lite. The trial court ruled only on the issue of whether or not wife's remarriage terminated alimony pendente lite; it did not consider the effect remarriage had on alimony. Moreover, no petition to terminate alimony was presented. Without an order terminating alimony, there is nothing to review.

CONCLUSION

Order of July 9, 1985, is affirmed. Order of March 4, 1986, is affirmed.

Order of September 5, 1985, and judgment of September 5, 1985, are affirmed in part and reversed in part. The order andjudgment are reversed to the following extent:

1. Rocco J. DeMasi's share of good will in Associated Internists, Inc. is not marital property;

2. One certificate of deposit established October 18, 1982, in the amount of $ 10,000.00, in the name of Rocco J. DeMasi in trust for Vincent M. DeMasi, is marital property;

3. One certificate of deposit established October 18, 1982, in the amount of $ 5,000.00, in the name of Rocco J. DeMasi in trust for John M. DeMasi, is marital property;

4. One certificate of deposit established September 24, 1982, in the amount of $ 3,000.00, in the name of Rocco J. DeMasi in trust for Vincent M. DeMasi, is marital property;

5. Three certificates of deposit shall be released to wife to be possessed, managed and controlled by her solely for the benefit of her children. These certificates are identified as follows:

a. one established January 14, 1982, in the amount of $ 3,000.00, in the names of Tanya J. DeMasi or John M. DeMasi;

b. one established February 21, 1980, in the amount of $ 3,500.00, in the names of Tanya J. DeMasi or Vincent M. DeMasi;

c. one established January 14, 1982, in the amount of $ 1,000.00, in the names of Tanya J. DeMasi or Vincent M. DeMasi.

We remand for equitable distribution of the three trust accounts of $ 10,000.00, $ 5,000.00 and $ 3,000.00 which were established with insurance proceeds from Vincent's automobile accident. The trial court may or may not find that these trusts should be maintained for the children. We also remand for reconsideration of equitable distribution; our holding which excludes good will from marital property and includes the certificates of deposit as marital property may require modification of the distribution of all other assets. Finally, the trial court must reconsider on remand the wife's entitlement to alimony following the distribution of the marital property. Braderman v. Braderman, supra, 339 Pa.Super. at 202, 488 A.2d at 621.

Dugan v. Dugan

Case name: Dugan v. Dugan
Citation: 92 N.J. 423, 457 A.2d 1, 1983 N.J. LEXIS 2351
Date of decision: February 28, 1983

JUDGES:

For reversal and remandment -- Chief Justice Wilentz and Justices Clifford, Schreiber, Handler, Pollock and O'Hern. For affirmance -- None. The opinion of the Court was delivered by Schreiber, J.

OPINIONBY:

SCHREIBER

OPINION:

This case involves the equitable distribution of marital property upon divorce, more particularly the evaluation of an attorney's goodwill in his exclusively owned professional corporation.

Plaintiff, James P. Dugan, and defendant, Rosaleen M. Dugan, were married in 1958 and separated in 1978. They had no children. The plaintiff, a member of the New Jersey Bar, carries on his practice as a professional corporation. The defendant had served as a secretary in plaintiff's law office and attended college during the marriage, graduating in 1972. She is certified as a public school teacher, but as of the date of the divorce judgment was unemployed.

The judgment entered for dual no-fault divorce provided for distribution of property, alimony and other relief. Plaintiff appealed from portions of the judgment relating to the assets of the marital estate, alimony, and counsel fees. The Appellate Division affirmed. Plaintiff filed a notice of appeal and a

petition for certification. We dismissed the appeal and granted plaintiff's petition for certification, limited to the issues arising from the valuation of plaintiff's interest in his wholly-owned professional corporation. 89 N.J. 405 (1982). The trial court determined thatthe value of the material part of the marital estate was $ 606,966 as of December 29, 1978, the date the complaint was filed. It awarded the defendant $ 230,864 and the plaintiff $ 376,102 consisting of the following:

Real property	$ 285,400
Law practice	
Goodwill	$ 182,725
Accounts receivable	18,891
Pension plan	50,500
Common stock	1,000
Less	
Retained earnings deficit	1,780
Net value of law practice	n1 251,336
Cash	55,313
Miscellaneous	14,917
	$ 606,966

n1 A primary source of information concerning the corporation's assets and liabilities was its federal income tax return. The balance sheet in that return did not reflect goodwill, accounts receivable or the pension plan.

A major asset in the joint estate was the plaintiff's law practice. It comprised more than 40% of the entire estate and over 70% of the value of that asset consisted of the value placed on goodwill. The trial court's methodology in calculating that value was predicated on the theory that the plaintiff was to be compared with the typical incorporated attorney whose gross assets were roughly equivalent to the plaintiff's. The comparison was limited to the efficiency of the respective operations, that is, the percentage that net income before income taxes bears to gross receipts. The net income of a typical attorney was found to be 38.5% of gross receipts. Plaintiff's gross income was multiplied by 38.5%, yielding what could be termed a typical attorney's net income based on plaintiff's actual gross revenues. The excess of plaintiff's net income over that resulting from the application of the 38.5% standard was then multiplied by a factor of five. The trial court found that this figure equaled goodwill.

We must determine whether goodwill is a part of the value of plaintiff's law practice; if so, whether it constitutes property subject to equitable distribution;and, if so, how it is to be evaluated.

I

In a divorce judgment a court may "effectuate an equitable distribution of the property, both real and personal," acquired during the marriage. N.J.S.A. 2A:34-23. n2 We have acknowledged that the Legislature intended that its reference to "property" be construed comprehensively. Painter v. Painter, 65 N.J. 196, 217 (1974); see Gauger v. Gauger, 73 N.J. 538, 544 (1977). Determining the "property" subject to equitable distribution requires a marshalling of the parties' economic resources. Kruger v.

Kruger, 73 N.J. 464, 468 (1977). These economic resources cover a broad spectrum. Initially a list of the parties' assets and liabilities upon a particular date should be prepared. Personal tangible property is clearly includable. Id. Intangibles may also constitute property. See id. (stating "[t]he right to receive monies in the future is unquestionably such an economic resource") (emphasis in original). See also Kikkert v. Kikkert, 177 N.J. Super. 471 (App.Div.), aff'd o.b., 88 N.J. 4 (1981) (holding a vested pension plan providing future monetary benefits to be equitably distributable).

n2 Gifts, devises or bequests, except interspousal gifts, are excluded. L.1980, c. 181, § 1, effective December 31, 1980.

As distinguished from tangible assets, intangibles have no intrinsic value, but do have a value related to the ownership and possession of tangible assets. Some intangibles, such as a trademark, trade name or patent, are related to an identifiable tangible asset. Goodwill, which is another intangible, is not. Often referred to as "the most 'intangible' of the intangibles," D. Kieso & J. Weygandt, Intermediate Accounting 570 (3d ed.1980), goodwill is essentially reputation that will probably generate future business. Lord Eldon expressed that thought in Cruttwell v. Lye, 17 Ves. 335, 346, 34 Eng.Rep. 129, 134 (Ch.1810): "The good-will, which has been the subject of sale, is nothing more than the probability, that the old customers will resort to the old place."

Justice Cardozo when Chief Judge of the New York Court of Appeals embraced the same concept when he wrote:

Men will pay for any privilege that gives a reasonable expectancy of preference in the race of competition. Such expectancy may come from succession in place or name or otherwise to a business that has won the favor of its customers. It is then known as good will. [In re Brown, 242 N.Y. 1, 6, 150 N.E. 581, 582 (1926) (citation omitted)]

See also J. Story, Commentaries on the Law of Partnership § 99, at 157-61 (7th ed.1881).

There can be no doubt that goodwill exists. It is a legally protectible interest. See J.B. Liebman & Co. v. Leibman, 135 N.J.Eq. 288, 292 (Ch.1944). Indeed, we have enforced a restrictive covenant limiting a seller's right to compete that was designed essentially to protect the goodwill of the business for the buyer. Solari Indus. v. Malady, 55 N.J. 571, 576 (1970). The New Jersey inheritance tax, N.J.S.A. 54:34-1, requires consideration of goodwill. See, e.g., In re Hall's Estate, 99 N.J.L. 1 (Sup.Ct.1923), aff'd o.b., 100 N.J.L. 405 (E. & A. 1924); Schneider v. Zink, 2 N.J. Super. 53 (App.Div.1949); In re Deutz, 105 N.J.Eq. 671 (Prerog.Ct.1930). Upon dissolution of a partnership goodwill has been recognized as an element in determining value for purposes of liquidation. Blut v. Katz, 13 N.J. 374 (1953). In Kanzler v. Smith, 123 N.J.Eq. 602 (1938), the Court of Errors and Appeals held that the legally contemplated liquidation of partnership property upon the death of a partner required "an accounting by the surviving partner for the value of the deceased partner's interest, including the value of goodwill, if any." Id. at 606 (citation omitted).

The basic notion expressed by Lord Eldon in Cruttwell was embellished by Chief Justice Gummere in Hall's Estate, supra, where he observed that goodwill consisted of several elements, including:

the right to continue the business at the same place in which it has been established and where its reputation has been made, carrying with it the probability that old customers will continue to resort to the old place for the purpose of making their purchases, notwithstanding the change in the name under

which the business has been carried on, so long as the service remains satisfactory and the standard of the goods sold is maintained; and this element undoubtedly has value, although perhaps not so much as the continued use of the name under which the business has theretofore been conducted.

But assuming this view to be unsound, a mere right to acquire the good-will of a business, which may be exercised or not at the option of the holder of that right, is not the equivalent of the ownership of the good-will. Good-will is property. [99 N.J.L. at 4-5]

The accounting profession has further expanded the concept of goodwill to encompass other advantages of an established business that contribute to its profitability. J. M. Smith & K. F. Skousen, Intermediate Accounting 283 (7th ed. standard vol. 1982), capture this thought in their definition:

Goodwill is generally regarded as the summation of all the special advantages, not otherwise identifiable, related to a going concern. It includes such items as a good name, capable staff and personnel, high credit standing, reputation for superior products and services, and favorable location.

See also Accounting Principles Board, Op. 17, "Intangible Assets," in FASB Financial Accounting Standards 266-72 (1981). n3 In abroad sense goodwill includes a whole host of intangibles including the quality of management, the ability of the organization to produce and market efficiently, and the existence and nature of competition. Some writers have been careful to differentiate between going concern value and goodwill. See Paulsen, "Goodwill and Going Concern Value Reconsidered," Mergers & Acquisitions, Winter 1980, at 10. Goodwill is keyed to reputation; going concern value to the enhanced value of the assets due to their presence in an established firm. See Danzig & Robison, "Going Concern Value Reexamined," The Tax Adviser, Jan. 1980, at 32. Going concern value has many of the characteristics of goodwill and in many situations will constitute an asset enhancing the value of an enterprise. In that event it will be a component of the property subject to equitable distribution. Going concern value may be prevalent in some law firms. It is probably not significant in an individual law practice, as is probably the case here. We note no claim has been made on that basis.

n3 APB Opinions are authoritative statements by the American Institute of Certified Public Accountants of generally accepted accounting principles. See "Forward," FASB Financial Accounting Standards, supra; 2 APB Acc'ting Principles (CCH) § 510.08, at 33 (1973).

Goodwill can be translated into prospective earnings. From an accounting standpoint goodwill has also been perceived of in terms of the extent to which future estimated earnings exceed the normal return on the investment. Walker, "Why Purchased Goodwill Should be Amortized on a Systematic Basis," 95 J. Acc'tancy 210, 213 (1953); accord,Rev.Rul. 59-60, § 4.02(f), 1959-1 C.B. 237, 241 (stating that value of goodwill "rests upon the excess of net earnings over and above a fair return on the net tangible assets"). The price paid for goodwill then is equivalent to the excess of actual earnings over expected earnings based on a normal rate of return on investment. Walker, supra, at 213; see Kerley, "Intangible Assets," in 1 Accountants' Handbook 23-10 (L. Seidler & D. Carmichael 6th ed.1981). When goodwill exists, it has value and may well be the most lucrative asset of some enterprises.

Variances in the forms of an enterprise do not eliminate goodwill, though they may affect its worth. Goodwill may be present whether that form is a partnership, corporation, joint venture, or individual proprietorship. See Grayer v. Grayer, 147 N.J. Super. 513,520 (App.Div.1977); Scherzer v. Scherzer, 136 N.J. Super. 397, 400 (App.Div.1975) (holding no essential difference so far as equitable distribution principle is concerned between an interest in an individual business and one held in corporate name:

"The form should not control"), certif. den., 69 N.J. 391 (1976). Moreover, goodwill exists in personal service enterprises as well as other businesses. 2 B. Bittker, Federal Taxation of Income, Estates and Gifts para. 51.9.3, at 51-53 (1981).

In a publicly held corporation one can determine the total value of a business whose stock is publicly traded and therefore its goodwill by the market price of the stock. G. Catlett & N. Olson, Accounting for Goodwill 14 (1968). The excess over the book or market value of its assets, however, may also be due to many and diverse conditions affecting the economy as a whole and an industry in particular. The value of stock in a closely held corporation is not fixed by public trading. Its computation depends primarily on the earning power of the business "since goodwill by nature encompasses all those intangible attributes of a business whose quality can be demonstrated only by a company's ability to make profits." Id.

The calculation of goodwill may depend upon the purpose for which the measurement is being made. The federal Internal Revenue Service has prescribed a formula approach for income, gift and estate tax purposes. See Rev.Rul. 68-609, 1968-2 C.B. 327. The market place, as noted above, may often provide a different figure. Accountants will usually not reflect goodwill on a balance sheet until after a business has been sold and then state goodwill in terms of the excess paid for the net assets overbook value. G. Catlett & N. Olson, supra, at 17. Its evaluation may be complex and difficult. Judge Pressler in Lavene v. Lavene, 148 N.J. Super. 267, 275 (App.Div.), certif. den., 75 N.J. 28 (1977), commented:

There are probably few assets whose valuation imposes as difficult, intricate and sophisticated a task as interests in close corporations. They cannot be realistically evaluated by a simplistic approach which is based solely on book value, which fails to deal with the realities of the good will concept, which does not consider investment value of a business in terms of actual profit, and which does not deal with the question of discounting the value of a minority interest.

II

Our limited concern involves the existence of goodwill as property and its evaluation for purposes of equitable distribution under N.J.S.A. 2A:34-23 with respect to attorneys and in particular individual practitioners. Though other elements may contribute to goodwill in the context of a professional service, such as locality and specialization, reputation is at the core. Paulsen, supra, at 10. It does not exist at the time professional qualifications and a license to practice are obtained. A good reputation is earned after accomplishment and performance. Field testing is an essential ingredient before goodwill comes into being. Future earning capacity per se is not goodwill. However, when that future earning capacity has been enhanced because reputation leads to probable future patronage from existing and potential clients, goodwill may exist and have value. When that occurs the resulting goodwill is property subject to equitable distribution.

We held in Lynn v. Lynn, 91 N.J. 510 (1982), that a license to practice medicine and a medical degree were not property. They reflected only a possibility of future earnings. This holding was consonant with the proposition in Stern v. Stern, 66 N.J. 340, 345 (1975), that potential earning capacity is not property within the meaning of the statute, though relevant on the issues of alimony and of determining equitable proportions for the distribution of property.

When, however, the opportunity provided by the license is exercised, then goodwill may come into existence. Goodwill is to be differentiated from earning capacity. It reflects not simply a possibility of future earnings, but a probability based on existing circumstances. Enhanced earnings reflected in goodwill are to be distinguished from a license to practice a profession and an educational degree. In that situation the enhanced future earnings are so remote and speculative that the license and degree have not been deemed to be property. The possibility of additional earnings is to be distinguished from the existence of goodwill in a law practice and the probability of its continuation. Moreover, unlike the license and the degree, goodwill is transferable and marketable. Though there is an apparent limitation on the part of an individual practitioner to sell a law practice, the same is not true in a law firm.

After divorce, the law practice will continue to benefit from that goodwill as it had during the marriage. Much of the economic value produced during an attorney's marriage will inhere in the goodwill of the law practice. It would be inequitable to ignore the contribution of the non-attorney spouse to the development of that economic resource. An individual practitioner's inability to sell a law practice does not eliminate existence of goodwill and its value as an asset to be considered in equitable distribution. Obviously, equitable distribution does not require conveyance or transfer of any particular asset. The other spouse, in this case the wife, is entitled to have that asset considered as any other property acquired during the marriage partnership.

Other jurisdictions have accepted the principle that an attorney's goodwill is property subject to equitable distribution. In In re Marriage of Lopez, 38 Cal.App.3d 93, 107, 113 Cal.Rptr. 58, 67 (1974), in discussinggoodwill, the court quoted approvingly the following language from Golden v. Golden, 270 Cal.App.2d 401, 405, 75 Cal.Rptr. 735, 738 (1969):

[I]n a matrimonial matter, the practice of the sole practitioner husband will continue, with the same intangible value as it had during the marriage. Under principles of community property law, the wife, by virtue of her position of wife, made to that value the same contribution as does a wife to any of [the] husband's earnings and accumulations during marriage. She is as much entitled to be recompensed for that contribution as if it were represented by the increased value of stock in a family business.

See also the following cases in which courts have held goodwill in a law practice to be subject to distribution: In re Marriage of Fenton, 134 Cal.App.3d 451, 460, 184 Cal.Rptr. 597, 600 (1982); Todd v. Todd, 272 Cal.App.2d 786, 78 Cal.Rptr. 131 (1969); In re Marriage of Kaplan, 23 Wash.App. 503, 597 P.2d 439 (1979); In re Marriage of Freedman, 23 Wash.App. 27, 592 P.2d 1124 (1979). New York decisions are split on whether goodwill of a law practice is subject to equitable distribution. See Litman v. Litman, 115 Misc.2d 230, 453N.Y.S.2d 1003 (Sup.Ct.1982) (in the negative); Barton v. Barton, N.Y.L.J., May 20, 1982, at 10 (Sup.Ct.) (in the affirmative); Hirschfeld v. Hirschfeld, N.Y.L.J., May 4, 1982, at 7 (S.Ct.) (in the affirmative). n4 Some jurisdictions have also held with respect to other professions that goodwill is property subject to distribution. In re Marriage of Nichols, 43 Colo.App. 383, 606 P.2d 1314 (1979) (dentist's practice); In re Marriage of White, 98 Ill.App.3d 380, 53 Ill.Dec. 786, 424 N.E.2d 421 (1981) (dentist's practice); Hurley v. Hurley, 94 N.M. 641, 615 P.2d 256 (1980) (doctor's practice), overruled on other grounds, Ellsworth v. Ellsworth, 97 N.M. 133, 637 P.2d 564 (1981); In re Marriage of Goger, 27 Or.App. 729, 557 P.2d 46 (1976) (dentist's practice); In re Marriage of Fleege, 91 Wash.2d 324, 327-30, 588 P.2d 1136, 1138-39 (1979) (dentist's practice). Contra Nail v. Nail, 486 S.W.2d 761 (Tex.1972) (goodwill of a medical practice not properly subject to division by the court).

n4 The New York Court of Appeals recently held that the goodwill of a dental practice could be sold by the deceased dentist's wife who was the sole beneficiary of his estate, noting that the sale of goodwill included something other than the personal attributes of a professional, such as the right to practice at the same location. Spaulding v. Benenati, 57 N.Y.2d 418, 442 N.E.2d 1244, 456 N.Y.S.2d 733 (1982).

In Stern v. Stern, we acknowledged that "[i]t may . . . be possible to prove that [goodwill] does exist and is a real element of economic worth. Concededly, determining its value presents difficulties." 66 N.J. at 346-47 n. 5 (citation omitted). However, difficulty in fixing its value does not justify ignoring its existence. Goodwill should be valued with great care, for the individual practitioner will be forced to pay the ex-spouse "tangible" dollars for an intangible asset at a value concededly arrived at on the basis of some uncertain elements. For purposes of valuing the goodwill of a law practice, the true enhancement to be evaluated is the likelihood of repeat patronage and a certain degree of immunity from competition. See Levy v. Levy, 164 N.J. Super. 542, 554 (Ch.1978). Identification of goodwill in this fashion differs from that utilized in evaluating goodwill in businesses where an identification of a return on tangible assets is made.

For example, the Internal Revenue Service has prescribed a formula approach for federal tax purposes when there is no better basis for valuation. See Rev.Rul. 68-609, supra, 1968-2 C.B. 327. It requires a determination of income from the tangible assets, and subtraction of that income from the total income. The residual is capitalized and the balance is designated goodwill. For similar methods see G. Catlett & N. Olson, supra, at 13-14 (1968); Paulsen, supra, at 11. A law office's tangible asset value is so disproportionately small when compared to the value of the services renderedthat measurement by these methods would not be meaningful.

Other methodologies have been developed in the market place for particular businesses or professions. It is common in evaluating goodwill of an accountant's practice to compute goodwill on the basis of a percentage of annual gross income. "Valuing an Accounting Practice," The Practicing CPA, Mar. 1982, at 1; Wright, "On Buying and Selling a Practice," J. Acc'tancy, Jan. 1982, at 38. In the medical profession a charge per patient card has sometimes been utilized, see Fallon, "What's Your Practice Worth -- in Cash?," Med. Econ., Jan. 22, 1979, at 180, as well as a percentage of annual gross income, see Balliett, "Private Practice: How to Quit at a Profit," Med. World News, Dec. 25,1978, at 40, or a percentage of annual net income, see Cantor, "The Value of a Lawyer's Interest in His Practice," 43 N.Y.St.B.J. 47, 50 (1971) (quoting Bernard D. Hirsh, General Counsel for the American Medical Ass'n).

A significant element in fixing an attorney's goodwill is that an attorney as a sole practitioner cannot sell his law practice, see Geffen v. Moss, 53 Cal.App.3d 215, 125 Cal.Rptr. 687 (1975), and when any attorney severs his relationship with a law practice, a restrictive covenant to protect goodwill is unavailable, see Karlin v. Weinberg, 77 N.J. 408, 418 (1978) (dictum). n5 Contra Hicklin v. O'Brien, 11 Ill.App.2d 541, 138 N.E.2d 47 (1956); Heinz v. Roberts, 135 Iowa 748, 110 N.W. 1034 (1907); Thorn v. Dinsmoor, 104 Kan. 275, 178 P. 445 (1919) (upholding sale of a law practice to a law student not yet admitted to practice). Drinker in his treatise on legal ethics states that "[a] lawyer's practice and good will may not be offered for sale." H. Drinker, Legal Ethics 161 (1953) (footnote omitted); accord R. Wise, Legal Ethics 204 (2d ed.1970) ("Goodwill cannot be sold as clients are not chattels or merchandise and a lawyer is not a tradesman") (footnote omitted). This principle has been accepted and announced by our Advisory Committee on Professional Ethics, Op. 48, 87 N.J.L.J. 459 (1964).

n5 Medical doctors may sell their practices, Tessmar v. Grosner, 23 N.J. 193 (1957), and enter into enforceable restrictive covenants, Karlin v. Weinberg, supra. These factors affect the value of goodwill. See Ferber, "Make the Most of Your Last Business Move," Med.Econ., Mar. 29, 1982, at 144; Balliett, supra, at 40; DeMuth & Achorn, "What You Always Needed to Know About Selling Your Practice," Pa.Med., Sept. 1977, at 34.

The underlying basis for the principle proscribing a restrictive covenant is the prohibition against an attorney selling his practice including goodwill. DR 2-108(A) of our Disciplinary Rules of the Code of Professional Responsibility, prohibiting such restrictions, reads as follows:

A lawyer shall not be a party to or participate in a partnership or employment agreement with another lawyer that restricts the right of a lawyer to practice law after the termination of a relationship created by the agreement, except as may be provided in a bona fide retirement plan and then only to the extent reasonably necessary to protect the plan.

See also Dwyer v. Jung, 133 N.J. Super. 343 (Ch.), aff'd o.b., 137 N.J. Super. 135 (App.Div.1975); N.J. Advisory Comm. on Professional Ethics, Op. 147, 92 N.J.L.J. 177 (1969); Model Rules of Professional Conduct Rule 1.8(h) (Proposed Final Draft 1981).

We do not intend herein to pass upon the soundness of the rule that prohibits the sale of goodwill, but only to note that we have approved of partnership agreements providing for payment upon a partner's retirement or death of an amount in excess of the capital account presumably representing his share of goodwill in the firm. In Stern we observed:

Generally speaking the monetary worth of this type of professional partnership will consist of the total value of the partners' capital accounts, accounts receivable, the value of work in progress, any appreciation in the true worth of tangible personalty over and above book value, together with good will, should there infact be any; the total so arrived at to be diminished by the amount of accounts payable as well as any other liabilities not reflected on the partnership books. [66 N.J. at 346-47 (emphasis supplied) (footnotes omitted)]

Payment to a former partner is excepted from Disciplinary Rule 2-107, prohibiting the division of fees unless services have been performed. n6 N.J.Code of Professional Responsibility DR 2-107(C); see ABA Comm. on Ethics and Professional Responsibility, Formal Op. 327 (1971) (stating that it is permissible to "make payments to a retired partner or for a fixed period to the estate of a deceased partner in accordance with a pre-existing retirement plan, the amount of those payments being measured by subsequent earnings of the firm"). Thus members of a law firm may provide for selling their interest therein, including goodwill, and sole practitioners may not. See Sterrett, "The Sale of a Law Practice," 121 U.Pa.L.Rev. 306, 320-23 (1972) (justifying this distinction). It has been suggested that the individual practitioner may avoid the restriction by entering into a partnership arrangement with another attorney before retiring. Cantor, supra, at 51; see Winter, "Selling a Law Firm: Ethics Rules Eyed," 68 A.B.A. J. 406, 406 (1982) (criticizing the distinction). Indeed, England, Australia and Canada permit the sale of a solicitor's practice, including goodwill, upon death or retirement. See Note, "The Death of a Lawyer," 56 Colum.L.Rev. 606, 617-18 & n. 72 (1956). England also enforces restrictive covenants entered into in connection with such a sale. Id.; see, e.g., Bunn v. Guy, 4 East. 190, 102 Eng.Rep. 803

(K.B.1803). But see Aubin v. Holt, 2 K. & J. 68, 69-70, 69 E.R. 696, 697 (Ch.1855) (suggesting Bunn is limited to agreements between retiring partner and firm); Thornbury v. Bevill, 1 Y. & C. Ch. C. 556, 62 E.R. 1014 (Ch.1842) (similar arrangement between strangers not enforced).

n6 DR 2-107(A)(3) was amended effective April 1, 1979 to permit a certified specialist to pay a referral fee provided the total fee charged the client is reasonable for the legal services rendered.

As matters now stand limitations on the sale of a law practice with its goodwill have an adverse effect upon its value. However, as previously observed, goodwill may be of significant value irrespective of these limitations.

One appropriate method to determine the value of goodwill of a law practice can be accomplished by fixing the amount by which the attorney's earnings exceed that which would have been earned as an employee by a person with similar qualifications of education, experience and capability. This is a fair manner in which to resolve the goodwill constituent. An attorney who earns $ 35,000 per year as an employee would, as any employee, not have goodwill properly ascribable to his employment. The same attorney earning a net income of the same amount from his individual practice should likewise not be considered to have property consisting of goodwill in ascertaining the value of his practice. See Levy v. Levy, supra.

The court should first ascertain what an attorney of comparable experience, expertise, education and age would be earning as an employee in the same general locale. The effort that the practitioner expends on his law practice should not be overlooked when comparing his income to that of the hypothetical employee. A sole practitioner who, for example, works a regular sixty-hour week may have a significantly greater income than an employee who regularly works a forty-hour week, and the income may be due to greater productivity rather than the realization of income on the sole practitioner's goodwill. Next, the attorney's net income before federal and state income taxes for a period of years, preferably five, should be determined and averaged. The actual average should then be compared with the employee norm. If the attorney's actual average realistically exceeds the total of (1) the employee norm and (2) a return on the investment in thephysical assets, the excess would be the basis for evaluating goodwill.

This excess is subject to a capitalization factor. The capitalization factor is generally perceived as the number of years of excess earnings a purchaser would be willing to pay for in advance in order to acquire the goodwill. 2 J. Bonbright, Valuation of Property 731 (1937). The minimum capitalization factor is zero. The precise capitalization factor would depend on other evidence.Such evidence could consist of a comparison of capitalization factors used to measure goodwill in other professions, such as medicine or dentistry, adjusted, however, for ingredients peculiar to law, such as the inability to sell the practice and nonavailability of a restrictive covenant. The age of a lawyer may be particularly important because a sole practitioner's goodwill would probably terminate upon death, contrary to that of a doctor. See Tessmar v. Grosner, 23 N.J. 193, 200-01 (1957); ABA Comm. on Professional Ethics, Formal Op. 266 (1945); Note, supra, at 614. n7 Subject to such adjustments, the method used in a comparable profession may be applied and a figure close to the true worth of the law practice's goodwill may be obtained.

n7 Note the dictum in Kremelberg v. Thompson, 87 N.J.Eq. 655, 659 (E. & A.1917), adopting the view generally that "[t]he good-will of the business of a successful professional man, practicing alone, if good-will it may be called, dies with him. He is employed because of his personal ability and reputation." The validity of this dictum with respect to professions other than lawyers is questionable. See Tessmar, supra.

Other approaches equally or more compelling may be used. If sufficient information about the average income of attorney employees with similar background and expertise is unavailable, partnership agreements covering comparable attorneys that set forth value in excess of capital accounts may disclose a useful figure for goodwill. See Cantor, supra, at 52-53 (referring to surveys of law firms to ascertain policies for valuing a terminating partner's interest). In Stern we agreed that the law partnership agreement may determine the worth of a lawyer's practice including goodwill upon proof that the books are well kept and the partner's interests are carefully reviewed periodically. 66 N.J. at 347.

There may well be other ways in which goodwill may be computed and we do not by the suggestions made herein intend to preclude their use. See, e.g., Hitchman, "The Fair Market Value of a Law Practice," 15 L. Soc'y Upper Can. Gaz. 303 (1981); Dlugatch & Olds, "Goodwill Determination in Professional Practice Evaluation -- Pursuant to a Marriage Dissolution," 4 Glendale L.Rev. 28, 34-36 (1982). In any event the limitations to which we have previously alluded, as well as the expertise and age of the individual should be factored into any evaluation. Moreover, potential federal tax consequences should be considered in determining equitable distribution.

III

Pointing out what not to do is sometimes as illuminating as what to do. In the case at hand the trial court accepted the calculation of the defendant's expert in fixing goodwill. We find several shortcomings in its method. First, it averaged four instead of five years of the plaintiff's income because plaintiff did not operate through the entire year 1974 as a professional corporation. That did not justify its elimination. The form of plaintiff's practice as an individual or as a professional corporation is irrelevant. Plaintiff's income for that year included the salary earned from his professional association and his income from his practice as an individual, or a total of $ 62,553. Instead of a four-year average of $ 104,630 used by the defendant's expert and accepted by the trial court, it would have been preferable to commence with plaintiff's five-year average income of $ 96,214.

Second, in determining plaintiff's actual income, the expert included promotion,travel and automobile expenses incurred in each of the years. These would appear to be appropriate deductible business expenses in the absence of evidence demonstrating that they were not properly incurred as such.

Third, the expert used as a comparison information compiled from the federal Internal Revenue Service data for the twelve months ended June 30, 1976. The comparative group was attorneys generally throughout the United States. There was no showing how New Jersey or northern New Jersey attorneys fit into that milieu. More particularly, there was no evidence that attorneys of comparable age and expertise had assets approximately equivalent to the averages shown.

Fourth, the most troublesome aspect of the expert's estimation process comes to light upon an examination of his use of these statistics. He compared plaintiff with others, relying solely on the dollar amount of assets on a particular date, despite the fact that plaintiff's assets varied widely during the relevant period due to the large fluctuations in the amount of cash on hand. He then found the average

percentage of total receipts retained by attorneys before taxes in the form of executive compensation and net income -- 38.5%. This percentage was applied to plaintiff's gross income for each year. Because of large fluctuations in cash on hand or accounts receivable that may occur during certain periods of the year, attorneys may be placed in one category rather than another by pure happenstance. Moreover, in the absence of some evidence to the contrary, a classification of attorneys based on the assets in their offices does not appear to be relevant in determining the normal or average income for comparison purposes.

The expert concluded that any excess of plaintiff's income for each year over the figure calculated using the average rate of efficiency (38.5%) reflected goodwill. The expert's analysis may be summarized as follows:

	Total Fees Received	38.5%	Actual Net Income	Actual Excess
1978	$ 222,702	$ 87,280 [sic]	$ 124,090	$ 36,810
1977	146,151	56,268	88,610	32,342
1976	185,095	71,262	107,795	36,533
1975	149,435	57,532	98,028	40,496

The underlying fallacy in this approach is that the measurement reflects the relative efficiency of the operation,rather than comparing plaintiff's net income with other attorneys.

Lastly, the expert used a factor of five, that is, he multiplied the average excess earnings which he had calculated to be $ 36,545 by five, in order to fix goodwill. No evidence supported capitalization at that figure. Our New Jersey inheritance practice indicates a frequent use of three in evaluating goodwill in close corporations or partnerships and Bonbright points out that in New York three is the factor regarded as least in need of justification. See 2 J. Bonbright, supra, at 731. n8 When calculating the value of an attorney's goodwill, the court should also consider the risks and competitiveness of the practice. A string of recent successes in contingent fee cases, for example, may lead to overestimating expected income, although averaging over a number of years will correct for many of such distortions. Even a properly adjusted estimate may reflect a portion of income attributable to return on risk-taking by the attorney, rather than on his reputation. Similarly, a practice in a highly competitive field might reduce the estimated value of an attorney's goodwill. If consideration is given to plaintiff's work life expectancy, tohis inability to sell the practice, to his inability to grant a restrictive covenant, and to the competitiveness and risks of the practice, a factor of five is inordinately high.

n8 See G. McCarthy & R. Healy, Valuing a Company 378 (1971) (expressing the thought that usually the price paid for goodwill of a small professional service is low relative to valuations of large businesses and may be two to three times net income before federal income taxes, adjusted by eliminating the compensation a buyer would expect to receive as an employee for the services to be rendered and the profit generated by the business that the buyer does not expect to retain).

IV

Plaintiff raises several other issues. He complains that the trial court erred by including the annual pension payments in calculating his yearly income and also by including accrued pension as an asset subject to equitable distribution. This contention is misplaced. When the funds used for pension purposes were being earned during a particular year, they represented additional compensation in that period. Upon accrual, the pension fund thus created became a distributable asset. This fund is analogous to income accumulated in a bank account which is subject to equitable distribution.

In evaluating the law practice, the trial court did not accept the accounts receivable as of December 31, 1978, because the amount of that account varied so widely. Instead the trial court averaged the receivables on a twelve months basis and used the monthly average in fixing this asset. This was an acceptable and rational normalization method. The plaintiff asserts that the payables averaged $ 17,830 monthly and there should have been a deduction in that amount. We stated in Stern that the total assets should be diminished by the amount of accounts payable. 66 N.J. at 346-47. The record is unclear as to the status of accounts payable. Upon remand, plaintiff may have the opportunity to submit proofs of accounts payable and, if established, he would be entitled to credit for them.

The judgment is reversed and the cause remanded to the trial court for further proceedings to determine the value of plaintiff's law practice with respect to goodwill and accounts payable and for modification of equitable distribution, which may or may not affect the quantum of appropriate alimony.

Estate of Dunn v. Commissioner

Case name: Estate of Dunn v. Commissioner
Citation: 301 F.3d 339, 2002 U.S. App. LEXIS 15453
Date of decision: August 1, 2002
Country: US
State or Federal: Federal
State/Jurisdiction: 5th Circuit
Court: United States Court of Appeals
Type of action: Estate and Gift Taxation
Judge: Wiener
Experts: William Frazier, ASA (for estate)
Shannon Pratt, CFA, FASA, CBA (for estate)
Carmen Eggleston, CPA (for IRS)
SIC: 7353 Heavy Construction Equipment Rental and Leasing (rental of construction equipment [except cranes] with operator)
NAICS: 532412 Construction, Mining, and Forestry Machinery and Equipment Rental and Leasing
1400

IN THE UNITED STATES COURT OF APPEALS

FOR THE FIFTH CIRCUIT

No. 00-60614

BEATRICE ELLEN JONES DUNN, Deceased, ESTATE

OF, JESSE L. DUNN III, Independent Executor,

Petitioner-Appellant,

v.

COMMISSIONER OF INTERNAL REVENUE,

Respondent-Appellee.

Appeal from the Decision of the United States Tax Court

August 1, 2002

Before SMITH, DUHÉ, and WIENER, Circuit Judges.

WIENER, Circuit Judge.

The sole issue presented by this appeal from the United States Tax Court (the "Tax Court") is the fair market value of a block of common stock in Dunn Equipment, Inc. ("Dunn Equipment" or the "Corporation") owned by the late Beatrice Ellen Jones Dunn (the "Decedent") on the date of her death (the "valuation date") for purposes of calculating the estate tax owed by Petitioner-Appellant Estate of Beatrice Ellen Jones Dunn, Deceased (the "
Estate"). The Tax Court valued the Decedent's shares higher than had the Estate on the Form 706 (the "estate tax return" or the "return") filed by Jesse L. Dunn III, the Decedent's Independent Executor (the "Executor") but lower than had Respondent-Appellee Commissioner of Internal Revenue (the "Commissioner"). We conclude that the Tax Court erred as a matter of law in the valuation methodology that it selected and applied to facts that are now largely uncontested by virtue of stipulations, concessions, and non-erroneous findings of that court. This legal error produced an incorrect valuation and thus an erroneous final Tax Court judgment as to the Estate's tax deficiency, requiring remand to that court.

We hold that the correct methodology for determining the value of Dunn Equipment as of the valuation date requires application of an 85:15 ratio, assigning a weight of 85% to the value of the Corporation that the Tax Court determined to be $1,321,740(1) when using its "earnings-based approach" and a weight of 15% to the value that the court determines on remand using its "asset-based approach" but only after recomputing the Corporation's value under this latter approach by reducing the market value of the assets(2) by 34% of their built-in taxable gain ---- not by the 5% as previously applied by that court ---- of the built-in gain (excess of net sales value before taxes over book value) of the assets, to account for the inherent gains tax liability of the assets.

We therefore remand this case to the Tax Court for it to (1) redetermine the asset-based value using a 34% reduction for built-in tax liability; (2) recalculate the fair market value of the Corporation based on that 85:15 weighting ratio; (3) calculate the value of the Estate's ratable portion of the total value of the Corporation as thus redetermined; (4) discount the value of that ratable portion by 22.5% for lack of market and lack of super-majority; (5) based on that result, redetermine the estate tax liability of the Estate as well as any resulting overpayment of such taxes by the Estate; and (6) render a final judgment consistent with this opinion and our judgment.

I. Facts and Proceedings

A. Proceedings

In November, 1994, approximately three and one-half years after the Decedent's death and two and one-half years after her estate tax return was filed, the Commissioner issued a notice of deficiency, assessing additional estate taxes of $238,515.05. This litigation ensued. In an amended answer filed in the Tax Court, the Commissioner increased the asserted estate tax deficiency to approximately $1,100,000. This deficiency was predicated on the Commissioner's contention that the Decedent's 492,610 shares of common stock in Dunn Equipment, a closely-
held, family-operated corporation, was undervalued in the estate tax return. The Commissioner argued that such stock should be valued solely on the basis of the fair market value of its assets, discounted only for lack of a market and lack of a super-majority, and with no reduction for built-in tax liability of those assets and no consideration whatsoever of an earnings or cash flow-based approach to valuation.

In June, 1996, trial was held in the Tax Court to determine the fair market value of Decedent's block of stock in Dunn Equipment.
Approximately three and one-half years after trial, the Tax Court issued its Memorandum Findings of Fact and Opinion ("the Tax Court opinion"). The court concluded that the subject block of stock, which constituted 62.96% of the issued and the outstanding shares of Dunn Equipment's
capital stock, was worth $2,738,558 on the valuation date. After the Tax Court entered its final judgment some six months later, the Estate timely filed a notice of appeal.

B. Facts

Based in principal part on stipulations, uncontested evidence,(3) and concessions, the Tax Court found the following facts. Decedent, a longtime resident of Texas, died there on June 8, 1991 at the age of 81. The Executor, Decedent's son, is also a Texas resident, and the Estate was administered there.

Dunn Equipment was incorporated in Texas in 1949. It had been family owned and operated throughout its entire existence. The Corporation actively operated its business from four locations in Texas and, on

the valuation date, employed 134 persons, three of whom were executives and eight of whom were salesmen.

Dunn Equipment owned and rented out heavy equipment, and provided related services, primarily in the petroleum refinery and petrochemical industries. The personal property rented from the Corporation by its customers consisted principally of large cranes, air compressors, backhoes, manlifts, and sanders and grinders. The Corporation frequently furnished operators for the equipment that it rented to its customers, charging for both equipment and operators on an hourly basis. For example, the Corporation's revenues resulted in significant part from the renting of large cranes, with and without operators. For the four fiscal years preceding the valuation date, equipment rented with operators furnished by the Corporation produced between 26.3% and 32.7% of the Corporation's revenues. On the valuation date, Dunn Equipment's assets comprised the aforedescribed heavy equipment, plus industrial real estate valued at $1, 442,580 and a townhouse valued at $35,000, prepaid expenses of $52,643, and prepaid interest of $671,260.

In addition to the shares owned by the Decedent, shares in Dunn Equipment constituting 31.12% of the issued and outstanding common stock were owned individually by Jesse L. Dunn III (the Decedent's son and executor), who also held title to an additional 2.61% as a trustee. Shares representing the remaining 3.31% of the Corporation's issued and outstanding stock were owned in combination by other family members and employees of the Corporation.

The Corporation's Board of Directors consisted of the Decedent; her son and executor, Jesse; and her grandson, Peter Dunn (Jesse's son). Jesse was President, Peter was Vice President, and the Decedent was Secretary- Treasurer. The Tax Court found that compensation paid to the officers of Dunn Equipment was lower than that paid to officers of similarly situated companies.

Over the course of its 42 years of operation preceding the valuation date, Dunn Equipment had emerged as the largest heavy equipment rental business in its part of Texas, holding a substantial share of that market. By virtue of its market dominance and reputation for dependable service, the Corporation was historically able to command rates above the market average. From 1987 through the valuation date, a decline in the worldwide price of feed stock for the oil refining and petrochemical industries created a favorable business climate for the Corporation's principal customers, and Dunn Equipment's gross revenues increased during that period.

During the same period, however, the heavy equipment rental market became increasingly competitive, as equipment such as cranes became more readily available and additional rental companies entered the field. This in turn caused hourly rental rates to decline and flatten. In fact, increased competition prevented Dunn Equipment from raising its rental rates at any time during the period of more than ten years preceding the valuation date. These rates remained

essentially flat for that 10-year period. The same competitive factors forced the Corporation to replace its equipment with increasing frequency, reaching an average new equipment expenditure of $2 million per annum in the years immediately preceding the valuation date.

In addition to the increased annual cost and frequency of replacing equipment during the years of flat rental rates that preceded the Decedent's death, the Corporation's operating expenses increased significantly, beginning in 1988, and continued to do so thereafter: The ratios of direct operating expenses to revenue escalated from 42% in 1988 to 52% in the 12-month period that ended a week before the Decedent's death. The effect of the increase in direct operating expenses on the Corporation's cash flow and profitability was exacerbated by a practice that Dunn Equipment was forced to implement in 1988: meeting its
customers' demands by leasing equipment from third parties and renting it out to the Corporation's customers whenever all of its own equipment was rented out to other customers. Although this practice, which continued through the valuation date, helped Dunn Equipment keep its customers happy and retain its customer base, the Corporation was only able to break even on these re-rentals, further depressing its profit margin.

Based on the foregoing factors, the Tax Court concluded that the Corporation had no capacity to pay dividends during the five years preceding the death of the Decedent. In fact, it had paid none.

As of the valuation date, no public market in the stock of Dunn Equipment
existed, and no recent private transactions in its stock had occurred. There was no current or pending litigation that could have had a material effect on the value of the stock, but large annual capital expenditures for equipment replacement coupled with shrinking profit margins resulting from the combination of increased operating expenses and flat or reduced rental rates, essentially eliminated net cash flow available for debt reduction or dividend payment. On the valuation date, the Corporation had outstanding debt of $7,343,161, producing a debt-to-equity ratio in excess of 6.5 to 1. The Corporation's average net annual cash flow for the 4- year period ending with the valuation date was only $286,421. Given the Tax Court's finding regarding the underpayment of compensation to its officers, the Corporation's cash flow ---- and thus its income-based valuation ---- is actually overstated.

On the basis of these extensive factual findings and reasonable inferences from them, the Tax Court concluded that, as of the valuation date, Dunn Equipment was "a viable operating company...and earned a significant part of its revenues from selling services as well as renting equipment"; that between one-fourth and one-third of the Corporation's gross operating revenue was produced by charges for labor, parts, and equipment rentals with operators supplied; and that there were " significant active operational aspects to the company as of the valuation date."(4)

The Tax Court also found that, even though the Decedent's 62.96% of stock ownership in the Corporation gave her operational control, under Texas law she lacked the power to compel a liquidation, a sale of all or substantially all of its assets, or a merger or consolidation, for each of which a "super-majority" equal to or greater than 66.67% of the outstanding shares is required.(5) The Court further concluded that, in addition to lacking a super-majority herself, the Decedent would not have been likely

to garner the votes of additional shareholders sufficient to constitute the super-majority required to instigate liquidation or sale of all assets because the other shareholders were determined to continue the Corporation's independent existence and its operations indefinitely. The court based these findings on evidence of the Corporation's history, community ties, and relationship with its 134 employees, whose livelihoods depended on Dunn Equipment's continuing as an operating business.(6)

We perceive no clear error in any of the foregoing findings or in the inferences and conclusions that the Tax Court derived from them.

The Tax Court found further that, for Dunn Equipment, the process of liquidation would be expensive and time-consuming, involving sales costs, transportation costs, reduced equipment sales prices because of the increased short-term supply of such equipment that would result from a liquidation's flooding of the market, and the risk of loss of customers during the course of a lengthy liquidating process if that were to be attempted. These findings too are free of clear error. (Again, the Court did not list among Dunn Equipment's costs of liquidation, however, the adverse tax results that would be incurred, particularly the 34% federal income tax on gains to be realized by the Corporation on the sale of its equipment, whether ultimately deemed ordinary income or capital gains.(7))

Having painted this clear and detailed valuation-date portrait of Dunn Equipment, the Tax Court proceeded to confect its valuation methodology. The court selected two different approaches to value, one being an income- based approach driven by net cash flow(8) and the other being an asset- based approach driven by the net fair market value of the Corporation's assets.(9) The court calculated the Corporation's "earnings-based value" at $1,321,740 and its net "asset-based value" at $7,922,892, as of the valuation date. The latter value was calculated using a 5% factor for built-in gains tax liability, not the actual rate of 34% that the Corporation would have incurred on sale to a willing buyer.

As the next step in its methodology, the Tax Court assigned dissimilar weights to the two valuations, expressly rejecting (1) the Estate's expert's method, which assigned equal weight to each, and (2) the Commissioner's contention that no weight whatsoever should be given to earnings or cash flow and that the Corporation be valued entirely on asset value undiminished by any built-in tax liability. Despite having concluded that "the hypothetical investor would give earnings value substantial weight" and acknowledging "that, as a general rule, earnings are a better criterion of value for operating companies [which Dunn Equipment is] and net assets a better criterion of value for holding or investment companies [which Dunn Equipment is not],"(10) the Tax Court confected the weighting factor of its valuation method by assigning a weight of 35% to earnings-based value and 65% to asset-based value (which the court calculated by, inter alia, reducing the value of assets by 5% for built-in gains tax liability).(11) After applying its weighted average to the results of its two valuation approaches to reach the fair market value of the entire Corporation, the Tax Court calculated the Decedent's percentage of ownership (62.96%) to ascertain the pro rata value of her block of stock.

The final step in the Tax Court's methodology involved the determination and application of discounts. In the discount step, the court concluded that the gross pro rata value of Decedent's block of stock should be reduced 15% for lack of marketability and 7.5% for lack of super-majority control, producing a total discount of 22.5%. This is not contested on appeal.

The Executor had returned the Decedent's block of stock at $1,635,465. The Estate's expert appraiser's 50:50 weighting approach produced a minimally lower value of $1,582,185. The Commissioner originally contended that the value was $2,229,043 but ultimately claimed the value to be $4,430,238. And the Tax Court found the value to be $2,738,558.

On appeal, the Estate has stipulated that it is not contesting the Tax Court's determination of the value of Dunn Equipment "under the earnings
based approach, or [the Tax Court's] application of a 15% discount for lack of marketability and a 7.5% discount for lack of super-majority control" to the Decedent's pro rata ownership of the issued and outstanding stock of the Corporation.(12) This reduces our chore to one of reviewing only the aspects of the Tax Court's methodology that the Estate does continue to challenge, i.e., the method employed to determine (1) the appropriate discount to apply to the value of the Corporation's assets to account for built-in tax liability in determining its asset- based value and (2) the relative weights to assign to the two disparate values, income-based and asset-based.

II. Analysis

A. Standard of Review

We review opinions and judgments of the Tax Court under the same standards that we apply when reviewing those of other trial courts: Factual determinations are reviewed for clear error, and conclusions of law are reviewed de novo.(13) We have held that determination of fair market value is a mixed question of fact and law for which "the factual premises [are] subject to review on a clearly erroneous standard, and the legal conclusion[s are] subject to de novo review."(14) The mathematical computation of fair market value is an issue of fact, but determination of the appropriate valuation method is an issue of law that we review de novo.(15)

B. Burden of Proof

On the estate tax return, the Decedent's block of stock in Dunn Equipment
was valued at $1,635,465. The Commissioner's deficiency notice stated a value of $2,229,043. Subsequently, the Commissioner's amended answer upped the value to $4,430,238, roughly doubling the deficiency notice value and increasing the asserted estate tax deficiency by $861,485 for a total of $1,100,000. The Tax Court correctly observed that the Estate has the burden of refuting the value asserted in the Commissioner's original notice of deficiency, but that the Commissioner has the burden of proving any value in excess of that initial amount.(16)

C. The Commissioner's Disparate Positions: Trial Vis-à-Vis Appeal

1. Position On Appeal As appellee, the Commissioner supports the Tax Court's treatment of each aspect of the case and asks us to affirm the court's judgment. Specifically, the Commissioner urges us to accept, inter alia, the Tax Court's dual approach to value; the court's treatment of built-in tax liability; the relative weights assigned by the court to the results of each approach; and the court's discounts for lack of market and lack of supermajority control.

2. Pre-Trial and Trial Position

The Commissioner's posture on appeal is a stark departure from his pre- trial and trial position: amending his answer to quadruple the Estate's tax deficiency as originally assessed, urging the Tax Court to disregard totally the built-in tax liability of the Corporation's assets, insisting that the Corporation be valued solely on asset values, and urging that no consideration whatsoever be given the earnings or cash-flow based approach to valuation. Indeed, at trial, the Commissioner did not favor the Tax Court with testimony of an expert appraiser, even though the Commissioner had affirmatively proposed his own, geometrically higher value for the Decedent's block of stock ---- values that started out higher than the ones reported on the estate tax return and that were then multiplied, by virtue of the Commissioner's amended answer, to almost four times the Estate's figures. Yet, instead of supporting his own higher values (for which he had the burden of proof) by proffering professional expert valuation testimony during the trial, the Commissioner merely engaged in guerilla warfare, presenting only an accounting expert to snipe at the methodology of the Estate's valuation expert. The use of such trial tactics might be legitimate when merely contesting values proposed by the party opposite, but they can never suffice as support for a higher value affirmatively asserted by the party employing such a trial strategy. This is particularly true when, as here, that party is the Commissioner, who has the burden of proving the expanded value asserted in his amended answer.

Using such tactics remains the prerogative of the Commissioner and his trial counsel, at least up to a point. But when his choice of tactics is viewed in the framework of the substantive valuation methodology urged by the Commissioner in the Tax Court, his posture at trial is seen to be so extreme and so far removed from reality as to be totally lacking in probative value.

To keep this in perspective, it must be remembered that this case had been under the scrutiny of the Commissioner for many years before trial, during which time he had to have learned essentially all of the discrete attributes of Dunn Equipment that were eventually stipulated by the
parties or found by the Tax Court: its operating history, its sources of income, the nature of its assets and their use in its operations, the status of the industry, and so on ad infinitum. Thus, as of the commencement of trial, the Commissioner must be held to the knowledge that Dunn Equipment was and had always been, as the Tax Court concluded, "a viable operating company" which "earned a significant part of its revenues from selling services as well as renting equipment" and that there were " significant active operational aspects to the company as of the valuation date."(17) When the nature of the Corporation's assets ---- primarily heavy equipment held not for investment or production of passive

income, like interest and dividends, but for active hourly rental (frequently with operators furnished by the Corporation), in the heavy construction and maintenance of chemical plants and petroleum refineries, rapidly depreciating with use and requiring constant maintenance, repair, and replacement ---- are viewed in pari materia with the myriad specific attributes of the Corporation, the untenability of the Commissioner's trial position in the Tax Court is plain.

Consequently, the Commissioner's insistence at trial that the value of the subject stock in Dunn Equipment be determined exclusively on the basis
of the market value of its assets, undiminished by their inherent tax liability ---- coupled with his failure to adduce affirmative testimony of a valuation expert ---- was so incongruous as to call his motivation into question. It can only be seen as one aimed at achieving maximum revenue at any cost, here seeking to gain leverage against the taxpayer in the hope of garnering a split-the-difference settlement ---- or, failing that, then a compromise judgment ---- somewhere between the value returned by the taxpayer (which, by virtue of the Commissioner's eleventh-hour deficiency notice, could not effectively be revised downward) and the unsupportedly excessive value eventually proposed by the Commissioner. And, that is precisely the result that the Commissioner obtained in the Tax Court.

Any remaining doubt that the Commissioner's pretrial and trial tactics in this case could conceivably evidence a bona fide disagreement over the value of Dunn Equipment is dispelled by the element of timing. In an
estate tax situation, the statute of limitations for assessment and collection by the IRS is generally three years, as specified in Internal Revenue Code ("I.R.C.") § 6501. When the IRS presents a deficiency notice in close proximity to the expiration of I.R.C. § 6501's 3-year time bar, it creates a tactical advantage for itself: Once the statute of limitation expires, the taxpayer can no longer claim a refund even if he then concludes that he was too conservative in his original valuation. This is so because the ability of the taxpayer to claim a refund is controlled by I.R.C. § 6511, which provides that the taxpayer has until the later of three years from the time the return was filed or two years from the time the tax was paid to assert such a claim. The tax due is normally paid with the tax return, by or before the due date. As a result, the only amount that the taxpayer could recover would be for taxes paid in response to the deficiency notice. Consequently, by holding off the filing of a notice of deficiency until more than two years following payment of tax or three years following the filing of the return, the IRS is able to manufacture an advantage with no downside risk: The taxpayer is precluded from claiming a refund except for any taxes paid with the deficiency notice, and the Commissioner is able to assert an excessive value and then use it for leverage in negotiations or at trial.

The Commissioner's abrupt change of position on appeal is so inconsistent and unreconcilable with his pretrial and trial positions that all of his urgings to us are rendered highly suspect. We keep this duplicity in mind as we proceed to examine the Tax Court's valuation methodology.

D. Determination of Fair Market Value

The definition of fair market value is as universally recognized as its determination is elusive: Fair market value is "'the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable

knowledge of relevant facts.'"(18) As a broad generality, appraising corporations or blocks of corporate stock involves consideration of three approaches: income, market, and assets-based.(19) When, as here, the corporation being appraised is closely held, is not regularly traded on an exchange, has not been traded at arm's length in close proximity of the valuation date, and is not comparable to other corporations engaged in the same or similar businesses of which there is evidence of recent sales of stock, the market approach is inapposite, leaving only the income and assets-based approaches as candidates for analysis. Thus, in cases like this, such features as net worth, prospective earning power and dividend-paying capacity, good will, position in the industry, management, economic outlook of the industry, and the degree of control represented by the block of stock in question must be looked to in the appraisal process.(20)

As is apparent from the essentially uncontested operative facts and inferences of this case, most of the heavy lifting required to reach the ultimate conclusion of fair market value of Decedent's block of stock had been accomplished by the time the question reached us. In addition, most of the penultimate conclusions regarding valuation methodology are conceded or uncontested on appeal: the pre-discount value of the Corporation under the earnings-based approach ($1,321,740); its debts ($7, 343,161); the market value of its assets before adjustment for built-in tax liability ($8,278,342); the discount for lack of marketability (15%); and the discount for lack of super-majority control (7.5%). That is why only two contested questions remain, both of which implicate valuation methodology: Did the Tax Court err as a matter of law in the methodology that it chose for (1) dealing with the assets' built-in tax liability when determining the Corporation's asset-based value, and (2) assigning relative weights to the asset-based and earnings-based values? The parties to this appeal agree with the Tax Court's starting point that "[t]he dispute in the instant case concerns the proper method for valuing an interest in a company in which asset-based value and earnings-based value are widely divergent."(21) We therefore begin by examining de novo the method employed by the Tax Court for dealing with the built-in tax liability of assets in connection with the asset-based approach to value. We then review de novo the method employed by the court in determining the relative weights to be given to Dunn Equipment's "widely divergent" asset-
based and earnings-based values.
Adjustment for Built-In Tax Liability of Assets

None can dispute that if Dunn Equipment had sold all of its heavy
equipment, industrial real estate, and townhouse on the valuation date, the Corporation would have incurred a 34% federal tax on the gain realized, regardless of whether that gain were labeled as capital gain or ordinary income.(22) The question, then, is not the rate of the built-in tax liability of the assets or the dollar amount of the inherent gain, but the method to employ in accounting for that inherent tax liability when valuing the Corporation's assets (not to be confused with the ultimate task of valuing its stock).

The Estate's expert took the position that, when determining the asset- based value to be used in calculating the fair market value of the Corporation, its assets must be treated as though they had in fact been sold, in which event the Corporation would have incurred federal income tax equal to 34% of the gain realized on the sale. This in turn would have instantly reduced the Corporation's fair market value,

dollar for dollar, for taxes payable. But, if the willing buyer were to purchase the Decedent's block of stock with the assets still owned by the Corporation, then regardless of whether thereafter that buyer could and would cause all or essentially all of the Corporation's assets to be sold, either in the ordinary course of business or globally in liquidation, the value to the Corporation of its assets qua assets would still be the amount that the Corporation could realize on disposition of those assets, net of all costs (including gains tax). The Estate contends that, like advertising and transportation costs, commissions, and other unavoidable expenses of disposition of these assets accepted by the Tax Court, the assets' gross value must be reduced by their built-in gains tax liability to reach their net fair market value for purposes of calculating the asset-based value of the Corporation.

In diametric opposition, the Commissioner argued to the Tax Court that no reduction for built-in tax liability should be allowed. He grounded this contention solely on the assertion that liquidation was not imminent or even likely.

Although the Tax Court accepted the 34% rate and acknowledged that the value of the Corporation had to be reduced by some factor to account for inherent tax liability of its assets, the court followed the Commissioner's "no imminent liquidation" red herring and concluded that only if the hypothetical willing buyer of the Decedent's block of stock intended to liquidate the Corporation in the short term ---- which the holder of that block of stock, acting alone, could not force ---- would that buyer seek a substantial reduction for built-in capital gain. The Tax Court then proceeded to discuss such a postulational buyer's alternatives to liquidation and to calculate the present value (actually, negative value) of future tax liability. The court concluded that the asset-based value of Dunn Equipment should be reduced by only 5% for
potential tax costs, not by the full 34% gains tax that the Corporation would have to pay when and if its assets were sold, whether in globo or seriatim.

The Tax Court's fundamental error in this regard is reflected in its statement that ---- for purposes of an asset-based analysis of corporate value ---- a fully-informed willing buyer of corporate shares (as distinguished from the Corporation's assemblage of assets) constituting an operational-control majority would not seek a substantial price reduction for built-in tax liability, absent that buyer's intention to liquidate. This is simply wrong: It is inconceivable that, since the abolition of the General Utilities doctrine and the attendant repeal of relevant I.R.C. sections, such as §§ 333 and 337, any reasonably informed, fully taxable buyer (1) of an operational-control majority block of stock in a corporation (2) for the purpose of acquiring its assets, has not insisted that all (or essentially all) of the latent tax liability of assets held in corporate solution be reflected in the purchase price of such stock.

We are satisfied that the hypothetical willing buyer of the Decedent's block of Dunn Equipment stock would demand a reduction in price for the
built-in gains tax liability of the Corporation's assets at essentially 100 cents on the dollar, regardless of his subjective desires or intentions regarding use or disposition of the assets. Here, that reduction would be 34%. This is true "in spades" when, for purposes of computing the asset-based value of the Corporation, we assume (as we must) that the willing buyer is purchasing the stock to get the assets, (23) whether in or out of corporate solution. We hold as a matter of law that the built-in gains tax liability

of this particular business's assets must be considered as a dollar-for-dollar reduction when calculating the asset- based value of the Corporation, just as, conversely, built-in gains tax liability would have no place in the calculation of the Corporation's earnings-based value.(24)

The Tax Court made a more significant mistake in the way it factored the " likelihood of liquidation" into its methodology, a quintessential mixing of apples and oranges: considering the likelihood of a liquidation sale of assets when calculating the asset-based value of the Corporation. Under the factual totality of this case, the hypothetical assumption that the assets will be sold is a foregone conclusion ---- a given ---- for purposes of the asset-based test.(25) The process of determining the value of the assets for this facet of the asset-based valuation methodology must start with the basic assumption that all assets will be sold, either by Dunn Equipment to the willing buyer or by the willing buyer of the Decedent's block of stock after he acquires her stock. By definition, the asset-based value of a corporation is grounded in the fair market value of its assets (a figure found by the Tax Court and not contested by the estate), which in turn is determined by applying the venerable willing buyer-willing seller test. By its very definition, this contemplates the consummation of the purchase and sale of the property, i.e., the asset being valued. Otherwise the hypothetical willing parties would be called something other than "buyer" and "seller."

In other words, when one facet of the valuation process requires a sub- determination based on the value of the company's assets, that value must be tested in the same willing buyer/willing seller crucible as is the stock itself, which presupposes that the property being valued is in fact bought and sold. It is axiomatic that an asset-based valuation starts with the gross market (sales) value of the underlying assets themselves, and, as observed, the Tax Court's finding in that regard is unchallenged on appeal: When the starting point is the assumption of sale, the " likelihood" is 100%!

This truism is confirmed by its obverse in today's dual, polar-opposite approaches (cash flow; assets). The fundamental assumption in the income or cash-flow approach is that the assets are retained by the Corporation, i.e., not globally disposed of in liquidation or otherwise. So, just as the starting point for the asset-based approach in this case is the assumption that the assets are sold, the starting point for the earnings- based approach is that the Corporation's assets are retained ---- are not sold, (other than as trade-ins for new replacement assets in the ordinary course of business) ---- and will be used as an integral part of its ongoing business operations. This duly accounts for the value of assets ---- unsold ---- in the active operations of the Corporation as one inextricably intertwined element of the production of income.

Bottom Line: The likelihood of liquidation has no place in either of the two disparate approaches to valuing this particular operating company. We hasten to add, however, that the likelihood of liquidation does play a key role in appraising the Decedent's block of stock, and that role is in the determination of the relative weights to be given to those two approaches: The lesser the likelihood of liquidation (or sale of essentially all assets), the greater the weight (percentage) that must be assigned to the earnings(cash flow)-based approach and, perforce, the lesser the weight to be assigned to the asset-based approach.

Belabored as our point might be, it illustrates the reason why, in conducting its asset-based approach to valuing Dunn Equipment, the Tax

Court erred when it grounded its time-use-of-money reduction of the 34% gains tax factor to 5% on the assumption that the corporation's assets would not likely be sold in liquidation. As explained, the likelihood of liquidation is inapposite to the asset-based approach to valuation.

In our recent response to a similarly misguided application of the built- in gains tax factor by the Tax Court, we rejected its treatment as based on "internally inconsistent assumptions."(26) In that case we reversed and remanded with instructions for the Tax Court to reconsider its valuation of the subject corporation's timber property values by using a more straightforward capital gains tax reduction. Similarly, because valuing Dunn Equipment's underlying corporate assets is not the equivalent of valuing the Company's capital stock on the basis of its assets, but is merely one preliminary exercise in that process, the threshold assumption in conducting the asset-based valuation approach as to this company must be that the underlying assets would indeed be sold. And to whom? To a fully informed, non-compelled, willing buyer. That is always the starting point for a fair market value determination of assets qua assets. That determination becomes the basis for the company's asset-based value, which must include consideration of the tax implications of those assets as owned by that company.

We must reject as legal error, then, the Tax Court's treatment of built- in gains tax liability and hold that ---- under the court's asset-based approach ---- determination of the value of Dunn Equipment must include a
reduction equal to 34% of the taxable gain inherent in those assets as of the valuation date.(27) Moreover, the factually determined, "real world" likelihood of liquidation is not a factor affecting built-in tax liability when conducting the asset-based approach to valuing Dunn Equipment stock.(
28) Rather, the probability of a liquidation's occurring affects only (but significantly) the relative weights to be assigned to each of the two values once they have been determined under the asset-based and income- based approaches, respectively ---- which brings us to the second methodology issue presented in this appeal.
Assignment of Weight to Values

a. Cash Flow Vis-à-Vis Earnings

Prior to determining the appropriate method of valuing Dunn Equipment,
the Tax Court reviewed the factors that bear on the fair market value of a block of stock in a closely-held, non-traded, operating corporation and concluded that

the value of Dunn Equipment is best represented by a combination of an
earnings-based value using capitalization of net cash-flow and an asset- based value using fair market value of assets, with an appropriate discount for a lack of marketability and lack of super-majority control.(29)

In so doing, the Tax Court rejected the approach of the Estate's expert, who used capitalized net earnings to determine the income-based value of the Corporation, and went instead with a capitalized

net cash-flow method. As the Estate is not contesting the Tax Court's choice of the cash-flow approach over the earnings approach, we too accept the court's choice.

b. The Tax Court's Determination of Value

To its credit, the Tax Court flatly rejected the Commissioner's legally and factually absurd contention at trial that no weight should be given to the Corporation's earnings-based value and that its value should be based entirely in an asset-based approach, with no consideration of built-in tax liability. In so doing, the Tax Court concluded that the Commissioner " puts too much emphasis on the fair market value of assets"(30) ---- to us, a classic understatement ---- and stated correctly that "because Dunn Equipment was an operating company, the better question is not whether we should disregard the earnings-based value, but whether we should disregard the asset-based value."(31) The Tax Court went on to voice agreement with the basic position urged by the Estate's valuation expert that substantial weight should be given to both the asset-based value and the earnings- based value of the Corporation. Although we wholeheartedly endorse the point made by the Tax Court's rhetorical question whether any weight at all should be given to the asset-based value ---- and see little hyperbole in it ---- we are constrained to proceed, as proposed by the Estate and as done by the Tax Court, with a methodology that assigns some weight to each of the values generated by those two disparate approaches.

The final determination required to complete the pre-discount valuation methodology in this case, then, is the selection of the respective weights (percentages) to be assigned to each of the Corporation's theoretical values, asset-based and earnings-based. As observed in our discussion of the potential effects (or lack thereof) of the likelihood of liquidation and latent gains tax liability on the value of the Corporation's assets, it is in the exercise conducted to determine the relative weights to be accorded to each of the two differently calculated values of the Corporation ---- and only in that exercise ---- that the likelihood of liquidation vis-à-vis the likelihood of indefinitely retaining and using the assets, comes into play.

The Tax Court was of the opinion ---- and we agree ---- that the hypothetical willing buyer of the Decedent's block of stock would be unlikely to provoke liquidation of the company, even if he could. The Tax Court bolstered that conclusion with the recognition that even though the Estate's block of stock represents day-to-day control, the buyer of that block would lack the power to compel liquidation, merger, or consolidation.(32) In this regard, the court cogently emphasized that Dunn Equipment's history, community ties, and relationship with its employees would make it difficult if not virtually impossible for the holder of the Estate's block of stock to secure the votes of additional shares sufficient to institute liquidation. After concluding that the likelihood of liquidation was slight, the Tax Court added:

A rapid liquidation would have flooded the market with equipment, reducing the value obtained for each piece. A lengthy, drawn-out liquidation (also called a "creeping liquidation") would have risked the loss of customers who, at some point, would have realized that Dunn Equipment no longer meant to stay in business and who would therefore have sought other suppliers of equipment.(33)

Despite having asked rhetorically ---- but, in our opinion, insightfully ---- whether the asset-based value of the Corporation should not be disregarded altogether, the Tax Court simply reiterated the factors that should be considered (largely paraphrasing Rev. Rul. 59-60), then conclusionally completed its pre-discount valuation methodology by assigning unequal percentages of weight to the results of its two approaches to valuation.

Given the stipulated or agreed facts, the additional facts found by the Tax Court, and the correct determination by that court that the likelihood of liquidation was minimal, our expectation would be that if the court elected to assign unequal weight to the two approaches, it would accord a minority (or even a nominal) weight to the asset-based value of the Corporation, and a majority (or even a super-majority) weight to the net cash flow or earnings-based value. Without explanation, however, the Tax Court baldly ---- and, to us, astonishingly ---- did just the opposite, assigning a substantial majority of the weight to the asset-based value. The court allocated almost two-thirds of the weight (65%) to the results of the asset-based approach and only slightly more than one-third (35%) to the results of the earnings-based approach. We view this as a legal, logical, and economic non sequitur, inconsistent with all findings and expressions of the court leading up to its announcement of this step in its methodology. We also note that the Tax Court's ratio roughly splits the difference between the 50:50 ratio advanced by the Estate and the 100: 0 ratio advocated by the Commissioner.

Irrespective of whether the crucial step in the Tax Court's methodology, the assignment of relative weights to the results of the different valuation approaches, is deemed to be an issue of law or a mixed question of fact and law, we review it de novo. Our plenary review leads us inescapably to the conclusion that the Tax Court's 65:35 ratio in favor of its asset-based value constitutes reversible error. How, we must ask, can the value of a corporation that possesses all the attributes verbalized by the Tax Court conceivably be governed essentially twice as much by its asset-based value as by its earnings or cash flow-based value, when its assets (1) are not susceptible of appreciation (except, possibly, de minimis by the condo and the plant sites), (2) are physically depreciated and depreciating as a result of their being used as intended, (3) are being replaced constantly with newer models at great cost, and (4) are virtually certain not to be put up for sale because indefinite operation ---- not liquidation ---- is all that can be predicted as the Corporation's future, both long-term and short?

At this point we must emphasize the fact that the lion's share of the Corporation's assets comprised heavy equipment which, to such an operating company, is virtually indistinguishable from consumable supplies ---- and likely would be so regarded were it not for the administratively necessary but economically unrealistic artificiality of 12-month tax years. Those assets are constantly depreciating from heavy use and obsolescence; they are being replaced to the tune of $2 million annually; their highest and best use is short-term rental, frequently impossible to accomplish without the furnishing of operators by the Corporation; and the tax effects of their unlikely sale to third parties would greatly diminish their value to the Corporation. Indeed, it takes eight salesmen and 123 common-law employees, working full time in this highly competitive industry, to make these heavy-equipment assets produce even moderately acceptable levels of profitability.

Throughout its comprehensive and logical background analysis, the Tax Court recognized that Dunn Equipment is an operating company, a going
business concern, the Decedent's shares in which would almost certainly be purchased by a willing buyer for continued operation and not for liquidation or other asset disposition. For purposes of valuation, Dunn Equipment is easily distinguishable from true asset-holding investment companies, which own properties for their own intrinsic, passive yield and appreciation ---- securities, timberland, mineral royalties, collectibles, and the like. For the Tax Court here to employ a valuation method that, in its penultimate step of crafting a weighting ratio assigns only one- third weight to this operating company's income-based value, defies reason and makes no economic sense.(34) Our conclusion is all the more unavoidable when viewed in the light of the Tax Court's disregard of the ubiquitous factor of dividend paying capacity ---- in this case, zero ---- which, if applied under customarily employed weighting methods, would further dilute the weight of the asset-value factor and reduce the overall value of the Corporation as well. The same can be said for the effect on cash flow of the underpayment of officers' compensation.

When we review the objective, factual record in this case ---- which is all that remained for the Tax Court to rely on after it disregarded most expert testimony ---- we are left with the definite impression that an error was committed at the weighting step of the method employed here. This review also mandates that something between zero and a small percentage of weight be assigned to the Corporation's asset-based value, and that the remainder of the weight be assigned to its earnings-based value. Under different circumstances, we might be inclined to remand for the Tax Court to make another try at assigning relative weights and constructing a reasonable ratio. Given the state of the record and the seven-plus years that this case has languished in the courts (over a year now in ours), such a remand, coupled with its potential for yet another appeal, militates against sending this particular issue back to the Tax Court. After all, the record of this case, free as it is of credibility calls and genuine disputes of material fact between the parties (other than as to their experts) places us in exactly the same methodological vantage point as the Tax Court when it comes to assigning relative weights to the results of the valuation approaches employed. This is true regardless of whether that assignment be labeled a question of law or a mixed question of fact and law.

Tempting as it is to follow the implication of the Tax Court's rhetorical question and disregard the asset-based value altogether, we remain cognizant of the venerable Cohan(35) rule, which counsels against assigning a zero value or probability to anything under any circumstances, and therefore resist that temptation. Recognizing the impossibility of ever making an absolutely precise and universally accepted determination of weighting percentages,(36) we nevertheless hold that the proper method of valuing the stock of Dunn Equipment, under all the relevant
circumstances and discrete facts of this case (not the least of which is the "unlikelihood" of liquidation of its assets), requires assigning a weight to its earnings-based value somewhere between 75% and 90%, and to its asset-based value somewhere between 10% and 25%. Within these ranges we select 85% for the earnings-based weight and 15% for the asset-based weight, producing a 85:15 weighting ratio.

III. Conclusion

The Tax Court calculated Dunn Equipment's earnings-based value before discount at $1,321,740, and the Estate does not appeal that determination. Therefore, on remand the Tax Court shall give the results of that approach a weight of 85% in computing the Corporation's value. In contrast, the asset-based value, to which a weight of 15% shall be given, must be recalculated by the Tax Court by applying to the previously determined market value of the Corporation's assets, a reduction equal to 34% of those assets' built-in taxable gains. After thus recalculating the Corporation's asset-based value and computing the pre-discount value of the Corporation by application of this 85:15 ratio, the Tax Court shall then reduce the Estate's 62.96% ratable portion of that value by 22.5% for lack of marketability and lack of super-majority control, pursuant to the unappealed discount methodology originally selected by the Tax Court.

With the correct value of the Estate's block of stock in Dunn Equipment thus determined, the court shall recalculate (or the parties shall stipulate) the correct estate tax liability for Decedent's Estate. This will enable the court to enter an appropriate final judgment to account for the Estate's overpayment of taxes as well as interest and any other relevant factors.

Finally, given the Commissioner's delays in issuing his notice of deficiency and his extreme and unjustifiable trial position in advocating a valuation based entirely on asset value (with no reduction for built-in tax liability and no weight given to income-based value), exacerbated by his failure to adduce expert appraisal testimony in support of his own exorbitant proposed value, the Tax Court shall entertain any claim that the Estate might elect to assert under I.R.C. § 7430, if perchance the re- valuation of the Decedent's block of Dunn Equipment's stock should reduce the net worth of the Estate to a sum below the $2 million cap on entitlement to relief under that section. (37)

REVERSED and REMANDED, with instructions.

1. If need be, this figure can be fine tuned on remand to reconcile the slight discrepancy between the Tax Court's figure and that of the Estate.

2. $8,278,342 according to the Tax Court; $8,268,345 according to the Commissioner's appellate brief.

3. We do not refer here to the testimony and documents submitted by the opposing parties' dueling experts as being uncontested. The Commissioner contested the methodology of the Estate's expert appraisers, and the Estate took issue with the assertions of the Commissioner's accounting (not appraisal) expert; but the Tax Court was not required to credit such testimony and in fact disregarded or disagreed with much of it from both camps. Like the Tax Court, we are not bound to rely on expert testimony proffered by the Estate or the Commissioner.

4. Dunn v. Comm'r, 79 T.C.M. (CCH) 1337, 1339 (2000).

5. Id. at 1340 (citing Tex. Bus. Corp. Act Ann. art 6.03 (West 1991)).

6. Although not mentioned by the court, we speculate that the specter of incurring a 34% tax on the multimillion dollar amount by which the selling price of the assets in liquidation would have exceeded the Corporation's basis for tax purposes was also a deterrent to liquidation.

7. The taxable gain on any sale of used heavy equipment presumably would result from reduction in basis produced by substantial depreciation deductions previously taken, not from appreciation in value of these assets, as age, use, and obsolescence generally produce sales prices for such used equipment substantially below its original cost.

8. The Estate's expert proffered the use of a capitalization-of-earnings rather than a capitalization-of-net-cash-flow approach to an earnings- based valuation, but the results of these two methods produced similar results, and the Estate does not press the issue on appeal.

9. We note in passing that the court did not include dividend-paying capacity as a factor despite its customary inclusion in multifaceted valuation methodology for closely held corporations. See, e.g., Rev. Rul. 59-60, 1959-1 C.B. 237, § 4.01(e) (1959). Although factoring in a "zero" dividend-paying capacity would have further reduced the value of Dunn Equipment, the Estate has not complained to us of that omission so we do not examine it as a possible error in the valuation methodology employed by the Tax Court.

10. Dunn, 79 T.C.M. (CCH) at 1340.

11. For over 40 years, Rev. Rul. 59-60 has counseled against assigning finite percentages to relative weights of the various valuation methods employed by appraisers of stock in closely held businesses; yet that admonition is largely honored in its breach ---- as exemplified by both the Tax Court and the Estate's appraiser in this case.

12. Neither has the Estate contested the Tax Court's finding of the market value of the Corporation's assets, before discount for built-in tax liability, of $8,278,342.

13. See, e.g., McIngvale v. Comm'r, 936 F.2d 833, 836 (5th Cir. 1991).

14. In re T-H New Orleans, Ltd. P'ship, 116 F.3d 790, 799 (5th Cir. 1997).

15. Estate of Palmer v. Comm'r, 839 F.2d 420, 423 (8th Cir. 1988)(citing Powers v. Comm'r, 312 U.S. 259, 260 (1941))("The ultimate determination of fair market value is a finding of fact. ... The question of what criteria should be used to determine value is a question of law subject to de novo review.").

16. See Dunn, 79 T.C.M. (CCH) at 1338.

17. Dunn, 79 T.C.M. (CCH) at 1339.

18. United States v. Cartwright, 411 U.S. 546, 551 (1973)(quoting Treas. Reg. § 20.2031-1(b)).

19. See Shannon P. Pratt et al., Valuing a Business: The Analysis and Appraisal of Closely Held Companies 45 (4th ed. 2000) [hereinafter Valuing a Business].

20. See Treas. Reg. § 20.2031-2(f); see also Rev. Rul. 59-60, 1959-1 C.B. 237, § 4.01.

21. Dunn, 79 T.C.M. (CCH) at 1338 (emphasis added).

22. Id. at 1344, n.9 (referring in its analysis to I.R.C. §§ 1245, 11, and 1201).

23. This is easily illustrated by a simplified example: Buyer B wants an assemblage of assets identical to Corporation C's assets. Those assets are worth $1 million on the open market but are depreciated on C's books to a tax basis of $500,000. B has two options: (1) He can buy the assets from C for $1 million and depreciate them to zero over, e.g., seven years (or buy them on the open market and have the same cash flow and tax experience), leaving C to pay its own 34% tax ($170,000) on its gain; or (2) he can buy C's stock, get no depreciation deductions other than, at the corporate level, to the extent the assets are further depreciable, and have a 34% built-in corporate tax liability at sale of the assets. Surely a buyer of the stock rather than the assets would insist on a price reduction to account for the full amount of the built-in gain tax and the loss of the depreciation opportunity.

24. Pratt et al., Valuing a Business, at 47 ("[T]ax consequences of ownership and/or transfer of stock ... usually are quite different from those of ownership and/or transfer of direct investment in underlying assets. These tax implication often have a significant bearing on value.").

25. Id. at 34 ("[I]f valuing a minority ownership interest, one would normally adopt the premise of 'business as usual...."). Compare id. at 443 ("[T]he asset-based approach tends to be more appropriate when valuing a controlling ownership interest than a noncontrolling ownership interest.") . The Decedent's non-supermajority interest is a hybrid, somewhere between minority and full control, so neither approach trumps the other totally.

26. Estate of Jameson v. Comm'r. 267 F.3d 366, 372 (5th Cir. 2001).

27. We observe a slight discrepancy between the amount of the built-in gain mentioned by the Tax Court in its opinion ($7,109,000) and the gain referred to in the Estate's appellate brief ($7,117,638) to which a 34% tax should be applied. We are satisfied that this minor difference can be resolved by the court and the parties on remand or, alternatively, ignored on the maxim de minimis non curat lex, the net difference to the taxable value of the subject block of stock being roughly $1,200.

28. The likelihood of liquidation is also taken into account in another way, albeit indirectly and implicitly: in the court's assignment of a 7.5% discount to the Decedent's block of Dunn Equipment stock for lack of
supermajority control. For it is liquidation that, absent supermajority, the operational majority stockholder alone cannot force. Thus this discount is grounded in inter alia, the block's inability to make liquidation happen.

29. Dunn, 79 T.C.M. (CCH) at 1339 (emphasis added).

30. Id.

31. Id. at 1340 (boldface ours).

32. See Tex. Bus. Corp. Act Ann. art. 6.03 (Vernon 1991).

33. Dunn, 79 T.C.M. (CCH) at 1340. The Tax Court nevertheless opined that the earnings value of the company appeared to be understated because the earnings projections are based on a low period in a cyclical business. We see this observation as clearly erroneous: Dunn Equipment's business and earnings had been flat for over 10 years ---- hardly a cycle ---- and nothing known to the Corporation or any hypothetical buyer as of the valuation date predicted any kind of sustained upturn in the foreseeable future. The Tax Court's belief, grounded in that erroneous analysis of the business cycle, that a hypothetical buyer and seller would give asset value added weight, is likewise clearly erroneous.

34. See e.g., B. F. Sturtevant Co. v. Comm'r, 75 F.2d 316, 324 (1st Cir. 1935)(holding that good business judgment must prevail, "and a failure or refusal to exercise that judgment constitutes an error of law").

35. Cohan v. Comm'r, 39 F.2d 540, 544 (2d Cir. 1930) (L. Hand, J.) ("But to allow nothing at all appears to us inconsistent....The amount may be trivial and unsatisfactory, but there was a basis for some allowance, and it was wrong to refuse any....").

36. Fomented in significant part by myriad valuation challenges instituted by the IRS over the past decades, a full-fledged profession of business appraisers, such as the American Society of Appraisers, has emerged, generating its own methodology and lexicon in the process; which in turn have contributed to the profession's respect and mystique. Because ---- absent an actual purchase and sale ---- valuing businesses, particularly closely held corporations, is not a pure science replete with precise formulae and susceptible of mechanical calculation but depends instead largely on subjective opinions, the writings and public pronouncements (including expert testimony) of these learned practitioners necessarily contain some vagaries, ambiguities, inexactitudes, caveats, and qualifications. It is not surprising therefore that from time to time disagreements of diametric proportion arise among these practitioners. As the methodology we employ today may well be viewed by some of these professionals as unsophisticated, dogmatic, overly simplistic, or just plain wrong, we consciously assume the risk of

incurring such criticism from the business appraisal community. In particular, we anticipate that some may find fault with (1) our insistence (like that of the Estate's expert) that, in the asset-based approach, the valuing of the Corporation's assets proceed on the assumption that the assets are sold; and (2) our determination that, in this case, the likelihood of liquidation or sale of essentially all assets be factored into the weighting of the results of the two valuation approaches and not be considered as an integral factor in valuing the Corporation under either of those approaches. In this regard, we observe that on the end of the methodology spectrum opposite oversimplification lies over-engineering.

37. See 28 U.S.C. § 2412(d)(1)(B); I.R.C. § 7430(c)(4)(ii).

Eisenberg v. Commissioner

Case name: Eisenberg v. Commissioner
Citation: 155 F.3d 50, 1998 U.S. App. LEXIS 20109
Date of decision: August 18, 1998
Country: US
State or Federal: Federal
State/Jurisdiction: 2nd Circuit
Court: United States Court of Appeals
Type of action: Estate and Gift Taxation
Judge: Carman
SIC: 6719 Offices of Holding Companies, NEC
NAICS: 551112 Offices of Other Holding Companies
472

Keywords: Fair market value (FMV)

Counsel: Martin A. Stoll, New York, New York, for Petitioner-Appellant.

David I. Pincus, Tax Division, Department of Justice, Washington D.C., (Loretta C. Argrett, Assistant Att. Gen., Tamara W. Ashford, Attorney), for Respondent-Appellee.

Judges: Winter, Jacobs, Carman

n1 Honorable Gregory W. Carman, Chief Judge of the United States Court of International Trade, sitting by designation.

Opnion by: Carman

BACKGROUND

n2 The facts set forth below are drawn from the August 8, 1996 Stipulation of Facts agreed to by the parties and adopted in the Tax Court's opinion and order.

Appellant, Irene Eisenberg, owned all 1,000 shares of the issued and outstanding common stock of Avenue N Realty Corporation (the Corporation), its only class of stock. The Corporation, a C corporation n3 for tax purposes during 1991, 1992 and 1993, the years in issue, was organized under the laws of the State of New York. The Corporation's only fixed asset was a commercial building located at 4901-4911 Avenue N, Brooklyn, New York, which it owned and leased to third parties. The Corporation's only active trade or business was the rental of the building. The Corporation did not have plans to liquidate, or to sell or distribute the building.

n3 A "C" corporation refers to a corporation governed by the tax rules contained in subchapter C of the Internal Revenue Code. See 26 U.S.C. ¡× ¡× 301-385 (1988). Although the Corporation made an election, effective January 1, 1987, to be treated as a subchapter S corporation, its election was revoked on January 1, 1989. Thereafter, the Corporation was a C corporation.

In 1991, 1992 and 1993 appellant gifted shares of the Corporation to her son and two grandchildren. When valuing the stock for gift tax purposes, appellant reduced the value of the stock by the full amount of the capital gains tax n4 that she would have incurred had the Corporation liquidated, or sold or distributed its fixed asset. Appellant computed the potential capital gains tax by assuming hypothetical annual sales of the property, and the parties stipulated to the amount of capital gains that would have been realized from the hypothetical sales. n5

n4 The capital gains tax consists of the aggregated Federal Income Tax, New York State Franchise Tax on Business Corporations, and New York City General Corporation Tax (collectively the capital gains tax).

n5 The parties agreed that on the first transfer date, the fair market value of the property was $ 600,000, and the fair market value of the stock was $ 517.20 per share. The property's adjusted basis was $ 69,500. A hypothetical sale of the property would have led to a capital gain of $ 530,500. On the second transfer date, the fair market value of the property was $ 470,000, and the fair market value of the stock was $ 356.71 per share. The property's adjusted basis was $ 67,906. A hypothetical sale of the property would have led to a capital gain of $ 402,094. On the third transfer date, the fair market value of the property was $ 470,000, and the fair market value of the stock was $ 341.77 per share. The property's adjusted basis was $ 67,108. A hypothetical sale of the property would have led to a capital gain of $ 402,892. See Joint App. at A-25, A-27.

On July 18, 1995, appellant received a notice of deficiency from the Commissioner identifying deficiencies in gift tax of $ 20,157.99, $ 38,257.15 and $ 3,319.55 for the years 1991, 1992 and 1993, respectively. The deficiencies were based solely on the Commissioner's determination that the values reported on appellant's tax return should not have included reductions in the stock's value to account for potential capital gains tax liabilities. On September 5, 1995, appellant filed a petition in the United States Tax Court contesting the Commissioner's determination she was not entitled on her federal tax returns to reduce the fair market value of the gifted stock by the amount of capital gains tax the Corporation would have incurred if it were to liquidate, or to distribute or sell its commercial building.

The parties filed cross motions for summary judgment in August and September, 1996. The parties agreed that the net- asset-value method n6 was appropriate for valuing the gifted stock in this case, stipulated to a 25% minority discount, n7 agreed on the fair market value of the property and agreed on the valuation of the shares of stock as reported on petitioner's gift tax returns. The only issue between the parties, therefore, was the valuation reduction for the capital gains tax liabilities. n8

n6 Under the traditional "net asset value" method, the value of the underlying corporation is considered to be equal to the difference of the fair market value of the corporation's assets and its liabilities. See Andrews v. Commissioner, 1976 T.C. Memo 106, 35 T.C.M. (CCH) 459, 463 (1976).

n7 A minority discount reflects the lower value of minority shares due to the minority shareholder's inability to influence corporate decisions, such as a liquidation or the sale or distribution of the property.

n8 The valuation reduction for unrealized capital gains is the reduction claimed by the appellant with respect to each transfer date for the aggregated Federal Income Tax, New York State Franchise Tax on Business Corporations, and New York City General Corporation Tax.

