UNITED STATES COURT OF APPEALS

FOR THE SIXTH CIRCUIT

Walter L. Gross, Jr. and Barbara H. Gross (99-2239); Calvin C. Linnemann and Patricia G. Linnemann (99-2257), Petitioners-Appellants, v. Commissioner of Internal Revenue, Respondent-Appellee.	Nos. 99-2239/2257

On Appeal from the United States Tax Court.

Nos. 97-04460; 97-04469--James S. Halpern,

Tax Court Judge.

Argued: October 27, 2000

Decided and Filed: November 19, 2001

Before: DAUGHTREY and CLAY, Circuit Judges; COHN, Senior District Judge.(*)

COUNSEL

ARGUED: Gerald J. Rapien, TAFT, STETTINIUS & HOLLISTER, Cincinnati, Ohio, for Appellants. David I. Pincus, UNITED STATES DEPARTMENT OF JUSTICE, APPELLATE SECTION, TAX DIVISION, Washington, D.C., for Appellee. ON BRIEF: Gerald J. Rapien, James J. Ryan, TAFT, STETTINIUS & HOLLISTER, Cincinnati, Ohio, for Appellants. David I. Pincus, A. Wray Muoio, UNITED STATES DEPARTMENT OF JUSTICE, APPELLATE SECTION, TAX DIVISION, Washington, D.C., for Appellee.

CLAY, J., announced the judgment of the court and delivered an opinion, in which DAUGHTREY, J., and COHN, D. J., concurred except as to Part II.B.1. COHN, D. J. (pp. 31-39), delivered a separate opinion, in which DAUGHTREY, J. concurred, which constitutes the opinion of the court on the issue addressed in Part II.B.1.

OPINION

CLAY, Circuit Judge. Taxpayers, Walter L. and Barbara H. Gross, Jr., along with Calvin C. and Patricia G. Linnemann, appeal from the order of the United States Tax Court valuing certain gifts of corporate stock at $10,910 per share. To the extent that the valuation was based upon the use of a contested valuation approach, I would find that the tax court's decision was clearly erroneous; and would therefore reverse the tax court's decision and remand for further proceedings. However, inasmuch as Judge Daughtrey and Judge Cohn find that the tax court did not clearly err in concluding that it was appropriate not to tax affect the stock in order to determine its fair market value, the tax court's decision is AFFIRMED.

FACTS

The common question presented by this consolidated appeal is the fair market value of certain shares of corporate stock transferred as gifts by Taxpayers Walter L. Gross, Jr., and Patricia G. Linnemann to their respective children. Taxpayers Barbara H. Gross and Calvin C. Linnemann, the wife and husband of the aforementioned taxpayers, are parties because they consented to having the gifts made by their respective spouses as also having been made one-half by them for federal gift tax purposes. The shares in question are shares of stock of Pepsi-Cola Bottlers, Inc. ("G&J"), an Ohio corporation that bottles and distributes various beverages in Ohio and Kentucky. G&J's business operations can be traced back to a partnership formed in the 1920s between two married couples, Isaac N. and Esther M. Jarson and Walter L. and Nell R. Gross. This business was incorporated in 1969. By the time the questioned gifts were made in 1992, the founders of the corporation were deceased and ownership of G&J had devolved to their relatives: the Gross family group (which included members of the Linnemann family) and the Jarson family group. Directly and through voting trusts, each family group owned 50% of the outstanding shares of stock of G&J.

By a written agreement dated November 1, 1982,G&J's shareholders elected to be taxed as a small business corporation ("S corporation"), pursuant to Subchapter S of the Internal Revenue Code, I.R.C. §§ 1361-1379, for at least 10 years. This subchapter was enacted to eliminate the tax disadvantages that might dissuade small businesses from adopting the corporate form and to lessen the tax burden on such businesses. The statute accomplishes these goals by means of a pass-through system under which corporate income, losses, deductions, and credits are attributed to individual shareholders in a manner akin to the tax treatment of partnerships. See I.R.C. §§ 1366-1368; Bufferd v. Commissioner, 506 U.S. 523, 524-25 (1993). In practical terms, this means that the corporation pays no state or federal income tax. See I.R.C. §§ 1361-1363; Ohio Rev. Code Ann. § 5733.09(B) (Banks-Baldwin 1995). Rather, the S corporation passes its income through to its shareholders, who report their pro rata shares of that income on their individual tax returns. See I.R.C. § 1366. G&J maintained S corporation status through July 31, 1992, at which time there were no plans to change its S corporation status.