On October 27, 1997, the Tax Court granted appellee's motion for summary judgment and denied appellant's motion, holding appellant was not entitled on her federal tax returns to reduce the fair market value of the shares of stock she gifted to her relatives by the amount of capital gains tax the Corporation would incur if it were to liquidate, or to sell or distribute its sole asset. The Tax Court held firmly-established precedent dictated no reduction in the value of closely held stock may be taken to reflect the potential capital gains tax liability where evidence fails to establish a liquidation or sale of the corporation or its assets is likely to occur, reasoning the tax liability is purely speculative. The Tax Court also found there was no showing that a hypothetical buyer would purchase the Corporation with a view toward liquidating the Corporation or selling its asset, such that the potential tax liability would be considered a material or significant concern.

On October 31, 1997, the Tax Court entered an order and decision finding deficiencies in gift tax due from appellant for the taxable years 1991, 1992 and 1993 in the amounts of $ 20,157.99, $ 38,257.15 and $ 3,319.55, respectively. Appellant challenges this order and decision.

This Court must decide whether, for gift tax purposes, appellant is entitled to reduce the fair market value of her C corporation stock to take into account potential capital gains tax liabilities that may be incurred if the Corporation liquidated, or distributed or sold its sole asset where no liquidation, sale or distribution was contemplated as of the stock transfer dates.

DISCUSSION

We review de novo a grant of summary judgment. Summary judgment is properly granted where no genuine issue of material fact exists and the movant is entitled to judgment as a matter of law. See, e.g., Briones v. Runyon, 101 F.3d 287, 291 (2d Cir. 1996). This Court has jurisdiction pursuant to 26 U.S.C. ¡× 7482(a)(1) (1994) and 28 U.S.C. ¡× 2106 (1994).

Section 2501 of the Internal Revenue Code imposes a gift tax "on the transfer of property by gift during [the] calendar year by any individual." 26 U.S.C. ¡× 2501(a)(1) (1988). Section 2512(a), which addresses the valuation of gifts, states, "if the gift is made in property, the value thereof at the date of the gift shall be considered the amount of the gift." 26 U.S.C. ¡× 2512(a) (1988). In interpreting this provision, section 25.2512-1 of the Treasury Regulations on gift tax provides, "the value of the property is the price at

which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." 26 C.F.R. ¡× 25.2512-1 (1992).

The value of a gift on which a tax is paid is generally determined by ascertaining the fair market value of the property at the time the gift is transferred. Where, as here, the gift is stock, its value for gift tax purposes is the fair market value of the stock on the date of the transfer, and "all relevant facts and elements of value as of the time of the gift shall be considered." 26 C.F.R. ¡× 25.2512-1 (1992). For publicly traded stock, valuation can generally be based on market selling prices. See 26 C.F.R. ¡× 25.2512-2(b) (1992). For closely held corporations, such as Avenue N, for which there is no public trading market, valuation of stock is based on of a variety of factors. n9 In this case, the parties stipulated to the fair market value of the property and the shares of stock on each of the transfer dates. See supra, note 5.

> n9 Revenue Ruling 59-60 outlines the general approach, methods and factors to be considered in valuing the shares of stock of closely held corporations for estate and gift tax purposes. The ruling states:
>
> 3.01. A determination of fair market value, being a question of fact, will depend upon the circumstances in each case. No formula can be devised that will be generally applicable to the multitude of different valuation issues arising in estate and gift tax cases. ... A sound valuation will be based upon all the relevant facts, but the elements of common sense, informed judgment and reasonableness must enter into the process of weighing those facts and determining their aggregate significance.
>
> Rev. Rul. 59-60, 1959-1 C.B. 237, 238.

Valuation Reduction for Unrealized Capital Gains

The Tax Court has consistently held, in valuing closely held stock using the net asset value method, that a special reduction of the value of the stock for potential capital gains tax liabilities at the corporate level is unwarranted where there is no evidence that a tax-triggering event, such as a liquidation or sale of the corporation's assets, is likely to occur. See, e.g., Ward v. Commissioner, 87 T.C. 78, 103-04 (1986) (finding when liquidation only speculative, costs of selling real estate and taxes that would be recognized upon liquidation not taken into account); Estate of Piper v. Commissioner, 72 T.C. 1062, 1087 (1979) (determining no discount for potential capital gains tax at corporate level where there is no evidence a liquidation of the investment companies was planned or could not have been accomplished without incurring capital gains taxes at corporate level); Estate of Cruikshank v. Commissioner, 9 T.C. 162, 165 (1947) (finding tax on appreciation to be "hypothetical and supposititious" because there was no demonstrated intent to liquidate assets, and in any case, liquidation could occur without taxing the corporation).

In the past, the denial of a reduction for potential capital gains tax liability was based, in part, on the possibility that the taxes could be avoided by liquidating the corporation. The law in this area, embodied in the Internal Revenue Code of 1954, was loosely based on the Supreme Court decision in General Utilities & Operating Co. v. Helvering, 296 U.S. 200, 80 L. Ed. 154, 56 S. Ct. 185 (1935), which held that a corporation did not recognize gain on a dividend distribution of appreciated property. Id. at 206. The General Utilities doctrine operated as an exception to the double taxation that applied to C corporations and their shareholders, i.e., taxation once at the corporate level and a second time at the shareholder level upon the distribution of corporate earnings to shareholders. See United States v. Cumberland Pub. Serv. Co., 338 U.S. 451, 452 n.2, 455, 94 L. Ed. 251, 70 S. Ct. 280 (1950) (finding "no gain or loss is realized by a corporation from the mere distribution of its assets in kind in partial or complete liquidation, however they may have appreciated or depreciated in value since their acquisition" and finding "a corporation may liquidate or dissolve without subjecting itself to the corporate gains tax, even though a primary motive is to avoid the burden of corporate taxation"). By employing the General Utilities doctrine, a corporation could liquidate and distribute appreciated or depreciated property to its shareholders without recognizing built-in gain or loss, and thus could circumvent double taxation. See 26 U.S.C. ¡× ¡× 311, 336, 337 (1958). n10

n10 Section 311 provided:

311. Taxability of corporation on distribution.

(a) General rule.

Except as provided in subsections (b) and (c) of this section and section 453(d), no gain or loss shall be recognized to a corporation on the distribution, with respect to its stock, of-

(1) its stock (or rights to acquire its stock), or

(2) property.

26 U.S.C. ¡× 311(a) (1958). Section 336 provided:

336. General rule.

Except as provided in section 453(d) (relating to disposition of installment obligations), no gain or loss shall be recognized to a corporation on the distribution of property in partial or complete liquidation.

26 U.S.C. ¡× 336 (1958). Section 337 provided:

337. Gain or loss on sales or exchanges in connection with certain liquidations.

General rule.

If-

(1) a corporation adopts a plan of complete liquidation on or after June 22, 1954, and

> (2) within the 12-month period beginning on the date of the adoption of such plan, all of the assets of the corporation are distributed in complete liquidation, less assets retained to meet claims,
>
> then no gain or loss shall be recognized to such corporation from the sale or exchange by it of property within such 12-month period.
>
> 26 U.S.C. ¡× 337(a) (1958).

Tax Reform Act of 1986

These tax-favorable options ended with the enactment of the Tax Reform Act of 1986 (TRA), Pub. L. No. 99-514, ¡× 631, 100 Stat. 2085, 2269 (codified as amended in scattered sections of 26 U.S.C.), which abrogated the General Utilities doctrine for liquidations after 1986 and rejected tax principles that were more than half a century old. n11 The TRA removed a corporation's ability to avoid recognition of a gain on the distribution of appreciated property to its shareholders, irrespective of whether the gain occurred in a liquidating or nonliquidating context. n12 The TRA's abrogation of the General Utilities doctrine reflected an effort to preserve the integrity of the system of double taxation of corporate gain. n13 See H.R. Conf. Rep. No. 99-841, at 204 (1986), reprinted in 1986 U.S.C.C.A.N. 4075, 4292.

> n11 In addition to several explicit statutory exceptions, Congress created more and more exceptions to the general rule of non-recognition, especially with respect to gains on non-liquidating distributions of appreciated property. See Boris I. Bittker and James S. Eustice, Federal Income Taxation of Corporations and Shareholders, ¡× ¡× 8.20, 8.21 (6th ed. 1998) (hereinafter Bittker) for further discussion of the legislative repeal of the General Utilities doctrine.
>
> n12 A liquidating distribution is a distribution by a corporation that is in complete liquidation of the entity's trade or business activities. A nonliquidating distribution is a payment made by a corporation to the entity's owner(s) when the entity's legal existence does not cease thereafter.
>
> n13 Congress offered this rationale:
>
> The General Utilities rule tends to undermine the corporate income tax. Under normally applicable tax principles, nonrecognition of gain is available only if the transferee takes a carryover basis in the transferred property, thus assuring that a tax will eventually be collected on the appreciation. Where the General Utilities rule applies, assets generally are permitted to leave corporate solution and to take a stepped-up basis in the hands of the transferee without the imposition of a corporate-level tax. Thus, the effect of the rule is to grant a permanent exemption from the corporate income tax.
>
> Bitter, supra note 11, at ¡× 8.20 quoting H.R. Rep. No. 99-426, at 282 (1985) (footnote omitted)). Bittker notes the report also asserted that a pre-1986 discrepancy between the treatment of liquidating and nonliquidating distributions may have artificially encouraged corporate mergers and acquisitions, despite economic reasons for a different course of action. Id. at note 319.

The TRA amended 26 U.S.C. ¡× ¡× 336, 337 and 311 and added new provisions 26 U.S.C. ¡× ¡× 311(b) and 336(a) to provide for the corporate level recognition of gain on distributions or sales of appreciated property. Section 336(a), relating to complete liquidations, provides for the recognition of gain or loss to a corporation on the distribution of property in complete liquidation as if the property were sold at its fair market value. The statute states:

(a) General Rule

Except as otherwise provided in this section or section 337, gain or loss shall be recognized to a liquidating corporation on the distribution of property in complete liquidation as if such property were sold to the distributee at its fair market value.

26 U.S.C. ¡× 336(a) (1988). The statutory rule is subject to only a few exceptions and abrogates the General Utilities doctrine.

Section 311(b), relating to nonliquidating distributions, requires a corporation to recognize gain on nonliquidating distributions of appreciated property as if the corporation had sold the property for its fair market value except as to distributions in tax-free reorganizations and similar transactions. See Boris I. Bittker and James S. Eustice, Federal Income Taxation of Corporations and Shareholders, ¡× 8.21 (6th ed. 1998). The statute specifically states:

(b) Distributions of appreciated property

(1) In general

If-

(A) a corporation distributes property (other than an obligation of such corporation) to a shareholder in a distribution to which subpart A applies, and

(B) the fair market value of such property exceeds its adjusted basis (in the hands of the distributing corporation),

then gain shall be recognized to the distributing corporation as if such property were sold to the distributee at its fair market value.

26 U.S.C. ¡× 311(b) (1988).

Since it is a virtual certainty that capital gains tax will ultimately be realized in this case due to the changes brought about by the TRA, n14 the question before us is whether we agree with the reasoning of the Tax Court that the capital gains tax liability is too speculative to be valued as of the date of the gift where no liquidation, sale or distribution of the Corporation was planned.

> n14 Exceptions exist but they do not apply to the facts of this case. For example, a subchapter C corporation can avoid recognition of gain if the corporation converts to a subchapter S corporation and retains the assets for a period of ten years. See generally 26 U.S.C. ¡× ¡× 1374, 1374(d)(7) (1988). If a corporation is eligible for a subchapter S election, therefore, a technique does exist for avoiding recognition of gain. See, id.

Nevertheless, where there was no evidence of intent by a subchapter C corporation to convert to a subchapter S corporation, the Tax Court rejected the likelihood that a subchapter S election would be implemented. Estate of Davis v. Commissioner, 1998 U.S. Tax Ct. LEXIS 35, Daily Tax Report (BNA) No. 126, at K-12, K-19 (T.C. June 30, 1998). In Estate of Davis, the Court rejected the respondent's assumptions that the corporation could have avoided all built-in capital gains tax by having it elect S corporation status and by not permitting it to sell any of its assets for ten years where the record did not indicate it was likely the corporation would have converted to an S corporation and where the record did not establish that there was any other way as of the valuation date by which the corporation could have avoided the tax. Id.

In addition to a ten-year holding period possibly to avoid potential capital gains tax liability, an S corporation election may present other cumbersome consequences. See 26 U.S.C. ¡× 469 (limiting passive activity losses for active participation in a rental activity to a maximum of $ 25,000 per year related to the rental real estate and phasing out deduction for passive activity loss as the taxpayer's adjusted gross income reaches certain levels).

In any event, the practical remoteness of a subchapter C corporation converting to a subchapter S corporation and holding the assets for ten years would seem to be a matter that could easily be taken into account by those valuing the gift for gift tax purposes.

Appellant could also defer gain recognition indefinitely by having the Corporation retain the property and continue leasing it to third parties. This option, however, would not eliminate the fact that gain will be triggered by a sale or distribution in liquidation of the corporate property. The Corporation's sale of the property on any of the transfer dates (and on any future date) would produce gain to the Corporation under 26 U.S.C. ¡× 1001, which would subject the Corporation to taxes on the existing gain either in the year of sale, over a deferred period of years or both, depending on the terms of the sale. The Corporation's distribution of the property to its shareholders not in complete liquidation would also result in recognized gain to the Corporation under 26 U.S.C. ¡× 311(b), which would subject the Corporation to taxes on the existing gain in the year of the distribution. The Corporation's distribution of the property to its shareholders in complete liquidation would also result in recognized gain to the Corporation under 26 U.S.C. ¡× 336(a), which would subject the Corporation to taxes on the existing gain in the year of the distribution.

Determining Fair Market Value for Gift Tax Purposes

Appellant argues as a result of the abrogation of the General Utilities doctrine, Avenue N Realty Corporation cannot avoid the capital gains tax liability on the property and no willing buyer of the Corporation's stock would pay an amount that did not take into account a reduction in the stock's value for the amount of the potential capital gains tax. Appellant contends the cases relied upon by the appellee and the Tax Court have lost their vitality as a result of the TRA and argues any hypothetical willing buyer would likely reduce the purchase price by the tax, thereby justifying a discount for the built-in gain.

Appellee argues a hypothetical willing buyer still has the option of avoiding the imposition of capital gains tax through the purchase of corporate stock and the continuation of the business by leasing the property in question through the corporate form. Appellee also argues based upon the undisputed fact that Avenue N did not have a plan to liquidate, or to distribute or sell the appreciated building, appellant is not entitled to reduce the value of the corporate stock for gift tax purposes based on a purely speculative and uncertain event. Appellee maintains even if it were certain a hypothetical buyer would eventually cause the corporate level capital gains tax to be triggered, the amount of the eventual tax is too speculative to take into account because it would be impossible to determine currently when the tax-triggering event would take place and thus, what the capital gains tax rate would be. Appellee additionally maintains it cannot be known what the value of the property would be when the recognizing event occurs and whether the sale or distribution would result in a gain or loss.

We disagree with appellee's arguments and find appellant's contentions to be more persuasive. Appellee's argument that the best and most likely uses of the property are to continue indefinitely its current use or to make a subchapter S election are not supported by the evidence presented to us. Appellee cites numerous cases addressing the impact of contingent tax liability on fair market value, but the valuation dates in those cases precede the abrogation of the General Utilities doctrine, when corporations could still distribute appreciated assets to shareholders without an additional tax at the corporate level. See, e.g, Estate of Andrews v. Commissioner, 79 T.C. 938, 942 (1982); Estate of Piper, 72 T.C. at 1086-87; Estate of Cruikshank, 9 T.C. at 165.

While appellee argues that prior to the enactment of the TRA, courts disallowed discounts for contingent tax liability because they considered the tax liability to be too speculative, many courts also based their decisions on the ability of the corporation to avoid the corporate taxes altogether. See Estate of Piper, 72 T.C. at 1087 (disallowing a discount for potential capital gains tax at the corporate level where there was no evidence that a liquidation was planned or that it could not have been accomplished without incurring capital gains taxes at the corporate level and citing pre-TRA sections of the Code which allowed avoidance of capital gains taxes at the corporate level); Gallun v. Commissioner, 1974 T.C. Memo 284, 33 T.C.M. (CCH) 1316, 1321 (1974) (disallowing a discount because court found record did not establish management had any immediate plans to liquidate and that it was possible "that the management at some time in the future may dispose of certain or all of the investment assets without incurring a capital gains tax"); Estate of Cruikshank, 9 T.C. at 165 (disallowing a discount as based on "hypothetical and supposititious" tax liability since there was no demonstrated intent to liquidate assets, and, in any case, there could be a liquidation without tax at the corporate level). Now that the TRA has effectively closed the option to avoid capital gains tax at the corporate level, reliance on these cases in the post-TRA environment should, in our view, no longer continue.

As stated above, 26 U.S.C. ¡× ¡× 2501(a)(1) and 2512(a) impose a gift tax on property measured by the value of the property at the time of the gift. In this case, the parties agreed on the fair market value of the property and the shares of stock on the three transfer dates, but disagreed on the issue of whether, in determining the Federal gift tax value of the stock, a discount for the unrealized capital gains tax liability should reduce the fair market value. Fair market value is based on a hypothetical transaction between a willing buyer and a willing seller, and in applying this willing buyer-willing seller rule, "the potential transaction is to be analyzed from the viewpoint of a hypothetical buyer whose only goal is to maximize his advantage. ... Courts may not permit the positing of transactions which are unlikely and plainly contrary to the economic interest of a hypothetical buyer...." Estate of Curry v. United States, 706

F.2d 1424, 1428-29 (7th Cir. 1983) (citations omitted). Our concern in this case is not whether or when the donees will sell, distribute or liquidate the property at issue, but what a hypothetical buyer would take into account in computing fair market value of the stock. We believe it is common business practice and not mere speculation to conclude a hypothetical willing buyer, having reasonable knowledge of the relevant facts, would take some account of the tax consequences of contingent built-in capital gains on the sole asset of the Corporation at issue in making a sound valuation of the property.

We disagree with the Commissioner's reasoning that the critical point in this case is that there was no indication a liquidation was imminent or that "a hypothetical willing buyer would desire to purchase the stock with the view toward liquidating the corporation or selling the assets, such that the potential tax liability would be of material and significant concern." Eisenberg v. Commissioner, 1997 Tax Ct. Memo LEXIS 567, 74 T.C.M. (CCH) 1046, 1048-49, 1997 T.C. Memo 483 (1997). The issue is not what a hypothetical willing buyer plans to do with the property, but what considerations affect the fair market value of the property he considers buying. While prior to the TRA any buyer of a corporation's stock could avoid potential built-in capital gains tax, there is simply no evidence to dispute the fact that a hypothetical willing buyer today would likely pay less for the shares of a corporation because of the buyer's inability to eliminate the contingent tax liability. See John Gilbert, After the Repeal of General Utilities: Business Valuations and Contingent Income Taxes on Appreciated Assets, Mont. Law, Nov. 1995, at 5 (citing a 1994 study that analyzed the impact of contingent tax liability on a buyer of a private, closely-held corporation and concluded a large majority of buyers would discount the stock and negotiate a lower purchase price due to the existence of a contingent tax liability on the corporation's appreciated property).

A recent decision issued by the Tax Court further supports our reasoning in this case. In Estate of Davis, which examines whether to discount the value of stock to account for the corporation's built-in capital gains tax, both petitioner's and respondent's experts recommended the built-in capital gains tax be taken into account as a factor in ascertaining the fair market value of the stock in question, even though no liquidation of the corporation or sale of its assets was planned. See Estate of Davis v. Commissioner, 1998 U.S. Tax Ct. LEXIS 35, Daily Tax Report (BNA) No. 126, at K-17 (T.C. June 30, 1998). The Tax Court "rejected respondent's position that, as a matter of law, no discount or adjustment attributable to [the corporation's] built-in capital gains tax is allowable," id. at K-18, and noted the cases relied on by respondent involved valuation dates that preceded the abrogation of the General Utilities doctrine. The Court found even the respondent acknowledged that irrespective of whether a liquidation of the corporation or a sale of its assets was contemplated on the valuation date, "some reduction in value would be appropriate if, in fact, avoidance of a corporate level gains tax was not available." Id. (quotations omitted). The Court stated:

We are convinced on the record in this case, and we find, that, even though no liquidation of [the corporation] or sale of its assets was planned or contemplated on the valuation date, a hypothetical willing seller and a hypothetical willing buyer would not have agreed on that date on a price for each of the blocks of stock in question that took no account of [the corporation's] built-in capital gains tax. We are also persuaded on that record, and we find, that such a willing seller and such a willing buyer of each of the two blocks of [the corporation's] stock at issue would have agreed on a price on the valuation date at which each such block would have changed hands that was less than the price that

they would have agreed upon if there had been no ... built-in capital gains tax as of that date. ... We have found nothing in the ... cases on which respondent relies that requires us, as a matter of law, to alter our view. ...

Id. at K-19 (citations omitted). The Court allowed a discount for the built-in capital gains tax because "that is what a hypothetical willing seller and a hypothetical willing buyer would have done." Id. at K-20. n15

> n15 An example set forth in Bittker also illustrates this point. In the example, A owns 100% of the stock of X corporation, which owns one asset, a machine with a value of $ 1,000 and a basis of $ 200. Bittker assumes a 25% tax rate and points out that if X sells the machine to Z for $ 1,000, X will pay tax of $ 200 on the $ 800 gain. Bittker adds that if Z buys the stock for $ 1,000 "on the mistaken theory that the stock is worth the value of the corporate assets," Z will have lost $ 200 economically "because it paid too much for the stock, failing to account for the built-in tax liability (which can be viewed as the potential tax on disposition of the machine, or as the potential loss from lack of depreciation on $ 800 [of] basis that Z will not enjoy)." Bittker, supra Note 11, at ¡× 10.41[4]. Because of Z's loss, Bittker concludes, "Z will want to pay only $ 800 for the stock, in which event A will have effectively 'paid' the $ 200 built-in gains tax." Id. One might conclude from this example that the full amount of the potential capital gains tax should be subtracted from what would otherwise be the fair market value of the real estate. This would not be a correct conclusion. In this case, we are only addressing how potential tax consequences-the capital gains tax- may affect the fair market value of the shares of stock appellant gifted to her relatives in contrast to the fair market value of the real estate.

Further, we believe, contrary to the opinion of the Tax Court, since the General Utilities doctrine has been revoked by statute, a tax liability upon liquidation or sale for built-in capital gains is not too speculative in this case. Courts previously have allowed discounts for built-in capital gains if, among other factors, payment of tax on a capital gain is likely. See, e.g., Obermer v. United States, 238 F. Supp. 29, 34-36 (D. Haw. 1964) (finding expert testimony showed built-in capital gains tax would necessarily adversely affect value of stock at issue to willing buyer, and in allowing discount, contrasted the facts with Estate of Cruikshank, 9 T.C. 162, a case relied on by appellee); see generally Clark v. United States, 1975 U.S. Dist. LEXIS 12312, No. 1309, 1309, 1975 WL 610, at 4, 5 (E.D.N.C. May 16, 1975) (stating a well-informed willing buyer of stock in corporation would consider that underlying assets of corporation included inactive investment portfolio that, upon liquidation, would incur substantial capital gains tax liability).

Although the Tax Court in this case held that "the primary reason for disallowing a discount for capital gains taxes in this situation is that the tax liability itself is deemed to be speculative," Eisenberg, 74 T.C.M. (CCH) at 1048, we disagree. We believe that an adjustment for potential capital gains tax liabilities should be taken into account in valuing the stock at issue in the closely held C corporation even though no liquidation or sale of the Corporation or its assets was planned at the time of the gift of the stock. We therefore remand this matter to the Tax Court to ascertain the gift tax to be paid by the taxpayer consistent with this opinion. n16

n16 Where there is a relatively sizable number of potential buyers who can avoid or defer the tax, the fair market value of the shares might well approach the pre-tax market value of the real estate. Potential buyers who could avoid or defer the tax would compete to purchase the shares, albeit in a market that would include similar real estate that was not owned by a corporation. However, where the number of potential buyers who can avoid or defer the tax is small, the fair market value of the shares might be only slightly above the value of the real estate net of taxes. In any event, all of these circumstances should be determined as a question of valuation for tax purposes.

CONCLUSION

For the reasons stated above, we vacate the order and decision of the Tax Court granting respondent's motion for summary judgment and denying petitioner's motion for summary judgment and remand this case to the Tax Court to determine the gift tax liability of the appellant-taxpayer consistent with this opinion.

ESTATE OF JAMES A. ELKINS, JR., DECEASED, MARGARET ELISE JOSEPH AND LESLIE KEITH SASSER, INDEPENDENT EXECUTORS, PETITIONERS *v*. COMMISSIONER OF INTERNAL REVENUE, RESPONDENT

Docket No. 16597–10. Filed March 11, 2013.

D owned undivided fractional interests in 64 works of contemporary art.

1. *Held*: In valuing certain of those fractional interests, pursuant to I.R.C. sec. 2703(a)(2) we disregard D's agreement by which he waived his right to institute a partition action with respect to some of the works of art and thereby relinquished an important use of his fractional interests in those works.

2. *Held*, *further*, the total fair market value of D's interests in the art determined. *See* I.R.C. sec. 2031.

Donald Frederick Wood, *J. Graham Kenney*, *Harry M. Reasoner*, *Stacey N. Vu*, and *Juliana D. Hunter*, for petitioners.

Warren P. Simonsen, *Sharyn M. Ortega*, and *Susan S. Hu*, for respondent.

HALPERN, *Judge*: By notice of deficiency issued to petitioners (notice), respondent determined an estate tax deficiency of $9,068,265. Petitioners (Ms. Sasser and Ms. Joseph) are the coexecutors of the Estate of James A. Elkins, Jr. (estate), and are decedent's daughters. Their brother, James A. Elkins III (James III), who was also a coexecutor of the estate, died on June 10, 2010, less than a month after respondent issued the notice, and will not be replaced as a

coexecutor. The issue to be decided is the total fair market value of decedent's undivided fractional interests in 64 works of art, which interests are includable in decedent's gross estate.

Unless otherwise indicated, all section references are to the Internal Revenue Code in effect for 2006, the year in which decedent died, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Residence

When they filed the petition, petitioners resided in Houston, Texas.

The Art

Decedent (sometimes, Mr. Elkins) and Mrs. Elkins purchased 64 works of art (sometimes, when referenced collectively, art) between 1970 and 1999. Mr. and Mrs. Elkins purchased all 64 works during their marriage. The art became community property under Texas law. The art principally consists of works of contemporary art. The collection includes works by a number of famous artists, including Pablo Picasso, Henry Moore, Jackson Pollock, Paul Cezanne, Jasper Johns, Ellsworth Kelly, Cy Twombly, Robert Motherwell, Sam Francis, and David Hockney. Both before and since decedent's death, on February 21, 2006 (valuation date), the art has been displayed primarily in decedent and Mrs. Elkins' family home and at the family office, both in Houston, Texas. Some works are at various other locations in the Houston area or, in one instance, Galveston, Texas. Those other locations are homes belonging to petitioners and to Virginia Arnold Elkins, the widow of James III. One work is on loan to the Museum of Fine Arts, Houston. None of the 64 works have been sold since decedent's death.

Creation of Fractional Interests in the Art

The GRIT Art

On July 13, 1990, Mr. and Mrs. Elkins each created a grantor retained income trust (GRIT) funded by each's undivided 50% interests in three of the works in the collection:

a large Henry Moore sculpture, a Pablo Picasso drawing, and a Jackson Pollock painting (GRIT art).[1] Each trust was for a 10-year period, during which the grantor retained the "use" of the transferred interests in the art. At the conclusion of the 10-year period, each grantor's interests were to go to the Elkinses' three children, which, in effect, would give them 100% ownership of the GRIT art, one-third each.

Mrs. Elkins died on May 19, 1999, before the expiration of the 10-year period of her GRIT. Pursuant to the terms of her GRIT, her 50% undivided interests in the GRIT art passed to Mr. Elkins. Because Mr. Elkins survived the 10-year term of his GRIT, his original 50% undivided interests in the GRIT art passed to his three children in equal shares so that each received 16.667% interests in the GRIT art. Decedent retained the 50% interests in the GRIT art that he received upon Mrs. Elkins' death, which constitute part of his gross estate.

Decedent and the Elkins children executed a lease agreement (art lease) covering two of the three works of GRIT art (the Picasso drawing and the Pollock painting), made effective "as of the 13th day of July, 2000" (the expiration date of decedent's GRIT). Under the art lease, the Elkins children leased their combined 50% interests in the two works to decedent, in effect allowing him to retain year-round possession of those works. There was an initial lease term, with automatic extensions, unless decedent opted out of an extension, which he never did. Section 10 of the art lease provides, in relevant part, as follows: "*Sale*. Lessors and Lessee each agrees not to sell his or her percentage interest in any item of the * * * [leased artwork] during the Initial Term or any Additional Term without the joinder of * * * [the parties to the art lease] for the purpose of selling the item * * * in its entirety." Section 13 states that the lease and the parties' "rights, duties and obligations" under it "may not be transferred or assigned" without the consent of all parties and that, subject to that restriction on assignment, the lease "shall be binding upon and inure to the benefit of Lessors and Lessee and their respective heirs, representatives, successor and assigns."

[1] Mr. and Mrs. Elkins partitioned their community property interests in the GRIT art before creating the GRITs.

The rent due under the lease was left blank in the original agreement and was not computed until May 16, 2006, when Deloitte LLP made a determination of the appropriate monthly rental for the two works. That determination resulted in a finding of rent due of $841,688 for the period from July 13, 2000, through the valuation date. The estate sought to deduct its payment of that amount to the Elkins children. On audit, the parties agreed to reduce the amount of that deduction to $10,000, the propriety of which is not at issue herein.

The Disclaimer Art

Under Mrs. Elkins' will, her 50% community property interests in the other 61 works of art passed outright to decedent. Mr. Elkins decided, however, to disclaim a portion of those interests equal in value to the unused unified credit against estate tax, *see* sec. 2010, available to Mrs. Elkins' estate so that the disclaimed portion could pass to the Elkins children free of estate tax. On the basis of appraisals obtained by Mrs. Elkins' estate, decedent disclaimed a 26.945% interest in each of the 61 works (disclaimer art). Pursuant to Mrs. Elkins' will, those fractional interests passed to the Elkins children, one-third each. As a result, each child received an 8.98167% interest in each item of the disclaimer art, and the balance, a 23.055% interest in each item, passed to decedent. Thus, decedent retained a 73.055% interest in each item of the disclaimer art (his original 50% interest plus the additional 23.055% interest received from Mrs. Elkins that he did not disclaim).

On February 14, 2000, shortly after decedent executed his partial disclaimer, decedent and the Elkins children entered into a "Cotenants' Agreement" (cotenants' or original cotenants' agreement) relating to the disclaimer art. In relevant part, the cotenants' agreement provides as follows:

> This Agreement is made as of the 25th day of February, 2000, by and among James A. Elkins, Jr., Margaret Elise Joseph, James A. Elkins, III and Leslie Keith Elkins (hereinafter referred to individually as "*Cotenant*" and collectively as "*Cotenants*"), all of Houston, Texas.
>
> WHEREAS, each Cotenant is the owner of an undivided interest in each item of property described in Exhibit A attached hereto and made a part hereof (hereinafter, all of such property or any part thereof shall be referred to as the "*Property*").

WHEREAS, Cotenants desire to clarify certain of their responsibilities and duties related to the use, possession and care of the Property.

NOW THEREFORE, in consideration of the above and of the mutual covenants contained herein, Cotetants hereby agree as follows:

1. Beginning on the date of this Agreement, each Cotenant shall have the right of possession, dominion, and control of each item of the Property for a total number of days out [of] a twelve month period that is equal to his or her percentage interest in such item times the number of days in such twelve month period. During a short calendar year, the number of days to which a Cotenant is entitled to possession, dominion and control of each item of the Property shall be prorated.

2. Each Cotenant, with respect to the exercise of his or her right of possession, dominion, and control, shall request possession of an item of the Property by giving 30 days' written notice of such request to the Cotenant in possession of such item. The notice shall specify the number of days to which such Cotenant is entitled to possession and the number of days remaining thereof during the twelve month period (or a fewer number of months for a short calendar year). In the event of a conflict among the Cotenants at any time as to which Cotenant is entitled to possession of an item of the Property, Cotenant James A. Elkins, Jr. shall determine which Cotenant is entitled to possession and the number of days remaining thereof.

3. The Cotenant requesting possession (the "Receiving Cotenant") of an item of the Property shall be responsible for arranging and paying for the transport of such item to the Receiving Cotenant's residence.

* * * * * * *

6. Each Cotenant shall be responsible, to the extent of his or her percentage interest in the Property, for the cost of maintaining and restoring the Property.

7. An item of the Property may only be sold with the unanimous consent of all of the Cotenants. Any net proceeds from the sale of such item shall be payable to the Cotenants in accordance with their respective percentage interests in the Property.

8. This Agreement shall be binding on Cotenants and on their respective heirs, personal representatives, successors and assigns.

9. This Agreement shall be governed and construed under the laws of the State of Texas.

After decedent's GRIT terminated on July 13, 2000, the parties to the cotenants' agreement amended it (amended cotenants' agreement or, when not differentiating between the original and amended agreements, cotenants' agreement), effective as of that date, by incorporating therein one of the three works of GRIT art (the large Henry Moore sculpture that was not included in the art lease). On February 17,

2006, the Elkins children signed the amended cotenants' agreement, both for themselves and (under a January 28, 2000, power of attorney) for decedent.

Decedent's Will

Decedent's will provides that his descendants inherit his personal and household effects, which included his undivided fractional ownership interests in the art. Decedent's residuary estate passed to the James A. Elkins, Jr. and Margaret W. Elkins Family Foundation (Elkins Foundation), a bequest that entitles the estate to a charitable contribution deduction under section 2055. The will provides that all estate taxes, plus any interest and penalties, due by reason of decedent's death (but not including taxes due with respect to the assets in Mrs. Elkins' marital trust includable in decedent's gross estate under section 2044) shall be charged against his residuary estate. Thus, any additional estate taxes payable by the estate as a result of this case will correspondingly reduce the distribution to the Elkins Foundation and the charitable contribution deduction with respect thereto.

Decedent's Estate Tax Return

Petitioners timely filed a Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return (estate tax return), on May 21, 2007, in which they reported a Federal estate tax liability of $102,332,524. Schedule F, Other Miscellaneous Property Not Reportable Under Any Other Schedule, included in decedent's gross estate his 73.055% interests in the 61 works of disclaimer art that were subject to the original cotenants' agreement, valued at $9,497,650, and his 50% interests in the three works of GRIT art (two of which remained subject to the art lease on the valuation date), valued at $2,652,000. Those amounts were derived by, first, determining decedent's pro rata share of the fair market value of the art as determined by Sotheby's, Inc., and, then, applying a 44.75% combined fractional interest discount (for lack of control and marketability), as determined by Deloitte LLP, to those pro rata share amounts. The parties have stipulated a total (undiscounted) fair market value, as of the valuation date, of $24,580,650 for the dis-

claimer art and $10,600,000 for the GRIT art.[2] A list of the 64 works of art, their status as GRIT art or disclaimer art, and the stipulated fair market value of each work is attached to this Opinion as appendix A.

Notice

In the notice, respondent determined that decedent's gross estate included his 73.055% interests in the disclaimer art at an undiscounted fair market value of $18,488,504[3] and his 50% interests in the GRIT art at an undiscounted fair market value of $5,300,000. As alternative bases for his using undiscounted values of decedent's fractional interests in the art in computing decedent's taxable estate, respondent determined that (1) the restrictions on the sale of art subject to the cotenants' agreement and fractional interests in art subject to the art lease constituted "an option, agreement, or other right to acquire or use such artwork at a price less than the fair market value" and, alternatively, "a restriction on the right to sell or use the decedent's interest in such artwork" so that, pursuant to section 2703(a)(1) and (2), respectively, decedent's interests in the art covered by those agreements "should be valued without regard to" those restrictions; (2) "the discounts used in calculating the fair market value of Decedent's fractional interests in * * * [the art] are overstated and no discount is appropriate." In addition, because decedent's will provided that all estate taxes were to be paid out of his residuary estate passing to the Elkins Foundation, the notice reduces the deduction for the charitable bequest to that foundation by the amount of the proposed estate tax deficiency, i.e., by the amount of additional estate tax payable by the estate.

[2] Sotheby's had derived a date-of-death fair market value of $23,530,650 for the disclaimer art and $9,600,000 for the GRIT art.

[3] That amount is 73.055% of $25,307,650 rather than of $24,580,650, which is the parties' stipulated undiscounted fair market value for the disclaimer art. Thus, the parties now appear to agree that the undiscounted fair market value of decedent's 73.055% interests in the disclaimer art is $17,957,393 (73.055% of $24,580,650), not the $18,488,504 determined in the notice.

Petition

In response to the notice, petitioners timely filed the petition. In it, petitioners, in addition to assigning error to the deficiency determined by respondent, seek a refund of estate tax based upon the estate's (1) overvaluation of the art, (2) entitlement to a greater charitable contribution deduction than claimed on the return in an amount equal to the estate tax refund arising out of its overvaluation of the art, and (3) entitlement to deductions for attorney's, accountant's, and appraisal fees and other administration expenses in excess of the amounts estimated on decedent's estate tax return. [4]

Petitioners' Experts

In defense of their proposed discounts in valuing decedent's fractional interests in the art, petitioners offered the testimony of three expert witnesses.

David Nash

The first, David Nash, has been an appraiser and seller of fine art for over 48 years. He worked at Sotheby's, Inc., for 35 years, was a member of the IRS Art Advisory Panel, and has appraised works for collectors and museums, including the Metropolitan Museum of Art, the Museum of Modern Art, the Art Institute of Chicago, and the National Gallery of Art. The Court accepted Mr. Nash as an expert in the art market, the marketability of art, and art valuation, and we received his written report into evidence as his direct testimony.

In November 2008, before attempting to value decedent's fractional interests in the art as of the valuation date, Mr. Nash viewed each of the 64 works in Houston and met with the Elkins children. He came away from that meeting convinced that any buyer of decedent's interests in the art would have to take into account the fact that the children (whom he refers to as "the other shareholders") are "committed to retaining the art in the family until the last shareholder dies." He was asked to assess the marketability of decedent's

[4] The estate's entitlement to an additional deduction for administration expenses is not at issue herein.

interest in each work "rather than viewing the collection as a whole."

He states, preliminarily, that collectors, museums, dealers, art funds, and other investors or speculators constitute the categories of potential buyers for a work of art. He describes auction houses as retailers on consignment, not as purchasers. He then considers each as a potential buyer of decedent's fractional interests in the art. His analysis is informed by the expert report submitted by William T. Miller (discussed *infra*), regarding the expense and likelihood of a successful partition action with respect to the works subject to the cotenants' agreement.

In general, Mr. Nash concludes that all categories of potential buyers of fine art would demand steep discounts from pro rata fair market value for decedent's fractional interests in the art and that auction houses simply do not market fractional interests in fine art, a fact that, in and of itself, would have "a significant [adverse] impact on the marketability of * * * [decedent's fractional] Interests."

Mr. Nash reasons that a collector would be put off by the uncertainty of his ever being able to acquire the whole work, potential disputes with the Elkins children over periods of possession or, alternatively, over his right to sell a particular work and his recognition that, probably, there would be comparable works by the same artist that he could purchase outright. Mr. Nash states that the collector's only motivation for buying a fractional interest in one of the works of art, even at a steep discount, would be "the expectation or hope that the work is so desirable that it will increase in value over time and that eventually it will be possible to sell the whole or acquire all of the outstanding shares".

Mr. Nash states that it is "highly unlikely" that a museum would pay "anything close [to] the pro rata value of the fractional share where they will never know if or when they will be able to obtain full control" and that he did not "know of any situation where a museum has ever paid for a fractional interest in a work of art or a collection * * * [with] no assurance * * * [of ever acquiring] full ownership." He notes, however, that it is common for two museums to jointly purchase a work (or works) of art and take turns exhibiting the work(s) in proportion to their interests. He concludes, however, that museums would not be interested in purchasing

joint interests in art where the coowners would be the Elkins children rather than another museum or institution.

Mr. Nash similarly concludes that dealers, investors, and art funds would have little interest in buying decedent's fractional interests, mainly because of the difficulty in reselling them to collectors or museums, and that the "logistical difficulties and potential litigation would also be unappealing." He notes that it is "common practice" among dealers to jointly purchase artworks with the goal of reselling the works in their entirety but that, because of the Elkins children's determined refusal to sell any of the works outside the family, that option is essentially a nonstarter in this case.

Mr. Nash summarizes the "key factors" making decedent's fractional interests in the art "unappealing" to potential buyers as follows: (1) the inability to sell the art at auction houses, (2) the lack of exclusive possession and the inability to force a sale of the art without litigation against the Elkins children as coowners, (3) possible litigation involving time of possession and proper care, storage, or transportation of the art, and (4) the difficulty or impossibility of insuring the purchased interest or using it as collateral for a loan. Nonetheless, he concludes that speculators "would be willing to purchase * * * [decedent's] interests if appropriately discounted."

In determining the discounted fair market value of decedent's fractional interest in each of the 64 works of art, Mr. Nash divides those works into three categories, which he identifies as categories I–III.

Category I consists of five works that he characterizes as "highly desirable". He states: "Collectors, Dealers, Investors and Museums might be willing to invest in * * * [those] works * * * due to * * * [their] rarity and importance". The five works range in stipulated fair market value from a high of $8 million (Jasper Johns' Figure 4) to a low of $1.5 million (Robert Motherwell's Elegy to Spanish Republic #134), and Mr. Nash's discounts from the pro rata fair market value of decedent's interests in those works are between 50% and 80%.[5]

[5] For two of the works, Mr. Nash determines a range of discounted values for decedent's fractional interests therein. Mark L. Mitchell is another

Continued

Category II consists of 19[6] works for which, according to Mr. Nash, "alternate choices could be found and purchased outright * * * [noting that the artworks] are good examples, but not masterpieces by the artist and the artist's reputation is more or less on the same level as in Category I, but will include some artists who might not be so internationally recognized." Mr. Nash concludes that, for those works, "a potential buyer would demand a discount of approximately 80–90% of the pro rata value."

Mr. Nash describes the remaining 40 works, which he places in category III, as "not worth the risk at any level", and he opines that "a potential buyer would demand a discount of approximately 95% of the pro rata value" so that "[a]s a result, these interests have only a nominal value." In reaching that conclusion he notes that, although the works "have a real international value, * * * neither the works themselves nor their creators are in the masterpiece category." He does single out five of the works as having "relatively high underlying values" but concludes that decedent's fractional interests in them still had only nominal values because comparable works by the same artists were readily available, in some cases for less money than the stipulated pro rata fair market values of the examples contained in the Elkins family collection.

On the basis of the foregoing, Mr. Nash finds the discounted fair market value of decedent's interests in the art to be as follows:

Category I	$4,336,859
Category II	976,451

of petitioners' expert witnesses, whose valuations of the 64 works of art (based, in part, on Mr. Nash's report) are the valuations upon which petitioners rely herein. For each of the two works for which Mr. Nash determined a range of values, Mr. Mitchell adopts the mean between the high and low ends of the range as Mr. Nash's discounted value of decedent's interests.

[6] Mr. Nash lists 1 of the 19 works (Franz Kline's The Hill) as a category II work on an exhibit listing and categorizing all 64 works, but he inexplicably omits that work from an exhibit separately listing the category II works. He does, however, state that "40 interests are in Category III", and, because 5 category I, 19 category II, and 40 category III works total the 64 works under consideration, we conclude that Mr. Nash did, in fact, intend to include the Kline in category II.

Category III	149,056
Total	5,462,366

William T. Miller

William T. Miller is licensed to practice law in Texas, and he has been a member of the Texas Bar since 1968. As an attorney he has been involved in a number of partition actions in Texas and has had experience with receivers and agents for liquidating personal property, including works of art. The Court accepted Mr. Miller as an expert on the nature, procedure, time, and cost of partition actions litigated in the Texas courts and received his written report into evidence as his direct testimony, with modifications agreed to by the parties.

Mr. Miller is of the opinion that, in Texas, the "right to partition is absolute" and protected by statute but that "it is also well settled that cotenants 'may expressly or impliedly agree not to partition'". (Citation omitted.) He assumes, for purposes of his report, that paragraph 7 of the cotenants' agreement, requiring unanimous consent of the coowners to the sale of any art, "is, in essence, an agreement * * * not to partition", that, therefore, the coowners "impliedly waived their right [under Texas law] to partition", that that agreement, under Texas law, would be binding on the coowners of the art, but that a Texas court would strike paragraph 8 of the agreement, which binds "heirs, personal representatives, successors and assigns" to the terms thereof (leaving the rest of the agreement intact), as "an invalid restraint on alienation". Alternatively, he notes that the court might choose to "reform" paragraph 8 so that it would "terminate after a reasonable period of time", e.g., the lives of the coowners. Mr. Miller opines that, in any event, "the enforceability of the Cotenants Agreement will be a litigated issue in the Partition Actions." He does not view that fact as a "material element", however, as regards "the procedure, time and costs of a * * * partition action." Like Mr. Nash, Mr. Miller was "instructed that the interests in each Work of Art must be valued individually", with the result that he assumes a separate partition action for each work to be "the standard in determining costs and attorneys' fees."

Mr. Miller states that, if the cotenants' agreement is held to be enforceable, "any further partition action would be prohibited", but he assumes, for purposes of his report, that it would be held to be unenforceable so that partition actions "would proceed through a sale of the Work of Art." He describes the various steps and procedures of Texas partition actions and concludes that a partition by sale of the art (with a division of the proceeds among the coowners) is more likely than a partition in kind (which would involve a time-sharing agreement among the coowners) because the latter "would mean * * * indefinite court supervision." He posits that an adversarial partition action would culminate in a public or private sale of the art by a court-appointed receiver, although the buyer of decedent's fractional interests in the art would be "subject to the risk that his interest could be sold at a sheriff's sale * * * [, which] would substantially reduce the amount that might be recovered".

Mr. Miller states that, most likely, any partition action with respect to the art would entail a two-step procedure: a trial to determine (1) the enforceability of the cotenants' agreement, (2) whether partition by sale or in kind is appropriate, (3) the coowners' interests, (4) whether the art is susceptible to partition, and (5) whether to appoint a receiver for any sale of the art, followed by a second trial to determine the terms of any proposed sale, the property to be sold, the method of sale, and the distribution of proceeds among the coowners. He opines that the first trial would take 18 to 24 months and the second, an additional 12 to 18 months. He states that both decisions would be appealable, that each appeal could take an additional 18 to 24 months, and that it was possible, under Texas law, to suspend the sale of any piece of art subject to litigation during the entire appeal process. Thus, assuming appeals (and, worst case, assuming an appeal of the first decision to the Texas Supreme Court, which could take an additional 6 to 12 months), the entire process before the Texas courts could take anywhere from 6 to 9½ years for each partition action, averaging 7 years in duration. Mr. Miller limits that timeframe to litigation involving "the more expensive Works of Art" (pro rata value in excess of $650,000, which would encompass 9 of the 64 works and 8 of the 62 works of cotenant art), reasoning that "a second appeal would not occur" with respect to the less

valuable works (pro rata value below $650,000) because litigation costs would exceed the values of the works. For those works, he estimates a timeframe of three to four years for each partition action.

Mr. Miller estimates that a buyer of decedent's fractional interest in any of the more expensive works would have $650,000 in total legal and receiver fees in a partition action for a court-ordered sale of the works. For works with a pro rata fair market value between $250,000 and $650,000, Mr. Miller reduces that amount to $250,000. For the rest of the works, he assumes fees equal to the pro rata value of each work "because no 'willing buyer' would expend more in litigation than the value of * * * [the purchased fractional interest]". Mr. Miller notes that there would be additional costs for sales commissions, appraisal fees, and auction house fees. Lastly, Mr. Miller assumes that a receiver would take possession of the art so that there would be additional costs for crating, moving, and storing the art, as well as costs for insurance.

In summary, Mr. Miller assumes that, for a hypothetical buyer instituting a partition action with respect to any one of the more valuable works of art in the Elkins family collection, the total costs for legal fees and other expenditures, could be anywhere from $25,000 to over $1,100,000 (for Jasper Johns' Figure 4) from trial through the appeal process.

Mark L. Mitchell

Petitioners' third and final expert witness, Mark L. Mitchell, testified in his capacity as director of valuation services for Clothier & Head, P.S., of Seattle, Washington. He holds a B.S. and an M.B.A. degree from Southern Methodist University and is experienced in providing valuation consulting services in litigation support situations, including tax litigation. He has testified on behalf of the Commissioner and has completed numerous assignments in valuing intangible assets; e.g., patents, trademarks, and trade names. His work has included the valuation of assets where there was no active or regular market, including the valuation of undivided interests in property, but not including (until this assignment on behalf of petitioners) works of art. The Court

accepted Mr. Mitchell as an expert in the valuation of undivided interests in personal property and received the Clothier & Head, P.S. report, prepared by Mr. Mitchell, in evidence as Mr. Mitchell's direct testimony.

Mr. Mitchell states that, in reaching his valuation conclusions, he relied on Mr. Nash's report as the source for the stipulated, undiscounted fair market values of the 64 works of art and for "insight into the potential market for the Undivided Interests", and on Mr. Miller's report regarding partitioning rights and costs related to partition actions including "costs associated with a legal challenge of the Cotenants' Agreement". His final valuation conclusions are based upon those two reports, his analysis of the economics of the art market, and his quantitative methodology.

Mr. Mitchell states that, unlike pure consumption or pure financial assets, art provides both a psychic and financial return to the investor, and, because of that, an art buyer will accept lower financial returns, including less liquidity and certain additional costs (e.g., insurance, maintenance), than will buyers of pure financial assets. He reasons that that is truer of collectors than it is of speculators, who do not seek a psychic benefit and, therefore, normally, will pay less than collectors.

After describing the cotenants' agreement and the nature of an undivided (fractional) interest in a work of art, Mr. Mitchell notes that the limitations that both have on the owner of an undivided interest in any of the 62 works subject to the (amended) cotenants' agreement (e.g., lack of control, limited use of the art as collateral, the need for a lengthy and expensive partitioning process before any sale, a limited market for such interests) justify "substantial" discounts. He also states that "the absence of transaction data involving the fractional ownership of art does not suggest that discounts do not exist for undivided interests in art." Instead, he views the circumstance as "evidence * * * that there are very few willing buyers of such interests, not that there is a limited number of willing sellers."

Mr. Mitchell states that there are two options for the holder of an undivided interest in art (holder) to monetize his holding (absent unanimous consent of all undivided interest holders): option 1, a sale of his undivided interest or, option 2, a successful partition action ultimately leading to a sale of

the work and pro rata distribution of the proceeds among all interest holders.

According to Mr. Mitchell, under option 1, the holder and the hypothetical willing buyer would consider a number of adverse factors in arriving at a price for the holder's undivided interest in any one of the 62 works of art subject to the amended cotenants' agreement, including the need to obtain unanimous consent of all cotenants to sell the work of art, limited possession of the art and, hence, reduced psychic benefit, the cost of transporting the art from another cotenant, joint responsibility for insurance, maintenance or restoration costs with respect to the work of art, and risk of damage to the art by other cotenants, all of which would induce a prospective collector-buyer to demand a substantial return premium (i.e., discount) related to the reduction of both the buyer's psychic and financial returns attributable to fractional ownership. The need for an enhanced return premium would mean a substantial reduction in value from pro rata fair market value. The speculator-buyer's exclusive reliance on marketability (i.e., financial return) means that his financial return premium would be significantly higher than the collector's.

With respect to option 2, Mr. Mitchell concludes that the dollar amount of any discount must exceed anticipated partition litigation costs to make the investment worthwhile. He also notes that, because a partition action will most likely provide a strictly financial outcome (share of proceeds of a court-ordered sale of the art), the buyer will have abandoned any psychic benefit and, therefore, is necessarily a speculator, not a collector.

In valuing decedent's undivided interest in each work of art, Mr. Mitchell assumes, on the basis of the Nash and Miller reports, that the other interest holders have no desire to sell the art so that, under option 1, the hypothetical buyer "faces the prospect of holding a non-marketable interest * * * [indefinitely], with no prospects for * * * [monetizing his interest] and no ability to control decisions regarding the underlying * * * Art", and, under option 2, he is, in effect, purchasing a "litigation claim".

Mr. Mitchell then notes that, because art collectors do not purchase art with the primary intent to profit on a later sale thereof, despite the greater volatility and risk associated

with art as compared with alternative investments (e.g., Government bonds or stock), the financial returns on the former are generally lower than they are on the latter. That apparent anomaly is explained by the psychic benefit that the art collector derives from the art.

On the basis of his analysis of the Nash report, the expected holding period for the art, rates of return data from various art research studies, and anticipated inflation, Mr. Mitchell determines that an option 1 hypothetical buyer of an undivided interest in art would expect a nominal financial return for art in general of 6% and, in this case, need an 8% "consumption return" in order to compensate for diminished psychic benefit. To that 14% incremental return Mr. Mitchell would add "an increment to account for impaired marketability and other risk factors." He concludes that an assumed 10-year holding period "is a reasonable basis on which to assess discounts" and, in general, would require an additional 2% rate of return resulting in a 16% total required rate of return for the hypothetical option 1 buyer (10% "return premium" and 6% financial return), assuming a 10-year holding period for the purchased interest in the art.

Mr. Mitchell modifies the 16% overall rate of return he deems necessary for an option 1 hypothetical buyer's purchase of an interest in art subject to the restrictions the buyer would face in this case in order to account for the varying quality of the works included in the Elkins collection. For that purpose, he adopts Mr. Nash's division of those works into three categories.

Relying on Mr. Nash's opinion of the category I works, Mr. Mitchell differentiates them from his baseline return estimates by reducing his 10% return premium to 8% for works by Jackson Pollock and Henry Moore and increasing it to 12% for works by Sam Francis and Robert Motherwell and 14% for a work by Jasper Johns. He also reduces the required financial return for the Johns work from 6% to 4% because of its fragile condition and the potential ill effects of shared ownership on such a work. Those adjustments result in an overall 14% required rate of return for the Pollock and the Moore and an overall 18% required rate of return for the other three category I works. Using those rates of return, Mr. Mitchell arrives at a 51.7% discount from pro rata fair market value for decedent's interests in the Pollock and the

Moore, a 65.8% discount for decedent's interests in the Francis and the Motherwell, and a 71.7% discount for decedent's interests in the Johns.

Relying on Mr. Nash's description of the category II works, Mr. Mitchell increases the return premium from 10% to 14% and the overall required rate of return from 16% to 20% resulting in a 71.1% discount from pro rata fair market value for decedent's interests in the 19 category II works.

Again, relying on Mr. Nash's description of the remaining (category III) works, Mr. Mitchell increases the return premium to 18% and reduces the financial return to 4% resulting in an overall 22% required rate of return and a 79.7% discount from pro rata fair market value for decedent's interests in those works.

For option 2 buyers, Mr. Mitchell, relying on Mr. Miller's report, factors in the added costs and anticipated duration of partition litigation and posits a 14% required annual rate of return for all category I works (except for the Johns work) and for five of the category II works. For the Johns work, Mr. Mitchell posits an 18% required rate of return, again because of its fragility (which he states "would tend to make the issues * * * with respect to shared ownership [e.g., in-transit damage to the work] more severe") and the high cost of the investment. On the basis of those required rates of return, he computes the option 2 discounts for the art as follows: for decedent's interests in the category I works and five of the category II works, discounts ranging from 60% to 85%; for his interests in the balance of the category II works, a discount of 90% plus, and for his interests in all category III works a 100% discount, presumably on the theory that the costs of litigation would exceed the sale price of all category III works.

Finally, Mr. Mitchell selects the lesser of the option 1 versus option 2 discounts as the appropriate discount for decedent's interest in each work of art.[7] On the basis of those discounts, he determines the discounted fair market value for decedent's interest in each work of art. Mr. Mitchell finds the total discounted fair market value of decedent's interests in the art to be as follows:

[7] With respect to all but two of the works of art, the option 1 discount is lower.

Category I	$5,150,420
Category II	1,904,117
Category III	604,108
Total	7,658,645

That total, although greater than the $5,462,366 total discounted fair market value computed by Mr. Nash, is much less than the $12,149,650 total discounted value for decedent's interests in the art reported on Schedule F of decedent's estate tax return. It is the difference between that last amount and Mr. Mitchell's discounted total fair market value amount that constitutes the basis for the bulk of petitioners' claim for refund in the petition, the balance being attributable to the increase in the charitable contribution deduction arising by virtue of the refund relating to the estate's alleged overvaluation of the art on its return.

A copy of Mr. Mitchell's table of all 64 works of art, the Nash category of each work, Mr. Mitchell's option 1 and option 2 discounts, his concluded discount for each work, and the resulting discounted fair market value of each is attached to this Opinion as appendix B.

Respondent's Experts

Karen Hanus-McManus

Since 2006, Karen Hanus-McManus has been employed by Jacqueline Silverman & Associates, Inc. (Associates), as an associate appraiser. Before that, she held several positions with the Museum of Contemporary Art, Los Angeles, and, since 2009, she has been an adjunct professor at the New York University School of Continuing & Professional Studies, teaching a course entitled "Essentials of Appraising" for which she developed the course materials. She has a B.A. degree in art history from the University of California, Los Angeles, and two M.A. degrees (in art history and museum studies) from Syracuse University. Since 1977, her employer, Associates, has specialized in the appraisal of modern and contemporary art, preparing thousands of appraisals in numerous contexts including appraisals for estate tax purposes, donations to museums, and legal disputes. Ms. Hanus-McManus has also conducted a study on secondary markets for fractional interests in art. She is the sole author of her

written report in this case, although she conferred with Jacqueline Silverman, president of Associates, who edited, proofread, and cosigned the report. The Court accepted Ms. Hanus-McManus as an expert appraiser of modern and contemporary art and received her written report into evidence as her direct testimony.

Ms. Hanus-McManus testified that the market for modern and contemporary art operates on two levels: the primary market, created by the artist or his or her agent, and the secondary market, controlled by art galleries and dealers and auction houses. On the basis of (1) Associates' more than 30 years' experience observing the primary and secondary markets for modern and contemporary art, (2) conversations with art gallery personnel, dealers, auction houses, banks, and art world professionals, and (3) her survey of 40 art dealers and galleries in New York, Los Angeles and other U.S. cities, Ms. Hanus-McManus concludes that "there is no established marketplace for the sale of a partial interest in a work of art." She notes that there are dealer-to-dealer sales of fractional interests in art in what she refers to as "the wholesale market" but that such a sale would be made in connection with an agreement between the dealers to sell the whole work at a profit and split the proceeds. She further concludes that, while there are sales of fractional interests in art, they involve coowners who intend to sell or donate the entire work of art at a later date and, therefore, are not germane to the hypothetical sale of fractional interests in this case. She admits, however, to having no experience with the buying or selling habits of pure speculators who deal in art without regard to its aesthetic quality.

John R. Cahill

John R. Cahill is an attorney practicing in New York as a partner in the law firm Lynn & Cahill. More than 80% of his practice is devoted to legal matters concerning clients involved in art including auction houses, museums, artists, art galleries, art collectors and dealers, appraisers, banks, insurance companies, and foundations. He represents clients in both litigation and transactional planning and counsels them on a variety of art-related matters. He also chairs the Art Law Committee of the New York City Bar Association.

The Court accepted Mr. Cahill as an expert in art transactions and received his written report into evidence as his direct testimony.

On the basis of caselaw and his own observations of museum-related and commercial transactions involving joint ownership of art, Mr. Cahill concludes: "In my opinion, the Sale Restriction and related terms in the Cotenant's Agreement, Amendment to Cotenants Agreement and Art Lease are not comparable to similar arrangements entered into by persons in arms length art market transactions."[8]

OPINION

I. *Introduction*

We must determine the fair market value of decedent's interest in each of 64 works of art for Federal estate tax purposes. Those interests were included in decedent's gross estate and reported on decedent's estate tax return at a total value of $12,149,650. On the basis of the expert testimony of three experts, and, in particular, Mr. Mitchell's expert testimony, petitioners now argue that that total value must be reduced to $7,658,645. The parties have stipulated that the total, undiscounted fair market value of the art on the valuation date was $35,180,650 ($24,580,650 for the disclaimer art and $10,600,000 for the GRIT art), and respondent bases his proposed deficiency herein on his view that that undiscounted value, to the extent it is allocable pro rata to decedent's interest in each of the 64 works of art (i.e., to the extent of 73.055% of the disclaimer art, or $17,957,393, and 50% of the GRIT art, or $5,300,000, a total of $23,257,393[9]),

[8] Mr. Cahill's conclusion supports respondent's argument that the sale restrictions in the cotenants' agreement and the art lease do not satisfy the requirements of sec. 2703(b)(3). That provision constitutes one of the three requirements of the sec. 2703(b) exception to the application of sec. 2703(a)(2), which generally mandates that "any restriction on the right to sell or use * * * property" be ignored in determining the value of any property for estate and gift tax purposes. *See* discussion *infra*. Petitioners concede that neither the cotenants' agreement nor the art lease satisfies the sec. 2703(b) exception. Therefore, we agree with petitioners that Mr. Cahill's report is not germane to the issues in this case.

[9] On brief, respondent argues that the total stipulated fair market value of decedent's interests in the art on the valuation date is $23,788,504. But, given the parties' stipulated agreement that the value of 100% of the art

constitutes the value of decedent's interests in the art for Federal estate tax purposes.

II. *Burden of Proof*

In general, a taxpayer bears the burden of proof. Rule 142(a)(1). However, section 7491(a) shifts the burden of proof to the Commissioner in certain situations if the taxpayer raises the issue, introduces credible evidence with respect to any factual issue relevant to ascertaining the proper tax liability, and demonstrates compliance with the applicable requirements of section 7491(a)(2).

The parties stipulate that the estate has satisfied the section 7491(a)(2) requirements, and petitioners argue that, through the expert testimony of Messrs. Nash, Miller, and Mitchell and through Ms. Sasser's testimony, they have presented credible evidence of value, thereby shifting the burden of proof to respondent pursuant to section 7491(a).

Because we base our decision regarding the value of decedent's interests in the art upon a preponderance of the evidence, it is not necessary that we assign the burden of proof. *See, e.g.*, *Estate of Black v. Commissioner*, 133 T.C. 340, 359 (2009); *Estate of Bongard v. Commissioner*, 124 T.C. 95, 111 (2005). [10]

---

on that date was $35,180,650 divided between $10,600,000 for the GRIT art and $24,580,650 for the disclaimer art, the undiscounted fair market value of decedent's interests in the art cannot exceed $23,257,393 (50% of $10,600,000, or $5,300,000, plus 73.055% of $24,580,650, or $17,957,393). Therefore, we view respondent's argument for a greater stipulated value for decedent's interests in the art, presumably based upon the agent's valuations on audit, as an inadvertent oversight, and we give it no credence. *See supra* note 3.

[10] Although we agree with respondent that it is unnecessary to assign the burden of proof, we reject respondent's reliance on *Estate of Jelke v. Commissioner*, T.C. Memo. 2005–131 (and cases cited therein), *vacated and remanded on another issue*, 507 F.3d 1317 (11th Cir. 2007), as requiring that result. In those cases, there was deemed to be no need to assign the burden of proof because the operative facts were fully stipulated and supplemented solely by expert witness testimony. Here, there is disputed fact testimony furnished by Ms. Sasser.

III. *Law*

A. *General Principles*

Section 2001(a) imposes a tax on "the transfer of the taxable estate of every decedent who is a citizen or resident of the United States." Section 2031(a) provides: "The value of the gross estate of the decedent shall be determined by including to the extent provided for in this part, the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated."

Fair market value is the standard for determining the value of property for Federal estate tax purposes. *United States v. Cartwright*, 411 U.S. 546, 550–551 (1973). Section 20.2031–1(b), Estate Tax Regs., defines fair market value as "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." It then states that the fair market value of an item of property is not "to be determined by the sale price of the item in a market other than that in which such item is most commonly sold to the public" and that, "in the case of an item of property includible in the decedent's gross estate, which is generally obtained by the public in the retail market, the fair market value of such an item of property is the price at which the item or a comparable item would be sold at retail." The regulation requires that "[a]ll relevant facts and elements of value as of the applicable valuation date shall be considered in every case." The willing buyer and willing seller are hypothetical persons, rather than specific individuals or entities, and their characteristics are not necessarily the same as those of the actual buyer or seller. *See Estate of Newhouse v. Commissioner*, 94 T.C. 193, 218 (1990) (citing *Estate of Bright v. United States*, 658 F.2d 999, 1006 (5th Cir. 1981)). The hypothetical willing buyer and seller are presumed to be dedicated to achieving the maximum economic advantage. *Id.*

B. *Expert Opinions*

In deciding valuation cases, courts often look to the opinions of expert witnesses. Nonetheless, we are not bound by the opinion of any expert witness, and we may accept or

reject expert testimony in the exercise of our sound judgment. *Helvering v. Nat'l Grocery Co.*, 304 U.S. 282, 295 (1938); *Estate of Newhouse v. Commissioner*, 94 T.C. at 217. Although we may largely accept the opinion of one party's expert over that of the other party's expert, *see Buffalo Tool & Die Mfg. Co. v. Commissioner*, 74 T.C. 441, 452 (1980), we may be selective in determining what portions of each expert's opinion, if any, to accept, *Parker v. Commissioner*, 86 T.C. 547, 562 (1986). Finally, because valuation necessarily involves an approximation, the figure at which we arrive need not be directly traceable to specific testimony if it is within the range of values that may be properly derived from consideration of all the evidence. *Estate of True v. Commissioner*, T.C. Memo. 2001–167 (citing *Silverman v. Commissioner*, 538 F.2d 927, 933 (2d Cir. 1976), *aff'g* T.C. Memo. 1974–285), *aff'd*, 390 F.3d 1210 (10th Cir. 2004).

C. *Section 2703*

As noted *supra* note 8: (1) section 2703(a)(2) provides that, for estate and gift tax purposes, the value of any property is determined without regard to any restriction on the right to sell or use such property, (2) section 2703(b) provides that section 2703(a) does not apply to disregard a right or restriction if it meets certain requirements, and (3) petitioners concede that neither the cotenants' agreement nor the art lease satisfies the section 2703(b) exception. Thus, the section 2703 issue herein is whether the restrictions on transferability in the cotenants' agreement and the art lease are restrictions "on the right to sell or use * * * property" within the meaning of section 2703(a)(2). [11]

[11] Although the notice invokes both sec. 2703(a)(1) and (2) as alternative bases for denying any discount in valuing decedent's fractional interests in the art, and although respondent generally invokes the application of sec. 2703, he emphasizes the application of sec. 2703(a)(2). In fact, because neither the cotenants' agreement nor the art lease provides an option, agreement, or other right to acquire property at a bargain price, sec. 2703(a)(1), by its terms, is inapplicable. Therefore, the only sec. 2703 issue for our decision is whether sec. 2703(a)(2) applies herein.

IV. *Summary of the Parties' Arguments*

A. *Respondent*

1. *Introduction*

Respondent argues that no discount from the pro rata fair market value of decedent's interest in each of the 64 works of art is warranted. Respondent sets forth two grounds for that argument: (1) the restrictions on sale in the cotenants' agreement and the art lease are restrictions that must be disregarded under section 2703(a)(2), and (2) because the proper market in which to determine the fair market value of fractional interests in works of art is the retail market in which the entire work (consisting of all fractional interests) is commonly sold at full fair market value, a fractional interest holder (being entitled to a pro rata share of the sale proceeds) is not entitled to any discount for his or her interest.

2. *Application of Section 2703(a)(2)*

In support of the application of section 2703(a)(2) respondent states:

> In view of the irrefutable evidence that the only way to sell a fractional interest in artwork is by selling the entire art by agreement or through a partition action filed with the court, the only apparent reason for including the restriction on sale language in the Cotenants' Agreement and the Art Lease Agreement * * * was to reduce the value of Decedent's retained fractional interests in the Artwork as part of a plan to make a testamentary transfer of his remaining interests in the Artwork to his children at a reduced transfer tax rate—a purpose which section 2703 was specifically intended to prevent.

Respondent concludes that the restrictions on sale in paragraph 7 of the cotenants' agreement and section 10 of the art lease "are restrictions that are controlled by section 2703" and, accordingly, they must be disregarded in determining the value of decedent's fractional interests in the art.

3. *Use of Undiscounted Pro Rata Fair Market Value in Valuing Decedent's Interests in the Art*

In support of his valuation argument, in which he concludes that no discount is warranted with respect to decedent's interests in the art, respondent states that the

Elkins children's opposition to any sale of the art "is not material" in the light of section 20.2031–1(b), Estate Tax Regs. In so arguing, respondent focuses on that regulation's admonition that "an item of property includible in the decedent's gross estate, which is generally obtained by the public in the retail market", must be valued at "the price at which the item or a comparable item would be sold at retail." Respondent finds additional support for his view in the testimony of Ms. Hanus-McManus, who concludes that, as of the valuation date, "the sale of an undivided fractional interest in a work of art was not an established practice in the art market, and no service, venue or marketplace exists today for an owner of an undivided fractional interest in a work of art to sell his/her share in that work."

Respondent also cites Mr. Nash's testimony that he could not recall ever advising a client to sell a fractional interest in art at a discount, and that he himself had never done so. Respondent states, however, that "[j]ust because there is no direct market for fractional interests in artwork * * * does not mean that * * * fractional interests in artwork are not bought and sold every day." Respondent concludes that the lack of evidence of discounted sales of fractional interests in art supports his position that "fractional interests in artwork are only sold as part of a sale where the entire interest in the artwork is sold", typically by coowners who know each other and who act in concert when purchasing and selling their respective fractional interests, either by direct sale to a buyer who acquires 100% ownership of the art or, assuming coownership of several works, after a partition in kind or by sale. In either event, the sale results (or, if several works are involved, the sales result) in a fair market value price, and each coowner receives a pro rata share of the proceeds. Thus no fractional interest discounts are warranted.

Respondent does note that, in the case of a particularly valuable item of personal property, "a stranger/speculator could perhaps be found to buy a fractional interest * * * for a deeply discounted price." He argues, however, that "this type of a transaction simply does not occur and even if there have been a few of these unrecorded transactions", they do not reflect the retail market in which we are required to value decedent's fractional interests in the art pursuant to section 20.2031–1(b), Estate Tax Regs.

Although his principal argument is that, as a matter of law, no discount is permissible in valuing undivided fractional interests in art, respondent also argues that, as a factual matter, petitioners' proffered discounts are unsupported by the evidence; i.e., by the testimony of their three experts.

He views Mr. Nash's discounts as having been based on unrealistic scenarios, faulty methodology, and a failure to properly account for the interests of the hypothetical seller by improperly positing the seller's position in the context of a forced sale. Because he views Mr. Nash's proposed discounts as without any justifiable basis, respondent concludes that they are essentially guesses.

He argues that, by referring to "general court statistics" not specific to the timespan for partition actions relating to art and by basing his opinions on a "worst case scenario", Mr. Miller overstated both the time for and costs of a partition action with respect to the art. Respondent further argues that Mr. Miller, because he was instructed to consider partition-related costs in terms of a separate partition action for each work of art, improperly failed to consider the likelihood of and the costs associated with a single action for partitioning the entire collection in kind. On a more fundamental level, respondent rejects the notion of any discount from fair market value based upon anticipated partition costs, arguing that such costs are selling expenses, which, if shown to exist, may constitute deductible administration expenses under section 2053(a).

He criticizes Mr. Mitchell's valuations principally on the ground that Mr. Mitchell considered the hypothetical buyer of decedent's interests in the art to be a speculator, uninterested in obtaining the psychic benefits of owning art, thereby, eliminating "approximately 60 percent of the value of the Artwork that a normal purchaser would pay for the Artwork."

Finally, respondent argues that a determination that a discount is appropriate in valuing decedent's fractional interests in the art would be inconsistent with the Commissioner's longstanding position that fractional interests in art are not discounted for purposes of valuing charitable contributions thereof under section 170. See, for example, Rev. Rul. 58–455, 1958–2 C.B. 100, and Rev. Rul. 57–293, 1957–2 C.B. 153, both of which involve the transfer of either a fractional

interest or a remainder interest in a work of art to a section 170(c) organization, and both of which determine the value of the gift without requiring any discount.

B. *Petitioners*

1. *Application of Section 2703(a)(2)*

Petitioners argue that section 2703(a)(2) does not apply to the cotenants' agreement because paragraph 7 thereof restricts only the sale of any of the 62 works of art covered by that agreement (cotenant art). It does not restrict the sale of a cotenant's or coowner's fractional interest in the work, and it is decedent's fractional interests in the cotenant art, not the art itself, that must be valued for Federal estate tax purposes.

As respondent notes in his opening brief, petitioners do not oppose the application of section 2703(a)(2) to the two works of GRIT art subject to the art lease (leased art); i.e., they do not argue that the restriction on sale provision in section 10 of the art lease gives rise to a discounted value for those two works. Petitioners' failure to so argue is based, presumably, on the fact that that restriction (unlike the restriction in paragraph 7 of the cotenants' agreement) is a restriction on the sale of each party's "percentage interest in" the two works; i.e., it is a restriction, on the right to sell property that must be valued for Federal estate tax purposes. We interpret petitioners' silence in this regard as an admission that, pursuant to section 2703(a)(2), we must value decedent's interests in the leased art without regard to the restriction on sale provision in section 10 of the art lease.

2. *Propriety of Petitioners' Discounts With Respect to the Art*

Petitioners argue that they have fully supported the discounts they seek herein for decedent's interests in the art as they have "provided extensive evidence of facts that would be known to a hypothetical willing buyer and * * * seller with reasonable knowledge of relevant facts, as required by * * * [section 20.2031–1(b), Estate Tax Regs.]". Petitioners reject respondent's assertion that *any* discount would contravene the cited regulation. They argue that "Mr. Mitchell's valuation conclusions fully take into account the risks and

impairments to value" inherent in the hypothetical buyer's alternative options (i.e., option 1: hold the purchased fractional interest for enjoyment, appreciation, and eventual sale of the art; option 2: institute an immediate partition action against the Elkins children), and that "he properly relied on the expert reports of Mr. Nash and Mr. Miller in doing so."

Petitioners argue that caselaw (and, in particular, caselaw arising in the Court of Appeals for the Fifth Circuit, to which an appeal of this case normally would lie) mandates the application of discounts when valuing fractional interests in personal property, including art. Petitioners also argue that, in determining the appropriate valuation discount, the cases take into consideration anticipated costs associated with a partition of the property.

Presumably in defense of Mr. Miller's cost analysis based upon a separate partition action for each work of art, petitioners state that the applicable regulations mandate that decedent's fractional interest in each work be valued separately, citing section 20.2031–1(b), Estate Tax Regs. (value determined with reference to "each unit of property"), and section 20.2031–6(a), Estate Tax Regs. (stating the need to provide a separate valuation for "each article" of household and personal effects). Therefore, petitioners conclude that decedent's fractional interests in the art "cannot be valued * * * as a collection; separate hypothetical buyers and sellers must be posited for each Work." They further state that, because the art does not form "a cohesive collection * * * [with a] unifying theme, there is no factual basis * * * for assuming that a single buyer would be interested in purchasing all of the art."

V. *Analysis*

A. *Application of Section 2703(a)(2) to the Cotenant Art*

1. *Introduction*

Should we determine that the restriction on sales of cotenant art in paragraph 7 of the cotenants' agreement constitutes a restriction on the right to sell or use "property" within the meaning of section 2703(a)(2), we must disregard that restriction in valuing decedent's interests in that art.

2. *Analysis*

As noted *supra*, respondent argues that the foregoing restriction on sales of cotenant art constitutes a restriction that must be disregarded under section 2703(a)(2) on the ground that "the only apparent reason for * * * [its inclusion in the cotenants' agreement] was to reduce the value of Decedent's retained fractional interests in the Artwork as part of a plan * * * [to reduce estate taxes]", which respondent characterizes as "a purpose which section 2703 was specifically intended to prevent."

The evidence with respect to intent is inconclusive. The cotenants' agreement was entered into in February 2000, six years before decedent's death in February 2006, and paragraph 7 may have been intended only to keep the art in the family unless there was a work that no one wished to retain. Of greater significance, however, is the fact that section 2703(a)(2) does not refer to intent as a controlling or even relevant factor. The only question is whether the property to be valued, for estate or gift tax purposes, is subject to a restriction on sale or use.

Petitioners argue that, because paragraph 7 of the cotenants' agreement does not restrict the sale of decedent's fractional interests in the cotenant art (the property to be valued for estate tax purposes), section 2703(a)(2) is inapplicable. In connection with that argument, petitioners point to the definitional reference to the term "property" in the cotenants' agreement, which, in pertinent part, states that "[e]ach cotenant is the owner of an undivided interest in each item of property described in Exhibit A [listing the works of art] * * * (hereinafter, all of such property or any part thereof shall be referred to as the 'Property')". Petitioners argue that, although "property" under the foregoing definition "could refer to one, several, or all of the 62 Works in their entirety, under no interpretation does * * * [it] refer to a fractional interest in the Works." Respondent disagrees. He reads the foregoing language, and, in particular, the reference to "any part" of the property as a reference to the cotenants' undivided fractional interests in the cotenant art.

We think that both petitioners' and respondent's analyses miss the mark. During trial, we queried Mr. Miller, petitioners' expert on partition, about paragraph 7 of the coten-

ants' agreement. We pointed out to him that, for a sale of any of the jointly owned properties (i.e., works of art) to occur, *all* of the cotenants would have to agree, and that would be so independent of the language of paragraph 7 of the cotenants' agreement. He agreed. We added: "So that the statement that an item of property may only be sold with the unanimous consent of all of the cotenants is a rather unremarkable statement of the obvious." He responded: "I do agree." With respect to what the language of paragraph 7 accomplished, he testified: "If this language was not in the co-tenancy agreement, any individual interest owner would have the right to commence a partition action." That is in accord with his direct, written testimony, wherein he states that the right to partition is absolute, although cotenants may expressly or impliedly agree not to partition, and that he has "assumed that Provision 7 * * * is, in essence, an agreement by the Co-Owners not to partition." With exceptions not here relevant, section 2703(a)(2) instructs that "the value of any property shall be determined without regard to * * * any restriction on the right to sell or use such property." Whether paragraph 7 of the cotenants' agreement is a restriction on decedent's right to sell the cotenant art or is a restriction on his right to use the cotenant art is not important. It is clear that, pursuant to paragraph 7 of the cotenants' agreement, decedent, in effect, waived his right to institute a partition action, and, in so doing, he relinquished an important use of his fractional interests in the cotenant art. While, as we shall explain, it makes little or no difference to our conclusion as to the value of the art, we shall, in determining the value of each of the items of cotenant art, disregard any restriction on decedent's right to partition.

3. *Conclusion*

We hold that section 2703(a)(2) is applicable to the restriction, in paragraph 7 of the cotenants' agreement, on sales of cotenant art.

B. *Whether and the Extent to Which the Estate Is Entitled To Discount Decedent's Interests in the Art*

1. *Introduction*

Our determination that section 2703(a)(2) negates the restriction on sales of cotenant art in paragraph 7 of the cotenants' agreement, coupled with petitioners' concession that section 2703(a)(2) negates the restriction on sales of the lessor's and lessee's interests in the leased art contained in section 10 of the art lease, leaves the hypothetical willing seller and buyer in the same negotiating position with respect to decedent's interests in all 64 works of art. That is because, as a result of those section 2703(a)(2) determinations, neither the cotenants' agreement nor the art lease may be read as restricting the hypothetical seller's right to sell decedent's interests in the subject art, but the hypothetical buyer's ability to monetize those interests on an undiscounted basis remains subject either to the coowners' (i.e., the Elkins children's) agreement to a sale of the underlying art and a pro rata splitting of the proceeds of sale or to the need to institute a partition action in order to achieve that result.[12]

In resolving the parties' dispute over the proper valuation of decedent's interests in the art, we first address the question of whether any discount from pro rata fair market value is permissible under section 20.2031–1(b), Estate Tax Regs., and, if the answer to that question is yes, we must then determine the proper amount, if any, of that discount.

2. *Whether Any Discount Is Permissible*

a. *Analysis*

Respondent's argument that no discount is warranted in valuing decedent's fractional interests in the art is premised

[12] The parties have not addressed whether the hypothetical seller would constitute a "successor" to decedent's interests in the disclaimer art and the leased art pursuant to sec. 8 of the cotenants' agreement and sec. 13 of the art lease. Nor have they addressed how the hypothetical seller's status as such might affect the value of his or her interests in the art. We do not consider that to be a significant valuation issue, however, because, whether or not the hypothetical seller constitutes a "successor" to decedent's interests under either agreement, no sale of the underlying art can occur without either the consent of the Elkins children, which, presumably, would not be forthcoming, or a successful partition action.

essentially on his view that, (1) under section 20.2031–1(b), Estate Tax Regs., the fair market value of tangible personal property must be determined with reference to the market in which the property is most commonly sold to the public and, (2) in the case of art, that market is the retail market whereby all fractional interest holders agree to sell (or sell after a partition action) the underlying art, i.e., where the art is sold for its undiscounted fair market value, after which each fractional interest holder receives his or her pro rata share of the proceeds.

In support of his position, respondent cites *Estate of Scull v. Commissioner*, T.C. Memo. 1994–211, and *Stone v. United States*, 99 A.F.T.R.2d (RIA) 2007–2992 (N.D. Cal. 2007), *supplemented by* 100 A.F.T.R.2d (RIA) 2007–5512 (N.D. Cal. 2007), *aff'd*, *Stone ex rel. Stone Trust Agreement v. United States*, 103 A.F.T.R.2d (RIA) 2009–1379 (9th Cir. 2009).

In *Stone*, the District Court rejected the plaintiffs' proffered 44% fractional interest discount for the decedent's 50% interest in 19 paintings on the ground that a hypothetical seller would seek to sell each entire work of art (with the coowners' consent or via partition) and take his or her pro rata share of the proceeds or sell the partial interest at a price equivalent thereto. On that basis, the District Court concluded that, "because an undivided interest holder has the right to partition, a hypothetical seller under no compulsion to sell would not accept any less for his or her undivided interest than could be obtained by splitting proceeds in this manner." *Stone*, 99 A.F.T.R.2d (RIA) at 2007–2996. The District Court did, however, decide that "some discount is appropriate to allow for the uncertainties involved in waiting to sell the collection until after a hypothetical partition action is resolved". *Id.* at 2007–2998 (citing *Estate of Scull v. Commissioner*, T.C. Memo. 1994–211). In its supplemental opinion, the District Court determined that the "relatively low" 5% discount proposed by the Government was appropriate in the absence of proof by the plaintiffs that they were entitled to more than a 2% discount to account for selling costs plus a $50,000 discount to account for the hypothetical seller's legal fees in connection with any partition action. Moreover, the District Court was not persuaded that a hypothetical buyer would refuse to buy the decedent's interest in

the collection unless the discount were greater than 5%. *Stone*, 100 A.F.T.R.2d (RIA) at 2007–5514.

In *Estate of Scull*, the decedent died owning a 65% undivided interest in a "pop" and minimalist art collection that he and his wife had accumulated before their divorce. In connection with divorce-related litigation in the New York State courts, there was a court-ordered in-kind division of the collection (65% to the decedent, 35% to Mrs. Scull) that did not go into effect before the decedent's death. Thirty days after the decedent's death, Mrs. Scull appealed that decision, seeking a 50% share of the collection. Just before his death, the decedent had also appealed an earlier New York State appellate court decision sustaining the imposition of constructive trusts on the collection for Mrs. Scull's benefit.

The estate argued that the value of the decedent's 65% interest in the collection was less than 65% of the entire collection. We noted that "[a]ny purchaser of * * * [the estate's] interest in the collection as of * * * [the date of the decedent's death] would consider * * * [Mrs.] Scull's rights in the collection and * * * [the decedent's] pending appeal on the date of death." We then stated as follows:

> However, since * * * [the decedent's] appeal, if successful, would have increased his share, that appeal does not provide any basis for a reduction. Moreover, since * * * [Mrs.] Scull's appeal came later, it probably should not be taken into account. In any event, given the trial court's detailed explanation of its basis for its determination of the 65–35 split, we think that a purchaser would not require a reduction in excess of 5 percent for any uncertainties involved in acquiring decedent's 65-percent interest, despite one or both appeals. * * *

Thus, on the facts of that case, we allowed a 5% valuation discount from pro rata fair market value.

We fail to see how either *Stone* or *Estate of Scull* supports respondent's position. In both cases, the court approved a discount from pro rata fair market value for the decedent's fractional interest in an art collection in order to account for various uncertainties that would confront a hypothetical buyer of the art. Although the 5% discount approved in each case was essentially nominal, that was because of a lack of proof that any greater discount was warranted, not because of any regulatory prohibition against discounts for art that is normally sold at retail. Moreover, the District Court in *Stone* agreed with the plaintiffs that, "contrary to the government's

assertions, the costs of a court-ordered partition must be considered in determining the fair market value of the Estate's interest in the collection." *Stone*, 99 A.F.T.R.2d (RIA) at 2007–2997. That position was based, primarily, on the District Court's view that it could not "assume that the Estate's co-owner in the [art] collection [the estate's trustees actually owned the entire collection] would agree either to a sale of the collection as a whole or to a division of the nineteen paintings among the co-owners." *Id.* at 2007–2997 through 2007–2998. The District Court's refusal to personalize the circumstances surrounding a hypothetical sale was based upon the admonition of the Court of Appeals for the Ninth Circuit in *Propstra v. United States*, 680 F.2d 1248, 1251–1252 (9th Cir. 1982), that the willing seller must be "a hypothetical seller rather than the estate or any of decedent's beneficiaries" and that defining fair market value in terms of that "objective standard" will serve to avoid

> the uncertainties that would otherwise be inherent if valuation methods attempted to account for the likelihood that estates, legatees, or heirs would sell their interests together with others who hold undivided interests in the property. Executors will not have to make delicate inquiries into the feelings, attitudes, and anticipated behavior of those holding undivided interests in the property in question. * * *

Accord Estate of Bonner v. United States, 84 F.3d 196, 198 (5th Cir. 1996); *Estate of Bright v. United States*, 658 F.2d at 1006;[13] *see also Holman v. Commissioner*, 601 F.3d 763, 775 (8th Cir. 2010), *aff'g* 130 T.C. 170 (2008).

In this case, not only, as stated by the District Court in *Stone*, 99 A.F.T.R.2d (RIA) at 2007–2998, are we not entitled to assume that the Elkins children "would agree either to a sale of * * * [the art] or to a division * * * [thereof] among

[13] *Propstra v. United States*, 680 F.2d 1248 (9th Cir. 1982), and *Estate of Bright v. United States*, 658 F.2d 999 (5th Cir. 1981), both constitute a rejection of the "family attribution" or "unity of ownership" principle, which takes into account the close relationship among the decedent, executor, or legatee, on the one hand, and the other coowners of real or personal property, on the other hand, in valuing the decedent's minority interest in the property. The Government's argument, rejected by the Court of Appeals for the Ninth Circuit in *Propstra*, was that, in the absence of a showing that such parties, if related, were likely to sell their interests separately, "one can reasonably assume" that those interests, including the decedent's interest, will be sold as a unit. *Propstra*, 680 F.2d at 1251–1252.

the co-owners", but, unlike the circumstances in *Propstra* and *Estate of Bright*, we are presented with unchallenged facts demonstrating that the Elkins children had strong sentimental and emotional ties to each of the 64 works of art so that they treated the art as "part of the family". Those facts strongly suggest that a hypothetical buyer of decedent's fractional interests in the art would be confronted by coowners who were resistant to any sale of the art, in whole or in part, to a new owner, a resistance that the Elkins children specifically communicated to Mr. Nash. In this case, it is not necessary for the executors to speculate or "make delicate inquiries into the feelings, attitudes and anticipated behavior" of the other owners. It is clear that they have a deep and abiding love for the art and, therefore, could be expected to be hostile to a joint sale of any one or all of the 64 works to a new owner, a hostility that they explicitly expressed to Mr. Nash during their meeting with him preparatory to his inspection of the art. That being so, the hypothetical seller and buyer necessarily would be faced with uncertainties regarding the latter's ability to monetize his or her investment in the art. As in *Stone*, "some discount is appropriate to allow for * * * uncertainties". *Stone*, 99 A.F.T.R.2d (RIA) at 2007–2998.

We also reject respondent's argument that consideration of the Elkins children's probable hostility to any sale of the art to a new owner violates the requirement to consider the hypothetical, not the actual, seller. The Elkins children, as coowners of the art, would not be the sellers of decedent's interests therein and cannot be viewed as such. Their hostility would be to any sale to a new owner of one or more of the works in which they, like the hypothetical seller, owned a fractional interest. That probable hostility constitutes one of the "relevant facts and elements of value as of the * * * valuation date [that] shall be considered [by the hypothetical seller and buyer] in every case", as mandated by section 20.2031–1(b), Estate Tax Regs.

As noted *supra*, respondent's no-discount argument is premised upon the requirement in section 20.2031–1(b), Estate Tax Regs., that the value of "an item of property * * * generally obtained by the public in the retail market * * * is the price at which the item or a comparable item would be sold at retail." Respondent describes the market for fractional

interests in art (as well as for other types of personal property) as one in which the holder of the fractional interest either purchases or inherits the interest under circumstances in which the holder and the other coowners (who may be family members, friends, or, in the case of art, art dealers) hold, or simultaneously acquire, their interests with a shared goal of selling (or, if the fractional interests are purchased, of reselling) the entire item of property at retail, either directly or after a partition of the property. Respondent posits that, under any of those scenarios, the interest holders would each receive a pro rata share of the property or of the proceeds from the sale thereof, and no fractional discounts would be applied. Focusing specifically on the facts of this case, respondent argues that it would be in the financial interests of both the Elkins children and the hypothetical buyer to agree to (1) sell the art and divide the proceeds pro rata, (2) divide the art pro rata, or (3) some combination of those two alternatives, none of which would entail a fractional interest discount. Respondent cites *Holman v. Commissioner*, 601 F.3d at 775, and its affirmation of caselaw describing the hypothetical buyer and seller as rational economic actors lacking "motivations that are personal and reflective of the idiosyncracies of particular individuals."

Although respondent's approach to the valuation of personal property would have merit in the absence of "relevant facts" that would render that approach unrealistic and, therefore, inapplicable, here such facts exist in the form of the Elkins children's probable resistance to any sale or partition of the art that would result in new ownership; and although, by opposing such a sale, the Elkins children might not be acting in their best economic interests,[14] they undoubtedly would view continued retention of the entire collection as acting (to paraphrase Mr. Mitchell) in their best psychic interests; i.e., they would be willing to forgo the financial gain from a sale of the art in order to keep the collection intact and continue to enjoy it.

[14] It is, of course, possible that, by holding on to the art, subsequent appreciation of one or more works would allow the fractional interest holders to realize a greater economic benefit than would have resulted from an immediate sale of the art at its fair market value on the valuation date.

We do not interpret section 20.2031–1(b), Estate Tax Regs., as mandating reference to the retail market for entire works of art in determining the fair market value of decedent's fractional interests in the art. As both Mr. Nash (implicitly) and Ms. Hanus-McManus (explicitly) agree, there is no market (retail or otherwise) in which undivided fractional interests in art are "commonly sold to the public". Secondly, the prospect of a fair market value sale of the art followed by a pro rata division of the proceeds among the coowners is manifestly uncertain in this case. The fact that there exists a retail market for works of art with multiple owners does not necessarily mean that all fractional interests in art must be valued as if it is certain that the art will be sold in that market. The regulation should not be read in a vacuum, without reference to actual circumstances. *See, e.g.*, *Estate of Baird v. Commissioner*, T.C. Memo. 2001–258 (agreeing to "an increased discount" in valuing the decedent's interest in jointly owned timberland because of the uncertainty of whether the family-member coowners would force a hypothetical willing buyer to institute a partition action with respect to the property); *Estate of Lauder v. Commissioner*, T.C. Memo. 1994–527 (approving a 40% discount for lack of liquidity with respect to the decedent's interest in a family-owned corporation on the basis of a finding that the coshareholder family members intended to maintain the company "as a privately held, family-controlled company" thereby rendering the sale of the decedent's shares on a public market "remote").

Moreover, respondent's approach ignores the willingness of the courts in *Stone* and *Estate of Scull* to permit discounts for fractional interests in art, provided there is adequate proof of entitlement thereto. Respondent also ignores precedent in the Court of Appeals for the Fifth Circuit permitting valuation discounts for fractional interests in property. *E.g.*, *Estate of Bonner*, 84 F.3d 196; *Estate of Bright*, 658 F.2d 999.

We also reject respondent's argument that partition costs may be deductible as administration expenses under section 2053(a)(2) but may not be cited as justification for a valuation discount. To begin with, respondent's position is directly contrary to the caselaw permitting discounts in the light of uncertainties regarding the possibility of and/or costs associated with partition actions. *E.g.*, *Estate of Bonner*, 84

F.3d at 197–198; *Estate of Baird v. Commissioner*, T.C. Memo. 2001–258; *Stone*, 99 A.F.T.R.2d at 2007–2997, 2007–2999; *accord Estate of Baird v. Commissioner*, 416 F.3d 442, 452–453 (5th Cir. 2005) (citing *Estate of Bonner*, 84 F.3d at 197–198), *rev'g* T.C. Memo. 2002–299. Secondly, the anticipated expense of a partition action is not an anticipated expense of the estate's sale of property to be valued. Rather, as petitioners note, it is an expense that the hypothetical buyer might have to incur after purchasing that property. As we have held, such costs are costs that a potential buyer would have to "take into account in determining the price he would be willing to pay. This, of course, is consistent with the definition of fair market value. See sec. 20.2031–1(b), Estate Tax Regs." *Estate of Smith v. Commissioner*, T.C. Memo. 1993–236. Lastly, the cases upon which respondent relies are inapposite. The court in each of those cases rejected taxpayer claims that the fair market value of property was the net amount received by the seller after payment of excise taxes, sales commissions, or other expenses of sale and held the fair market value to be the gross amount paid by the buyer to the seller. *See Estate of Smith v. Commissioner*, 57 T.C. 650, 659 (1972), *aff'd*, 510 F.2d 479 (2d Cir. 1975); *Estate of Gould v. Commissioner*, 14 T.C. 414, 417 (1950); *Payne v. United States*, 35 A.F.T.R.2d 75–1623 (M.D. Fla. 1975). The costs involved in each of those cases were the seller's costs associated with the sale whereas here, as we have noted, the anticipated partition costs are anticipated costs of the buyer, which are properly considered in determining fair market value. *See Estate of Smith v. Commissioner*, T.C. Memo. 1993–236.

Lastly, we reject respondent's argument that the Commissioner's rulings policy (reflected in both revenue rulings and private letter rulings), whereby undiscounted pro rata fair market value deductions are allowed for charitable contributions of fractional interests in art, controls the valuation of decedent's fractional interests in the art.

Respondent cites two revenue rulings in which the taxpayer donated to a section 170(c) organization either all or a portion of the taxpayer's remainder interest in the art with the taxpayer retaining sole right of possession for life, or an undivided fractional interest in the art resulting in shared possession. Those rulings state that the donor is entitled to

a deduction for either the present value of the remainder interest or for the undiscounted pro rata fair market value of the undivided fractional interest transferred. *See* Rev. Rul. 58–455, *supra*; Rev. Rul. 57–293, *supra*. Respondent argues that any discount in valuing fractional interests in art for estate tax purposes would conflict impermissibly with the position taken in the rulings.

We are not bound by revenue rulings, and the weight (if any) that we afford them depends upon their persuasiveness and the consistency of the Commissioner's position over time. *Taproot Admin. Servs., Inc. v. Commissioner*, 133 T.C. 202 (2009), *aff'd*, 679 F.3d 1109 (9th Cir. 2012). In the earlier ruling, the Commissioner does not provide a rationale for his failure to discount (other than to present value) the value of the charitable contributions of the remainder or fractional interests in the art, and the later ruling cites only the prior ruling as authority. In neither ruling is there any indication of an impediment to a joint, fair market value sale of the art or, if such an impediment does exist, that the Commissioner took it into account. Moreover, in the light of precedent in both this Court and the Court of Appeals for the Fifth Circuit allowing discounts in valuing a fractional interest in property for Federal estate tax purposes where there are potential impediments to a fair market value sale of the interest (e.g., the possible need for a partition action), the rulings do not persuade us to deny any discount for decedent's fractional interests in the art. [15]

[15] Petitioners distinguish the Commissioner's ruling position on the ground that it deals with income rather than estate taxes (a position that finds support in *Stone v. United States*, 99 A.F.T.R.2d (RIA) 2007–2992, 2007–2997 n.9 (N.D. Cal. 2007), *supplemented by* 100 A.F.T.R.2d (RIA) 2007–5512 (N.D. Cal. 2007), *aff'd*, *Stone ex rel. Stone Trust Agreement v. United States*, 103 A.F.T.R.2d (RIA) 2009–1379 (9th Cir. 2009)) and on the further ground that it should be interpreted as applying only to the "common situation" in which the donor "makes a series of fractional donations and ultimately donates the entire work of art in full." Neither effort to distinguish the Commissioner's rulings from the facts of this case is persuasive. There is no basis for concluding that the term "value" has a meaning for income tax purposes different from the one it has for estate tax purposes, i.e., fair market value is fair market value (see sec. 1.170A–1(c)(1), Income Tax Regs., which provides a definition of fair market value identical to that provided by sec. 20.2031–1(b), Estate Tax Regs.); and we fail

Continued

Respondent also cites two cases decided by this Court in which we permitted undiscounted fair market value deductions for charitable contributions of, in one case, undivided fractional interests in an art collection and, in the other case, a collection of "antique stereoscopic" equipment and related material. *See Winokur v. Commissioner*, 90 T.C. 733 (1988); *Mast v. Commissioner*, T.C. Memo. 1989–119. In both cases, the sole valuation issue was the undiscounted fair market value of the collection, there being no dispute over the possible application of a pro rata deduction for the donated fractional interest. The parties did not raise the issue of a fractional interest discount, and we did not consider it. Therefore, we do not view those cases as precedent for denying a valuation discount in this case.

b. *Conclusion*

There is no bar, as a matter of law, to an appropriate discount from pro rata fair market value in valuing, for estate tax purposes, decedent's undivided fractional interests in the art.

3. *The Extent to Which Petitioners Are Entitled To Discount the Pro Rata Fair Market Value of Decedent's Interests in the Art*

a. *Introduction*

Only petitioners' valuation experts, Mr. Nash and Mr. Mitchell (both of whom based their reports, in part, on Mr. Miller's expert testimony), analyze the extent to which a discount from pro rata fair market value for decedent's undivided fractional interests in the art is warranted. Ms. Hanus-McManus essentially opines that there is no market for an undivided interest in art other than in connection with an agreement or understanding among the coowners that they

---

to see the basis for petitioners' assumption that respondent's allowance of an undiscounted fair market value deduction for the contribution of an undivided fractional interest in art (in Rev. Rul. 57–293, 1957–2 C.B. 153, 154–155, Ex. 2) is best read to apply to a situation in which the contribution was one in a series of contributions ultimately providing the donee with complete ownership and possession of the art. Thus, although we decline to apply the rulings to the facts of this case, we do so on grounds other than those proffered by petitioners.

will agree to a joint sale of the art at some future time.[16] Respondent offers her testimony solely in support of his argument that no discount is warranted in valuing an undivided fractional interest in art. As noted *supra*, Mr. Cahill also does not address the subject of discounts, opining only that the restrictions on sales of cotenant art "are not comparable to similar arrangements entered into by persons in arms length art market transactions." Respondent offers that report solely in support of his application of section 2703 to the cotenant art.

b. *Analysis*

Having decided that petitioners may introduce facts demonstrating the estate's entitlement to a discount from pro rata fair market value for the art, the issue before us is whether and to what extent we should sustain the discounts proffered by Mr. Mitchell on the basis of the expert testimony of Messrs. Nash and Miller.

The overriding flaw in Mr. Nash's and (derivatively) Mr. Mitchell's analyses is their failure to consider not only the Elkins children's opposition to selling any of the art but also their ownership position vis-a-vis that of the hypothetical willing buyer and the impact that the 73.055–26.945 or 50–50 ownership split would have on the negotiations between seller and buyer. Both experts should have considered the fact that the Elkins children, cumulatively, were entitled to possession of 61 works of cotenant art for a little over three months each year, and to possession of the three works of GRIT art for six months of each year.[17] The relatively brief

[16] Mr. Nash is in apparent agreement with that conclusion, but he nonetheless opines that a collector or speculator might offer to purchase decedent's interests in the art at an appropriate discount, i.e., "at a price that was deeply discounted from the actual market value to justify the risks involved."

[17] The Elkins children were before, and have been since, decedent's death content to leave all but the smaller works of art (which they have rotated among themselves) in place in the Houston area (primarily in Mr. and Mrs. Elkins' family home) where each has ready access to all of the art. Thus, despite their separate, individual rights of exclusive possession, we assume for purposes of this analysis that possession by any one child may be treated as possession by all three. Therefore, we consider their rights of possession as a cumulative or combined right of possession, i.e.,

Continued

period of annual possession and the expense and inconvenience of annually moving the art from the hypothetical buyer's premises back to Houston most likely would have caused the Elkins children to reassess their professed desire to cling, at all costs, to the ownership status quo existing after decedent's death. Thus, the hypothetical buyer would be in an excellent position to persuade the Elkins children, who, together, had the financial wherewithal to do so, to buy the buyer's interest in any or all of the works, thereby enabling them to continue to maintain absolute ownership and possession of the art.[18] Neither Mr. Nash nor Mr. Mitchell considered that possibility.

Ms. Sasser testified that, in the light of a relatively short period of possession of the art to which she and her siblings would be entitled vis-a-vis a hypothetical buyer, and considering that the buyer would, most likely, not reside in the Houston area, she "would be willing to pay * * * a fair price" to purchase the hypothetical buyer's 73.055% or 50% interests in the art. Her testimony confirms what both the hypothetical willing buyer and seller would reasonably suspect during their negotiations: that the Elkins children's strong desire to retain possession of the art in place would motivate them to purchase the hypothetical buyer's interests, most likely in each case for an amount equal or close to the undiscounted fair market value of the interest. It defies logic to assume that, as 27% or 50% owners and possessors of the art, the Elkins children would spend millions of dollars to retain their status as such, perhaps as defendants in multiple partition actions that could drag on for many years, when they would be able to acquire 100% ownership and

26.945% (3 × 8.98167%) of each year for 61 works and 50% (3 × 16.667%) of each year for three works.

[18] During her testimony, Ms. Sasser suggested that, as a means of reducing the number of moves to which the art would be subject under the cotenants' agreement, she might opt to revise the agreement so that the art would be moved only once every three years, i.e., she and her siblings could retain 61 works for some 9 months and 3 works for 18 months every three years. But even if we assume that a hypothetical buyer would agree to such an arrangement, the perennial back-and-forth movement of the art would remain an expensive and undesirable option for the Elkins children.

possession of the art, which, after all, is what they really want. [19]

Petitioners argue that the "fair price" referred to by Ms. Sasser would not exceed "fair market value", meaning the discounted values determined by Messrs. Nash and Mitchell. We disagree. Ms. Sasser's testimony confirms that the Elkins children would be willing to purchase the hypothetical buyer's interests in the art at much higher prices than a disinterested buyer would be willing to pay for the same interests because of the children's added motivation of keeping the art within the family as, in petitioners' words, "a memorial to their parents rather than [as] an investment". That motivation is reflected in the following exchange:

> Q: All right. So, most of the attachment to the art is as a memorial to your parents, and it means more to you than money in this instance?
>
> A: Yes, it does.

Ms. Sasser further testified that by a "fair price" she meant the price determined by "an expert or somebody who knew something about it". Then, during a subsequent colloquy between Ms. Sasser and the Court, Ms. Sasser shed further light on what she considered to be a "fair price":

> THE COURT: Now, I want you to explain to me why you would be reluctant to sell * * * [the art], to sell your piece?
>
> THE WITNESS: I guess honestly that I would be hoping that some day that I could buy, or * * * [maybe] we could buy, me, my brother, and sister, could buy the 73[%] back in some way.
>
> THE COURT: Well, would you be willing to pay a pro rata portion, * * * [73] percent, of the fair market value of the whole piece of art, of each of the ones that you liked, to get back that * * * [73] percent interest that somebody else had?

---

[19] As discussed *infra*, the Elkins children most likely would be willing to pay a hypothetical buyer substantially more than the anticipated attorney's fees and related costs they would incur to oppose the buyer's partition action simply because the outcome of a purchase by them would be so much more satisfactory. Moreover, because of their desire to preserve intact and continue to have uninterrupted access to the entire collection, it is reasonable to assume that the Elkins children would be as motivated to purchase the hypothetical buyer's interests in Mr. Nash's category III works as they would be to purchase the buyer's interests in Mr. Nash's category I and category II works. Indeed, Mr. Nash testified that he had met with the Elkins children, who are "committed to retaining the art in the family until the last * * * [of them] dies."

> THE WITNESS: I would be willing to pay if somebody told me that it was a fair price to get that, and I can't say what is fair.

Later, in reference to a particular painting (Pool on Sprayed Blue Paper by David Hockney), the following exchange took place:

> THE COURT: The Pool? Okay. They say that the sales value of it is $900 thousand. Would you then be willing to pay * * * [73] percent of that to get it back, assuming that you were convinced that was a fair price?
>
> THE WITNESS: If somebody who knew the art market assured me that was a fair price, then yes, I would.

We infer from the foregoing exchange that the "fair price" Ms. Sasser was willing to pay was decedent's pro rata share of an expert-verified undiscounted fair market value of the art, as exemplified by her willingness to pay 73% of the $900,000 stipulated fair market value of the Hockney painting were that still a "fair price". At the time she testified, Ms. Sasser obviously was aware of the sharply discounted values posited by Messrs. Nash and Mitchell for decedent's interests in the art and of the fact that those values were based upon the hypothetical buyer's having to confront the Elkins children's unrelenting opposition to any attempt by the buyer to employ a partition action to monetize his or her investment in the art or to obtain full possession of a pro rata portion thereof, circumstances that she knew were irrelevant to her (and her siblings') potential purchase of decedent's interests, which would give them 100% ownership of the art. Had she had those sharply discounted values in mind when responding to the Court's questioning, she would not have left open the possibility that 73% of the $900,000 undiscounted fair market value of the Hockney painting might constitute a "fair price" for decedent's interest therein. Moreover, the hypothetical willing buyer and seller would suspect the Elkins children's willingness to pay pro rata fair market value, or something close to it, and they would price decedent's interests in the art accordingly. Therefore, we reject petitioners' conclusion that a hypothetical owner of decedent's fractional interests in the art, cognizant of the Elkins children's "staying power", i.e., their determination "to outlast any third party who attempted to force a sale of a Fractional Interest by litigation", would have

to sell the art to the Elkins children at the sharply discounted values determined by Messrs. Nash and Mitchell "because he or she could not expect to 'out-negotiate' the Elkins Children and because no one else would offer any more than * * * [those discounted] values." We fail to see the connection between the Elkins children's so-called staying power and the fair market value of decedent's interests in the art in the context of the children's purchase of those interests. Ms. Sasser testified that she would opt to preserve her minority interests in the art, rather than monetize those interests, but only on the assumption that she could not "buy it back". Clearly, then, her preference (and, presumably, that of her siblings) was to repurchase decedent's fractional interests in the art from the hypothetical buyers, and we see no evidence that she or they would limit their offer to an amount not in excess of the discounted values posited by Messrs. Nash and Mitchell.

The actual bargaining position that a hypothetical buyer of decedent's interests in the art would have vis-a-vis the interests of the Elkins children constitutes one of the "relevant facts" that we must deem to be considered by a hypothetical buyer and seller pursuant to section 20.2031–1(b), Estate Tax Regs. See *Estate of Winkler v. Commissioner*, T.C. Memo. 1989–231, where, in valuing a 10% block of voting stock in a closely held corporation, we took into account the fact that the hypothetical buyer thereof would represent the "swing vote" between the two families that owned the other 90% (50% and 40%) of the voting stock. On that basis, we held that a buyer, unrelated to either family, "would be willing to pay a premium for a 10 percent block of voting stock that could be pivotal as between the two families" and that "a minority discount would be inappropriate here." *See also Estate of Andrews v. Commissioner*, 79 T.C. 938, 956 (1982) ("Certainly, the hypothetical sale should not be constructed in a vacuum isolated from the actual facts that affect the value of the stock in the hands of the decedent[.]"); *True v. United States*, 547 F. Supp. 201, 203 (D. Wyo. 1982) ("Hypothetical analysis can be a valuable tool; however, when real considerations exist, those realities should not and cannot be ignored.").

The logic of assuming that the Elkins children would pay a hypothetical buyer of decedent's interests in the art more

than a disinterested collector or speculator would have paid for those interests is also confirmed by cases recognizing that certain properties possess an enhanced "assemblage" value. *See, e.g.*, *Pittsburgh Terminal Corp. v. Commissioner*, 60 T.C. 80, 90 (1973) (dicta: "[W]e do not quarrel with * * * [the taxpayer's] assertion that aggregation increases the value of coal lands[.]"), *aff'd without published opinion*, 500 F.2d 1400 (3d Cir. 1974); *Serdar v. Commissioner*, T.C. Memo. 1986–504.[20] In *Serdar*, the taxpayer gave two parcels of real property to Smith in exchange for a single parcel valued at more than what the Commissioner considered to be the combined value of the taxpayer's two properties. The Commissioner determined that the difference constituted ordinary income to the taxpayer attributable to a prepayment penalty, owed by Smith to the taxpayer, related to a prior transaction. In rejecting the Commissioner's argument, we reasoned as follows:

> We think that * * * [the Commissioner's] appraisal failed to adequately take into account factors that made the properties peculiarly adaptable to Smith's use, and that their fair market value equaled the value of the consideration received for them. The factors that the appraisal failed to adequately take into account are the value to Smith of the road and railroad access that the properties provided and their assemblage value, and, with respect to the Wadsworth Property, the value to Smith of eliminating a tract of land that would have jutted north into his assemblage.
>
> * * * * * * *
>
> In sum, we believe that Smith was convinced that it was essential to acquire * * * [the two properties] to enable him to develop his property as he planned, that he was therefore willing to pay a high price for those properties, and that * * * [the taxpayer] knew of Smith's plans and drove a hard bargain.

In this case, the hypothetical willing buyer (whether he be a collector or a speculator) and seller of decedent's fractional interests in the art would know of the Elkins children's strong desire to own the art in whole. Therefore, the buyer and seller would recognize the former's ability to drive "a

[20] For a general discussion of cases involving assemblage and other special needs values, see John A. Bogdanski, Federal Tax Valuation, para. 2.01[2][c], at 2–32 through 2–37 (2012).

hard bargain" in negotiating a resale of that art to the children.[21]

Moreover, the hypothetical buyer-collector might very well be content to possess the art for 73.055% (or 50%) of each year. In his written report, Mr. Nash states:

> It is not uncommon for two museums, acting together, to buy a work of art. * * * They each take turns in exhibiting the works in proportion to their interests. This would not work in this circumstance because the other owners would be the Elkins Children, and not another museum or institution. Consequently, museums would not be interested in purchasing the interest.

Mr. Nash offers no reason for his conclusion that a museum would not be as willing to share ownership with the Elkins children as it would with another museum or institution, nor do we see one. Moreover, we see no basis for concluding that only a museum jointly owning art with another museum would be content to retain its fractional interest and shared right of possession with another joint owner for an indefinite period. The point, of course, is that a hypothetical buyer-collector, in no rush to sell his or her acquired interests in the art, would be in an even stronger bargaining position than a speculator or art dealer in negotiating a purchase price with the Elkins children.

In short, we find petitioners' experts' analyses and conclusions to be unreliable because they are based, in large part, on the false or at least highly dubious assumption that the Elkins children would mount an unrelenting defense of the status quo, ignoring the very high probability that, instead,

---

[21] We note that the Commissioner made a similar argument in *Estate of Bright*, 658 F.2d at 1007. In that case, the decedent owned 27½% of the common stock of a closely held corporation. Her surviving husband (Mr. Bright) also owned 27½%, and an unrelated party (Mr. Schiff) owned 30%. The Commissioner argued that the decedent's 27½% interest "offered by the 'willing seller' would provide the margin of control for either Mr. Bright or Mr. Schiff, and that the 'willing buyer' might negotiate a resale to either". The Commissioner argued that those facts constituted "relevant facts" that "might affect the value of * * * [the decedent's] 27½% minority interest which is to be valued." The Commissioner stressed that "the 'willing buyer-seller' rule renders irrelevant only the real seller and buyer, not the other stockholders." *Id.* The Court of Appeals for the Fifth Circuit, after noting that "a few cases have acknowledged the relevance of such facts", declined to consider the Commissioner's argument because he made it for the first time on appeal. *Id.* at 1007–1008.

the children would seek to purchase the hypothetical buyer's interests in the art. Because we reject that assumption, we find Mr. Mitchell's discounted values for the art to be unrealistically low. [22]

c. *Conclusion*

Petitioners argue that the Elkins children would spend whatever was necessary to retain their minority (or 50%) interests in the art. It is much more likely, however, that, given their undisputed financial resources to do so, they would be willing to spend even more to acquire decedent's fractional interests therein and thereby preserve for themselves 100% ownership and possession of the art. The question is how much more.

We believe that a hypothetical willing buyer and seller of decedent's interests in the art would agree upon a price at or fairly close to the pro rata fair market value of those interests. Because the hypothetical seller and buyer could not be certain, however, regarding the Elkins children's intentions, i.e., because they could not be certain that the Elkins children would seek to purchase the hypothetical buyer's interests in the art rather than be content with their existing fractional interests, and because they could not be certain that, if the Elkins children did seek to repurchase decedent's interests in the art, they would agree to pay the full pro rata fair market value for those interests, we conclude that a nominal discount from full pro rata fair market value is appropriate.

[22] Our analysis renders moot the dispute between the parties over whether it is proper to assume that the hypothetical buyer might be a collector purchasing multiple works of art who opts to institute a partition in kind, which, if true, would reduce the hypothetical buyer's potential partition costs. Because the hypothetical willing buyer and seller would consider a resale of decedent's interests in the art to the Elkins children to be the most likely alternative in arriving at a price for those interests, and because that price, in our view, would exceed even Mr. Miller's worst case estimate of total partition costs ($11 million plus), it is unlikely that potential partition costs would become a significant factor in the negotiations. For the same reason, the probability, discussed by Mr. Miller, that, under Texas law, the restriction on sales provision in para. 7 of the cotenants' agreement will constitute an implied waiver of the right to partition, is not a significant factor in valuing the cotenant art.

We hold that, in order to account for the foregoing uncertainties, a hypothetical buyer and seller of all or a portion of decedent's interests in the art would agree to a 10% discount from pro rata fair market value in arriving at a purchase price for those interests. We believe that a 10% discount would enable a hypothetical buyer to assure himself or herself of a reasonable profit on a resale of those interests to the Elkins children.

VI. *Conclusion*

Petitioners are entitled to a 10% discount from pro rata fair market value with respect to decedent's interests in the art.

A list of the 64 works of art, decedent's pro rata share of the stipulated fair market value of each work, and the resulting fair market value of each work, for Federal estate tax purposes, after applying the 10% discount permitted herein, is attached to this Opinion as appendix C.

Decision will be entered under Rule 155.

APPENDIX A

THE GRIT ART

Item	*Artist*	*Title/year/description/size*	*Stipulated fair market value*
1	Pollock, Jackson	Untitled, Number 21, 1949 (Oil & enamel paper on masonite, 19¼" × 26¾")	$6,000,000
2	Moore, Henry	Two-Piece Reclining Figure No. 3, 1961 (Bronze, 59" × 113" × 54")	4,000,000
3	Picasso, Pablo	Baigneuse debout, 1925 (Brush & ink on paper, 42" × 26½")	600,000
	Total		10,600,000

THE DISCLAIMER ART

Item	*Artist*	*Title/year/description/size*	*Stipulated fair market value*
4	Johns, Jasper	Figure 4, 1967 (Oil, encaustic & newspaper on canvas, 53½" × 41½")	$8,000,000

Item	*Artist*	*Title/year/description/size*	*Stipulated fair market value*
5	Francis, Sam	Green Gold, 1956 (Oil on canvas, 105" × 78")	2,500,000
6	Motherwell, Robert	Elegy to Spanish Republic #134, 1976 (Acrylic on canvas, 72" × 84")	1,500,000
7	Twombly, Cy	Untitled, 1971 (Oil-based house paint, wax crayon, & pencil on canvas, 69" × 49½")	1,500,000
8	Hockney, David	Pool on Sprayed Blue Paper...1978 (Colored & pressed paper pulp in 6 sheets, 72" × 85")	900,000
9	Kelly, Ellsworth	Yellow Panel, 1985 (Oil on canvas, 108" × 104½")	800,000
10	Moore, Henry	Standing Figure (Internal Form) (Bronze w/green patina, 57½" high)	600,000
11	Cezanne, Paul	Pot de geraniums, ca. 1885 (Watercolor on paper, 12¾" × 10¼")	550,000
12	Soulages, Pierre	8 June 61, 1961 (Oil on canvas, 81½" × 57½")	550,000
13	Magritte, Rene	La lecon des tenebres, 1964 (Gouache on paper, 13½" × 21½")	450,000
14	Albers, Joseph	Study for Homage to a Square in White Light, 1968 (Oil on masonite, 24" × 24")	400,000
15	Johns, Jasper	Three Flags, 1977 (Ink on plastic, image: 6⅞" × 9⅞"; 12½" × 18⅛")	400,000
16	Hofmann, Hans	Adagio, 1962 (Oil on canvas, 48" × 36")	375,000
17	Louis, Morris	Delta Epsilon, 1960 (Acrylic on canvas, 103" × 150")	375,000
18	Ernst, Max	The Elements..., 1962 (Oil on canvas, 45¼" × 35")	350,000
19	Moore, Henry	Family Group, 1944 (Bronze w/ green patina, height 6")	350,000

IN THE UNITED STATES COURT OF APPEALS
FOR THE FIFTH CIRCUIT

United States Court of Appeals
Fifth Circuit
FILED
September 15, 2014
Lyle W. Cayce
Clerk

No. 13-60472

ESTATE OF JAMES A. ELKINS, JR., Deceased;
MARGARET ELISE JOSEPH, and
LESLIE KEITH SASSER, Independent Executors,

Petitioners-Appellants,

v.

COMMISSIONER OF INTERNAL REVENUE,

Respondent-Appellee.

Appeal from the Decision of the United States
Tax Court

Before STEWART, Chief Judge, and WIENER and COSTA, Circuit Judges.

WIENER, Circuit Judge:

Petitioners-Appellants Margaret Elise Joseph and Leslie Keith Sasser ("Petitioners"), as Independent Executors of the Estate of their deceased father, James A. Elkins, Jr. ("Decedent"), petitioned the United States Tax Court ("Tax Court") to review and eventually eliminate the federal estate tax deficiency assessed against the Estate by Respondent-Appellee, the Commissioner of Internal Revenue ("the Commissioner"). That deficiency resulted solely from the Commissioner's disallowance of the "fractional-ownership discount" applied by the Estate in determining the taxable values of Decedent's pro rata shares of the jointly stipulated fair market values

("FMV") of 64 original works of modern and contemporary art in which the Decedent owned only fractional interests at his death.

In the Tax Court, the Commissioner steadfastly maintained that absolutely no fractional-ownership discount was allowable. This presumably accounts for his failure to adduce *any* affirmative evidence—either factual or expert opinion—as to the quantum of such discounts in the event they were found applicable by the court.

The Tax Court rejected the Commissioner's zero-discount position, but also rejected the quantums of the various fractional-ownership discounts adduced by the Estate through the reports, exhibits, and testimony of its three expert witnesses—the only substantive evidence of discount quantum presented to the court.[1] Instead, the Tax Court concluded that a "nominal" fractional-ownership discount of 10 percent should apply across the board to Decedent's ratable share of the stipulated FMV of each of the works of art; this despite the absence of any record evidence whatsoever on which to base the quantum of its self-labeled nominal discount.

We agree in large part with the Tax Court's underlying analysis and discrete factual determinations, including its rejection of the Commissioner's zero-discount position (which holding we affirm). We disagree, however, with the ultimate step in the court's analysis that led it not only to reject the quantums of the Estate's proffered fractional-ownership discounts but also to adopt and apply one of its own without any supporting evidence. We therefore affirm in part, reverse in part, and render judgment in favor of Petitioners,

[1] The Estate had applied a fractional-ownership discount of 44.75 percent uniformly to the Decedent's interest in each work of art when preparing the estate tax return, Form 706. It did so based on the appraisal of Sotheby's, Inc. and the report of Deloitte L.L.P. As the IRS disallowed that discount, however, the Estate treated it as a fall-back position in the Tax Court and adduced expert testimony of discrete discounts for the various works.

holding that the taxable values of Decedent's fractional interests in the works of art are the net amounts reflected for each on Exhibit B of the Tax Court's opinion. This, in turn, produces an aggregate refund owed to the Estate of $14,359,508.21, plus statutory interest.[2]

I. FACTS AND PROCEEDINGS

A. Issue on Appeal

Despite the size and complexity of Decedent's estate and the millions of dollars of federal estate tax that it returned and paid, the single question presented in this appeal is narrow, straightforward, and easily posed:

> Given the parties' stipulation of the FMV of each of the works of art in which Decedent owned fractional interests at his death, is the Estate taxable on Decedent's undiscounted pro rata share of those FMVs, as the Commissioner contended on audit and throughout the Tax Court proceedings, or is it taxable only on those values reduced by fractional-ownership discounts of either (1) a uniform 10 percent each, as held by the Tax Court, or (2) the various percentages that the Estate advanced through the testimony and reports of its expert witnesses?

This entire appeal thus begins and ends with the question of the taxable value of Decedent's fractional interests in those 64 items of non-business, tangible, personal property that were jointly owned in varying percentages by Decedent and his three adult children at the instant of his death. And, the answer to that one question begins and ends with the proper administration of the ubiquitous willing buyer/willing seller test for fair market value: "Fair market value is defined as 'the price at which the property would change hands between a willing buyer and a willing seller, neither being under any

[2] The Estate and the Commissioner have jointly stipulated this amount as the tax refund that would be due under these circumstances and have further stipulated that they will confer and calculate the proper amount of statutory interest owed if the stipulated refund is ultimately determined to be due and owing.

compulsion to buy or sell and both having reasonable knowledge of relevant facts.' "[3]

B. Background

Over the course of their marriage, the Texas-domiciled Decedent and his wife acquired property, both real and personal, essentially all of which fell into the community that existed between them and thus was owned equally by the spouses. Among their many and varied acquisitions were race horses, real estate, interests in closely held businesses, and the said 64 works of art. Their interests in each of those works were retained for the remainder of their respective lifetimes, and that art was displayed in their home or office, or those of their adult children, or, occasionally, at an art gallery, museum, or other public place, albeit not as one cohesive collection or assemblage.

Decedent and his wife each created an *inter vivos* Grantor Retained Income Trust ("GRIT") that held title to their respective half interests in three of the 64 works (the "GRIT Art"). After the death of his wife during the terms of the GRITs, and for the remainder of his lifetime, Decedent continued to own his 50 percent interest in those three pieces. His three children received his late wife's 50 percent interest, 16.667 percent each.

By virtue of a bequest to him from his wife of her 50 percent interest in each of the remaining works and his subsequent disclaimer of a 26.945 percent interest in each, Decedent owned at his death an aggregate 73.055 percent interest in each of those 61 pieces (the "Disclaimer Art"), comprising his original 50 percent and the 23.055 percent interest from his wife's bequest that remained after deducting the 26.945 percent interest that Decedent disclaimed. That disclaimed interest passed equally to their three children, as

[3] *Anthony v. United States*, 520 F.3d 374, 377 (5th Cir. 2008) (citing Treas. Reg. § 20.2031-1(b)).

their mother's successor legatees, 8.98167 percent each, and was owned by them at his death.

From time to time following the death of his wife, Decedent and his children voluntarily subjected their respective interests in the works of art to various restraints on possession, partition, and alienation. For example, Decedent's three children leased their combined 50 percent interests in two of the three pieces of GRIT Art to Decedent, thereby ensuring his uninterrupted possession of those two works. That lease, which was still in effect at Decedent's death, specified, *inter alia*, that no co-owner could dispose of his or her interest in a leased work unless joined by all co-owners. The lease also provided that none could transfer or assign his or her "rights, duties and obligations" under the lease without the prior consent of all.

Similarly, Decedent and his children encumbered all 61 items of Disclaimer Art with a "Cotenants Agreement." Among other things, it spelled out each co-owner's right of possession for a specified number of days during any 12 month period. More pertinent to this appeal, that agreement prohibited the sale of an interest in any work by a co-owner without the prior consent of all. The one piece of GRIT Art that had not been subjected to the children's lease to Decedent was eventually added to the list of works covered by the Cotenants Agreement.

C. Proceedings Prior to Tax Court Litigation

Decedent died testate in February 2006. His will was probated in Harris County, Texas, and his three children qualified as co-executors.[4] The Decedent's Estate Tax Return, Form 706, was filed the following May,

[4] Decedent's son, who was one of the three co-executors, died unexpectedly in June 2010, after which his two sisters, Petitioners herein, continued to serve as the Independent Executors of Decedent's estate.

reporting a tax liability in excess of $102 million. It listed, among other assets, fractional interests in various items of real and personal property, including his 73.005 percent interest in the Disclaimer Art and his 50 percent interest in the GRIT Art.[5]

Following its audit of the estate tax return, the Internal Revenue Service ("IRS") accepted net values that remained after deducting various fractional-ownership discounts on essentially every property, real and personal, in which Decedent owned a fractional interest, *with but one exception*: the 64 works of art. The IRS refused to allow *any* discount against the Decedent's pro rata share—his fractional-ownership interest—of the stipulated FMVs of these works. The IRS assessed an estate tax deficiency of $9,068,266.

D. Tax Court Proceedings

The Estate filed the instant action in Tax Court in July 2010, addressing the single substantive issue of the taxable values of Decedent's fractional interest in the 64 items of art.[6] By the time of the trial in September 2011, the parties had narrowed a number of issues by joint stipulations. During that one-day trial, six witnesses testified, five of whom were tendered as experts, three by the Estate and two by the Commissioner. The lone non-expert witness was Mrs. Leslie Keith Sasser, Decedent's daughter and co-executor.

The gist of Mrs. Sasser's responses to questions on direct, on cross, and from the court, was that she and the other Elkins heirs are strongly attached

[5] The Commissioner and the Estate eventually stipulated undiscounted FMVs totaling $24,580,650 for the Disclaimer Art and $10,600,000 for the GRIT Art, differing slightly from the appraisal of $23,530,650 for the Disclaimer Art and $9,600,000 for the GRIT Art previously received by the Estate.

[6] The Estate's petition included additional refund claims that turn on the valuation of the art work, including a greater charitable deduction produced by that valuation and deductions for greater fees and cost of administration than originally projected. Such claims are ancillary to and controlled by the ultimate determination of the taxable value of the art.

to the art work, largely sentimentally; that they do not view those works as business assets, primarily because they simply do not need the money; and that they are determined to retain the art for life, *i.e.*, they would never be sellers. In response to hypothetical questions from the court, Mrs. Sasser did respond—also hypothetically—that she and presumably the other Elkins heirs might be *buyers* of Decedent's interest from a hypothetical willing buyer of that interest, but only if assured by an expert or experts that the price was fair:

> THE COURT: Well, would you be willing to pay a pro rata portion . . . of the fair market value of the whole piece of art, of each of the ones that you liked, to get that [] percent interest that somebody else had?
>
> THE WITNESS: I would be willing to pay if somebody told me that it was a fair price to get that, and I can't say what is fair. . . . If somebody who knew the art market assured me that was a fair price, then, yes, I would.
>
> THE COURT: Such as [the Estate's expert]?
>
> THE WITNESS: Yes, if he assured me that it was a fair price, I would buy it back.

The Estate's three remaining witnesses were tendered as experts in various aspects of the art's values and were "received" as such by the court: David Nash as an expert in the art market, the merchantability of art, and the valuation of art; longtime Texas lawyer William T. Miller as an expert on the nature, procedure, time, and costs of actions of partition and enforcement of restraints on alienation litigated on the basis of Texas law; and Mark L. Mitchell as an expert on the valuation of fractional interests in property. The result of the combined, interrelated, and interdependent testimony and reports of these experts was that a proper application of the willing buyer/willing seller test would produce prices for the Decedent's undivided interests in the works

of art substantially below his pro rata share of their respective FMVs. They concluded that any hypothetical willing buyer would demand significant fractional-ownership discounts in the face of becoming a co-owner with the Elkins descendants, given their financial strength and sophistication, their legal restraints on alienation and partition, and their determination never to sell their interests in the art.

By contrast, the Commissioner adduced no expert testimony or other evidence to establish alternative quantums of fractional-ownership discounts, sticking instead to his no-discount position.[7] He did proffer two experts as rebuttal witnesses. The Tax Court "received" one of them, Ms. Karen Hanus-McManus, as an expert appraiser of modern and contemporary art, and the other, Mr. John R. Cahill, as an expert on "art transactions," but rejected his opinion as "not germane to the issues in this case." Ms. Hanus-McManus's testimony is best summarized by her stated conclusion that "there is no *recognized* market for partial interest[s] in works of modern art and contemporary art within the secondary markets, with the galleries, and with private dealers."[8] She would not state, however, that there had never been, or never could be, sales of undivided interests in such art; only that there was no established or "recognized" market for such fractional interests.

The Tax Court issued its opinion in March 2013.[9] Applying the "fictitious willing buyer/willing seller" test to determine the taxable value of Decedent's undivided interests in the various works of art, the Tax Court ultimately held that such interests are indeed subject to fractional-ownership discounts, but

---

[7] The Commissioner appears to have ignored, or been unaware of, the venerable lesson of Judge Learned Hand's opinion in *Cohan*: In essence, make as close an approximation as you can, but never use a zero. *See Cohan v. Comm'r*, 39 F.2d 540, 543–44 (2d Cir. 1930).

[8] Emphasis supplied.

[9] *Estate of Elkins v. Comm'r*, 140 T.C. 86 (2013).

that the price on which the fictitious buyer and seller would finally agree would be the jointly stipulated values reduced by a "nominal" discount of 10 percent only.

II. ANALYSIS

A. Standard of Review

We review appeals from the Tax Court under the same standards which we review appeals from the district courts: *de novo* for purely legal conclusions; clear error for findings of fact.[10] "Clear error exists if we are left with a definite and firm conviction that a mistake has been made."[11] We review mixed questions of fact and law *de novo*.[12] We have long held that "determination of fair market value is a mixed question of fact and law."[13] As noted in the Estate's appellate brief, *de novo* review is appropriate here because "there is a pure question of law imbedded in the valuation calculus."[14]

B. Framework

1. No Special Deference

Preliminarily, we note two factors that *do not* come into play in today's review. First, the Tax Court neither expressed nor implied credibility concerns with any witness, lay or expert, so there are no credibility calls to which we owe special deference. Second, the willing buyer/willing seller test of fair market value truly is ubiquitous: It is not peculiar to federal tax issues. Rather, it is universally employed in myriad legal contexts: civil and criminal;

---

[10] *Green v. Comm'r*, 507 F.3d 857, 866 (5th Cir. 2007).

[11] *United States v. Roussel*, 705 F.3d 184, 195 (5th Cir. 2013) (citing *United States v. Griffin*, 324 F.3d 330, 365 (5th Cir. 2003)).

[12] *Succession of McCord v. Comm'r*, 461 F.3d 614, 626 (5th Cir. 2006).

[13] *Estate of Dunn v. Comm'r*, 301 F.3d 339, 348 (5th Cir. 2002).

[14] *Adams v. United States*, 218 F.3d 383, 385–86 (5th Cir. 2000).

tort and contracts; administrative and insurance. We therefore owe no enhanced deference to the Tax Court's application of that test.

2. Burden of Proof

As we affirm the Tax Court's ruling that percentages of fractional-ownership discount are applicable, we need not consider whether it applied the correct burden of proof to reach that conclusion. The second part of today's inquiry—the correct percentages of fractional-ownership discounts to be applied—presents a somewhat thornier question, at least theoretically. The Tax Court failed to require the Commissioner to bear that burden of proof, even though 26 U.S.C. § 7491 mandates that when, as here, the petitioning taxpayer adduces sufficient evidence to establish the material facts—in this case, the amounts of the discounts—the Commissioner has the burden of refuting such facts and proving different ones. Yet he chose not to adduce any evidence of discount *quantum* whatsoever, sticking instead to his no-discount position. By contrast, the Estate adduced a plethora of credible and highly probative evidence in support of both the applicability of such discounts *vel non* and the precise percentages of the discount to be applied to each separate item, as summarized in detail on Exhibit B of the Tax Court's opinion. Under a proper administration of § 7491's burden of proof rule, this case should have ended at that point with a judgment for the Estate. But, as shall be seen, the court's failure to assign the burden of proof of quantum to the Commissioner, although error, makes no difference in the end.

3. Preponderance of the Evidence

After rejecting the Commissioner's no-discount position, the Tax Court announced that the issue of the burden of proof was not important because it would proceed to determine the appropriate quantum of the discounts based on a *preponderance* of the evidence. In most trials, "[a] determination of where the preponderance lies requires a measuring and weighing of all the evidence,

pro and con."[15] But, when, as here, the *only* evidence on an issue is that presented by but one party—and by the one that did not have the burden of proof, at that—there is no "preponderance": It takes two to tango.[16] As with its misapplication of the burden of proof, however, the Tax Court's error in announcing its use of the preponderance standard to determine the amounts of the discounts ultimately makes no difference. This is because, having put all of his eggs in the one, no-discount basket at trial, the Commissioner cannot be heard on appeal to question the quantity, quality, or sufficiency of the evidence adduced by the Estate to prove the *quantum* of the fractional-ownership discounts to be applied.[17] Likewise, given the total absence of substantive evidence from the Commissioner on the issue of quantum, the Tax Court should have accepted and applied the uncontradicted quantums of the partial-ownership discounts that the Estate proved with much more than substantial evidence.

4. Merits

Just as it was obvious to the Tax Court that the Commissioner had no viable basis for rigidly insisting that no fractional-ownership discount was applicable, it should have been equally obvious that, in the absence of any evidentiary basis whatsoever, there is no viable factual or legal support for the

---

[15] *United States v. Ricks*, 639 F.2d 1305, 1309 (5th Cir. Unit B Mar.1981).

[16] *Black's Law Dictionary* defines "preponderance of the evidence" as: "The greater weight of the evidence, not necessarily established by the greater number of witnesses testifying to a fact but by evidence that has the most convincing force; superior evidentiary weight that, though not sufficient to free the mind wholly from all reasonable doubt, is still sufficient to incline a fair and impartial mind to one side of the issue rather than the other." *See Black's Law Dictionary* 1301 (9th ed. 2009).

[17] For the first time on appeal, the Commissioner attempts to address the quantum of the fractional-ownership discounts as supporting the Tax Court's 10 percent discount. It is well settled, however, that we do not consider contentions raised for the first time on appeal. *Crawford Prof'l Drugs, Inc. v. CVS Caremark Corp.*, 748 F.3d 249, 267 (5th Cir. 2014).

court's own nominal 10 percent discount. This is particularly ironical when viewed in the light of the Tax Court's correct distinction of this case from, among others, *Estate of Scull v. Commissioner*, 67 T.C.M. (CCH) 2953 (1994), and *Stone v. United States*, No. 06-0259, 2007 WL 2318974, at *3 (N.D. Cal. Aug. 10, 2007). The courts in both of those cases awarded nominal discounts, but, as the Tax Court noted, they were only awarded "because of a lack of proof [by the taxpayer] that any greater discount was warranted." But the exact opposite situation is present here: The Estate, as taxpayer, presented *all* of the discount evidence, and a surfeit at that, further eschewing the propriety of a nominal discount.

At oral argument, appellate counsel for the Commissioner insisted that the Tax Court's sole reason for rejecting the discounts determined by the Estate's experts was their failure to include, or assign sufficient weight to, the Elkins heirs' strong emotional ("psychic") attachment to the family's works of art. Counsel claimed that the court faulted those experts for not concluding that, in and of itself, such psychic attachment would guarantee the hypothetical willing buyer a virtually undiscounted purchase price for the Decedent's fractional interests, regardless of those heirs' strong legal and financial positions as putative hostile co-owners with such a hypothetical willing buyer. According to Commissioner's counsel, this is what led the Tax Court to reject the expert's discounts out of hand. We disagree with counsel's cherry picking of the Tax Court's analysis. But even if counsel's reading of the Tax Court's reasoning were correct, it would not absolve that court of clear error.

We have again reviewed the entire transcript of the testimony of the Estate's experts and their written reports, and we are satisfied beyond cavil that they considered and correctly weighed all factors and characteristics of the Elkins heirs when determining how much a hypothetical willing buyer

would pay for Decedent's fractional interests and thus become a co-owner with them. Those experts took into account both the pros and the cons: the children's financial astuteness and their net worths; their hypothetical desire to acquire Decedent's fractional interests if a hypothetical willing buyer should acquire them first, but also their uncontradicted testimony that they would do so only for a "fair price," as determined by experts (presumably those who testified for them); their legal and financial ability to prevent any hypothetical willing buyer from quickly "flipping" his fractional interests in the art to third parties, particularly given the heirs' contractual restraints on alienation and partition, as well as their predictable determination to rid themselves of unrelated co-owners regardless of how much time it might take. In sum, we do not read the Tax Court to have rejected the importance of all aspects of the children's legal relationships to the art *other than* their "psychic" interests.

We repeat for emphasis that the Estate's uncontradicted, unimpeached, and eminently credible evidence in support of its proffered fractional-ownership discounts is not just a "preponderance" of such evidence; it is the *only* such evidence. Nowhere is there any evidentiary support for the Tax Court's unsubstantiated declaration that "a 10% discount would enable a hypothetical buyer to assure himself or herself of a reasonable profit on a resale of those interests to the Elkins children." Besides the error in logic of presuming that the hypothetical willing buyer *must* turn right around and sell his fractional purchases to those heirs, we cannot escape the conclusion that, under the facts of this case and the way the parties tried it, such a determination constitutes reversible error under any standard of review.

5. Correct Quantum of Fractional-Ownership Discounts

In turning to the question of the appropriate quantum of discount, the Tax Court acknowledged that (1) only the Estate's experts thoroughly analyzed

the extent of the discount, (2) the *relevant* testimony of the Commissioner's expert Ms. Hanus-McManus boiled down to the single fact that there is no "recognized" market for fractional interests in art, and (3) the several co-owners' agreements that regulated and restricted alienation, partition, and possession of essentially all of the art are distinguishable from such arrangements among persons engaged in arm's length, for-profit, art transactions. We agree. In fact, this increases the level of our comfort in concluding that nothing in the testimony of the Commissioner's experts, in his appellate brief, or in his appellate counsel's oral argument, detracts from or calls into question the Estate's unilateral discount evidence.[18]

It is principally within the last few pages of its opinion that the Tax Court's reversible error lies. While continuing to advocate the willing buyer/willing seller test that controls this case, the Tax Court inexplicably veers off course, focusing almost exclusively on its perception of the role of "the Elkins children" as owners of the remaining fractional interests in the works of art and giving short shrift to the time and expense that a successful willing buyer would face in litigating the restraints on alienation and possession and otherwise outwaiting those particular co-owners. Moreover, the Elkins heirs are neither *hypothetical* willing buyers nor *hypothetical* willing sellers, any more than the Estate is deemed to be the hypothetical willing seller.

We acknowledge, of course—as did the Estate's experts—that a hypothetical willing buyer would be aware of and take into account *all* aspects

[18] Indeed, the testimony of Ms. Hanus-McManus that there is no recognized or established market for undivided interests in art lends support to a *greater* discount. The absence of an established market would be a factor that a willing buyer would consider as calling for a deeper discount of fractional interests in art. Such absence does not, however, mean that willing buyers and willing sellers of fractional interests in art do not exist and cannot find one another through means other than an established market, *e.g.*, eBay, art galleries, art dealers' networks, conventions, social networking, and the like.

of the remaining fractional interests in the art that the Elkins heirs owned, not just the likelihood of their hypothetical desire to acquire the Decedent's fractional interests in the art from any successful hypothetical buyer thereof. An objective reading of the entirety of those experts' written reports and their testimony at trial demonstrates beyond question that the heirs' financial strengths, their out-of-hand rejection of the idea of ever selling their interests, and the time and money that the legal restraints in their arsenal would cost a willing buyer, combine to minimize any effect to the contrary that their "psychic" attachment to the art might otherwise have on the discounts that apply here. To repeat, Mrs. Sasser testified that if, hypothetically, she and her siblings were to purchase such interests, it would only be after first determining *from experts* that any price was fair and reasonable. And the experts consulted would likely be those persons whom the Tax Court accepted at trial; experts whose ultimate values were based on their substantial discounts below FMV.

Furthermore, like the absence of an established market, the subjective characteristics of the Decedent's descendants as the owners of the remaining fractional interests would likely cut the other way: A potential willing buyer would undoubtedly insist that his potential willing seller *further discount* the sales price to account for the virtual impossibility of making an immediate "flip" of the art. Such a fully informed willing buyer would be well aware that, by virtue of becoming a co-owner with the sophisticated, determined, and financially independent Elkins heirs, he could not possibly make such a quick resale—absent a deep discount, that is. And, the situation is only exacerbated by the effect of the various restrictions on partition, alienation, and possession that survived the death of the Decedent.

III. CONCLUSION

We conclude our review by examining the entire record to see if we can determine the correct quantums of the fractional-ownership discounts and thereby avoid remand. When we do so, we conclude that the discounts determined by the Estate's experts are not just the only ones proved in court; they are eminently correct. We are never comfortable in disagreeing with, much less reversing, a jurist of the experience, reputation, and respect enjoyed by the Tax Court judge whose work product we are called on to review today. Yet, our review of the court's extensive explication of this case and its ultimate conclusion that the proper discount is 10 percent, leaves us with the "definite and firm conviction that a mistake has been made."[19]

At bottom, we find nothing in this record or in the Tax Court's opinion that would justify any conclusion other than that the Estate is entitled to a final determination of the estate tax owed that produces a tax refund calculated on the basis of the fractional-ownership discounts and net taxable FMVs set forth on Exhibit B to the court's opinion. The record on appeal is sufficient for us to render a final judgment and dispose of the sole issue in this case without prolonging it by remand at the cost of more time and money to the parties. Accordingly, we (1) affirm the Tax Court's rejection of the Commissioner's insistence that no fractional-ownership discount may be applied in determining the taxable values of Decedent's undivided interests in the subject art work; (2) affirm the Tax Court's holding that the Estate is entitled to apply a fractional-ownership discount to the Decedent's ratable share of the stipulated FMV of each of the 64 works of art; (3) reverse the Tax Court's holding that the appropriate fractional-ownership discount is a nominal 10 percent, uniformly applied to each work of art, regardless of

[19] *Green v. Comm'r*, 507 F.3d 857, 866 (5th Cir. 2007).

distinguishing features; (4) hold that the correct quantums of the fractional-ownership discounts applicable to the Decedent's pro rata share of the stipulated FMVs of the various works of art are those determined by the Estate's experts and itemized on Exhibit B to the Tax Court's opinion; and (5) render judgment in favor of the Estate for a refund of taxes overpaid in the amount of $14,359,508.21, plus statutory interest in a sum to be agreed on by the parties, based on the timing of the payment of that refund to the Estate, all as jointly stipulated to us by the parties.

AFFIRMED in part; REVERSED in part; and RENDERED.

OPINIONBY:

ROSENBERGER

OPINION:

OPINION OF THE COURT

In this matrimonial action, the plaintiff, Frederica von Stade Elkus, moved for an order determining, prior to trial, whether her career and/or celebrity status constituted marital property subject to equitable distribution. The parties have already stipulated to mutual judgments of divorce terminating their 17-year marriage and to joint custody of their two minor children. The trial on the remaining economic issues has been stayed pending the outcome of this appeal from the order of the Supreme Court, which had determined that the enhanced value of the plaintiff's career and/or celebrity status was not marital property subject to equitable distribution. Contrary to the conclusion reached by the Supreme Court, we

find that to the extent the defendant's contributions and efforts led to an increase in the value of the plaintiff's career, this appreciation was a product of the marital partnership, and, therefore, marital property subject to equitable distribution.

At the time of her marriage to the defendant on February 9, 1973, the plaintiff hadjust embarked on her career, performing minor roles with the Metropolitan Opera Company. During the course of the marriage, the plaintiff's career succeeded dramatically and her income rose accordingly. In the first year of the marriage, she earned $ 2,250. In 1989, she earned $ 621,878. She is now a celebrated artist with the Metropolitan Opera, as well as an international recording artist, concert and television performer. She has garnered numerous awards, and has performed for the President of the United States.

During the marriage, the defendant traveled with the plaintiff throughout the world, attending and critiquing her performances and rehearsals, and photographed her for album covers and magazine articles. The defendant was also the plaintiff's voice coach and teacher for 10 years of the marriage. He states that he sacrificed his own career as a singer and teacher to devote himself to the plaintiff's career and to the lives of their young children, and that his efforts enabled the plaintiff to become one of the most celebrated opera singers in the world. Since the plaintiff's career and/or celebrity status increased in value during the marriage due in part to his contributions, the defendant contends that he is entitled to equitable distribution of this marital property.

The Supreme Court disagreed, refusing to extend the holding in O'Brien v O'Brien (66 NY2d 576) in which the Court of Appeals determined that a medical license constituted marital property subject to equitable distribution, to the plaintiff's career as an opera singer. The court found that since the defendant enjoyed a substantial life-style during the marriage and since he would be sufficiently compensated through distribution of the parties' other assets, the plaintiff's career was not marital property.

There is a paucity of case law and no appellate authority in New York governing the issue of whether a career as a performing artist, and its accompanying celebrity status, constitute marital property subject to equitable distribution. The plaintiff maintains that since her career and celebrity status are not licensed, are not entities which are owned like a business, nor are protected interests which are subject to due process of law, they are not marital property. In our view, neither the Domestic Relations Law, nor relevant case law, allows for such a limited interpretation of the term marital property.

Domestic Relations Law § 236 (B) (1) (c) broadly defines marital property as property acquired during the marriage "regardless of the form in which title is held". In enacting the Equitable Distribution Law (L 1980, ch 281, § 9), the Legislature created a radical change in the traditional method of distributing property upon the dissolution of a marriage (Price v Price, 69 NY2d 8, 14). By broadly defining the term "marital property", it intended to give effect to the "economic partnership" concept of the marriage relationship (supra, at 15; Majauskas v Majauskas, 61 NY2d 481). It then left it to the courts to determine what interests constitute marital property.

Things of value acquired during marriage are marital property even though they may fall outside the scope of traditional property concepts (O'Brien v O'Brien, supra; Florescue, "Market Value", Professional Licenses and Marital Property: A Dilemma in Search of a Horn, 1982 NY St B Assn Fam L

Rev 13 [Dec]). The statutory definition of marital property does not mandate that it be an asset with an exchange value or be salable, assignable or transferable. (Freed, Brandes and Weidman, "What is Marital Property?", NYLJ, Dec. 5, 1990, at 3, col 1.) The property may be tangible or intangible (ibid.).

Medical licenses have been held to enhance the earning capacity of their holders, so as to enable the other spouse who made direct or indirect contributions to their acquisition, to share their value as part of equitable distribution (O'Brien v O'Brien, supra; Maloney v Maloney, 137 AD2d 666; Raff v Raff, 120 AD2d 507). A MedicalBoard certification (Savasta v Savasta, 146 Misc 2d 101 [Sup Ct, Nassau County]), a law degree (Cronin v Cronin, 131 Misc 2d 879 [Sup Ct, Nassau County]), an accounting degree (Vanasco v Vanasco, 132 Misc 2d 227 [Sup Ct, Nassau County]), a podiatry practice (Morton v Morton, 130 AD2d 558), the licensing and certification of a physician's assistant (Morimando v Morimando, 145 AD2d 609), a Masters degree in teaching (McGowan v McGowan, 142 AD2d 355) and a fellowship in the Society of Actuaries (McAlpine v McAlpine, 143 Misc 2d 30 [Sup Ct, Suffolk County]) have also been held to constitute marital property.

Although the plaintiff's career, unlike that of the husband in O'Brien (supra), is not licensed, the O'Brien court did not restrict its holding to professions requiring a license or degree. In reaching its conclusion that a medical license constitutes marital property, the O'Brien court referred to the language contained in Domestic Relations Law § 236 which provides that in making an equitable distribution of marital property, "the court shall consider:

"(6) any equitable claim to, interest in, or direct or indirect contribution made to the acquisition of such marital property by the party not having title, including joint efforts or expenditures and contributions and services as a spouse, parent, wage earner and homemaker, and to the career or career potential of the other party [and]

"(9) the impossibility or difficulty of evaluating any component asset or any interest in a business, corporation or profession" (Domestic Relations Law § 236 [B] [5] [d] [6], [9] [emphasis added]).

The court also cited section 236 [B] [5] [e] which provides that where, equitable distribution of marital property is appropriate, but "the distribution of an interest in a business, corporation or profession would be contrary to law", the court shall make a distributive award in lieu of an actual distribution of the property (O'Brien v O'Brien, supra, 66 NY2d, at 584).

The Court of Appeals' analysis of the statute is equally applicable here. "The words mean exactly what they say: that an interest in a profession or professional career potential is marital property which may be represented by direct or indirect contributions of the non-title-holding spouse, including financial contributions and nonfinancial contributions made by caring for the home and family" (O'Brien v O'Brien, supra, at 584). Nothing in the statute or the O'Brien decision supports the plaintiff's contention that her career and/or celebrity status are not marital property. The purpose behind the enactment of the legislation was to prevent inequities which previously occurred upon the dissolution of a marriage. Any attempt to limit marital property to professions which are licensed would only serve to discriminate against the spouses of those engaged in other areas of employment. Such a distinction would fail to carry out the premise upon which equitable distribution is based, i.e., that a marriage is an economic partnership to which both parties contribute, as spouse, parent, wage earner or homemaker (Assembly mem, 1980 NY Legis Ann, at 130; Governor's mem of approval, 1980 McKinney's Session Laws of NY, at 1863; O'Brien v O'Brien, supra, at 585).

In Golub v Golub (139 Misc 2d 440 [Sup Ct, NY County]), the Supreme Court agreed with the defendant husband that the increase in value in the acting and modeling career of his wife, Marisa Berenson, was marital property subject to equitable distribution as a result of his contributions thereto. Like Ms. von Stade, Ms. Berenson claimed that since her celebrity status was neither "professional" nor a "license", and, since her show business career was subject to substantial fluctuation, it should not be considered "marital property".

The court disagreed, concluding at page 447 that "the skills of an artisan, actor, professional athlete or any person whose expertise in his or her career has enabled him or her to become an exceptional wage earner should be valued as marital property subject to equitable distri bution" (see also, Getz v Getz, NYLJ, Mar. 2, 1989, at 28, col 6 [Sup Ct, Westchester County]). As the Golub court found, it is the enhanced earning capacity that a medical license affords its holder that the O'Brien court deemed valuable, not the document itself. There is no rational basis upon which to distinguish between a degree, a license, or any other special skill that generates substantial income.

As further noted by the Golub court, there is tremendous potential for financial gain from the commercial exploitation of famous personalities. While the plaintiff insists that she will never be asked to endorse a product, this is simply speculation. More and more opportunities have presented themselves to her as her fame increased. They will continue to present themselves to her as she continues to advance in her career. The career of the plaintiff is unique, in that she has risen to the top in a field where success is rarely achieved.

Like the parties here, after Joe Piscopo and his wife married in 1973, they focused on one goal -- the facilitation of his rise to stardom (Piscopo v Piscopo, 231 NJ Super 576, 555 A2d 1190, affd 232 NJ Super 559, 557 A2d 1040, certification denied 117 NJ 156, 564 A2d 875). The defendant wife claimed that her husband's celebrity goodwill was a distributable asset and that she was entitled to a share in his excess earning capacity to which she contributed as homemaker, caretaker of their child, and sounding board for his artistic ideas.

Rejecting Mr. Piscopo's argument that celebrity goodwill is distinguishable from professional goodwill since professional goodwill has educational and regulatory requirements while celebrity goodwill requires ineffable talent, the court held that "it is the person with particular and uncommon aptitude for some specialized discipline whether law, medicine or entertainment that transforms the average professional or entertainer into one with measurable goodwill" (Piscopo v Piscopo, supra, 231 NJ Super, at 580-581, 555 A2d, at 1191). We agree with the courts that have considered the issue, that the enhanced skills of an artist such as the plaintiff, albeit growing from an innate talent, which have enabled her to become an exceptional earner, may be valued as marital property subject to equitable distribution.

The plaintiff additionally contends that her career is not marital property because she had already become successful prior to her marriage to the defendant. As noted, supra, during the first year of marriage, the plaintiff earned $ 2,250. By 1989, her earnings had increased more than 275 fold. Further, in Price v Price (supra, at 11), the Court of Appeals held that "under the Equitable Distribution Law an increase in the value of separate property of one spouse, occurring during the marriage and prior to the commencement of matrimonial proceedings, which is due in part to the indirect contributions or efforts of the other spouse as homemaker and parent, should be considered marital property (Domestic Relations

Law § 236 [B] [1] [d] [3])" (see, Capasso v Capasso, 119 AD2d 268; Clerk v Clerk, 132 AD2d 456, lv denied 70 NY2d 611). In this case, it cannot be overlooked that the defendant's contributions to plaintiff's career were direct and concrete, going far beyond child care and the like, which he also provided.

While it is true that the plaintiff was born with talent, and, while she had already been hired by the Metropolitan Opera at the time of her marriage to the defendant, her career, at this time, was only in the initial stages of development. During the course of the marriage, the defendant's active involvement in the plaintiff's career, in teaching, coaching, and critiquing her, as well as in caring for their children, clearly contributed to the increase in its value. Accordingly, to the extent the appreciation in the plaintiff's career was due to the defendant's efforts and contributions, this appreciation constitutes marital property.

In sum, we find that it is the nature and extent of the contribution by the spouse seeking equitable distribution, rather than the nature of the career, whetherlicensed or otherwise, that should determine the status of the enterprise as marital property.

We have considered the parties' remaining contentions and find them to be without merit.

Accordingly, the order of the Supreme Court, New York County (Walter M. Schackman, J.), entered September 26, 1990, which determined that the plaintiff's career and/or celebrity status was not "marital property" subject to equitable distribution, should be reversed, on the law, without costs, and the matter should be remitted to the Supreme Court for further proceedings.

Hug, Skopil, and Fletcher, Circuit Judges.

OPINIONBY:

HUG

OPINION:

HUG, Circuit Judge:

Elliotts, Inc. ("Taxpayer"), challenges the Tax Court's determination of deficiencies in its 1975 and 1976 tax returns. It argues that the Tax Court erred in finding that part of the compensation paid Taxpayer's chief executive and sole shareholder during those years constituted a dividend distribution and thus was not deductible under section 162(a)(1) of the Internal Revenue Code. We reverse.

I

BACKGROUND

Taxpayer is an Idaho corporation that sells equipment manufactured by John Deere Co. and services equipment made by Deere and several other manufacturers. Its principal place of business is Burley, Idaho. During the period relevant here, Taxpayer had business locations in both Burley and Idaho Falls, Idaho. n1 The Idaho Falls location dealt only in industrial equipment; the Burley office sold and serviced a wide range of agricultural and industrial equipment. Out of approximately 168 John Deere agricultural dealers in the zone comprising seven western states, Taxpayer remained, at the time of trial, one of only three dealers handling both agricultural and industrial equipment.

n1 Taxpayer sold its Idaho Falls business on March 1, 1975. It has since done business only from its Burley location.

Taxpayer was incorporated in 1952. During its first year, it grossed $500,000 in agricultural equipment sales in the Burley area. It employed about eight people at that time. By 1975, Taxpayer was employing 40 people, selling both agricultural and industrial equipment throughout southeast Idaho, and achieving gross annual sales in excess of $5 million.

Edward G. Elliott has been Taxpayer's chief executive officer since its incorporation and he has also been its sole shareholder since 1954. He has always had total managerial responsibility for Taxpayer's business. In addition to being Taxpayer's ultimate decision and policy maker, he has performed the functions usually delegated to sales and credit managers. It is undisputed that he works about 80 hours each week.

For several years, Taxpayer has paid Elliott a fixed salary of $2000 per month plus a bonus at year's end. Since Taxpayer's incorporation, Elliott's bonus has been fixed at 50% of net profits (before subtraction of taxes and management bonuses).

On its return for the fiscal year ending February 28, 1975, Taxpayer claimed a $181,074 deduction for total compensation paid Elliott. It claimed a similar $191,663 deduction on its return for the fiscal year ending February 28, 1976. The Commissioner of Internal Revenue ("Commissioner") found these deductions to be in excess of the amounts Taxpayer properly could deduct as reasonable salary under section 162(a)(1). On June 16, 1978, the Commissioner issued Taxpayer a notice of deficiency which limited deductions for Elliott's salary to $65,000 for each fiscal year.

Taxpayer petitioned the Tax Court for a redetermination of liability. The court, after reviewing the testimony and statistical evidence, concluded that the payments to Elliott, in addition to providing compensation for personal services, were intended in part to distribute profits. Although the Tax Court acknowledged that it could not determine what amounts paid Elliott actually were dividends, it found that the total amounts paid him were in excess of reasonable compensation. It determined that $120,000 was reasonable compensation for the year 1975 and that $125,000 was reasonable for 1976. The deficiencies assessed to Taxpayer by the Commissioner were reduced accordingly. Taxpayer appeals the Tax Court's determination of reasonable compensation.

II

THE SHAREHOLDER-EMPLOYEE PROBLEM

The issue presented by this case concerns the deductibility by a corporation of payments ostensibly made as compensation for services to an employee who is also a shareholder. If the payments are reasonable compensation for services rendered, the corporation may deduct them. 26 U.S.C. § 162(a)(1). If, however, they are actually dividends, they are not deductible. Thus, it will normally be in a corporation's interest to characterize such payments as compensation rather than dividends. n2

n2 The recipient is taxed at ordinary income rates on both dividends and wages. If the recipient is a significant shareholder, his interest in the corporation may cause him to prefer to characterize such payments as compensation. Moreover, for payments made between 1971 and 1981, as is the case here, a high-income recipient has a strong incentive to characterize such payments as compensation rather than dividends: pre-1982 dividends are taxable at a maximum rate of 70% while the maximum tax rate for wages received between 1971 and 1981 is 50%. 26 U.S.C. § 1 (amended 1983) and § 1348 (repealed 1981). (Since 1982, the maximum tax rate for both wages and dividends has been 50%. 26 U.S.C. § 1 (1983).)

The general problem is that of distinguishing between dividends and compensation for services received by a shareholder-employee of a closely held corporation. What makes this situation troublesome is that the shareholder-employee and the corporation are not dealing with each other at arm's length. It is likely to be in the interests of both the corporation and the shareholder-employee to characterize any payments to the shareholder-employee as compensation rather than dividends. For this reason, a taxpayer's characterization of such payments may warrant close scrutiny to ensure that a portion of the purported compensation payments is not a disguised dividend. See Nor-Cal Adjusters v. Commissioner, 503 F.2d 359, 361 (9th Cir. 1974).

The problem of determining whether compensation payments contain an element of disguised dividend is exacerbated in a case such as this one where the shareholder-employee is the corporation's sole shareholder. Not only is a sole shareholder likely to have complete control over the corporation's operations, he will also be the only recipient of its dividends. If a corporation has multiple shareholders, the existence of a plan which compensates shareholder-employees in proportion to their ownership interests may be evidence that compensation payments contain disguised dividends. In the case of a sole shareholder, such evidence is meaningless.

Section 162(a)(1) of the Internal Revenue Code permits a corporation to deduct "a reasonable allowance for salaries or other compensation for personal services actually rendered." There is a two-prong test for deductibility under section 162(a)(1): (1) the amount of the compensation must be reasonable and (2) the payments must in fact be purely for services. Treas. Reg. § 1.162-7(a) (1960); Nor-Cal, 503 F.2d at 362.

Proof of the second prong, which requires a "compensatory purpose," can be difficult to establish because of its subjective nature. See Note, Reasonable Compensation and the Close Corporation: McCandless, the Automatic Dividend Rule, and the Dual Level Test, 26 Stan. L. Rev. 441, 447 (1974) (hereafter "Note, Reasonable Compensation"). The existence of a compensatory purpose can often be inferred if the amount of the compensation is determined to be reasonable under the first prong. For these reasons, courts generally concentrate on the first prong -- whether the amount of the purported compensation is reasonable. See, e.g., Pacific Grains, Inc. v. Commissioner, 399 F.2d 603 (9th Cir.

1968); Note, Reasonable Compensation, 26 Stan. L. Rev. at 447; Coggin, The Status of the McCandless Doctrine, 55 Taxes 720, 720 (Nov. 1977) (hereafter "Coggin"). Courts have generally not delved into whether a compensatory purpose exists under the second prong except in those rare cases where the Commissioner has come forward with evidence that purported compensation payments, although reasonable in amount, were in fact disguised dividends. See, e.g., Klamath Medical Serv. Bureau v. Commissioner, 29 T.C. 339, 348-49 (1957), aff'd, 261 F.2d 842 (9th Cir. 1958), cert. denied, 359 U.S. 966, 3 L. Ed. 2d 834, 79 S. Ct. 877 (1959). See generally Note, Reasonable Compensation, 26 Stan. L. Rev. at 447 & n. 35. By and large, the inquiry under section 162(a)(1) has turned on whether the amounts of the purported compensation payments were reasonable.

One court has departed from this practice of restricting the inquiry in most cases to the reasonableness of the payments. In Charles McCandless Tile Serv. v. United States, 191 Ct. Cl. 108, 422 F.2d 1336 (1970), the Court of Claims held that ostensible compensation payments paid to two shareholder-employees, even though reasonable in amount, "necessarily" contained disguised dividends because the closely held corporation had been profitable and had not paid out any dividends since its formation. Id. at 1339-40. n3 This has become known as the "automatic dividend rule," and has been subjected to much criticism. E.g., Coggin, 55 Taxes 720; Walthall, McCandless -- Implications for Compensation Planning and Dividend Policy, 6 Cum. L. Rev. 1 (1975) (hereafter "Walthall"); Note, Reasonable Compensation, 26 Stan. L. Rev. 441.

n3 It appears that the Court of Claims subsequently adopted a narrow interpretation of McCandless. Giles Indust., Inc. v. United States, 204 Ct. Cl. 202, 496 F.2d 556, 567 (1974).

We reject the automatic dividend rule of McCandless for several reasons. First, there is no statute requiring profitable corporations to pay dividends. Congress has chosen to handle abuses in this area through the accumulated earnings tax. 26 U.S.C. § § 531-537; see Walthall, 6 Cum. L. Rev. at 16-19; Note, Reasonable Compensation, 26 Stan. L. Rev. at 449-50. Beyond the penalties contained in the accumulated earnings tax, Congress has not indicated that it wants the Commissioner or the courts to require the payment of dividends as a matter of federal tax policy. See Casey v. Commissioner, 267 F.2d 26, 30 (2d Cir. 1959); Laure v. Commissioner, 70 T.C. 1087, 1098 (1978).

Second, the automatic dividend rule is based on the faulty premise that shareholders of a profitable corporation will demand dividends. See McCandless, 422 F.2d at 1339-40. Shareholders are generally concerned with the return on their investment. While some shareholders may prefer to see their return in the form of dividends, others will prefer to have the corporation reinvest its profits so that their return will be in the form of appreciation and the potential of greater future return. See, Note, Reasonable Compensation, 26 Stan. L. Rev. at 450-53. If the shareholders prefer to have their return in the form of appreciation rather than dividends, there is nothing in the law precluding the corporation from reinvesting its profits.

Third, it may well be in the best interests of the corporation to retain and reinvest its earnings. As the Supreme Court has noted, "Directors of a closely held, small corporation must bear in mind the relatively limited access of such an enterprise to capital markets. This may require a more conservative policy with respect to dividends than would be expected of an established corporation with securities listed on national exchanges." United States v. Byrum, 408 U.S. 125, 140, 33 L. Ed. 2d 238, 92 S. Ct. 2382

(1972). Not only may retained earnings be the most rational source of financing for a small corporation, "suppliers or outside lenders may insist upon the retention of earnings as a cushion for the credit which they extend or to insure that the firm has sufficient operating funds to continue functioning as a going concern." Walthall, 6 Cum. L. Rev. at 15.

For these reasons, we will not presume an element of disguised dividend from the bare fact that a profitable corporation does not pay dividends.

In determining the deductibility of compensation payments paid to shareholder-employees, we will continue to concentrate on the reasonableness of those payments. In the rare case where there is evidence that an otherwise reasonable compensation payment contains a disguised dividend, the inquiry may expand into compensatory intent apart from reasonableness. But where, as here, the evidence focuses only on reasonableness and the failure to pay dividends, and there is no other evidence of an intent to hide dividends in compensation payments, our inquiry will be confined to the reasonableness issue. The inquiry into reasonableness is a broad one and will, in effect, subsume the inquiry into compensatory intent in most cases.

In evaluating the reasonableness of compensation paid to a shareholder-employee, particularly a sole shareholder, it is helpful to consider the matter from the perspective of a hypothetical independent investor. A relevant inquiry is whether an inactive, independent investor would be willing to compensate the employee as he was compensated. The nature and quality of the services should be considered, as well as the effect of those services on the return the investor is seeing on his investment. The corporation's rate of return on equity would be relevant to the independent investor in assessing the reasonableness of compensation in a small corporation where excessive compensation would noticeably decrease the rate of return.

Bearing in mind the preceding discussion, we now turn to the reasonableness of the compensation paid by Taxpayer to Elliott.

III

REASONABLENESS DETERMINATION

Section 162(a)(1) provides that a taxpayer may deduct "all the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business," including "a reasonable allowance for salaries or other compensation for personal services actually rendered." 26 U.S.C. § 162(a)(1). That Elliott actually rendered services as an employee of Taxpayer is not disputed. At issue is whether the payments made to Elliott are attributable to that employment relationship or to his role as Taxpayer's sole shareholder. Our inquiry focuses on whether the Tax Court, in finding that a part of the payments made to Elliott could not be attributed to his employment status, correctly defined and applied the factors that determine what is "reasonable compensation" under section 162(a)(1).

Although we accord deference to the Tax Court's special expertise, definition of the appropriate factors is reviewable by this court as a question of law. See Keller Street Development Co. v. Commissioner, 688 F.2d 675, 678 (9th Cir. 1982); Sibla v. Commissioner, 611 F.2d 1260, 1262-63 (9th Cir. 1980). The Tax Court's findings of fact, derived from application of the appropriate factors, must be affirmed unless clearly erroneous. Keller Street, 688 F.2d at 678; Estate of Skaggs v. Commissioner, 672 F.2d 756, 757 (9th Cir. 1982), cert. denied, 459 U.S. 1037, 103 S. Ct. 448, 74 L. Ed. 2d 603 (1982).

Our cases have defined a number of factors that are relevant to this attribution determination, "with no single factor being decisive of the question." Pacific Grains, 399 F.2d at 606. For analytical purposes, these factors may be divided into five broad categories.

A. Role in Company

The first category of factors concerns the employee's role in the taxpaying company. Relevant considerations include the position held by the employee, hours worked, and duties performed, American Foundry v. Commissioner, 536 F.2d 289, 291-92 (9th Cir. 1976), as well as the general importance of the employee to the success of the company, American Foundry, 536 F.2d at 291-92. If the employee has received a large salary increase, comparing past duties and salary with current responsibilities and compensation also may provide significant insights into the reasonableness of the compensation scheme. Pacific Grains, 399 F.2d at 605, 607.

The Tax Court found that Elliott worked 80 hours per week, performed the functions of general manager, sales manager, and credit manager, and made all policy decisions concerning the parts and service department. Elliotts, Inc. v. Commissioner, 1980 T.C. Memo 282, 40 T.C.M. (CCH) 802, 804 (1980). These are all appropriate considerations. The Tax Court also considered Elliott's qualifications and found that although he was a "capable executive" he had no "special expertise." Id. at 813. The Tax Court did not seem, however, to consider Elliott's extreme personal dedication and devotion to his work. See id. at 811. To the extent that this benefited the corporation, it is surely something for which an independent shareholder would have been willing to compensate Elliott. Because we reverse and remand on other grounds, we point this out so that the Tax Court may consider it on remand.

B. External Comparison

The second set of relevant factors is a comparison of the employee's salary with those paid by similar companies for similar services. See Hoffman Radio Corp. v. Commissioner, 177 F.2d 264, 266 (9th Cir. 1949); E. Wagner & Son v. Commissioner, 93 F.2d 816, 819 (9th Cir. 1937).

The Tax Court did compare Elliott's compensation to that of managers at other John Deere dealers. 40 T.C.M. at 813. In making these comparisons, it appears that the Tax Court considered that Elliott was performing the functions that two or three people performed at other dealers. This was correct. Such comparisons should be made on the basis of services performed. See E. Wagner, 93 F.2d at 818; Treas. Reg. § 1.162-7(b)(3). If Elliott was performing the work of three people, the relevant comparison would be the combined salaries of those three people at another dealer.

C. Character and Condition of Company

The third general category of factors concerns the character and condition of the company. The focus under this category may be on the company's size as indicated by its sales, net income, or capital value. See E. Wagner, 93 F.2d at 819; General Water Heater Corp. v. Commissioner, 42 F.2d 419, 420 (9th Cir. 1930). Also relevant are the complexities of the business and general economic conditions. To the extent that they are relevant to this case, the Tax Court did adequately consider these factors.

D. Conflict of Interest

The fourth category focuses on those factors that may indicate a conflict of interest. The primary issue within this category is whether some relationship exists between the taxpaying company and its employee which might permit the company to disguise nondeductible corporate distributions of income as salary expenditures deductible under section 162(a)(1). n4 Such a potentially exploitable relationship may exist where, as in this case, the employee is the taxpaying company's sole or controlling shareholder, see Nor-Cal, 503 F.2d at 361; Pacific Grains, 399 F.2d at 607; E. Wagner, 93 F.2d at 817, 819, or where the existence of a family relationship indicates that the terms of the compensation plan may not have been the result of a free bargain, Harolds Club v. Commissioner, 340 F.2d 861, 865 (9th Cir. 1965). Other factors also may point toward an attempt to distribute income through "compensation," including the existence of a bonus system that distributes all or nearly all of the company's pre-tax earnings, Nor-Cal, 503 F.2d at 362; Klamath Medical, 261 F.2d at 846; Sunset Scavenger Co. v. Commissioner, 84 F.2d 453, 455 (9th Cir. 1936), that amounts to a disproportionately large percentage of gross income when combined with salary, Pacific Grains, 399 F.2d at 607; General Water Heater, 42 F.2d at 420, or that provides large bonuses to owner-executives, but none to non-owner management, Nor-Cal, 503 F.2d at 361.

n4 This may also be probative of a presence or absence of compensatory intent.

In this case, where Elliott was the sole shareholder, the sort of relationship existed that warrants scrutiny. The mere existence of such a relationship, however, when coupled with an absence of dividend payments, does not necessarily lead to the conclusion that the amount of compensation is unreasonably high. Further exploration of the situation is necessary.

In such a situation, as discussed earlier, it is appropriate to evaluate the compensation payments from the perspective of a hypothetical independent shareholder. If the bulk of the corporation's earnings are being paid out in the form of compensation, so that the corporate profits, after payment of the compensation, do not represent a reasonable return on the shareholder's equity in the corporation, then an independent shareholder would probably not approve of the compensation arrangement. If, however, that is not the case and the company's earnings on equity remain at a level that would satisfy an independent investor, there is a strong indication that management is providing compensable services and that profits are not being siphoned out of the company disguised as salary. n5

n5 It should be noted that there are situations in which the compensation paid to employees is reasonable and yet the corporation may suffer a loss or an inadequate return on equity.

During the fiscal year ending February 28, 1975, Taxpayer reported equity of $415,133 and net profits (profits less taxes and compensation paid Elliott) of $88,969 -- a return of 21%. For fiscal year 1976, Taxpayer reported equity of $513,429 and net profits of $98,297 -- a return of 19%. 40 T.C.M. at 804. Thus, the average rate of return on equity during these years was 20%. The Tax Court failed to consider the significance of this data. It seems clear, however, that this rate of return on equity would satisfy an independent investor and would indicate that Taxpayer and Elliott were not exploiting their relationship. n6

n6 Over the period from 1968 to 1978, during which the bonus formula was in effect, the average rate of return on equity was 15%, based on corporate profit in relation to net book value. There was also evidence, which was not disputed, that the market value of the corporation had increased from the initial shareholder investment of $19,000 to a current market value at the time of trial of $5,000,000. Utilizing these market value figures, Professor Albrecht, an expert witness, testified that this resulted in an annual compounded return of 56%.

This is also probative of Elliott's management contributions to Taxpayer.

The Tax Court erred by limiting its analysis in this area to the facts that Elliott was Taxpayer's sole shareholder and Taxpayer paid no dividends. These are relevant factors, but they cannot be viewed in isolation. Taxpayer's no-dividend policy does not by itself demonstrate that the relationship between Taxpayer and Elliott was being exploited.

E. Internal Consistency

Finally, evidence of an internal inconsistency in a company's treatment of payments to employees may indicate that the payments go beyond reasonable compensation. n7 Bonuses that have not been awarded under a structured, formal, consistently applied program generally are suspect, see Nor-Cal, 503 F.2d at 362, as are bonuses consistently designated in amounts tracking either the percentage of the recipient's stock holdings, id.; General Water Heater, 42 F.2d at 420, or some type of tax benefit, Pacific Grains, 399 F.2d at 607 (bonus adjusted according to available surtax exemption). Similarly, salaries paid to controlling shareholders are open to question if, when compared to salaries paid non-owner management, they indicate that the level of compensation is a function of ownership, not corporate management responsibility. Sunset Scavenger Co., 84 F.2d at 456. On the other hand, evidence of a reasonable, longstanding, consistently applied compensation plan is evidence that the compensation paid in the years in question was reasonable.

n7 This may also be probative of a presence or absence of compensatory intent.

There was evidence in this case of a longstanding, consistently applied compensation plan. Since Taxpayer's incorporation, it had paid to Elliott an annual bonus equal to 50% of its net profits. Taxpayer contended before the Tax Court that because the yearly bonuses paid Elliott were derived from a predetermined formula that had been in use for over 20 years, it could be inferred that the bonuses constituted compensation for services rather than a dividend distribution. It noted that under the bonus formula Elliott's salary in some prior years had been too low to compensate him for the services he had rendered to Taxpayer, so that the higher salaries in the years in issue "resulted in average reasonable compensation during the 10-year period . . . . 1968 through 1978." 40 T.C.M. at 809-10.

In considering the significance of this longstanding bonus formula, the Tax Court erred in several respects.

The Tax Court failed to consider the reasonableness of the contingent formula itself; it concentrated instead on the amounts paid under the formula in two particular years. Such a formula may overcompensate in good years and undercompensate in bad years. This feature, however, does not necessarily make the formula unreasonable. It is permissible to pay and deduct compensation for services performed in prior years. Lucas v. Ox Fibre Brush Co., 281 U.S. 115, 119, 74 L. Ed. 733, 50 S. Ct. 273 (1930).

Whether payments under such a formula are reasonable will depend on whether the formula is reasonable. The reasonableness of a longstanding formula should not be determined on the basis of just one or two years. Taxpayer persuasively argues that, accepting the Tax Court's determination of reasonable compensation for 1974 and 1975, Elliott was severely undercompensated in terms of constant dollars in six of the seven preceding years. n8

n8 A formula which is reasonable at its inception may later become unreasonable because of changed circumstances. Where a formula has proved reasonable over a long period of time, however, it should normally not be deemed unreasonable solely because it has overcompensated in one or two years.

Also relevant to the reasonableness of the formula used in this case is the return on equity an independent investor would have achieved. A formula which would not allow a reasonable return on equity is likely to be unreasonable. In this case, however, as discussed earlier, the return on equity in the years at issue was about 20%.

Over the long run, such a formula should reasonably compensate for the work done, the performance achieved, the responsibility assumed, and the experience and dedication of the employee. At the same time, it should not stand in the way of a satisfactory return on equity.

The Tax Court also discounted the significance of the bonus formula on the ground that "no special incentive is necessary to insure [Elliott's] best efforts since he would 'receive the fruits of success through his status as the majority shareholder. '" 40 T.C.M. at 811, quoting Charles Schneider & Co. v. Commissioner, 500 F.2d 148, 153 (8th Cir. 1974), cert. denied, 420 U.S. 908, 42 L. Ed. 2d 837, 95 S. Ct. 826 (1975). To the extent that this implied that incentive payment plans for shareholder-employees are unreasonable, it was error.

Incentive payment plans are designed to encourage and compensate that extra effort and dedication which can be so valuable to a corporation. There is no reason a shareholder-employee should not also be entitled to such compensation if his dedication and efforts are instrumental to the corporation's success. In this case, there is no doubt that Elliott's extreme dedication and hard work were valuable to Taxpayer. If an outside investor would approve of such a compensation plan, that plan is probably reasonable. The fact that the recipient is a shareholder-employee does not make the plan unreasonable.

IV

CONCLUSION

We reverse and remand to the Tax Court for reconsideration in light of this opinion. On remand, the Tax Court should begin its analysis by looking at the reasonableness of the compensation payments and should consider the bonus payments in the context of the reasonableness of the formula used. It should

not be assumed solely from Elliott's role as sole shareholder and the absence of dividends that the compensation payments necessarily contained disguised dividends. These are just two of many factors to be considered.

REVERSED and REMANDED.