Also in 1982, the members of the Gross/Linnemann family group entered into an agreement restricting the transferability of their G&J stock. This restrictive agreement permitted certain transfers within the Gross/Linnemann family group, but provided that if other transfers were attempted, the G&J stock would be purchased by the family group at book value.(1) More importantly, the agreement also restricted any transfers that would jeopardize G&J's S corporation status. This agreement was still in effect as of July 31, 1992.

At that time, G&J was the third largest independent bottler of Pepsi-Cola products. G&J had an exclusive franchise agreement to distribute these products within several geographic territories. These products, including the brand names Seven-Up, Dr. Pepper, and five variations of Pepsi-Cola, were distributed to over 24,000 customers including wholesale and retail outlets. G&J's operational infrastructure included plants, warehouses, over 800 vehicles, and over 11,000 soft drink vending machines. From 1988 to 1992, G&J enjoyed steady increases in its operational income, total income, and distribution to shareholders. In addition, G&J's shareholder distributions nearly totaled the company's entire income for each of these years.

On July 31, 1992 Walter Gross gave each of his three children 124.5 shares of G&J stock, and Patricia Linnemann gave each of her two children 187.5 shares of G&J stock. The gifts to each child represented less than one percent of the corporation's outstanding shares. Walter Gross and his wife Barbara each reported one-half of the asserted value of the gifts to their children on a timely filed Form 709, United States Gift (and Generation Skipping Transfer) Tax Return ("Form 709"). Patricia Linnemann and her husband Calvin did the same with respect to the gifts to their children. In reporting these gifts ro the IRS, the Grosses and Linnemanns ("Taxpayers") relied on an appraisal report prepared by Business Valuations, Inc. This report, dated July 22, 1992, valued the G&J stock at $5,680 per share as of May 31, 1992. Based upon this report, the Grosses reported a total gift value of $2,121,480 and the Linnemanns reported a total value of $2,130,000. Upon receiving the report of these gifts, the Commissioner of Internal Revenue ("Commissioner") issued notices of deficiency to Taxpayers based on his valuation of the stock at a much higher amount, $11, 738.00. The Commissioner later agreed that the shares had a value of no more than $10,910 as of the gift date. Taxpayers challenged the Commissioner's determinations in the United States Tax Court.

At trial, both parties relied on expert testimony to establish the value of the shares of G&J stock. Taxpayers relied upon the Testimony of David O. McCoy and Charles A. Wilhoite. McCoy, a business appraiser, prepared a report valuing the common shares of G&J. He was accepted as an expert witness and his report was accepted into evidence as direct testimony. McCoy also prepared an additional report rebutting the testimony of the Commissioner's lone expert witness. Wilhoite is an appraiser and valuation expert who prepared a second rebuttal report in response to the Commissioner's expert. Wilhoite was accepted as an expert on appraisal and valuation methodology and his report was also accepted into evidence as his direct testimony. The Commissioner called Mukesh Bajaj, Ph.D., as an appraisal expert. Bajaj presented two reports, one valuing minority interests in G&J as of the gift date, and one in rebuttal to McCoy's first report. Bajaj was accepted as an expert witness and his reports were accepted into evidence as his direct testimony.

The experts on either side determined the value of the G&J stock using "income approaches" in which a company's fair market value is determined by calculating the present value of its projected future income. One approach used by both parties was the "discounted future cash flow" approach. (2)Experts on both sides also agreed that the value of the shares should be discounted to reflect the fact that, as shares of a closely held S corporation, they are not readily marketable. But two basic disagreements distinguished the experts' calculations of the value of G&J stock.

The first disagreement was whether, under the discounted future cash flow approach, to reduce the corporation's projected future income by deducting hypothetical corporate income taxes even though as an S corporation G&J did not pay income taxes. This process is known as "tax affecting." McCoy testified that in 1992 various professional associations published standards governing the conduct of professional business appraisers and that professional appraisers were ethically bound to follow those standards, citing a publication entitled the Uniform Standards of Professional Appraisal Practice ("USPAP"). This document requires appraisers to be aware of, understand, and correctly employ recognized methods and techniques necessary to produce a credible appraisal (the "standards rule"). McCoy testified that in order to comply with the standards rule, and produce a credible appraisal, it was necessary for professional appraisers to "tax affect" the earnings of an S corporation. In order to "tax affect" G&J's stock, McCoy introduced a fictitious tax burden, equal to an assumed corporate tax of 40%, which he then applied to reduce the estimated future income of G&J. Both McCoy and Wilhoite testified that despite some growing controversy surrounding the issue, use of a 40% tax affect was the accepted practice at the time Taxpayers performed the transaction in question.