Estate of Feldmar v. Commissioner

Case name: Estate of Feldmar v. Commissioner
Citation: T.C. Memo 1988-429, 56 T.C.M. 118
Date of decision: September 12, 1988
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Fay
SIC: 6719 Offices of Holding Companies, NEC
NAICS: 551112 Offices of Other Holding Companies

Keywords: Estate tax, Holding company

COUNSEL:

Rex A. Guest and Francis Grossi, for the petitioners.

Judith Picken and James S. Stanis, for the respondent.

OPINIONBY:

FAY

OPINION:

MEMORANDUM FINDINGS OF FACT AND OPINION

FAY, Judge: Respondent determined a deficiency of $ 9,649,113.69 in the estate tax due from the Estate of Milton Feldmar. After concessions, the sole issue for decision is the date of death fair market value of 767,800 shares of United Equitable Corporation common stock owned by Milton Feldmar at his death.

FINDINGS OF FACT

Some of the facts have been stipulated and are found accordingly. The stipulation of facts, the addendum to the stipulation of facts, and attached exhibits are incorporated herein by this reference.

Petitioner is the Estate of Milton Feldmar. On March 30, 1982, Milton Feldmar (the decedent) died unexpectedly. At the time of his death, decedent's domicile was Northfield, Illinois. The co-executors of petitioner are Gary Feldmar and Dorothy Feldmar. Gary Feldmar resided in Lincolnshire, Illinois, and Dorothy Feldmar resided in Highland Park, Illinois, at the time the petition in this case was filed.

Petitioner's Federal estate tax return was timely filed. The alternate valuation date was not elected. Included with the estate were 767,800 shares of common stock in United Equitable Corporation (UEC). Petitioner's return listed the value of this stock as $ 7,678,000, or $ 10 per share. In his notice of

deficiency, respondent determined that the fair market value of the UEC stock in the state should be $ 35,776,524, or $ 46.60 per share.

Nature of UEC's Business

At the time of decedent's death, UEC was an Illinois-based holding company which, through the companies it owned, was in the business of selling and underwriting several different types of insurance coverage. The companies UEC owned, directly or indirectly, were, among others, as follows: (1) United Equitable Life Insurance Company (UELIC) and its wholly owned subsidiary, United Equitable Insurance Company (UELIC), both of which UEC acquired in 1972; (2) American Warranty Corporation (AWC), acquired by UEC in December 1976; and, (3) Action Associates (Action), acquired by UEC in July, 1980.

The types of insurance coverage UEC's family of companies sold and underwrote included the traditional forms of insurance: life, and individual and family accident and health. In addition, the companies UEC owned were also involved in marketing and administering two specialty forms of insurance products: vehicle warranty/service contracts, and collateral protection services.

The vehicle warranty/service contract business (hereinafter referred to as warranty services) conducted by AWC involves the marketing of such contracts to factory-authorized new car dealerships. The car dealerships in turn sell the warranty contracts to buyers of both new and used cars, and thus provide such buyers a warranty against power train mechanical breakdowns. When a car buyer purchases the contract from a dealer, the buyer is buying a warranty. When a dealer purchases the contract from AWC, the dealer is basically purchasing insurance against the liability they will incur in satisfying the terms of the warranty they have given the car buyer.

The collateral protection services of UEC are marketed and administered by Action. Action is a Los Angeles, California, based insurance broker that provides collateral protection services to financial institutions engaged in consumer lending. In the performance of its services, Action manages a client's consumer loan portfolio by ensuring that the collateral securing each loan is insured in an amount at least equal to the outstanding loan balance. Underinsured collateral is insured by Action through a third-party underwriter, and Action is compensated for its services in the form of a commission.

Through the early 1970s, UEC's major emphasis was on low cost limited indemnity accident and health policies. After UEC's acquisition of AWC in 1976, and of Action in 1980, however, UEC's revenue mix shifted away from such accident and health policies to an emphasis on the warranty services and collateral protection services. Of UEC's 1981 consolidated revenue, 57% consisted of warranty and collateral protection services income, and 40% consisted of accident and health and life insurance income. The remaining 3% came from UEC's corporate investment portfolio. By comparison, in 1977 62% of UC's revenue came from accident and health insurance sales.

Economic Trends Facing UEC

Accident and Health Insurance. Historically, UEC had specialized in the sale of individual and family accident and health insurance. This line of UEC's business was a major source of UEC's total earning power at the time of decedent's death.

UEC's accident and health insurance policies were, as of the date of decedent's death, marketed through the use of direct mail solicitations (hereinafter referred to as direct response marketing), and through the use of agents, UEC's own or agents which operated independently thereof (hereinafter

referred to as agency marketing). In prior periods, UEC's concentration was upon the direct response form of marketing; such direct response marketing techniques were considered to be the core of UEC's business. In 1976, approximately 71% of UEC's accident and health premiums resulted from direct response marketing, and approximately 29% came from agency marketing. In contrast, in 1981 approximately 54% of UEC's written premiums for UEC's accident and health insurance resulted from direct response marketing, and 46% from agency marketing.

With respect to UEC's accident and health insurance first year premium income trends, i.e., premium income on newly sold policies, direct response marketing was, as of decedent's date of death, increasingly less successful. To counter this increasing ineffectiveness, UEC developed and began marketing, in 1979, an add-on policy which provided to existing accident and health policy holders additional protection. Such add-on policies were also sold through a direct response marketing program. Even considering such add-on policies as additional first year premiums, however, UEC's total first year premiums from direct response marketing continued to decline after 1979. n1 Total direct response marketing first year premiums declined, in relation to the prior year's premiums, by 35.8% in 1980 and by 46.6% in 1981. Exclusive on the add-on policy premiums, accident and health insurance first year premium income from direct response marketing fell by 84.9% between 1980 and 1981.

n1 UEC's direct response marketing new policy premium income was as follows:

Year	New Policy Premiums	Change	Add-On Sales To Existing Policy holders	Total New Policy Premiums	Change
1978	1,628,000		N/A	1,628,000	
1979	1,375,000		1,422,000	2,797,000	
					(35.8%)
1980	1,004,000		791,000	1,795,000	
		(84.9%)			(46.6%)
1981	152,000		806,000	958,000	

The most important reason for such a precipitous decline in sales from direct response marketing was because UEC has not been able to develope a successful direct response marketing campaign since 1979. UEC did continuously test newly developed direct response marketing programs during 1980 and 1981. However, the marketing test results were unsatisfactory. Specifically, the marketing test results indicated that the expected amount of net new policy sales from the proposed new direct response marketing programs would not be large enough to justify the initial costs UEC would have to incur in implementing such new direct response marketing program.

Another reason for the decline in UEC's sales of accident and health policies through direct response marketing in 1980 and 1981 was the intense competition UEC faced in the industry. In the years preceding the date of decedent's death, competition in the industry was intensifying and regulatory constraints were increasing. These influences, increasing competition and regulatory concerns, caused

the sellers of accident and health insurance to provide to the consumer more complete disclosure of policy benefits and the seller's related costs. Because of this, UEC's policies appeared less attractive to the consumer than did the policies of UEC's competitors.

Although the direct response marketing's successive failures were somewhat offset by steady growth in the sales produced by agency marketing, such offset was not without its costs. In order to give the agents a product which would sell, and which would enable the agent to make a livelihood selling, UEC was required to develop a product costing a larger premium but offering additional coverage for nursing home or extended care costs. Inherent in such policy coverage was greater potential risks to the policies' underwriter, UEIC.

The costs incurred by UEC in selling its accident and health policies, by direct response or agency marketing, were capitalized by UEC as an asset labeled "deferred policy acquisition costs." That asset, i.e., the cost of newly acquired policies, is amortized by UEC over the expected life of those policies. The "deferred policy acquisition costs" asset is the second largest of all assets on the corporate balance sheet and represents approximately 24.8% of UEC's total assets as of December 31, 1981. Moreover, in relation to the total stock outstanding, deferred policy acquisition costs represented $ 23.21 per share as of December 31, 1981.

Life Insurance. UEC began emphasizing its life insurance sales in 1980. Prior to that time, earned insurance premium income was less than $50,000 a year. In 1981, earned insurance premium income from UEC's life insurance sales increased to approximately $ 1,700,000. The profitability of this product line was negatively affected, however, by the costs UEC incurred in connection with making the initial sales of the policies. The costs so incurred are those associated with selling a new policy and are recurring expenses so long as UEC remains in the life insurance business. For example, part of a policy's acquisition costs consists of the commission paid an agent for the sale of that policy. Generally, UEC expects to recoup such deferred policy acquisition costs as premiums on the life insurance policy are paid in future years. If a policyholder allows a policy to lapse, however, the initial costs incurred by UEC are never recovered and UEC's profitability suffers.

UEC's experience with respect to the lapse rate of life insurance policies, in relation to premiums paid, n2 has been as follows:

Year	First Year Life Insurance Premiums	Total Life Insurance Premiums	Lapse Rate
1978	$ 13,000	$ 36,000	1.2%
1979	10,000	45,000	3.5
1980	1,223,000	1,351,000	22.7
1981	1,003,000	2,016,000	33.4

n2 This is based upon statutory accounting procedures, as opposed to generally accepted accounting principles.

Vehicle Warranty/Service Contracts. There are two distinct aspects of the warranty services business which contribute to UEC's earnings. Operating revenue is first generated from the sale of the contracts to the automobile dealerships, from which AWC expects to earn a profit after all expenses. Second, the pricing of the contracts includes a provision for a premium for the warranty insurance coverage provided the automobile dealership under the contract. AWC would remit such premium to UEIC, the underwriter of the warranty insurance coverage. Thus, UEC generates revenue in the form of AWC's contract sales in excess of expenses therefor, where such expenses include the premium for warranty insurance, and in the form of UEIC's premiums in excess of losses for which UEIC must reimburse the automobile dealers. UEC's experience with respect to its warranty contract sales, and its warranty insurance premiums earned, as been as follows:

Year	Warranty Contract Sales	Pretax Earnings (Losses)	Warranty Insurance Premiums Eaned	Loss Ratio n3
1979	10,984,000	120,000	9,885,000	71.3%
1980	12,330,000	(234,000	9,865,000	77.2
1981	10,293,000	(521,000)	12,143,000	78.6

n3 As an example of how the loss ratio is computed, in 1981, the loss ratio represents the UEIC paid out 78.6 cents of every dollar it received in premiums. Such ratio is based upon information generated under statutory accounting procedures, as opposed to generally accepted accounting principles.

In 1979, AWC's contract sales represented an estimated 30% market share for new U.S. manufactured automobiles and a 5% market share for foreign manufactured automobiles. By early 1982, AWC's estimated domestic market share had declined to 5% to 10%, whereas its foreign market share had increased to an estimated 20% to 25%. Such shift in emphasis was partially in response to the shift American purchasers made from domestically produced automobiles to foreign produced automobiles. AWC's rate of growth in total contract sales slowed sharply in 1980, and declined by 16.5% in 1981.

The reasons behind AWC's increasingly poor performance are multifaceted. First, new car sales steadily declined following the record results the automobile industry realized in 1978 and, therefore, the warranty contract sales made in connection therewith also declined. Second, competition in the market increased because, in an attempt to off-set the declining market, automobile manufacturers themselves started competing with AWC by offering additional warranties or warranty contracts through their respective automobile dealerships. Finally, in an attempt to stem its declining market share, AWC changed its compensation program offered to major automobile dealerships. In 1979, AWC began offering such dealers a compensation plan for the sale of AWC warranty contracts, under which the dealers would be able to participate in the profits UEIC was realizing in its underwriting capacity. Such a compensation plan, however, was ineffective and was discontinued in 1981. This resulted in an additional disruption in AWC's marketing program in that year and added to UEC's decline in total contract sales.

Another negative impact upon AWC's profitability in 1981 was caused in connection with its 1979 attempt to change its compensation scheme for major car dealerships. Such change in its compensation scheme required, in 1979, a major revamping of AWC's computer system. When such compensation scheme proved to be ineffective as an incentive for marketing AWC's warranty service contracts, and was terminated in 1981, AWC was required to again reprogram its computer system. Such reprogramming of computers often occurs in the insurance industry. The 1981 reprogramming had not been completed as of early 1982, and the costs associated with the reprogrammming during 1981 further decreased AWC's earnings for that year.

The second aspect of UEC's revenues flowing from its warranty services comes from the premium income UEIC receives upon underwriting the warranty insurance coverage incorporated into the contracts sold. UEIC's earned premiums from its underwriting activities grew gradually in the years 1979 through 1981; however, such was only in response to AWC's successful contract sales during the period 1977 through 1979. Due to the nature of insurance accounting, however, changes in earned premiums for UEIC's underwriting activities lag, by approximately two to four years, behind AWC's contract sales... Consequently, over the period from 1982 to 1984, it can be expected that UEIC's experience in earned premiums will begin to decline in response to AWC's dismal contract sales performance during the 1980 to 1981 period.

Even considering the growth UEIC experienced in earned premiums from its warranty services underwriting activities in 1981, UEIC still suffered a $ 569,000 pre-tax operating loss in that year from such activities. Further, in 1981 UEIC experienced a loss ratio of 78.6% on its warranty services underwriting activities; such losses were deemed excessive. To ensure that it had sufficient funds available for future claims under its warranty services' coverage, UEIC engaged an actuarial consulting service to evaluate the sufficiency of UEIC's claim reservs. Such actuarial service found that, in relation to the expectations under which UEIC originally operated in establishing its reserves, consumers were beginning to retain their automobiles for longer periods of time. Such a change in consumer habits had the potential of requiring UEIC to reimburse automobile dealers for more warranty claims than were anticipated by UEIC in establishing its claim reserves. For this reason, the actuarial service advised UEIC to increase its claims reserve by $ 2,000,000 in 1981, and to expect similar increases in subsequent years. The $ 2,000,000 adjustment UEC made to its warranty services claim reserves in 1981 negatively impacted its net income, and thus partially caused the pre-tax operating loss.

Collateral Protection Services. Action's business of providing collateral protection services is closely tied to the demand for automobile loans because the majority of the loans managed by Action have automobiles as their underlying collateral. For this reason, Action's revenue growth is heavily influenced by automotive industry sales, which historically have been cyclical and closely tied to the business cycle. As of early 1982, the automotive industry was, as was the whole of the United States, in the midst of a recession.

Furthermore, Action was purchased by UEC in 1980 in a transaction under which UEC was required to pay, in addition to the initial purchase price of $ 1,900,000, additional contingent consideration amounting to a substantial portion of the pre-tax income of Action through 1983. The initial consideration of $ 1,900,000 was paid by UEC in 1980 and 1981. The contingent consideration earned and accrued amounted to $ 745,000 and $ 490,000 in 1981 and 1980, respectively. Of the contingent consideration so accrued and owed by UEC, $ 1,166,000 remained unpaid on December 31, 1981, and was payable

at various times through June, 1985. This, together with the effect the recession was having on Action's growth rate, effectively eliminated any prospect of return to UEC from this segment of its business until 1984.

UEC's Revenues and Earnings

In UEC's annual reports, the consolidated balance sheets for the fiscal years ending December 31, 1979, 1980, and 1981, appeared as follows n4 (in 000's):

ASSETS	1981	1980	1979
Cash	$ 1,588	$ 2,615	$ 948
Investments			
Bonds, at amortized cost	40,614	35,411	35,420
Short-term investments, at cost	3,406	6,652	1,321
Mortgage loans, at unpaid principal	896	--	--
Other	1,767	1,114	270
Total investments	46,683	43,177	37,011
Other Assets			
Uncollected premiums	4,357	3,185	3,255
Uncollected commissions	1,381	1,738	--
Accrued investment income	939	852	889
Deferred policy acquisition costs	22,400	21,021	20,984
Funds held by reinsurers	576	421	--
Land and buildings, net	5,541	4,101	910
Equipment, net	2,321	1,617	1,600
Cost in excess of net assets of purchased subsidiaries, net	2,679	1,808	622
Other	1,716	1,175	736
Total other assets	41,910	35,918	28,996
Total Assets	$ 90,181	$ 81,710	$ 66,955

n4 The consolidated financial statements of UEC were prepared in conformity with generally accepted accounting principles which, as to UEC's insurance subsidiaries, vary in some respects from statutory accounting practices which are prescribed by such subsidiaries' respective domiciliary states' insurance department.

LIABILITIES AND SHAREHOLDERS' EQUITY

Insurance Reserves

Unearned premiums	$ 34,638	$ 25,570	$ 21,474

Net income	2,050	4,619	4,020
Balance, end of year	$ 31,253	$ 29,203	$ 24,584

UEC's financial records are generated annually. Therefore, information similar to that which is presented above and which concerned UEC's performance between January 1 and March 30, 1982, was not available on the date of decedent's death.

From the preceding tables, it can be seen that UEC consolidated gross revenues increased, in relation to the immediately preceding year, by approximately 18.5% in 1980 and 11.7% in 1981. The principal factors to which such growth may be attributed are the acquisition of Action in 1980, and the growth in

net investment income UEC experienced in 1980 and 1981. The decrease in the growth rate, i.e., an increase of only 11.7% in 1981 down from the 1980 increase of 18.5%, in large part reflects the problems UEC encountered with respect to its direct response marketing of accident and health policies and its warranty service contracts sales.

As evident from the above tables, UEC's consolidated expenses also grew, in relation to the immediately preceding year, by approximately 18.3% in 1980 and 26.5% in 1981. The net result of the increases in revenues and the increase in expenses, in 1980 and 1981, is that, in relation to the preceding year, net income rose by approximately 14.9% in 1980 and fell by approximately 55.6% in 1981. Overall, UEC's net profit margin was 10.5% in 1979, 10.2% in 1980, and 4.2% in 1981.

The precipitous drop in UEC's net income and profit margin between 1980 and 1981 is attributable to a multitude of problems UEC encountered during that period. First, UEC was performing poorly in connection with its direct response marketing of the accident and health insurance lines. Second, UEC was suffering a very high lapse rate in connection with its life insurance sales which caused an accelerated amortization of those policies' acquisition costs. Third, UEC was required to make a large adjustment in 1981 to AWC's reserve for claims losses. Fourth, UEC's earnings were also impacted by the accruals UEC made for payment of the contingent consideration owed in connection with the acquisition of Action in 1980. Finally, UEC experienced, in 1981, a combination of a relatively low revenue gain and a narrowed profit margin caused by an inability to control salary and administrative expenses. Throughout 1979 and 1980, salary and administrative expenses grew in line with revenues. In 1981, however, such expenses grew, in relation to 1980, by approximately 29.2% whereas revenue declined sharply.

What is also evident from the above tables is that an additional source of earnings for UEC came from investment income, which primarily flows from assets underlying UEC's claims reserves. Such revenue grew, in relation to the preceding year, by 33.3% in 1980 and by 40.2% in 1981, approximately. This favorable investment income record reflects UEC's policy of investing in short and intermediate-term securities, i.e., securities with a life of one to four years, and reflects the benefits such policy reaped because of the record high interest rates prevailing in the 1979 to 1981 period. In early 1982, however, interest rates were falling and were expected to decline even further. The result caused by UEC's reliance upon such securities and by the declining interest rate, with respect to UEC's investment income trend, would be that the investments it held in early 1982 would roll off the corporate books and would be replaced with securities bearing a smaller yield. Thus, the expectations concerning future investment income, based on UEC's investment portfolio as it existed on the date of death, were that such income source would be less successful than it had been in the recent past.

Miscellaneous Factors Effecting Value of Stock

Suit by former employee. When UEC acquired AWC, UEC entered into with AWC's then-existing management certain employment contracts which, inter alia, limited such management's ability to compete with UEC in the event they left that corporation's employ. In 1981, AWC's former president, Jerry R. Farrar (Farrar), was terminated from his position as president and chief operating officer of AWC. Following such termination, Farrar was employed by another insurance agency. As a result of such other employment, AWC sued, inter alios, Farrar and his employer at that time on the grounds that, as UEC asserted, Farrar was competing against AWC in violation of the above-mentioned employment

contract. The relief UEC sought was primarily in the nature of an injunction under which Farrar would be prohibited from utilizing AWC's actuarial reports and dealer lists in competition with AWC. UEC also sought punitive damages of an unspecified amount.

In response to the suit brought by AWC, Farrar and his employer at that time bought a cross-claim against AWC and UEC which may be characterized as an anti-trust suit. Such cross-claim sought, inter alia, salary, bonuses, vacation and severance pay, and amounts due from Farrar's profit sharing plan, all as were allegedly due Farrar under the employment contract he had with UEC. In addition, Farrar also sought punitive damages against UEC. The relief sought by Farrar against UEC was in an amount of approximately $ 40,000,000. At the time of decedent's death, no resolution of the suit filed by UEC against Farrar, or of the cross-claim filed by Farrar against AWC and UEC had been reached.

Management. UEC was founded by decedent in 1972. From its inception until the date of decedent's death, UEC has been a company highly dependent upon specialized marketing techniques which are employed in selected markets to encourage the sale of UEC's non-traditional insurance products and services. Throughout the company's history, decedent had been heavily involved in the daily operation of UEC. Decedent was the creative driving force behind both UEC's innovative marketing techniques, and UEC's creation of, or acquisition and exploitation of, new products and services.

In 1981, decedent was paid a salary of $ 270,000 by UEC and of $ 98,466 by AWC for his services. Such salary was, as compared to the salaries of the executives in positions and companies comparable to decedent's, approximately $ 100,000 higher than the norm. However, decedent never received any payments from UEC in the form of dividends. Despite the higher salary decedent received, UEC recognized that the prospects for finding someone to replace decedent as the head of UEC's management team were not hopeful. In recognition of UEC's probable inability to acquire the services of a competent leader to replace decedent, UEC attempted to partially ameliorate that eventuality by obtaining an insurance policy on decedent's life under which UEC was the beneficiary. Such insurance policy provided for proceeds of $ 2,000,000 upon decedent's death.

Prior Sales of UEC Stock. Immediately following incorporation, UEC was operated as a privately held corporation. In March, 1973, UEC converted from private to public ownership through the sale of its common stock to the public on the over-the-counter market. UEC reverted to private ownership in September, 1976, following a tender offer at $ 6 per share to public shareholders.

The parties have stipulated that as of October 1, 1979, the fair market value of the common stock of UEC was $ 8 per share. In 1981, UEC purchased 367 shares of its common stock for $ 10 per share. Further in 1981, under the terms of a stock purchase plan, UEC sold 12,500 shares of its common stock from its treasury stock holdings to the then-existing president of UEC at a price of $ 10 per share.

Testimony of Experts

Petitioner's Expert. In an attempt to prove its asserted value of $ 10 per share, petitioner offered the testimony of Milton L. Meigs (Meigs), an investment and financial analyst engaged for the purpose of valuing the UEC corporation and, in particular, the stock in question. In the course of his examination, Meigs conducted an in-depth and thorough evaluation of UEC, its subsidiaries, the business conducted thereby, and the economic trends existing at the time of decedent's death. From such analysis, Meigs made a forecast concerning what could be expected by UEC in the form of future economic trends.

Relying upon his analyses and forecasts, Meigs devised a valuation of UEC under a comparative market analysis approach. n5 The approach Meigs used relied solely upon UEC's 1981 earnings figures as such figures were, Meigs felt, indicative of the earnings UEC could expect in the future.

n5 Such approach entails an examination of corporations which are publicly traded, and which are comparable to the corporation under examination. From the examination of the comparable corporations, an appraiser is able to ascertain a number of quantitative factors which are then applied to the information of the corporation whose value is being determined. Theoretically, the application of such quantitative factors to the information concerning the corporation under examination will yield estimates of that corporation's value.

From his examination of five publicly traded companies he found to be comparable to UEC, Meigs found two quantitative factors to be of primary importance. First, Meigs determined that the price/earnings ratio n6 for the comparable companies' stock ranged, at the time of death, from 5.6:1 to 7.7:1. Second, Meigs considered the relationship that the market value of the stock traded on the market bore to the book value of the stock's corporation. From such determination, Meigs found that the market value of the comparable corporation's stock was generally between 63% to 148% of that corporation's book value.

n6 Such ratio shows the relationship a stock's price bears to the earnings that stock's corporation realizes.

After having made such determinations concerning the price/earnings ratios and the market to book value percentages of corporations comparable to UEC, Meigs then opined that UEC's stock was worth $ 10 per share as of the date of decedent's death. The value Meigs ascribed to UEC's stock is equivalent to approximately 4.7 times UEC's reported operating earnings and represents 32% of UEC's yearend 1981 book value. The value Meigs ultimately reached with respect to UEC's stock did not comport with the numbers at which he arrived in analyzing the corporations comparable to UEC because Meigs considered two qualitative factors which did not avail themselves to the application of strict formulae. First, Meigs concluded that UEC's value should be lower than that value which would be reached using the quantitative factors of the comparable companies because there was a "serious management vacuum" created by the death of decedent. From this, Meigs vaticinated that UEC's earnings would be negatively impacted in the future. Second, Meigs reasoned that UEC's value should be even lower still, as such related to the comparable companies, because the pending litigation brought by Farar would cast a cloud on UEC's attractiveness to any potential investor.

As further support for the $ 10 per share value he ascribed to UEC's stock, Meigs referred to the price/earnings ratios and the market to book value percentages UEC's stock experienced while it was being publicly traded during the period 1973 through 1976. n7 The market conditions for that period for stocks generally, and insurance stocks specifically, were, on the average, not materially dissimilar to the market conditions of early 1982. Because of this, Meigs concluded that his ascribed $ 10 per share value was the fair market value of UEC's stock as of the date of decedent's death.

n7 The market statistics of UEC's common stock as it was publicly traded during 1973 through 1976 appear as follows:

	Price earnings ratio		Market % of book value	
Year	Low	High	Low	High

1973	2.3	9.9	39%	163%
1974	1.0	4.0	12	49
1975	1.1	3.7	11	38
1976	1.7	3.4	23	46

Respondent's experts. Respondent first offered the testimony of Robert v. McMahon (McMahon), an independent contractor associated with a national business brokerage firm, for the purpose of valuing UEC. For his valuation, McMahon relied almost exclusively upon UEC's financial records from 1976 through 1981. However, such records did not include UEC's Federal income tax returns for those years. At no time did McMahon interview any of the management personnel surviving decedent. In the course of his valuation, McMahon employed an approach based upon an investor's anticipated return on investment. Further, the analysis McMahon used is based upon projections he made concerning UEC's future earnings, rather than upon UEC's past earnings experience.

To calculate a projection of UEC's net income for the years 1982 through 1988, McMahon first looked to UEC's performance during 1977 through 1981 and determined: (1) that UEC had an average annual increase in total income of 21.5%; (2) that net income as a percent of assets was an average of 5.6%; and, (3) that assets increased an average of 9.2% annually. McMahon next used UEC's data from 1977 through 1981 to determine that UEC had: (1) An average total income of $ 36,500,000; (2) An average net income of $ 3,700,000; and, (3) Average asset holdings of $ 67,300,000. By using the average total income and average asset holdings, and by applying them to the average percentage increases listed above, McMahon calculated UEC's net income for each year from 1982 through 1988. Finally, by taking one more average, the average of his projected annual net incomes, McMahon concluded that UEC would realize, for years after 1981, average annual net income of $ 6,900,000. McMahon reached this conclusion despite having observed that UEC's profitability between 1977 and 1981 was in decline.

McMahon next computed the return an average investor would require on investments in UEC as of December 31, 1981. To make such a computation, McMahon considered the yield on 10 years United States Treasury Notes, which was 13% as of such date, and added an additional 2% for the inherent risk, and for the lack of liquidity an investor would face with an investment in UEC. Thus, McMahon concluded that an average investor would require a 15% rate of return on investments in UEC as of December 31, 1981.

McMahon took the average projected annual earnings, $ 6,900,000, and divided that by the rate of return an investor would require, 15%, to compute the investment which would be required to return $ 6,900,000 at 15%. Such investment equaled $ 46,000,000. From this number, McMahon subtracted the difference between the liabilities owed by UEC, and the cash and equivalents UEC retained, both as of December 31, 1981. The result of $ 46,000,000 less the $ 2,633,000 differences of liabilities over liquid assets is $ 43,367,000. This figure is McMahon's estimate of the fair market value of UEC as of December 31, 1981. McMahon further stated that this value would prevail as of the date of decedent's death.

To arrive at the value of the stock held by decedent at the date of his death, as such related to the value of the corporation as a whole on such date, McMahon next concluded that the shares held by decedent, 767,800 shares, were not in fact the 79.5% of UEC's outstanding stock which such shares represented. That is, through a convoluted weighting formula for which he offered no explanation, McMahon

concluded that, in reality, the 767,800 shares decedent held were equivalent to 82.48% of UEC's total shares outstanding. This is tantamount to applying a premium to decedent's holdings for the reason that an investor would be acquiring control of UEC when such investor bought decedent's shares in UEC. Thus, McMahon concluded that the 767,800 shares decedent held at the time of his death should be valued at 82.48% of the total value of UEC, i.e., that decedent's holdings had a fair market date of death value of $ 35,776,524, or a value of $ 46.60 per share.

Respodent next offered the testimony of Steven R. LaMantia (LaMantia), a professional appraiser engaged by respondent for purposes of valuing decedent's holdings in UEC as of the date of decedent's death. In the report prepared in connection with such valuation, following a brief description of the lines of business in which UEC was engaged, LaMantia performed a comparative market analysis similar to, but distinct from, that analysis which was conducted by Meigs.

From an examination of nine corporations he found to be comparable to UEC, LaMantia determined that a value for UEC could be determined by applying a capitalization rate of 6.5, i.e., a price/earnings ratio of 6.5:1, to UEC's net income. LaMantia first applied such rate to only UEC's net income. LaMantia first applied such rate to only UEC's 1981 net income and arrived at a value of $ 13,325,000. Next, LaMantia applied the capitalization rate of 6.5 to an average of UEC's net income from the preceding five years, 1977 through 1981, to arrive at an alternative value of $ 23,106,200.

Because LaMantia felt UEC's 1981 earnings were being skewed by losses incurred by Action, LaMantia focused upon the value achieved by the capitalization of UEC's average earnings from the preceding five year period. Lamantia's analysis operated under the impression that Action had incurred losses in 1981 of approximately $ 1,500,000. In fact, Action's 1981 losses were only $ 100,000.

Despite his focus on the value derived from capitalization of the five-year average of UEC's earnings, LaMantia did determine that UEC's lowered earnings in 1981 indicated that UEC would continue to realize decreased earnings in the future. For this reason, LaMantia discounted the value he reached for the whole of UEC of $ 23,106,200 to $ 20,000,000. Such value for UEC reflects a price per share of $ 20.72.

To the $ 20.72 per share indicated value, LaMantia then applied a premium of 20% in recognition of a premium the average investor would pay when purchasing a controlling share of a corporation's stock. Thus, the value LaMantia attributed to decedent's holdings, 767,800 shares, at the death of death is, rounded to the nearest million, $ 19,000,000, or $ 24.75 per share.

Notice of Deficiency

Petitioner listed the value of decedent's UEC's holdings at $ 10 per share in the estate tax return petitioner filed. In his notice of deficiency, respondent determined that the fair market value of such UEC stock in the estate of decedent should be $ 46.60 per share, in reliance upon McMahon's appraisal.

OPINION

The sole issue for decision is the date of death value of 767,800 shares of UEC common stock owned by decedent at his death.

Section 2031(a) n6 requires that the property be included in a decedent's gross estate shall be taxed on the basis of that property's fair market value at the time of the decedent's death. Section 20.2031-1(b) of the Estate Tax Regulations defines fair market value as "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts."

n6 All section references are to the Internal Revenue Code of 1954, as amended and in effect as of the date of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure, unless otherwise indicated.

With respect to stock or securities of a corporation, where such are traded on a national stock exchange, the value of those stocks or securities is easily determined by reference to the relevant market price thereof. Where the corporate stocks or securities are not listed on an exchange but are closely held, however, the proper method of valuation is made "by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange." Sec. 2031(b). Unfortunately, such a method of valuation may be reduced to the application of rote formulae. See Messing v. Commissioner, 48 T.C. 502 (1967). Clearly the question here presented is purely one of fact which is better disposed of through settlement negotiations between the parties, rather than through an adjudication process which put the onus upon us to make a Solomon-like pronouncement. See Buffalo Tool and Die Mfg. Co. v. Commissioner, 74 T.C. 441 (1980).

In looking at the surrounding facts and circumstances, we are limited to those which were available on the date of decedent's death; using hindsight at the time of trial would be inappropriate. Estate of Jephson v. Commissioner, 81 T.C. 999 (1983). When the date of death is the valuation date, post-mortem events may be considered, however, for the limited purpose of establishing that the willing buyer and seller's expectations were on the valuation date and whether these expectations were reasonable and intelligent. Estate of Jephson v. Commissioner, supra. Further, in determining the buyer and seller's expectations, events occurring after decedent's death are considered only if such events were reasonably foreseeable at that time. Estate of Gilford v. Commissioner, 88 T.C. 38 (1987). That is, reasonable expectations entertained at the date of death are of substantial importance; "subsequent events may serve to establish both that the expectations were entertained and also that such expectations were reasonable and intelligent." Couzens v. Commissioner, 11 B.T.A. 1040, 1165 (1928).

The question of the fair market value to be attributed UEC's stock is a question of fact. Petitioner bears the burden of proof in showing that the value determined by respondent is incorrect. Welch v. Helvering, 290 U.S. 111 (1933). As the triers of fact, we are required to weigh all relevant evidence and draw appropriate inferences therefrom. Estate of Andrews v. Commissioner, 79 T.C. 938 (1982). Included within the ambit of relevant evidence are the valuations made by the parties' respective experts.

After reviewing the valuation methods adopted by the parties' experts, we are not satisfied that any one method, or the result reached thereby, should be adopted by us in toto. Meigs' report does provide a comprehensive review of UEC and its major lines of business. However, it appears that Meigs merely chose a value of $ 10 per share and then attempted to justify that value by referring to the sales of UEC stock occurring between the remote period of 1973 and 1976 when UEC's stock was publicly traded. Further, although Meigs did do a comparative market analysis, the valuation he ascribes to the stock in

question in no way comports with such analysis. For example, although Meigs found that comparative market price/earnings ratios ranged from 5.6:1 to 7.7:1, Meigs' value is equivalent to a price/earnings ratio of 4.7:1.

McMahon's method of valuation is even less supported by the facts. Initially, we observe that McMahon relied upon market numbers generated in the abstract by Forbes magazine. Further, in applying the numbers so generated, McMahon is caught in the trappings presented by the application of rote formulae. That is, as is apparent from the method by which he arrives at an average annual net income, McMahon is enticed into a false sense of security in his numbers merely because they are averages. With respect to the use of averages, it has been said:

averages may be deceiving. Two corporations with 5-year earnings going from the past to the present represented by the figures in one case of 5, 4, 3, 2, and 1, and in the other by the same figures of 1, 2, 3, 4, and 5, will have the same 5-year averages, but investors will quite naturally prefer the stock of the later whose earnings are consistently moving forward.

Central Trust Co. v. United States, 305 F.2d 393, 403 (Ct. Cl. 1962).

Finally, LaMantia's method of valuation ignores the significant problems UEC faced with respect to its claims reserve, and further ignores the effect a declining interest rate would have upon UEC's future investment portfolio's income. Further, LaMantia too relied upon a five-year average earnings figure although he did observe that UEC's 1981 earnings had dropped substantially. These are not all of the shortcomings we found in each method of valuation but they are principal reasons why we will not adopt in whole the report of any one expert, nor will we weigh the reports one against the other to arrive at a value for the decedent's UEC stock. Rather, we have evaluated UEC's financial history using the experts' reports as a reference and have arrived at a value for such stock using a different methodology.

From our review of the facts concerning UEC and its family of companies, as such facts existed on the date of decedent's death, we find that UEC was suffering from a serious decline in its profitability without much hope for a recovery in the near future. UEC's sales of accident and health insurance through direct response marketing, its historical marketing mainstay, were progressively decreasing. UEC's life insurance sales, although increasing in volume, were facing an ever increasing lapse rate with the result that the policy acquisition costs incurred in connection with the increased sales were necessarily being expensed at a faster rate. UEC's warranty services, its major source of revenue in 1981, were suffering from a decline in related automobile sales, increased competition from automobile manufacturers, and disruptions in its marketing program, all of which resulted in decreased sales. Further, UEC's warranty services insurance coverage was, as of 1981, found to be backed by reserves which were found to be dangerously insufficient to meet future warranty claims. Finally, UEC's investment portfolio income, which was highly dependent upon intermediate and short-term securities, was sure to decrease as such securities rolled off of UEC's books and were replaced with securities which would bear lower interest rates because such rates were on the decline in 1981. All of these factors reflect that UEC's future would not bode well to a potential investor.

Taking into consideration UEC's past economic performance and future economic prospects, we find that the stock in UEC held by petitioner should be valued by use of a comparative market analysis. Under such method of valuation we shall first derive a per share value based upon the following:

(1) The price/earnings ratios of corporations comparable to UEC;

(2) The relationship the market price of comparable corporations' stock bore to the book value of their respective corporations; and,

(3) The value ascribed to UEC's stock when such was previously sold.

After arriving at a value per share of UEC's stock using the above three methods, we shall derive a weighted average price per share based upon the relative trustworthiness of those three methods.

Price/Earnings ratios. To establish a value for the UEC stock in question by using the price/earnings ratios of comparable corporations, it is first necessary that we establish an earnings base to which the ratio will be applied. In calculating such earnings base, we rely only upon that information which would have been available to an investor on the date of decedent's death. For this reason, we do not look to UEC's 1982 financial records because such would not have been generated until after the valuation date. We have chosen to consider the earnings UEC experienced during 1979, 1980, and 1981. We do so because, in recognition of UEC's relative success in the past, the earnings for 1979 and 1980 would have some importance to an investor in UEC at the time of valuation. The earnings from those two years would not be given the same weight of importance as would the earnings from 1981, however. For this reason we shall weight UEC's earnings for 1980 as being more important than those for 1979. Further, because all three experts offered by the parties found 1981's earnings to be on the decline and, more importantly, indicative of the earning UEC could expect in the future, we have chosen to weight that year's earnings as being of primary importance. Therefore, our earnings base is calculated as follows (in 000's):

Year	Earnings		Weight Factor		Weighted Earnings
1981	2,050	x	.7	=	1,435.0
1980	4,619	x	.2	=	923.8
1979	4,020	x	.1	=	402.0
Earnings base					$ 2,760.8

Generally, it would be appropriate to adjust UEC's past earnings to take into consideration items which are non-recurring and extra-ordinary in nature, and which have the tendency to distort UEC's prior earnings. Central Trust Co. v. United States, supra. Respondent argues that the adjustments UEC made to its claim reserve, and that the costs AWC incurred in revamping its computer system, should be so characterized, and that UEC's 1981 earnings should, therefore, be adjusted.

In the realm of economic reality, we find that the increase to UEC's claims reserve is neither extraordinary, nor nonrecurring. As an on-going business, UEC is required to continually and accurately evaluate the estimations it makes with respect to its claim reserves. Such is the nature of the insurance industry that it must constantly make estimates despite the uncertainties it faces, and that it must continually make adjustments to such estimates as the operative facts of such estimate change. The claim reserves account is such an estimate and the increase UEC made thereto in 1981 is such an adjustment. Further, that such an adjustment could be expected to again occur in the future is shown by UEC's actuary advising UEC to anticipate additional modifications to that account.

With respect to the revamping of AWC's computer system, we also find such to neither be nonrecurring, nor extraordinary. UEC, as is the whole insurance industry, is heavily dependent upon computers in the conduct of its business. For this reason, in the case at hand we find that AWC's modification of its computer system was an ordinary and necessary expense, and that such expense can reasonably be expected to be incurred in the future.

To their respective earnings bases, Meigs applied a capitalization rate of 4.7, i.e., a price/earnings ratio of 4.7:1, and LaMantia applied a rate of 6.5. Because of the claim reservers problems UEC was facing in 1981, because of the drastic decrease in profitability UEC saw in that year, and because UEC's investment portfolio promised to see reduced income in the future, we find that the proper capitalization rate should be at the lower end of the spectrum presented by the parties' experts; we will apply a price/earnings capitalization rate of 5:

(Earnings Base) (in 000's) x (Capitalization rate) = Aggregate Value of UEC (in 000's)

$ 2,760.8 x 5 = $ 13,804

The aggregate value of UEC, therefore, yields a per share value of $ 14.30 as of December 31, 1981 using the price/earnings ratio method.

Book value. The book value of a corporation indicates how much of that corporation's net assets, valued as a going concern, stand behind each share of its stock. See Central Trust Co. v. United States, supra. Such value is, therefore, an important factor in valuing the shares in question.

UEC's book value as of December 31, 1981, was $ 30,368,000. Included within this value is the life insurance policy UEC held on decedent's life. The value of said policy, as included within UEC's book value on December 31, 1981, is not the amount UEC would receive on decedent's death; rather, it is the amount UEC paid for the acquisition of the policy. To accont for the $ 2,000,000 in proceeds UEC would receive from the policy, we find that it would be appropriate to include that amount within the book value when computing a market to book value for UEC's stock. Therefore, for our purposes, the book value of UEC will be $ 32,368,000. This amount includes the amount UEC paid for the policy; however, we cannot take such policy cost into consideration because that cost is not in the record.

In his examination of UEC, Meigs found that the price of a stock, as a percentage of that stock's book value, ranged from 63% to 148%. LaMantia found such percentages to range from 50% to 220%.

As of December 31, 1981, the asset "deferred policy acquisition costs" represented 24.8% of total assets. At that time there existed considerable risk that such asset was substantially overstated and subject to an accelerated rate of amortization if UEC's lapse experience also deteriorated. Considering this, and considering the increases UEC was experiencing in its lapse rates, we find that a proper value for the aggregate of UEC's outstanding stock will be found by applying a book-to-market value percentage of 45%. Accordingly, the aggregate value of UEC stock outstanding is:

$ 32,368,000 x .45 = $ 14,565,600

Such value represents $ 15.09 per share as of December 31, 1981.

Prior sales. The prior sales here under consideration are those sales which involvved a material number of shares, and which occurred at the time that UEC converted from public to private ownership or thereafter. Such sales were as follows:

Year	Price
1976	$ 6
1979	8
1981	10

We find that such history of shares sold is relevant to our present inquiry for two reasons. First, that the prices at which the stock sold over the years increases in line with the overall growth of UEC reflects that such prices do indicate the stock's relative fair market value on those dates. Second, the prior sales are relevant because of the close proximity in time the most recent of such sales bears to the valuation date.

For our purposes, we shall rely only on the sales of stock occurring in 1981. Such sale was of 12,500 shares made to the then-existing president of UEC under the terms of a stock purchase plan. Because such sale involved a relatively small number of shares of stock and was made to an officer of UEC under a stock purchase plan, however, we find that it would be appropriate to apply a premium to the sales price to determine the stock's true fair market value. Such premium shall be one of 30% as of December 31, 1981. Accordingly, we find that the fair market value of UEC's stock as of December 31, 1981, based on the prior sales experience of such stock, is $ 13 per share.

Per Share Weighted Average Value

To reach a per share value of UEC's stock as of December 31, 1981, we shall use a weighted average of the results reached under the above three approaches. Of least value is the price determined from an examination of the prior sales. The results reached from use of the price/earnings method is of most importance because the earnings of UEC are more indicative of what can be expected following decedent's death than is the book value of the stock. Accordingly, we weight the results reached above as follows:

Method	Result Reached	Weight Factor	Weighted Value
Price/earnings	$ 14.30	.6	$ 8.58
Book value	15.09	.3	4.53
Prior sales	13.00	.1	1.30
Per share weighted average value			$ 14.41

Adjustments. The per share weighted average fair market value of $ 14.41 is computed above based upon December 31, 1981 information. We find that additional adjustments to such value are required by the facts of this case.

Initially, we recognize that an investor would be willing to pay a premium above fair market value for a block of shares which represent a controlling interest in UEC (control premium). See Estate of Chenoweth v. Commissioner, 88 T.C. 1577 (1987). The shares held by decedent at the date of death represent such a controlling interest and a control premium should, therefore, be applied.

We further recognize, however, that where a corporation is substantially dependent upon the services of one person, and where that person is no longer able to perform services for the corporation by reason of death or incapacitation, an investor would expect some form of discount below fair market value when purchasing stock in the corporation to compensate for the loss of that key employee (key employee discount). See Estate of Huntsman v. Commissioner, 66 T.C. 861 (1976: Edwards v. Commissioner, a Memorandum Opinion of this Court dated January 23, 1945. We find that Milton Feldmar was an innovative driving force upon which UEC was substantially dependent for the implementation of new marketing strategies and acquisition policies. Therefore, we find that a key employee discount is appropriate.

Respondent asserts that no key man discount should be applied becuase, respondent argues, any detriment UEC suffered from the loss of decedent's services is more than compensated for by the life insurance policy upon decedent's life. We do not find merit in such a position. The life insurance proceeds UEC was to receive upon decedent's death are more appropriately considered as a non-operating asset of UEC. See Estate of Huntsman v. Commissioner, supra. We did this when we determined a value of UEC's stock by using the market-to-book valuation method.

Respondent also argues that the key employee discont should not be applied because, respondent asserts, UEC could rely upon the services of the management structure already controlling UEC, or UEC could obtain the services of a new manager, comparable to the decedent, by using the salary decedent had received at the time of his demise. With respect to the existing management, Meigs conducted interviews of such managers and found them to be inexperienced and incapable of filling the void created by decedent's absence. By contrast, neither of respondent's experts offered an opinion on such management's ability to replace decedent. From the evidence presented, we conclude that UEC could not compensate for the loss of decedent by drawing upon its management reserves as such existed on the valuation date.

Taking into account the control premium and key employee discount, we find that an investor would be willing to pay a 15% premium for a controlling block of shares in UEC, but the same invfstor would expect a 35% discount for the loss of a key employee. A control premium of 15% is proper in the case at hand because, although an investor would be acquiring a corporation over which he could exercise dominion, that investor would also be acquiring a corporation which was already facing declining profitability and serious concerns regarding the adequacy of its claims reservs. A key man discount of 35% is appropriate in this case because UEC suffered a serious loss when decedent took to his grave his considerable expertise in finding and expoloiting innovative insurance products and services. Such 35% discount should be reduced, however, to account for UEC's potential for finding a new leader, from outside of its existing management, to replace decedent. Although we find it to be a very remote possibility that UEC might find a new helmsman with knowledge, experience, innovative skills, and resources comparable to those of the decedent, we shall reduce the key employee discount to be applied forrm 35% to 25% to account for such potentiality.

Combining the control premium of 15% and the key employee discont of 25%, the result is an overall downward adjustment of 10% to the per share weighted average fair market value of $ 14.41. Accordingly, the per share fair market value of UEC's stock on December 31, 1981, is computed:

$ 14.41 - $ 1.44 = $ 12.97

This value, $ 12.97 per share, must now be adjusted to take into consideration two other variables. First, the value determined above must be adjusted to account for the potential loss UEC might face in connection with the anti-trust suit brought by Farrar. We find that such suit would, in an investor's mind, cast a cloud upon UEC's financial stability, and that such investor would take such into consideration when determining what price to pay for the stock. Further, the value determined above must be adjusted so as to bring that value up to the date of decedent's death; the value above determined is as of December 31, 1981, and the proper valuation date is March 30, 1982. To account for such difference in valuation dates, we find that UEC could expect to experience the same decline in profitability and could expect the same lessening of its revenues in the first 90 days of 1982 as it experienced in 1981. To give due consideration to the concerns presented by the suit facing UEC, and to account for the decreases in value UEC's stock would suffer between December 31, 1981, and March 30, 1982, we find it to be appropriate to decrese the above-determined value by an additional 4%, which is equivalent to a per share discount of $ 0.52 to arrive at a date of death fair market value of $ 12.45 per share. Accordingly, the date of death value of 767,800 shares of United Equitable Corporation common stock owned by the decedent at his death is $ 9,559,110.

To reflect the foregoing,

Decision will be entered under Rule 155.

PARKER

OPINION:

ORDER

The named plaintiffs in this class action proceeding have filed an application to solicit litigation expenses from the members of the class. Although the named plaintiffs have accepted responsibility for the full cost of this action, they wish to defray these expenses through contributions from other class members who stand to benefit from the litigation. Several defendants have filed pleadings in response to the plaintiffs' request.

In support of their application, the plaintiff rely on Norris v. Colonial Commercial Corp., 77 F.R.D. 672 (S.D. Ohio 1977). There, the court approved a communication which sought post-certification solicitation of contributions from class members, subject to certain conditions. The court limited the distribution of the communication to class members who had not opted out of the litigation, and directed that the communication should advise class members that their contributions were voluntary and would not affect their right to recovery in the event that the litigation was ultimately successful. Id. at 673. With respect to the management of any money collected through the plaintiffs' efforts, the court ordered that the funds should be deposited in a bank account approved by the court and be withdrawn only with court approval, must be accounted for at the conclusion of the litigation, and could not be used to pay attorneys' fees. Id.

Later decisions have cautioned against the imposition of restrictions on communications by parties and their counsel with other class members. See, e.g., Gulf Oil Co. v. Bernard, 452 U.S. 89, 101 S. Ct. 2193, 68 L. Ed. 2d 693 (1981), aff'g 619 F.2d 459 (5th Cir. 1980). The theory underlying these decisions is that such restrictions often constitute invalid prior restraints on constitutionally protected expression, id. at 2202, or alternatively, that they exceed the rule-making authority of the lower courts because they frustrate the policies underlying class action proceedings brought under Fed. R. Civ. P. 23. Id. at 2195, 2202; Williams v. United States District Court, 658 F.2d 430, 434-35 (6th Cir.), cert. denied sub nom. Southern Railway Co. v. Williams, 454 U.S. 1128, 102 S. Ct. 980, 71 L. Ed. 2d 116 (1981). As the Fifth Circuit noted in Bernard, communications which are designed to raise funds to support litigation are often "a necessary adjunct to obtaining meaningful access to the courts," and as such, are particuarly deserving of protection. 619 F.2d at 473 n.25.

This Court agrees with the reasoning of the above decisions, and concludes that the plaintiffs should not be prohibited from soliciting funds to defray the cost of litigation expenses. The ruling which follows is designed to incorporate the concerns addressed in Norris, supra. The content of the communication to the class and the mechanics of the solicitation will be addressed at the next status conference.

Accordingly, it is this 20th day of November, 1984,

ORDERED

That the Plaintiffs' Application to Solicit Expenses from Class Members is granted subject to the following conditions:

1. Plaintiffs may direct the communcation only to those members of the certified class who have not exercised a right of exclusion.

2. All funds collected must be deposited in a bank approved by this Court which conducts business in the District of Columbia, conditioned as follows:

a. Funds may be withdrawn only for payment of litigation expenses other than attorneys' fees.

b. Funds may be withdrawn only with Court approval.

c. An accounting of all receipts and disbursements shall be made to members of the class at the conclusion of the litigation.

ORDER

Upon consideration of the relevant facts and circumstances, it is hereby

ORDERED, that the Profit Sharing Plan of U.S. News & World Report may file a memorandum in support of the motion of Save the fund et al. to intervene in this action, and that said memorandum is hereby deemed to be filed.

UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

CHARLES S. FOLTZ, et al., Individually and as respresentatives of the class, Plaintiffs, v. U.S. NEWS & WORLD REPORT, INC., et al., Defendants.

Civil Action No. 84-0447

ORDER

It is this 20th day of November, 1984,

ORDERED

That a status conference will be held in this proceeding on November 30, 1984 at 2:00 p.m. The purpose of the status conference is to discuss scheduling matters, the status of new parties, class notice and certification, and the proposed Notice to Class Members for Solicitation of Expenses.

MEMORANDUM OPINION

Barrington D. Parker, District Judge:

BACKGROUND

This Memorandum Opinion is issued in support of this Court's Order Declaring a Class Action and Directing Notice to Class Members, filed September 10, 1984 ("September 10 Order"). The plaintiffs in this action, Charles S. Foltz, Howard M. Handleman, Bem Price, M. Eugene Williamson, Richard J. Theobald, Nathan J. Margolin, and Edward H. Castens, have been certified as class representatives. They are retired employees of defendant U.S. News & World Report, Inc. ("U.S. News" or "Company"), and each of them retired in a different year during the period 1975-1981. n1 At the time of retirement, the plaintiffs, as well as other employees of U.S. News, sold their stock in U.S. News back to the Company or liquidated their interests in the Company's profit-sharing plan. The plaintiffs assert that with respect to these transactions, the defendants severely undervalued the interests of U.S. News employees. They allege violations of federal securities and antitrust laws, in addition to breach of ERISA and common law duties.

The Court also certifies plaintiff Robert deVogelaere, who left U.S. News in 1974, as a class representative. Mr. deVogelaere moved to intervene in this action after the Court's September 10 Order. The Court granted his motion to intervene, but reserved ruling on whether he was a suitable class representative until after the defendants had the opportunity to depose him. After considering Mr. DeVogelaere's deposition testimony and the relevant pleadings, the Court determines that he is an adequate class representative. The accompanying order modifies the September 10 Order to reflect this ruling.

In addition to U.S. News, the defendants include several former directors of U.S. News, the American Appraisal Company, the entity which determined the value of the stock, and the Madana Realty Company, a wholly-owned subsidiary of U.S. News.

In the September 10 Order, the Court conditionally certified this case as a class action proceeding, pursuant to Rule 23 of the Federal Rules of Civil Procedure. The class certified was composed of:

all persons who retired from employment with, or were otherwise separated as employees of, U.S. News from 1975 to 1981, and who during their tenure as employees were shareholders of the Company, participants in the Company's profit-sharing plan, or beneficial owners of the stock of the Company; and who, upon their retirement or separation from the Company, sold to the Company their legal or beneficial interest in the Company's stock or surrendered their interest in the Company's profit-sharing plan.

The Court now addresses the criteria which support the certification of a class in this action.

CLASS ACTION CRITERIA

A case may proceed as a class action if the four prerequisites of Rule 23(a) are met, and one of the three elements of 23(b) is satisfied. The four elements of Rule 23(a) require that: (1) the class is so numerous that joinder is impractical; (2) that there are questions of law or fact which are common to the class the plaintiff seeks to represent; (3) that the claims or defenses of the representative parties are typical of the claims of the class; and (4) that the representative parties will fairly and adequately protect the interests of the class.

The defendants' opposition to class certification focuses on the adequacy of the plaintiffs as class representatives under Fed. R. Civ. P. 23(a)(4). With one exception, the defendants have not challenged the plaintiffs' showing with respect to numerosity, typicality or commonality. n2 In their lone challenge to typicality and commonality, the defendants suggest that even if class certification is appropriate, subclasses should be certified for each pertinent retirement year.

n2 Although the defendants' challenges focus on the adequacy of representation requirement, some of these challenges could also be asserted in connection with commonality and typicality. These requirements are often interchangeable and their dividing lines are not hard and fast. Donaldson v. Pillsbury, 554 F.2d 825, 829-30 (8th Cir.), cert. denied, 434 U.S. 856, 54 L. Ed. 2d 128, 98 S. Ct. 177 (1977).

Apart from the question of subclasses, the Court is satisfied the plaintiffs have satisfied the first three requirements of Fed R. Civ. P. 23(a). The plaintiffs' claims concerning the undervaluation of U.S. News stock are common to all members of the class, and the claims of the class representatives "exhibit the essential characteristics" of those of the class. Pendleton v. Schlesinger, 73 F.R.D. 506, 509 (D.D.C. 1977) (citation omitted), aff'd sub nom. Pendleton v. Rumsfeld, 202 U.S. App. D.C. 102, 628 F.2d 102 (D. C. Cir. 1980). Moreover, the plaintiffs' undisputed estimation that the class consists of at least 200 members is sufficient to satisfy the numerosity requirement. The Court now turns to the defendants' objections to class certification, and their alternative suggestion that subclasses should be certified.

Rule 23(a)(4): Adequacy of Representation

The two-part standard for fair and adequate representation of a class under Rule 23(a)(4) requires that:

counsel for the class must be qualified, experienced and generally able to conduct the proposed litigation and [] the interests of the representative party [must] be coextensive with the interests of the entire class.

Equal Employment Opportunity Commission v. Printing Industry of Metropolitan Washington, D.C., Inc., 92 F.R.D. 51, 54 (D.D.C. 1981). Here, the defendants argue that the plaintiffs are inadequate representatives for the following reasons: failure to plead fraud with particularity and statute of limitations problems; and failure to adequately investigate the grounds for their allegations pursuant to Fed. R. Civ. P. 11. n3

n3 None of these arguments concerns the ability of plaintiff's counsel. The affidavit filed by plaintiffs' lead counsel on July 17, 1984 demonstrates that he is amply qualified to conduct this litigation on behalf of the plaintiffs.

These arguments must be rejected. In Eisen v. Carlisle & Jacquelin, 417 U.S. 156, 177-178, 40 L. Ed. 2d 732, 94 S. Ct. 2140 (1974), the United States Supreme Court cautioned against reliance on merits considerations in determining whether class certification is appropriate. Accord E.E.O.C. v. Printing Industry, 92 F.R.D. at 54 (citations omitted). Here, the dispute concerning the adequacy of the plaintiffs showing of fraud is at the heart of this litigation. In view of the fact that the plaintiffs have presented a colorable case on the merits, the sufficiency of their fraud allegations does not enter into the class certification equation.

The same rationale applies to the defendants' argument that the statute of limitations bars the claims for a portion of the relevant class period. Both of these merits considerations may be dealt with after the parties file any appropriate dispositive motions. If this Court subsequently determines that the claims of certain class members are barred by the statute of limitations, it may order that those individuals or their representative class years be deleted from the class. Cohen v. District of Columbia National Bank, 59 F.R.D. 84, 90 (D.D.C. 1972).

Moreover, the defendants' assertions challenging the adequacy of plaintiffs' investigation and knowledge of the facts underlying this lawsuit raise no serious concerns. Class representatives are not required to possess detailed substantive knowledge of the nature of their lawsuit. E.E.O.C. v. Printing Industry, 92 F.R.D. at 54. Moreover, the huge increase in the value of U.S. News stock in 1982 was sufficient to put the plaintiffs on notice of possible grounds for a lawsuit. See, e.g., Foltz Deposition at 49, filed July 3, 1984; Price Deposition at 45, filed July 3, 1984; Williamson Deposition at 24-25, filed July 3, 1984.

The Appropriateness of Subclasses

Next, the defendants argue that if a class is certified, separate subclasses for each pertinent class year should be established. They point to distinct factual issues which must be adjudicated for each annual appraisal, and conflicts of interest among retirees in different years. The allegation of conflict among class members stems from the defendants' complex speculations on the apportionment of damages between class members. They assert that each plaintiff's recovery will depend on the mix of undervaluation in the years preceding his retirement, creating different sets of incentives for recovery between members of each class year.

While these assertions are not frivolous, the concerns which are common to all class members far outweigh their individual interests. The key issue in this action is whether the defendants fraudulently undervalued U.S. News stock during the relevant class period. If conflicting interests become more apparent at a later stage in this litigation, the Court will have the opportunity to create subclasses to resolve the conflicts. See Blackie v. Barrack, 524 F.2d 891, 909 (9th Cir. 1975), cert. denied, 429 U.S. 816, 50 L. Ed. 2d 75, 97 S. Ct. 57 (1976).

Rule 23(b)(3)

In addition to satisfying the criteria of Rule 23(a), the plaintiffs also meet the requirement of Rule 23(b)(3) that common questions of law and fact predominate over questions affecting individual members of the class. Here, the factual and legal questions concerning the alleged undervaluation of the plaintiffs' interests in U.S. News are the primary issues in this case, and are common to all members of the class. Moreover, a class action is superior to individual actions due to the efficiencies achieved through economies of scale. Indeed, separate litigation of these individual claims would be both wasteful and unnecessary when the major issues can be resolved in a single proceeding. The Court perceives no procedural unfairness or any other undesirable consequences from certifying this case as a class action. Advisory Committee Notes to Rule 23(b)(3), 39 F.R.D. 69 (1966) at 102-03.

CONCLUSION

In sum, the Court concludes that the class of retired U.S. News employees certified in the September 10 Order, as modified to include the year 1974, meets the requirement of Rule 23, Federal Rules of Civil Procedure. This finding is provisional, and may be modified in light of subsequent proceedings.

T.C. Memo. 1998-157

UNITED STATES TAX COURT

MAUDE G. FURMAN, DONOR, DECEASED, AND ESTATE OF MAUDE G. FURMAN, DECEASED, ROBERT G. FURMAN, EXECUTOR, Petitioners v. COMMISSIONER OF INTERNAL REVENUE, Respondent

ROYAL G. FURMAN, DONOR, DECEASED, AND ESTATE OF ROYAL G. FURMAN, DECEASED, ROBERT G. FURMAN, EXECUTOR Petitioners v. COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 11568-96, 11569-96. Filed April 30, 1998.

Stanley W. Rosenkranz and James R. Freeman, for petitioners.

James F. Kearney, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

BEGHE, Judge: Respondent determined deficiencies in petitioners' Federal gift taxes and Federal estate tax and additions to tax as follows:

Estate of Maude G. Furman

	Deficiency	Additions to Tax Sec. 6651(a)	Additions to Tax Sec. 6653(a)
Gift tax--1981	$75,460	$18,865	$3,773
Estate Tax	115,649	--	--

Estate of Royal G. Furman

	Deficiency	Additions to Tax Sec. 6651(a)	Additions to Tax Sec. 6653(a)
Gift tax--1981	$75,460	$18,865	$3,773

After concessions regarding the estate tax deficiency, the issues for decision are:

1. Whether for purposes of computing the taxable gifts of Royal G. Furman (Royal) and the taxable gifts and taxable estate of Maude G. Furman (Maude), the fair market value of 24 shares of Furman's, Inc. (FIC) common stock exchanged by each of Royal and Maude in 1981 for preferred stock of FIC was $300,000 ($12,500 per share) as petitioners contend, $540,540 ($22,522 per share) as respondent contends, or some other amount. We hold that the fair market value was $424,552 ($17,690 per share).

2. Whether for purposes of computing Maude's taxable estate, the fair market value of six shares of FIC common stock that she transferred to Robert G. Furman (Robert) in 1980 was $62,016 ($10,336 per share), as petitioners contend, $147,600 ($24,600 per share), as respondent contends, or some other amount. We hold that the fair market value was $82,859 ($13,810 per share).

3. Whether Royal and Maude had reasonable cause for failing to file gift tax returns for the period ending September 30, 1981, and whether their failures to pay gift taxes for that period were due to negligence or intentional disregard of rules and regulations. We hold that Royal and Maude had reasonable cause for failing to file gift tax returns and were not negligent in failing to pay gift taxes.

FINDINGS OF FACT

Some of the facts have been stipulated and are incorporated herein by this reference. Unless otherwise noted, all section references are to the Internal Revenue Code in effect for the years at issue, and all Rule references are to the Tax Court Rules of Practice & Procedure. All amounts have been rounded to the nearest dollar.

A. Decedents

Royal died testate on June 29, 1990. His wife Maude died testate on June 12, 1992 (collectively decedents). Royal and Maude were residents of Florida at the times of their deaths. Robert, the personal representative of decedents' estates, resided in Florida at the time of filing the petitions.[1] Decedents weresurvived by five children, including Robert, their son.

[1] Under Florida law, the terms "executor" and "personal representative" are synonymous. Fla. Stat. Ann. sec. 731.201(25) (West 1995) defines "personal representative" as a court-appointed fiduciary who administers a decedent's estate. For purposes of the Florida Probate Code, the definition supersedes "executor" and other synonymous terms. Id.

B. Furman's, Inc.

FIC is a Florida corporation that was organized in 1959. The principal place of business of FIC is Florida. Throughout its existence FIC has been a C corporation, and the stock of FIC has never been publicly traded. FIC was founded by Maude, Royal, and Robert for the purpose of acquiring and operating a Burger King[2] restaurant franchise after Royal had retired from a 35-year career as a mail carrier. Until the founding of FIC, Maude, Royal, and Robert resided in Chicago, Illinois.

From its organization in 1959 until February 1980, FIC was capitalized with 100 shares of no-par common stock issued and outstanding, held as follows:

Maude	30 shares
Royal	30 shares
Robert	40 shares

Although Royal and Maude had five children, Robert is their only child who has ever had a common stock ownership interest in FIC or been active in its management.

Burger King Corp. (BKC), a Florida corporation headquartered in Miami, Florida, is the franchisor of the second largest restaurant chain in the world, after McDonald's. Since 1967, BKC has been a wholly owned subsidiary of Pillsbury, Inc. Pillsbury was acquired by Grand Metropolitan PLC in 1989.

[2] Burger King Corp. is the exclusive licensee of the Burger King® registered trademark used in this opinion.

FIC, since its formation, has been engaged solely in the business of owning and operating franchised Burger King restaurants. At the date of trial, FIC operated 27 Burger King restaurants, primarily in Manatee, Sarasota, Charlotte, and Lee Counties, on the west coast of Florida.

FIC entered the fast-food business in May 1959 by opening Burger King Store No. 12 (Store No. 12) in North Miami Beach, Florida, one of the original restaurants in the Burger King chain. Royal and Maude relocated to Florida to operate the new restaurant, while Robert had intended to stay in Chicago, where he was employed as a special agent for an insurance company.

Just 2 weeks after the opening of Store No. 12, Robert received a call from James McLamore, one of the cofounders of BKC, informing him that Royal had been hospitalized. Robert traveled to Florida and immediately went to work in Store No. 12. After Royal's recuperation, Robert decided to stay in Florida and help manage FIC. Robert has remained in the fast-food business ever since.

In 1961, FIC purchased a 20-percent interest at a cost of $15,000 in three corporations that were opening Burger King restaurants in the greater Chicago area (the Chicago Operation). In 1962, at the request of Mr. McLamore, Robert moved back to Chicago to participate in the management and operation of the Chicago Operation of which he ultimately became executive vice president and a member of the board of directors. Robert's

management duties in the Chicago Operation included the approval of new restaurant locations, supervising the construction of new restaurants, and the hiring and training of their employees. As of November 1969, the Chicago Operation directly operated 37 Burger King restaurants and was subfranchisor of 29 other Chicago-area Burger King restaurants.

In 1970, after a corporate reorganization of the Chicago Operation, FIC sold its interest in the Chicago Operation to Self-Service Restaurants (Self-Service), a publicly traded Burger King franchisee. In exchange for all of FIC's shares in the Chicago Operation, FIC received shares of Self-Service common stock that FIC later sold for approximately $222,000, as well as Self-Service's promissory note in the principal amount of $868,500. Following the sale, Robert was employed by Self-Service to assist during the period of transition to Self-Service management.

In 1971, Robert terminated his employment with Self-Service. Robert remained in Chicago, where he managed five Burger King restaurants that he owned directly, and participated in the management of six Burger King restaurants in Milwaukee, Wisconsin, in whose corporate franchisee he had acquired a 27-percent stock interest.

In 1973, FIC purchased an existing Burger King restaurant in Fort Myers, Florida. Thereafter, in 1976, after Robert returned to Florida, FIC acquired three existing Burger King restaurants,

in Sarasota, Bradenton, and Port Charlotte on the west coast of Florida (the 1976 Purchase), with an exclusive territorial agreement (the Territorial Agreement). The purchase price for the 1976 Purchase was $500,000, payable $300,000 in cash and $200,000 over 5 years. FIC allocated $200,000 of the $500,000 purchase price to the Territorial Agreement.

The Territorial Agreement granted FIC, for a period of 5 years, an exclusive territorial right to build, own, and operate Burger King restaurants in Manatee, Sarasota, and Charlotte Counties in Florida (the Exclusive Territories) and a right of first refusal to build, own, and operate Burger King restaurants in Lee County, Florida (collectively, the Protected Territories). The Territorial Agreement also provided that if FIC had six Burger King restaurants open and in operation on or before August 26, 1981, it would be entitled to a right of first refusal on all Burger King restaurants to be subsequently franchised in the Exclusive Territories through August 1986.

After his return to Florida, Robert moved to Sarasota, Florida, and worked full time for FIC selecting and developing real estate sites, securing financing, and supervising the construction of new restaurants, while continuing to supervise the operations of existing FIC-owned restaurants.

As of February 2, 1980, FIC had seven Burger King restaurants in operation in the Exclusive Territories. As of August 24, 1981, FIC had a total of nine Burger King restaurants.

Inasmuch as FIC had more than six Burger King restaurants in operation before August 26, 1981, FIC became entitled to the right of first refusal in the Exclusive Territories through August 1986.

C. FIC's Advisers

1. Hugh B. Shillington

After opening Store No. 12 in 1959, FIC retained Hugh B. Shillington, C.P.A. (Mr. Shillington), as its outside accountant, to assist in tax and financial accounting matters. Mr. Shillington was a principal of Shillington & Fay (S&F), a Coral Gables, Florida, accounting firm. Mr. Shillington served as outside accountant to other Burger King franchisees and had been recommended to FIC by BKC. S&F reviewed[3] FIC's annual financial statements, including financial statements for FIC's fiscal years ending September 30, 1979, 1980, and 1981 (FY 1979, FY 1980, and FY 1981). Mr. Shillington, who advised FIC to retain its financial records for 7 years, died in 1995.

2. Louis B. Tishler, Jr.

Louis B. Tishler, Jr. (Mr. Tishler), is an attorney who has been practicing law in the Chicago area since his graduation from

[3] S&F annually reviewed the balance sheets, income statements, and statements of changes in financial position of FIC (the financial statements) in order to provide an opinion letter of limited assurance that S&F was aware of no material modifications that should be made to the financial statements in order for them to be in conformity with generally accepted accounting principles. The scope of a review is substantially less than that of an audit.

Northwestern University School of Law in 1959. Mr. Tishler's primary area of practice is franchising, in which he has been engaged since 1962. Mr. Tishler has represented many well-known franchisors, including Dunkin' Donuts and McDonald's, among others. Mr. Tishler has also represented numerous franchisees of Burger King and Church's Fried Chicken. In the 1960's and 1970's, he represented Burger King franchisees in the acquisition of more than 100 restaurants. Mr. Tishler began his representation of FIC in 1966 or 1967. Both Messrs. Tishler and Shillington had assisted FIC in the making of its decision to allocate $200,000 of the purchase price of the 1976 Purchase to the Territorial Agreement.

D. 1980 Gift

By 1976, when the Territorial Agreement was executed, BKC had adopted a new policy requiring that corporate franchisees be operated by a shareholder with voting control of the corporation (the Control Requirement). FIC did not then satisfy the Control Requirement, but Robert made an oral promise to BKC to acquire a controlling interest in FIC. Despite Robert's promise, no such action was taken until 1980, when BKC demanded that Robert acquire voting control of FIC. To satisfy BKC's demand, on February 2, 1980, decedents each transferred by gift 6 shares of FIC's common stock to Robert (the 1980 Gifts). By the time of the 1980 Gifts, neither of decedents was actively participating in the day-to-day management or operations of FIC.

As of September 30, 1979, the book value of FIC's common stock was $1,033,601. As of February 2, 1980, no dividends had ever been declared or paid on FIC's common stock. With the assistance of Robert, Mr. Shillington, and Mr. Tishler, decedents valued their respective gifts of 6 shares of FIC stock at $62,016 ($10,336 per share) and timely filed the requisite gift tax returns reporting the 1980 Gifts. The period of limitations on assessment of additional gift tax on the 1980 Gifts has expired.

Following the 1980 Gifts, the outstanding common stock of FIC was owned as follows:

Royal	24 shares
Maude	24 shares
Robert	52 shares

Following the 1980 Gifts, decedents executed codicils to their wills providing that their remaining shares of FIC's common stock would be distributed equally among all their children, to the exclusion of Robert.

E. 1981 Recapitalization

In 1980 or 1981, BKC requested that all shareholders of FIC personally guarantee the debt of FIC to BKC. Neither decedent was willing to accede to BKC's request, while Robert was willing to become liable as the sole guarantor only if decedents agreed to relinquish their voting rights in FIC. Robert's reluctance to be the sole guarantor emanated, in part, from the terms of decedents' wills, under which Robert's siblings would eventually

own all decedents' remaining shares in FIC, while Robert would be left the sole guarantor of FIC's debt. Decedents, who were then over 70 years of age, acknowledged their diminished participation in FIC's affairs and Robert's leading role and agreed to relinquish their voting rights only under the following conditions: (i) Robert would continue to actively direct FIC; (ii) FIC would be kept intact; (iii) decedents would receive a fixed income from their investment in FIC; (iv) decedents would be released from any obligation to guarantee FIC's debt; and (v) decedents would receive some kind of equity interest that they could pass on to their children other than Robert.

In order to provide Robert with all the voting stock of FIC and satisfy decedents' conditions, Robert and decedents agreed to a recapitalization of FIC whereby decedents would exchange their common stock for preferred stock. Before the recapitalization, with the assistance of Mr. Tishler, FIC requested and received a private letter ruling from the Internal Revenue Service that the proposed exchange of common stock for preferred stock would qualify as a reorganization for income tax purposes within the meaning of section 368(a)(1)(E).

On August 24, 1981, FIC's articles of incorporation were amended to authorize 5,000 shares of no-par voting common stock and 6,000 shares of par value $100, nonvoting, 10-percent cumulative preferred stock (the Preferred Stock). The Preferred Stock contained no participation, conversion or redemption rights. On August 24, 1981, each of decedents exchanged 24

shares of common stock for 3,000 shares of Preferred Stock (the Recapitalization).

While the Recapitalization indirectly addressed BKC's requirement that each common shareholder personally guarantee the debt of FIC, the Recapitalization had not been required by any condition imposed by BKC.

As of September 30, 1981, the book value of FIC's common stock was $1,109,400. Decedents did not file any 1981 gift tax returns reporting any donative transfers that they may have made by reason of their participation in the Recapitalization.

After the Recapitalization, decedents executed new wills devising their shares of Preferred Stock to their children other than Robert.[4] As of the date of trial, all the Preferred Stock has remained outstanding, all dividends on the Preferred Stock have been timely declared and paid, and Robert has been the only shareholder to personally guarantee the debts of FIC.

F. Estate Tax Returns

Royal died on June 29, 1990, and Maude died on June 12, 1992. Robert, as personal representative, executed and timely filed the required estate tax returns. The adjusted taxable gifts reported on line 4 of the estate tax returns for Royal's

[4] In a distinction dating from the 19th century, a testator devises real property to a devisee and bequeaths personal property to a legatee. Dukeminier, Wills, Trusts, and Estates 36 (1984). However, the Florida Probate Code uses the term "devise" to describe the transfer at death of personal property as well as real property. Fla. Stat. Ann. sec. 731.201(8) (West 1995).

and Maude's estates reflected the 1980 Gifts as reported by Royal and Maude on their respective 1980 gift tax returns. The period of limitations on assessment of additional estate tax against Royal's estate has expired.

G. Notices of Deficiency

On March 11, 1996, respondent issued three deficiency notices: (i) For gift tax for the period ending September 30, 1981, to Maude G. Furman, donor, deceased, Estate of Maude G. Furman, deceased, and Robert G. Furman, Executor (the Maude Gift Tax Notice); (ii) for estate tax to the Estate of Maude G. Furman, deceased, and Robert G. Furman, Executor (the Estate Tax Notice); and (iii) for gift tax for the period ending September 30, 1981, to Royal G. Furman, donor, deceased, Estate of Royal G. Furman, deceased, Robert G. Furman, Executor (the Royal Gift Tax Notice).

The Estate Tax Notice determined that the fair market value of the shares transferred by each decedent in the 1980 Gifts was $147,600 ($24,600 per share), rather than the $62,016 ($10,366 per share) that they had reported on their 1980 gift tax returns. Both the Maude Gift Tax Notice and Royal Gift Tax Notice determined that the fair market value of the 24 shares of FIC common stock exchanged by each decedent in the Recapitalization was $540,540 ($22,522 per share), while the 3,000 shares of preferred stock received by each decedent in the Recapitalization

had a fair market value of only $300,000 ($100 per share),[5] resulting in gifts by each of them to Robert of $240,540, before allowance for the $3,000 annual exclusion.[6]

After concessions by Maude's estate, the remaining items at issue in the Estate Tax Notice are respondent's determinations that for purposes of the estate tax: (i) The fair market value on February 2, 1980, of the donative transfer of 6 shares of FIC's common stock from Maude to Robert was $147,600, rather than

---

[5] Respondent has not contested that the preferred shares of FIC had a fair market value equal to their par value when received by decedents. Valued at par, FIC's preferred shares, with no participatory or residual rights beyond the stated dividend and par value, would yield 10 percent if dividends were declared and paid in a timely fashion by the directors elected by the holder(s) of the common stock of this small, closely held corporation. Inasmuch as the parties have stipulated that returns on a 20-year Treasury bond (risk-free rate) in 1980 and 1981 were 11.86 percent and 14.4 percent, respectively, respondent's acceptance of par as the value of the preferred shares appears to be highly questionable. In addition, the closely held character of FIC, the nonvoting characteristics of the preferred, and the resulting inability of the preferred holders to compel the payment of dividends or bring about redemption of their preferred shares or liquidation of the company would have justified substantial minority and lack-of-marketability discounts for the preferred. Despite our misgivings, we decline to revalue the preferred shares on our own motion.

[6] See sec. 2503(b). The Economic Recovery Tax Act of 1981, Pub. L. 97-34, sec. 441(a), 95 Stat. 319, which does not apply in this case, amended sec. 2503(b) by increasing the annual exclusion to $10,000, for transfers made after Dec. 31, 1981.

Respondent determined that Royal and Maude had made gifts of $240,540 before allowance for the $3,000 annual exclusion. Royal was determined to have made a taxable gift of $237,540, while Maude was determined to have made a taxable gift of $237,840. This discrepancy appears to be the result of a computational error by respondent.

the $62,016 reported, so that for purposes of computing the tentative estate tax, an additional $85,584 in adjusted taxable gifts should have been added to the taxable estate;[7] and (ii) on August 24, 1981, when Maude exchanged her 24 shares of FIC's common stock for 3,000 shares of FIC's preferred stock, the fair market value of the common stock was $540,540 ($22,522 per share) and the fair market value of the preferred stock, $300,000 ($100,000 per share). Consequently, the Estate Tax Notice determined that there was a taxable gift in the amount of $237,540 ($240,540 less $3,000 annual exclusion), thereby increasing the adjusted taxable gifts that are added to the reported taxable estate for purposes of computing the tentative estate tax.

H. Discounts and Premiums

1. Minority Interests

On both February 2, 1980, and August 24, 1981, each decedent was a minority shareholder.

Neither decedent had the power to compel FIC to purchase key person insurance.

2. Absence of Swing Vote

On February 2, 1980, no FIC shareholder could obtain voting

[7] Any increase found in the fair market value of the 1980 Gifts will trigger an increase in taxable gifts of like amount, because decedents' 1980 gift tax return has already taken into account the annual exclusion provided by sec. 2503(b). Decedents reported additional taxable gifts to Robert on their respective gift tax returns for the first quarter of 1980 that are not at issue in this case.

control of FIC through the receipt of 6 shares of issued and outstanding FIC common stock. On February 2, 1980, no shareholder of FIC other than Robert could obtain voting control of FIC through the receipt of 12 shares of issued and outstanding FIC common stock. Because only one person, Robert, could gain control through the 1980 Gifts, no swing vote premium would have been paid by a hypothetical third-party buyer of shares of FIC owned by Maude and Royal.

On August 24, 1981, voting control of FIC could not be affected by the transfer of Maude and Royal's respective holdings of FIC common stock, singularly or collectively.

3. Lack of Marketability

On both February 2, 1980, and August 24, 1981: (1) BKC had not established a buy-back program or policy for acquiring Burger King franchises; (2) high interest rates contributed to a depressed market for the sale of Burger King franchises; and (3) there was no readily available market for the stock of FIC. Each of the foregoing factors contributed to a lack of marketability of FIC stock.

4. Combined Minority and Lack of Marketability Discount

On February 2, 1980, the fair market value of each decedent’s gratuitous transfer of 6 shares of FIC's common stock was subject to a combined minority and marketability discount of 40 percent. On August 24, 1981, the fair market value of the 24 shares of FIC's common stock transferred by each decedent in the

Recapitalization was subject to a combined minority and marketability discount of 40 percent.

5. Robert Furman a Key Person

At the times of the 1980 Gifts and the Recapitalization, Robert actively managed FIC, and no succession plan was in effect. FIC employed no individual who was qualified to succeed Robert in the management of FIC. Robert's active participation, experience, business contacts,[8] and reputation as a Burger King franchisee contributed to the value of FIC. Specifically, it was Robert whose contacts had made possible the 1976 Purchase, and whose expertise in selecting sites for new restaurants and supervising their construction and startup were of critical importance in enabling FIC to avail itself of the expansion opportunities created by the Territorial Agreement. The possibility of Robert's untimely death, disability, or resignation contributed to uncertainty in the value of FIC's operations and future cash-flows. Although a professional manager could have been hired to replace Robert, the following risks would still have been present: (i) Lack of management until a replacement was hired; (ii) the risk that a professional manager would require higher compensation than Robert had received; and (iii) the risk that a professional manager would not perform as well as Robert.

[8] Robert developed close friendships with the cofounders of BKC, especially James McLamore, along with Art Rosewall, BKC's chief executive officer.

Robert was a key person in the management of FIC. His potential absence or inability were risks that had a negative impact on the fair market value of FIC. On February 2, 1980, the fair market value of each decedent's gratuitous transfer of 6 shares of FIC's common stock was subject to a key-person discount of 10 percent. On August 24, 1981, the fair market value of the 24 shares of FIC's common stock transferred by each decedent in the Recapitalization was subject to a key-person discount of 10 percent.

ULTIMATE FINDINGS OF FACT

On February 2, 1980, the fair market value of the gratuitous transfer of 6 shares of FIC's common stock by each of Maude and Royal to Robert was $82,859 ($13,810 per share).

On August 24, 1981, when Maude and Royal each exchanged 24 shares of FIC common stock for 3,000 shares of FIC's preferred stock, the fair market value of the common stock transferred by each of them was $424,552 ($17,690 per share).

OPINION

A. Fair Market Value of FIC Stock

Section 2501(a) provides for a tax on gifts by individuals. Section 2512(a) provides that the value of a gift of property at the date of the gift shall be considered the amount of the gift.

The principal issues we must decide in this case are the value of the shares of common stock in FIC that decedents gratuitously transferred to Robert on February 2, 1980, and the

amount, if any, of the excess of the value of the shares of common stock that decedents surrendered in the Recapitalization of August 24, 1981, over the value of the shares of preferred stock that they received in the exchange. The amount of any such excess, by augmenting the value of Robert's common stock in FIC, would be a taxable gift from decedents to Robert. See Estate of Trenchard v. Commissioner, T.C. Memo. 1995-121 supplemented by T.C. Memo. 1995-232; sec. 25.2511-1(h)(1), Gift Tax Regs.

Valuation is a question of fact, and the trier of fact must weigh all relevant evidence to draw the appropriate inferences. Commissioner v. Scottish Am. Inv. Co., 323 U.S. 119, 123-125 (1944); Helvering v. National Grocery Co., 304 U.S. 282, 294-295 (1938); Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957), affg. in part and remanding in part T.C. Memo. 1956-178; Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); Skripak v. Commissioner, 84 T.C. 285, 320 (1985).

Fair market value is defined for Federal estate and gift tax purposes as the price that a willing buyer would pay a willing seller, both having reasonable knowledge of all the relevant facts and neither being under compulsion to buy or to sell. United States v. Cartwright, 411 U.S. 546, 551 (1973) (citing sec. 20.2031-1(b), Estate Tax Regs.); see also Snyder v. Commissioner, 93 T.C. 529, 539 (1989); Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989). The willing buyer and the willing seller are hypothetical persons, rather than specific

individuals or entities, and the individual characteristics of these hypothetical persons are not necessarily the same as the individual characteristics of the actual seller or the actual buyer. Estate of Curry v. United States, 706 F.2d 1424, 1428-1429, 1431 (7th Cir. 1983); Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981); Estate of Newhouse v. Commissioner, supra at 218; see also Estate of Watts v. Commissioner, 823 F.2d 483, 486 (11th Cir. 1987), affg. T.C. Memo. 1985-595. The hypothetical willing buyer and willing seller are presumed to be dedicated to achieving the maximum economic advantage. Estate of Curry v. United States, supra at 1428; Estate of Newhouse v. Commissioner, supra at 218. This advantage must be achieved in the context of market and economic conditions at the valuation date. Estate of Newhouse v. Commissioner, supra at 218.

For Federal gift tax purposes, the fair market value of the subject property is determined as of the date of the gift; ordinarily, no consideration is given to any unforeseeable future event that may have affected the value of the subject property on some later date. Sec. 2512(a); sec. 20.2031-1(b), Estate Tax Regs.; see also First Natl. Bank v. United States, 763 F.2d 891, 893-894 (7th Cir. 1985); Estate of Newhouse v. Commissioner, supra at 218; Estate of Gilford v. Commissioner, 88 T.C. 38, 52 (1987).

Special rules apply to the valuation of the stock of a

closely held corporation. While listed market prices are the benchmark in the case of publicly traded stock, recent arm's-length transactions generally are the best evidence of fair market value in the case of unlisted stock. Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982); Duncan Indus., Inc. v. Commissioner, 73 T.C. 266, 276 (1979). Where the value of unlisted stock cannot be determined from actual sale prices, value is determined by taking into consideration the value of listed stock in comparable corporations engaged in the same or a similar line of business, as well as all other factors bearing on value, including analysis of fundamentals. Sec. 2031(b); Estate of Newhouse v. Commissioner, supra at 217; Estate of Hall v. Commissioner, supra at 336. The factors that we must consider are those that an informed buyer and an informed seller would take into account. Hamm v. Commissioner, 325 F.2d 934, 940 (8th Cir. 1963), affg. T.C. Memo. 1961-347. Rev. Rul. 59-60, 1959-1 C.B. 237, "has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value", Estate of Newhouse v. Commissioner, supra at 217; it lists the following factors to be considered, which are virtually identical to those listed in section 20.2031-2(f), Estate Tax Regs.:

> (a) The nature of the business and the history of the enterprise from its inception.
> (b) The economic outlook in general and the condition and outlook of the specific industry in particular.
> (c) The book value of the stock and the financial condition of the business.

> (d) The earning capacity of the company.
> (e) The dividend-paying capacity.
> (f) Whether or not the enterprise has goodwill or other intangible value.
> (g) Sales of the stock and the size of the block of stock to be valued.
> (h) The market price of stocks of corporations engaged in the same or a similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter.
> [Rev. Rul. 59-60, 1959-1 C.B. at 238-239.]

Because valuation may not be reduced to the rote application of formulas, and because of the imprecision inherent in determining fair market value of stock that lacks a public market (and the Solomon-like pronouncements that often follow), we again remind the parties that these matters are better resolved by agreement rather than trial by ordeal in which conflicting opinions of the experts are pitted against each other. See Estate of Hall v. Commissioner, supra; Messing v. Commissioner, 48 T.C. 502, 512 (1967); see also Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441 (1980).

As is customary in valuation cases, the parties rely primarily on expert opinion evidence to support their contrary valuation positions. We evaluate the opinions of experts in light of the demonstrated qualifications of each expert and all other evidence in the record. Anderson v. Commissioner, supra; Parker v. Commissioner, 86 T.C. 547, 561 (1986). We have broad discretion to evaluate "`the overall cogency of each expert's analysis.'" Sammons v. Commissioner, 838 F.2d 330, 334 (9th Cir. 1988) (quoting Ebben v. Commissioner, 783 F.2d 906, 909 (9th Cir. 1986), affg. in part and revg. in part T.C. Memo. 1983-200),

affg. in part and revg. in part T.C. Memo. 1986-318. Expert testimony sometimes aids the Court in determining values and sometimes it does not. See, e.g., Estate of Halas v. Commissioner, 94 T.C. 570, 577 (1990); Laureys v. Commissioner, 92 T.C. 101, 129 (1989) (expert testimony is not useful when the expert is merely an advocate for the position argued by one of the parties). We are not bound by the formulas and opinions proffered by an expert witness and will accept or reject expert testimony in the exercise of sound judgment. Helvering v. National Grocery Co., supra at 295; Anderson v. Commissioner, 250 F.2d at 249; Estate of Newhouse v. Commissioner, 94 T.C. at 217; Estate of Hall v. Commissioner, 92 T.C. at 338. Where necessary, we may reach a determination of value based on our own examination of the evidence in the record. Lukens v. Commissioner, 945 F.2d 92, 96 (5th Cir. 1991) (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285); Ames v. Commissioner, T.C. Memo. 1990-87. Where experts offer divergent estimates of fair market value, we decide what weight to give these estimates by examining the factors they used in arriving at their conclusions. Casey v. Commissioner, 38 T.C. 357, 381 (1962). We have broad discretion in selecting valuation methods. Estate of O'Connell v. Commissioner, 640 F.2d 249, 251 (9th Cir. 1981), affg. on this issue and revg. in part T.C. Memo. 1978-191, and the weight to be given the facts in reaching our conclusion because “finding market value is, after all, something for judgment, experience, and reason”, Colonial

Fabrics, Inc. v. Commissioner, 202 F.2d 105, 107 (2d Cir. 1953), affg. a Memorandum Opinion of this Court dated January 22, 1951. Moreover, while we may accept the opinion of an expert in its entirety, Buffalo Tool & Die Manufacturing Co. v. Commissioner, supra at 452, we may be selective in the use of any part of such opinion, or reject the opinion in its entirety, Parker v. Commissioner, supra at 561. Finally, because valuation necessarily results in an approximation, the figure at which this Court arrives need not be one as to which there is specific testimony if it is within the range of values that may properly be arrived at from consideration of all the evidence. Silverman v. Commissioner, supra at 933; Alvary v. United States, 302 F.2d 790, 795 (2d Cir. 1962).

1. Respondent's Expert

Respondent relies on the expert report of Hugh Jackson Shelton (Mr. Shelton). Mr. Shelton has been employed by respondent as a valuation engineer since 1987, in which time he has completed approximately 10 business valuations. Mr. Shelton holds a bachelor of science degree in industrial engineering from the University of Tennessee and a master of arts degree in business management from Webster University.

In the expert report submitted by respondent, Mr. Shelton represents that he has certain qualifications and credentials to perform business valuations that he does not in fact have, including courses on valuation that he has not successfully completed. Mr. Shelton's report also suggests that he is a

member of the American Society of Appraisers, to which he has never belonged. Since Mr. Shelton has not demonstrated that he is qualified to perform a business valuation, we will evaluate his opinion accordingly. See Anderson v. Commissioner, supra at 249.

Mr. Shelton used a capitalized earnings method to value the FIC stock at the time of the 1980 Gifts. Using the capital asset pricing model (CAPM), Mr. Shelton calculated a cost of equity and then computed FIC's weighted average cost of capital (WACC). Earnings before interest, depreciation, and taxes (EBIDT), a variant of EBITDA (earnings before interest, taxes, depreciation, and amortization), were then capitalized using the WACC to arrive at a total enterprise value. In valuing the 1980 Gifts, Mr. Shelton projected 12-month earnings from FIC's 10-month income statement for FY 1979, which he then capitalized to arrive at a February 1980 enterprise value. Mr. Shelton determined August 1981 enterprise value by capitalizing FY 1980 EBIDT and then adding 5 percent to reflect FIC's value in August 1981.

After determining that FIC had a beta of 1.0., Mr. Shelton used the standard CAPM formula to arrive at a cost of equity of 18.44 percent. See description and discussion of beta infra pp. 28-30. Finding that Burger King was the number two fast food chain, Mr. Shelton reasoned that Burger King would be no more or less volatile than the fast food industry as a whole, justifying a beta of 1.0 for FIC's common stock. In his report, Mr. Shelton

gave no further explanation of his choice of beta and did not provide evidence that he had investigated the betas of comparable public companies, or even of BKC, on which his selection of beta was based.[9]

After determining a cost of equity using CAPM, Mr. Shelton purported to compute the WACC of FIC in order to arrive at a capitalization rate. Without providing any explanation, Mr. Shelton computed WACC in a manner that did not conform to the accepted method. See Brealey & Myers, Principles of Corporate Finance 465-469 (4th ed. 1991); Pratt et al., Valuing a Business 180, 184, 189-190 (3d ed. 1996). First, Mr. Shelton modified the WACC formula by weighting FIC's debt and equity based on book value, rather than market value, to arrive at a WACC of 11.0 percent. Considering that the parties have stipulated risk-free rates of 11.86 percent and 14.4 percent in 1980 and 1981, respectively, it is obvious that Mr. Shelton's result is incorrect.

The calculation of WACC provides an after-tax figure, because it is computed using an estimate of the firm's marginal corporate income tax rate. After finding that FIC had a WACC of 11.0 percent, Mr. Shelton tried to convert WACC to a pretax figure. Mr. Shelton calculated what he referred to as a pretax

[9] At the time of the Recapitalization, as discussed supra, BKC was a wholly owned subsidiary of Pillsbury. Because BKC stock did not trade publicly, it did not have a beta. See discussion and explanation of beta, infra pp. 28-30.

WACC of 18.4 percent, which he then used to value FIC. Not only is the calculation of pretax WACC not accepted in the financial community; we are puzzled as to why Mr. Shelton would want to apply a marginal tax rate to compute an after-tax figure, only to then attempt to convert it back to a pretax figure. Finally, we question Mr. Shelton's use of a 40-percent marginal tax rate in computing WACC, when the marginal tax rates derived from FIC's income statements for FY 1979, FY 1980, and FY 1981 are 4.96 percent, 1.25 percent, and 31.69 percent, respectively.

After capitalizing the FY 1979 and FY 1980 EBIDT's of FIC, Mr. Shelton arrived at total enterprise values of $2,764,114, $3,481,369, and $3,655,427 on February 2, 1980, September 30, 1980, and August 24, 1981, respectively. Mr. Shelton then discounted the 1980 and 1981 enterprise values by 17 percent to reflect a combined minority, lack of marketability, and "control premium discount [sic]", to arrive at a fair market value of $22,942 per share as of February 1980 and $30,340 as of August 1981. Applying the annual exclusion to the 1981 gifts only, acceptance of respondent's position would result in taxable gifts by each decedent of $137,652 and $425,160 in 1980 and 1981, respectively. Understatements of taxable gifts by each decedent would then amount to $75,636 and $425,160 for 1980 and 1981, respectively.

With the exception of his assessment of the prospects for economic growth on the west coast of Florida, we reject, in toto,

Mr. Shelton's analysis and conclusions. Although we do not rely on any aspect of Mr. Shelton's opinion, we will discuss some of the major shortcomings for the sake of completeness.

We do not believe that CAPM and WACC are the proper analytical tools to value a small, closely held corporation with little possibility of going public. CAPM is a financial model intended to explain the behavior of publicly traded securities that has been subjected to empirical validation using only historical data of the two largest U.S. stock markets. Raabe & Whittenburg, "Is the Capital Asset Pricing Model Appropriate in Tax Litigation?", Valuation Strategies 12-15, 36 (Jan./Feb. 1998); see Brealey & Myers, supra at 166 (citing Fama & MacBeth, "Risk, Return and Equilibrium: Empirical Tests," 81 Journal of Political Economy 607-636 (1973)). Contrary to the assumptions of CAPM, the market for stock in a closely held corporation like FIC is not efficient, is subject to substantial transaction costs, and does not offer liquidity. Mr. Shelton did not increase our confidence in his choice of method when he computed the cost of equity using an unsubstantiated risk-free rate and risk premium that were not in conformance with the amounts stipulated, and when he arbitrarily assigned a beta to FIC's common stock. Beta, a measure of systematic risk,[10] is a

[10] For purposes of capital market theory, risk is defined as the degree of uncertainty that expected future returns will be realized. Capital market theory divides risk into two components: Systematic risk and unsystematic risk. Systematic, (continued...)

function of the relationship between the return on an individual security and the return on the market as a whole. Pratt et al., supra at 166. Betas of public companies are frequently published, or can be calculated based on price and earnings data. Because the calculation of beta requires historical pricing data, beta can not be calculated for stock in a closely held corporation. The inability to calculate beta is a significant shortcoming in the use of CAPM to value a closely held corporation; this shortcoming is most accurately resolved by using the betas of comparable public companies. Id. at 175. Mr. Shelton's unsubstantiated statement regarding the standing of BKC in the fast food industry is hardly a sufficient basis for arriving at a beta of 1.0 for FIC. Mr. Shelton did not provide any evidence that he had researched or calculated the betas of BKC or any other public company. He seems to have assumed, without further explanation, that FIC and BKC were comparable

[10](...continued)
or market, risk represents the sensitivity of the future returns from a given asset to the movements of the market as a whole. Unsystematic, or unique, risk reflects those elements of risk that are specific to the asset held, such as company characteristics, industry conditions, and the type of investment interest held. Capital market theory assumes that investors hold or have the ability to hold, diversified portfolios that eliminate, on a portfolio basis, the effects of unsystematic risk. Consequently, since capital market theory assumes that an investor holding a diversified portfolio will encounter only systematic risk, the only type of risk for which an investor can be compensated, is systematic risk, the degree of which can be measured by beta. Brealey & Myers, Principles of Corporate Finance 137-138, 143-144 (4th ed. 1991); Pratt et al., Valuing a Business 166 (3d ed. 1996).

companies for this purpose. Finally, we reject Mr. Shelton's methodology for estimating FIC's beta, since it was based on BKC's industry standing and not on references to the volatility of stock in FIC in comparison to the market as a whole.[11] See Brealey & Myers, supra at G2 (defining beta as a "measure of market risk").

Mr. Shelton's use and application of the WACC fares no better under our scrutiny. WACC is generally used to calculate a discount rate that reflects the weighted average cost of each of the components of a firm's capital structure. To compute WACC, it is necessary to know the market value of the firm's debt and equity, which if known, would go far toward negating the need to perform a valuation. In computing WACC, Mr. Shelton used FIC's book value weighting of debt and equity, rather than market value, without justifying his departure.

We also find fault with Mr. Shelton's computation of EBIDT and the manner in which he arrives at an enterprise value as of August 24, 1981. Since the parties have stipulated the proper EBIDTA amounts for the periods in question, we abstain from further comment on Mr. Shelton's computation of EBIDT. We do,

[11] Mr. Shelton's conception of beta as a measure of the relative volatility of a specific security in comparison to an industry should not be confused with industry beta, which is often used to calculate discount or capitalization rates. Industry beta is calculated from the individual betas of a portfolio of securities within the same industry and reflects the market risk of that industry portfolio. See Brealey & Myers, supra at 189. Unlike Mr. Shelton's method, industry beta focuses on market risk.

however, question Mr. Shelton's failure to incorporate the reported FY 1981 earnings of FIC into his August 24, 1981, valuation; his estimate of 5-percent growth could hardly be viewed as reasonable where actual EBIDTA growth for FY 1981 was 61 percent.[12] We also fault Mr. Shelton's failure to deduct the outstanding debt of FIC from his capitalization of EBIDT in determining FIC's enterprise value.

Mr. Shelton's report also contains detailed calculations from which he attempts to determine the replacement cost of building 10 Burger King restaurants. We are unsure what relevance such a calculation has to the valuation of a business where value is determined by the prospect of future earnings rather than net asset value. Moreover, Mr. Shelton's use of 1992 data in computing replacement cost is of no relevance to the valuation of stock in 1980 and 1981.

Our final criticism of Mr. Shelton's report has little if any bearing on his valuation conclusion but has again caused us to doubt his expertise. In his report, Mr. Shelton attempted to analyze the FY 1979 and FY 1980 balance sheets of FIC. Using the FY 1979 balance sheet data of FIC, Mr. Shelton "projected" a 12-month balance sheet for 1979 by substantially increasing the amounts of some of the balance sheet items, without indicating what items on the income statement would lead to such growth in the amounts reported on the projected balance sheet.

[12] Employing a larger growth factor would have led to a higher valuation.

2. Petitioners' Expert

Petitioners rely on the expert report of Francis X. Burns (Mr. Burns) and Brian R. Oliver (Mr. Oliver) of IPC Group, LLC (IPC). Messrs. Burns and Oliver are both experienced in business valuation and, in addition to their undergraduate degrees, hold master's degrees in finance from Northwestern University's Kellogg School of Management. Although Messrs. Burns and Oliver are not formally accredited as appraisers, we are satisfied that they are qualified to perform a business valuation. Fed. R. Evid. 702; see Martin Ice Cream Co. v. Commissioner, 110 T.C. ___, ___ (1998) (slip op. at 52).

IPC valued the FIC shares using two approaches: A capitalized income method (income method) and a multiple of EBITDA method (EBITDA multiple method).

Applying the income method, IPC determined per-share values for the stock transferred in the 1980 Gifts and the 1981 Recapitalization of $7,388 and $4,273, respectively. Value was determined under the income method by capitalizing a measure of normalized earnings, adding the fair market value of nonoperating assets, and then applying a marketability discount to the per-share value. IPC determined normalized earnings using net operating cash-flow available to equity holders (NCF), adjusted to reflect noncash charges. In valuing the 1980 Gifts, IPC used the NCF for FY 1979, a 10-month fiscal year. A weighted average of the net operating cash-flows for the previous 3 years was used

to compute the August 1981 fair market value of the stock.

IPC applied CAPM principles to determine the rate of return an investor would expect in February 1980 and August 1981. IPC used market data from Ibbotson Associates[13] and determined that the expected rate of return an investor in FIC stock would demand would be equal to the sum of the applicable risk-free rate, risk premium, and small-stock premium, as well as an additional premium to account for the risk specific to FIC. To reflect the effect of nominal long-term earnings growth, IPC subtracted a growth factor[14] from the expected rate of return and determined a capitalization rate of 21.38 percent for valuing the 1980 Gifts and a 25.50 percent capitalization rate for valuing the stock transferred in the Recapitalization.

After capitalizing normalized earnings to determine enterprise value from operations, IPC added the market value of FIC's nonoperating assets to determine total equity value. IPC computed a per-share equity value of $11,366 for the 1980 Gifts

[13] The parties stipulated that the Ibbotson Associates figures used by IPC were correct for the dates in question. They have not stipulated: (1) The proper capitalization rate; (2) the correctness of any FIC specific risk premium; or (3) the correctness of any particular method of computing a capitalization rate.

[14] IPC determined growth factors of 8 percent for the 1980 Gifts and 7 percent for the Recapitalization, on the basis of the long-term inflation outlook of the Value Line Investment Survey on Feb. 1, 1980, and Aug. 21, 1981. Apparently, IPC did not take into account the likelihood of real earnings growth attributable to FIC's ability to open more restaurants in its expanding market, as well as the likelihood of increasing sales in the existing restaurants.

and $6,574 per share for the Recapitalization. IPC then determined that a marketability discount of 35 percent should be applied because of the following factors: (1) The transactions at issue involved minority interests, which are harder to sell; (2) the size of FIC precluded the possibility of a public offering; and (3), as of the relevant dates, no dividends had ever been paid by FIC on its common stock. After applying the marketability discount, IPC determined that the fair market value of the stock, per share, was $7,388 in 1980 and $4,273 in 1981. In comparison, book value per share after applying a 30-percent minority interest discount and a 35-percent marketability discount was determined to be $4,703 in 1980 and $5,048 in 1981. Applying book value as a floor in the valuation, IPC determined that use of the income method resulted in an undervaluation.

Petitioners have relied upon IPC's second method of valuation, the EBITDA multiple method. Under this method, a multiple of net earnings before interest, taxes, depreciation, and amortization (EBITDA) was used to determine total enterprise value. IPC determined the EBITDA of FIC for the FY 1979 through FY 1981. In valuing the 1980 Gifts, IPC used a multiple of FY 1979 EBITDA; a multiple of the weighted average of EBITDA for FY 1979 through FY 1981 was used to value the stock transferred in the Recapitalization. The parties have stipulated FIC's EBITDA for FY 1979 through FY 1981, using the figures determined by IPC.

IPC determined that a multiple of 4 to 6 times EBITDA was a

commonly used valuation guideline that should be applied in this case. IPC determined that high interest rates, a sluggish economy, and the high returns required by investors in small companies were factors that would depress the value of FIC stock, leading to a multiple in the order of 4.0 to 4.5, while the modestly successful sales growth of FIC between 1979 and 1981 suggested a multiple of 5.0 to 5.5. IPC concluded that FIC should be valued using an EBITDA multiple of 5.0 for both 1980 and 1981.

After determining total enterprise value, IPC made various adjustments, such as subtracting the value of outstanding debt, to determine total equity value, which was then converted to equity value per share. Equity value per share was determined to be $20,842 in February 1980 and $26,245 in August 1981. After applying a 30-percent minority discount, a 35-percent marketability discount, and a 10-percent key-person discount, or a total of 59.05 percent in discounts, IPC determined a fair market value per share of $8,535 in February 1980 and $10,747 in August 1981; following these conclusions would result in an overstatement of $10,806 for Royal and Maude's 1980 taxable gifts, and zero taxable gifts for their transfers in 1981.

We found Messrs. Burns and Oliver to be qualified, experienced, and credible expert witnesses. We agree with them that valuing FIC using the income method would not be appropriate inasmuch as the income method produces a value less than book

value for August 1981. While it is odd that the use of an accepted method like this one would produce a value lower than book value, this oddity is explained by IPC's incorrect computation of book value for August 1981,[15] and, we suspect, an overstated capitalization rate.

Our major criticism of IPC's application of the income method was their construction of the capitalization rate. In deducting a long-term growth factor from the expected rate of return, IPC deducted 8 percent for the 1980 capitalization rate and 7 percent for the 1981 rate. Since these figures are identical to the inflation estimates of the Value Line Investment Survey that were cited by IPC in its report, the growth factors used represented only the expectation of nominal earnings growth: the growth in earnings caused by price inflation. FIC was a growing business; real sales and earnings growth could be expected, both from increased volume at existing restaurants and from the construction of new stores in the Exclusive Territory,

[15] IPC calculated discounted book value for August 1981 using the FY 1981 balance sheet. Discounted book value of the common stock was calculated as total stockholders' equity, less $600,000 to reflect the preferred stock issued in the Recapitalization, and then minority and marketability discounts were applied. Because the relevant valuation period is immediately before the Recapitalization, at which time only one class of stock existed, it was improper to use the unadjusted FY 1981 balance sheet figures reflecting the capital structure of FIC after it had been recapitalized. Discounted book value should have been computed as total stockholder's equity, subject to the minority and marketability discounts, which would have produced a discounted book value per share of $7,778 per share, rather than the $5,048 per share determined by IPC.

which was an area of rapid population growth.

We accept IPC's valuation under the EBITDA multiple approach as the most accurate measurement of value available, but we do not accept the percentages of minority interest and marketability discounts that were applied. We also reject IPC's use of a multiple rate of 5.0 as unreasonable in light of FIC's growth potential and the prevailing economic conditions.

At time of the Recapitalization, FIC had only nine Burger King restaurants open but held a right of first refusal that provided FIC with a protected territory in four southwest Florida counties that were experiencing rapid population growth. Because many of the FIC restaurants were new at the time of the Recapitalization, we think that a prospective purchaser of stock in FIC would expect earnings from existing restaurants to increase as an area presence was established and store sales were increased; the fact that FIC had the ability to block potential Burger King franchisees from entering its market would only strengthen such an expectation. Since the exercise of the right of first refusal would enable FIC to open additional restaurants in the Protected Territories, we think that a prospective purchaser would be bullish regarding FIC's potential for earnings growth from expansion.

Because we think that IPC has not properly taken into account FIC's potential for growth, we find 6.0 times EBITDA to be the proper multiple to be employed in the valuation of the FIC

stock. We approve petitioners' weighting of EBITDA in determining an August 1981 value, since we believe that the use of 3 years of financial statements provided a more accurate earnings picture than the capitalization of any single year.[16] Finally, we approve of the adjustments made by IPC after calculating a multiple of EBITDA. We find that the stock in FIC had an equity value per share of $25,574 in February 1980 and $32,759 in August 1981.

3. Discounts

a. Minority Interest Discount

A minority interest discount reflects the minority shareholder's inability to compel either the payment of dividends or liquidation in order to realize a pro rata share of the corporation's net earnings or net asset value. Discounts for a minority interest and for lack of marketability are conceptually distinct, and the appropriate percentage rate of each of them is a question of fact. Estate of Newhouse v. Commissioner, 94 T.C. at 249.

Because the blocks of stock transferred in the 1980 Gifts and in the 1981 Recapitalization were minority interests, it is appropriate to apply a minority interest discount in their valuation. Since the willing buyer-willing seller test is an objective test, requiring that potential transactions be analyzed

[16] FY 1979, FY 1980, and FY 1981 EBITDA were weighted 10 percent, 30 percent, and 60 percent, respectively.

from the viewpoint of a hypothetical seller, whether a block of stock is a minority interest must be determined without regard to the identity and holdings of the transferee. See Estate of Watts v. Commissioner, 823 F.2d 483, 486-487 (11th Cir. 1987), affg. T.C. Memo. 1985-595; Estate of Bright v. United States, 658 F.2d at 1005-1006. Consequently, the fact that the 1980 Gifts enabled Robert Furman to gain control of FIC can not be considered.

Both parties agree that a minority discount should be applied in valuing both the 1980 Gifts and 1981 transfers by decedents in the Recapitalization, although we do not understand how respondent's expert determined that both a minority discount and a control premium should be applied, since the two are essentially opposites. We recognize that a hypothetical investor would not be willing to purchase a minority interest in FIC without a significant discount; no matter how successful the corporation, a minority interest in a corporation that does not pay dividends and whose stock does not have a ready market is of limited value.

Petitioners' expert cited three articles on minority discounts. The first, Bolten, "Discounts for Stocks of Closely Held Corporations", 129 Tr. & Est. 47 (Dec. 1990), summarized nine studies regarding discounts for minority interests that indicated a mean discount of 29.63 percent. The second article, "Survey Shows Trend Towards Larger Minority Discounts", 10 Est. Planning 281 (Sept. 1983), summarized the results of a study

conducted by H. Calvin Coolidge that compared the actual sales of minority interests in closely held corporations to the reported book value of those corporations. The Coolidge study found an average discount of 39.9 percent and a median discount of 39 percent against book value. The third article cited by IPC, Pratt, "Discounts and Premia", in Valuation of Closely Held Companies and Inactively Traded Securities 38 (Dec. 5, 1989) (on file with The Institute of Chartered Financial Analysts), summarized several empirical studies regarding both minority and marketability discounts. By analyzing control premium data, Pratt found an implied minority discount of approximately 33 percent for 1980 and 1981 in the studied transactions. Based on the cited articles, IPC determined that a 30-percent minority interest discount was appropriate.

We do not believe that any control premium is warranted. We reject respondent's argument that a swing vote potential existed, since we have found that the transferred shares did not have swing vote potential. We are required to value the shares as if they were transferred to a hypothetical buyer and are not permitted to take into account the circumstances of the actual transferee in valuing the shares.

b. Marketability Discount

Both petitioners and respondent acknowledge the necessity of applying a marketability discount in the valuation but disagree as to the proper percentage. A lack of marketability discount

reflects the fact that there is no ready market for shares in a closely held corporation. Ascertaining the appropriate discount for limited marketability is a factual determination. Critical to this determination is an appreciation of the fundamental elements of value that are used by an investor in making his or her investment decision. Some of the relevant factors include: (1) The cost of a similar company's stock; (2) an analysis of the corporation's financial statements; (3) the corporation's dividend-paying capacity and dividend payment history; (4) the nature of the corporation, its history, its industry position, and its economic outlook; (5) the corporation's management; (6) the degree of control transferred with the block of stock to be valued; (7) restrictions on transferability; (8) the period of time for which an investor must hold the stock to realize a sufficient return; (9)the corporation's redemption policy; and (10) the cost and likelihood of a public offering of the stock to be valued. See Estate of Gilford v. Commissioner, 88 T.C. 38, 60 (1987); Northern Trust Co. v. Commissioner, 87 T.C. 349, 383-389 (1986).

The factors limiting the marketability of stock in FIC in February 1980 and August 1981 included the following: (1) FIC had never paid dividends on its common stock; (2) the corporation was managed and controlled by one individual; (3) the blocks of stock to be transferred were minority interests; (4) a long holding period was required to realize a return; (5) FIC had no

custom or policy of redeeming common stock; (6) because FIC's annual sales were only in the $7 million range, it was not likely to go public; and (7) there was no secondary market for FIC stock. While FIC had significant potential for controlled growth, a healthy balance sheet, and robust earnings growth, we find the factors limiting marketability to be significant.

In concluding that a 35-percent marketability discount should be applied, petitioners' expert cited four articles, including three studies on the sale of restricted stock[17] that have been frequently brought to the attention of this Court. See, e.g., Estate of Jung v. Commissioner, 101 T.C. 412, 435-436 (1993); Mandelbaum v. Commissioner, T.C. Memo. 1995-255 (1995), affd. without published opinion 91 F.3d 124 (3d Cir. 1996); Estate of Lauder v. Commissioner, T.C. Memo. 1992-736; Estate of Friedberg v. Commissioner, T.C. Memo. 1992-310; Estate of Berg v. Commissioner, T.C. Memo. 1991-279, affd. in part and revd. and remanded in part 976 F.2d 1163 (8th Cir. 1992); Estate of O'Connell v. Commissioner, T.C. Memo. 1978-191, affd. in part and revd. in part 640 F.2d 249 (9th Cir. 1981). The first restricted stock study, Gelman, “An Economist-Financial Analyst's Approach to Valuing Stock of a Closely-Held Company”, 36 J. Taxn. 353 (June 1972), studied the transactions of four large, closed-end

[17] Restricted stock is stock acquired from an issuer in a transaction exempt from the registration requirements of the Federal securities laws. Sales of restricted stock are generally restricted within the first 2 years after issuance.

publicly traded investment companies that specialized in restricted securities. The study found mean marketability discounts of 33 percent after analyzing 89 restricted stock investments by the four investment companies. The second study, Moroney, "Most Courts Overvalue Closely Held Stocks", 51 Taxes 144 (Mar. 1973), is based on 10 registered investment companies that held a total of 146 blocks of restricted equity securities. The Moroney study found an average discount on the restricted stock transactions of 35.6 percent. The third study, Maher, "Discounts for Lack of Marketability for Closely Held Business Interests", 54 Taxes 562 (Sept. 1976), is based on reports filed with the Securities and Exchange Commission by four mutual fund companies reporting their restricted stock transactions. The Maher study found a mean discount of 34.73 percent. The final study cited was an IPO study, Emory, "The Value of Marketability as Illustrated in Initial Public Offerings of Common Stock February 1992 through July 1993", Bus. Valuation Rev. 3 (Mar. 1994). The Emory study found an average marketability discount of 46 percent after comparing the share price in private transactions that occurred within 5 months of an IPO by the same corporation. We find petitioners' reliance on the restricted stock studies to be misplaced, since those studies analyzed only restricted stock that had a holding period of 2 years. Inasmuch as we expect the investment time horizon of an investor in the stock of a closely held corporation like FIC to be long term, we

do not believe that marketability concerns rise to the same level as a security with a short-term holding period like restricted stock.[18] In light of the foregoing, we find no persuasive evidence in the record to support our reliance on the restricted stock studies in determining an appropriate marketability discount.[19]

c. Combined Minority and Lack of Marketability Discount

Respondent has chosen to apply a combined minority and lack of marketability discount of 17 percent, while petitioners seek a minority discount of 30 percent and a marketability discount of 35 percent, which would result in a combined discount of approximately 54.5 percent. While we take into account the articles cited by petitioners, we are by no means bound by the report of petitioners' expert. We also recognize that while the minority and marketability discounts may be conceptually distinct, Estate of Newhouse v. Commissioner, 94 T.C. at 249 (1990), the boundaries are often less clear in practice, and the empirical studies cited by petitioners may in fact reflect the

[18] That all investors have identical investment horizons is one of the most widely criticized assumptions of CAPM. See Gilson, "Value Creation by Business Lawyers: Legal Skills and Asset Pricing", 94 Yale L.J. 239, 252 (1984).

[19] For further discussion and criticism of the use of the Moroney, Maher, and Emory studies to support the application of a marketability discount in the valuation of stock in a closely held corporation, see Mandelbaum v. Commissioner, T.C. Memo. 1995-255, affd. without published opinion 91 F.3d 124 (3d Cir. 1996).

resulting uncertainties; see e.g., Dockery v. Commissioner, T.C. Memo. 1998-114 (40-percent combined minority and marketability discount); Estate of Mitchell v. Commissioner, T.C. Memo. 1997-461 (35-percent combined minority and marketability discount); LeFrak v. Commissioner, T.C. Memo. 1993-526 (30-percent combined discount); Estate of Gallo v. Commissioner, T.C. Memo. 1985-363 (36-percent marketability discount, with references to minority issues). We reject both respondent's combined discount of 17 percent and petitioners' separate 30-percent minority discount and 35-percent marketability discount and conclude that a 40-percent combined minority and marketability discount is appropriate in this case.

d. Key-Person Discount

Where a corporation is substantially dependent upon the services of one person, and where that person would no longer be able to perform services for the corporation by reason of death or incapacity, an investor would expect some form of discount below fair market value when purchasing stock in the corporation to compensate for the loss of that key employee. See Estate of Huntsman v. Commissioner, 66 T.C. 861 (1976); Estate of Mitchell v. Commissioner, supra; Estate of Feldmar v. Commissioner, T.C. Memo. 1988-429; Estate of Yeager v. Commissioner, T.C. Memo. 1986-448. Although FIC could have purchased key-person life insurance on Robert's life, a minority shareholder could not compel FIC to purchase such insurance, and FIC had no such

insurance in effect.

We have found as facts that Robert was a key person in the management of FIC, that FIC had no second layer of management, and that Robert's contacts, experience, and managerial expertise were critically important to the success of FIC. While the operation of a franchised Burger King restaurant might appear to be formulaic, FIC was a growing organization, and Robert's responsibilities extended well beyond the operation of existing restaurants. Moreover, since BKC had considerable control over FIC's costs, expansion opportunities, competition, and ultimately profits, Robert's personal relationships with the founders of BKC were very helpful to the success of FIC. We therefore agree with petitioners and find that a key-person discount of 10 percent was appropriate in determining the value of FIC stock as of February 1980 and August 1981.

Accordingly, we allow a total discount of 46 percent in valuing the FIC common stock transferred by decedents in 1980 and 1981, reflecting a combined minority and marketability discount of 40 percent and a key-person discount of 10 percent.

4. Valuation Conclusions

On the basis of the foregoing, we find that for purposes of computing the taxable gifts of Royal and the taxable gifts and taxable estate of Maude: (1) The fair market value of 24 shares of FIC common stock exchanged by each decedent in 1981 for preferred stock of FIC was $424,552; (2) the fair market value of

the 3,000 shares of preferred stock of FIC received by each decedent in the Recapitalization was $300,000; and (3) after applying the $3,000 annual exclusion, each decedent made a taxable gift to Robert in the Recapitalization in the amount of $121,552. For purposes of computing Maude's taxable estate, we also find that the fair market value of 6 shares of FIC common stock that she transferred to Robert in 1980 was $82,859, resulting in a taxable gift of the same amount.

B. Additions to Tax

1. Failures To File 1981 Gift Tax Returns

For the 1981 taxable year, individuals who were required to file a timely gift tax return but did not do so are subject to an addition to tax equal to 5 percent of the amount of tax that should have been shown on the return, for every month in which the failure to file continues, subject to a maximum of 25 percent. Sec. 6651(a)(1).

The addition to tax for failure to timely file a gift tax return may be avoided if the taxpayer can show that his failure to file was due to reasonable cause and not due to willful neglect. Sec. 6651(a)(1); United States v. Boyle, 469 U.S. 241, 245 (1985); Logan Lumber Co. v. Commissioner, 365 F.2d 846, 853 (5th Cir. 1966) (citing Breland v. United States, 323 F.2d 492 (5th Cir. 1963)), affg. in part and remanding in part T.C. Memo. 1964-126; Home Builders Lumber Co. v. Commissioner, 165 F.2d 1009 (5th Cir. 1948); Estate of Reynolds v. Commissioner, 55 T.C. 172,

202-203 (1970). Reasonable cause exists if a taxpayer exercised ordinary business care and prudence and nevertheless did not timely file a gift tax return. Hollingsworth v. Commissioner, 86 T.C. 91, 108 (1986) (citing Estate of Kerber v. United States, 717 F.2d 454, 455 (8th Cir. 1983)); sec. 301.6651-1(c)(1), Proced. & Admin. Regs.; see Haywood Lumber & Mining Co. v. Commissioner, 178 F.2d 769 (2d Cir. 1950). Willful neglect means a conscious, intentional failure or reckless indifference. United States v. Boyle, supra at 245-246; sec. 301.6651-1(c)(1), Proced. & Admin. Regs. Whether a failure to timely file a gift tax return was due to reasonable cause, and not to willful neglect, is a factual matter to be decided on the basis of the facts and circumstances of each case. The Commissioner's determination of an addition to tax is presumed to be correct and must be disproven by the taxpayer. Welch v. Helvering, 290 U.S. 111, 115 (1933); Epstein v. Commissioner, 53 T.C. 459, 477 (1969).

"Courts have frequently held that `reasonable cause' is established when a taxpayer shows that he reasonably relied on the advice of an accountant or attorney that it was unnecessary to file a return, even when such advice turned out to have been mistaken." United States v. Boyle, supra at 250 (citing United States v. Kroll, 547 F.2d 393, 395-396 (7th Cir. 1977)); Commissioner v. American Association of Engg. Employment, Inc., 204 F.2d 19, 21 (7th Cir. 1953); Burton Swartz Land Corp. v.

Commissioner, 198 F.2d 558, 560 (5th Cir. 1952); Haywood Lumber & Mining Co. v. Commissioner, supra at 771; Orient Inv. & Fin. Co. v. Commissioner, 166 F.2d 601, 602-603 D.C. Cir. (1948); Hatfried, Inc. v. Commissioner, 162 F.2d 628, 634 (3d Cir. 1947); Girard Inv. Co. v. Commissioner, 122 F.2d 843, 848 (3d Cir. 1941); Dayton Bronze Bearing Co. v. Gilligan, 281 F. 709, 712 (6th Cir. 1922)). Thus in some cases, reliance on the opinion of a tax adviser may constitute reasonable cause for failure to file a return. United States v. Boyle, supra at 250-251; Commissioner v. Lane-Wells Co., 321 U.S. 219 (1944).

Reasonable cause based upon reliance on the opinion of a competent adviser has been found where the reliance concerned a question of law, such as whether the filing of a return was required; a taxpayer's reliance on an adviser ordinarily cannot supplant his personal duty to ensure the timely filing of any required return.

> When an accountant or attorney advises a taxpayer on a matter of tax law * * * it is reasonable for the taxpayer to rely on that advice * * *
>
> By contrast, one does not have to be a tax expert to know that tax returns have fixed filing dates and that taxes must be paid when they are due. [United States v. Boyle, supra at 251.]

Compare Haywood Lumber & Mining Co., supra at 770-771 (reasonable cause for failure to file personal holding company surtax returns where corporation had relied on competent certified public accountant to prepare income tax returns) and Hollingsworth v. Commissioner, supra at 108-109 (reasonable cause for failure to

file a gift tax return where attorneys advised the taxpayer that no gift tax liability resulted from transfer of property at fair market value) with Logan Lumber Co. v. Commissioner, supra at 853 (forgetting to file a tax return or failing through inadvertence to see that it is filed does not constitute reasonable cause), and Millette & Associates, Inc. v. Commissioner, 594 F.2d 121, 124-125 (5th Cir. 1979) ("responsibility for assuring a timely filing is the taxpayer's"), affg. T.C. Memo. 1978-180.

Decedents were advised not to file a gift tax return by Messrs. Tishler and Shillington in connection with the transfers made in the Recapitalization. Messrs. Tishler and Shillington concluded that the fair market values of the common stock exchanged and the preferred stock received in the recapitalization were equal, so that no taxable gift had been made.

Respondent argues that the addition to tax is nonetheless applicable because decedents did not rely on a formal appraisal of FIC to determine whether they had made taxable gifts. Respondent's argument is unwarranted on the facts of this case. As we have discussed in our findings of fact, supra, Mr. Tishler is highly experienced in restaurant franchising, and at the time of the Recapitalization, had served as FIC's attorney for approximately 15 years. Mr. Tishler's representation of FIC included tax matters; for instance: (1) In connection with the 1980 Gifts, he had advised decedents to file gift tax returns,

and had signed those returns as preparer; and (2), as discussed, supra, Mr. Tishler had acted on FIC's behalf in requesting a private letter ruling in connection with the Recapitalization. Like Mr. Tishler, Mr. Shillington, a C.P.A., had a longstanding relationship with FIC at the time of the Recapitalization. Having prepared FIC's income tax returns and financial statements since 1959, it is obvious that Mr. Shillington was intimately familiar with FIC's financial affairs. Moreover, as the accountant to other Florida-based Burger King franchisees, Mr. Shillington could draw on his knowledge of industry trends, averages, and conventions in valuing FIC. In sum, in light of the expertise of Messrs. Tishler and Shillington, we think that it was not unreasonable for decedents to rely on their advice not to file a gift tax return.

That decedents received advice that ultimately proved erroneous does not alter our conclusion; valuation is an area of inherent uncertainty. See United States v. Boyle, 469 U.S. at 250. Consequently, we conclude that decedents' failure to file was due to reasonable cause and do not sustain any portion of respondent's additions to gift tax under section 6651(a)(1).

2. Negligence

Section 6653(a) provides for an addition to tax of 5 percent of the underpayment if any part of the underpayment of tax is due to negligence or intentional disregard of rules or regulations. For purposes of this section, an underpayment generally can be

viewed as the equivalent of a deficiency. Sec. 6653(c)(1). For purposes of section 6653(a), negligence is defined as a lack of due care or failure to do what a reasonable and ordinarily prudent person would do under the circumstances. Marcello v. Commissioner, 380 F.2d 499, 506 (5th Cir. 1967), affg. on this issue 43 T.C. 168 (1964) and T.C. Memo. 1963-66; Elliott v. Commissioner, 90 T.C. 960, 974 (1988), affd. without published opinion 899 F.2d 18 (9th Cir. 1990); Larotonda v. Commissioner, 89 T.C. 287, 292-293 (1987); Neely v. Commissioner, 85 T.C. 934, 947-948 (1985); Bixby v. Commissioner, 58 T.C. 757, 791-792 (1972). Petitioners bear the burden of proving that the additions to tax determined by respondent should not be applied. Pollard v. Commissioner, 786 F.2d 1063 (11th Cir. 1986), affg. T.C. Memo. 1984-536; Luman v. Commissioner, 79 T.C. 846, 860-861 (1982); Axelrod v. Commissioner, 56 T.C. 248, 258 (1971).

For the same reasons that we have found that decedents had reasonable cause for their failures to file gift tax returns, we do not find them to have been negligent by reason of having underpaid their gift taxes. In light of the qualifications and expertise of Mr. Tishler, FIC's attorney, and Mr. Shillington, FIC's accountant, we think that decedents acted reasonably in relying on their opinions. Finally, although the advice rendered to decedents by Messrs. Tishler and Shillington has proven to be erroneous, we do not think, in light of the uncertainty associated with valuation, that their determination of fair

market value was so unreasonable as to render decedents' reliance thereon negligent. Consequently, we do not sustain any portion of respondent's addition to gift tax under section 6653(a).

To reflect the foregoing,

Decisions will be entered under Rule 155.

B 7925
NO. 17985

JUL 13 1979

IN THE COURT OF CIVIL APPEALS FOR THE
SECOND SUPREME JUDICIAL DISTRICT OF TEXAS

MARY LEE GEESBREGHT — APPELLANT

VS.

JOHN GEESBREGHT — APPELLEE

FROM THE DISTRICT COURT OF TARRANT COUNTY

OPINION

In this divorce case we affirm those portions of the trial judgment which granted a divorce and awarded custody of the parties' minor children to the father; and at the same time reverse and remand for another trial that portion of the trial court's judgment decreeing division of the property involved.

The trial court's judgment was rendered upon both the petition for divorce filed by John Geesbreght against his wife Mary Lee and upon the cross-petition for divorce by Mary Lee. Each will be hereinafter referred to by their first names. Declaration for relief by each party was upon the generally termed "no fault" ground of TEX. FAMILY CODE ANN. § 3.01, (Supp. 1978) "Insupportability" of Chapter 3, "Dissolution of Marriage".

ON THE JURISDICTION

Mary Lee desired that that part of the judgment which decrees the parties' divorce be affirmed on appeal. Nevertheless, she has a point of error founded upon the trial court's decision that it had jurisdiction of the case. Mary Lee left her husband's domicile in Fort Worth, Texas, on January 20, 1976; on January 22, 1976, she filed a suit against him in the Circuit Court of Cook

County, Illinois for separate maintenance and for custody of the parties' children. A suit for separate maintenance is not valid by Texas law. On February 10, 1976 John filed his suit for divorce in the Tarrant County court from which there is this appeal. Both suits pended until August 17, 1976 when the Illinois court dismissed that of Mary Lee for want of prosecution. There was reinstatement of such case on September 14, 1976 upon the petition of Mary Lee. The Tarrant County suit continued to pend. Before the Illinois case was reinstated and on August 30, 1976 Mary Lee appeared before the Tarrant County court at a hearing in connection with her plea to be temporarily appointed managing conservator of her children. The circumstance presents a situation where Mary Lee has waived her right to complain of jurisdiction. The jurisdiction of the Tarrant County court was secure as of the time of dismissal of Mary Lee's suit in Illinois even though a question might have persisted (had she filed a plea to the jurisdiction - and none was filed either in compliance or non-compliance with the "due order of pleading" rules) had the dismissal not occurred and/or had there been no waiver during the period during which the Illinois case was a dismissed case. At no time was the Tarrant County court ever requested to take judicial notice of Illinois law, and such law was not proved.

What we have said in the preceding paragraph does not necessarily cover Mary Lee's contention that the Tarrant County court did not have the requisite jurisdiction which authorized it to make an enforceable decree concerning custody of the children. By the circumstances we consider the question moot. Mary Lee appealed the judgment of the Tarrant County trial court to this appellate court while withholding custody of her children from John, contrary to the provisions of the trial court judgment. John presented such facts to this court and moved for dismissal of Mary Lee's appeal.

The proper order of an appellate court is to dismiss the appeal where an appellant is in obvious contempt of the judgment of the trial court from which the appeal has been taken. See Strange v. Strange, 464 S.W.2d 216 (Tex. Civ. App.--Fort Worth 1970). See also the opinion of the supreme court answering certified questions upon other aspects of the same case at 464 S.W.2d 364 (Tex. 1971). The day before John's motion to dismiss the appeal was scheduled to be heard Mary Lee caused or permitted the children to be delivered to John in Tarrant County, Texas, making proof to this court that such had been done. The motion to dismiss the appeal was withdrawn. We have continued to honor Mary Lee's appeal.

Apart from the foregoing we nevertheless have considered the question of jurisdiction of the trial court, as of the time it rendered judgment and as of the time its jurisdiction passed (for necessary purposes) to this appellate court. We hold that the court below had jurisdiction of the children and authority to make the adjudication upon their custody.

Though the adjudication is as upon a case in rem in that is upon the status of the children (so that there is the legal requisite that the trial court have jurisdiction not only of the husband and wife but also of their children for purposes of an enforceable custody decree) we hold that by the circumstances the domicile of the children was in Texas. Of course the trial court had jurisdiction for purposes of divorce.

The facts were not in dispute. Mary Lee took the children from Fort Worth on January 20, 1976 and removed them to Illinois.

John did not know, if it was the fact, that Mary Lee did not intend to return to Texas or did not intend to return the children to Texas. He did not consent to any change of the domicile of the children. He did not refuse to continue support. John provided support for the family at all times. Mary Lee did not work outside the home. Regardless of her unhappiness in her marital relationship

there existed no danger or threat to her security or to that of the children which occasioned a change of domicile. Mary Lee did not return the children to Texas until after jurisdiction existed in this court by reason of her appeal. The children were not in Texas at time of the divorce and custody decree nor at time Mary Lee's appeal was perfected.

Of course we are considering "domicile by operation of law", i.e., analagous to what was formerly that of a wife arising upon her marriage. Of little value are the cases prior to the adoption of Texas' Constitutional Equal Rights Amendment: TEX.CONST. art. 1, § 3a, "Equality under the law shall not be denied or abridged because of sex, race, color, creed, or national origin. This amendment is selfoperative". The Amendment was adopted November 7, 1972. See Vol. 5, No. 2, Symposium, 1974, Tex. Tech L. Rev., Sampson, "The Texas Equal Rights Amendment and the Family Code: Litigation Ahead". To be kept in mind, however, are the old cases bearing upon the question. See 4 A.L.R. 2d, p. 7, Annotation: "Jurisdiction to award custody of child having legal domicile in another state", and 9 A.L.R. 2d p. 434, "Jurisdiction of court to award custody of child domiciled in state but physically outside it."

We hold that Texas has effectively legislated, in the Texas Family Code, by its § 12.04, "Rights, Privileges, Duties, and Powers of Parent" where there is provision that, except as provided by judicial order or by an affidavit of relinquishment of parental rights executed under § 15.03, the parent of a child has, among other rights, privileges, duties, and powers, "the right to have physical possession of a child and to establish its legal domicile". (The provisions of § 15.03, "Affidavit of Relinquishment of Parental Rights" are inapplicable to this case.) Prior to the separation of Mary Lee from John they had jointly established Tarrant County, Texas, as their legal domicile and also that of their children.

TEX. FAMILY CODE ANN. § 3.26 (Supp. 1978) "Acquiring Jurisdiction over Nonresident Respondent" provides that when the petitioner in a suit for divorce is a resident or a domiciliary of this state at the time the suit is filed personal jurisdiction by the court shall exist over the respondent, although the respondent is not a resident or domiciliary of Texas, if this is the last state in which marital cohabitation between petitioner and respondent occurred and the suit is commenced within two years after the date on which cohabitation ended, - and that a court acquiring jurisdiction under the section also acquires jurisdiction in a suit affecting the parent-child relation if § 11.051 of the Code is applicable.

TEX. FAMILY CODE ANN. § 11.051 (Supp. 1978) "Acquiring Jurisdiction Over Nonresident", provides that in a suit affecting the parent-child relationship, the court may exercise personal jurisdiction over a person on whom service of citation is required, though a non-resident or domiciliary of this state, if the person on whom service is required has resided with the child in this state, and even where the section might otherwise be deemed inapplicable, if there is any basis consistent with the constitutions of this state or the United States for the exercise of the personal jurisdiction. Note the Law Review Commentaries listed under this section. § 11.051 is applicable in the situation posed by the case at bar.

On the "long-arm jurisdiction" of TEX. FAMILY CODE ANN. § 3.26 (Supp. 1978) it has been held that a Texas court properly exercised its jurisdiction over a non-resident defendant where suit was filed within two years after the termination of a 2 1/2 month period of cohabitation of the parties in Texas. Scott v. Scott, 554 S.W.2d 274 (Tex. Civ. App.--Houston [1st Dist.] 1977, no writ hist.). The case involved custody of a child as well as divorce.

ON THE JURY TRIAL UPON CUSTODY

The matter of custody of the parties' minor children was tried to a jury before the Honorable Gordon Gray, District Judge.

Without objection two special issues were submitted along with a definition of the term Managing Conservator which in general "tracked" the language of TEX. FAMILY CODE ANN. § 14.02 (Supp. 1978) "Rights, Privileges, Duties, and Powers of Managing Conservator", save that there was not included in the definition the provision that the managing conservator has "the right to have physical possession of the child and to establish its legal domicile". There was not an objection to the definition.

By ultimately returned answers to the two issues submitted the jury found for John to be awarded care and custody of the child (1) Andrea Marie Geesbreght would be to best serve her welfare and best interests; and (2) for him to be awarded care and custody of the child John Alexander Geesbreght would be to best serve that child's welfare and best interests. Time when the special issues were answered came after additional issues were submitted, to be subsequently explained.

In connection with the above the jury was told, as a part of the instructions given, that "CHOICE Without Regard to Sex of Parent: You are instructed that the rights of the father and mother are equal with respect to the custody of their child, but that the welfare and best interests of the child is of controlling importance, and it will be your duty to find according as you may believe from a preponderance of all the evidence as to what would be for the welfare and best interest of the child, and you will answer this issue as you may find the facts to be."

The state of the evidence was such that the jury knew that if there were findings that John Geesbreght should be awarded the care and custody of the children (or that such would serve their best interests) he would become the managing conservator. There was additional clarification in the arguments made to the jury. Not made clear to the jury was any right of a "possessory conservator". What was clearly shown to the jury by the evidence

was that if the father was granted custody of the children (made managing conservator) that, if the mother would move to Texas, he was willing that she should have "unlimited visitation rights".

At 10:05 o'clock A.M., after the case was argued, the jury received the case and began deliberations. At 2:50 o'clock P.M. the jury sent out word that it would like to see the judge. The judge sent back his note that the jury should put any requests in writing. About 5:00 o'clock P.M. a written notice was sent to the judge stating that the jury was deadlocked. The jury was brought into the courtroom. Upon inquiry of the judge, the foreman advised that the jury stood nine to three. The jury was directed to return to the jury room for further deliberations. At this point in time the foreman asked whether the jurors were compelled to reach a verdict. The judge answered "I wouldn't say that you are compelled. What I said in the charge is true. If you don't reach a verdict, the same jury will have the same problem and they won't find it any easier than this jury. You are making progress if it's nine to three. All right, you may retire to the jury room." No objection was made by either party. After about 20 minutes the jury was excused to return the following court-day.

On the next day for proceedings in the business of the court deliberations were begun by the jury at 9:00 A.M. Soon after the jury sent out Note A-3 inquiring "Is conservatorship up for review periodically?", and thereafter Note A-4 inquiring "What would be legal assurance that Mary Lee can, in fact, have unlimited visitation rights if John is awarded managing conservator". In answer the court asked the jury to review the Charge as previously submitted. About 2:00 o'clock P.M. the jury sent in a note informing the judge that it was deadlocked. At about 2:30 P.M. the jury sent the judge a note which read: "As stated by law, define 'Unlimited Visitation'".

At this point the court prepared a supplemental charge, reading:

> The definition of Possessory Conservator is as follows:
>
> A Possessory conservator has the following rights, privileges, duties, and powers during the period of possession, subject to any limitations expressed in the decree:
>
> (1) the duty of care, control, protection, and reasonable discipline of the child;
>
> (2) the duty to provide the child with clothing, food, and shelter;
>
> (3) the power to consent to medical and surgical treatment during an emergency involving an immediate danger to the health and safety of the child; and
>
> (4) any other right, privilege, duty or power of a managing conservator expressly granted in the decree awarding possession of the child.
>
> SPECIAL ISSUE NO. 3.
>
> What rights, privileges, duties, and powers do you find that the possessory conservator should have?
>
> ANSWER: (Ultimately answered by the jury as: "Items 1, 2, 3, 4 as stated under definition of possessory conservator of page one of this document. In addition, the option to review as necessary to insure that the Possessory Conservator's right to unlimited visitation is, in fact, adhered to.")
>
> SPECIAL ISSUE NO. 4.
>
> What should be the visitation rights of the possessory conservator?
>
> ANSWER: (Ultimately answered by the jury as: "Unlimited".)

Before calling the jury from the jury room into the court room the judge asked if there were any objections to the court's submission of the supplemental charge. Mr. Meyer, attorney for Mary Lee, replied "Yes, Your Honor, we object to it on the grounds that it constitutes a submission of an issue which has not been tried to the jury by the evidence. And, on the contrary, the Court instructed the jury at the beginning of the trial and during the submission of the instructions to the jury that the Court would

decide all matters other than Managing Conservatorship including the rights, duties and responsibilities of the Possessory Conservator."

The objection was overruled. The jury was brought back into court and, with other oral statements made to the jury by the court to which there was no objection, was told the supplemental charge would be submitted and it was submitted. There was no argument thereupon and there was no request therefor. The jury took the supplemental along with the original charge into the jury room. Rather promptly thereafter the jury returned its verdict as embraced by its answers to all special issues of both the original and supplemental charges.

No reversible error appears. The questions asked in the supplemental charge were in neither case such as required a finding upon an ultimate issue. The answers could amount to no more than recommendations, at least other than that as the possessory conservator Mary Lee should have all the rights of that office. This she did receive by the judgment. As already noticed, the jury was not misled in any failure to understand that the managing conservator should have the paramount custodial rights in and to the children, with visitation rights of any other and with rights of any possessory conservator subject thereto. It does appear that the failure of the original charge to show the jury what rights by law were vested in one who was a possessory conservator and, perhaps, an inability to express its desire to state an opinion that Mary Lee should have the most extensive of visitation rights upon the face of the instrument, caused difficulty in arriving at an agreement to make the finding that John should have the paramount rights of managing conservator. We see no error on trial which amounted to reversible error by TEX. R. CIV. P. 434, the Texas "harmless error" rule.

Submission of the immaterial Special Issue No. 3 was not subject to the only complaint made in the objection, which was that it presented new issues of fact which had not been tried.

That being the only complaint, any additional complaints which might have been made were waived. By provision of TEX. R. CIV. P. 286, "Jury May Receive Further Instructions" there is authority for instructions to the jury, even after it has retired and begun deliberations. Even a new and different controlling issue in the case may be submitted under TEX. R. CIV. P. 286, though there would be reversible error if there was denial of the right to make additional jury argument upon an issue thus submitted in a supplemental charge. In the denial of such it has been held there would be probable harm, though not merely because there was a supplemental charge given by the court. Boler v. Coughran, 304 S.W.2d 290 (Tex. Civ. App.--San Antonio 1957, writ ref'd).

The answers to Special Issues nos. 1 and 2 were not so contrary to the greater weight and preponderance of the whole of the evidence in the case as to be clearly erroneous. There was not reversible error by trial before the jury of the issues submitted.

SEVERABILITY OF JUDGMENT ON CHILD CUSTODY AND DIVORCE FROM JUDGMENT RELATIVE TO PROPERTY PARTITION.

7 ST. MARY'S L.J. 1 (1975), "Try, Try, Again . . .", "A Proposal to Limit the Scope of New Trials in Texas" by Justice Jack Pope with Daniel J. Sheehan, Jr., contained recommendations which were adopted and made effective January 1, 1978, in TEX. R. CIV. P. 320, "(New Trials) Motion and Action of Court Thereon". The Rule so adopted, and also - since January 1, 1976 - provisions of TEX. R. CIV. P. 434, "If Judgment Reversed" authorizes new trial of the part of the controversy which is clearly separable without unfairness to the parties. We can now affirm the trial court's judgment insofar as it grants the decree of divorce, and as it decrees the custodial rights to the parties' children, though we might find ourselves obligated to remand for another trial the issues upon the division of property upon the grant of divorce. Young v. Hicks, 559 S.W.2d 343 (Tex. 1977).

In the instant case, we have concluded that there should be a new trial on the issues appropriate to the determination of correct property division.

PARTITION OF PROPERTY UPON DIVORCE.

By agreement issues on property were tried by the court without a jury.

The date of the trial court's judgment was August 30, 1977. In the event of retrial, issues relative to the property of the parties, as existent upon that date, would be those to be retried. This is so because we have affirmed the part of the judgment which decrees divorce, meaning that from August 30, 1977 each party was divorced from the other though no proper division of their property was made at the time.

The occasion for what is considered to require remand of the case relative to property division lies in the court's having treated the stock held by John Geesbreght in a Professional Corporation not to have been enhanced above its book value by any "good will" of the corporation developed during the period when he owned it. John not only held the stock but worked as an employee. In the approximate eighteen months of John's interest there had been an improvement of corporate business to the extent that it had become unusually profitable.

John is a physician. Had his practice been that of an individual, then, in the event of divorce, the "good will" existent and which might have a value upon a sale of his practice or interest therein to another member of the same profession (with whom he might agree not to compete) would not be properly considered as part of the property to be taken into consideration in the property division to be made as part of the parties' estate because there was a divorce. Nail v. Nail, 486 S.W.2d 761 (Tex. 1972). The case appears in 52 A.L.R. 3d p. 1338, followed, at p. 1344 by ANNOTATION: "Accountability for Good Will of Professional Practice in Actions Arising from Divorce or Separation". In that case there was the

implied holding that the trial court had erroneously considered as evidence that which was "no evidence" or "not legal evidence" because it was improperly considered. Of course, what resulted by the trial court, which was reversed, was an amount of judgment contrary to the greater weight and preponderance of the evidence. Posed was actually a "no evidence" question for the supreme court would not otherwise have had jurisdiction.

In Nail, supra at p. 764, the court took occasion to state: "It is to be understood that in resolving the question at hand we are not concerned with good will as an asset incident to the sale of a professional practice, or that may exist in a professional partnership or corporation apart from the person of an individual member . . . . "

Here we have that very question with which the supreme court stated itself not to be concerned, i.e., good will in Emergency Medicine upon which there was the necessity to find what portion, if any, apart from John's person as an individual employee member, existed in that the corporation occasioning enhancement in the value of its corporate stock. We hold that there was "value" of such good will and that the trial court erred in the failure to take it into consideration in rendering the judgment from which the appeal was taken.

From the record we understand that in the field of medicine there has apparently arisen at many hospitals a need for the services of physicians at unusual hours in rendering emergency services, primarily at the emergency rooms. In ordinary medical practice the average doctor naturally prefers normal hours and the opportunity to know when he will probably be able to be with family or friends. Such a doctor, and no doubt there are many, is pleased to be relieved of the emergency duties performed at hospitals.

Some time ago, apparently in Dallas, Texas, a Dr. Lambert conceived the idea of making such emergency room services by

physicians a specialized form of endeavor. Subsequently a Dr. Riggs became associated, and as applied to this particular work they called their organization the Emergency Health Services Associates, apparently a professional corporation. Dr. Riggs bought Dr. Lambert's 50% ownership (of stock if it was a corporation) and himself became what we will call the Emergency Health Services. This has remained an entity, probably still doing business.

In August of 1974 John Geesbreght made a contract of employment with Emergency Health Services (Dr. Riggs) and for it performed the work of a physician in emergency room service at a Fort Worth hospital which will for convenience be called Harris. By subsequent arrangement, concluded in the spring of 1974, John became a partner of Dr. Riggs. When this partnership was formed Emergency Health Services ceased to supply the emergency services at Harris in Fort Worth. The partnership of Dr. Riggs and John, which they chose to call Emergency Medicine Consultants, took from Emergency Health Services the contract it had with Harris. Emergency Medicine Consultants began handling the Harris' account as its own. This continued until November of 1975 when the partnership ceased as such, with the organization of the corporation Emergency Medicine Consultants, a Professional Corporation under the provisions of V.A.T.S. Title 32, "Corporation", Art. 1528e, et seq. "Professional Corporation Act". Dr. Riggs paid in $500.00 and John paid in $500.00, each receiving 500 shares of stock. They were the only stockholders. The business was that of supplying emergency room services of physicians at hospitals, but upon an expanded scale. The corporate business so begun proved successful; by time the divorce suit of John and Mary Lee Geesbreght was tried in July 1977 it was supplying hospital emergency room service by physicians in its employ at eight (8) different locations. There had been three (3) additional hospitals where the services had begun but at which they had been terminated to time of trial. One year's gross receipts of Emergency Medicine Consultants for these services amounted to more than $1,000,000.00. The corporation

will hereafter be referred to as Emergency Medicine.

At a time prior to the divorce trial Emergency Medicine (50% Dr. Riggs) had had occasion to pay Emergency Health Services Associates (100% Dr. Riggs) the sum of $36,000.00 for contract negotiations by the latter in behalf of Emergency Medicine. As a result, Emergency Medicine acquired four (4) of the aforementioned eleven (11) hospital contracts. The Harris hospital contract was transferred to Emergency Medicine by agreement and without any payment and Harris' contract evidently became that of Emergency Medicine. There John had begun to personally perform the emergency room hospital services in 1974, continued by him during the partnership period beginning in the spring of 1975, and still continuing when Emergency Medicine was incorporated in November of 1975. Little, if any, of the hospital emergency room services at locations other than Harris was ever personally performed by John, but all, or nearly all, the services at Harris were performed by him. The Harris contract with Emergency Medicine provides for cancellation at any time. Here would be the contract where any "good will" built up by and through satisfaction with John's services would be, percentagewise, more personal to him and, to the extent it might be found personal, not proper to be taken into consideration in the division of property upon divorce.

However, over the entire field of operations by Emergency Medicine there are about ten full-time, and 50 to 100 part-time physicians with whom Emergency Medicine has employment contracts to fulfill its obligations to furnish emergency services at the hospitals with which it has contracted. By the evidence each of these physicians receives 80% of what is received by the hospital from third persons for services he has rendered at the hospital, of the 100% which is received by Emergency Medicine. (Emergency Medicine is paid the 100% and Emergency Medicine pays 80% to each physician entitled thereto.)

There may be minor discrepancies in what we have stated and will state relative to the business operations, though if that be true it would make no difference in our ultimate conclusions and holdings.

Of the 20% resultant gross profit of Emergency Medicine after each employed physician is paid John receives 5% for his services as "director" as applied to payment for the corporate services at Harris, and/or as "regional director" of the services rendered at other locations. Emergency Medicine receives 5% as earnings in the form of "contract fee". The remaining percentage to explain is thus made 10%. Of this 10% in receipts the majority is applied to pay for necessary services as by a secretary, book-keeper, etc.; with something between 2% and 4% going into Emergency Medicine's treasury as profit. This "profit", whatever the monetary amount, would become the ultimate entitlement of the two stockholders - on a 50-50 basis, because 50% of the shares belonged to Dr. Riggs and 50% to John. We need not at this point concern ourselves with the earnings represented by the term "contract fee".

"Good will" is sometimes difficult to define. In a personal service enterprise such as that of a professional person or firm, there is a difference in what it means as applied to "John Doe" and as applied to "The Doe Corporation" or "The Doe Company". If "John Doe" builds up a reputation for service it is personal to him. If "The Doe Company" builds up a reputation for service there may be a change in personnel performing the service upon a sale of its business but the sale of such business naturally involves the right to continue in business as "The Doe Company". The "good will" built up by the company would continue for a time and would last while the new management, performing the same personal services, would at least have the opportunity to justify confidence in such management while it attempted to retain the "good will" of customer clients of the former operators.

At least the opportunity to have time to try to preserve the "good will" already existent and to use it as an entrance into the identical field of operations in a personal service type of business would be present where the name of the business is a company name as distinguished from the name of an individual. Therein does it have value, plus the value of the opportunity to justify confidence in the new management by the customer/clients of the predecessor owner(s).

It is as applied to the foregoing that we consider Emergency Medicine to possess what we treat as "good will" as part of its worth and value under the circumstances of this case, and therefore an asset which would have value to some extent apart from John's person as a professional practitioner.

It is clear that in the event John sold his stock to another physician then - save perhaps at Harris Hospital - there would be an opportunity to retain the contracts of Emergency Medicine if the services of its employed physicians in the various emergency rooms continued to be satisfactory.

On this it was shown that the Emergency Medicine contracts generally had either a 30 or 60 day cancellation provision "without cause", and a 24 hour cancellation provision "with cause". Also shown was that Dr. Riggs had a contract with John relative to sale or transfer of John's stock. In the event of John's death, Dr. Riggs is by this contract entitled to all of John's stock at the price of $50,000.00, and in the event John desires to sell his stock before that time, Dr. Riggs has the privilege of purchasing it at a price of $50,000.00.

We think it obvious that to take the figure of $16,000.00, which was proved to have been the "book value" of John's 500 shares of stock in Emergency Medicine Consultants, and use it as the "actual value" of the stock as its worth to be taken into consideration by the court in the division of the estate upon divorce was, under the circumstances of the case, reversible error.

We hold that it resulted in gross inadequacy in the award on property division as applied to Mary Lee; that it also resulted in an award to her which was so contrary to the greater weight and preponderance of the whole of the evidence on trial as to be clearly erroneous. Further, we hold that the court erred in considering as "no evidence" that which was evidence in that under the circumstances of the case. The value of the stock in Emergency Medicine Consultants was enhanced by some "good will" which was existent as applied to that professional corporation apart from the person of John Geesbreght.

It is error for a court not to take into consideration all relevant property interests in reaching equitable division of the property on divorce. Gillis v. Gillis, 435 S.W.2d 171 (Tex. Civ. App.--Fort Worth, 1968, writ dism'd); Matter of Marriage of Butler, 543 S.W.2d 147 (Tex. Civ. App.--Texarkana, 1976, writ dism'd); Matter of Marriage of Long, 542 S.W.2d 712 (Tex. Civ. App.--Texarkana, 1976, no writ hist.).

In this case, for reasons stated, we hold that the trial court erred in failure to take into consideration all relevant property interests.

We have discussed the important matters necessary to disposition of the appeal. We have considered all points of error presented and they are overruled except for those whereby our action, below stated, has been determined.

Judgment is affirmed insofar as it granted the divorce and determined the custodial rights of the parties' children. Judgment is reversed and remanded for another trial on the matter of the appropriate property division.

Cost of the appeal are taxed 50% to John Geesbreght and 50% to Mary Lee Geesbreght.

FRANK A. MASSEY,
CHIEF JUSTICE.

MEMORANDUM OPINION AND ORDER

Submitted: February 9, 2006
Decided: May 18, 2006

Joseph A. Rosenthal, Esquire, Jessica Zeldin, Esquire, ROSENTHAL MONTHAIT & GODDESS P.A., Wilmington, Delaware; Harold B. Obstfeld, Esquire, HAROLD B. OBSTFELD P.C., New York, New York, *Attorneys for the Plaintiff and Petitioner.*

Daniel A. Dreisbach, Esquire, Elizabeth C. Tucker, Esquire, RICHARDS, LAYTON & FINGER, P.A., Wilmington, Delaware; David J. Cynamon, Esquire, Matthew A. Anzaldi, Esquire, PILLSBURY WINTHROP SHAW PITTMAN LLP, Washington, D.C., *Attorneys for Defendants IIC Industries Inc., CP Holdings Limited, Kenyon Phillips Acquisition, LLC, Bernard Shreier, John Smith, Robert M. Levy, and Robert Glatter.*

Stephen C. Norman, Esquire, Melony R. Anderson, Esquire, POTTER ANDERSON & CORROON, Wilmington, Delaware, *Attorneys for Defendant Alfred L. Simon.*

LAMB, Vice Chancellor.

This case arises out of a decision by a foreign holding company which controlled a publicly traded United States subsidiary to simplify its internal structure by removing the minority stockholders of that subsidiary in a going-private transaction. To achieve that goal, the controlling stockholder first initiated a voluntary tender offer at a price supposedly determined through a negotiation with a special committee. When the tender offer failed, the controller successfully executed a statutory long-form merger at the same price.

The present class action was filed by one of the minority stockholders, claiming that the merger evidenced unfair dealing and produced an unfair price. Additionally, the minority stockholder has brought a statutory appraisal claim, seeking a determination of the fair value of the U.S. subsidiary's shares at the time of the merger. The defendants argue that the merger process was fair, or at least harmlessly flawed, and that the price determined by the merger process was fair in view of the fact that the terrorist attacks of September 11, 2001 intervened between the determination of the merger price and the transaction itself. They also urge the court to decide that the fair appraisal value of the shares is well below the consideration offered in the merger. Additionally, one of the defendants claims that his actions in approving the merger were exculpated by the corporation's provision under 8 *Del. C.* § 102(b)(7), and therefore that he cannot be personally liable for any damages.

The court held trial from May 25, 2005 to May 31, 2005. The parties submitted post-trial briefs and argument was presented on February 9, 2006. In this opinion, the court finds that the merger process between the controlling stockholder and the subsidiary was marked with grave examples of unfairness, and led to a plainly unfair price for the going-private transaction. Consequently, the court awards damages to the class and to those stockholders seeking appraisal based on the court's determination of fair value at the time of the merger, a figure that is significantly in excess of the consideration offered in the going-private transaction. Nonetheless, the court finds that the subsidiary corporation's Section 102(b)(7) provision does act to protect the one defendant who raised that affirmative defense, and therefore assigns him none of the liability.

I.

A. The Parties

1. The Plaintiff

The plaintiff in this case, Richard Gesoff, was a stockholder of IIC Industries Inc. until the transaction at issue. He owned approximately 50,000 shares of IIC common stock. As a result of the transaction, Gesoff's shares have been cashed out at the disputed price, $10.50 per share. His class action claim has been brought on behalf of all persons who were owners of the common stock of IIC on the effective date of the merger, March 27, 2002, except for affiliates of IIC

or CP, and those stockholders who properly opted out of the class. Gesoff's statutory appraisal proceeding is on behalf of 402,476 IIC shares, slightly less than half of the shares owned by class members.

2. The Defendants[1]

CP Holdings is an English holding company with its principal place of business in Watford, England. This conglomerate owns approximately 80% of the defendant in this case, IIC Industries, Inc., a Delaware corporation with its principal place of business in New York City. In essence, the only business of IIC is to act as an intermediate holding company for certain overseas assets.

As an investment company, IIC controls various companies engaged in businesses throughout the world. The most significant of these is Danubius Hotel & Spa Rt., a Hungarian corporation, listed on the Budapest Stock Exchange, that operates hotels and spas in Hungary and the Czech Republic.[2] Overall, the Danubius group owns and manages approximately 3,100 four-star rooms, and

[1] The plaintiff has also sued Kenyon Phillips Acquisition LLC, a subsidiary formed specifically for purposes of the merger, and wholly owned by Kenyon Phillips Limited, itself a wholly owned subsidiary of CP Holdings. The individual named defendants, Bernard Schreier, John Smith, Robert M. Levy, Robert Glatter, and Alfred L. Simon, are discussed below, but, in summary, were the directors of IIC. Except for Simon, all were also directors of CP Holdings.
[2] Formally, IIC owns a 49% voting interest in Danubius, and CP owns another 5% of the company. JX 237.

2,300 three-star rooms. It claims to be the leading hotel chain in Hungary, and attracts many tourists from Western Europe and elsewhere.[3]

IIC also controls Investor Rt., a Hungarian holding company, whose principal subsidiaries are Agrimill Rt., in which Investor has a 65% interest, and Interag Rt., in which Investor has a 79% interest.[4] Agrimill is also listed on the Budapest Stock Exchange and is engaged in the processing of agricultural products. Agrimill's business strategy has been to produce flour, animal feeds, and maize products to be sold both on the domestic Hungarian and export markets.[5]

Additionally, IIC controls ITE and Equipment Company Limited, an Israeli corporation that distributes tractors and other heavy equipment in Israel through its 70% owned subsidiary, Zoko Ltd. Zoko is listed on the Tel Aviv Stock Exchange, and manufactures and distributes products such as construction equipment, diesel engines and trucks, and spare parts for such equipment. Zoko is also the exclusive dealer in Israel for Caterpillar and Navistar trucks, and is a dealer for Ingersoll-Rand equipment. In addition to selling the aforementioned heavy machinery, Zoko offers service and maintenance of these machines.[6]

---

[3] JX 32.
[4] Interag is a Hungarian company involved in the warehousing and warrant business, and automobile dealerships.
[5] *Id.*
[6] *Id.*

Finally, IIC controls Balton CP Limited, which sells agricultural, communications, and electrical equipment in Nigeria, Zambia, Ghana, Kenya, Tanzania, Uganda, and the Ivory Coast. In summary, Balton uses its expertise in agriculture to provide modern flower, fruit, and vegetable growing facilities in greenhouses and fields, including greenhouse structures, full irrigation systems, cold storage, and packing lines. In addition, Balton acts as a distributor for Motorola, Inc. in Nigeria and Ghana in West Africa, distributing Motorola two-way radios, walkie-talkies, mobile phones, base stations, repeaters, and telephones.[7]

B. CP Decides To Take IIC Private

The events that led to this trial began when Paul Filer was appointed as Finance Director of CP Holdings in 2000.[8] As part of his initial duties, he was assigned by the board of CP Holdings and its chairman, Sir Bernard Schreier, to undertake a review of the company's corporate structure. Filer decided, as a result of this review, that IIC was serving little purpose in its current form. Indeed, IIC was exposing CP to the U.S. regulatory environment and its associated costs, including possible tax liability, while CP was failing to take advantage of its presence in the U.S. to raise funds through the capital markets.[9] In December

[7] *Id.*
[8] Tr. 700:19.
[9] JX 48.

2000, Filer prepared a report setting out his findings. This report first noted the potential benefits of removing IIC as an intermediate holding company:

> There have been extensive discussions internally on simplifying the group structure. The purpose for doing this is:
>
> • Improve the ability to extract cash by CP
>
> At present it is expensive to remit cash from Hungary to CP. This is firstly because the funds have to be split with the relevant minorities . . . .
>
> • Reduce the costs within the current structure
>
> The cost of maintaining a quoted company in the US seems an unnecessary expense. No use is being made of the quote; overall it is a burden, not a benefit . . . .[10]

The report observed that CP owned only 78% of IIC, and therefore the minority would have to be removed either by a "rights issue to dilute the minority" or by a "tender offer to the minority to acquire their shares."[11] The report then noted that a "separate paper on the mechanics of buying out the minority" was attached.[12]

The information in that separate document was provided by IIC's and CP's U.S. lawyer for purposes of the going-private transaction, Samuel Ottensoser,[13] who would soon play an important role in the tender offer. In addition to setting out the two options described above for removing the minority, this report noted that the minority was likely to negotiate aggressively as to the price at which they

[10] *Id.*
[11] *Id.*
[12] *Id.*
[13] Tr. 707:8-10.

would be cashed out. At this relatively early stage, indeed, CP and its counsel expected the minority to demand $16.20 per share:

> Any price that is below $16.20, the disclosed net assets, will yield a book gain to CP on the shares tendered. Equally any price below $16.20 will be difficult to sell to the minority, as they will be sustaining a loss against the disclosed book value. The best argument is that they could never realize the $16.20, so that figure is not a realistic disposal value.[14]

But the document also included information that indicated that CP had paid only $10 per share for IIC in the recent past.[15]

On January 25, 2001, the CP board authorized Filer to continue investigating the removal of the IIC minority, but did not yet authorize any approach to those stockholders.[16] Following the board's authorization, Filer produced another report in March 2001 explaining his progress. This report reiterated much of the information available in the December 2000 report, but included new information as to Filer's progress in securing financial advice. As Filer noted, "we have received from our U.S. lawyers the name of a small investment bank that would be willing to do the company valuation necessary to support the tender offer . . . ."[17]

[14] JX 49.
[15] *Id.*
[16] JX 50; Tr. 711:8-14.
[17] JX 9.

Filer testified at trial that this small investment bank, that had been recommended by Ottensoser, was Jesup & Lamont.[18] This was CP's first contact with that firm.[19]

In the following months, Filer continued preparing the groundwork for a possible transaction. On May 17, 2001, Filer presented a more comprehensive report describing his conclusions as to the going-private transaction to Schreier, John Smith, and Robert Levy,[20] who together comprise the CP Holdings executive team.[21] In that document, Filer described the work that had been done to date, including a quote received from Jesup & Lamont, an assessment of the possible fees involved in the transaction, and a discussion of possible consequences that might result.[22] This document included new information that showed that CP was now required to pay $13 for shares of IIC in the open market.[23] Filer testified at trial that, at this point, neither he nor the board had prepared a valuation of IIC to determine the value of the company.[24]

At a subsequent board meeting of CP Holdings on May 24, 2001, the board adopted Filer's plans, and expressly authorized that a "bid approach" be made to

[24] Tr. 717:10:13.

the board of IIC at $13 per share for the minority stockholdings,[25] which was envisioned to be in the form of a tender offer followed by a short-form merger under 8 *Del. C.* § 253.[26] This price, although not based on a formal discounted cash flow analysis, was based on the price at which CP had been paying in the market at that time for shares of IIC.[27] The board also authorized that $100,000 be spent to obtain a fairness opinion, but decided that the process through which IIC board approval would be obtained was subject to later discussion because "those members of the board requesting [the fairness opinion] should be independent."[28]

C. IIC Appoints A Special Committee

Apparently on the basis of Ottensoser's advice, the IIC board of directors decided to appoint a special committee to help comply with Delaware law for fundamental transactions between parents and subsidiaries. The only IIC directors independent of CP Holdings were Alfred L. Simon and Wilfred Wyler. Wyler, however, was elderly, and unable to fulfill the responsibilities of the supplemental appointment.[29] On May 24, 2001, therefore, Filer called Simon, and asked him to

[25] JX 54.
[26] A short-form merger, of course, allows a parent company holding more than 90% of a subsidiary's shares to squeeze out the remaining minority without a stockholder vote.
[27] Tr. 721:15-18.
[28] JX 54.
[29] Wyler passed away in January 2002. Tr. 723:18-22.

become the sole member of the special committee.[30] Simon accepted the commission in principle, although he had not yet been officially empowered.[31]

Filer's next step was to visit New York and meet personally with the key players in the plan to privatize IIC. On June 18, 2001, Filer met with Jesup & Lamont, before speaking in person with Simon. This meeting, Filer testified, was a "courtesy visit," although Filer was never able to articulate what such a visit entailed,[32] or whether details of Jesup & Lamont's eventual representation were discussed. The next day, Filer met with both Simon and Michael Zarriello of Jesup & Lamont. At that meeting, Zarriello was given the opportunity to "pitch" his firm to Simon for the appointment as financial advisor to the special committee.[33] Simon attended the presentation, and testified at trial that he reserved judgment on whether to formally hire Jesup & Lamont.[34]

In June 2001, Simon was appointed by undated consent as the sole director of the special committee tasked with examining CP's tender offer on behalf of IIC's minority stockholders.[35] Simon's authorization formally invested him with

[30] JX 55.
[31] JX 55; Tr. 821:19-22.
[32] Tr. 725:21-24; Tr. 726:1; Tr. 782:1-6 ("I went to see [Jesup & Lamont]. It was, I guess, out of courtesy, and just to see who they were.").
[33] Tr. 726:11-16; Tr. 825:14-23.
[34] Tr. 726: 9-11.
[35] JX 6.

the power to present a recommendation to the IIC board as to the CP tender offer only, in the following form:

> RESOLVED, that the Board hereby appoints Alfred L. Simon, the Company's only director not affiliated with CPH . . . to examine the Tender Offer and to prepare and present a recommendation to the Board and the public stockholders on the Company's position on the Tender Offer.[36]

In connection with that recommendation, the consent gave Simon the authority to appoint outside auditors and/or counsel to assist him in preparing the recommendation.[37] The resolution further authorized Simon to spend $100,000, the same price as quoted by Jesup & Lamont, for a fairness opinion, and granted Simon a director's fee of $10,000 for the additional work the position would require.

While this formal grant seems relatively broad, the court notes that the evidence adduced at trial and the defendants' own testimony demonstrate convincingly that Simon's authority was closely circumscribed even from the beginning of his role as the sole member of the special committee. First, Simon had no real authority to choose either his own lawyer or his own financial advisor. Ottensoser was presented to Simon as the choice of the conflicted IIC board, and

[36] *Id.*
[37] *Id.*

CP's choice, for counsel.[38] He had long been IIC's main outside counsel, and had already spent considerable time working on the proposed transaction on behalf of CP.[39] And as Simon testified at trial, when he pressed Ottensoser about the clear conflict of interest in representing IIC and CP on the one hand and the special committee on the other, Ottensoser answered that no conflict existed between the two roles.[40]

Simon had no more latitude as to his choice of financial advisor. On June 12, 2001, Jesup & Lamont had already sent a draft engagement letter to Simon, then still working only in the role of director of IIC.[41] As early as June 15, 2001, four days before Simon was officially granted any power to hire financial or legal advisors, Filer emailed Zarriello promising that "we are very close to having you signed up for the project."[42] As Filer confirmed at trial, this email was motivated by a desire to hurry the privatization process toward a conclusion.[43] Zarriello, as described above, was then allowed to make a pitch to Simon on June 19, even

---

[38] Q: Why did you wait? [to decide whether to retain Jesup & Lamont for a week after the meeting in which the investment bank first pitched their services?]
A: First, I wanted to digest this. I wanted to speak to Sam Ottensoser, who *had been appointed, and I had accepted him,* as my counsel. Tr. 828: 22-25 (emphasis added).
[39] Tr. 708: 17-22.
[40] Simon testified that Ottensoser responded to this question by saying "something to the effect that . . . IIC and [Simon] were really on the same side of this, and looking to get the best price from CP Holdings, and there was no conflict." Tr. 831: 18-22.
[41] JX 12.
[42] JX 56.
[43] Filer testified that this email "confirm[ed] his desire to get on with . . . the privatization project." Tr. 787:14-18

before Simon was officially empowered, and before he was able to do any independent research on investment banking firms.[44] Simon spoke to no other investment banking firms before appointing Jesup & Lamont to assist him in his duties, relying on Ottensoser's advice that "Jesup would do fine."[45] Nor did Simon discover the relationship that had arisen between Filer and Jesup & Lamont in the months prior to the creation of the special committee. Indeed, Simon failed to even ask whether Jesup & Lamont had any prior relationship with either CP or IIC, assuming that an "honest" investment banker would volunteer this information on his own.[46]

D. CP Negotiates With Simon And The Special Committee As To The Tender Offer

The evidence adduced at trial creates a clear picture of what, as will be discussed below, was an entirely inadequate negotiation between Simon and CP. At the heart of this process was an email exchange between Filer and Ottensoser on May 17, 2001, which clearly outlines the manipulative way in which CP envisioned the negotiation process with the special committee, even at this very early stage. In Filer's words, in an email seeking to "confirm the process," CP would first make a "lowish bid" to the board of IIC, which would respond by

[44] Tr. 825:14-20.
[45] Tr. 830:6-8.
[46] Tr. 830:12-24.

hiring Jesup & Lamont, named specifically, to evaluate the bid. Jesup & Lamont was then expected to recommend a bid that was a "bit higher." CP would meet that new price, Jesup & Lamont would approve it, and the door would then be open for CP to make its tender offer for the shares of IIC.[47] Ottensoser's response to this frank outline was clear. As he wrote, "I just spoke to Michael [Zarriello] again and he confirms that this is the process."[48] Asked at trial about this email, Filer equivocated by saying that the term "lowish" in the email meant, to him, a "realistic bid with room to maneuver,"[49] in the context of the price that CP had paid previously for shares of IIC.[50]

The way the negotiation proceeded in the next several months confirms that CP adhered in spirit to the plan set forth in this email. In accordance with CP's obvious wishes, and the fact that Jesup & Lamont had been afforded advance access to Simon and had been recommended by the special committee's conflicted lawyer, Ottensoser, Jesup & Lamont was hired as the special committee's financial advisor on June 22, 2001. Filer confirmed this by sending a retainer check to Zariello on June 26, and by faxing the signature page of Jesup & Lamont's engagement letter to Zarriello on the same day.

---

[47] JX 36.
[48] *Id.*
[49] Tr. 719:14-15
[50] Tr. 719:18-19.

Concurrently, CP made its "lowish" initial offer for IIC, dropping the previously authorized $13 price, about which Simon had full knowledge,[51] to a new price of $10 per share.[52] At trial, Filer explained this decision as a result of a conversation with Schreier.[53] In essence, the two had decided to lower the price because they felt that $10 was "the price that we would wish to start this process,"[54] leaving room to negotiate later. This conversation was confirmed in a letter issued by Schreier on June 22, 2001 informally announcing the transaction, noting that CP intended to "commence a tender offer shortly for any and all of the Common Shares, other than those beneficially owned by [CP], for $10 per share, net to seller in cash."[55]

In the following several months, Jesup & Lamont conducted a valuation of IIC, purportedly for the special committee. This process involved considerable interaction between Simon and the professionals at Jesup & Lamont, with Simon suggesting various alternative ways of valuing IIC that Jesup ultimately rejected.[56] In order to gather information, Jesup & Lamont were also engaged in discussions with Filer. Filer testified that he acted as a conduit for financial information to be

[51] Tr. 819:15-24.
[52] Tr. 820:6-7.
[53] Tr. 728:5-8.
[54] Tr. 728:9-12.
[55] JX 4.
[56] Tr. 841-843; JX 24.

prepared for the investment bank.[57] Apparently unbeknownst to Simon, however, Filer was also receiving significant information from Jesup & Lamont.[58] Specifically, Filer testified under cross-examination that he received draft valuations from Jesup & Lamont of IIC's subsidiaries or investments.[59] Filer also testified that he received Jesup & Lamont's valuation ranges for IIC.[60] These were shared in a memorandum sent to certain members of CP's board of directors, including Schreier, on August 8, 2001.[61] Throughout the entire process, therefore, CP had almost full access to the special committee's valuation numbers and analysis.

On August 7, 2001, Simon told Filer during a telephone conversation that he could not recommend an offer of $10 per share to the stockholders. Simon asked CP to increase its offer to something above $10.30, the midpoint of the preliminary valuation range determined by Jesup and Lamont.[62] The next day, Filer issued a report to certain members of the CP board, again including Schreier, which set out Simon's position at that point. As Filer explained,

> Al Simon recognizes that the $10 offer is fair, but would be more comfortable if he felt he had succeeded in raising it. A further $0.50

[57] Tr. 732:17-21.

[62] Tr. 858; JX 29.

> would be sufficient to satisfy him in this regard. However, a decision on the offer price can be delayed until the Board meeting.[63]

Filer testified that he had no independent knowledge of how he knew that an extra $0.50 would satisfy Simon aside from a reference in his handwritten notes of the August 7 telephone call.[64] At first, Filer refused to raise CP's offer.[65] Indeed, Simon testified at trial that the period between August 2001 and September 10, 2001 was characterized by continued negotiations concerning any additional consideration over $10 per share that the IIC minority would receive in the tender offer. As Simon explained,

> I think it's just really a repeat of what I have said, that - my looking for reasons to get CP to make a higher bid and CP telling me that they have done their work, this is what the company is worth to them, and that is all they are going to pay for it.[66]

What followed is not entirely clear. On August 21, 2001, Filer produced another memorandum to the CP board confirming that CP would move its offer up to $10.50, as Simon had requested.[67] This memo also noted that Simon would definitely recommend the offer to the stockholders at the new price, and that Simon had almost finalized the fairness opinion with the investment bank.[68] But Simon

[63] JX 30.

[66] Tr. 857:11-16.
[67] JX 31.
[68] *Id.*

testified at trial that, in August, no such agreement had been reached. In Simon's view, the critical negotiation occurred on September 10, 2001, when Simon claims that he finally agreed to recommend the tender offer so long as it came in above the midpoint of the Jesup & Lamont valuation.[69]

What is clear, in any case, is that both Filer and Simon agreed on September 10, 2001 to the $10.50 per share tender offer price.[70] Based on this price, and supported by a fairness opinion by Jesup & Lamont,[71] the IIC board met later that day. Simon discussed the process leading up to the $10.50 offer, and then announced his decision to recommend the tender offer to the stockholders as fair from a financial point of view.[72] The full IIC board, however, decided not to make a recommendation with respect to the tender offer.[73]

E. The CP Tender Offer Is Initiated And Comes Up Short

Although the CP board had approved an immediate tender offer approach, matters were understandably delayed by the tragic events of September 11. It took until October 15, 2001 for CP to formally commence the tender offer. According

[69] JX 858:1-12.
[70] Tr. 859:1-8.
[71] JX 32.
[72] Tr. 860.
[73] "However, because of the conflict of interest as a result of the fact that a majority of the Company's directors consist of principals and management of CP Holdings, the Board will not make a recommendation to the stockholders of the Company with respect to the Tender offer." JX 39.

to the tender offer statement filed with the SEC, the offer was designed with the intention of effectuating a merger between IIC and CP after it terminated.

> On May 24, 2001, the Board of Directors of CP Holdings met to discuss the possibility of launching a tender offer for all of the Common Shares that CP Holdings did not already own . . . . The Board was advised of the requirements under Delaware law of long- and short-form mergers, and since CP Holdings already owned nearly 80% of the Company's outstanding common stock, the Board authorized the commencement of a tender offer for all the outstanding shares of the Company, with the intention of receiving at least enough stock to bring CP Holdings' percentage of ownership up to 90% to thus enable CP Holdings to effectuate a short-form merger with the Company.[74]

Although CP clearly hoped to reach the 90% threshold for short-form merger under 8 *Del. C.* § 253, the tender offer resulted in only 20% of the unaffiliated shares being tendered,[75] despite three extensions of the tender offer. This meant that CP's ownership of IIC increased from 78.8% to 84.1%. Unable to garner sufficient support in the tender offer to acquire the remaining shares of IIC by short-form merger, CP determined to proceed with the merger in some other way.[76]

F. The Merger

After the tender offer was closed, CP decided to move forward immediately with the second step of the merger, after a discussion between Schreier and Filer in

[74] JX 42.
[75] JX 7.
[76] JX 111; JX 113.

which the two ruled out the possibility of lowering the offered consideration as a result of the altered international situation.[77] The CP board met on January 24, 2002, in part to confirm that the merger process was going forward. The minutes of that meeting specifically note that Filer hired the law firm Shaw Pittman to provide a "second opinion on the work being done by Sam Ottensoser."[78] There is no indication, however, that Shaw Pittman ever conducted work in an independent way for the special committee.

Filer forwarded a document to Simon on January 25, 2005 summarizing the performance of the businesses within the IIC group since the preparation of the Jesup & Lamont report.[79] This document pointed out various challenges facing the IIC group companies in the coming year, including fallout from the terrorist attacks, and concerns about the strength of various currencies, especially the Hungarian forint (HUF), in IIC's portfolio.[80] In a conference call on that same day, having provided Simon with the aforementioned information, Filer discussed the merger with Simon. Specifically, he told Simon of the need to include the "independent Director's view on the fairness of the price offered per share" in the proxy materials sent to IIC stockholders in connection with the merger and

[77] Tr. 755:17-24; Tr. 756:1-10.
[78] JX 113.
[79] Tr. 748:3-6.
[80] JX 70.

explained the need for Simon "to be happy that the offer remained fair from a financial point of view."[81]

In response to Filer, Simon conducted no new research as to the fairness of the transaction. Indeed, Simon's view seems to have been that the merger transaction he was asked to approve was substantively the same transaction as he had approved on September 10, 2001. Asked whether he was retained as a member of the special committee in connection with the merger, for example, Simon answered:

> I'm sorry. I'm confusing the two . . . [the merger] [w]ith the tender offer . . . I believed that my responsibility continued – as long as there were independent shareholders and – this is sort of like a continuation of the same transaction. I was still applying due diligence to what was happening at the companies. I was keeping up with what was going on. I think I assumed at the time that I still was responsible . . . to act in the interests of the independent shareholders, although maybe legally, I was not.[82]

Apparently acting on the belief that he had already satisfied his duty to represent the minority, Simon relied "solely" on information given to him by Filer in the course of the aforementioned conversations.[83] Specifically, Simon concluded that he was prepared to recommend the merger without receiving any new fairness opinion, and without conducting any new formalities on behalf of the minority

[81] *Id.*
[82] Tr. 880:11-20.
[83] Tr. 882:22.

even in light of the failure of the tender offer to attract more than a scant number of tenders. When asked during trial why he felt no need for further information, given the events of September 11, 2001, Simon explained that he was concerned that new information would reflect a lower price for IIC than the merger price.[84] In any case, Simon testified that he concluded that the merger too was fair.[85] As a result, a meeting of the IIC board was held on February 1, 2002 to review and vote on the merger. Simon was not in attendance, and did not personally vote on the merger,[86] but did give his proxy to Filer to vote in favor of the transaction.[87] The IIC board approved the combination on the same day.[88] The IIC stockholder meeting was held on March 27, 2002, and the merger was officially approved by CP's vote.

II.

The plaintiff makes two primary arguments. First, in the entire fairness class claim, Gesoff argues that the merger between IIC and CP described above was a product of unfair dealing, and produced an unfair price. Therefore, he demands that the court award him damages for those failures of fiduciary duty on the part of the CP and IIC boards. Second, in the statutory appraisal action, the plaintiff

[84] Tr. 873-883; Tr. 884: 5-10.
[85] Tr. 872.
[86] Tr. 874-75.
[87] JX 164.
[88] JX 169.

presents the expert report of David N. Fuller of Value Incorporated in support of his position that the fair value of IIC's common stock should be determined by this court to be $20.17 per share. The appraisal action has been brought on behalf of dissenting IIC stockholders who held 402,476 shares, somewhat less than half of the shares owned by class members.[89]

The defendants argue in response that the merger was entirely fair because any irregularities in the merger dealings did not affect the fairness of the merger price. Most importantly, the defendants argue, the events of September 11, 2001, which they claim necessarily depressed the value of IIC, made the merger price, determined before that date, "more than fair." Second, the defendants rely on the expert report of Neil J. Beaton to assert that the fair appraisal value of IIC was somewhere between $6.22 and $12.98 on a per share basis as of March 27, 2002, with a midpoint of $9.60 per share. Third, Simon argues that the plaintiff's claims

[89] The defendants contend that those stockholders who accepted the merger consideration or who voted in favor of the merger, acquiesced in the transaction, and are therefore barred from recovery. In this context, the court is well aware of the apparent inconsistency between *Bershad v. Curtiss-Wright Corp.*, 535 A.2d 840 (Del. 1987), which held that well-informed stockholders who accept merger consideration cannot seek an entire fairness remedy, and more recent cases in this court which hold otherwise. *See In re JCC Holding Co. Inc. S'holders Litig.*, 843 A.2d 713 (Del. Ch. 2003); *In re Best Lock Corp. S'holders Litig.*, 845 A.2d 1057 (Del. Ch. 2001); *but see Norberg v. Security Storage Co.*, 2000 Del. Ch. LEXIS 142 (Del. Ch. Sept. 19, 2000) (holding that the rule in *Bershad* precluded recovery in a minority squeeze out transaction). Whether it is because minority stockholders who are squeezed out in an unfair transaction cannot, by definition, be well informed, or because, as this court has held, *Kahn v. Lynch* implicitly overruled the holding in *Bershad*, it seems extremely unlikely to the court that Delaware law denies a remedy to minority stockholders battered into accepting unfair merger consideration.

against him, even if supported by the evidence adduced at trial, constitute at most duty of care violations. Therefore, Simon argues, those claims are barred against him personally by IIC's Section 102(b)(7) provision, as provided for in Article Tenth of the IIC charter.

III.

A. The Entire Fairness Standard

It is well established that a statutory long-form merger between a parent and a subsidiary invokes the entire fairness standard of review.[90] The usual deference courts give to corporate boards of directors, as embodied in the business judgment rule, is inappropriate in these circumstances because the self-interested directors have an interest that diverges from that of the minority stockholders,[91] and, to the extent that the minority resists, the process is entirely suffused with the parent's coercive power.[92] Entire fairness review, in other words, serves to protect the minority stockholders where the law's normal range of protections are insufficient.

The meaning of the phrase "entire fairness" was definitively set out by the Supreme Court in *Weinberger v. UOP, Inc.*[93] According to the now familiar words

[90] *Kahn v. Lynch Commc'n Sys.*, 669 A.2d 79 (Del. 1994) (*Kahn II)* .
[91] *Citron v. E.I. Du Pont de Nemours & Co.*, 584 A.2d 490 (Del. 1990); RODMAN WARD, EDWARD P. WELCH, & ANDREW TUREZYN, FOLK ON THE DELAWARE GENERAL CORPORATION LAW, § 251.6 (2005 ed.).
[92] *In re Cysive Inc. S'holders Litig.*, 836 A.2d 531, 547 (Del. Ch. 2003).
[93] 457 A.2d 701 (Del. 1983).

of that opinion, entire fairness has two aspects: fair dealing and fair price. This test, however, is not a "bifurcated one between fair dealing and price. All aspects of the issue must be examined as a whole since the question is one of entire fairness."[94] In the specific context of a merger between a parent and a subsidiary, this review requires the parties to be assiduous in fulfilling their fiduciary duties. Not even an honest belief that the transaction was entirely fair will be sufficient to establish entire fairness. Rather, the transaction itself must be objectively fair, independent of the board's beliefs.

1. The Legal Standard Of Fair Dealing

Most of the cases in which Delaware courts have closely examined the procedural safeguards surrounding parent-subsidiary mergers have focused on how a defendant can shift the burden of proving entire fairness from itself to the plaintiff.[95] Such differentiations are most important at preliminary stages of

[94] *Id.* at 708 ("Although perfection is not possible, or expected, the result here could have been entirely different if UOP had appointed an independent negotiating committee of its outside directors to deal with Signal at arm's length. Since fairness in this context can be equated to conduct by a theoretical, wholly independent, board of directors acting upon the matter before them, it is unfortunate that this course apparently was neither considered nor pursued. Particularly in a parent-subsidiary context, a showing that the action taken was as though each of the contending parties had in fact exerted its bargaining power against the other at arm's length is strong evidence that the transaction meets the standard of fairness.") (internal citations omitted).

[95] As this court has recently observed, the entanglement between the substantive doctrine of entire fairness and the burden-shifting force of a special committee or an informed majority of the minority vote means that defendants must act like they have the burden of persuasion throughout the entire trial court process. *In re Cysive*, 836 A.2d at 549.

litigation. By the time a case comes to trial, however, the standards for shifting the burden of entire fairness, and those factors establishing fair dealing, are highly intertwined. What can shift the burden of entire fairness can also establish fair dealing.[96] The following summary of our courts' entire fairness cases, therefore, assumes that indicators of fairness are interchangeable between those two doctrinal divisions.[97]

The Supreme Court observed as early as *Weinberger* that the establishment of an independent special committee can serve as powerful evidence of fair dealing. Since that case was decided, parties have relied increasingly on such committees to prove entire fairness, seeking to assure themselves that important transactions will withstand scrutiny. This trend has necessarily occasioned attention from our courts. If the parties in a parent-subsidiary merger decide to proceed by establishing an independent bargaining structure through a special committee, the court takes that establishment seriously, and examines the special committee process closely for indicators of fairness. To summarize Delaware cases, the goal of the process established by the board of the subsidiary must be to

[96] *Id.*

[97] To the extent that burden shifting and the ultimate determination of fairness are separate inquiries at trial, the court finds that the burden of proving entire fairness lies with the defendants in this case.

come as close as possible to simulating arm's-length bargaining with the parent.[98] For obvious reasons, a transaction that is by its terms dependent on the special committee process will struggle to evidence fair dealing if that process withers under scrutiny.

The court's investigation of a special committee process for fairness is highly fact intensive, and our courts commonly look to a range of well known factors to evaluate fair dealing. A comprehensive discussion of all the possible ways to prove fair dealing in a parent-subsidiary context in this opinion would not be practical. Several of these factors, however, are of importance in this case, or are especially central to any evaluation of a special committee. These factors are discussed briefly below.

As a threshold matter, the composition of the special committee is of central importance. Members of a special committee negotiating a parent-subsidiary merger must, of course, be independent and willing to perform their job.[99] This independence is the *sina qua non* of the entire negotiation process. The court

---

[98] *Rabkin v. Olin Corp.,* 1990 Del. Ch. LEXIS 50, *18-19 (Del. Ch. Apr. 17, 1990) (in order to shift the burden of proving entire fairness, a "special committee must have real bargaining power that it can exercise with the majority shareholder on an arms' length basis").

[99] This court has held, for example, that leaving negotiations in the hands of directors who are not independent is evidence of unfairness. *Sealy Mattress Co. v. Sealy, Inc.*, 532 A.2d 1324, 1337 (Del. Ch. 1987) (noting, in the context of a case that set out a "textbook study of how one might violate as many fiduciary precepts as possible in the course of a single merger transaction," that the "directors were not independent and that they 'functioned in a ministerial capacity to carry out the parent [corporation's] bidding'").

necessarily places more trust in a multiple-member committee than in a committee where a single member works free of the oversight provided by at least one colleague.[100] But, in those rare circumstances when a special committee is comprised of only one director, Delaware courts have required the sole member, "like Caesar's wife, to be above reproach."[101]

In addition to being independent and, preferably, having more than one member, a well constituted special committee should be given a clear mandate setting out its powers and responsibilities in negotiating the interested transaction. Evidently, this mandate should include the power to fully evaluate the transaction at issue, and, ideally, include what this court has called the "critical power" to say

[100] Vice Chancellor Hartnett's common sense intuition that two heads are better than one in the context of special board committees has since been bolstered, in some sense, by economic and empirical research. *See, e.g.*, Stephen M. Bainbridge, *Why a Board? Group Decisionmaking in Corporate Governance*, 55 VAND. L. REV. 1, 12 (2002) ("In sum, groups appear to outperform their average member consistently, even at relatively complex tasks requiring exercise of evaluative judgment . . . . Corporate law's strong emphasis on collective decisionmaking by the board thus seems to have a compelling efficiency rationale.").

[101] The source of this formulation is, perhaps, somewhat more obscure today than when it first entered our law. In short, when Julius Caesar was asked why he chose to divorce his wife after a false accusation of adultery, Caesar's laconic answer is said to have been that "Caesar's wife must be above suspicion," or as it is usually rendered, "Caesar's wife must be above reproach." PLUTARCH, PLUTARCH'S LIVES 206 (Arthur Hugh Clough ed., John Dryden trans., 2001). Since Vice Chancellor Hartnett first cited Caesar's famous aphorism in *Lewis v. Fuqua*, 502 A.2d 962, 967 (Del. Ch. 1985), in the context of a special litigation committee, it has been used repeatedly to describe the responsibilities of directors charged with managing committees of the sort at issue here.

"no" to the transaction.[102] The controller's commitment to leave the essential fate of the transaction in the hands of the special committee is a significant one, because it ensures that the merger offer is not negotiated in the shadow of punitive action by the controller if the minority resists the merger. Our courts have also noted that, when questioned, members of a special committee should be able to articulate the extent of their authority.[103] The source of that requirement, simply enough, is the common sense principle that no mandate, however clear, is sufficient if the special committee does not understand its considerable powers.

As has been repeatedly held, special committee members should have access to knowledgeable and independent advisors, including legal and financial advisors.[104] Two recent cases clearly illustrate the adverse consequences of depriving the special committee of such support.

---

[102] *In Re First Boston, Inc. S'holders Litig.*, 1990 Del. Ch. LEXIS 74, *20 (Del. Ch. June 7, 1990) ("It is that power [to say no] and the recognition of the responsibility it implies by committees of disinterested directors, that gives utility to the device of special board committees in charge of control transactions."); *Kahn v. Lynch*, 638 A.2d 1110, 1119 (Del. 1994) (*Kahn I)*.
[103] *In Re Tele-Commc'ns, Inc. S'holders Litig.*, 2005 Del. Ch. LEXIS 206, *37 (Del. Ch. Dec. 21, 2005) ("A special committee's clear understanding of its own mandate is an important factor facilitating the knowledgeable and careful fulfilment of its purpose."); *Clements v. Rogers*, 790 A.2d 1222, 1241 (Del. Ch. 2001) (holding that a special committee's misunderstanding of its purpose and mandate could be combined with other factors to show that a special committee's effectiveness was "compromised from the get-go").
[104] *In Re Tele-Communications*, 2005 Del. Ch. LEXIS at *41 ("The effectiveness of a Special Committee often lies in the quality of the advice its members receive from their legal and financial advisors.")

In *In Re Tele-Communications, Inc. Shareholders Litigation,*[105] this court denied summary judgment for the defendants in an entire fairness action. The transaction at issue raised entire fairness concerns because the company's equity structure was divided into three groups of paired stock series, each group tracking one of the company's three operating divisions. For each division's two series of stock, the A shares were entitled to one vote per share, and the B shares were entitled to ten votes per share. When the defendant company (TCI) entered into merger negotiations with AT&T, TCI's board decided to establish a special committee to ensure fairness, in view of the fact that certain B series stockholders insisted on receiving a premium for their shares in any transaction. The special committee retained the same legal and financial advisors as TCI when evaluating the claim. Although the court's ultimate decision was based on a broad range of troubling facts about the negotiation process, the court noted that a special committee's decision to use the legal and financial advisors already advising the parent "alone rais[ed] questions regarding the quality and independence of the counsel and advice received."[106] This was particularly true where, as in that case, the financial advisor with the dual role was motivated by an incentive fee structure to close the deal on behalf of the full board, thus further splitting its loyalties.

---

[105] *Id.*
[106] *Id.* at *41.

Similarly, in *In re Emerging Communications, Inc. Shareholders Litigation,*[107] this court found that a special committee had been prejudiced when its financial and legal advisors were co-opted by the parent. As the court observed in that case, the special committee was prejudiced by the fact that the advisors best placed to assist the special committee were made unavailable by the parent itself.[108] The point, critically, was not that other advisors were unqualified, but that the parent's action in robbing the subsidiary of these trusted advisors betrayed the unfairness of the transaction itself.[109]

Structural protections embedded in the merger offer are also of some importance in establishing the fair dealing aspect of entire fairness. As the Supreme Court held in *Kahn v. Lynch,* a majority of the minority voting provision, even without an independent special committee, can shift the burden of entire fairness to the plaintiff.[110] Similarly, this court has suggested repeatedly that the presence of a non-waivable "majority of the minority" provision is an indicator at

[107] 2004 Del. Ch. LEXIS 70 (Del. Ch. May 3, 2004).
[108] *Id.* at *119.
[109] *Id.* ("[T]he board–or at the very least the Special Committee–should have insisted that Prudential and Cahill recuse themselves from the negotiations. By [failing to do so], ECM was deprived of the advantage of knowledgeable advisors. That advantage was conferred upon ECM's controlling stockholders and to-be adversary in the transaction–Prosser. There is no evidence that either the full board or the Special Committee ever considered that issue.").
[110] *Kahn I,* 638 A.2d at 1117.

trial of fairness[111] because it disables the power of the majority stockholder to both initiate and approve the merger.[112]

Finally, the discussions between the parent and the special committee should be conducted in a way that is consistent with arm's-length negotiations. These negotiations need not, of course, be a "death struggle."[113] But they should be vigorous and spirited, and provide evidence that the special committee and the parent are not colluding to injure the minority stockholders. At a minimum, the special committee should have control over its own sources of information and should have the loyalty of its advisors throughout the process.[114]

While this list of factors is not exhaustive, the lesson it should collectively teach to transactional planners faced with conducting such a process is unmistakably clear. If a parent seeks to satisfy the high standard of entire fairness by establishing a special committee, its burden to show fair dealing cannot be satisfied by orchestrating a stylized mockery of arm's-length negotiation.[115] In

---

[111] *Jedwab v. MGM Grand Hotels*, 509 A.2d 584, 599-600 (Del. Ch. 1986) (a majority of the minority provision "typically constitute[s] indicia of fairness").

[113] *In re Cysive*, 836 A.2d at 543.
[114] *Id.* at 554. ("Once [the parent] became a buyer, [the investment bank's] reporting authority went straight to the special committee, and it acted as a vigorous negotiator on the committee's behalf.").
[115] *See, e.g*, *Rabkin*, 1990 Del. Ch. LEXIS 50.

order to satisfy entire fairness, the committee must act with informed diligence, and seek the best result available for its constituents, given the facts at hand.

2. Was The CP Merger With IIC The Product Of Fair Dealing?

CP's defense of fair dealing is necessarily based on the purportedly arm's-length negotiating process it instituted in order to establish the merger price.[116] Other factors that have shown fair dealing in the past are simply inapplicable here. Neither CP nor IIC claim to have sought alternative, third-party buyers for the company,[117] for example, or to have undertaken any other action that might make the CP/IIC merger process the product of fair dealing. In sum, therefore, the question of whether this merger evidenced fair dealing is entirely dependent on the quality of the negotiations between Simon, as the sole member of the special committee, and the team at CP.

---

[116] The court does not reach the plaintiff's numerous disclosure claims. Simply put, while it is settled law that adequate disclosure is part of the duty of fair dealing, FOLK *supra* note 91, at § 251.6.3.6, the alleged disclosure violations in this case are entirely overshadowed by the plaintiff's substantive allegations of unfair dealing. Even if the defendants had disclosed all material facts in their proxy materials, the court would not be persuaded that the entirely coercive CP/IIC merger, which never depended on the minority's vote, would have been any more fair. *See e.g., Kahn II*, 669 A.2d at 89 (holding that a finding of adequate disclosure in a parent-subsidiary merger was persuasive evidence of entire fairness, because "although the merger was not conditioned on a majority of the minority vote . . . more than 94 percent of the shares were tendered in response to Alcatel's offer").

[117] *In re Cysive*, 836 A.2d at 553 (discussing factors that supported the conclusion that an interested transaction met the "exacting standard of entire fairness," the court observed, "first, the decision to enter into the Snowbird Agreement was preceded by an active and aggressive search for a third-party buyer").

It is unfortunate, therefore, that the process designed by Schreier, Filer, and the rest of the CP board to effectuate the merger between CP and IIC in the case *sub judice* fails at the very threshold to establish fair dealing. Indeed, redolent as they are with cynicism and corruption, the facts in this case serve as a singular example of the pitfalls inherent in organizing any sort of self-dealing transaction. This court cannot allow so clear a breach of fiduciary duty to escape without remedy.

The flaws in the special committee process begin with the appointment of Simon as the sole member of the committee. Although the court acknowledges that no other independent director was available, and that Simon was independent of CP, this lone appointment necessarily causes the court to examine the entire process with a higher level of scrutiny, and equally causes the court to require more of Simon than it would had he been joined by other independent directors. Unfortunately, the facts of this case serve to illustrate exactly why a single-member special committee has been thought such a worrisome portent of unfair dealing. On numerous occasions during the course of negotiations, a second director might have ameliorated the process by counseling Simon to think again, or by making it more difficult for CP to exert the control it exerted over the special committee. But that moderating influence was never available.

At the heart of the court's conclusion that the negotiation process was flawed is the fact that Simon's mandate as a special director, whether embodied by the June 2001 IIC board consent or otherwise, was fatally incomplete. The mandate entirely failed to set out a clear range of authority for Simon in terms of his power to approve or disapprove the merger. The plain language of the June 2001 board resolution allows Simon only to provide a vague recommendation as to the transaction, a power that Simon was unsure included any right to veto the merger.[118] This seemingly willful vagueness in Simon's mandate, and of CP's authority to proceed with or without minority approval, sits in contrast to those cases where special committee negotiations have been held to help establish entire fairness.[119]

Additionally, and somewhat uniquely, the record in this case evidences the parties' deep confusion about the nature of the contemplated transaction. The evidence shows clearly that when this transaction was first negotiated during the summer and fall of 2001, the parties all envisioned a tender offer followed by a short-form merger. It is unclear whether they considered the consequences of the fact that the tender offer could fail to provide CP with 90% ownership of IIC. The

[118] Tr. 833:7-13.

[119] *See, e.g.*, *In re Cysive*, 836 A.2d at 554 (noting, in the course of finding that a transaction evidenced entire fairness, a fully empowered special committee was an important factor in that conclusion) ("Second, once the Snowbird offer was made, a special committee was set up that had *full authority* to negotiate with Carbonell on Cysive's behalf regarding that transaction.").

tender offer materials, as described above, show the same intent when the offer was initiated in October 2001, although those documents evidence CP's intention to later consummate an unspecified merger regardless of the result of the tender offer. At this point, therefore, CP was in no sense contemplating the type of long-form merger transaction our courts usually are asked to assess, characterized by a full negotiation between the parent and the subsidiary's special committee, the signing of an agreement of merger, and a possible tender offer in connection with that finalized transaction. Rather, CP appears to have initiated a process that was in some ways like the unilateral tender offer process approved in *In re Siliconix Shareholders Litigation*[120] and in *In re Pure Resources, Inc. Shareholders Litigation*, but mimicked the traditional merger route by including the subsidiary intimately in the process even before the tender offer was officially made.[121]

When the tender offer failed, however, the short-form merger became impossible. It was only then that CP decided to proceed definitively with a long-form merger. It chose to do so, however, without undertaking any further formalities to ensure that this somewhat new transaction would be fair to the minority stockholders, other than having Filer, apparently on behalf of CP, hire

[120] 2001 Del. Ch. LEXIS 83 (Del. Ch. June 19, 2001).
[121] The court need not reach the question of exactly what level of scrutiny would have attached to that transaction had the tender offer succeeded in driving CP's ownership of IIC over 90%. Certainly, the lack of a non-waivable majority of the minority provision in the October 15, 2001 tender offer would have raised serious questions about its lack of coercion.

Shaw Pittman to review Ottensoser's work. The court cannot be sure whether CP proceeded in this way because it felt that the negotiations between Simon and the special committee with regard to the initial tender offer were sufficient to establish the fairness of the merger or because it simply failed to understand that the change in transactional form could, at least, have some consequences in terms of judicial scrutiny. Simon's testimony, in any case, betrays a deep confusion as to the distinction between a tender offer and a merger. Whatever the truth of the matter, the validity of the merger approved on March 27, 2002 rests primarily on work done months earlier, formally to approve a tender offer approach. That disjunction, never addressed internally either by IIC or CP, casts serious doubt on whether Simon's inadequate mandate was even intended to apply to the later long-form merger, or whether his role as a special committee director was really designed exclusively to evaluate the tender offer.

The court does not mean to imply that a change from one transactional form to another requires a wholesale retreading of ground previously covered, and corporations can change their minds as to how they choose to structure fundamental transactions, even in mid-stream.[122] But neither Simon's testimony,

[122] *See e.g., Paramount Commc'ns, Inc. v. Time, Inc.*, 571 A.2d 1140 (Del. 1990).

nor any other part of the record, convince the court that the parties in this case acted from the beginning with a view toward a long-form merger.

Even if Simon had clearly been granted the power to say "no," his efforts were crippled by the special committee's complete lack of independent legal and financial advice. Doubtless, Simon's mandate formally gave him the authority to hire financial and legal advisors to evaluate the tender offer. But the reality of these appointments was that both the special committee's financial and legal advisors were handpicked by CP. Jesup & Lamont were effectively selected by CP and Filer, having been contacted months earlier, and having essentially been promised employment by Filer rather than the special committee. That conflict of interest robs Jesup & Lamont's fairness opinion of its value as an indicator of fairness, and is itself an indicator that the parties did not structure the process in a way that was entirely fair. The situation in this case, in sum, is of a more alarming kind than the dual representation in *In re Tele-Communications, Inc*., where the skewed incentives of the special committee's financial advisor merely suggested possible disloyalty. Here, as shown indisputably at trial, Jesup & Lamont were actively and persistently disloyal to the special committee and to its aims of ensuring a fair transaction for IIC's minority stockholders.

Simon's decision to retain Ottensoser as the special committee's legal counsel was, if anything, even more damaging to the special committee's duty to

be well and independently informed. Ottensoser was IIC's outside counsel, was beholden for his job to a board entirely dominated by CP, and had indeed been advising CP on its approach to the tender offer from the beginning. No reasonable observer could have believed that Ottensoser was an appropriate independent counsel for the IIC special committee. It is most unfortunate, therefore, that Simon accepted Ottensoser's frankly incredible statement that his dual representation of IIC and the special committee presented no conflict of interest. Both Ottensoser's work as counsel for the IIC special committee, and Simon's blithe acceptance of his representation, are evidence of unfair dealing. Indeed, as the Supreme Court observed in a similar case, the fact that the parent's "General Counsel suggested the name of appropriate legal counsel to the Special Committee, and that individual was promptly retained," was a notable indicator that the special committee's process was not to be trusted.[123] Here, CP ensured its control over the special committee process by the simple expedient of inserting its own outside counsel directly into the opposition camp.[124]

---

[123] *Kahn v. Tremont,* 694 A.2d 422, 429 (Del. 1997).

[124] *In re Cysive,* 836 A.2d at 531, presents an important limitation on the court's suspicion as to advisors shared between the parent or subsidiary and the special committee. In that case, the subsidiary in a proposed merger between a parent and a subsidiary formed a "pristine" special committee composed of two independent directors. The committee then retained the same investment bank as its own advisor as the subsidiary had retained in its initial, failed, efforts to sell the company to a third party. The court found that this dual representation did not conflict the investment bank, because the bank's responsibilities now clearly ran to the special committee. As the court noted, "once [the parent] became a buyer, [the investment bank's] authority went straight to the special committee, and it acted as a vigorous negotiator on the

Even had Ottensoser been a fully independent advisor, the court is troubled by Simon's failure to investigate Ottensoser's qualifications to serve as transactional counsel. As Simon flatly testified, he considered no other lawyers, and in fact accepted CP's "appointment" of IIC's counsel as his own. But the ramshackle way in which the merger between IIC and CP was organized raises, to say the least, very serious doubts about Ottensoser's familiarity and competence to give a client advice about Delaware fiduciary duty law. This case, therefore, presents a situation in which the special committee's advisors are of little use in establishing the entire fairness of the merger transaction. As the Supreme Court observed in *Kahn v. Tremont*, "professional advisors have the ability to influence directors who are anxious to make the right decision but who are often *in terra [in]cognito.*"[125] No evidence in this case suggests that Simon was able to rely on his conflicted and inexperienced advisors for the help he so obviously needed.

The court can take no comfort, therefore, in the prophylactics established by the IIC board to ensure that the CP/IIC merger was the product of fair dealing. Regrettably, moreover, the negotiation between CP and IIC was rife with substantive unfairness.

---

committee's behalf." *Id.* at 554. The differences between that case, and the situation in this case, where the special committee's advisors fed information to the parent throughout the process, are substantial and determinative.

[125] 694 A.2d at 429.

Considered alone, the most disturbing email sent on May 17, 2001 between Ottensoser, Filer, and Zarriello is enough to cast a dark shadow over the entire merger process. The plain text of the message shows that CP had no intention of negotiating at arm's length with the special committee, but rather planned from the beginning to orchestrate an unfair process with a predetermined result. Even more problematic, the defendants were successful in carrying out the plan described in that letter. CP managed to dupe Simon into hiring Jesup & Lamont as his financial advisor. It then proceeded to make precisely the "lowish" offer envisioned in the email message, which Simon approved exactly as the letter said he would after a nominal increase in consideration. This email was not, in other words, a merely descriptive piece of work recording the process that CP hoped would transpire. It prescribed, in advance, the process that Jesup & Lamont would convince Simon to follow in the future on behalf of the subsidiary. As such, it is clear and startling evidence that the facade of arm's-length negotiation constructed by CP was nothing more than a sham.

Equally troubling, as was entirely obvious from trial, was the fact that information flowed freely from Jesup & Lamont to Filer at CP. The evidence shows that Filer knew Simon's private valuations of IIC at all relevant times. In fact, without Simon's knowledge, Filer was receiving a stream of draft valuation reports on which to base his negotiating strategy against the special committee.

This sieve-like separation between Jesup & Lamont and CP was obviously inimical to the special committee's power to negotiate a fair transaction. Any transaction that relies on so transparently corrupt a process cannot possibly be found to satisfy the high standard of entire fairness.

To summarize the collected weight of the evidence, the court finds that the process established by the defendants unilaterally imposed on the minority a price of the parent's own choosing, established a deceptive negotiation between the parties, and left the minority's putative special committee almost entirely powerless against its parent. This muddled, dishonest, process is emphatically not what the Supreme Court meant by fair dealing in *Weinberger*, and will not be tolerated here.

3. Fair Price

The defendants' arguments as to the procedural fairness of the underlying merger are halfhearted, and their papers walk the line of conceding that the negotiations between CP and IIC were, as this court has held, severely lacking in fairness.[126] But, the defendants argue, the price paid in the transaction was entirely fair. Not because $10.50 was a fair price at the time Simon approved the tender

[126] Def.'s Opening Post-Trial Br. at 36. ("[D]ue to poor legal advice from their American lawyer, IIC and CP Holdings were unaware of procedural safeguards . . . that would have insulated the going-private process from challenge . . . . Despite any procedural missteps of IIC and CP Holdings . . . the minority shareholders received more than fair value for their shares in the March 2002 merger.").

offer on September 10, 2001, but because September 11, 2001 intervened between Simon's approval and the merger.[127] The defendants argue that whatever the fairness of the price on September 10, the next day's cataclysm so depressed IIC's intrinsic value that $10.50 became a fair price. Indeed, the defendants' valuation expert testified at trial that IIC was worth only $9.60 on the date of the merger. Therefore, the defendants contend, the merger between IIC and CP was entirely fair.

As a logical matter, of course, the defendants are right to note that if $10.50 was even in the vicinity of a fair price on September 10, and if the defendants had shown that IIC was affected to the same extent as many American companies on September 11, then the fair price on September 12 would be somewhat below $10.50. Neither of these assumptions, coincide with the evidence presented in this case.

Initially, the defendants have frankly failed to show, as is their burden, that the September 11 terrorist attacks had a significant effect on IIC. The defendants' papers simply rely for this causal link on a combination of common sense and the

[127] Our courts have held that the correct test of fair price is that "upon a merger the minority stockholder shall receive the substantial equivalent in value of what he had before." *Rosenblatt v. Getty Oil*, 493 A.2d 929, 940 (Del. 1985). This "involves all relevant economic factors of the proposed merger, such as asset value, market value, earnings, future prospects, and any other elements that affect the inherent or intrinsic value of a company's stock." *Id.* Therefore, in general, the techniques used to determine the fairness of price in a non-appraisal stockholder's suit are the same as those used in appraisal proceedings. FOLK, *supra* note 91, at § 251.6.2.

fact that the CP board discussed lowering the offer price after the attacks but declined to do so. The evidence adduced at trial, however, does not support the conclusion that September 11 had a material affect on IIC's intrinsic value. The component of IIC most likely to be affected by September 11 was Danubius, a hotel company, and the largest part of IIC's valuation. Filer testified that September 11 certainly would have some effect on Danubius's business, because Americans would be less likely to visit Hungary and the Czech Republic.[128] But Filer also testified that Americans formed a smaller part of the business than other customers. And it is not at all obvious to the court that Germans, the key Danubius client, would stop vacationing in eastern Europe because of an attack on New York,[129] especially when, as Filer also testified, any decline in German tourism could just as easily be explained by the fact that the "German economy was starting to suffer from a recession"[130] which in fact much predated 2001. Danubius was also under pressure from increased competition in Hungary, due in part to government subsidies for spa hotels.[131] Further, as is clear, world currency trends leading to a strong Hungarian forint were hurting revenues.[132] The

[128] Tr. 751:4-10.
[129] Danubius Hotels' own Annual General Meeting report notes, in reference to the Czech hotels, that they "did not feel the September 11 events (as most of their guests are European, the majority is from Germany"). JX 156.

[131] Tr. 751:12-24.
[132] Tr. 750: 20-24.

defendants have produced no credible evidence that all of these developments were somehow localized to the time after the $10.50 price was approved by Simon. If Danubius was suffering, no evidence shows that September 11 was the cause.

Nor is it especially obvious to the court that IIC's other businesses were materially affected by September 11. It is hardly credible that Balton, a company operating in environments so risky that the defendants' own expert imposed a 12.5% specific country risk premium on its revenues,[133] was likely to become any more risk-prone due to terrorist attacks, or that its market for basic food products would decline substantially. And IIC's companies in Israel had surely already factored into their plans the extreme risk of terrorism on their front step, rather than thousands of miles away in New York. The second intifada, for example, began in September 2000, a full year before September 11 supposedly weakened ITE's and Zoko's prospects. None of this in any way is meant to minimize the effects of the attacks of September 11, which were felt so acutely and so intimately in this country. But the defendants have failed to show that they materially undercut the value of IIC, a company wholly based overseas.

Nor have the defendants given any reason for this court to believe that the price was fair on either side of September 11. Of course, the price of $10.50 per

[133] JX 311 at 39.

share was well below the $13 determined to be an acceptable price at the beginning of the process by CP, a fact known to Simon and Jesup & Lamont. It was below what the court determines an appraisal process would show. It was, as the evidence adduced at trial demonstrated, even below the illiquid market price of IIC shares. As this court has held in the past, reliance on a price determined in a thinly traded, illiquid, market is evidence of a price's unfairness.[134] Yet, in this case, the minority stockholders would actually have been better off had CP bought the shares in exactly that sort of market. The only indicator of fairness the price adhered to was Jesup & Lamont's valuations during the negotiation process. But as already discussed, Jesup & Lamont was deeply conflicted, ostensibly hired by the special committee, but plainly loyal to CP. In sum, the price of $10.50 per share for IIC was unfair, and is obviously so from the evidence adduced at trial. The defendants have failed to show that September 11 changed that basic truth.

C. Remedy

As this court has held in the past, and as affirmed by the Supreme Court, the calculation of damages in a consolidated entire fairness and appraisal action decided on the basis of entire fairness is a flexible process. As such, significant discretion is given to the court in fashioning an appropriate remedy. In

[134] *Seagraves v. Urstadt Property Co.*, 1996 Del. Ch. LEXIS 36, *22 (Del. Ch. Apr. 1, 1996).

determining damages, the court's "powers are complete to fashion any form of equitable and monetary relief as may be appropriate . . . ."[135] Or, as the Supreme Court has described this court's authority, "the Court of Chancery has greater discretion when fashioning an award of damages in an action for a breach of the duty of loyalty than it would when assessing fair value in an appraisal action."[136] Obviously, the court cannot award punitive damages. But the court can, and has in the past, awarded damages designed to eliminate the possibility of profit flowing to defendants from the breach of the fiduciary relationship.[137]

This case presents exactly such a situation. Plainly, IIC is extremely difficult to accurately value. It was difficult to value before September 11 due to its wide ranging holdings in highly divergent markets. It became, perhaps, even more difficult to value after September 11 because this court cannot know how to factor the effects of terrorism into a company already exposed to terrorism in Israel, unreliant on American visitors in Hungary, and otherwise exposed to sovereign risks in Africa that must far outstrip the effects of September 11. The court will, therefore, evaluate the reports of the experts produced by both sides, conduct its own DCF analysis based on the findings of those experts,[138] and test the

---

[135] *Weinberger v. UOP*, 457 A.2d 701, 714 (Del. 1983).
[136] *Int'l Telecharge v. Bomarko, Inc.*, 766 A.2d 437, 441 (Del. 2000).
[137] *Id.*
[138] As this court has recently noted, "[t]he DCF model of valuation is a standard one that gives life to the finance principle that firms should be valued on the expected value of their future cash

results of that financial analysis against the facts of this case in order to ensure that the value produced by that analysis is consistent with what the court believes is the proper measure of damages.[139] Because the court is convinced this process yields a value at least as high as a formal appraisal, the court will not perform a separate statutory appraisal, but instead, uses the value ascertained as a basis on which to compensate all individual and class plaintiffs.

1. DCF Analysis

The court concludes that the evidence adduced at trial does not support the conclusions of the plaintiff's expert, David Fuller. First, Fuller's opinion relies to a material extent on expert valuations, by Russell Kett for Danubius and Ofer Nir for the Zoko real estate. As proven at trial, however, both of these valuations are seriously suspect.

Kett is a managing director at HVS International, a firm based in London, Egland, specializing in the valuation and financial analysis of hotels.[140] He was

---

flows, discounted to present value in a manner that accounts for risk. The DCF method is frequently used in this court, and [the court] . . . prefer[s] to give it great, and sometimes even exclusive, weight when it may be used responsibly." *Andaloro v. PFPC Worldwide*, 2005 Del. Ch. LEXIS 125, *35 (Del. Ch. Aug. 19, 2005).

[139] Even in a case that is purely a matter of statutory appraisal, this court retains considerable discretion to arrive at a fair value. *Union Ill. 1995 Inv. L.P. v. Union Fin. Group*, 847 A.2d 340, 356-57 (Del. Ch. 2003) ("I am free to consider all non-speculative elements of value, provided that I honor the fair value definition articulated by the Delaware Supreme Court. This does not mean that I must perform every conceivable valuation technique in the universe and then give some arithmetic weight to each of them. Rather, I am empowered to come up with a valuation, drawing on what I reasonably conclude is the most reliable evidence of value on the record.").

[140] Tr. 5:23-24.

hired by Fuller, on the plaintiff's behalf, to conduct a valuation of eight hotels owned by Danubius in Budapest, and the values that he derived for those hotels were incorporated into Fuller's valuation for that company, which is by far the largest component of IIC's overall value. Kett's testimony concerning his valuation report, however, led to serious suspicions regarding its reliability. Two of his most significant errors demonstrate particularly why the court can give no weight at all to his opinion.

The first of these errors concerns the franchise fee that the Budapest Hilton Hotel was required to pay to the international Hilton company for the privilege of using the well known brand name. As Kett forthrightly conceded in his initial report, that fee was necessarily part of any valuation of Danubius, and would reduce the company's value:

> The Hotel is operated under a franchise agreement with Hilton Hotels. We have not had sight of any of the terms of this agreement, nor are we aware of the fees payable to Hilton Hotels. We note that the fees in 2001 were approximately 7.7% of total revenue and have allowed this amount to increase with inflation in our projections.[141]

When Kett actually did the calculations to derive the value of the Budapest Hilton in his initial report, he inexplicably omitted this substantial expense,[142] thus greatly overvaluing the hotel. When this clear mistake became evident, Kett issued a

[141] JX 137 at 23.
[142] *Id.* at 24.

revision to his report purportedly fixing the error.[143] As Kett testified, this revision was meant to do nothing but correct the omission of the franchise fee.[144] At trial, however, it became clear that although Kett purported to have fixed the error in his calculations, he had somehow made yet another mistake. This time, although his calculations included a franchise fee, that fee was self-evidently too low.[145] Again, therefore, Kett's valuation was plainly wrong, and overstated the Budapest Hilton's value.[146] When Kett was questioned about his mistakes at trial, he could provide no explanation and no indication of what the value of Danubius would be if he had done the calculation correctly.[147]

Kett's second serious error concerned the calculation of the sale value of the Budapest Hilton, which was incorporated into the tenth year net income of the hotel's DCF value.[148] In his original report, completely omitting the franchise fee, Kett had arrived at a sale value for the hotel of roughly 20.1 million HUF. His revised report, taking into account the (admittedly too low) franchise fee, replaced this figure with a new value of 19.5 million HUF,[149] a difference of approximately 600,000 HUF. When questioned at trial about how he arrived at this number, it

[143] JX 262.
[144] Tr. 59:12-16.
[145] Tr. 62:12-18.
[146] Tr. 63:17-20.
[147] Tr. 63:14-24.
[148] JX 137 at 25.
[149] JX 262 at 25.

became apparent that this revised calculation had no basis in fact. Rather, taking Kett's own calculations on their face, the correct sale value of the Budapest Hilton was about 16.4 million HUF,[150] a difference of about 3 million HUF from the number he incorporated into his calculations of Danubius's value. During cross-examination, Kett had no explanation whatsoever for this significant, and easy to conceal, mistake.[151] He conceded, however, that using the correct value would substantially lower his valuation.[152]

The court gave the plaintiff the evening after Kett's testimony to provide some further explanation of these two mistakes. What emerged the next morning were completely novel rationalizations of Kett's valuations, none of which Kett had so much as alluded to when he was questioned at trial.[153] Given that Kett repeatedly assured the court that he had been personally involved with the valuations at every stage,[154] the court finds it extremely unlikely that Kett could have simply forgotten these important aspects of his own valuation. Rather, as the court observed at trial, the more plausible explanation of Kett's failure to testify as to these explanations when he was first asked about them is that they were

[150] Tr. 65:6-12.
[151] Tr. 66:13-16.
[152] Tr. 67-1-14.
[153] Tr. 269-279.
[154] *See, e.g.*, Tr. 13.

concocted only after his mistakes became apparent. Kett's after-the-fact revisions to the plain text of his report, therefore, do nothing to reassure the court as to the reliability of his work, and are fatal to Fuller's report as it relates to Danubius.

Fuller also relied on Nir's valuation of certain pieces of real estate owned by ITE and used by Zoko in order to run its business. Specifically, these included a 23,199 square meter lot at Kiriyat Beyalik, and a smaller lot at Holon.
The court believes that Nir's valuation, and its use by Fuller, was more reliable than Kett's flawed analysis. When incorporating Nir's valuation into ITE's balance sheet, for example, Fuller was careful to use only the lower of the valuations found by Nir, and to eliminate any value for a third, smaller, property, for which Nir was unable to provide either a book or market value. Moreover, Nir correctly anchored his valuation at the low end of the price per square meter for somewhat similar properties in the Israeli market.[155] However, Nir's valuation was heavily based on documents that either could not be found and presented as evidence, or were produced only shortly before trial and were available only in Hebrew. This fact prejudiced the defendants and reduces the court's confidence in Nir's opinion. Further, Nir conceded that he had only been hired to conduct a "short version" valuation, and had not even been inside the properties he was

[155] Tr. 400:5-11.

meant to value.[156] On the whole, therefore, the court believes that Fuller's complete reliance on Nir's opinion was unjustified.

Additionally, the court finds that Fuller made certain other mistakes in his valuation analysis that render his testimony unreliable. In his initial report, Fuller relied on forecasts for the IIC constituent companies that differed considerably from the forecasts produced by management. Later, Fuller adopted Beaton's DCF analysis for Danubius, Agrimill, and Balton, apparently conceding that management analysis was a better basis for valuation than his own subjective valuations.[157] Further, he used country-specific risk premia that the court believes were too low for all the IIC constituent companies, incorrectly applied control premia to DCF analysis, and entirely discounted the existence of a small-stock risk premium in all circumstances.[158] These troubling weaknesses in Fuller's valuation mean that the court cannot adopt the plaintiff's fair value conclusion of $20.17.

In contrast, the court believes that the evidence adduced at trial substantially supports the report of the defendant's expert, Neil J. Beaton. Thus, the court will adopt it as the general framework for its own valuation. Specifically, the court believes that using a scenario analysis, averaging conservative and optimistic possibilities, is the most appropriate valuation technique for a company in the

[156] Tr. 161; Tr. 162: 13-15.
[157] Tr. 354:2-15.
[158] Tr. 243:21-24; Tr. 244:1-10.

somewhat uncertain position of IIC at the time it was to be valued. The plaintiff has, however, raised significant questions about certain aspects of Beaton's methodology. The court is convinced, therefore, that a proper valuation of IIC would require several material adjustments to Beaton's report. These are discussed in turn below.

a. Beaton's Application Of Specific-Company Risk Premia

A so-called "specific-company risk premium" (SCRP) is added to a discount rate when valuing an asset "to the extent that the company has risk factors that have not already been reflected in the general equity risk premium as modified by beta and the small company size premium."[159] In his value determination, Beaton applied a SCRP to all constituent parts of IIC. In valuing Danubius, for example, Beaton applied a SCRP of 3% under his optimistic scenario, and 2% under the conservative scenario. In his view, these premia were justified due to a variety of risks faced by the constituent companies of IIC not reflected in the industry beta. For Danubius, therefore, Beaton "identified the over-supply of hotels in the Budapest market, and in Hungary overall, [and a major cut-back in] capital expenditures."[160]

[159] SHANNON PRATT, THE LAWYER'S BUSINESS VALUATION HANDBOOK 125 (2000).
[160] Tr. 533.

As a commonly used reference in Delaware case law explains, "estimating [the SCRP] necessarily requires some subjective judgment on the part of the appraiser." But, as the same source explains, "the more the judgment is based on rigorous financial analysis, the more reliable the result is likely to be."[161] As a result of the inherent subjectivity of the SCRP, our courts have been ambivalent in their approach to the use of that premium. In *Union Illinois 1995 Investment L.P. v. Union Financial Group, Ltd.*,[162] for example, this court rejected the use of a company-specific risk premium, without purporting to decide in general whether such premia are appropriate to a financial analysis. Although, as the court noted, "investors do consider company-specific risks in calculating the cost they will use in investing capital, . . . pure proponents of CAPM argue that only systemic risk as measured by beta is relevant to the cost of capital and that company-specific risks should be addressed by appropriate revisions in cash-flow estimates."[163] This court has also explained that we have been "understandably . . . suspicious of expert valuations offered at trial that incorporate subjective measures of company-specific risk premia, as subjective measures may easily be employed as a means to smuggle improper risk assumptions into the discount rate so as to affect dramatically the expert's ultimate opinion on value."[164] As this court observed in *ONTI, Inc. v.*

[161] PRATT, *supra* note 159 at 121.
[162] 847 A.2d at 340.
[163] *Id.* at n.28.
[164] *Solar Cells, Inc. v. True N. Partners*, 2002 Del. Ch. LEXIS 38, *21 (Del. Ch. Apr. 25, 2002).

Integra Bank,[165] applying a company-specific premium in the *absence* of beta, "the concept of a company-specific risk premium is not so prevalent as [defendants] imply."[166] In accordance with that sentiment, our courts have not applied company-specific risk premia without fact based evidence produced at trial on which to base that discount.

In this case, the court finds that the defendants did not carry their burden of proving the appropriateness of company-specific premia for IIC constituent companies. As Beaton conceded at trial, his application of the SCRP was based almost entirely on his subjective beliefs as to the correct discount rate for each IIC company. He was unable, crucially, to point to specific financial analyses on which the court could rely to derive such a discount. Indeed, when discussing the correct SCRP to be applied to Balton, Beaton flatly admitted that he applied only 100 basis points of risk to that company because he felt that to add more would "be, actually, punitive at that point."[167] The court recognizes that some level of subjectivity is inherent in the calculation of SCRP. Beaton's analysis, however, is

---

[165] 751 A.2d 904, 920 (Del. Ch. 1999).
[166] *Id.* at 920; *see also, Hintmann v. Weber*, 1998 Del. Ch. LEXIS 26 (Del. Ch. Feb. 17, 1998) ("a company specific risk premium 'remains largely a matter of the analyst's judgment, without a commonly accepted set of empirical support evidence.' Thus, the factors relied upon in assessing an investment specific premium should be carefully explained to the court. As with all aspects of a party's valuation for purposes of Section 262, the proponent of a company specific premium bears the burden of convincing the court of the premium's appropriateness.") (internal citations omitted).
[167] Tr. 563:22-23.

unmoored to any objective financial analysis the court can reasonably evaluate, and thus cannot be the basis of what are, in aggregate, substantial discounts to IIC's fair value. In view of that conclusion, the court has applied no SCRP for any IIC constituent company, whether in the conservative or optimistic DCF scenarios.

b. Beaton's Application Of Small-Company Risk Premia

In deriving the value for IIC, Beaton applied small-company risk premia to all IIC constituent companies, relying on the Ibbotson Associates chart, *Size Premium in Excess of CAPM*, for guidance on incorporating the size effect into the equity discount.[168] Specifically, relying on that source, Beaton adds a small-size premium of 5.33% to the Weighted Average Cost of Capital (WACC) of all the IIC companies, including Danubius, arguing that all of these companies' market capitalizations fall within the tenth decile of the companies observed by Ibbotson.

In short, a small-stock premium arises from empirical observations that the common stocks of small firms generally provide higher mean returns than do the stocks of large firms.[169] Studies have also shown, however, that smaller companies tend to experience higher risk than larger companies.[170] Financial analysts have, on

[168] PRATT, *supra* note 159, at 125.
[169] Christopher B. Barry, et al., *Robustness of Size and Value Effects in Emerging Equity Markets 1985-2000* at 1 (Texas Christian Univ. Center for Fin. Studies, Working Paper, 2001).
[170] PRATT, *supra* note 159, at 125 .

that basis, applied a further discount to the valuation of small companies in order to reflect that increased risk.

The small-size premium, although somewhat controversial, is a generally accepted premise of both financial analyses and of this court's valuation opinions.[171] What differentiates the facts in the present case from other circumstances in which the small-size premium has been applied, however, is that the IIC constituent companies all operate entirely outside the U.S., while the Ibbotson charts rely solely on observations of the U.S. market. The general question that Beaton's decision to apply small-size premia raises, therefore, is whether size risk premia developed for the U.S. market are applicable in any sense to a foreign corporation. In other words, Beaton's valuation calls on the court to decide whether there is something inherently risky about the stock of companies that are small compared to their global competitors, or whether the small-stock premium arises only when a company is small in relation to the market on which it trades.

---

[171] *ONTI,* 751 A.2d at 920 ("this court has traditionally recognized the existence of a small stock premium in appraisal matters"); *Hintmann,* 1998 Del. Ch. LEXIS at *14 ("a small stock premium is appropriate to reflect that 'on average, smaller companies have higher rates of return than larger companies.' This Court has accepted the addition of small stock premia."); *Emerging Communications,* 2004 Del. Ch. LEXIS at *71 ("although plaintiffs contend that there is no basis in the finance literature or theory for adding a 'small firm/small stock' premium to the cost of equity, that is not entirely accurate. There is finance literature supporting the position that stocks of smaller companies are riskier than securities of large ones, and therefore, command a higher expected rate of return in the market. Our case law also recognizes the propriety of a small firm/small stock premium in appropriate circumstances.").

Our courts have never squarely considered the question of the international application of U.S. small-size premia, especially in developing or newly developed markets. The finance literature, further, is deeply conflicted, and indeterminate, on the correct application of such premia in foreign valuations. As multiple important sources have noted, the small-size premium almost certainly does not apply in a uniform way in all markets. Rather, local factors and local conditions necessarily change whether a corporation can expect to experience the higher risk and higher returns that small corporations evidence in the U.S. One study states, for example:

> Initially, we define size for each firm relative to each firm's local market average. Unlike BE/ME, which suffers from incomparability across markets due to differences in accounting, size is entirely comparable across markets: $100 million in Brazil is exactly the same value as $100 million in Zimbabwe. However, if size matters at the local level, then using absolute size in portfolios may mask the effect that size has in distinct markets and in fact could capture differences in performance across markets rather than the effect of size *per se.* For example, the <u>average</u> size of a stock in Brazil in our data is $1.7 billion. The <u>largest</u> stock from Zimbabwe in our data is $1.5 billion . . . . In Section VI of the paper, we also report results using absolute size, or size not adjusted by the average size in the local market. The choice of relative size versus absolute size is ultimately a question of the degree to which emerging capital markets are integrated globally. In a perfectly integrated global capital market in which investors freely select from among all securities in global markets, absolute size would be the preferred measure of size. If, alternatively, global capital markets were completely segmented, relative size would be the appropriate measure to employ in testing for the existence of a size effect.[172]

[172] *See* Barry, *supra* note 169, at 6-7.

There are various reasons that the global capital markets might be segmented, thus leading to results for small stocks that differ somewhat from those observed in the U.S. and in other leading developed economies:

> Foreign investors may be first attracted to large (blue chip) shares, which would tend to increase their returns relative to smaller stocks. In addition, in some countries, larger firms may have had increasing access to cheaper capital over this period, either domestically through government-subsidized credit or, more likely, through lower-cost international financing, which would make their equity more attractive. Finally, it is possible that trade and other reforms that occurred in many of these countries could have benefitted large firms more than their smaller counterparts.[173]

The end result of this uncertainty is reflected in recent empirical studies. Some scholars have discovered that small stocks enjoy premiums over large stocks in developing economies, just as in more developed economies.[174] But others believe that "in many cases, the signs of those coefficients are contrary to those found in many developed markets. This is especially true for size."[175] The general weight of the scholarship, in summary, seems to be that the small-size premium might well apply in the same way as in the U.S. in more highly developed foreign

---

[173] Stijn Claessens et al., *The Cross-Section of Stock Returns* 12 (The World Bank, Policy Research Department, Policy Research Working Paper No. 1505, 1995).
[174] K. Geert Rouwenhorst, *Local Return Factors and Turnover in Emerging Stock Markets* (Yale University, School of Management, Working Paper Series, 1998) ("The paper shows that the factors that drive cross-sectional differences in expected stock returns in emerging equity markets are qualitatively similar to those that have been found in developed equity markets. In a sample of more than 1700 firms from 20 countries, I find that emerging market stocks exhibit momentum, small stocks outperform large stocks, and value stocks outperform growth stocks.").
[175] Claessens, *supra* note 173, at 15.

markets, and would not apply to the same extent, or at all, in newly developing markets.

Based on the evidence presented at trial, the court does not believe that a small-stock premium can possibly be justified in connection with Balton, which operates in countries with very few of the ties to the global capital markets which point towards use of that premium. The specific risks that accompany investment in Balton, in any case, are well represented in the high country-specific risk premium applied to the company's valuation, which takes into account the risk of operating a company in the African markets where Balton does business.

Danubius, Agrimill, Investor, and Zoko/ITE, however, are based in countries that the evidence shows are relatively well connected to the global capital markets. They are traded on major stock markets, and have access to international capital. The court, therefore, believes that some small-stock premium should be applied to the value of these companies, and that the best data available to the court is that represented by the Ibbotson numbers.

Taking into account the Ibbotson chart, and the size of the IIC constituent companies in relation to their home markets, the court is convinced by the defendants' argument that Investor, Agrimill, and Zoko/ITE would probably evidence behavior characteristic of small companies in the U.S., and should thus be subject to a further discount for their small size in the court's determination of fair

value. Therefore, the court will apply the Ibbotson Decile 10 small-size risk premium of 5.33% as a factor in deriving the WACC of those two companies.

Danubius is quite a different matter. Most important, Danubius forms part of the index for the Budapest Stock Exchange, a strong indication that it may not evidence the full 5.33% risk premium for a company of its size in the U.S.[176] Also, the Ibbotson numbers suggest, at least, that the hotel industry itself may be less subject to the size premium than other industries.[177] On those and other bases, the court believes that the 5.33% Decile 10 risk premium applied to both the conservative and optimistic scenarios of Danubius does not properly reflect Danubius's position within its own market. In order to balance the court's belief that some small-stock premium should apply to Danubius, the court will apply the Decile 9 small-stock risk premium of 2.41% to both of the Danubius valuation scenarios.[178]

c. The ITE Real Estate

ITE owns certain real estate at Kiriyat Beyalik and in Holon, both of which are leased by Zoko, an ITE subsidiary, for its operations. In Beaton's analysis, this

[176] Tr. 506:5-20.
[177] JX 158 at 142.
[178] The court also notes that under Beaton's optimistic DCF value, Danubius would be a Decile 9 company even in the U.S. Tr. 683-684.

real estate was valued at the book value of 18.8 million NIS, because Beaton felt that any value this land had above book would be consumed if the land were sold and Zoko made to move elsewhere. As the Beaton report explains, "[w]e did not make any adjustment for ITE's real estate assets since the transfer payment to ITE is significantly captured by ITE's majority ownership in Zoko. Because these properties are single purpose assets built to accommodate Zoko's particular operation, any value derived from the sale of these properties over their book value would most likely be consumed by tenant and leasehold improvements of new facilities needed to replace the sold properties."[179] When questioned further at trial about this conclusion, Beaton affirmed his written statement, refusing to put any specific number on Zoko's moving costs other than to say that these costs would be "equal to the value that they believed the properties could be sold for over book value,"[180] no matter what that number might eventually be.[181]

The court cannot accept Beaton's Panglossian approach to valuation. The ITE real estate, as Beaton seems to concede, had some value, apparently above book value. Beaton, for example, entirely discounts the very real possibility, raised by both Nir and Fuller, that ITE would be able to sell the real estate, and the new

[179] JX 311, at 50.
[180] Tr. 622:19-22.
[181] Tr. 623:2-10.

buyer would allow Zoko to remain on the property to the end of its lease in exchange for the rent previously paid to ITE.[182]

On this basis, the court believes that some upward adjustment to book value for the ITE real estate is justified. The only available number to use to derive that value is provided by Nir's preliminary analysis. The number, 51.8 million NIS for the two main properties, is incorporated into Fuller's valuation report as a component of Net PPE, constituting a 33.012 million NIS adjustment to the land's book value.[183] As the court has already held, however, neither Nir's report nor Fuller's use of the report in his calculations is entirely reliable. To the extent the court is compelled to use Nir's report as a starting point, the court believes it should apply a significant discount to that calculation to take into account the fact that Nir failed to sufficiently consider the amount of time it would take to sell the very large Kiriyat Beyalik property, failed to consider the potential expense if Zoko was forced to move or forced to accommodate itself with a new landlord, and failed to consider whether selling the property (and thus forsaking the rent it received from Zoko) would have any effect on ITE's balance sheet.[184]

To reflect those failures, the court will apply a 67% discount to Fuller's and Nir's adjustment to the book value of the Zoko properties. This calculation, which

[182] Tr. 402:3-13.
[183] PX 5, at 17.
[184] Tr. 403:3-6.

reduces Fuller's and Nir's adjustment to 10.89 million NIS, produces a Net PPE value for ITE of 29.69 million NIS. Further, in order to reflect the inherent uncertainty of deriving a value for real estate in this way, the court will apply this adjustment only to the optimistic ITE balance sheet, and not to the conservative valuation.

d. The Zoko Forecasts

In his initial valuation report, Beaton used "the conservative and optimistic forecasts prepared by management for the years 2002 through 2005" in deriving his valuation for Zoko as part of ITE.[185] As Beaton admitted at trial, however, this statement was misleading.[186] Rather, Beaton personally prepared the forecasts used in his valuation for Zoko, purportedly based on management forecasts, but adjusted downward for various reasons having to do with Zoko's business situation as of the valuation date. The court is not persuaded that Beaton's revisions to the Zoko management projections are reliable, and their use would cut against this court's belief that management projections are generally preferable to projections by third parties, especially projections by third parties created after the fact.[187] In deriving

[185] JX 311 at 45.
[186] Tr. 608:7-8.
[187] *See e.g., Doft & Co. v. Travelocity.com*, 2004 Del. Ch. LEXIS 75, *22 (Del. Ch. May 20, 2004) ("Delaware law clearly prefers valuations based on contemporaneously prepared management projections because management ordinarily has the best first-hand knowledge of a company's operations.").

both the conservative and optimistic value for Zoko, therefore, the court has used the management forecasts for that business from 2002 through 2005, and has reflected the resultant values for Zoko in the ITE balance sheet.[188]

e. Value Conclusion

In summary, the court accepts the Beaton valuation with four substantive changes. First, the court rejects Beaton's use of SCRP, and therefore applies no SCRP for any of the IIC companies. Second, the court rejects Beaton's use of a small-size premium for Balton, adopts Beaton's use of that premium for Agrimill, Investor, and Zoko/ITE, and reduces that premium from 5.33% to 2.41% for Danubius. Third, the court rejects, in part, Beaton's belief that the ITE real estate leased to Zoko has no value above book value, and therefore applies an adjustment of 10.89 million NIS to ITE's optimistic balance sheet to reflect the court's view as to the potential value of that land. Finally, the court rejects Beaton's forecast for Zoko, and applies management's forecasts to both the conservative and optimistic valuation of Zoko.

Having made these changes to the Beaton valuation, the court derives a conservative DCF valuation for IIC of $9.55 per share and an optimistic valuation

[188] The new optimistic value for Zoko under this valuation method is in excess of the market capitalization of Zoko, which represented the optimistic value of Zoko under Beaton's valuation. JX 311 at 49. Following Beaton's method of using the highest indicated value for the optimistic value, the court has incorporated that new value into the ITE balance sheet.

of $19.05 per share. The midpoint of these results is $14.30 per share of common stock. The table below shows the effect of each of the four described changes on the conservative, optimistic, and midpoint values of the IIC stock. The table includes a column describing the incremental effect of each change over the value under the immediately previous version of the court's DCF valuation. In other words, the fifth column of the table shows how much the described DCF adjustment adds to the value per share of IIC without that change, but with all changes previously made.

Version of DCF Valuation	***Conservative Value Per Share***	***Optimistic Value***	***Midpoint Value***	***Incremental Change***
Beaton 5/26 Revised Report	$6.22	$12.98	$9.60	-
SCRP removed from WACC for all IIC Companies	$7.29	$15.36	$11.33	$1.73
Small-size Premium for Balton removed from WACC	$7.50	$15.71	$11.61	$0.28
Danubius Small-size Premium Adjustment	$8.68	$18.30	$13.49	$1.88
Zoko Real Estate adjusted in Optimistic ITE BS	$8.68	$18.71	$13.69	$0.20
Zoko Forecasts adjusted to fit Management Forecasts	$9.55	$19.05	$14.30	$0.61

The fact that CP's initial approach to Simon and to the special committee was at $13 per share provides validation for the court's value determination, as does the fact that CP paid $13 per share at one point in what was, admittedly, a

thinly traded market. On that basis, the court will give the DCF approach described above 100% weight in its final value determination, and will thus award $14.30 per common share.

E. The Question Of Simon's Liability

As explained above, the plaintiff has brought claims not only against CP and IIC, but against the former directors of IIC, namely Schreier, Smith, Levy, Glatter, and Simon, as individual defendants. All the individual defendants other than Simon implicitly concede, by failing to raise any affirmative defenses, that they cannot claim exculpation under Article Tenth of IIC's certificate of incorporation, the company's Section 102(b)(7) provision.[189]

Alone among the individual defendants, Simon claims that his actions in negotiating and approving the unfair CP/IIC merger are exculpated under Article Tenth. Even if the IIC merger was unfair, as this court has already concluded, and even if he breached his duty of care in authorizing that unfair merger, Simon argues that he neither violated his fiduciary duty of loyalty nor failed to evidence good faith in any way.[190] Therefore, Simon believes that he has access to Section 102(b)(7) as an affirmative defense, and cannot be liable for monetary damages.

[189] All these defendants clearly have personal financial interests in the CP/IIC merger, and therefore cannot avail themselves of Section 102(b)(7) exculpation.
[190] Pl.'s Opening Post-Trial Br. 38.

Section 102(b)(7) was added to Delaware law in 1986 in the wake of the landmark case, *Smith v. Van Gorkom.*[191] It provides that corporations may limit the personal liability of directors for all breaches of fiduciary duty other than for "breach of the duty of loyalty, failure to act in good faith, intentional misconduct," and certain other violations. Crucially, Section 102(b)(7) is regarded as an affirmative defense or limited immunity. Therefore, in an entire fairness case where the court has found that a challenged transaction is not entirely fair, a director seeking to rely on the exculpatory provision must show that any liability of his is "exclusively attributable to a violation of the duty of care."[192]

Our courts have issued numerous opinions describing the line between violations of the duty of care, which can be exculpated under Section 102(b)(7), and violations that preclude exculpation under that provision.[193] In the context of the instant case, the most pertinent of these decisions is this court's recent opinion in *Emerging Communications,* a case that similarly involved a parent-subsidiary merger, found to have failed the entire fairness test, where each of the directors raised the defense to liability of Section 102(b)(7). The court explained the standard for Section 102(b)(7) and then proceeded to examine each director's conduct in turn. The court found that one director, who was also the majority

[191] 488 A.2d 858 (Del. 1985).
[192] *Emerging Commc'ns,* 2004 Del. Ch. LEXIS at 70.
[193] FOLK, *supra* note 91, at § 102.15.

stockholder of the parent entity gaining from the entire fairness transaction, was "liable in his capacity as a director for breach of his duty of loyalty, conduct that is not exculpated under [Section 102(b)(7)]."[194] That director was not exculpated because he "derived an improper personal benefit"[195] from the transaction, another express carve-out in Section 102(b)(7). That is to say, the fact that the unfair transaction directly benefitted that director took him outside the realm of exculpation.

The court found that a second director was liable for the same reasons, because his economic interests were so intertwined with those of the controlling stockholder that he clearly violated either his fiduciary duty of loyalty or evidenced a lack of good faith.[196] A third director was also held culpable despite Section 102(b)(7) because he knew or should have known, on the basis of his extensive knowledge of the relevant industry and his financial expertise, that the price was unfair.[197] Although the court conceded that it could not divine the director's mental state when he made the decision to vote for the merger, it held that the director was liable for damages because of the burden of proof imposed by Section 102(b)(7) on a director seeking to avail himself of the statute's protections. The

[194] *Emerging Commc'ns*, 2004 Del. Ch. LEXIS at *140.
[195] *Id.*
[196] *Id.* at *142.
[197] *Id.* at *144.

possibility [that the director was acting in good faith] is "not sufficient to carry the day, because to establish a director's exculpation from liability under 8 *Del. C.* § 102(b)(7), the burden falls upon the director to show that 'his failure to withstand an entire fairness analysis is exclusively attributable to a violation of the duty of care.'"[198]

Finally, the court found certain other directors to have proved that they were entitled to Section 102(b)(7) protection. The court found that no evidence showed that those directors "affirmatively colluded with [the controller] to effectuate the [p]rivatization, or that they otherwise deliberately engaged in conduct disloyal to the minority stockholders' interests."[199] The court considered the plaintiffs' allegations that the directors had participated in a "scripted minuet" to approve an unfair price, but found that there was no evidence in that case that the directors "actually engaged in such improperly motivated conduct, or otherwise acted with disloyal intent."[200] The court also noted that if good faith meant adopting a "'we don't care about the risks attitude' concerning a material corporate decision,"[201] the plaintiffs had also failed to show that those particular defendants had acted with conscious disregard or made decisions with knowledge that they lacked material

[198] *Id.* at *145-146.
[199] *Id.* at *148.
[200] *Id.* at *152.
[201] *Id.* at *153.

information. Therefore, those directors were exculpated from liability under Section 102(b)(7).

The facts in this case closely resemble those at issue in *Emerging Communications*. At the threshold, the challenged merger is clearly unfair. Further, just as in *Emerging Communications*, the director seeking exculpation violated his fiduciary duty of due care in approving the unfair merger. Therefore, this court is faced only with the question of whether the director violated his fiduciary duty of loyalty or acted with a lack of good faith.[202] After careful consideration, the court finds that, like the independent directors in *Emerging Communications,* Simon is entitled to the benefit of Section 102(b)(7) exculpation.

---

[202] Simon also claims that "the fact that [he] did not vote in favor of the Merger [but rather was absent for scheduling reasons from the IIC board meeting that approved the transaction] is fatal to plaintiff's claims against him." Simon's Post-Trial Opening Br. 17. The case on which Simon relies for this proposition, however, does not support his position. In *In re Tri-Star Pictures, Inc. S'holders Litig.*, 1995 Del. Ch. LEXIS 27, *8 (Del. Ch. Mar. 9, 1995), this court noted that a director who plays "no role" in a challenged transaction cannot be held liable on a claim that the board's approval of that transaction was unlawful. But the court also recognized that "no per se rule unqualifiedly and categorically relieves a director from liability solely because that director refrains from voting on the challenged transaction." *Id.* at *8. Ultimately, the court in that case concluded that certain directors who had no "role, open or surreptitious, in formulating, negotiating, or facilitating the transaction complained of," could not be held liable. Nor did those directors have some "fiduciary duty not to abstain" from voting on such a transaction. In this case, by contrast, Simon was closely involved with the challenged merger from the very beginning. Its completion was literally premised on his involvement, and this court's conclusion that the transaction was unfair is based, in large part, on Simon's failures to properly conduct the parent-subsidiary negotiation. Simon's contention, therefore, that he cannot be held liable for the unfair merger because he was away at a fraternity reunion on the day of the vote, is, frankly, badly mistaken, and is entirely outside the scope of the limited defense envisioned in *Tri-Star*.

The court finds no evidence that Simon was personally conflicted in the CP/IIC transaction, or derived a personal benefit from that transaction to the exclusion of the minority stockholders. Nor did any evidence adduced at trial show that Simon "affirmatively colluded" with Filer, Schreier, and IIC in their scheme to squeeze out the IIC minority at an unfair price. To the extent that such a plan existed, as demonstrated by the May 17 email, Simon was not included in the inner circle. Whatever Simon's liability, therefore, the case against him does not rest on allegations of deliberate or self-interested misconduct.

The question remains whether Simon's conduct betrays that he knew or should have known that the merger process and price was unfair. But, unlike the director found culpable on that basis in *Emerging Communications*, the evidence adduced at trial here shows that Simon was unaware of the key facts that made the merger transaction so clearly unfair from a procedural point of view. Always laboring under CP's efforts to deprive him of information, Simon failed to discover that Jesup & Lamont had divided loyalties and had funneled crucial information to Filer and CP that belonged to the special committee. Similarly, although he knew that Ottensoser was retained by IIC, Simon apparently failed to discover until this litigation began that Ottensoser had also been engaged by CP in connection with the transaction. His ignorance of that key fact ensured that Simon could not appreciate the serious and evident conflicts of interest that burdened Ottensoser's

representation of the special committee. And Ottensoser did nothing to remedy Simon's misconception.

As to fair price, it is true that Simon knew about the $13 price authorized on May 24, 2001, and unaccountably failed to ask for it during the negotiations for the initial tender offer. Whether that failure would have evidenced a lack of good faith had the tender offer been successful in securing 90% ownership for CP, it seems likely that the same price was not available some months later in connection with the merger. In contrast, Simon was able to achieve a price above the midpoint of the flawed Jesup & Lamont valuation, which, though still unfair, evidences some good faith effort to negotiate with CP within the disabling strictures of CP's unfair merger process.

In short, the evidence adduced at trial shows that Simon attempted to fulfill his responsibilities as the sole member of the special committee, but failed to do so effectively in part as a result of carelessness and negligence, through which he failed to fulfill his duty of due care, and in part because of the manipulative efforts of the controlling stockholder and its agents to squeeze out the minority at an unfair price. Like those directors found to be exculpated in *Emerging Communications*, in other words, Simon did nothing during the CP/IIC merger

process to "[cover] himself in glory, or merit commendation."[203] But it is equally true that "negligent or even gross negligent conduct does not equate to disloyalty or bad faith," and nothing in the record in this case suggests that Simon "intentionally conspired . . . to engage in a process that would create the illusion, but avoid the reality, of arm's length bargaining to obscure the true purpose of benefitting [CP] at the expense of the minority . . . ."[204] In hindsight, the court believes that a more diligent independent director would have uncovered the controlling stockholder's nefarious plan to conclude an unfair merger. But to impose liability for a lack of good faith based on those facts would expand the holding of *Emerging Communications* beyond that required to protect the IIC stockholders' expectations, as evidenced by their decision to extend protection under Section 102(b)(7) to their directors. As such, holding Simon personally liable in this case would be fundamentally inconsistent with the purpose and language of Section 102(b)(7).

IV.

For the reasons set forth herein, the court finds that the defendants have failed to prove that the IIC merger was a product of fair dealing, or that the merger consideration of $10.50 was a fair price, and therefore have failed to prove the

[203] *Emerging Commc'ns*, 2004 Del. Ch. LEXIS at *149.
[204] *Id.* at *153.

entire fairness of the merger transaction. Consequently, the court exercises its equitable powers to award the appraisal claimants $14.30 per share, and all other claimants the difference between the merger price and $14.30 per share. This damages award will include pre-judgment interest at the legal rate, compounded quarterly. Finally, the court finds that Simon has proved his entitlement to exculpation under Section 102(b)(7), and is therefore not liable for the damages the court assigns in this case. IT IS SO ORDERED.

T.C. Memo. 2011-141

UNITED STATES TAX COURT

ESTATE OF NATALE B. GIUSTINA, DECEASED,
LARAWAY MICHAEL GIUSTINA, EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 10983-09. Filed June 22, 2011.

D. John Thornton and Kevin C. Belew, for petitioner.

Kelley A. Blaine, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

MORRISON, Judge: The IRS issued a notice of deficiency determining (1) a $12,657,506 deficiency in estate tax and (2) a $2,531,501 accuracy-related penalty under section 6662 of the Internal Revenue Code.[1] The notice of deficiency was issued to

[1]Unless otherwise indicated, all citations of sections refer (continued...)

Laraway Michael Giustina ("Larry Giustina"), the executor of the estate of his deceased father, Natale B. Giustina. Larry Giustina brings this case pursuant to section 6213(a), asking this Court to redetermine the deficiency. We refer to Larry Giustina as "the estate" when referring to him in his capacity as a party to this case. The two issues for decision are:

(1) the value of the 41.128-percent limited partner interest in Giustina Land & Timber Co. Limited Partnership owned by Natale Giustina at his death on August 13, 2005 (the estate contends the value is $12,995,000, but the IRS contends the value is $33,515,000);[2] and

(2) whether the estate is liable for the section 6662 accuracy-related penalty.[3]

---

[1](...continued)
to the Internal Revenue Code (26 U.S.C.) as in effect for the date of death, and all citations of Rules refer to the Tax Court Rules of Practice and Procedure.

[2]Although the 41.128-percent limited partner interest was owned by a trust, rather than by Natale Giustina directly, the estate concedes that the value of the partnership interest must be included in the gross estate. For convenience, we sometimes discuss the partnership interest as if it was held by Natale Giustina rather than through the trust.

[3]The parties have stipulated that the marital deduction at issue is a computational issue and that the amount of the allowable marital deduction will depend on the value of the 41.128-percent limited partner interest in Giustina Land & Timber Co. owned by Natale Giustina at his death on Aug. 13, 2005. The parties also stipulated that administrative expenses incurred by the estate shall be allowable to the extent substantiated.

We find that the value of the partnership interest is $27,454,115 and that the estate is not liable for the penalty.

FINDINGS OF FACT

1. Introduction

The parties stipulated some facts; those facts are so found. Larry Giustina resided in Eugene, Oregon, when the petition was filed. The decedent, Natale Giustina, was born in 1918 and died on August 13, 2005, at the age of 87. He was a resident of Eugene, Oregon, when he died, and his estate is administered in the State of Oregon.

Natale Giustina was the trustee of the N.B. Giustina Revocable Trust.[4] The trust owned a 41.128-percent limited partner interest in Giustina Land & Timber Co. Limited Partnership. This partnership is sometimes referred to here as "the partnership".

2. History of the Giustina Family and Its Business: 1917 to 1989

Erminio Giustina was the father of Natale Giustina, the decedent. In the summer of 1917, Erminio Giustina and two of his brothers entered the lumber industry. The three brothers bought a lumber mill in Molalla, a small town in Clackamas County, Oregon. In the 1920s the brothers moved their base of operations to Lane County, Oregon, where they were joined by another

[4]Natale Giustina's middle initial was "B".

brother, Anselmo. Over time, the Giustina family bought land and mills around Eugene, the largest town in Lane County. The family business was operated through several entities.

Until the 1960s the family timberlands were held by Giustina Bros., a partnership. In the 1960s the timberlands that contained young trees were transferred from Giustina Bros. to a newly formed partnership called Giustina Timber Co. The shares of Giustina Timber Co. were then transferred to heirs of the original four brothers. The mills, meanwhile, were owned by Giustina Bros. Lumber & Plywood, a corporation that employed 200 people.

For many years the family business was run by Natale Giustina and his brother, Ehrman Giustina. The Giustina family eventually sold all of its mills. By 1988 the Giustina family's business holdings consisted primarily of timberlands owned by Giustina Bros. and by Giustina Timber Co.

3. Formation of Giustina Land & Timber Co. in 1990

By the time the mills closed, the family business was managed by two family members: Larry Giustina, who was the son of Natale Giustina, and Dan Giustina, who was the son of Ehrman Giustina. The two cousins found that their managerial roles were redundant and that they had conflicting ideas about how to run the business. They therefore proposed to divide the family properties so that they each would manage separate properties.

Their proposal was adopted by the other members of the family. As a result, the assets of the family business entities, Giustina Bros., Giustina Timber Co., and Giustina Bros. Lumber & Plywood, were transferred to three new partnerships, each of which was owned by a separate set of Giustina family members.

The first new partnership was Giustina Land & Timber Co. Limited Partnership. This partnership received 51.875 percent of the assets of (1) Giustina Bros. and (2) Giustina Timber Co. The parties have stipulated that this partnership was owned by "the Natale Giustina and Anselmo Giustina families, as well as another relative named Dolores Fruiht". The value of a 41.128-percent limited partner interest in this partnership is the major issue in this case.

The second new partnership was Giustina Resources. This partnership received 30.625 percent of the assets of (1) Giustina Bros. and (2) Giustina Timber Co. The parties have stipulated that this partnership was owned by "members of the Ehrman Giustina family". It was operated by Dan Giustina.

The third new partnership was Giustina Woodlands. It received 17.5 percent of the assets of (1) Giustina Bros. and (2) Giustina Timber Co. The parties have stipulated that this partnership was owned by "the Greg Giustina family".

The extended Giustina families made every effort to ensure not only that the assets were divided according to each family's

proportionate ownership interests in Giustina Bros. and Giustina Timber Co., but also that the timber species, revenues, and income were divided in the same manner. Even though substantially all of its assets were distributed, the Giustina Bros. partnership remained in existence. All of the assets of Giustina Timber Co. were distributed.

4. Operations and Ownership of Giustina Land & Timber Co.

Giustina Land & Timber Co. was formed effective January 1, 1990. The partnership was governed by a written partnership agreement from the day the partnership was formed. The agreement has been amended several times since then. Unless otherwise noted, all provisions of the partnership agreement that we discuss were in effect when Natale Giustina died in August 2005.

The partnership agreement provides that the general partners have full control over the business of the partnership. The general partners have the power to sell the partnership's timber, land, and other property. The general partners also have the power to make distributions of cash or property to the partners in proportion to each partner's respective interest in the partnership. All decisions of the general partners must be made with the concurrence of a majority of the general partners.

The partnership agreement initially provided that the general partners were Larry Giustina and Ansel James Giustina, their survivors, and any other person admitted to the partnership

as an additional general partner in accordance with the provisions of the agreement. Ansel James Giustina is the son of Anselmo Giustina. We refer to him as James Giustina.

The partnership agreement allows a general partner to voluntarily resign. A general partner can be removed by the concurrence of limited partners owning two-thirds of the interests in the partnership. If a general partner resigns or is removed, a successor general partner may be designated by the limited partners owning two-thirds of the interests in the partnership. An additional general partner can be admitted to the partnership if all the partners consent to the admission.

The partnership agreement allows a limited partner interest to be transferred to (1) another limited partner, (2) a trust for the benefit of a limited partner, or (3) any other person approved by the general partners. A limited partner may not withdraw from the partnership unless all of the limited partner's interests have been transferred.

The partnership agreement provides that the partnership will continue to exist until December 31, 2040, unless the partnership is terminated earlier pursuant to section 12.2 of the partnership agreement. Section 12.2 provides that the partnership shall be dissolved: (1) automatically on December 31, 2040, (2) if the limited partners fail to designate a successor general partner within 90 days after the resignation or removal of the sole

general partner, or (3) if the limited partners owning two-thirds of the interests in the partnership vote to dissolve the partnership. If the partnership is dissolved, its affairs must be wound up, its assets may be sold, and its assets and any proceeds from the sale of assets must be distributed to its partners in accordance with their capital accounts.

Schedule A of the original partnership agreement listed the limited partners when the partnership was formed in 1990:

Limited Partner	Number of Units
N.B. Giustina	44.128
Anselmo Giustina	31.940
Dolores Giustina Fruiht	4.809
Natalie Giustina Newlove	4.198
L.M. Giustina	3.195
Irene Giustina Goldbeck	4.198
Sylvia B. Giustina	3.266
A.J. Giustina	2.266
Total	98.000

Each general partner owned one unit in his capacity as a general partner. N.B. Giustina refers to Natale Giustina, the decedent. Anselmo Giustina died in 1993. Dolores Giustina Fruiht's exact relationship to the other partners is not revealed by the record. Natalie Giustina Newlove is a daughter of Natale Giustina. L.M. Giustina, we infer, refers to Larry Giustina, i.e., Laraway Michael Giustina. Irene Giustina Goldbeck is a daughter of

Natale Giustina. Sylvia B. Giustina, we infer, is the sister of James Giustina and the daughter of Anselmo Giustina. A.J. Giustina refers to James Giustina, i.e., Ansel James Giustina.

A buy-sell agreement, dated November 21, 1994, bars a limited partner from transferring a partnership interest unless (1) the transfer is to a member of the transferring partner's family group, or (2) the transferring partner offers the other limited partners the right of first refusal. For these purposes, there are three family groups:

- "Sylvia B. Giustina, A.J. Giustina, children of Sylvia B. Giustina, and children of A.J. Giustina."
- "N.B. Giustina, Natalie Giustina Newlove, L.M. Giustina, Irene Giustina Goldbeck, and children of Natalie Giustina Newlove, L.M. Giustina, and Irene Giustina Goldbeck."
- "Dolores Giustina Fruiht, her children, and grandchildren."

The provisions of the buy-sell agreement were in effect in August 2005.

On January 1, 2002, Larry and James Giustina resigned as general partners. Each was replaced by a limited liability company. LMG, LLC, is controlled by Larry Giustina. AJG, LLC is controlled by James Giustina.

Some transfers of limited partner interests occurred after formation of the partnership. The parties stipulated that as of August 13, 2005, the partnership had the following owners:

Ownership of Giustina Land & Timber Co.
as of Aug. 13, 2005

	Percentage Interest
General Partners:	
LMG, LLC	1.000
AJG, LLC	1.000
Limited Partners:	
N.B. Giustina, Trustee of the N.B. Giustina Revocable Trust	41.128
Sylvia B. Giustina	17.236
A.J. Giustina	16.236
Natalie Giustina Newlove	5.198
Irene Giustina Goldbeck	5.198
Dolores Giustina Fruiht	4.809
L.M. Giustina	4.195
Anselmo Giustina Family Trust	4.000
Total	100.000

Under the terms of the N.B. Giustina Revocable Trust agreement, Natale Giustina had the right to revoke the trust or to withdraw the principal and accumulated income of the trust estate. The terms of the trust agreement required that the trust's 41.128-percent limited partner interest be distributed as follows at Natale Giustina's death: 17 percent to Natalie

Giustina Newlove, 17 percent to Larry Giustina, 17 percent to the Irene Giustina Goldbeck Trust, and 49 percent to the N.B. Giustina Marital Trust.

By August 13, 2005, Giustina Land & Timber Co. owned 47,939 acres of timberland in the area of Eugene, Oregon. It employed approximately 12 to 15 people. Three or four worked in forestry; four worked on the roads crew; and six worked at administrative tasks. Although James Giustina and Larry Giustina both controlled general partners of the partnership (their respective LLCs), the primary decisions regarding the management of the timber were made by Larry Giustina. James Giustina provided assistance to Larry Giustina in the decisionmaking.

5. Tax Reporting, Notice of Deficiency, and Positions of the Parties

Natale Giustina died on August 13, 2005. He was survived by his spouse, Jacqueline L. Giustina, and his three children: Natalie Giustina Newlove, Larry Giustina, and Irene Giustina Goldbeck. On the estate tax return, the value of the 41.128-percent limited partner interest was reported to be $12,678,117. On April 3, 2009, the IRS issued the notice of deficiency determining a $12,657,506 deficiency and a $2,531,501 accuracy-related penalty under the provisions of section 6662. The notice of deficiency determined that the value of the 41.128-percent limited partner interest was $35,710,000. The notice made a computational adjustment to the marital deduction claimed on the

return. At trial, the IRS contended that the value of the limited partner interest was $33,515,000 (a lesser amount than it had earlier determined). The estate contended that the value of the limited partner interest was $12,995,000 (a greater amount than it had reported on its return).

OPINION

Generally, the taxpayer has the burden of disproving the determinations in the IRS notice of deficiency. Rule 142(a)(1). The IRS has the burden of proof regarding any factual issue for which the taxpayer has presented credible evidence and met other requirements. Sec. 7491(a)(1). Our conclusions, however, are based on a preponderance of the evidence, and thus the allocation of the burden of proof is immaterial. See Martin Ice Cream Co. v. Commissioner, 110 T.C. 189, 210 n.16 (1998).

1. Introduction

Each party called an expert witness to opine on the value of the 41.128-percent limited partner interest. Of the methods used by the expert witnesses, we believe that there are two appropriate methods that are helpful in valuing that interest. The first method (the cashflow method) is based upon how much cash the partnership would be expected to earn if it had continued its ongoing forestry operations. The operations, which consisted of growing trees, cutting them down, and selling the logs, have historically generated almost all of the partnership's

cashflows. The second valuation method (the asset method) is based upon the value of the partnership's assets if they were sold. The value of the timberlands, which constitute most of the partnership's assets, is agreed to be $142,974,438. The value includes a 40-percent discount for the delays attendant to selling the partnership's approximately 48,000 acres of timberland.

2. The Cashflow Method

a. The Expert Witnesses

Both expert witnesses relied in part on the cashflow method to determine the value of Natale Giustina's interest in the partnership. John Thomson, the IRS expert, estimated that the partnership's annual cashflow would be $9,979,969 in the first year after Natale Giustina's death. He estimated that the total future cashflows, once discounted to present value, would be $65,760,000. Robert Reilly, the estate's expert, estimated that annual cashflow would be $4,560,000 in the first year after Natale Giustina's death. He estimated that the total future cashflows, once discounted to present value, would be $33,800,000.

b. Calculation of Cashflows

Thomson's cashflow estimates were not persuasive. First, as Reilly explained on pages 17-18 of his rebuttal report, there was an internal inconsistency between Thomson's cashflow estimates

and his calculation of the effect of lack of control on the value of the 41.128-percent limited partner interest. The inconsistency led Thomson to overvalue it. Second, Thomson unrealistically assumed that the partnership's operating expenses would remain fixed, even though he projected that its revenues would increase 3 percent annually. Third, Thomson's estimate of annual cashflows was extrapolated from the actual cashflow results of the most recent year. By contrast, Reilly extrapolated from the cashflow results of five consecutive years. Reilly's use of five years of data is sounder because it reduces the effect of a temporary variation in cashflow. But Reilly's application of the cashflow method to value the partnership interest has its own problems. As we explain, however, his computations can be adjusted.

One problem with Reilly's computations is that he reduced each year's predicted cashflows by 25 percent to account for the income taxes that would be owed by the owner of the partnership interest on that owner's share of the partnership's income. The 25-percent reduction is inappropriate because the rate at which Reilly discounted the cashflows to present value was a pretax rate of return, not a posttax rate of return. An appraiser should not reduce cashflows by income tax while simultaneously using a pretax rate of return to discount the cashflows to present value. Gross v. Commissioner, T.C. Memo. 1999-254, 78

T.C.M. (CCH) 201, 209, affd. 272 F.3d 333 (6th Cir. 2001). Thus, Reilly's cashflow estimates must be recomputed to eliminate the 25-percent discount for income tax liability.

c. The Discount Rate

Another problem with Reilly's application of the cashflow method is that the rate at which he discounted the cashflows to present value--18 percent--was too high. As we explain below, the discount rate should be 16.25 percent.

Reilly's 18-percent discount rate had four components. Only the fourth needs to be corrected. The first component was the risk-free rate. Reilly assumed that the risk-free rate was the 4.5-percent rate of return earned by owners of 20-year U.S. Treasury bonds.

The second component of Reilly's discount rate was a beta-adjusted equity risk premium. According to Reilly, beta is a "measure of the systematic risk (i.e., risk relative to returns in a measure of the overall equity market, such as the S&P 500 index) inherent in a company's investment returns." Reilly determined that the risk premium for an equity investment in the S&P 500 common stock index was 7.2 percent. Reilly estimated that the beta for an investment in companies in the timber industry was 0.56. He then estimated that a beta of 0.5 was appropriate for the partnership because it had less debt than

other timber companies. He therefore calculated a beta-adjusted risk premium of 3.6 percent (7.2 percent x 0.5).

The third component of Reilly's discount rate was a small stock equity risk premium. Reilly estimated that this component was 6.4 percent. Reilly calculated that an investment in a small company, defined as a company with a total equity capitalization between $1.4 million and $263 million, had an annual return of 6.4 percent above the overall equity risk premium exhibited by the S&P 500 common stock index.

The fourth component of Reilly's 18-percent discount rate was a partnership-specific risk premium of 3.5 percent. Reilly explained that this risk premium was justified because the partnership's timberlands were not geographically dispersed. All were in Oregon. He also explained that the partnership's operations were nondiversified. The partnership's sole source of revenue was timber harvesting. Thus, it is apparent that a portion of the 3.5-percent premium reflects the unique risks of the partnership. But unique risk does not justify a higher rate of return. Investors can eliminate such risks by holding a

diversified portfolio of assets.[5] We conclude that the partnership-specific risk premium should be only 1.75 percent.

After this adjustment is made, the correct discount rate is 16.25 percent. This is equal to the sum of 4.5 percent, 3.6 percent, 6.4 percent, and 1.75 percent.[6]

Reilly reduced his 18-percent discount rate by 4 percent to reflect his assumption that cashflows would increase by 4 percent each year. After making this reduction, his "direct capitalization rate" was 14 percent. We have no dispute with the

---

[5]Richard A. Brealey and Stewart C. Myers explain:

> The risk that potentially can be eliminated by diversification is called unique risk. Unique risk stems from the fact that many of the perils that surround an individual company are peculiar to that company and perhaps its immediate competitors. But there is also some risk that you can't avoid, regardless of how much you diversify. This risk is generally known as market risk. Market risk stems from the fact that there are other economywide perils that threaten all businesses. * * *

Brealy & Myers, Principles of Corporate Finance 168 (7th ed. 2003) (fn. refs. omitted); see also Booth, "The Uncertain Case for Regulating Program Trading", 1994 Colum. Bus. L. Rev. 1, 28 ("Because diversification can eliminate the unique risks associated with investing in individual companies, the market pays no additional return to those who assume such risks.").

[6]The discount rate Thomson used in his cashflow method, 16.22 percent, is almost equal to the 16.25-percent rate that we find to be the appropriate discount rate. Thomson's discount rate was equal to: (1) a 4.52-percent risk-free rate, plus (2) an 11.7-percent equity risk premium paid for small stocks (i.e., stocks in the fifth capitalization quintile of companies traded on the New York Stock Exchange for 1926-2004). We did not use Thomson's method of determining a discount rate.

4-percent assumption. Therefore, the 16.25-percent discount rate should be reduced by 4 percent, resulting in a direct capitalization rate of 12.25 percent.

d. Value of Marketable Noncontrolling Interests in the Partnership

Using the cashflow method, Reilly determined that the value of 100 percent of the interests of the partnership (on a freely marketable basis) is equal to the discounted present value of the cashflows. Reilly estimated that the discounted present value of the cashflows was $33,800,000, but our adjustments result in an estimate of $51,702,857. The adjustments are set forth in the table below:

Valuation of All Partnership Interests on a Marketable Basis Using the Cashflow Method

	Reilly's Calculations in Exhibit 10 of His Report	As Adjusted by Court
Normalized pretax income	$6,120,000	$6,120,000
Normalized net income (normalized pretax income reduced 25% by Reilly for income taxes)	$4,590,000	$6,120,000
Total adjustments to estimated cashflow	-$30,000	-$30,000
Normalized net cashflow	$4,560,000	$6,090,000
Projected normalized net cashflow (normalized net cash flow, increased by long-term growth rate of 4%)	$4,743,000	$6,333,600
Direct capitalization rate	14%	12.25%
Total equity value on a marketable, noncontrolling ownership interest basis (Reilly's estimate is rounded)	$33,800,000	$51,702,857

e. Discount for Marketability

Reilly discounted the cashflows in order to reflect the inability of the owner of the 41.128-percent limited partner interest to easily sell it. This discount for lack of marketability is 35 percent in Reilly's view.[7] Thomson's lack-of-marketability discount was only 25 percent. Both Reilly and Thomson formed their opinions from two types of studies: (1) restricted-stock studies and (2) pre-IPO studies. Thomson relied more on the restricted-stock studies because, he testified, the pre-IPO studies "tend to overstate their discount for just lack of marketability". In particular, Thomson relied on the SEC Institutional Investor Study, a restricted-stock study that showed an average discount of 26.4 percent. Reilly relied more on the pre-IPO studies than the restricted-stock studies. Reilly did not rebut Thomson's testimony that the pre-IPO studies overstated the discount for lack of marketability. We therefore adopt Thomson's marketability discount of 25 percent.

f. Weight Given to the Cashflow Method

Reilly gave a 30-percent weight to the cashflow method.[8] Thomson gave the cashflow method a weight of 20 percent. In our view, the cashflow method is appropriate to reflect the value of

[7]Reilly testified that 25 percent was also reasonable.

[8]Reilly referred to the cashflow method as the direct capitalization method.

the partnership if it is operated as a timber company, and the asset method is appropriate to reflect the value of the partnership if its assets are sold. Accordingly, the percentage weight to be accorded the cashflow method should be equal to the probability that the partnership would continue to be operated as a timber company.

We believe that there was a 75-percent probability that the partnership would have continued its operations rather than liquidating its assets. The Giustina family had a long history of acquiring and retaining timberlands. We take this into account, but we also assume that the owner of the 41.128-percent limited partner interest is a hypothetical third party, see sec. 25.2512-1, Gift Tax Regs., who seeks the maximum economic advantage from the asset.[9] As Reilly testified, the optimal strategy to maximize the value of the partnership would be to sell the timberland and "get $143 million today." Selling the timberlands would generate about $143 million; continuing to operate the partnership would generate only about $52 million.

---

[9]As we said in Estate of Davis v. Commissioner, 110 T.C. 530, 535 (1998) (citations omitted):

> The willing buyer and the willing seller are hypothetical persons, rather than specific individuals or entities, and the individual characteristics of these hypothetical persons are not necessarily the same as the individual characteristics of the actual seller or the actual buyer. The hypothetical willing buyer and the hypothetical willing seller are presumed to be dedicated to achieving the maximum economic advantage.

Reilly opined that the value of the timberlands is irrelevant because a holder of Natale Giustina's interest could not unilaterally force the sale of the partnership's assets. It is true that the owner of a 41.128-percent limited partner interest could not alone cause the partnership to sell the timberlands. However, there are various ways in which a voting block of limited partners with a two-thirds interest in the partnership could cause the sale. The members of such a voting block could replace the two general partners, who have the power to sell assets and make distributions. Alternatively, a two-thirds voting block could dissolve the partnership, an act that must be followed by the distribution of the partnership's assets. We are uncertain how many partners would share the view that the timberland should be sold. The uncertainty does not prevent us from estimating the probability of the sale:

> The entire valuation process is a boundless subjective inquiry: To value an asset the court has to make guesses or assumptions about the future. These inquiries require speculation about the composition of management * * *

Repetti, "Minority Discounts: The Alchemy in Estate and Gift Taxation", 50 Tax L. Rev. 415, 445 (1995). Some of these family members would perhaps prefer that the partnership remain in operation. But people also tend to prefer $143 million to $52 million, or, in this case, a share of $143 million to a share of $52 million. We believe that there is a 25-percent probability

that a sufficient number of limited partners would cause the sale of the partnership's assets.

Conversely, there was a 75-percent probability the timberlands would not be sold. We assign a weight of 75 percent to the value of the partnership as measured by the cashflow from its continued operations.

3. Asset Method

a. Significance of Value of Timberlands and Other Assets

The timberland assets of the partnership were worth approximately $143 million. The total assets of the partnership were worth $150,680,000, according to an estimate by Thomson that is essentially unchallenged by the estate. Therefore, we assume that if the partnership had liquidated its assets and distributed the proceeds to the partners, the amount of the distribution would have been $150,680,000. This figure should be weighted by the 25-percent probability that the partners would have caused the sale of the timberlands and other assets.

b. No Discount for Lack of Control

In determining the value of the 41.128-percent limited partner interest if the timberland assets were sold, it is not appropriate to subtract a discount for the inability of the owner to control the affairs of the partnership. The IRS expert, Thomson, applied a lack-of-control discount of 12 percent. However, our calculations already assume that there was a

75-percent chance that the owner of the interest would have been unable to garner enough support from the other limited partners to sell the timberland. The inability to cause the sale of the timberland is an aspect of the lack of control.[10] Thus, lack of control is already reflected by the 75/25 percentage weighting. No additional discount is needed.

c. No Discount for Lack of Marketability

In calculating the value of the partnership interest if the assets were sold, it is not appropriate to subtract a discount for lack of marketability. A discount for lack of marketability reflects the inability of the owner of a business enterprise to quickly sell the interest.[11] But in valuing the partnership interest as if there were a sale of the timberlands, we have

---

[10] James R. Repetti writes:

> Additional benefits of control, however, become available only as the percentage of stock ownership increases. For example, many state statutes require a two-thirds vote of shareholders to liquidate a corporation, sell substantially all the corporation's assets, merge the corporation or amend the certificate of incorporation. The ability to compel liquidation of a corporation or sale of its assets may be valuable if the value of the corporation's assets exceeds the value of its ongoing business. * * *

"Minority Discounts: The Alchemy in Estate and Gift Taxation", 50 Tax L. Rev. 415, 426-427 (1995) (fn. refs. omitted).

[11] As Reilly testified: "The concept of investment marketability relates to the liquidity of an investment--that is, how quickly and certainly the investment can be converted into cash at the owner's discretion."

assumed that the timberland could be sold for $143 million, a stipulated value that includes a 40-percent discount to reflect the delays in selling the land. It would be a double discount to reduce the value further to reflect the delays in selling the partnership interest.

4. Value of the 41.128-Percent Limited Partner Interest

In our view, the value of all interests in the partnership is equal to (75% x $51,702,857) + (25% x $150,680,000), or $76,447,143. The discount for lack of marketability (which is applicable only to the value of the partnership interest as if the partnership continued operations, not to the value as if the timberland is sold, see supra Opinion parts 2.e and 3.c) is equal to 25% x (75% x $51,702,857), or $9,694,286. This discount reduces the value to $66,752,857. Multiplying $66,752,857 by 41.128 percent equals $27,454,115, which we conclude is the correct value of the partnership interest in question. These calculations can be compared to the approaches taken by the two expert witnesses as set out in the following chart:

Valuation of the 41.128-Percent Limited Partner Interest:
Comparison of Approaches

	Reilly (Estate Expert)	Thomson (IRS Expert)	Court
Methods and adjustments			
Asset-accumulation method	10% x $51,100,000	--	--
Cashflow method	30% x $33,800,000	20% x $65,760,000	75% x $51,702,857
Capitalization-of-distributions method	30% x $52,100,000	--	
Price-of-shares-of-other-companies method	30% x $59,100,000	20% x $99,550,000	--
Asset method		60% x $150,680,000	25% x $150,680,000
Total	$48,610,000	$123,470,000	$76,447,143
Discount for lack of marketability	35%	25%	25% (applied to value from cash-flow method only, for a weighted discount of $9,694,286)
Discount for lack of control	0%	12%	0%
Total after discounts	$31,597,000	$81,490,200	$66,752,857
X 41.128%	$12,995,000	$33,515,000	$27,454,115

5. Valuation Methods That We Did Not Adopt

a. Reilly's Capitalization-of-Distributions Method

The estate's expert witness, Reilly, attributed a 30-percent weight to the value given by the capitalization-of-distributions method. Using this method, Reilly estimated the present value of the distributions that he expected the partnership to make to the partners. We did not attribute independent weight to this method for two reasons. First, the cash earned by the partnership is a more reliable indicator of value than the cash distributed to the partners.[12] Second, the capitalization-of-distributions method and the cashflow method share the assumption that the partnership would remain in operation and not liquidate its timberland holdings. In this respect the methods are duplicative.

b. Reilly's Asset-Accumulation Method

Reilly also ascribed a 10-percent weight to what he called the asset-accumulation method. Applying this method, Reilly first aggregated the distributions that he predicted the partnership would make to the partners from 2005 until 2040, the end of the term of the partnership agreement. Reilly then discounted these distributions to present value. To this sum Reilly added the value of the timberlands, $143 million, as discounted to present value from the year 2040. The asset-

[12]Undistributed cash that is used by the partnership to increase the value of the partnership assets increases the value of the limited partner interests.

accumulation method is effectively a hybrid of the capitalization-of-distributions method and the asset method. Because we reject the capitalization-of-distributions method for the reasons given in Opinion part 5.a, and because we adopt the asset method (as weighted by the probability of an asset sale), we accord no independent weight to the asset-accumulation method.

c. Prices of Stock of Similar Companies

Reilly ascribed a 30-percent weight to what he called the "guideline publicly traded company" method. Applying this method, Reilly used the value of two publicly traded businesses to derive the value of the interest in the partnership. The first business was Plum Creek Timber Co., Inc., which is a real estate investment trust. Plum Creek owned 7.8 million acres of timberlands and 10 wood product conversion facilities. It derived only 52 percent of its revenue from timber sales. The second business was Pope Resources LP, a partnership. This business derived 81 percent of its revenue from timber sales. The remaining revenue was earned from two other operations: timberland consulting and a multifaceted real estate operation.

Like Reilly, Thomson used the value of other businesses to value the interest in the partnership. He relied on four businesses: Plum Creek Timber Co., Inc., Pope Resources LP, Deltic Timber Corp., and Potlatch Corp. Both Deltic and Potlatch

have substantial operations other than owning timberland and selling timber.

In our view, neither expert appropriately considered that the other companies have assets other than timberland assets and that they earn income from sources other than timber sales. Because of this failure, and because other methods are available, we accord no weight to the "guideline publicly traded company" method used by Reilly or the similar method used by Thomson.

6. The Accuracy-Related Penalty Under Section 6662

If there is an underpayment of tax, the penalty imposed is equal to 20 percent of the portion of the underpayment that is attributable to a "substantial estate * * * tax valuation understatement." Secs. 6662(a), (b)(5), 6664(a). For estate-tax returns filed before August 17, 2006, like the return in this case, there is a substantial estate-tax valuation understatement if the value of property shown on the estate-tax return is 50 percent or less of the correct value. Sec. 6662(g)(1) (effective for tax returns filed before the August 17, 2006, amendment by the Pension Protection Act of 2006, Pub. L. 109-280, sec. 1219(a)(1)(B), 120 Stat. 1083). On its estate-tax return, the estate claimed that the value of the 41.128-percent limited partner interest was $12,678,117. This is less than 50 percent of the correct value of $27,454,115. Therefore there was a substantial estate-tax valuation understatement.

However, no penalty is imposed with respect to an underpayment if there was reasonable cause for the underpayment and the taxpayer acted in good faith. Sec. 6664(c)(1). Whether an underpayment of tax is made in good faith and due to reasonable cause will depend upon the facts and circumstances of each case. Sec. 1.6664-4(b)(1), Income Tax Regs. In determining whether a taxpayer acted reasonably and in good faith with regard to the valuation of property, factors to be considered include: (1) the methodology and assumptions underlying the appraisal; (2) the appraised value; (3) the circumstances under which the appraisal was obtained; and (4) the appraiser's relationship to the taxpayer. Id. Although the IRS bears the burden of production under section 7491(c) that the section 6662 penalty is appropriate, the taxpayer bears the burden of proof in demonstrating reasonable cause. See Higbee v. Commissioner, 116 T.C. 438, 446-448 (2001).

The executor of the estate is the decedent's son, Larry Giustina. Larry Giustina hired a lawyer, Steven Lane, to prepare the estate-tax return. Lane hired Columbia Financial Advisors to appraise the 41.128-percent limited partner interest. Larry Giustina relied on the Columbia appraisal in filing the return.

The Columbia appraisal, like the Reilly report, valued the limited partner interest on the basis of capitalized cashflows, capitalized distributions, and the market values of other companies. Even though the Columbia appraisal did not incorporate the asset method, it was reasonable for the executor to rely on the Columbia appraisal. The partnership had been in operation for 15 years. It was reasonable to conclude that the partnership would continue to maintain its timberland assets without liquidating them.

The underpayment of tax on the estate's tax return resulted from its valuation of the 41.128-percent limited partner interest. The valuation was made in good faith and with reasonable cause. The estate is not liable for the section 6662 penalty.

To reflect the foregoing,

Decision will be entered under Rule 155.

UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

ESTATE OF NATALE B. GIUSTINA, DECEASED, c/o Laraway Michael Giustina, Executor, Petitioner - Appellant, v. COMMISSIONER OF INTERNAL REVENUE, Respondent - Appellee.	No. 12-71747 Tax Ct. No. 10983-09 MEMORANDUM[*]

Appeal from a Decision of the
United StatesTax Court

Argued and Submitted March 5, 2014
Portland, Oregon
Submission Withdrawn March 6, 2014
Resubmitted December 1, 2014

Before: GOODWIN and W. FLETCHER, Circuit Judges, and BLOCK, Senior District Judge.[**]

[*] This disposition is not appropriate for publication and is not precedent except as provided by 9th Cir. R. 36-3.

[**] The Honorable Frederic Block, Senior District Judge for the U.S. District Court for the Eastern District of New York, sitting by designation.

The Estate of Natale B. Giustina appeals the Tax Court's conclusion that its 41.128% interest in Giustina Land and Timber Company Limited Partnership was worth $27,454,115 for estate tax purposes, rather than $12,678,117 as stated in the Estate's tax return.

We have jurisdiction under 26 U.S.C. § 7482. "We review the Tax Court's factual determinations, including valuation of assets . . ., for clear error." *Estate of Trompeter v. Comm'r*, 279 F.3d 767, 770 (9th Cir. 2002).

The Tax Court concluded that there was a 25% likelihood of liquidation of the partnership. It therefore gave a 25% weight to an asset-based valuation and a 75% weight to the valuation of the partnership as a going concern. Although the Tax Court recognized that the owner of the limited interest could not unilaterally force liquidation, it concluded that the owner of that interest could form a two-thirds voting bloc with other limited partners to do so, and assigned a 25% probability to this occurrence. This conclusion is contrary to the evidence in the record. In order for liquidation to occur, we must assume that (1) a hypothetical buyer would somehow obtain admission as a limited partner from the general partners, who have repeatedly emphasized the importance that they place upon continued operation of the partnership; (2) the buyer would then turn around and seek dissolution of the partnership or removal of the general partners who just

approved his admission to the partnership; and (3) the buyer would manage to convince at least two (or possibly more) other limited partners to go along, despite the fact that "no limited partner ever asked or ever discussed the sale of an interest." Alternatively, we must assume that the existing limited partners, or their heirs or assigns, owning two-thirds of the partnership, would seek dissolution. We conclude that it was clear error to assign a 25% likelihood to these hypothetical events. As in *Estate of Simplot v. Commissioner*, 249 F.3d 1191, 1195 (9th Cir. 2001), the Tax Court engaged in "imaginary scenarios as to who a purchaser might be, how long the purchaser would be willing to wait without any return on his investment, and what combinations the purchaser might be able to effect" with the existing partners. *See also Olson v. United States*, 292 U.S. 246, 257 (1934) (explaining in a condemnation case that, when a court estimates "market value," "[e]lements affecting value that depend upon events or combinations of occurrences which, while within the realm of possibility, are not fairly shown to be reasonably probable[,] should be excluded from consideration"). We therefore remand to the Tax Court to recalculate the value of the Estate based on the partnership's value as a going concern.

The Estate further claims that the Tax Court clearly erred by using pretax (non-tax-affected) cash flows for the going-concern portion of its valuation. The

Estate itself admits in its brief that "tax-affecting is . . . an unsettled matter of law." We therefore cannot say that the Tax Court clearly erred in adopting a pretax rather than a posttax methodology. Further, the Tax Court did not clearly err by using the Commissioner's proposed 25% marketability discount rather than the Estate's proffered 35% discount, *see, e.g.*, *Estate of O'Connell v. Comm'r*, 640 F.2d 249, 253 (9th Cir. 1981), especially considering that the Estate's expert acknowledged that such discounts typically range between 25% and 35%.

We do, however, hold that the Tax Court clearly erred by failing to adequately explain its basis for cutting in half the Estate's expert's proffered company-specific risk premium. Even under the deferential clear error standard, "[i]n drawing its conclusions . . . the Tax Court is obligated to detail its reasoning." *Estate of Trompeter*, 279 F.3d at 770. We recognize that diversification of assets is a widely accepted mechanism for reducing company-specific risk. However, the Tax Court stated only that "[i]nvestors can eliminate such risks by holding a diversified portfolio of assets," without considering the wealth a potential buyer would need in order to adequately mitigate risk through diversification.

REVERSED and REMANDED for recalculation of valuation.

STRINE, Vice Chancellor.

I. Introduction

This is an appraisal action. The petitioners Global GT LP and Global GT Ltd. owned nearly 1.4 million shares of respondent Golden Telecom, Inc. ("Golden"), a Russian-based telecommunications company that was listed on the NASDAQ. The petitioners claim that Golden was undervalued in a 2007 merger in which Golden was purchased for $105 per share by Vimpel-Communications ("VimpelCom") — a major Russian provider of mobile telephone services whose two largest stockholders were also the largest stockholders of Golden.

As is typical, the outcome of this appraisal proceeding largely depends on my acceptance, rejection, or modification of the views of the parties' valuation experts. Both experts were well qualified to testify about the appropriate inputs to use in valuing a public company; but neither had a deep knowledge of the Russian telecommunications market or of Golden itself. Both these men of valuation science purported to apply the same primary method of valuation — the discounted cash flow ("DCF") method — but the expert for the petitioners came up with a value of $139 per share and the expert for Golden came up with a value of only $88 per share — a modest $51 per share value gap.

In this decision, I reach a valuation of Golden using the DCF methodology, which is the method that both experts viewed as the most reliable. I eschew any reliance on methods based on analogizing to comparable companies or transactions because the experts themselves had even less knowledge of the comparables than they did of Golden and both viewed it difficult to find a good

sample of comparables. Thus, I focus on coming up with a solid, if necessarily imperfect, valuation using the DCF method that both experts embraced as the technique most susceptible to useful application.

In focusing on a DCF valuation, I reject Golden's argument that I should give weight to the merger price itself on the grounds that the merger reflected a market-tested price. I reject that proposition for several reasons. First of all, the Special Committee that negotiated the merger never engaged in any active market check either before or after signing the merger agreement with VimpelCom. Second and most important, the passive market check that is supposed to instill confidence in me required market participants to assume that Golden's two largest stockholders, Altimo Holdings and Investments Limited ("Altimo") and Telenor ASA ("Telenor"), would both sell their Golden stake to another bidder, despite the fact that they had an economic interest in VimpelCom that was far more substantial than their stake in Golden — an unlikely prospect made even more doubtful by Altimo's public announcement that it did not intend to sell its 26% stake in Golden in another transaction. Given these market realities, it is not surprising that Golden's Special Committee chairman admitted that the Committee had focused on getting the best deal they could from VimpelCom. There was no open market check that provides a reliable insight into Golden's value.

After rejecting that argument, I wade through the discrete differences that explain the experts' differing DCF valuations, which primarily involve Golden's terminal growth rate, and the appropriate equity risk premium and beta to use in

calculating a discount rate. After making my determinations as to these disagreements, I plugged them into the petitioners' DCF model and generated a per share value of $125.49 per share, which I supplement with an award of interest at the applicable statutory rate.

II. Factual Background[1]

The trial record was largely dominated by the testimony of the experts. For their part, the petitioners presented the testimony of Paul Gompers, a Professor of Business Administration at Harvard Business School.[2] Golden offered Marc Sherman, a Managing Director of Alvarez & Marshal, to respond.[3] Both experts are well qualified generally in the literature of valuation. Although Sherman has a bit more practical telecommunications experience, having done some valuation work involving other telecommunications firms, neither struck me as anything

[1] These are the facts as I find them after trial.

[2] Gompers graduated from Harvard College, and later earned a M.Sc. in Economics from Oxford University and a Ph.D. in Business Economics from Harvard University. He teaches courses at the graduate level and conducts research in areas including corporate finance, the valuation of companies, and entrepreneurial finance and management. Gompers has authored numerous case studies and technical notes, articles in peer-reviewed journals on finance and economics, and has co-authored four books. In the past, he has been retained as a valuation expert for a variety of companies, including a telecommunications company. *See* JX 728 (Expert Report of Paul A. Gompers) ("Gompers Report") at 1.

[3] Sherman graduated from the University of Baltimore, and received his J.D. from the University of Maryland School of Law. Before joining Alvarez & Marshal, Sherman was a Managing Director at Huron Consulting Group, and a partner at KPMG. He has also authored or co-authored several books. He is a certified public accountant, an attorney, a Certified Insolvency and Reorganization Advisor, a Certified Fraud Examiner, and is certified by the American Institute of Certified Public Accountants in Financial Forensics. Sherman has served as a valuation expert for businesses in a variety of industries, including communications, and has worked on a number of valuation projects involving the telecommunications industry. *See* JX 730 (Expert Report of Marc B. Sherman) ("Sherman Report") at 4-5, Ex. A.

close to an industry expert. Moreover, neither had a deep knowledge of Golden itself or the Russian telecommunications industry.

Golden has tried to impress me with the fact that Sherman spoke with management for Golden *after* the merger and *during* the litigation, and therefore supposedly gained a deeper sense of the firm and industry than did Gompers, who did not do so. Of course, the managers for Golden working for the VimpelCom corporate empire had an incentive to cooperate with Sherman, and doubtless Golden would not have given Gompers unfettered access to them. In that respect, the testimony of the two fact witnesses who testified about Golden was not particularly helpful in terms of conveying a good sense of Golden's prospects.

Fortunately, the experts did agree that there were a reliable set of projections prepared by Golden's management that existed for the first five years beyond the merger. Given the existence of those projections and the general evidence in the record regarding the telecommunications industry both in Russia and internationally, and the predicted future of the Russian economy, there is a rational, if far from fully satisfying, record from which to resolve the discrete areas of opinion where the experts differ.

What precedes my resolution of those issues is my distillation of the record, such as it is, regarding Golden and its prospects.

A. Golden's Business And Plans For Expansion

Golden, a telecommunications company, operated in the former Soviet Union, and was publicly traded on the NASDAQ.[4] Its initial public offering took place in September 1999 and, after that time, Golden grew primarily through self-financed acquisitions of regional-based telecommunications companies in Russia and other countries in the Commonwealth of Independent States (the "CIS").[5] Although Golden was, at first, predominately focused on providing long-distance services, its acquisitions of local telephone companies throughout Russia and certain CIS countries gave Golden the capacity to provide local service to homes and businesses.[6]

Golden traditionally focused on providing fixed-line services, meaning that it provided telephone services through fiber or copper wiring,[7] and derived its revenues primarily from corporate customers and from services provided to other telecommunications and mobile operators.[8] By 2006, Golden had begun to

[4] Before it was incorporated, Golden was a majority-owned subsidiary of Global TeleSystems, Inc., which was among the first foreign telecommunications operators in the former Soviet Union. *See* JX 16 (Golden 2007 10-K (Mar. 17, 2008)) ("2007 10-K") at 4.
[5] The CIS includes: the Azerbaijan Republic; the Republic of Armenia; the Republic of Belarus; Georgia; the Republic of Kazakstan; the Kyrgyz Republic; the Republic of Moldova; the Russian Federation; the Republic of Tajikistan; Turkmenistan; the Republic of Uzbekistan; and the Ukraine. *See* Commonwealth of Independent States: CIS States, http://cis.minsk.by/main.aspx?uid=3360.

expand its focus to include Wi-Fi,[9] which was in the early stages of development in Russia and the CIS, and broadband internet,[10] which was available only in major Russian cities.[11] By the end of 2007, Golden had completed approximately thirty acquisitions of smaller companies, and had become a leading facilities-based provider of integrated telecommunication and internet services in the most populated areas of Russia and other countries of the CIS, and the largest independent telecommunications operator in Russia.[12] In particular, Golden acquired a 51% stake in Corbina, a telecommunications service provider that offers broadband internet in several Russian cities, which allowed Golden to offer bundled services including broadband internet, voice over internet protocol, internet protocol television, and mobile virtual network-based services.[13]

B. Golden's Management Creates A Five Year Plan

Despite its expansion into other areas of the internet and telecom market and its goal to sell a wide variety of related services to the customers on the ends of its cables, Golden remained primarily a fixed-line telecommunications provider for the business sector. Golden's Board of Directors established a five-year

[9] Wi-Fi is a trademarked term, owned by the Wi-Fi Alliance, which applies to certified local area network devices that meet a class of technical standards — specifically, the IEEE 8.0211 standards. *See* GORDON A. GOW & RICHARD K. SMITH, MOBILE AND WIRELESS COMMUNICATIONS: AN INTRODUCTION (2006), at § 7.4.
[10] Broadband refers to high-speed internet access, which can be delivered through various means, such as fiber optics, cable modems, or wirelessly. *See* FEDERAL COMMUNICATIONS COMMISSION — CONSUMER & GOVERNMENTAL AFFAIRS BUREAU, WHAT IS BROADBAND (2009), http://www.fcc.gov/cgb/broadband.html.

[12] 2007 Investor Presentation at 5.
[13] 2007 10-K at 5, 27, 44.

business plan for Golden (the "Five Year Plan") in October 2007 to chart the company's continued expansion.[14] The Five Year Plan established a three-pronged strategy for Golden. First, Golden would continue to widen its corporate customer base in large cities, such as Moscow and St. Petersburg.[15] Second, Golden would continue regional expansion to become a "national market player in both corporate and retail market segments."[16] Third, Golden would enter the emerging broadband market, and seek to become a "leading provider of broadband access in Russia and the CIS."[17] Although Gompers contends that Golden's strategy reflected a marked move away from its prior consistent involvement in mergers and acquisitions activity, my reading of the record suggests that to accomplish this three-pronged strategy, Golden would be required to continue to engage in M&A activity to enter additional markets (which are comprised of cities smaller than Moscow but still far larger than, say, Wilmington, Delaware) and to gain scale in the product markets it wished to enter.[18]

The Five Year Plan projected revenue to grow annually at a declining rate:

2007	47.8%
2008	34.8%
2009	20.2%

[14] JX 412 (Five Year Plan, 2007-2012, Board of Directors Meeting (Oct. 3, 2007)) (the "Five Year Plan").
[15] *Id*. at 4.
[16] *Id*.; Tr. at 85 (Gallagher).
[17] Five Year Plan at 4.
[18] *See* JX 416 (Transcript of Golden's Third Quarter Earnings Release Conference Call (Nov. 22, 2007)) at 10-11 (stating that Golden's growth strategy included expansion into fifty cities, instead of the twenty in which it presently operated); Tr. at 816-18 (Svetlichny) (explaining that Golden had a number of smaller acquisitions "in the pipeline" before it was acquired by VimpelCom).

2010	19.5%
2011	13.0%
2012	8.5%[19]

The Five Year Plan also estimated that Golden's EBITDA margins would grow for three years, and then level off:

2007	25.9%
2008	31.8%
2009	32.1%
2010	32.6%
2011	32.6%
2012	32.5%[20]

The projections of Golden's management were based on Golden's business plan of expanding its corporate customer base, broadband service, and regional expansion throughout Russia and the CIS.[21] The Five Year Plan considered the increased competition that Golden would face in all segments of its business as the Russian telecom market continued to grow,[22] and a variety of potential risks, including political risk.[23]

The predictions in the Five Year Plan are reasonable when considering the trends in the Russian market generally, and the telecom industry in particular. For example, the projected compound annual growth rate ("CAGR") of the Russian

[23] *See* JX 17 (Golden Telecom, Inc., Schedule 14D-9 (Jan. 18, 2008)) (the "Proxy") at 43, 36 (explaining that Golden's projections considered "the commercial and execution risks associated with implementing [Golden's] business plan, [Golden's] ability to enter the media market, the potential costs for possible future acquisitions, the potential effect of the regulatory regime on [Golden's] operations, . . . the political, economic, and legal environment in the markets in which [Golden] operates").

nominal GDP was expected to be 14.6% from 2007 to 2012, which is consistent with the average projected CAGR predicted for Golden in the Five Year Plan of 14.5%.[24] The projected CAGR of the Russian nominal GDP of 8.5% from 2012-2017 is in line with Golden's projected revenue growth in 2012 of 8.5%.[25] And, the decline in Golden's growth rate is consistent with the decline in the (still healthy) growth rate of Russia's overall telecom sector since 2004.[26]

C. Russia's Expanding Telecom Market And Golden's Predicted Growth

Golden's Five Year Plan was based, in part, on the reasonable expectation that the Russian telecommunications market would continue to expand. Russia was one of the few remaining growth markets in Europe, and its telecom industry was predicted to grow rapidly, particularly the broadband retail market.[27] Golden was particularly well-poised to grow with the Russian market because it was the only operator present in all segments of Russia's fixed-line market in 18 of Russia's 20 largest cities.[28] Renaissance Capital, for example, opined in February 2007 that Golden was "well positioned to maintain its leadership in the corporate

[24] *See* JX 414 (Five Year Plan Executive Summary (2007)) at 4; Sherman Report at 46, 53 (citing *The Economist Intelligence Unit* (Jan. 2008)).

[27] *See* JX 221 (HSBC, *Golden Telecom* (Oct. 23, 2007)) at 7 (stating that "the growing consumer market will reshape the profile of the Russian economy, with domestic-oriented companies such as banks and telecom operators enjoying the strongest growth"); JX 168 (Renaissance Capital, *Golden Telecom — Loaded and Ready to Fire* (Aug. 8, 2007)) at 13 ("Given the level of broadband penetration, we expect to see rapid growth continue [in Russia] for the next three-to-four years.").
[28] 2007 Investor Presentation at 18, 20.

[telecom] segment," and Golden's residential internet market would become Golden's "second-largest contributor to operating income in 2010" largely because Golden's "fiber-to-the-home" internet service was "the best option on the market."[29] Golden was also in a position to expand because it had very low levels of debt compared to other telecom companies.[30]

D. Golden And VimpelCom Agree To Merge

Of course, just as Golden hoped to become a major competitor in the Wi-Fi and broadband markets, so too did other industry players have their eye on Golden's space. One industry player in particular had box seats from which to contemplate Golden. That was VimpelCom.

Golden's two largest stockholders, Altimo and Telenor, also happened to be the largest stockholders of VimpelCom. Indeed, Altimo and Telenor's combined stake in VimpelCom was larger in both percentage terms and value. Specifically, Sunbird Limited, which owned 26% of Golden's outstanding common stock, and Eco Telecom Limited, which owned 44% of VimpelCom's outstanding voting capital, are both subsidiaries of Altimo. And, Nye Telenor East Invest AS, the beneficial owner of 18.3% of Golden's outstanding common stock, and Telenor East Invest AS, the beneficial owner of 33.6% of VimpelCom's outstanding

[29] JX 126 (Renaissance Capital, *Golden Telecom: What's Going On With These Shares?* (Feb. 21, 2007)) at 6, 10, 14.

Servs., *The TeliaSonera-Telenor-Altimo Triangle: A Soap Opera With A Shakespearean Ending?* (Mar. 14, 2007)) at 5 (noting that Golden was "underleveraged and could acquire more [local fixed-line] exposure through M&A's"); Tr. at 271 (Gallagher) (explaining that Golden had $250 million in debt, which was minimal compared to other companies in the industry).

common stock, are both subsidiaries of Telenor. Moreover, Altimo and Telenor not only had board representatives on the VimpelCom board, but also had appointed members of the Golden Board.[31] Four nominees of Eco Telecom Limited served on the VimpelCom board, including Oleg Malis and Alexey Reznikovich, who also served on the Golden Board.[32] Four nominees of Telenor East Invest served on the VimpelCom board, including Kjell Morten Johnsen, who also served on Golden's Board.[33] Together, Altimo and Telenor appointed a majority of the nine-member VimpelCom board, suggesting how deep their interest in VimpelCom was.

Given the cross-holdings and the reality that Golden was strong in fixed-line services and weak in mobile capabilities, and VimpelCom had just the opposite qualities, it was perhaps inevitable that a merger of the two firms would be considered.[34] At first, in February 2007, Golden's CEO, Jean-Pierre Vandromme, and VimpelCom's CEO, Alexander Izosimov, began to discuss the possibility of the two companies working together by, for example, cross-selling their services.[35] Discussions between senior management of Golden and VimpelCom continued throughout 2007 and, in furtherance of those discussions,

[31] Proxy at 4.
[32] *Id*.
[33] *Id*.
[34] Tr. at 91 (Gallagher).
[35] Proxy at 14.

the two companies entered into a confidentiality agreement and exchanged non-public information.[36]

In April 2007, Izosimov met with Vandromme, and suggested that the two companies explore a transaction whereby VimpelCom would acquire 100% of Golden.[37] Golden's Board met on May 17, 2009 to discuss VimpelCom's proposal and decided to establish a Special Committee made up of the four Golden non-management directors who were not affiliated with Altimo or Telenor.[38]

The Special Committee retained Skadden, Arps, Slate, Meagher & Flom, LLP as outside counsel, and Credit Suisse Securities (USA), LLC as its financial advisor.[39] On July 3, 2007, VimpelCom gave Golden a summary sheet of proposed terms for a combination of the two companies. But because the summary sheet did not specify an offer price, the Special Committee decided not to respond until a more detailed proposal was presented.[40] Around this time, the news of VimpelCom's interest in Golden leaked into the market. In early September 2007, VimpelCom proposed to pay $80 per share of Golden's stock, which the Special Committee rejected,[41] and, in late September 2007, VimpelCom changed its proposal to a range of $80 to $95 per share.[42] The Special Committee felt that the upper end of the range was "sufficiently attractive" to justify

continuing the negotiations process and entered into a second confidentiality agreement with VimpelCom, which gave VimpelCom access to Golden's non-public information and Golden's management.[43]

VimpelCom raised its offer price again to $100 on November 12, 2007.[44] But the Special Committee felt that this amount was inadequate, and rejected the offer on November 15, 2007.[45] On November 28, 2007, VimpelCom raised its offer to $103 per share, and the Special Committee again rejected the offer. Although VimpelCom initially told the Special Committee that $103 per share was its final offer, VimpelCom raised its offer to $105 per share on December 1, 2007, which the Special Committee agreed to accept provided that all other material terms for the merger were fully resolved.[46]

According to Patrick Gallagher, Chairman of the Special Committee, VimpelCom's offer of $105 per share represented the "highest per share consideration reasonably obtainable" when considering the inherent risks in Golden's business plan, such as the increased competitiveness in Golden's key markets, political uncertainty in Russia, adverse changes in the global credit markets, and VimpelCom's intention to directly compete with Golden in the broadband market.[47] The Special Committee recommended that the full Board

accept the merger and, on December 3, 2007, the Board unanimously approved the merger. Credit Suisse completed a fairness opinion for the $105 per share price (the "Fairness Opinion") and, at a December 20, 2007 meeting of the Special Committee, opined that the price was fair.

The discounted cash flow ("DCF") analysis conducted by Credit Suisse came up with a range of $85-$128, and a median value of $102.[48] Importantly, this valuation was premised on a nominal GDP growth rate for the Russian economy of 5.6%.[49] That was supposedly taken from an Economist Intelligence Unit ("EIU") forecast for 2013 to 2017. The number used, however, does not track the December 2007 EIU data, which forecasted nominal GDP growth of 7.4%.[50] If the figure in the December 2007 EIU data was used in Credit Suisse's model, its DCF value for Golden would have had a median value of $110 per share.

The merger agreement between Golden and VimpelCom (the "Merger Agreement") was executed the next day, on December 21, 2007.[51] The Merger Agreement required that at least 63.3% of Golden's outstanding shares be tendered before the merger could close.[52] Additionally, the merger provided for: (1) an $80 million termination fee, which represented 2% of the $4 billion transaction;

[52] *Id*. at 29.

(2) a $120 million fee for Golden if VimpelCom's financing fell through; and (3) a matching right for VimpelCom to address superior offers.[53] But Altimo, which owned 26% of Golden, publicly indicated that it did not intend to sell its Golden stake to another bidder.[54] Telenor was more coy, but gave no affirmative indication that it would sell to another bidder, and its representative on the Golden Board had voted for the merger.[55] Unsurprisingly, given the objective facts regarding Altimo and Telenor's ownership interest in VimpelCom, no third party came forward after the Merger Agreement was signed to express an interest in buying Golden.

E. The Market Reacts Negatively To The Merger Price

After the merger price was announced on December 21, 2007, market analysts commented that the $105 per share price was very favorable to VimpelCom and, perhaps most important, VimpelCom's stock price rose substantially.[56] Morgan Stanley, for example, downgraded Golden on the day that

[53] *Id*. at 28.
[54] *Id*. at 19-20.
[55] *Id*. at 26.
[56] After rumors about the proposed VimpelCom/Golden merger were leaked, the price of VimpelCom stock steadily increased until a few days after the Merger Agreement was announced. VimpelCom stock traded at $22.12 on July 5, 2007, increased slightly to $22.31 on July 6, 2007, the day that the first rumor of the merger was leaked, rose to $41.98 on December 21, 2007, the day that the merger was announced, and peaked three days later at $44.98 on December 24, 2007. *See* Google Finance, Vimpel-Communications (ADR), *available at* http://www.google.com/finance?q=NYSE:VIP (last visited Apr. 18, 2010); Yahoo Finance, Vimpel-Communications (VIP), http://finance.yahoo.com/echarts?s =VIP#chart2:symbol=vip (last visited Apr. 18, 2010). In fact, VimpelCom's stock price increased from $37.73 on December 19, 2007, to $39.38 on December 20, 2007, before reaching $41.98 on the day of the merger announcement. *See id.*; BusinessWeek, Historical Stock Quotes for VimpelCom,

the price was announced, and expressed its concern that although "Golden offer[ed] attractive organic growth and prospects . . . the net realizable value for [Golden's minority stockholders] may [have been] limited only to the level of the bid price."[57] Renaissance Capital also commented that the transaction was favorable to VimpelCom shareholders, stating that "even purely taking the difference between [Renaissance Capital's] valuation of Golden Telecom ($136/ share) and the tender offer ($105 per share) add[ed] about $1.2 per VimpelCom share."[58]

---

http://investing.businessweek.com/research/stocks/snapshot/historical.asp?ticker=VIP:US (last visited Apr. 18, 2010); *see also* Sherman Cross Examination Demonstratives 7-9; Tr. at 1052-54 (Sherman). The rise in VimpelCom's price per share is difficult to attribute to general market trends. The DOW Jones Industrial Average, for example, was at 13,611 on July 6, 2007, and a bit lower at 13,450 on December 21, 2007. *See* Yahoo Finance, Dow Jones Industrial Average Index Chart, http:///finance.yahoo.com/echarts?s=^DJI (last visited April 10, 2010). Similarly, the NASDAQ closed at 2,666.51 on July 6, 2007, and at 2,691.99 on December 21, 2007. *See* Yahoo Finance, NASDAQ Composite Historical Prices, http://finance.yahoo.com/q/hp?s=^IXIC (last visited April 10, 2010). Nor can the rise in VimpelCom's stock price be easily attributed to the performance of the global telecom industry, which remained stable from early July 2007 to late December 2007. *See* Yahoo Finance, iShares Dow Jones US Telecom Historical Prices, http://finance.yahoo.com/q/hp?s=IYZ&a=05&b=26&c=2007&d=11&e=30&f=2007&g=d&z=66&y=0 (last visited April 22, 2010) (showing that the Dow Jones US Telecom index fund traded at $31.98 on July 6, 2007, and at $28.03 on December 21, 2007); Yahoo Finance, iShares S&P Global Telecommunications Historical Prices, http://finance.yahoo.com/q /hp?s=IXP&a=06&b=1 &c=2007&d=11&e=30&f=2007&g=d&z=66&y=0 (last visited April 22, 2010) (showing that the S&P Global Telecommunications index fund traded at $65.56 on July 6, 2007, and at $71.18 on December 21, 2007).

[57] JX 301 (Morgan Stanley, *Golden Telecom: Downgrading to EW on VimpelCom Bid; PT Moves Down to US$105* (Dec. 21, 2007)).

[58] JX 302 (Renaissance Capital, *VimpelCom Buying Golden Telecom* (Dec. 21, 2007)).

F. Shareholders Overwhelmingly Tender Their Shares At The $105 Price

Although the movement in VimpelCom's stock price suggested that the market believed that VimpelCom was getting a good deal, an overwhelming majority of Golden's shareholders tendered their shares at the $105 price. Under the terms of the Merger Agreement, Lillian Acquisition, Inc., a wholly owned subsidiary of VimpelCom, was to acquire 100% of Golden in a two step transaction. First, VimpelCom would commence a cash tender offer of $105 per share for the outstanding shares of Golden common stock.[59] Second, a back-end merger would convert all Golden shares not tendered — other than those Golden shares subject to the exercise of appraisal rights — into the right to receive $105 per share in cash.

VimpelCom commenced the tender offer on January 18, 2008. Altimo had already indicated that it intended to tender its shares and did so, but Telenor decided to first conduct its own analysis to determine whether the price was adequate,[60] and finally tendered its shares on February 5, 2008. A total of 94.4% of Golden's shareholders tendered at the $105 price before the offer expired on February 26, 2008. The merger closed on February 28, 2008, and Golden became a wholly-owned subsidiary of VimpelCom.

G. The Petitioners Request An Appraisal

The petitioners filed their request for an appraisal on April 18, 2008. Following extensive expert discovery, a trial was held on October 14-15, 19, and 30, 2009. This is my opinion on the fair value of Golden.

III. Legal Framework

Under 8 *Del. C.* § 262(h), this court must, upon finding that a stockholder is entitled to an appraisal, "determine the fair value of the shares exclusive of any element of value arising from the accomplishment or expectation of the merger or consolidation, together with interest, if any, to be paid upon the amount determined to be the fair value."[61] The entity must be valued as a going concern based on its business plan at the time of the merger,[62] and any synergies or other value expected from the merger giving rise to the appraisal proceeding itself must be disregarded.[63]

IV. Analysis

In addressing the question of fair value, I proceed in two steps. First, I explain why I reject Golden's argument that the merger price is itself a reliable indication of fair value. Then, I grapple with the contending positions of the

[61] 8 *Del. C.* § 262(h); *see also Cavalier Oil Corp. v. Harnett*, 1988 WL 15816, at *9 (Del. Ch. Feb. 22, 1988) (explaining that, in a § 262 action, the court must "determine the fair value of 100% of the corporation [and award] the dissenting stockholder his proportionate share of that value"), *aff'd*, 564 A.2d 1137 (Del. 1989).

[63] *Union Ill. 1995 Inv. Ltd. P'ship v. Union Fin. Group, Ltd.*, 847 A.2d 340, 343 (Del. Ch. Jan. 5, 2004).

parties' experts about the value of Golden, in particular regarding the valuation of Golden in light of its future expected cash flows.

A. Deference To The Merger Price

As an initial matter, I find the price that VimpelCom paid for Golden in the merger to have no reliable bearing on my appraisal valuation. Golden argues that deference should be given to the merger price of $105 per share because the Special Committee, assisted by outside advisors, was able to determine for itself the fair price of Golden, and because no other interested bidders came forward despite rumors of the potential merger that leaked to the market in July 2007. It is, of course, true that an arms-length merger price resulting from an effective market check is entitled to great weight in an appraisal. For example, in *Union Ill. 1995 Inv. Ltd. P'ship v. Union Fin. Group, Ltd.*, this court held that the merger price was the best indicator of fair value for appraisal purposes because the merger "resulted from a competitive and fair auction, which followed a more-than-adequate sales process and involved broad dissemination of confidential information to a large number of prospective buyers."[64] But, as Gallagher, the Special Committee chairman, admitted at trial, the Special Committee did not engage in any sales efforts at all and instead concentrated solely on getting as good

[64] *Id*. at 357-58; *see also Highfields Capital, Ltd. v. AXA Fin., Inc.*, 939 A.2d 34, 59 (Del. Ch. 2007) (deferring to the merger price where an arms-length process was conducted, and no material impediments prevented another bidder from entering the sales process during an eight-month market check period).

a deal as it could from VimpelCom.[65] In essence, the Special Committee treated the context as one closer to a merger proposal by a controlling stockholder, given the reality that Golden's two largest shareholders — Altimo and Telenor — owned more of VimpelCom, the buyer, than Golden, the seller. Now, in appraisal, Golden acts as if the Special Committee was simply locking in a floor, and creating the perfect conditions for an effective passive market check. That after-the-fact litigation argument is without any factual foundation.

The reality is that any bidder peering in from the outside was confronted by a merger agreement that did not contain an active go-shop provision, and by a public statement by Golden's largest stockholder, Altimo, that it would not sell its 26% stake in another transaction.[66] Although Golden argues that Telenor was more equivocal about whether it was willing to sell its 18% stake, equivocation in this context does not help Golden. The idea that a rational third-party bidder would make a blind expression of interest in a situation where the economic interests of Golden's largest stockholders was more heavily weighted toward doing what was best for VimpelCom — a corporation on whose board they had seated eight designees — and each stood to gain hugely if the merger generated synergy gains for VimpelCom is not one that I accept. In a situation such as this, to actually entice bids, the Special Committee, if it was relying on a market check to obtain the highest value, should have affirmatively sought guarantees from

[65] Tr. at 249-50 (Gallagher).
[66] *Id*. at 161-63, 186 (Gallagher); *see also* Proxy at 20.

Altimo and Telenor that they would support a higher bid and used those guarantees to attract bidders. Instead, the Special Committee created a situation where other market players would rationally infer that the merger was the deal supported by Golden's two largest stockholders (and the three directors that Altimo and Telenor appointed to Golden's Board) whose interest in VimpelCom gave them special reasons to support that deal and not to sell into another transaction.

Golden also makes a more novel argument. It contends that the fact that only a single investor has brought an appraisal claim demonstrates the fairness of the merger price. But analyzing a deal price based on the size of the appraisal class is not supported by the appraisal statute itself, and would require this court to speculate about the reasons for the size of the appraisal class. Investors may choose to forego appraisal for any number of reasons. Appraisal claims are expensive to pursue, and the petitioners get none of the merger consideration during the pendency of the case, making such claims beyond the means of some investors to fund. And, certain institutional investors may be happy to take a sizeable merger-generated gain on a stock for quarterly reporting purposes, or to offset other losses, even if that gain is not representative of what the company should have yielded in a genuinely competitive sales process.

Critically, if market evidence were to be considered, the weight of the evidence suggests that the market believed that VimpelCom was getting a bargain. As discussed earlier, a number of market analysts felt that the $105 price

undervalued Golden, and downgraded Golden after the merger was announced.[67] For example, Alfa Bank suggested that VimpelCom's offer undervalued Golden, and estimated that $129 per share would have been a more appropriate price.[68] More importantly, VimpelCom's stock rose substantially from $22.31 per share at the time that rumors about the proposed merger were leaked in July 2007 to $41.98 on December 21, 2007, the day that the Merger Agreement was announced, although the overall market remained relatively stable.[69] When the definitive terms of the merger were announced on December 21, 2007, VimpelCom's stock rose $2.60 for a price of $41.98 per share, and continued to rise in the immediate days following the merger announcement to $44.98.[70] These realities are noteworthy given that the stock price of an acquiring company will generally drop when it announces that it intends to merge with another company.[71]

For all these reasons, I reject Golden's argument that the merger price is a reliable indication of value.

OF BUS. & ECON. 51, 52 (1998) (stating that "the announcement of an acquisition for stock typically is associated with a drop in stock price for the acquiring firm") (citations omitted).

B. The Experts' DCF Analyses

The petitioners argue that the fair value of Golden as of February 28, 2008 (the "Valuation Date") was $138.37 per share.[72] Golden, on the other hand, argues that the $105 merger price is generous because $88.14 is the fair value of Golden as of the Valuation Date.[73] The parties' assertions are based on the reports of their valuation experts — Gompers and Sherman.[74] As I noted earlier, neither Sherman nor Gompers is an expert in Russia or in the telecom industry generally, although Sherman has more experience in conducting valuations of telecom companies in the context of litigation.[75]

Both experts conducted a DCF analysis, a comparable companies analysis, and a comparable transactions analysis. But, both give little weight to the latter two analyses. Sherman weighted his comparable companies and transactions analyses at only 20% of his conclusion.[76] Gompers did not give those methods any actual weight in his valuation, using them only as a check on his DCF findings.[77] Both experts admitted that there were few, if any, appropriate

[76] Sherman Report at 77-78. Giving 100% weight to his DCF analysis, Sherman's estimate of Golden's fair value is $88.58 per share. *See* Sherman Supplement at Updated Table 1.
[77] Gompers Report at 6.

comparables for Golden and the Golden-VimpelCom merger.[78] As important, neither of the experts convinced me that he really knew Golden deeply as a company, much less that he knew anything substantial about the sparse number of potential comparables, and their expert reports and the information they use to support them do not, in my view, provide me with any reliable basis to come up with a sound group of comparable companies or transactions myself.[79] The lack of confidence I have in this aspect of the experts' analyses is confirmed by the slight weighting they gave these methods. I am also not going to pretend that I am personally qualified or have the time to engage in a from-scratch construction of comparable companies and transactions analyses using such public resources as I could obtain.

Therefore, rather than engage in a speculative exercise based on tinkering with analyses that the two experts themselves essentially do not stand behind, I concentrate my valuation analysis on deploying the method that each expert

[78] Sherman Report at 71; Tr. at 308-09 (Gompers) (stating that Golden lacked "true comparables"), 1024 (Sherman) (explaining his view that Golden had only one true comparable).

[79] Despite supposedly applying similar methodologies, Sherman used just one company in his comparable company analysis, while Gompers used five. Gompers and Sherman only agreed on one company as a common comparable for Golden. That company is Comstar-United Telesystems ("Comstar"), a Russian integrated telecommunications company that operates in Russia and the CIS. Happily for Golden, Comstar's metrics lagged Golden on almost all measures. *See* Gompers Report at Ex. 15; JX 729 (Rebuttal Report of Paul A. Gompers) ("Gompers Rebuttal") at 33; Tr. at 1055-56 (Sherman). For example, both Golden and VimpelCom markedly outpaced Comstar in the pre-merger period, and after rumors of the merger had leaked into the market. Tr. at 1055-57 (Sherman) (citing Petitioners' Demonstratives 7 and 8). Sherman rejected as comparable another telecom company selected by Gompers — OAO Rostelecom — that would have generated a higher valuation for Golden if used in a sample.

believed was the most reliable and pertinent — the discounted cash flow method — and use that as the basis for my award.[80]

The components of a DCF analysis are familiar, and do not require repetition.[81] Both experts largely adopted the projections of Golden's management, including the Five Year Plan, which I have already found to be reasonable.[82] This provides the court with a largely-agreed upon projection of Golden's estimated cash flows for the period from 2008 to 2012.

The major area of disagreement between the experts about Golden's cash flows is the terminal growth value to be used in applying the Gordon growth model version of the DCF, which has been employed by both experts. The smaller argument about the cash flows is the tax rate to be applied to them.

After resolving those arguments, I then address the two critical differences the experts have that are relevant to determining the rate at which Golden's expected future cash flows are to be discounted back to present value. Both experts purport to apply the capital asset pricing model ("CAPM"). The weighted

[81] For the standard description, see RICHARD A. BREALEY & STEWART C. MYERS, PRINCIPLES OF CORPORATE FINANCE 75-80 (7th ed. 2003).

[82] *See supra* pages 6-9. The key difference is that Gompers uses the management projections provided to Credit Suisse for its Fairness Opinion, while Sherman used earlier forecasts. *See* Gompers Rebuttal at 10. The two sets of projections are very close, and differ in ways that are not relevant to my findings about the value of Golden. But I find that the projections given to Credit Suisse are more reliable because they (1) are more recent, and (2) undergirded the Credit Suisse Fairness Opinion that was presented in the Proxy.

average cost of capital they derive, however, is different because the equity risk premium and beta they use in coming up with their cost of equity diverge markedly.

1. Terminal Growth Rate

In a DCF analysis, future cash flows are projected for each year during a set period, typically five years.[83] After that time, a terminal value is calculated to predict the company's cash flow into perpetuity. Generally, once an industry has matured, a company will grow at a steady rate that is roughly equal to the rate of nominal GDP growth.[84] In this case, the experts had access to assumptions by Golden's management as to its growth rate for a full ten years. The first five years (2008 to 2012) of those assumptions were quite specific projections of future cash flows in the Five Year Plan, and the next five years were based on an assumption that Golden would grow at the rate of Russia's overall GDP. That is, the management projections assumed that Golden would keep up with Russia's overall growth during that period, even though, as I shall note, that is a conservative assumption. A viable company should grow at least at the rate of

[83] *See Cede & Co. v. JRC Acquisition Corp.*, 2004 WL 286963, at *4 (Del. Ch. Feb. 10, 2004).

[84] *See* MICHAEL C. EHRHARDT & EUGENE F. BRIGHAM, CORPORATE FINANCE: A FOCUSED APPROACH 242 (2009) ("Expected growth rates vary somewhat among companies, but dividend growth for most mature firms is generally expected to continue in the future at about the same rate as nominal gross domestic product."); JOSHUA ROSENBAUM & JOSHUA PEARL, INVESTMENT BANKING: VALUATION, LEVERAGED BUYOUTS, AND MERGERS & ACQUISITIONS 132 (2009) ("The perpetuity growth rate is typically chosen on the basis of the company's expected long-term growth rate, which typically tends to be within a range of 2% to 4% (i.e., nominal GDP growth)."); *see also* Gompers Report at 42.

inflation and, as Golden's expert Sherman admits,[85] the rate of inflation is the floor for a terminal value estimate for a solidly profitable company that does not have an identifiable risk of insolvency.[86] Sherman argues that the growth rate of the Russian economy will decline significantly in 2017 and beyond, and that Russia will reduce its inflation rate to a level below that which the United States has experienced in the last century.[87] Nowhere in his report or at trial did Sherman explain the basis for his prediction, which also tends to conflict with his suggestion that the risk of revolutionary changes in Russia that could put Golden out of business hangs over Golden.[88] In other words, Sherman somehow suggests

[85] Tr. at 1082 (Sherman) ("As a general rule . . . practitioners look at GDP as the ceiling and inflation as the floor . . . . If . . . the inflation rate turns out to be greater than [the terminal growth rate], then [the company being valued] will disappear one day."); Sherman Dep. at 159-60 ("Unless you have some specific reason to believe that a company is going to be a short term company, and short term for this purpose means a company that isn't going . . . to last into perpetuity, then using the inflation rate is the appropriate . . . number to use as . . . the floor.").

[86] *See Lane v. Cancer Treatment Ctrs. of Am., Inc.*, 2004 WL 1752847, at *31 (Del. Ch. July 30, 2004) (rejecting a terminal growth rate below inflation as unreasonable because "it must be assumed that [the company] would continue to grow at least at the rate of inflation"); PETER A. HUNT, STRUCTURING MERGERS & ACQUISITIONS: A GUIDE TO CREATING SHAREHOLDER VALUE 51 (2009) ("As a proxy for long-term growth, inflation assumes a company can pass along increases in its costs, but cannot necessarily increase its volume."); SHANNON P. PRATT & ALINA V. NICULITA, VALUING A BUSINESS: THE ANALYSIS AND APPRAISAL OF CLOSELY HELD COMPANIES 248 (5th ed. 2008) ("If the company is in an industry subject to vigorous competitive pressure, with little prospect for real growth without large capital expenditures, then perpetual growth at the rate of expected long-term inflation may be reasonable (i.e., zero real growth)."); *see also* Gompers Report at 42; JX 731 (Rebuttal Report of Marc B. Sherman) ("Sherman Rebuttal") at 14.

[87] Sherman Rebuttal at 17-18. For most of the 20th century, inflation in the United States averaged 3.5%. *See* Hoover Institution, Stanford University, Facts on Policy: Historical Inflation Rates, http://www.hoover.org/research/factsonpolicy /facts/4804201.html (last visited April 18, 2010).

[88] Tr. at 1118-1120 (Sherman) (discussing the binary risks associated with operating in Russia).

that Russia will whip inflation now and have a very low inflation, low growth economy, and that, despite the world-wide popularity of telecommunications-related products, Golden will grow only at that whipped rate of inflation.

But Sherman's position does not translate, in my view, into a reasonable approach to developing a terminal growth rate. Although Golden was a well-positioned, low-leverage firm that had a demonstrated history of profitability and above-average growth in an industry with above-average growth prospects in a market (the former Soviet Union) with above-average growth prospects, Sherman adopted a terminal growth rate for Golden based on his assumption about the rate of inflation. That is, Sherman assumed that as soon as the ten-year projection period ended, Golden would only grow with the rate of inflation in Russia. That is an unduly pessimistic assumption.

Not only that, Sherman used a 3% estimate for inflation, an estimate that he largely made up himself with no rational basis.[89] Notably, data from the EIU in February 2008 estimates Russian inflation to be an average of 3.9% from 2018 to 2030. For some unexplained reason, Sherman's terminal rate is below the floor. If Sherman is correct, it is not clear why VimpelCom was interested in buying Golden in the first place, as it was buying a firm that was not expected to even keep pace with Russia's overall growth, much less provide the above-market returns that, if the projected growth rate of the Russian telecommunications

[89] Tr. at 1082 (Sherman).

industry was consulted, might have been expected.[90] If the telecom industry in the United States, which grew at an annualized real rate of 9.3% from 1963 to 2003 while the annualized real growth rate of the U.S. GDP was just 3.3%, is any indication, the Russian telecom industry will exceed GDP growth for quite some time.[91] Thus, I believe Sherman's approach is unduly pessimistic and reject it.

Although Gompers, perhaps even more than Sherman, had a less than ideal understanding of Golden itself, Gompers knew enough about Golden and the telecommunications industry in Russia and worldwide to come to a much more responsible estimate than Sherman did. Sherman gave too slight a weight to Golden's good financial health, solid record of growth, and to the growth prospects of the Russia telecommunications industry. By contrast, Gompers came to a measured conclusion that gave responsible, but not overenthusiastic, weight to each of these factors. Although the relevant factors might have supported a terminal growth rate equal to the long run growth rate of Russia's GDP, Gompers used a 5% terminal growth rate. Gompers' rate is the mid-point between the

[90] *See, e.g.*, JX 206 (Aton Bank, *Golden Telecom: Triple-Pronged Growth Strategy Still Not Priced In* (Sept. 19, 2007)) at 10-11 (reporting that in 2006, the Russian telecom industry increased 32% year to year compared to the nominal GDP growth of 29%, and projecting the Russian telecom industry to grow at a 20% rate from 2006-2010 compared with a projected nominal GDP growth of 15%); *see also* JX 168 (Renaissance Capital, *supra* note 27) at 20 ("We forecast the Russian corporate telecoms market to grow at a 22% CAGR over 2006-2010 . . . .").

[91] *See* JX 316 (TIM KOLLER, MARC GOEDHART & DAVID WESSELS, MEASURING AND MANAGING THE VALUE OF COMPANIES 154-55 (5th ed. 2005)).

forecasted long-term Russian nominal GDP growth of 6.2%, and a forecasted inflation rate to 2030 of 3.9%.[92]

Gompers' use of a 5% terminal growth rate is based on a respected source of such projections, the EIU. That approach was measured and realistic given that the Russian telecom industry was expected to grow at a rate significantly exceeding the Russian GDP.[93] The reasonableness of expecting the Russian telecommunication sector to outpace the overall Russian economy is buttressed by actual history in the United States, where the telecom industry has grown at nearly three times the rate of the United States GDP.[94] Gompers' estimate accounts for the fact that the Russian telecommunications market is continuing to grow and that, with the increase of the broadband and Wi-Fi markets, companies such as Golden would have the opportunity to reach new customers and offer bundled services to existing customers. By choosing the average of the Russian GDP and inflation rate, Gompers accounted for the very real possibility that Golden will be close to (or in my view, likely exceed) the GDP rate for a period of time, but then,

[92] Gompers Report at 42-43 (citing the EIU Forecast Data for February 2008).
[93] *See, e.g.*, JX 168 (Renaissance Capital, *supra* note 27) at 20 (explaining that the Russian corporate telecoms market would grow at a 22% CAGR from 2006 to 2010); JX 206 (Aton Bank, *supra* note 90) at 10 (explaining that the Russian telecom industry was expected to continue to grow faster than the Russian GDP after 2006, and was "set to continue expanding by double digits").
[94] Gompers Rebuttal at 24 (citing JX 316 (Koller, *supra* note 91)).

as the telecom market matures, settle closer to the inflation rate. I therefore adopt a 5% terminal growth rate.[95]

2. Golden's Tax Rate

Sherman and Gompers also disagree about the tax rate to use. The tax rates in the Five Year Plan for 2008 to 2012 ranged from 30.1% to 35.3%, and the tax rate Credit Suisse used in connection with the DCF analysis undergirding its Fairness Opinion was 30%.[96] Gompers adopted the tax rate used by Credit Suisse in the Fairness Opinion. He also reasoned that a 30% tax rate was "consistent with the numbers forecasted by [Golden's] management."[97] Sherman, on the other hand, selected a tax rate of 31.6% based on the predictions of Golden's management, and on Golden's average historical tax rate for 2004 to 2006,[98] which ranged from 23.7% to 32.4%. Gompers simply adopted Credit Suisse's calculations without explaining convincingly why those calculations are reasonable.[99] By contrast, Sherman adjusted management's projections to reflect the average of Golden's historical tax rate, a rate that is at the conservative end of management's predictions, which called for tax rates ranging from 30.1% to

[95] *Cf. Lane*, 2004 WL 1752847, at *26 (adopting a 5% terminal growth rate by combining a 4% rate of inflation with a 1% growth rate for a company that had limited opportunities for growth).
[96] Five Year Plan at 25; Fairness Opinion at 15.
[97] Gompers Report at 40.
[98] Sherman Report at 59.
[99] Tr. at 470 (Gompers).

35.3% for the period from 2008 to 2012.[100] I therefore adopt Sherman's tax rate of 31.6% for purposes of my DCF analysis.

3. Equity Risk Premium

To figure out the cost of capital by which to discount Golden's future cash flows, both Sherman and Gompers had to come up with a cost of equity. One of the two major sources of disagreement between the experts was over what equity risk premium ("ERP") to use.[101] Sherman relied on an ERP of 7.1%. The ERP Sherman selected is from the 2008 Ibbotson SBBI Valuation Year Book, which is based on long-term historical data from 1926 to year-end 2007.[102] Gompers used an ERP of 6.0%, which he selected based on his teaching experience, the relevant academic and empirical literature, and the supply side ERP reported in the 2007 Ibbotson Yearbook.[103]

In a theme that will be continued when I next examine the debate about beta, the parties spar about the approach to take, with the petitioners portraying themselves as using the most reliable, market-accepted method because their method is "forward looking" and thus consistent with the purpose of this valuation, which is to determine the value of Golden based on its prospects in a future, not past, market. For its part, Golden portrays the petitioners as advancing

[100] Five Year Plan at 25; Tr. at 967 (Sherman).
[101] The ERP is the premium an investor should receive for the risk associated with investing in equities versus riskless assets, such as U.S. government short-term bonds. *See* SHANNON PRATT & ROGER GRABOWSKI, COST OF CAPITAL: APPLICATIONS AND EXAMPLES 89, 91 (3rd ed. 2008); Sherman Rebuttal at 14; Gompers Report at 37.
[102] JX 501 (IBBOTSON ASSOC., SBBI: 2008 YEARBOOK VALUATION (2008)) ("Ibbotson Yearbook"); Tr. at 938 (Sherman).
[103] Gompers Report at 38.

novel, unaccepted approaches that are more speculative and less reliable than the more traditional approaches it advances.

In reality, the debate is not nearly so stark. Although the petitioners, through Gompers, advance techniques that are designed to be forward-looking, those techniques are of course entirely based on using past data to predict the future, just like the techniques advanced by Golden, through Sherman. Each technique depends to a certain extent on taking some combination of past data and using it to predict a necessarily uncertain future.

In the case of their debate about the ERP, that reality can easily be discerned. For its part, Golden uses the most traditional estimate of the ERP, the historic ERP published by Ibbotson. That estimate is based on Ibbotson's consideration of stock returns from 1926 to the present (or as relevant to this case, to year end 2007). Sherman testified that the Ibbotson historic ERP (the "Historic ERP") is the best estimate of predicting long-term future performance because it relies on a long period of history,[104] while a predictive ERP is "an attempt at predicting the future as opposed to just letting history be the guide . . . ."[105] Golden buttresses its reliance upon the Historic ERP with three primary sources. First, Golden cites an article by Peng Chen and James Harrington which explains that "the historical equity risk premium estimate is a very solid estimate, and should continue to serve as a starting point for applying the equity risk premium in

[104] Ibbotson Yearbook at 80.
[105] Tr. at 945 (Sherman).

portfolio optimization and business valuation."[106] Second, Golden cites an article by James Hitchner and Katherine Morris which states that "[i]n practice, valuation analysts rarely rely on predictive models to forecast equity risk premiums. Risk premium components based directly on historical stock market return data are widely accepted and relied upon by the valuation community."[107] Finally, Golden relies on Ibbotson's 2008 Valuation Yearbook, pointing to a section where Ibbotson states that both Ibbotson's supply side and Historical ERP estimates are "from actual market statistics over a long historical period of time."[108] Crucially, all three of these sources include both historic and supply side ERP models.[109]

The petitioners, through Gompers, say that continued rote use of the Historic ERP will lead to unreliable results. Speaking most directly to that point, Gompers notes that Ibbotson and his co-authors have themselves developed an alternative model to forecast the long-term expected equity return because of their view that the historic approach wrongly assumes that the relationship between stocks and bonds observed in the past would remain stable into the future.[110] As Gompers notes, Ibbotson indicates "[o]ver the long run, the equity return should

[106] JX 724 (Peng Chen & James Harrington, *Ibbotson Authors Discuss Historical and Supply Side Estimates of ERP* (Jan. 2008), *available at* http://www.bvlibrary.com /BVUpdatePlus/bvuPlusArticles3Print.aspx?docRef=9543).

[110] Ibbotson Yearbook at 71.

be close to the long-run supply estimate."[111] The supply side estimate that Ibbotson publishes uses the Ibbotson historical sample from 1926 to the present, but estimates which components of the equity risk premium are driven by the price-to-earnings ratio of a stock, and which components are driven by expected earnings growth.[112] The supply side rate assumes that actual returns to equity will track real earnings growth, not the growth reflected in the price-to-earnings ratio.[113]

In arguing that continued use of the simple Historic ERP is unjustifiable, Gompers has substantial support in the professional and academic valuation literature.[114] Shannon Pratt, for example, has urged his readers who still use an ERP of 7% to "immediately make a downward adjustment to reflect recent research results,"[115] and has written that the "ERP as of the beginning of 2007 should be in the range of 3.5% to 6%."[116] Gompers also cites to a survey of finance professors, which found that the mean ERP taught by 369 professors is

[111] JX 109 (Robert G. Ibbotson & Peng Chen, *Long-Run Stock Returns: Participating in the Real Economy*, FIN. ANALYSTS J. (Jan./Feb. 2003)) at 88, 94; Ibbotson Yearbook at 92 (stating the same principle).

5.96%,[117] and a report of JP Morgan estimating the ERP to be in the range of 5% to 7%.[118] Although the surveys cited by Gompers are not so compelling as to be conclusive, they suggest that current academic thinking puts the ERP closer to 6.0% than to 7.1%.

The question is not free from doubt, but I believe that Gompers has the better of the argument for the following reasons. First, to cling to the Ibbotson Historic ERP blindly gives undue weight to Ibbotson's use of a single data set. 1926 might have been a special year because, for example, that was the year when Marilyn Monroe was born, but it has no magic as a starting point for estimating long-term equity returns. If one is going to use an approach that simply involves taking into account historical equity returns, then one has to consider that very well-respected scholars have made estimates in peer-reviewed studies of long-term equity returns for periods much longer than Ibbotson, and have come to an estimate of the ERP that is closer to the supply side rate Ibbotson himself now publishes as a reliable ERP for use in a DCF valuation.[119] For example, Professor Jeremy Siegel has examined the period from 1802 to 2004 and come up with an

[117] JX 114 (Ivo Welch, *The Consensus Estimate For the Equity Premium by Academic Financial Economists in December 2007* (Jan. 2008), *available at* http://ssrn.com/abstract=1084918)) at Table 2. Of the professors who responded to the survey, the middle 50% of respondents teach an ERP between 4% and 6%. Of the other fifty percent of respondents, five percent teach an ERP of 2-4%, twenty percent teach 4-5%, twenty percent teach 7-8.5%, and five percent teach 8.5-20%. *Id*.

[118] JX 112 (JP Morgan, *The Most Important Number in Finance: The Quest for the Market Risk Premium* (May 2008)) at 2.

[119] *See* JX 828 (Michael Devaney, *Will Future Equity Risk Premium Decline?*, J. OF FIN. PLANNING (Apr. 2008)) at 47 (finding that a mean equity risk premium of 5.5% covers the period from 1870-2002).

ERP of 5.36%.[120] Likewise, Professors Eugene Fama and Kenneth French considered the period from 1872 to 2000, and calculated an average ERP of 5.57%.[121]

Relevantly, the literature also suggests that the ERP for companies operating in foreign markets is, if anything, lower than the Historic ERP for a domestic company.[122] Importantly, these studies reach results that are consistent with the actual logic used by Ibbotson in recent volumes. Although it is true that Ibbotson does not disavow the use of the Historic ERP as a basis for valuing

[120] JX 113 (Siegel, *supra* note 114) at 63.

[121] JX 833 (Eugene Fama & Kenneth French, *The Equity Premium*, 57 J. OF FIN. 637, 638 (Apr. 2002)) (considering different measures of the expected ERP utilized by the market, such as the dividend growth model, and comparing those measures to the historical ERP). Golden argues that, because Fama and French advocate a three-factor model that differs from the CAPM in determining the cost of equity, their ERP findings cannot be compared to those of Ibbotson. But, whatever differences may exist between the CAPM and Fama-French models for calculating the cost of equity, those differences do not affect the applicability of Fama and French's ERP estimate, which is an input to both models. *See* BREALEY & MYERS, *supra* note 81 at 208-09; *see also* PRATT, COST OF CAPITAL, *supra* note 101 at 102 (discussing the ERP calculated by Fama and French from 1951 to 2000 and comparing it to other ERPs calculated by, among others, Ibbotson). Nothing suggests that the ERPs derived by Fama and French are only appropriately used in the Fama-French, and not the CAPM, model.

[122] *See, e.g.*, JX 318 (PRATT, COST OF CAPITAL, *supra* note 101) at 109 (noting that equity returns and historical equity premiums for foreign companies should be adjusted *downward* to account for the fact that corporate cash flows in most foreign countries typically exceed investors' expectations (citing Dimson, Marsh & Stauton, *Global Evidence on the Equity Premium*; *The Worldwide Equity Premium: A Smaller Puzzle*, EFA 2006 Zurich Meetings Paper, April 7, 2006; Global Investment Returns Yearbook 2007)); JX 113 (Siegel, *supra* note 114) at 63 (explaining that due to the "survivorship bias," ERPs based on the United States market typically overstate the returns on equities, particularly in markets "where stocks have faltered or disappeared outright, such as they did in Russia"); *see also* Aswath Damodaran, *Equity Risk Premiums (ERP): Determinants, Estimation and Implications* at 12, *available at* http://ssrn.com/abstract=1274967 (describing a view "backed by a study of large equity markets over the twentieth century" that "[t]he historical risk premium obtained by looking at U.S. data is biased upwards because of a survivor bias").

corporations on a going forward basis, the text is utterly devoid of any explication of why the Historic ERP should used. By contrast, the 2003 article by Ibbotson and Chen explains that "investors' expectations for long-term equity performance should be based on the supply of equity returns produced by corporations" because "[t]he supply of stock market returns is generated by the productivity of the corporations in the real economy."[123] And, Ibbotson's 2008 Valuation Yearbook makes a strong argument for the supply side method by stating that "over the long run, equity returns should be close to the long-run supply estimates."[124]

Ibbotson's reasoning comports with the strong weight of professional and academic thinking, which is accurately represented by Gomper's view that the most responsible estimate of ERP is closer to 6.0% than 7.1%. I come to this conclusion with full realization that any estimate of ERP is just that, an estimate of something that is highly uncertain, and that the relevant academic and professional community — and not this court — should develop the accepted approach. Sherman's approach has met with the approval of this court on prior occasions,[125] but, when the relevant professional community has mined additional data and pondered the reliability of past practice and come, by a healthy weight of reasoned opinion, to believe that a different practice should become the norm, this court's duty is to recognize that practice if, in the court's lay estimate, the practice is the

[123] JX 109 (Ibbotson and Chen, *supra* note 111) at 94.

[125] *See In re PNB Holding Co. S'holder Litig.*, 2006 WL 2403999, at *30 (Del. Ch. Aug. 18, 2006) (choosing to adopt a historical ERP of 7% because a long-term supply side ERP had not yet gained "universal acceptance").

most reliable available for use in an appraisal.[126] Here, there is solid academic and professional thinking that supports the view that 6.0% is the most responsible ERP to deploy, and I do so. In reaching this conclusion, I give heaviest weight to the published literature, but also find the admittedly squishier academic survey data supportive. Although that data is far from perfect, it does reveal that the weight of academic thinking at our nation's finest finance departments places the ERP much nearer to Gomper's estimates than Sherman's. For all these reasons, I adopt Gompers' ERP of 6.0%.

4. Beta

In round two of their theoretical debate, Gompers and Sherman spar over what beta to use in calculating Golden's cost of equity capital.[127] As in the prior debate, Gompers claims that he is using the best forward-looking, academically

[126] *See Weinberger v. UOP, Inc.*, 457 A.2d 701, 713 (Del. 1983) (interpreting 8 *Del. C.* § 262 to require that appraisal actions "include proof of value by any techniques or methods which are generally considered acceptable in the financial community and otherwise admissible in court"); *Union Ill.*, 847 A.2d at 363 (adopting the Fama-French approach to cost of capital over the more widely accepted CAPM approach because the court determined the former approach to be more reliable and more appropriate for use in that valuation of a regional bank). As in any complex area involving the prediction of future human events, one can expect that academic and professional thinking on the expected ERP will not remain static but will evolve as more data and additional thinking is done. That is the nature of things. What, of course, makes the use of such thinking of piquancy in this context is that ideas that academics and professionals throw around to create ranges of value are used by a law-trained judge to come to a single point estimate of value that could require a party to pay another party millions of dollars. The law-trained judges who must perform such analyses are more conscious than anyone of the inherent risk of error in such an endeavor, and indeed of the reality that no one can really tell if an error was made. That is why many of us eschew the hoary term "intrinsic value," a term best reserved for judgments of the divine than ones made by human judges.

[127] Sherman Rebuttal at 10.

and professionally sound approach while Sherman is using a backward-looking, outdated approach. Again, the petitioners overstate their case and, in this instance, also fail to put forward reliable academic and professional support for their position.

It is true that Sherman uses a more traditional approach to beta. Sherman uses the Bloomberg five-year weekly historic beta for Golden of 1.32.[128] The Bloomberg beta is based on a publicly-available regression calculation, and is computed in the standard way by examining the co-variance of a company's stock performance with that of the stock exchange on which the firm's shares are listed.[129] Although there is a fairly substantial amount of imprecision and a general disagreement in the finance industry and academia over the proper way to select a beta value,[130] the Bloomberg historic beta is considered to have a fair amount of predictive power, and to be a reliable proxy for unobservable forward-looking betas.[131]

Sherman argues that his use of a historic beta is appropriate because Golden's operating and capital structure would have remained substantially the same going forward as it had during the five years captured in the Bloomberg

[128] Sherman Rebuttal at 11; JX 465 (Bloomberg Historical Beta for Golden Telecom).
[129] Sherman Report at 62 n.200.
[130] *See* JX 106 (Robert Bruner et al., *Best Practices in Estimating the Cost of Capital: Survey and Synthesis*, FIN. PRACTICE AND EDU. (Spring/Summer 1998)) at Ex. 4 (showing that beta values for a sample company given by Bloomberg, Value Line, and Standard and Poor's range from a mean beta of 1.03 to 1.24).
[131] *Id*. at 19; Tr. at 603 (Gompers).

historical beta.[132] Sherman also accurately points out that the Bloomberg historical beta for Golden remained relatively stable during the five year period, suggesting that the market had a good bead on its systematic risk.[133]

By contrast, Gompers eschews reliance on Golden's historical beta and advocates a lower beta of 1.2, based on a so-called predictive beta from the financial consultancy MSCI Barra ("Barra").[134] Gompers argues that his approach is forward-looking and more reliable because beta estimates are not stable over long periods of time, and thus the use of a historical beta is not the best basis for predicting the future, especially because there is some evidence that the betas of companies tend to eventually revert towards the mean.[135] Gompers also claims that because Golden was seeking to evolve its business strategy from one heavily reliant on acquisitions for growth toward one that was less dependent on M&A and more on organic growth, Golden's historical beta is not a good predictor of its future beta.

The petitioners ask that if this court declines to adopt the Barra beta, a Bloomberg adjusted beta of 1.17 be used, but it is not clear why they advocate the Bloomberg adjusted beta as an appropriate alternative to the Barra beta. Aside from the fact that the Bloomberg adjusted beta produces a value close to 1.2, the methodology used by Bloomberg to adjust the beta value bears no apparent

[132] Tr. at 913 (Sherman).
[133] Sherman Rebuttal at 11-13.
[134] Gompers Rebuttal at 18.
[135] *Id*. at 17.

relationship to that used by Barra. Unlike the 13-factor Barra model, Bloomberg uses only two factors for its adjusted beta, giving 66% weight to a corporation's historic beta, while taking into account the possibility of later mean reversion by giving 33% weight to 1, or the average market beta.[136]

This battle of the experts is one that I am poorly positioned to resolve, and it appears unlikely that a finance professor would fare any better. Even after asking the parties to go back and submit relevant literature on beta, and even after doing an independent review, I admit to finding no literature that sheds reliable light on this question of whether to use a historical or the supposedly forward-looking Barra beta. The standard texts do not explore the reliability of different approaches to calculating beta in any useful depth.[137] I suppose that is not surprising because most practitioners who use beta are not looking for precision but for a reasonably reliable tool to make range of value estimates. But, whatever the reason, the reality is that the available literature is far from helpful, and does not aid Gompers or his client, the petitioners.

---

[136] JX 106 (Bruner, *supra* note 130) at 21.

[137] *See, e.g.*, BREALEY & MYERS, *supra* note 81 at 173-75, 232-34 (defining beta, and giving a cursory discussion of how beta reflects market sensitivity, and how beta is calculated relative to foreign markets for foreign investments in the United States); PRATT, VALUING A BUSINESS, *supra* note 86 (discussing beta as a measure of systematic risk, extreme betas that are above and below the average beta of 1.0, beta measurement problems, and listing problems that arise when applying betas estimated for guideline companies to the valuation of the subject company); BRADFORD CORNELL, CORPORATE VALUATION: TOOLS FOR EFFECTIVE APPRAISAL AND DECISION MAKING 219-22 (1993) (noting that certain analysts adjust beta toward 1.0, or toward the industry average, but stating that a more detailed discussion was "beyond the scope of [the] book").

Gompers touts the Barra beta as one that has been relied upon by the financial community for equity valuations.[138] I accept that that is the case, although I also recognize, as Gompers does, that the use of the Bloomberg historical beta is also a common, indeed probably more common, practice. [139] But for several reasons that I now explain, Gompers has not given me the confidence to embrace the Barra beta technique as reliable one.

For starters, the Barra forecasting model is proprietary, and cannot be reverse-engineered. The Barra predictive beta, which is a forecast of a stock's future looking beta using past data, is based on a thirteen-factor model,[140] but the weight given to each of the factors is not publicly available.[141] In fact, Barra has used three different versions of its model without explaining why or what changes have been made,[142] and it is not apparent whether Barra retroactively updates its past beta calculations as it tinkers with? improves? changes for changes' sake? or lessens? the reliability of its model. Consistent with these realities, Gompers himself does not fully understand the details of how the Barra model works and,

[138] Tr. at 351-52; *see also* JX 106 (Bruner, *supra* note 130) at 20 (stating that "[t]he best known provider of fundamental beta estimates is the consulting firm BARRA"); JX 115 (Scott Widen, *Delaware Law, Financial Theory and Investment Banking Valuation Practices*, 4 NYU J. OF L. & BUS. 579, 585-86 (2008)) (citing numerous sources for the notion that "[m]any investment banks now use predicted Barra betas in their fairness opinion analyses").
[139] Tr. at 618 (Gompers).
[140] The thirteen factors used in Barra's model include: volatility, momentum, size, size nonlinearity, trading activity, growth, earnings yield, value, earnings variability, leverage, currency sensitivity, dividend yield, and a non-estimation universe indicator. *See* JX 117 (BARRA, RISK MODEL HANDBOOK UNITED STATES EQUITY: VERSION 3 75-76 (1998)).
[141] *Id*. at 93 (explaining that the method of computing the Barra beta "is proprietary to Barra").
[142] Tr. at 616 (Gompers).

thus, I cannot rely on his advocacy of it. The only thing Gompers knows about the model is that it lists certain valuation-relevant factors, including factors relevant to the historical beta such as volatility, leverage, and trading activity, and throws them in a stew pot in undisclosed proportions to come up with an outcome.[143] Put simply, despite his impressive academic credentials, Gompers himself could not cook me up a Barra beta of Golden, Microsoft, or any other company if I asked him to do so.

In a critically important difference from the ERP controversy I just decided, the Barra beta's reliability is not buttressed by the weight of any reliable academic or professional literature. The only evidence that the petitioners have produced showing that the Barra beta has a greater reliability than other beta providers such as Bloomberg or Morningstar is a quarter-century old paper authored by Barr Rosenberg, the creator of the Barra beta.[144] No neutral academic support for the predictive power of the Barra beta has yet been published.[145] And, as discussed, the undisclosed recipe for the Barra beta has changed several times since the Rosenberg paper was published.

Finally, Gompers' advocacy of the Barra beta is inconsistent with a DCF valuation that Gompers submitted to this court in *Doft & Co. v. Travelocity.com*

[143] *See supra* note 140.
[144] *See* JX 111 (Barr Rosenberg, *Prediction of Common Stock Betas*, J. OF PORTFOLIO MGMT., Winter 1985) at 5-14 (discussing the overall predictive performance of the first Barra beta model).
[145] Tr. at 378-81 (Gompers).

Inc.[146] Tellingly, in that valuation, Gompers utilized a historic raw beta similar to Sherman's approach covering various time periods during the two-year period before the relevant merger,[147] which was lower than the Barra beta that would have applied to Travelocity at that time.[148] Gompers testified in this case that his opinion in *Travelocity* was in line with what he taught and understood about beta at that time and, since 2006, he has switched to using a Barra beta or an adjusted beta.[149] But, oddly, he cannot point to an epiphanic moment or any academic or other studies that prompted him to change his approach. In fact, the Barr Rosenberg article that Gompers predominantly relies on was published in 1985 — nineteen years before Gompers used a raw historic beta in *Travelocity*.[150] This is in strong contrast to the ERP question, where Gompers is able to cite a wealth of recent academic and professional writings that supports a lower ERP estimate.

I wish to emphasize that I do not reject the Barra beta for use in later cases. Rather, I decline to adopt the Barra beta for purposes of this appraisal, given both Gompers' inability to shed light on the inner workings of the Barra beta model and his unexplained shift from advocating the historical beta in *Travelocity* to the Barra beta in this case. If the Barra beta is to be used in appraisal proceedings, a more detailed and objective record of *how* the Barra beta works and *why* it is

[146] 2004 WL 1152338 (Del. Ch. May 21, 2004). The court in *Travelocity* declined to conduct a DCF analysis in determining the fair value of the company because the underlying management projections were unreliable. *Id*. at *5.

[148] Tr. at 608-09 (Gompers).
[149] *Id*. at 744-46 (Gompers).
[150] JX 111 (Barr Rosenberg, *supra* note 144).

superior to other betas must first be presented. To this point, it is more persuasive to a judge to know that a testimonial expert who is an academic has written about the reliability of a valuation methodology in an academic study in a peer-reviewed journal than to be among those first privileged in the world to hear from the academic about that issue in his expert reports and seat-of-the-pants testimony in a valuation assignment for a self-interested litigation client.

Although I reject Gompers' use of a Barra beta, I am persuaded that the simple use of historical beta is not the best method to use in calculating Golden's cost of equity. Although beta is a somewhat metaphysical concept, the literature does tend to suggest that, as a matter of theory anyway, companies that are more unstable and leveraged, less established and financially and competitively secure, and in colloquial terms "riskier," should have higher betas.[151] Betas can also take into account considerations like political risk to the extent they are priced by the market.[152]

Given these realities, a more substantial, if still less than ideal, part of the valuation literature comes into play. As even Golden admits, there is support for

[151] *See, e.g.*, PRATT, COST OF CAPITAL, *supra* note 101 (explaining that companies with higher levels of debt are "riskier" than the equity of companies with less leverage); PRATT, VALUING A BUSINESS, *supra* note 86 ("Securities that have betas greater than 1.0 are characterized as aggressive securities and are more risky than the market."); JX 312 (Pablo Fernandez, *Are Calculated Betas Worth for Anything?*, IESE Business School, Working Paper (Oct. 16, 2008)) at 13 (pointing out a problem with historic betas that high-risk companies often have smaller historical betas, although riskier companies should have higher betas).

[152] Tr. at 685 (Gompers) (explaining that, by accounting for the "historical correlation of the stock return with the market," the beta values account for political risk).

the notion that more extreme betas tend to revert to the industry mean over time.[153] The historical beta of Golden is quite high, especially given its low leverage, and might reflect, among other things, its geographic concentration in an emerging market with some higher risk of political instability, its high growth strategy and its position in the telecom sector.

But Sherman has premised his valuation of Golden on the notion that its growth will slow, its domestic market will become a place friendly for those desirous of Volcker-style inflation policing, and that Golden will become a steady, staid company. To my mind, this view is consistent with the notion that Golden will, over time, revert toward the telecom industry's typical beta.

Unlike Gompers, however, I do not believe the immediate use of a lower beta is in order. The record supports the conclusion that Golden will continue to engage in a good deal of M&A activity, will enter new product markets, and continue to operate in a market with some political risk.[154] Rather, the more

[153] *See* JX 318 (PRATT, COST OF CAPITAL, *supra* note 101) at 130 (stating that "[o]ver time, a company's beta tends toward its industry's average beta").

[154] Although Golden had a substantial presence in the largest Russian cities as of the valuation date, there were substantially-sized markets it still wished to enter and new product markets it hoped to join. *See* JX 416 (Transcript of Golden's Third Quarter Earnings Release Conference Call, *supra* note 18) (announcing that Golden's growth strategy included expansion into thirty additional cities); Tr. at 814, 816-17 (Svetlichny) (explaining that Golden was exploring a number of smaller acquisitions before it was acquired by VimpelCom). The likelihood is that to do so, M&A activity would have remained an important element of its growth strategy, as would risky product launches. Even if Gompers were correct that Golden was shifting its strategy to one of predominantly organic growth, Gompers fails to explain why such a strategy would result in a lower beta. Beta values measure systematic risk, and it is not clear that organic growth is less risky than M&A. Furthermore, Gompers' argument that the Barra, and not historical beta, would better account for this supposed strategy shift is belied by the fact

balanced approach is to give the predominant weight to Golden's historical beta, while giving some substantial weight to the industry beta.[155]

In doing so, I reject Gompers' argument that if I decline to adopt the Barra beta, I should instead adopt a Bloomberg adjusted beta of 1.17, which begins with the historic beta used by Sherman and adjusts it towards 1.0 on the theory that "extreme" betas eventually revert toward the overall average market beta of 1.0.[156] As an initial matter, Gompers' advocacy of the Bloomberg adjusted beta is not

---

that Gompers selected a Barra beta from June 2007 while Golden's Five Year Plan announcing its strategy is from October 2007. *See* Gompers Report at 37.

[155] The petitioners argue that it is not appropriate to use an historic beta because such a beta gives weight to political risk, which was already accounted for by Golden's management in estimating Golden's future cash flows. But, although the Proxy explained that the Special Committee based its recommendation that Golden's shareholders accept VimpelCom's tender offer on factors that included "political uncertainty in the Russian market," and noted that risks inherent in the forward-looking statements in the Five Year Plan included "the political, economic and legal environment in the markets in which [Golden] operate[d]," Golden's cash flow projections did not incorporate any specific value for political risk. *See* Proxy at 27, 46; Tr. at 828-29 (Svetlichny) (explaining that the Five Year Plan's projected cash flows did not account for political risk because such "risks are . . . binary in nature" and could not "be predicted and incorporated"). Moreover, it is difficult to estimate what value to place on political risk; in the case of Russia, the only real concern in the record seemed to be about some radical change in which companies like Golden might be expropriated. Management could not really price that risk, but it may be, I cannot say for sure, that the reported beta does capture some of that risk and, if the market does that, I cannot see why this court should not consider that real-world valuation factor. I also think it odd that the petitioners would have courts, and I suppose all those performing valuations, parse betas for factors that might have also been accounted for (e.g., leverage or the riskiness of certain industries) in management estimates of cash flow. The petitioners have not explained how or why one would do that. By giving weight to the industry beta, I also take into account the idea that Sherman embraced, which is that Russia is becoming more, not less, like markets such as the United States in terms of inflation and other relevant factors. Thus, I am confident that I am not giving some undue weight to political risk by relying heavily on Golden's historical beta.

[156] *See* JX 311 (Marshall Blume, *Betas and Their Regression Tendencies*, 30 J. OF FIN. 785, 794 (1975)) (explaining that "extreme" betas "tend to regress towards the grand mean of all betas over time"); Tr. at 626 (Gompers).

convincing because he simply suggests it as an alternative to the Barra beta, without any rational linking of these two disparate methods.[157] Moreover, he offers no explanation as to why adjusting the Bloomberg beta to 1.0 makes more sense for Golden — a company with low leverage, fast growth, and consistent performance in the telecom sector — than the raw five-year beta or, to the extent there is a reversion, an industry-based beta.

In my view, no reliable literature or evidence was presented to show that the beta of a telecom company like Golden, which operates in a risky market, will revert to 1.0. Instead, it makes more sense that companies in emerging markets will become more like their industry peers in more mature markets.[158] That intuition is also line with the views of both Gompers and Sherman that Russia's growth rate will slow, its telecom industry will approach maturity, and that Golden's growth rate will eventually settle closer to the Russian rate of inflation.[159]

According to the Ibbotson telecom (SIC 4813) beta, which gives the beta values for approximately 50 telecom companies that are traded in the United States including Golden, the median industry beta as of December 2007 was 1.45,

[157] *See supra* pages 41-42.
[158] *See* PRATT, COST OF CAPITAL, *supra* note 101 at 130 (stating that "[o]ver time, a company's beta tends toward its industry's average beta").
[159] *See supra* pages 26-30; Sherman Report at 21-21, 31.

and the SIC composite beta was 1.24.[160] Similarly, the Bloomberg CUTL Index, which is a telecommunications index of companies traded on the NASDAQ, including Golden, puts the five year weekly industry beta at 1.249.[161] Golden was a much larger, less levered company than the median company on the Ibbotson SIC 4813 list and, therefore, the composite beta of 1.24 is more appropriate than the median beta of 1.45.[162] I adopt it as the industry beta for purposes of this analysis.

I find that a beta that gives 2/3 weight to the Bloomberg historic raw beta of 1.32 and 1/3 weight to the 1.24 industry beta is the best approach to this DCF analysis. By predominantly adopting the historic raw beta, I give weight to the fact that Golden presently operates in a riskier, emerging, high-growth market, while tempering that number to account for the evidence that Russia is normalizing and that Golden is a stable company that would eventually have had a beta closer to its more mature, NASDAQ-traded peers. I thus apply a beta of 1.29 to the DCF analysis for a cost of equity of 12.3%.

---

[160] Sherman Demonstrative 26 (citing the Ibbotson Cost of Capital 2007 Yearbook December 2007 Quarterly Update, SIC Code 4813, and the Bloomberg CUTL Index as of Feb. 5, 2007); Tr. at 917-18 (Sherman).

[161] Sherman Demonstrative 26; Tr. at 917-18 (Sherman).

[162] The median company listed by Ibbotson in the SIC 4813 industry code has median sales of $141 million and median total capital of $389 million. Golden had sales over $1 billion and its total capitalization was over $4 billion. Tr. at 1135-36 (Sherman) (citing Sherman Cross Examination Demonstrative 18). And, the median company in the SIC 4813 had debt equal to 30% of its total capital, while Golden had debt equal to only 5% of its total capital. Sherman Cross Examination Demonstrative 18; 2007 10-K at 34; Tr. at 1137-38 (Sherman).

V. Conclusion

For the reasons I have explained, I adopt a terminal growth rate of 5.0%, a tax rate of 31.6%, an equity risk premium of 6.0%, and a beta of 1.29. I applied those inputs to Gompers' DCF model, and came up with a value of $125.49 per share. The parties should confer and make sure that I used the model correctly. Assuming that I did, they should present a final judgment using an amount of $125.49, plus interest from the Valuation Date to the date of payment at the legal rate, compounded quarterly.[163] If the dollar figure is different, they should explain why they use the different figure and submit the corrected amount. The parties shall submit an order within five days. IT IS SO ORDERED.

[163] 8 *Del. C.* § 262(h) (setting the interest rate for appraisal cases at the legal rate at 5% over the Federal Discount Rate, compounded quarterly, unless there is "good cause" to deviate from that rate).

COUNSEL:

Breed, Abbott & Morgan, P. C. (James Ziren of counsel), for plaintiff.

Cohen & Shalleck, P. C. (Jeffrey Cohen of counsel), for defendant.

JUDGES:

Jacqueline W. Silbermann, J.

OPINIONBY:

SILBERMANN

OPINION:

OPINION OF THE COURT

This matrimonial action was commenced by service of a summons in June 1986. After a timely appearance by defendant, a verified complaint was served on or about August 29, 1986. Issue was thereafter joined on November 4, 1986. A sufficient showing having been made at trial that the marriage which had been dying in 1984 was moribund as of 1985, a dual divorce on the grounds of constructive abandonment and abandonment was granted and the trial proceeded as to the ancillary relief.

After listening to the many days of testimony, observing the witnesses' demeanor and manner of testifying and studying the many exhibits offered in evidence, the court makes the following findings.

STATEMENTS OF FACTS

The parties were married amidst a great deal of fanfare including television coverage on February 14, 1982. Although there are no children of this marriage, plaintiff has a daughter, Starlite, by a former marriage.

Plaintiff, Marisa Berenson, is a renowned and celebrated film and television actress and model. At the time of the marriage she apparently enjoyed enormous entree to the world of arts and fashion both in her own right and as the granddaughter of Elsa Schiaparelli, the celebrated couturiere.

At the time of the marriage, defendant A. Richard Golub was a successful attorney who had been in private practice for many years and who attracted media and celebrity attention. Indeed, at the time immediately preceding their marriage, defendant was engaged in the trial of a matter involving Brooke Shields which was getting a substantial amount of media coverage.

It is clear that both parties coveted and gained the attention of the press and the company of the"Rich and Famous".

After living at several different locations during the first few months of their marriage, in the fall of 1982, the parties purchased a four-story townhouse at 209 East 83rd Street. This house was found by defendant and purchased for $ 575,000. The purchase was accomplished by the parties' assumption of a then existing small mortgage, and a contribution by plaintiff of $ 58,000 and defendant of $ 75,065.61.

On February 1, 1984 the 83rd Street property was sold for $ 950,000. Defendant had acquired the contract to purchase the townhouse at 42 East 64th Street for $ 50,000 and paid an additional $ 55,787.65 for a total cash payment of $ 105,787.65. Because the purchase of East 64th Street preceded the sale of 83rd Street property by six days, the remainder of the purchase price was covered by a purchase-money mortgage of $ 675,000 and a bridge loan of $ 250,000.

An examination of the various checks introduced into evidence as well as the testimony of the parties reveals the fact that the parties in effect pooled their income and defrayed their expenses using a flexible and/or pragmatic approach.

Plaintiff's funds, including income from films, television, modeling and a book, were placed mainly in two accounts. (Plaintiff had a separate Paris account as well.) One was called "A. Richard Golub Special Account No. 2" and the second "Echoes of Eternity". Defendant had signatory powers on both these accounts. Throughout the marriage it is evident that defendant made many of the decisions concerning the management of plaintiff's financial matters and how their moneys would be spent. Thus, their moneys were used interchangeably to pay their various expenses including expenses for the East 83rd Street house, the East 64th Street house, taxes and general living costs.

Beginning at the start of the marriage and continuing thereafter, plaintiff spent almost half of every year in Europe. In September 1985, plaintiff found an apartment in Paris which she leased in her name. Defendant contributed $ 32,500 toward obtaining the Paris apartment. Plaintiff has had exclusive use of the Paris apartment.

Throughout the marriage plaintiff appeared to have been engaged in pursuing her career both in the United States and abroad, concededly successfully. While in New York, the parties ate frequently in restaurants and seemingly entertained little at home. Housekeeping and child care were tended to by hired help. These homemaking services were solely supervised by the defendant for approximately half

of every year while plaintiff was in Europe. Likewise, defendant supervised the renovations made to the marital real estate as well as the negotiations and litigation necessary to vacate the rental apartments that were contained therein.

CONCLUSIONS OF LAW

Maintenance

In deciding plaintiff's request for maintenance, the court considered the statutory standards embodied in section 236 (B) (6) of the Domestic Relations Law.

The court notes that this is a short childless marriage in which both parties are in excellent health. Plaintiff has been a model since she was a teen-ager, appearing on the covers of such magazines as Vogue, Bazaar, Time and People. She is also a successful film and television actress. She works in this country as well as abroad, since she speaks several foreign languages. Plaintiff also wrote a book on fashion titled "Dressing Up" which was published by G.P. Putnam & Sons. Her talent and beauty have enabled plaintiff to become a substantial wage earner.

During the course of the marriage due in part to defendant's assistance by dint of his legal skills and business acumen plaintiff's earnings have appreciated. In this connection, defendant assisted plaintiff, inter alia, by getting her personal financial affairs in order at the inception of the marriage and making efforts throughout the marriage to advance her career. Indeed, plaintiff's income has significantly increased during the marriage to a point where she earned in excess of $ 150,000 in 1987.

Plaintiff is clearly able to maintain out of her own resources, as well as the equitable distribution to be awarded herein, the standard of living she has enjoyed during the marriage to defendant. Thus, an award of maintenance is inappropriate and none is awarded.

Marital Property and Separate Property

Marital property is defined in section 236 (B) (1) (c) as "all property acquired by either or both spouses during the marriage". (See also, Price v Price, 69 NY2d 8 [1986].) That is, the assets that represent the capital product of what was essentially a partnership entity. (Wood v Wood, 119 Misc 2d 1076 [Sup Ct, Suffolk County 1983].)

The court finds the following items to be marital property: the marital residence at East 64th Street; the increase in value of defendant's practice; the increase in value in plaintiff's career; the furnishings in the marital residence; the furnishings in the Paris apartment; and the dollar sign painting by Andy Warhol.

Equitable Distribution

In deciding the issue of the equitable distribution of the marital property the court has duly considered the factors enumerated in Domestic Relations Law § 236 (B) (5) (d) and being cognizant that "[the] function of equitable distribution is to recognize that when a marriage ends, each of the spouses, based on the totality of the contributions made to it, has a stake in and right to a share of the marital assets accumulated while it endured" (McGowan v McGowan,136 Misc 2d 225,227 [Sup Ct, Suffolk County] [emphasis supplied]).

Increase in Value of Acting and Modeling Career

Defendant contends that the increase in value of plaintiff's acting and modeling career is marital property and he seeks equitable distribution thereof as a result of his contributions thereto. The law of this State is clear that any increase in the value of separate property of a spouse occurring during the marriage which is due in part to the direct or indirect contributions of the other spouse may be considered property. (Price v Price., 69 NY2d 8 [1986], supra.) Further, the law is clear that professional licenses are included in the definition of property (O'Brien v O'Brien, 66 NY2d 576) and that this definition has been extended to include academic degrees as well as professional licenses (McGowan v McGowan, 136 Misc 2d 225 [Sup Ct, Suffolk County 1987], supra).,

Plaintiff, citing Morimando v Morimando (NYLJ, Feb. 6, 1987, at 16, col 1 [Sup Ct, Nassau County]), contends that her celebrity status is neither "professional" nor a "license" and hence not an "investment in human capital subject to equitable distribution." Moreover, plaintiff argues that because a career in show business is subject to substantial fluctuation, it should not be considered.

In O'Brien (supra), the fact that the professional license itself had no market value was irrelevant. It is the enhanced earning capacity that the license affords the holder that is of value. In this respect, all sources of enhanced earning capacity become indistinguishable. "Could it rationally be concluded that, for purposes of equitable distribution upon divorce, the Court of Appeals intended to limit as marital property, licenses enumerated in the Education Law? Hardly, given the definition of a license's value as enunciated in O'Brien as being enhanced earning capacity." (McGowan v McGowan, 136 Misc 2d 225, 228, supra.)

McGowan (supra) gives "enhanced earning capacity" an expansive meaning. The same logic used in McGowan to extend marital property to include degrees can be applied to include as marital property a spouse's unique ability to commercially exploit his or her fame. In O'Brien (66 NY2d 576, supra), it was the privileges conferred by the license that were critical to the court's decision, not the piece of paper itself. In McGowan, it was not the spouse's degree that was divisible; it was the income generated by exercising the privileges associated with the degree that the nondegreed spouse was seeking to share.

In O'Brien (supra), the court appears to bespeaking of an intangible asset or "res". (See, Morimando v Morimando, supra.)

In fairness, just as McGowan (supra) was a logical extension of O'Brien (supra), the right of a spouse to share in other valuable assets must be the next step forward.

There is tremendous potential for financial gain from the commercial exploitation of famous personalities (25 UCLA L Rev 1095). There is a proprietary interest in the product of a celebrity's labors. The right to exploit a celebrity's fame has been held to descend to his heirs (Price v Roach Studios, 400 F Supp 836). This exemplifies the property nature of a celebrity's fame. A commercial endorsement is essentially a "license" to use a person's fame. "Recognition of the community's interest in certain of these intangible interests indicates a disposition on the part of the judiciary to re-evaluate old notions of property. In light of this, consideration of the community property issues posed by the right of publicity seems overdue" (25 UCLA L Rev 1095, 1113).

There is an analogy to be made between the right of publicity and professional goodwill. In bothrights, there is a secondary meaning generated by a name and benefits derived therefrom. In either case, the right becomes an income-producing source.

The courts should treat all matrimonial litigants equally and should not prejudice nor penalize a spouse who is married to a nonprofessional who may nevertheless become an exceptional wage earner. The O'Brien remedy should be applied evenhandedly to all spouses. (Samuelson, The Valuation of Non-Tangible Assets of Non-Professionals, 19 [No. 2] Fam L Rev 1 [NY St B Assn, June 1987].) Otherwise, what will result is an economic windfall to some and an unfair deprivation to others. Clearly, there are certain fields in which the earning capacity exceeds that of other fields which require licensure. When a person's expertise in a field has allowed him or her to be an exceptional wage earner, this generates a value similar to that of the goodwill of a business.

In Morimando (supra), the spouse of a physician's assistant sought to have that spouse's licence declared marital property for equitable distribution purposes upon divorce. The court distinguished this case from O'Brien (66 NY2d 576,supra) because a physician's assistant does not share the same level of opportunity as does an M.D. A physician's assistant was said to always rely on an employer. The court also referred to the statute applicable to physician's assistants and noted that it "clearly imposes limitations upon the exercise of their functions." The physician's assistant is "destined to remain an employee." Unlike a physician's assistant, an actress/model often functions independently, on a free-lance basis and is not at the mercy of his or her employer.

O'Brien (supra) is the law. If it is to remain as good law, the rule should be uniformly applied. There seems to be no rational basis upon which to distinguish between a degree, a license, or any other special skill that generates substantial income. In determining the value of marital property, all such income-generating assets should be considered if they accumulated while the marriage endured. If one spouse has sacrificed and assisted the other in an effort to increase that other spouse's earning capacity, it should make no difference what shape or form that asset takes so long as it in fact results in an increased earning capacity. The rationale in both O'Brien and McGowan (supra) for awarding the spouse an economic interest in the intangible asset seems to have been based on a view of the asset as "investments in the economic partnership of the marriage and * * * the product of the parties' joint efforts". (McGowan v McGowan, supra, at 230.)

The noncelebrit spouse should be entitled to a share of the celebrity spouse's fame, limited, of course, by the degree to which that fame is attributable to the noncelebrity spouse (25 UCLA L Rev 1095). The source of the fame must still be traced to the marital efforts.

Thus, as in O'Brien (supra), if a spouse devotes himself or herself to the family throughout the marriage, giving up career opportunities, and no liquid assets exist, the court should compensate this spouse for his or her contribution enabling him or her to pursue his or her career and not just a terminable maintenance award. For example, if instead of medical school the spouse went to music school and became a celebrated pianist, in equity both accomplishments must be treated equally.

The question, therefore, presented is should O'Brien (supra) be extended so as not to prejudice a spouse who is married to a nonprofessional?

This court answers the question in the affirmative and holds that the skills of an artisan, actor, professional athlete or any person whose expertise in his or her career has enabled him or her to become an exceptional wage earner should be valued as marital property subject to equitable

distribution. Thus, although plaintiff's celebrity status is neither "professional" nor a "license" (Morimando v Morimando, NYLJ, Feb. 6, 1987, at 16, col 1, supra) its increase in value is marital property, despite the difficulties presented in valuing such property.

[Portions of opinion omitted for purposes of publication.]

44 So.3d 1092 (2009)

Rebecca R. GRELIER
v.
Maximilian J. GRELIER III.
Maximilian J. Grelier III
v.
Rebecca R. Grelier.

2060810.

Court of Civil Appeals of Alabama.

December 30, 2009.
Certiorari Denied February 12, 2010 Alabama Supreme Court 1090464.[1]

Nancy S. Gaines of Gaines & Gaines, L.L.C., Magnolia Springs, for appellant/cross-appellee Rebecca R. Grelier.

Dinah P. Rhodes of Rhodes & Creech, Huntsville, for appellee/cross-appellant Maximilian J. Grelier III.

On Application for Rehearing

PER CURIAM.

This court's opinion of December 19, 2008, is withdrawn, and the following is substituted therefor.

Rebecca R. Grelier ("the wife") appeals from a judgment divorcing her from Maximilian J. Grelier III ("the husband"); in particular, she challenges the trial court's valuation of and division of certain business interests of the husband's and the trial court's failure to reserve jurisdiction to award periodic alimony in the future. The husband cross-appeals, asserting that the trial court erred in requiring him to pay certain fees and in ordering him to purchase an automobile for the wife.

The wife and the husband were married on May 13, 1995; the parties' two children, who were born during the marriage, were 4 and 8 years old at the time of trial. On June 28, 2004, the wife filed a complaint that sought, among other things, a divorce on the ground of adultery, an award of custody of the parties' children, and an equitable division of the marital assets and debts. The husband filed an answer to the complaint 11 days later; he subsequently filed his own complaint in which he sought a divorce on the ground of incompatibility of temperament.

[1] Note from the reporter of decisions: This decision was released by the Alabama Supreme Court under the date February 12, 2010. This decision was actually released to the public on February 16, 2010.

On June 10, 2005, the wife filed a motion requesting that the trial court appoint a special master for the purpose of auditing, examining, and inspecting the accounting books, records, and physical assets of the husband's business interests and reporting its findings to the court. During a subsequent hearing, the trial court instructed the wife's attorney to draft an order appointing a special master and to obtain the husband's attorney's approval of the proposed order before submitting the order to the trial court. On August 2, 2005, the trial court, using an order drafted by the wife's attorney, appointed Gary Saliba to serve as a special master "for the purpose of identification and determination of the fair market value of all business entities in which the [husband] possesses any interest as well as analysis and determination of the fair market value of Queen Bee of Beverly Hills, the business operated by the [wife]." That order bore the signatures of the wife's counsel and the husband's counsel indicating their approval of the order at the time it was rendered by the trial court.

The trial court conducted an ore tenus proceeding over 6 days: November 13-15 and December 20-22, 2006. During the ore tenus hearing, the trial court heard testimony from the husband, the wife, the special master, and numerous witnesses; the testimony alone comprises over 1,800 pages of the 2,400-page record on appeal. Various documentary exhibits, including pertinent financial computations regarding the parties' business interests, were also admitted into evidence.

Although the testimony revealed that both parties had earned undergraduate business degrees, the evidence also indicated that the wife had worked primarily as an accountant before the birth of the parties' children and as a home-based entrepreneur following the birth of the children. In contrast, the husband had been self-employed, primarily as a commercial retail-property and office-property developer and broker, and he was serving as executive vice president of Chase Commercial Properties, LLC, at the time of trial. In addition, the husband regularly participated in real-estate and commercial ventures through a variety of closely held corporations: Flint Crossing, LLC; Trinity Associates, LLP; Chase Commercial Properties, LLC; Village Builders, Inc.; Rosemary Corners, LLC; Research Park Associates, LLC; and RMC Investors, LLC. Those entities, in turn, owned wholly or in part a number of other business entities, namely: Park Place Associates, LLC; Hughes Retail Associates, LLC; Bradford Associates, LLC; and The Falls at Grants Mill, LLC. In December 2005, while the divorce action was still pending, the husband and his three business partners (his father; his brother; and Remy Gross, his college friend) reorganized all the previously listed business entities under one entity, CG Partners, LLC, with each partner owning a 25% interest in that entity. The husband testified that consolidating the businesses was necessary to handle the outstanding debt that he and his father still owed from the financial failures of Village Builders, Inc., and The Ledges, an expensive residential-subdivision development. The husband also testified that during the pendency of the divorce action he had been forced to borrow $30,000 from Gross to employ his attorney and to pay child support. Additionally, the husband testified that he had borrowed a total of $40,000 from Chase Commercial Properties, LLC, to hire Sam Wessinger, a financial expert witness; he also stated that he owed the United States Internal Revenue Service $15,000.

The husband testified that he had earned $63,227 in 2005; he also stated that his annual income had peaked sometime between 1999 and 2000, when he had earned more than $100,000 in commissions. The husband testified that all of his various business interests had undergone financial trouble beginning in 2001; those troubles began with The Ledges,

a residential subdivision whose lots and expensive houses failed to sell before the construction loans were due to be paid. He stated that in 2003 he and his father had signed a promissory note representing the outstanding debt secured by that development and that as of August 1, 2005, the principal amount owed on that debt was $973,954.20. The husband testified that the parties had lived beyond their means throughout their marriage, defraying expenses through the use of credit cards, salary advances, and loans. At the time of trial, neither party had a retirement account; the wife testified that she had liquidated her retirement account to pay the parties' living expenses during a period when they had no income.

The wife testified that during the parties' worst financial period, which had occurred during the three years before the divorce complaint was filed, the parties had borrowed substantial sums from the wife's mother and stepfather. The trial court admitted into evidence a promissory note executed by the parties and payable to the wife's mother and stepfather on demand and no later than September 20, 2006, in the amount of $100,735.15; she stated that the total amount, including interest, owed on that note by the time of trial was $118,833.15. In addition, the wife testified that the parties had incurred large balances on joint credit-card accounts during the same period. She stated that at the time of the parties' separation her father had paid several of the parties' credit-card debts and was still owed $30,000 for those payments. Moreover, the wife testified that her mother had "rolled over" two other credit-card account balances onto her own credit-card accounts when the wife was unable to make required payments after the parties had separated; she stated that her mother was owed $8,800 in reimbursement for paying those marital debts.

The wife testified that her attorney had billed her a total amount of $50,345.29. By the time of trial, she had paid $31,770.74 to her attorney by borrowing from her mother, but she stated that she still owed $18,574.55 to her attorney. The husband testified that he had paid his attorneys over $30,000 by the time of trial, and, he stated, although he knew that he would owe more, he did not have a final bill from his attorneys.

The parties had purchased a lot in The Ledges in 1999 for approximately $165,000; they had built a house costing about $750,000 on that lot. Because the parties did not have enough money to complete construction of the house, they had borrowed $50,000 from the wife's aunt, Betty Ladas, in order to finish building the house. At the time of trial, the parties owed $592,379.67 on the first mortgage and $74,070 on the second mortgage on the house; additionally, there were two liens recorded against the house totaling $10,500. Moreover, the wife testified that the house needed major repairs, including repair of a leaking roof, before the property could be sold.

The trial court entered a judgment divorcing the parties on January 8, 2007.[2] In that judgment, the trial court, among other things, awarded to the husband all of his business interests. The trial court's judgment noted:

> "In making an equitable distribution of the marital assets and liabilities accumulated by these parties during their marriage, and in determining the fair market value of the interest owned by the [husband] in the above entities, this Court finds that it is

[2] Although the husband admitted to having conducted an adulterous relationship during the latter part of the parties' marriage, the trial court divorced the parties on the ground of incompatibility of temperament.

> reasonable to apply a combined forty percent (40%) minority discount and marketability discount to the evaluations made by the Special Master in this case. In addition, this Court has taken into account the fact that some of the underlying projects owned by the above awarded entities have a negative fair market value; and ha[s] also taken into account the substantial debt for which the [husband] is personally liable, on a joint and severable basis, which exceeds the total amount of $1,000,000.00. To do otherwise would be to ignore the reality of the financial condition of these parties."

In the divorce judgment, the husband was also ordered to pay rehabilitative alimony to the wife in the amount of $1,500 per month for 36 months. In addition, the husband was instructed to pay the necessary educational expenses for the wife to renew her license to practice as a certified public accountant, so long as those expenses did not exceed $5,000. The judgment also ordered that the marital residence be sold and that the wife was to receive the first $200,000 of the proceeds from that sale; in the event that the net sale proceeds did not amount to $200,000, the judgment instructed the husband to pay any such deficiency in monthly installments of $1,000 per month as an additional property settlement.

The wife filed a timely notice of appeal; she alleges that the trial court erred in its valuation of the husband's business interests, in its division of those business interests, and in its failure to reserve jurisdiction of the issue of periodic alimony. The husband cross-appealed, claiming in his docketing statement that the trial court had erred in ordering him to pay a portion of the wife's attorney fees, to pay a majority of the special-master's fee, and to purchase an automobile for the wife; however, the husband failed to present those issues or arguments in his appellate brief.[3] Therefore, we affirm the trial court's judgment as to the husband's cross-appeal, and we address only the wife's allegations of error.

Our standard of review in divorce cases is well established. A trial court's judgment based on ore tenus evidence will be presumed to be correct and will not be reversed on appeal absent a showing that the trial court acted outside its discretion or that the judgment is unsupported by the evidence so as to be plainly and palpably wrong. *See Clements v. Clements,* 990 So.2d 383, 389 (Ala.Civ. App.2007); *see also Harmon v. Harmon,* 928 So.2d 295, 298 (Ala.Civ.App.2005). However, questions of law are not subject to the ore tenus standard of review. *See, e.g., Ex parte Perkins,* 646 So.2d 46, 47 (Ala.1994), and *L.R.M. v. D.M.,* 962 So.2d 864, 873 (Ala.Civ.App.2007).

The wife first asserts on appeal that the trial court erred in applying minority and marketability discounts when valuing the husband's business interests. Heretofore, no Alabama case has addressed whether a divorce court should use minority and marketability discounts when assessing the value of a divorcing spouse's interest in a closely held business organization. However, that issue has been addressed by many other jurisdictions. *See* Stephen A. Hess, Annotation, *Use of Marketability Discounts in Valuing Closely Held Corporation or Its Stock,* 16 A.L.R.6th 693 (2006). Many jurisdictions, either by legislation or by caselaw, have adopted a "fair market value" standard by which the value of all marital property must be determined by gauging the price a willing buyer would pay to a

[3] This court has consistently held that when a party does not make an argument or cite any authority to support an allegation of error, that allegation of error is deemed waived on appeal. *See* Rule 28, Ala. R.App. P.; *see also Cain v. Howorth,* 877 So.2d 566, 581 (Ala. 2003).

willing seller in a hypothetical sales transaction. *See, e.g., Crismon v. Crismon,* 72 Ark.App. 116, 34 S.W.3d 763 (2000). Pursuant to that standard, it makes sense to apply minority and marketability discounts because those discounts reflect the economic reality that, unlike the case with publicly traded companies, no ready pool of willing buyers exists to purchase an interest in a private business organization that does not carry with it the ability to control that organization. *See generally In re Marriage of Barlow,* 111 Or.App. 179, 826 P.2d 18 (1992).

However, Alabama law has not adopted a "fair market value" standard for assessing marital property. Rather, under Alabama law, a trial court must determine the value of property with the only limitation being that the value must be equitable under the circumstances of the particular case. *See generally Yohey v. Yohey,* 890 So.2d 160 (Ala.Civ.App.2004). That standard implies that the valuation must be fair to all parties concerned. *See generally Black's Law Dictionary* 578 (8th ed.2004) (defining "equitable distribution" as the "fair ... allocation" of marital property). In cases in which a divorce court does not contemplate the sale of a business in which one of the spouses holds a minority interest but, instead, intends that the business shall remain a going concern, it makes little sense to determine fair value by the measuring stick of a hypothetical sales price. That methodology would artificially reduce the value of the marital asset in almost every case, which would be unfair, i.e., inequitable, to the party receiving only a portion of the reduced value or the property equivalent to that reduced value but would be advantageous to the party retaining the business interest, including its actual value to him or her as the holder.

In *Brown v. Brown,* 348 N.J.Super. 466, 792 A.2d 463 (App.Div.2002), the court held that a divorce court correctly declined to apply minority and marketability discounts when valuing the husband's minority interest in a family-owned floral business. The New Jersey court stated:

> "`A minority discount adjusts for lack of control over the business entity on the theory that non-controlling shares of stock are not worth their proportionate share of the firm's value because they lack voting power to control corporate actions.... A marketability discount adjusts for a lack of liquidity in one's interest in an entity, on the theory that there is a limited supply of potential buyers for stock in a closely-held corporation.' *Lawson [Mardon Wheaton, Inc. v. Smith],* 160 N.J. [383,] 398-99, 734 A.2d 738 [(1999)].... Whether marketability or minority discounts are appropriate to the valuation of a less than controlling interest in the entity are questions of law which we review *de novo,* giving no special deference to the trial judge's determination. *Balsamides [v. Protameen Chems., Inc.],* 160 N.J. [352,] 372-73, 734 A.2d 721 [(1999)]; *Lawson,* 160 N.J. at 398, 734 A.2d 738."

348 N.J.Super. at 483, 792 A.2d at 473-74. Noting that the minority and marketability discounts are intended to account for the limited liquidity of minority interests in business entities, the court reasoned that the discounts should not apply when liquidity concerns are not at issue, such as when the business will continue to be an ongoing concern following the divorce. 348 N.J.Super. at 488, 792 A.2d at 477. The court held that, in such circumstances, "[t]he distinction between fair value and fair market value appears to us equally applicable in the valuation of one spouse's interest in his family's closely-held corporation for purposes of equitable distribution." *Id.* The court explained that distinction at

length in discussing the fair-value standard applicable to sales of stock by a dissenting minority shareholder:

> "Statutory appraisal rights accorded to dissenting shareholders in New Jersey (and in most states) include the right to a determination of the `fair value' (not `fair market value') of their shares. N.J.S.A. 14A:11-3; *see* Bobbie J. Hollis, II, *The Unfairness of Applying Lack of Marketability Discounts to Determine Fair Value in Dissenter's Rights Cases,* 25 J. Corp. L. 137, 139 (1999), explaining the distinction between `fair value' and `fair market value':
> "`"Fair value" is not the same as, or short-hand for, "fair market value." "Fair value" carries with it the statutory purpose that shareholders be fairly compensated, which may or may not equate with the market's judgment about the stock's value. This is particularly appropriate in the close corporation setting where there is no ready market for the shares and consequently no fair market value.
> "`A closely-held corporation is one that has few shareholders and little market for the stock, or one that has an integration of ownership and management. When appraising shares of a close corporation, fair value cannot be fairly equated with the company's fair market value. Close corporations by their nature have less value to outsiders, but at the same time their value may be even greater to other shareholders who want to keep the business in the form of a close corporation.'"

348 N.J.Super. at 487, 792 A.2d at 476.

Like New Jersey law, Alabama law recognizes the concept of "fair value" in the dissenting-shareholder context. *See* Ala. Code 1975, § 10-2B-13.01(4). Our statute is silent as to the applicability of a marketability discount, but in *Ex parte Baron Services, Inc.,* 874 So.2d 545 (Ala.2003), the Alabama Supreme Court quoted with approval the explanation of the distinction between fair value and fair-market value contained in *Brown.* 874 So.2d at 549-50. The court held that fair-market value does not apply in dissenting-shareholder cases because the dissenting shareholder is not acting as a willing seller. 874 So.2d at 550. Rather, to accord the dissenting shareholder fair value, the trial court should determine the proportionate value of the company as a going concern without applying any discounts. *Id.* Because the Alabama Supreme Court has adopted the same reasoning that is applied in New Jersey in dissenting-shareholder cases, it seems reasonable to conclude that it would follow the same reasoning in divorce cases involving minority ownership of closely held business organizations. *See* Jay E. Fishman et al., *Standards of Value-Theory and Application* 167 (2007) (analogizing divorce cases to dissenting-shareholder cases). Thus, we conclude that the trial court erred in applying the minority and marketability discounts in this case.

Alabama law is firmly established that

> "[m]atters of alimony and property division are interrelated, and the entire judgment must be considered in determining whether the trial court abused its discretion as to either of those issues. *Willing v. Willing,* 655 So.2d 1064 (Ala. Civ.App.1995)."

Henderson v. Henderson, 800 So.2d 595, 597 (Ala.Civ.App.2000). "[T]here is no rigid standard or mathematical formula on which a trial court must base its determination of

alimony and the division of marital assets." *Yohey v. Yohey,* 890 So.2d at 164. In this case, the trial court awarded the husband 100% of his interest in the various business entities in which he was involved. In so doing, the trial court considered the husband's interest to be worth $602,108.40 instead of $1,003,514 because of the application of a combined 40% minority/marketability discount ($1,003,514 minus 40% discount = $602,108.40). Because we have determined that the trial court erred in its valuation of the husband's closely held business interests, we reverse the divorce judgment and remand the case with instructions to reconsider its property division and its award of alimony in light of the proper valuation of the husband's business interests. Because the entire judgment is hereby reversed, we pretermit discussion of the other issues raised in the wife's appeal.

The husband's request for an award of an attorney fee on appeal is denied.

APPLICATION GRANTED; OPINION OF DECEMBER 19, 2008, WITHDRAWN; OPINION SUBSTITUTED; REVERSED AND REMANDED WITH INSTRUCTIONS AS TO THE APPEAL; AFFIRMED AS TO THE CROSS-APPEAL.

THOMPSON, P.J., and BRYAN, THOMAS, and MOORE, JJ., concur.

PITTMAN, J., concurs in part and dissents in part, with writing.

PITTMAN, Judge, concurring in part and dissenting in part.

In this court's opinion on original deliverance, which today's opinion withdraws, this court made an initial determination that the decision whether to apply discounts in valuing the husband's business interests was a matter to be determined by the trier of fact. Writing for the court, I noted that:

"The trial court heard testimony from three experts, received substantial documentary evidence, and accepted posttrial legal memoranda from both the wife's attorney and the husband's attorney addressing whether the two discounts should be applied to the husband's business interests. The trial court has wide discretion to accept or to reject evidence and testimony presented ore tenus. *See Clements [v. Clements*], 990 So.2d [383,] 389 [(Ala.Civ.App.2007)], and *Harmon [v. Harmon],* 928 So.2d [295,] 298 [(Ala.Civ.App.2005)]. Based upon the disputed evidence as to the value of the husband's business interests, as well as the conflicting testimony of the financial experts who testified for the wife and the husband, we conclude that the trial court acted within its discretion in making the determination that computing the fair market value of the husband's business interests necessitated applying both minority-interest and marketability discounts."

I would prefer to leave the trial courts of this state with the discretion to determine, on the specific facts at issue in each divorce action, whether or not to apply discounts in valuing various types of business interests; therefore, I dissent from the reversal of the trial court's divorce judgment in that respect.

I concur in the main opinion to the extent that the cross-appeal is affirmed.

Grimes v. Vitalink Communications

Case name: Grimes v. Vitalink Communications
Citation: 1997 Del. Ch. LEXIS 124
Date of decision: August 26, 1997
Country: US
State or Federal: State
State/Jurisdiction: Delaware
Court: Court of Chancery
Type of action: Dissenting Shareholder
Judge: Chandler
Experts: William Becklean (for petitioner) Kevin Dages (for respondent)
SIC: 8743 Public Relations Services
NAICS: 541820 Public Relations Agencies
300

Keywords: Discounted cash flow method (DCF), Dissenting stockholder action, Fair value, Terminal value

---

Counsel: David A. Jenkins, Esquire, of SMITH, KATZENSTEIN & FURLOW, Wilmington, Delaware, Attorney for Petitioner.

Richard D. Heins, Esquire, of ASHBY & GEDDES, Wilmington, Delaware; OF COUNSEL: Jack M. Graves, Esquire, of CHRISMAN, BYNUM & JOHNSON, P.C., Boulder, Colorado, Attorneys for Respondent.

Judge: Chandler.

Petitioners and respondent in appraisal proceeding seek to determine fair value of petitioners' shares based on corporation's future cash flows. Petitioners' proposed cash flow is rejected for failing to reflect the risk that the corporation will not be able to develop or to obtain critical products, for failing to use the proper tax rate, and for failing to base the value of the cash flow's terminal value on comparable companies. Respondent's cash flow is accepted as accurately reflecting the corporation's value on the date of the merger. Interest on the fair value, which shall be compounded monthly from the date of merger to the date of payment, is set at the legal rate of interest.

I. BACKGROUND

This is an appraisal action pursuant to 8 Del. C. § 262. After completion of a tender offer whereby Network Systems Corporation ("NSC") obtained just over ninety percent of Vitalink Communications Corporation ("Vitalink"), NSC merged NSC Acquisition Corp., a wholly owned subsidiary of NSC, into Vitalink pursuant to 8 Del. C. § 253. n1 Charles L. Grimes ("Grimes"), owner of 200,000 shares of

Vitalink common stock, and Gadfly Foundation, Inc. ("Gadfly"), owner of 1,900 shares, dissented from the merger. Grimes and Gadfly ("petitioners") seek to have their shares appraised as of the effective date of the merger, July 1, 1991.

n1 Respondent Storage Technology later acquired NSC.

Both parties have retained appraisal experts and have submitted valuations of petitioners' shares. That the parties have agreed to the use of a single valuation method significantly eases this Court's burden of determining the fair value of Vitalink and minimizes problems that may result from an attempt to combine results from several valuation methods. n2 In this case, the parties have valued Vitalink using a discounted cash flow model--increasingly the model of choice for valuations in this Court. n3 The parties also agree that Vitalink's cash flows should be projected out over a five-year period commencing at the date of the merger. This Court has previously accepted valuations based upon such a time period. n4 Another area of agreement is the use of a comparable company analysis to value the terminal (residual) value of Vitalink at the end of the five-year forecast period, although the parties disagree as to which companies are comparable with Vitalink. The parties also agree that Vitalink's future cash flows should be discounted to present value at a rate of 20.83%. Finally, the parties agree on a number of adjustments that must be made to the present value of Vitalink's cash flows in order to arrive at the net present value of Vitalink's equity. With no reason to conclude that any of the areas in which the parties agree are not reflective of appropriate valuation methods and assumptions, I accept these methods and conclusions as accurate measures of Vitalink's fair value. Despite the numerous areas of agreement, this Court must still resolve several conflicting issues which lead to a $ 4.82 discrepancy between the fair value of the petitioners' shares as calculated by petitioners ($ 13.32) and as calculated by the respondent ($ 8.50). These issues involve the assumptions underlying the selection or development of Vitalink's product and sales forecast, the selection of comparable companies by which to estimate Vitalink's terminal value, and the selection of Vitalink's tax rate as well as several issues surrounding the appropriate rate of interest which should accrue on the fair value of petitioners' shares from the merger date to the date of payment.

n2 See In the Matter of the Appraisal of Shell Oil Co., Del. Ch., Consol. C.A. No. 8080, at 82, Hartnett, V.C. (Dec. 11), aff'd, Del. Supr., 607 A.2d 1213 (1990) (noting difficulty of interchanging data between different valuation methods).

n3 See, e.g., Kleinwort Benson Ltd v. Silgan, Del. Ch., C.A. No. 11107, 1995 Del. Ch. LEXIS 75, Chandler, V.C. (June 15, 1995); TV58 Ltd. Partnership v. Weigel Broadcasting Co., Del. Ch., C.A. No. 10798, 1993 Del. Ch. LEXIS 146, Chandler, V.C. (July 22, 1993).

n4 See Kleinwort Benson Ltd., Del. Ch., C.A. No. 11107. A five-year period may not, however, always be appropriate. Any time period selected should provide a representative forecast or historical sample of data. Cf. Gonsalves v. Straight Arrow Publishers, Del. Ch., C.A. No. 8474, 1996 Del. Ch. LEXIS 144, *14-15, Allen, C. (Nov. 27, 1996) (noting, in connection with an earnings capitalization model, that although the standard earnings base was five years, that time period is not necessarily the only period on which the method may be based.)

The focus of an appraisal proceeding is narrow. "In a section 262 appraisal action the only litigable issue is the determination of the value of the appraisal petitioners' shares on the date of the merger, the only party defendant is the surviving corporation and the only relief available is a judgment against the

surviving corporation for the fair value of the dissenters' shares." n5 The discussion below focuses only on the methods and data relied upon by the parties to arrive at their independent calculations of the fair value of petitioners' shares, and the extent to which the accuracy of the results might be affected by the credibility of the expert witnesses, their methods, and the sources of their information. n6 Further detail on the background of the events leading up to the merger may be found in this Court's opinion In re Vitalink Communications Corporation Shareholders Litigation. n7

n5 Cede & Co. v. Technicolor, Inc., Del. Supr., 542 A.2d 1182, 1187 (1988).

n6 Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796, 802 (1992) ("the trial judge, as finder of fact in appraisal cases, enjoys the unique opportunity to examine the record and assess the demeanor and credibility of witnesses"); Alabama By-Products Corp. v. Neal, Del. Supr., 588 A.2d 255, 258 (1991) ("Where those assumptions [underlying expert valuations] are values supplied by others, the conduct of such other persons is probative of their credibility and of the information being supplied to the expert.").

n7 Del. Ch., 1991 Del. Ch. LEXIS 195, Consol. C.A. No. 12085, Chandler, V.C. (Nov. 8, 1991).

II. VITALINK'S PRODUCT AND SALES FORECAST

The selection of the proper product and sales forecast accounts for just over fifty percent of the dollar difference between the two competing valuations. Petitioners argue that the proper forecast is that forecast developed by Vitalink's Assistant Vice President for Finance, Keith Glover ("Glover"). Respondent Storage Technology (NSC's successor in interest) asserts that Glover's forecast improperly reflects the existence and sale of products to which Vitalink did not have access and argues that the proper forecast results from a weighing of three forecasts reflective of the three most likely scenarios that Vitalink would encounter absent the merger.

A. Petitioners' Forecast

Petitioners' expert valuation witness is William Becklean ("Becklean"). n8 His estimate of Vitalink's projected cash flow for 1991 to 1995 is based on a financial forecast prepared by Glover. n9 Wes Saia ("Saia"), Vitalink's Chief Financial Officer, directed Glover to prepare the forecast for the benefit of Salomon Brothers Inc. ("Salomon") and Kidder, Peabody & Co. ("Kidder"). n10 Salomon, who was preparing a fairness opinion for NSC, and Kidder, who was preparing a fairness opinion for Vitalink, provided Glover with guidance as to what types of information were required. n11

n8 Becklean is currently senior Vice President of Tucker Anthony Incorporated where he heads the technology research group. He holds degrees in engineering and business and is a Certified Financial Analyst. A friend of petitioner Grimes since 1954 (Tr. 22-24, 76-77), he has provided Grimes with investment advice (Id. at 130-31) and appears to have been a partner with Grimes in Capital Counsel, an investment management firm, from the late 1960s to the early 1970s (Id. at 130), although he also testified at trial that he was not involved in businesses other than Quantum Associates from 1968 to 1976. Id. at 63-64. While at Kidder, Peabody in 1988, he served as a research analyst for Vitalink's initial public offering. Id. at 69. He published several research reports on Vitalink from 1988 to 1991. Id. at 69-70. Becklean has never served as an expert witness in an appraisal action or any other litigation. Id. at 116.

n9 Id. at 83-84, 204.

n10 Id. at 204-06.

n11 Id. at 206.

The foundation of Glover's forecast was based on Vitalink's existing internal business plan. This document, which Vitalink generally updated every six months, projected Vitalink's net income, by quarter, for the next two years. n12 Glover began his task by updating the existing two-year 1991-1992 forecast to reflect actual results for the first and second quarters of 1991. n13 With information derived from Vitalink's internal models that projected Vitalink's sales out further than two years, and guidance from Vitalink's President and Chief Executive Officer Leslie Denend ("Denend") and Saia as to the appropriate overall growth rates, Glover extended the two-year forecast through to 1995. n14 Glover's final forecast, which he provided to Salomon and Kidder on April 19, 1991, provided Vitalink's estimated revenues by product line. n15 Becklean testified that he did not have any reason to believe that Glover's report was "anything but an accurate reflection of [Vitalink's] belief of what the business was going to produce over the next five years." n16

n15 See PTX 39 (Project Star Analysis Prepared by Keith Glover, April 19, 1991); Tr. 232.

n16 Tr. 85.

B. Respondent's Forecast

Respondent's expert witness Kevin Dages ("Dages") n17 did not directly rely on Glover's forecast. Dages began his appraisal by examining valuations prepared by Kidder, Salomon and Ernst & Young in May and June 1991. He also examined previous reports prepared by Becklean and other industry analysts. Reviews of these reports and conversations with former Vitalink personnel convinced Dages that he would need to construct his own valuation. n18 Dages spoke to Denend, Vitalink's 1991 Vice President of Marketing, Vitalink's 1991 Vice President of Sales, and Vitalink's 1991 Associate Vice President of Software Engineering n19 and developed three separate forecasts reflective of the three most likely scenarios Vitalink would encounter absent the merger. n20 The first scenario assumes that Vitalink would obtain router products through OEM relationships and supply these products to its existing customers while it simultaneously pursued internal development of its own router product. n21 This scenario assumes that Vitalink could retain its current bridge customers by providing them with third-party router products while developing its own product. The second scenario assumes that Vitalink is unable to negotiate an OEM relationship for the ELYNX and TLYNX products. Thus, Vitalink is unable to supply its customers with router products for 24 months while Vitalink develops these products internally. n22 The third scenario builds upon the second by assuming that the delayed development of a router product will hinder Vitalink's efforts to enter the market. n23 Dages estimated that Vitalink faced a sixty percent chance of experiencing the first scenario and a twenty percent chance of experiencing the second or third. n24

n17 Dages is currently a principal at Chicago Partners, a litigation and economic consulting firm. Id. at 240. He has seven years of litigation consulting experience and several times has served as a consulting and testifying expert. Id. at 242-45. He has been a guest lecturer at the University of Chicago School of Business on the subject of valuations (Id. at 246-47), although he has no formal business education. He had no knowledge of Vitalink until he was hired for this case. (Id. at 353).

C. Analysis

Glover's forecast admittedly does not reflect the going concern value of Vitalink on the date of the merger. By the time of the merger, Vitalink had fallen from its position as a leader in the computer internetworking industry. In the late 1980s and the early 1990s, Vitalink held a significant share of the market for wide-area bridges, which allowed users to connect local area computer networks ("LANs") and to form wide-area networks ("WANs") by which information from one LAN could be transferred to a second LAN located on the same WAN. Each LAN in the WAN was attached to a bridge. All the bridges in the WAN were interconnected. Packets of information transmitted from a location on one LAN to that LAN's bridge would be forwarded by the bridge to each of the other bridges on the WAN. Each of these other bridges could then determine if the information was addressed to a location on its LAN. Bridges were limited by their inability to recognize addresses for any location other than locations on their own LAN. Thus, when they received a packet of information from their LAN, addressed to a location outside that LAN, the bridge forwarded the packet to each of the other bridges, rather than to only the bridge on the LAN containing the packet's intended recipient.

A second form of technology, routers, also allowed users to connect LANs and to transmit information from one LAN to another. Unlike bridges, however, routers were able to determine to exactly which bridge a packet of information should be transmitted. The advantages of routers were clear and by the early 1990s development and production of routers was the fastest growing segment in the industry. n25

n25 Tr. 75 (Becklean).

Denend, who had been hired as Vitalink's President and CEO in October 1990, and appointed as Vitalink's Chairman in January 1991, recognized the need for Vitalink to obtain a competitive router for its customers. Vitalink considered two different router sources: internal development and provision by third parties either through a relationship with an original equipment manufacturer or a merger with a company that had developed its own router product. n26

n26 Denend Dep. at 32, 42.

The need for Vitalink to obtain a router product was urgent. Revenues were declining rapidly. Vitalink was late in entering a market that Denend believed was growing at least fifty percent per year. n27 There were concerns that its loyal customers would not remain loyal while Vitalink sought to provide them with routers or technology that would enable them to make the transition to routers. n28

n27 Id. at 87-88.

n28 Id. at 41-42.

Some customers were already leaving. n29 Vitalink's management knew that survival depended upon Vitalink's ability to assist its customers in making the transition from bridges to routers. At the time of the merger, Vitalink did not have a competitive router product for its customers. Nor did Vitalink have access to a product through a third party OEM. It was attempting to develop a router internally. To ease the pressure from its bridge customers, who wished to switch to routers, Vitalink provided them with the TransPATH router consisting of bridge hardware linked to router software that provided minimal router functions. n30 Vitalink viewed the TransPATH as a stepping stone from its past leadership in bridges to its future in routers. n31 Vitalink planned to upgrade the TransPATH software while working to develop the LYNX--its own internal version of a router. n32 Initially Vitalink had intended to create a new code for the LYNX but this was abandoned in favor of adapting the code for TransLAN, its bridge product, for use with the LYNX. n33 The difficulties in working with this code were significant. n34 Denend was concerned about Vitalink's ability to have a functional router code available by the time the router hardware was complete. n35 In his presentation to the Board in March, Denend stated that Vitalink's customer base was looking elsewhere for router products, that "Vitalink's credibility as a company capable of developing or introducing leadership products has eroded severely" and that Vitalink would not have a competitive product ready "until the end of 1991, at the earliest." n36

n35 Id. at 33.

n36 PTX 22 at VC006026 (Documentation for Vitalink's Feb. 25, 1991, Board Meeting).

Denend's Rebuilding Shareholder Value Report dated April 1, 1991 (an earlier version of which had been prepared for presentation to Vitalink's Board of Directors in March), states that Vitalink's current strategy was based on the assumption that Vitalink would be able to return to "market leadership" within 18 to 24 months. n37 It also notes that "recent market developments have increased the risk of implementing Vitalink's strategy successfully" and that Vitalink faced a threat "that there will not be enough time for Vitalink to return to market leadership position before a dominant supplier emerges in the interconnect market." n38

n37 PTX 35 at VC002765.

n38 Id.

Kidder's April 9, 1991 report to Vitalink's Board listed several factors that were viewed as hindering Vitalink's ability to make a successful transition from bridges to routers:

* Expertise is concentrated in shrinking remote bridge market

* Multi-protocol offerings are currently not available

* Multi-protocol offerings will be late and not competitive with current products offered by industry leaders

* Low-product development credibility

* Engineering resources are inefficient

* Customer base migration is accelerating n39

n39 RTX 29 at KP000009.

As a result of these factors "Kidder, Peabody recommended that Vitalink proceed with a negotiated sale process." n40

n40 Id. at KP000021.

In May 1991, Maureen Lawrence, Vitalink's Vice President of Marketing, authored a short presentation entitled Vitalink Product Plans that revealed that if the merger with NSC were not completed, Vitalink would need to develop an entirely new software code. n41

n41 RTX 24 at VA003503; Denend Dep. at 58.

Salomon also completed its evaluation of Vitalink in preparation for the merger and presented its conclusion to NSC's Board in May 1991. It reported that Vitalink's sales of bridges were declining, that the stock market lacked confidence in Vitalink's "ability to introduce a successful router product," n42 and noted that even a combined Vitalink-NSC entity would be "playing 'catch-up'" in the router market that was dominated by other companies who "already have an established and growing position." n43

n42 PTX 50 at S 0000008, S 0000009 (Project Highway).

n43 Id. ($ 6,821,000 from TLYNX + $ 22,467,000 from ELYNX represents approximately forty-five percent of the $ 65,000,000 total revenue forecasted for 1992.

Glover's forecast does not reflect Vitalink's difficulties in providing a router product to its customer base. His forecast, which was broken down by product line, n44 reveals that Vitalink projected that the LYNX products would provide approximately forty-five percent of Vitalink's sales revenues in 1992. n45 Petitioners argue that such a percentage is entirely consistent with Vitalink's position, acknowledging that Vitalink had initially predicted release of a router product in July but noting that no Vitalink document places release of the router later than the end of 1991. They argue that the 18-24 month time period to return to "market leadership" was just that--a time estimate for leadership, not initial product sales. Respondent notes that Vitalink documents admit the need to develop entirely new software only after the report containing the 18-24 month schedule was released. Thus, respondent contends that only its scenarios, which reflect the existence of this delay, are an accurate projection of Vitalink's prospects absent the merger.

n44 PTX 37 at S0001556.

n45 Id. ($ 6,821,000 from TLYNX + $ 22,467,000 from ELYNX represents approximately forty-five percent of the $ 65,000,000 total revenue forecasted for 1992).

I do not find it necessary to resolve the exact date by which Vitalink would have a router product available for its customers. Glover, the author of the forecast upon which Becklean relies, testified that he understood that the ELYNX and TLYNX product development programs were late and that this delay could have affected the two-year forecast. n46 When asked if that concern was reflected in the five-year forecast, Glover explained that in preparing the five-year forecast Vitalink was "assuming availability, if you will, of a router product. It was just going to be supplied by Network Systems vis-a-vis the merger." n47 Petitioners attack Glover's testimony claiming that it "makes no sense," n48 that no one ever instructed Glover to exclude the risk that Vitalink would not be able to develop or obtain router products according to the schedule reflected in the two-year business plan, and that Kidder and Salomon both thought they were receiving a "stand-alone" forecast. Whether this is true or not, does not matter. Glover prepared the forecasts. Glover testified that the forecast did not reflect what he knew to be a fact (that the development of the router was late) and that the forecast assumed the router would be available, if not from Vitalink, then from NSC. Glover, in fact, testified that it was not his forecast, but Dages' three forecasts which were the three most likely scenarios Vitalink would encounter absent the merger although he placed slightly different weights on the three scenarios, believing that Vitalink had a fifty percent chance of experiencing the first scenario (the OEM scenario) and a twenty-five percent chance of experiencing the second and third scenarios. n49 Glover, thus, believed Vitalink had an even lower chance of being able to pursue the OEM scenario (the most favorable scenario of the three) than Dages. Moreover, Glover's forecast inappropriately includes sales revenues from products (other than the LYNX or companion router products) to which Vitalink did not have access. These revenues were expected to be captured through the sales of ENS and SNA products provided by Coral and Netlink, but neither product was available at the time Glover prepared the forecast and petitioners have provided no evidence that the OEM relationships existed and that the products were available at the time of the merger. n50 Glover's forecast may have been helpful to Vitalink as a prediction of what Vitalink might sell in the event that it merged with NSC, obtained router products from a third source or developed a router product internally, as Vitalink recognized the need to pursue one of these paths to make the transition from bridges to routers. The forecast is not, however, an appropriate forecast for a section 262 appraisal proceeding. Because it assumes the existence and sale of products that Vitalink did not then have the ability or right to provide, Glover's report is not an accurate projection of Vitalink on a stand-alone basis prior to the merger.

n47 Tr 216-17.

n48 Petitioners' Post-Trial Reply Br. at 13.

n49 Tr. 223.

n50 Id. at 214-15.

Petitioners, relying on Cede & Co. v. Technicolor, n51 argue that even if Glover's report assumed the availability of routers from another source, that Glover's forecast is nonetheless the proper forecast upon which to base an appraisal because it reflects the assumptions under which Vitalink was operating immediately prior to the merger. Petitioners assert that Vitalink's plan to sell routers is similar to Technicolor's assumption that it would proceed with the "Perelman plan" to sell certain assets of Technicolor and is, therefore, according to Cede & Co. v. Technicolor, an operating assumption that this Court must include when determining the fair value of petitioners' shares on the date of the merger.

n51 Del. Supr., 684 A.2d 289 (1996).

Focusing on the similarities, petitioners ignore the significant differences between the ability of Technicolor to sell its assets and the ability of Vitalink to sell routers. There were no barriers in the way of Technicolor. What petitioners refer to as the "Perelman plan" was a course of action which "was the operative reality on the date of the merger." n52 The plan involved the sale of certain assets that Technicolor already owned. Vitalink, by contrast, did not own the assets it intended to sell and petitioners have provided no evidence that NSC, owner of just over ninety percent of Vitalink as of the date of the merger was willing or even able, to provide router products. Petitioners, in fact, provide no evidence of any value added by NSC between the date on which it obtained majority control and the date on which petitioners became entitled to appraisal rights. As of the date of the merger, Vitalink did not have an agreement with a third party to supply routers, Vitalink did not have the power to force a third party to provide routers, and Vitalink did not have the ability to provide those products internally. Vitalink' power was limited to the ability to negotiate with others and to continue to seek to overcome its own internal development problems and to produce a competitive router.

n52 Id. at 298.

The risk that Vitalink might not be able to consummate an OEM relationship or that Vitalink might not be able to develop a competitive router product must be, but is not, reflected in the product sales forecast prepared by Glover and relied upon by Becklean. Accordingly, Glover's forecast is not an accurate reflection of the future prospects of Vitalink on the date of the merger. Petitioners argue that Dages' product forecasts are also subject to criticism. First, petitioners contend that Dages unjustifiably pushed back development of router products. Considering the fact that petitioners' time frame for development is reflected in Glover's forecast, and Glover concedes that that time frame assumed away risks of development, I find Dages' time frame for development to be reasonable, especially since Vitalink experienced further developmental setbacks between the time when Glover's forecast was first prepared and the time at which petitioners obtained the right to seek appraisal. Petitioners also criticize Dages for supporting his forecast on external documents and fairly limited contact with Vitalink employees. Yet petitioners' expert, Becklean, did not contact anyone at Vitalink to confirm Glover's report. It appears that Becklean simply assumed that Glover's report was an accurate reflection of Vitalink as of the date of the merger. Because I find otherwise, I reject Becklean's reliance on Glover's report and accept the three product forecasts constructed by Dages because I find that Dages' weighting of these three forecasts accurately reflects the value of Vitalink on July 1.

III. COMPARABLE COMPANY ANALYSIS

The parties' use of different comparable companies to calculate the terminal value accounts for just over forty percent of the dollar difference between the two valuations. The differences in the lists of selected companies largely result from the two different views of the expected profitability and success of Vitalink in 1995--at the end of the cash flow period.

A. Petitioners' Selection

Both parties employed a comparable company analysis to determine Vitalink's terminal value in 1995. A company's terminal value is the estimated value of the company at a date in the future. To determine this value, the parties each selected a list of companies whose current performance they believed would be comparable to Vitalink in 1995. Each party's list of comparable companies was a subset of ten comparable companies selected by Kidder which had divided these ten companies into an "upper tier" and a "lower tier" based on the differences among their sales, earnings before interest and taxes, net income, return on assets and return on equity. As Kidder's report explained, the upper and lower tier groups exhibited "dramatically different valuation multiples" with the disparity between the sets of numbers resulting from "recent financial performance as well as the perception that upper tier companies are well positioned for the future." n53 Becklean's selected comparable companies were Cabletron, cisco, SynOptics and 3Com. Three of these four companies appeared in Kidder's upper tier. Becklean selected these companies because he believed they "were the only publicly traded companies at the time primarily engaged in the design, manufacture and marketing of hardware for use in constructing local and wide area data networks (LANs and WANs)" and that this was "the same market served by Vitalink." n54

n53 RTX 29 at KP 000006.

n54 PTX 4 at 2-3 (Valuation of Vitalink Communications Corporation prepared by William R. Becklean, Nov. 18, 1996).

In his report, Becklean explained that price/earnings (P/E), price/earnings before accounting for interest and taxes (P/EBIT), price/earnings before interest but after taxes (P/EBIAT), and price/earnings before interest, taxes and depreciation (P/EBITD) are ratios commonly used to determine a company's terminal value through comparison to similar companies. Because of Vitalink's large cash position, Becklean did not believe that a P/E ratio would accurately reflect Vitalink's terminal value. Accordingly, he employed each of the above ratios except for P/E.

Dividing each comparable company's market capitalization by its EBIT, EBITD, and EBIAT, Becklean obtained a series of three figures representing that comparable company's "multiples." n55 He then averaged the four companies' results for each multiple to obtain an average EBIT multiple of 11.5, and average EBIAT multiple of 18.7 and an average EBITD multiple of 10.0. Applying these averages to Vitalink's EBIT, EBIAT and EBITD, he obtained three comparable values of Vitalink's terminal value that averaged to $ 240 million.

n55 For example, Becklean determined Cabletron's market capitalization was $ 997.7 million and its EBIT was $ 63.0 million. Therefore, Cabletron's EBIT multiple was 15.8 ($ 997.7/$ 63).

B. Respondent's Selection

Dages performed a similar analysis but based his comparison on Digital Communications Associates, General Datacomm Industries, Network Equipment Technologies, Network Systems, Newbridge Networks, and 3Com. These are the companies appearing in Kidder's lower tier group and are the companies on which Kidder based its May 5, 1991 valuation of Vitalink's future terminal value. n56

n56 PTX 2 at KP000064; Valdez Dep. at 30.

C. Analysis

The difference between Kidder's upper and lower tier multiples was addressed by this Court in In re Vitalink Communications Corporation Shareholders Litigation. n57 The focus of the inquiry at that time was whether Kidder's valuation was reliable information on which Vitalink's Board could judge on May 6, 1991; the fairness of NSC's offer. I concluded that Kidder's exclusion of the upper tier companies from its comparable company analysis was appropriate and that such exclusion made the valuation more reliable than a valuation based on exclusion of both the upper "upper tier" and the lower "lower tier" companies. My reasoning at that time was based on the fact that "Vitalink clearly had become a lower tier company." n58 Petitioners provide no evidence that Vitalink's outlook had improved, rather than continued to decline, between May 6, 1991 and July 1, 1991. Moreover, I find no support for Becklean's conclusion that the upper tier companies were more closely comparable to Vitalink than the remaining companies on Kidder's list. n59 Accordingly, I find no reason to conclude that Vitalink or the comparable companies had changed sufficiently to warrant the selection of Becklean's rather than Kidder's/Dages' selection of comparable companies.

n57 Del. Ch., 1991 Del. Ch. LEXIS 195, Consol. C.A. No. 12085, Chandler, V.C. (Nov. 8, 1991).

n58 Id. at *28-29.

n59 See Valdez Dep. at 14-15.

IV. VITALINK'S TAX RATE

The final difference between the two valuations is the selection of Vitalink's tax rate. This difference accounts for just under ten percent of the difference between the two valuations. An adjustment to the tax rate is the only adjustment Becklean made to Glover's forecast. Becklean adjusted the 20.8 to 28 percent tax rates contained in Glover's forecast to reflect the fact that tax-free investments represented thirty-five percent of Vitalink's investment portfolio. Thus, assuming that Vitalink would maintain the same percentage of tax-free investments, Becklean adjusted Glover's forecast to reflect effective tax rates of 30.9 to 34.1 percent. n60

n60 Tr. 89-90, PTX 4 Ex. 1.

Dages also adjusted upward the tax rates in Glover's report. Noting that Vitalink's most recent annual report listed a forty-percent tax rate for 1988 to 1990, Dages applied that rate across the five-year time period 1991 to 1995.

I find that the appropriate tax rate is Dages' tax rate of forty percent, which is Vitalink's tax rate for the previous three years. In addition, Dages' forty-percent tax rate is similar to the tax rates used in the analyses of Kidder and Salomon.

V. POST-MERGER INTEREST RATE

In addition to the differences between the two estimates of value, the parties differ as to 1) the proper method of calculating the rate at which interest should accrue on the fair value of petitioners' shares from the date of the merger to the date of the payment and 2) whether the awarded interest should be simple or compound. These are issues with which this Court is most familiar. n61

n61 Kleinwort Benson Ltd, Del. Ch., C.A. No. 11107; Wacht v Continental Hosts, Ltd., Del. Ch., C.A. No. 7954, 1994 Del. Ch. LEXIS 216, Chandler, V.C. (Dec. 23, 1994); Chang's Holdings v. No. 8080, Hartnett, V.C. (Dec. 11), aff'd, Del. Supr., 607 A.2d 1213 (1990); Harris v. Rapid-American Corp., Del. Ch., C.A. No. 6462, 1990 Del. Ch. LEXIS 166, Chandler, V.C. (Oct. 2, 1990), aff'd in part, rev'd in part on other grounds, Del. Supr., 603 A.2d 796 (1992); Neal v. Alabama By-Products Corp., Del. Ch., C.A. No. 8282, 1990 Del. Ch. LEXIS 127, Chandler, V.C., (Aug. 1, 1990), aff'd, Del. Supr., 588 A.2d 255 (1991); Pinson v. Campbell-Taggart, Inc., Del. Ch., C.A. No. 7499, 1989 Del. Ch. LEXIS 50, Jacobs, V.C. (Feb. 28, 1989).

An award of interest is discretionary but "the general rule is that an award of interest is routinely made unless the petitioner brought the action in bad faith." n62 Each party bears the burden of proving an appropriate rate under the circumstances. n63 There is no specific formula used to establish an appropriate rate of interest. n64 When the parties fail to develop a sufficient record, the legal rate of interest may be appropriate. Eight Del. C. § 262(h) provides that "the Court may consider all relevant factors, including the rate of interest which the surviving or resulting corporation would have had to pay to borrow money during the pendency of the proceeding." Furthermore, pursuant to section 262(i), the award of interest "may be simple or compound, as the Court may direct." n65

n62 Cooper, Del. Ch., C.A. No. 7244, at 26.

n63 Pinson, Del. Ch., C.A. No. 7499, at 17 ("In an appraisal action, each side has the burden of proving its respective valuation position. No presumption, favorable or unfavorable, attaches to either side's valuation, including the actual merger price.").

n64 Chang's Holdings, Del. Ch., C.A. No. 10856, at 1-2; Charlip v. Lear Siegler, Inc., Del. Ch., C.A. No. 5178, 1985 Del. Ch. LEXIS 455, *5-6, Walsh, V.C. (July 2, 1985); Pinson, Del. Ch., C.A No. 7499, at 55.

n65 See also Rapid-American Corp., 603 A.2d at 808 "§ 262(i) clearly gives the trial court absolute discretion to determine the form of interest it will award in a statutory appraisal action.").

An award of interest serves two purposes. First, an award of interest recognizes that petitioners, by electing to pursue appraisal rather than accepting the amount offered in the merger, have been denied the use of the fair value of their shares. n66 Second, an award of interest recognizes that the corporation has received a benefit from the use of the fair value of petitioners' shares during the pendency of the proceeding. n67 Neither purpose is intended to reflect culpability on behalf of either party. This Court, recognizing that a single rate may not perfectly reflect both purposes, has frequently considered two rates: one reflecting the rate necessary to compensate petitioners for the loss of the use of their funds and one reflecting the benefit obtained by the corporation. n68 While the decision to enact

a short-form merger, as well as the decision to seek appraisal, are statutory rights, which are not accompanied by presumptions of wrongdoing, n69 there may be times when the actions of one party cause a delay in the appraisal proceedings and place an unfair burden on the opposing party. Any such burden may be recognized by weighting the compensatory and restitutionary rates to reflect the extent to which each party contributed to a delay, if any, in the proceedings. Petitioners, noting that one purpose of an award of interest is to compensate the dissenting or cashed-out shareholders for the loss of the use of their money, argue that the only way in which petitioner Grimes will be compensated for the loss of the use of his funds is for this Court to award a rate of interest equal to the rate of return on Grimes' investments. n70 In the alternative, petitioners suggest that interest be awarded at the rate of 20.83%, which is the rate at which the parties have agreed to discount Vitalink's future cash flows back to the date of the merger. In either case, petitioners seek interest compounded monthly.

n66 Chang's Holdings, Del. Ch., C.A. No. 10856, at 2.

n67 Kleinwort Benson Ltd., Del. Ch., C.A. No. 11107, at 23; Chang's Holdings, Del. Ch., C.A. No. 10856, at 2; Cede & Co. v. Technicolor, Inc., Del. Ch., C.A. No. 7129, 1990 Del. Ch. LEXIS 259, *109, Allen, C. (Oct. 19, 1990), rev'd in part on other grounds, Del. Supr., 634 A.2d 345 (1990). Prior to the 1981 amendment of the appraisal statute, this Court frequently recognized only the first of these purposes. See, e.g., Lebman v. National Union Elec. Corp., Del. Ch., 414 A.2d 824, 829 (1980); Universal City Studios, Inc. v. Francis I. duPont & Co., 334 A.2d 216 (1975). The 1981 amendment, which specifically invited this Court to consider the corporation's cost of borrowing, recognizes the second purpose. See Chang's Holdings, Del. Ch., C.A. No. 10856, at 2-3; Cede & Co. v. Technicolor; Inc., Del. Ch, C.A. No. 7129, at 81, Allen, C. (Oct. 19, 1990), rev'd in part on other grounds, Del. Supr., 634 A.2d 345 (1990). But see Rapid-American Corp., 603 A.2d at 809 (Court addresses only the first factor).

n68 See, e.g., Kleinwort Benson Ltd, Del. Ch., C.A. No. 11107; Wacht, Del. Ch., C.A. No. 7954; Chang's Holdings, Del. Ch., C.A. No. 10856; Cooper, Del. Ch., C.A. No. 7244; Salomon Brothers Inc., C.A. No. 10054.

n69 Rapid-American Corp., Del. Supr., 603 A.2d at 808 (1992) ("There is no punitive aspect of an appraisal proceeding.").

n70 For reasons explained below, evidence of Grimes' investment returns was excluded at trial.

Respondent offers two sets of interest rate calculations. The first, a slight modification on the prudent investor rate adopted by this Court in Chang's Holdings, reflects a compensatory goal. The second is a rather elaborate calculation of the benefit that NSC and respondent obtained from the use of petitioners' funds during the pendency of this proceeding. Asserting that neither party has unjustly contributed to the delay in these proceedings, respondent suggests that the Court weight the two rates equally. Respondent's calculations support a request of 6.5% simple interest.

A. The Appropriate Interest Rate

Neither petitioners' nor respondent's calculations provide reliable estimates of the appropriate rate of interest. Petitioners' interest rate arguments focus on the compensatory principle. They argue that only a rate based on actual investment returns or the discount rate accepted by both parties would adequately compensate petitioners for the loss of the use of their funds. Awarding interest based on investment returns, according to petitioners, "reduces the corporation's incentive to delay the litigation" and supports

the "long standing principle of Delaware tort law that the defendant takes the plaintiff as he finds him." n71 Thus, petitioners argue that because Grimes was "involuntarily" removed from Vitalink and because the only way Grimes could continue to invest in similar companies with the funds he had invested in Vitalink was to accept the "meager amounts" offered in the merger, he should be compensated for the loss of the use of his funds at the same rate of return he achieved by investing in similar high-risk, high-return companies.

n71 Petitioners' Opening Post-Trial Br. at 32-33.

Petitioners fail to recognize that an appraisal proceeding is not akin to an action in tort. n72 The decision to enact a short-form merger is not tortious conduct Allegations of wrongdoing associated with the decision to enact the merger such as breaches of fiduciary duty may be asserted in an action for damages. They will not be recognized here. Furthermore, petitioners' election to exercise their statutory right to reject the merger amount and to pursue appraisal does not shift to the corporation all responsibility for losses they may incur as a result of their inability to use the funds retained by the corporation. Petitioners could have mitigated their losses and obtained perfect compensation for the loss of the use of their funds by borrowing the fair value of their shares. Respondent correctly notes that this Court has repeatedly rejected the use of a petitioner's investment rate of return (as a rate reflective of the compensatory principle) in favor of an objective standard. n73 Evidence of petitioner Grimes' specific investment returns is irrelevant and was excluded at trial. In the alternative, petitioners seek a rate of interest based on the rate selected by the parties to discount Vitalink's future cash flows. Petitioners have not explained how this rate, which the parties have agreed to use to discount Vitalink's future cash flows, reflects either petitioners' loss of the use of their funds or respondent's benefit obtained from the use of petitioners' funds. Thus, I find that neither of petitioners' proposed rates are reflective of a rate that would compensate them for the loss of the use of their funds or force the corporation to disgorge the benefits obtained from the use of their funds.

n72 Rapid-American Corp., 603 A.2d at 808 (1992) ("the purpose of an appraisal proceeding is not to punish the respondent corporation.").

n73 See, e.g., Chang's Holdings, Del. Ch., C.A. No. 10856, at 9.

Respondent purports to provide rates based on the principles expounded in Chang's Holdings. Respondent calculated the average cost of its (or NSC's) debt for each year since July 1991 by first determining the 1) annual amount of cash and short-term investments and 2) annual long-term debt. Respondent then determined, for each year, three different types of interest rates. The first rate reflected the average rate on available short-term investments. The second rate reflected the average rate paid on existing long-term debt. The final type of rate provides two figures for available rates on contractual commitments. For each year, respondent then selected one of the four rates as the rate most reflective of the cost of debt.

For several reasons I cannot conclude that respondent's proffered data on the cost of borrowing is accurate--as a reflection of the cost of borrowing or the cost of debt. n74 First, respondent has failed to explain adequately why some figures are actual rates and some rates are only estimates of rates available. Second, neither Dages' report, nor the briefs, nor trial testimony reveals the actual types of short-term investments held by respondent (or NSC) or the sources of the figures. n75 Third, the report fails to provide interest rates for long-term debt in 1991, 1992, 1993 or 1994. Fourth, there is no

indication of what percentage of debt was obtained pursuant to the contractual obligations. Depending on the method used to select the representative yearly rate, these omissions might not affect the result. In this case, however, respondent's method appears to have little justification. For example, any year in which respondent (or NSC) had more than $ 100,000,000 in cash and short-term investments, the selected yearly rate was not that rate which was obtained on short-term investments, but that rate at which further short-term funds allegedly could be obtained. This use of the rate required to obtain further funds rather than the return it actually achieved on its own investments, implicitly acknowledges that petitioners should not bear the risk of respondent's particular investments and that respondent's benefit may be accurately measured by its cost of obtaining further funds. There is no evidence, however, that the short-term rate provided was the rate available to respondent or NSC, rather than a blend of the rates offered on commercial paper and treasury bills. Moreover, according to respondent's methodology, for years when NSC or respondent did not have over $ 100,000,000 in cash and short-term investments, the selected rate would have been the actual rate of long-term debt, except that rate was unavailable for those years, so respondent selected the higher of the two contractual rates. I fail to understand why, when respondent or NSC had more than $ 100,000,000 in cash and short-term investments that the benefit received from the use of petitioners' funds is most appropriately reflected by the rate reflecting the cost of additional short-term funds. Why, for example, is the benefit best reflected by the "available" short-term rate for 1995, rather than the long-term "actual" rate it paid on debt when for that year respondent had $ 264,502,000 in cash and short-term investments and $ 449,222,000 in long-term debt? n76 Vitalink could have used some of its short-term investments to pay down its long-term debt. The fact that it did not may indicate that its business required the liquidity provided by the short-term investments and that further short-term funds were not available at a rate less than that available on its long-term loans. In any case, the cost of short-term debt is not an appropriate measure of the benefit obtained from the use of petitioners' funds.

n74 If the purpose of a restitutionary rate is to force the corporation to forgo the benefits obtained from the use of petitioners' funds, then perhaps the corporation's cost of debt is not the only factor this Court should consider. Respondent, like other publicly held corporations, has two sources of funds: equity and debt. Debt, backed by security and a superior claim on the firm's assets, is obtainable at a lower cost than equity, which is unsecured and carries only a residual claim on the firm's assets. But both sources provide funds for the corporation's use. Thus, the benefit obtained from the use of additional funds may be more appropriately reflected through a weighted average of the two sources.

n75 At trial, Dages revealed that the long-debt figures were obtained from Vitalink's annual forms 10 Q.

n76 See Ryan v. Tad's Enterprises; Inc., Del. Ch., 709 A.2d 682, 705, Jacobs, V.C. (1996) (responding to argument that cash-rich corporation would not need to borrow and thus derived no benefit from holding plaintiffs' funds by noting that even a cash-rich corporation derived benefit from the use of funds at no cost and concluding that the benefit should therefore, "be considered in determining a fair rate of interest during the period that the defendants had the cost-free use of plaintiffs' funds.").

With respect to a rate that would compensate petitioners for the loss of the use of their funds respondent, on one hand, argues for investments of the type accepted by this Court in Chang's Holdings. n77 On the other hand, respondent argues that petitioners, once electing to perfect their appraisal rights, assume the status of debtors to the corporation, not investors. Petitioners object to the use of a rate based on the prudent investor standard, arguing that the expected risk and return of their

investment in Vitalink is not reflected in the investments which make up the prudent investor standard. I agree that an investment in Vitalink is not likely to be considered by any Court to be an accepted investment under the prudent investor standard. Although I am sympathetic to petitioners' claim that their investment in Vitalink demonstrates that the prudent investor rate would not reflect the risk and return of their investments, respondent is correct in its assertion that petitioners' decision to reject the merger and to seek appraisal removes them from the status of shareholder and places them in the position of a creditor to the corporation. Their former status as shareholders is not relevant to the determination of interest. n78 Yet a compensatory rate of interest based on petitioners' position as a creditor must reflect the fact that petitioners are involuntary creditors to a specific corporation with its own unique risk of defaulting on the loan. Thus, the petitioners are correct when they assert that the particular risk of the party holding their funds should be considered in the selection of the proper compensatory rate. But, because I believe that petitioners' election to exercise their statutory right to reject the merger amount and to pursue appraisal does not shift to the corporation all responsibility for losses they may incur as a result of their inability to use the funds retained by the corporation, and because petitioners could have mitigated their losses and obtained perfect compensation for the loss of the use of their funds by borrowing the fair value of their shares, I believe the proper way to reflect the specific risk borne by the petitioners would be to adjust the petitioners' cost of borrowing funds to reflect the risk that, by the time the appraisal proceeding had concluded, the surviving corporation would be unable to repay the retained funds. This risk is, perhaps, best reflected by the surviving corporation's cost of borrowing for similarly secured funds. n79

n77 Respondent's selected investments are similar to those employed by this Court in Chang's Holdings in all but two of the six categories.

n78 See Southern Production Co., Inc. v. Sabath, Del. Supr., 32 Del. Ch. 497, 87 A.2d 128, 134 (1952) (The status of a petitioner who has perfected a right to appraisal "is primarily that of a monetary claimant against the consolidated or surviving corporation, and is more nearly analogous to that of a creditor than to that of a stockholder.")

n79 Cf. In the Matter of Oil Spill by the Amoco Cadiz off the Coast of France on March 16, 1978, 954 F.2d 1279, 1332 (7th Cir. 1992) (The Court noted that an involuntary tort creditor faces a risk that the defendant will not be able to meet its obligations. "The defendant may go out of business (or encounter less serious reverses), or hide assets, during the litigation. Any market interest rate reflects three things: the social return on investment (that is the amount necessary to bid money away from other productive uses), the expected change in the value of money during the term of the loan (i.e., anticipated inflation), and the risk of nonpayment. The best estimate of these three variables is the amount the defendant must pay for money, which reflects variables specific to that entity.").

Exactly which of respondent's several "available" and "actual" rates would serve this purpose is unclear. The rates offered by respondent range from 3.2% to 5.8% on short-term funds, 7.7% to 7.8% for long-term loans (although the rates for 1991 through 1994 are missing), 6.0% to 8.8% for contractual loans based on the prime rate and 3.3% to 6.5% for contractual rates based on the ninety-day LIBOR. I decline to consider the proffered short-term rates because respondent has not shown that these rates, which were based on a mixture of commercial paper, treasury bills, and treasury notes, were available to respondent. Certainly the rate that respondent would have had to pay to attract funds would have been higher than the rate available on treasury bills. Likewise, I decline to consider the contractual rates as

respondent has failed to explain whether these were rates at which it loaned money to third parties or rates at which it had the right to obtain funds from third parties. Thus, the only potentially helpful interest rate information is respondent's cost of long-term debt. Alas, that provides little guidance. The rate only represents the borrowing rate of respondent Storage Technology from 1995 to September 1996. There is no information documenting NSC's cost of debt prior to that time and thus no way in which to determine a rate reflective of the rate that creditors would have charged NSC from 1991 to 1994 to reflect the risk that NSC would be unable to repay the fair value of petitioners' shares. Concluding that neither side has provided evidence of the proper rate of interest, I award interest at the legal rate calculated as described below. n80

n80 Cf. Cooper, Del. Ch., C.A. No. 7244 ("when, as here, none of the parties establishes a value that is persuasive, the Court must make a determination based upon its own analysis."). See also Chang's Holdings, Del. Ch., C.A. No. 10856, at 6 ("The legal interest rate serves as a useful default rate when the parties have inadequately developed the record on the issue.").

B. Simple or Compound Interest?

Prior to the 1987 amendment of section 262(i), this Court held that it did not have authority to award compound interest. n81 The 1987 amendments, however, provided that "interest may be simple or compound, as the Court may direct." n82 Our Supreme Court has repeatedly confirmed that either method is within this Court's discretion. n83 Despite the clear authority to award simple or compound since 1987, this Court has elected to award compound interest only once. n84 The reasons for continuing to award simple interest since 1987 have not been fully explained. n85 Nor was the reason for awarding compound. n86 As our Supreme Court noted in 1992, "no Delaware case has ever explicitly considered the factors which determine whether a court should award either compound or simple interest." n87 To my knowledge, this Court has yet to formulate a list of factors to consider when determining whether an award of interest should be simple or compound. To be frank, I am not sure what factors might appear on such a list. Factors affecting the fair value of petitioners' shares are best addressed in the determination of the fair value. Factors affecting the ability of the Court to provide full compensation to the petitioners for the loss of the use of their funds and to ensure that the corporation does not receive unjust benefit from the use of petitioners' funds may be addressed while setting the interest rate. The extent to which one party may be relatively more responsible for a delay in the proceedings may be addressed by balancing the two rates to relieve some of the burden imposed by the other party. Regardless of the amount of value established as the fair value, the magnitude of the particular rate which best serves the compensatory and restitutionary purposes, or the extent to which one party may have delayed the proceeding, it appears to me that, in this case, only an award of compound interest may truly serve to compensate the petitioners for the loss of the use of their funds and to prevent the corporation from retaining unjust benefits from the use of petitioners' funds. n88 As Becklean explained, compound interest is "the standard form of interest in the financial market." n89 Neither Becklean nor Dages could provide an example of an investment that would not provide for compound interest. n90 Certainly respondent has earned compound interest on its investments during the pendency of this proceeding and certainly petitioners would have had to pay compound interest to borrow funds during the pendency of the proceeding. Accordingly, I am unable to conclude that an award of simple interest will adequately compensate the petitioners for the loss of the use of their funds or prevent the corporation from retaining unjust benefits from the use of petitioners' funds. n91

n87 Rapid-American Corp., 603 A.2d at 808.

n88 See Saulpaugh v. Monroe Community Hospital, 4 F.3d 134 (2nd Cir. 1993) (holding that district court's failure to award compound interest was an abuse of discretion because compound interest was necessary to make plaintiff whole); In re Valuation of Common Stock of McLoon Oil Co., Me., 565 A.2d 997 (1989) (referee's failure to award compound interest on fair value of appraised shares reversed as legal error because compounding interest was "the only fair and equitable way to compensate the Dissenters for the lost use of their funds").

n89 Tr. 111.

n90 Id.; Id. at 389.

n91 See Bogosian v. Woloohojian Realty Corp., 1997 WL 431885 (D.R.I.) (finding that the case presented "a situation in which it might fairly be said that failing to award compound interest would not fully compensate the plaintiff, and would therefore amount to an abuse of the court's discretion."); In re Valuation of Common Stock of McLoon Oil Co., Me., 565 A.2d at 1007 (noting that because compound interest is available to the dissenting shareholders, it may be more profitable for shareholders to invest the consideration initially offered rather than to invoke the lengthy appraisal process).

C. Compounding Interval

Petitioners have requested that interest be compounded monthly. The selection of the appropriate compounding interval, like the determination of the proper interest rate and the decision to award simple or compound interest, should be guided by the dual purposes of providing compensation to the dissenting shareholder and compelling the corporation to disgorge any unjustly retained benefit from the use of petitioners' funds. The compounding interval should, thus, reflect the interval available to the petitioners had they the use of their funds as well as, if possible, the interval actually received by the corporation. Neither side has provided evidence of such intervals. I find that the dual purposes of

compensation and restitution may only be served by a compounding interval at least as frequent as one month. n92 Petitioners, therefore, are entitled to the legal rate of interest, compounded monthly, on the fair value of their shares ($ 8.50 per share) from July 1, 1991, to the date of payment.

n92 Marfia v. T.C. Ziraat Bankasi, 968 F. Supp. 152, 153 (S.D.N.Y. 1997) (monthly compounding); Andrew Corp. v. Gabriel Electronics, Inc., 785 F. Supp. 1041, 1055 (D. Me. 1992) (monthly compounding); New Orleans Elec. Pension Fund v. Newman, 784 F. Supp. 1233, 1238 (E.D.La. 1992) (monthly compounding); T.A. Pelsue Co. v. Grand Enterprises, Inc., 782 F. Supp. 1476, 1502 (D.Colo. 1991) (monthly compounding). But see also Uniroyal, Inc. v. Rudkin-Wiley Corp., 721 F. Supp. 28, 29 (E.D.N.Y. 1989) ("Daily compounding more accurately reflects modern banking and investment practices, and thereby satisfies more fully" the goal of proving full compensation for patent infringement."); Trans-World Mfg. Corp. v. Al Nyman & Sons, 633 F. Supp. 1047, 1057 (D. Del. 1986) (Daily compounding serves goal of providing "adequate compensation" for plaintiff who had been deprived of interest that could have been earned had plaintiff received payment promptly.).

I ask counsel to confer and to agree upon a form of Order implementing this decision.