Bajaj also relied on the discounted free flow cash method to value the G&J stock. But, although he was informed of G&J's S corporation status, Bajaj concluded that using a 0% tax rate was appropriate to determine the future earnings of G&J that would be available for distribution. Thus, in essence, Bajaj did not tax affect the stock at all.

The second disagreement between the experts dealt with the amount of the lack of marketability discount. McCoy examined several studies discussing the lack of marketability inherent in closely held and restricted securities such as G&J stock. He testified that his research reflected that an average lack of marketability discount for shares that would eventually become freely tradable was "30%+" and ultimately found that a discount rate of 35% was required to fully compensate an owner for the lack of marketability of those shares. On behalf of the Commissioner , Bajaj also reviewed the commonly cited published studies examining lack of marketability discounts, dividing them into two groups: those that

analyzed sales of restricted stock by firms that also had publicly traded shares, and those that compared the share prices used in several successful initial public offerings ("IPO"s). According to Bajaj, the first category of studies revealed that median discounts ranged from 10%-40%. But he determined that only about 10%-15% of these discounts could be attributed to a lack of marketability. Bajaj then concluded that the studies regarding the second category of firms was not useful in evaluating discount levels for two reasons. First, he indicated that many of the pre-IPO transactions did not occur at fair market values. Second, Bajaj surmised that referring only to discounts of companies that conducted successful IPOs would create a biased sample that could artificially inflate the discount rate. In the end, Bajaj relied upon his own study in which he conducted an empirical analysis of marketability discounts, considering such factors as G&J's generous dividend policy and its restrictive transfer agreements, the latter of which he considered to be a greater marketability restriction. This study considered 157 transactions that took place from 1980 through 1996, 75 of which took place before July 31, 1992, and 79 of which took place after that date. He concluded that the highest predicted discount for G&J was 12.84%. Based on this study as well as the other studies relied upon by McCoy, Bajaj determined that the lack of marketability discount for G&J shares should be 13%. But when considering other factors unique to G&J, such as the restrictive agreements and the fact that the corporation paid out most of its earnings to its shareholders, he came to a final figure of a 25% lack of marketability discount.

Taxpayers filed a motion in limine to exclude Bajaj's testimony regarding both tax affecting and the lack of marketability discount as being based upon unproven methodology. The tax court denied these motions and admitted Bajaj's testimony and reports into evidence. After hearing evidence presented by the experts, the tax court determined that the G&J stock should be discounted using a tax affect of 0% and that the lack of marketability discount should be 25%. Using these figures the tax court ultimately determined that the G&J stock should be valued at a rate of $10,910 per share. Taxpayers now appeal from this order. Specifically, they contest (1) the admissibility of expert testimony by the IRS' expert witness based upon methods which taxpayers claim were scientifically unreliable; and (2) the validity of the court's valuation.

I. ADMISSIBILITY OF EVIDENCE

On appeal, Taxpayers allege that the tax court did not follow proper procedures in admitting certain aspects of Bajaj's testimony on behalf of the Commissioner. For the following reasons we hold that the tax court did not abuse its discretion in admitting this testimony.

A.

The tax court's decision whether to admit expert testimony, as well as its decisions regarding how to determine the reliability of that testimony, are reviewed for an abuse of discretion. See Kumho Tire Co. v. Carmichael, 526 U.S. 137, 152 (1999).

B.

Federal Rule of Evidence 702 governs the admissibility of expert testimony. That Rule provides that "[i]f scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, a witness qualified as an expert by knowledge, skill, experience, training, or education, may testify thereto in the form of an opinion or otherwise." Fed. R. Evid. 702. In Daubert v. Merrill Dow Pharmaceuticals, Inc., 509 U.S. 579, 597 (1993), the Supreme

Court held that Rule 702, along with Rule 104(a) (relevance), confers upon trial judges a special obligation to ensure "that an expert's testimony both rests on a reliable foundation and is relevant to the task at hand. Pertinent evidence based on scientifically valid principles will satisfy those demands."(3)

The Daubert Court also suggested several criteria that might assist trial courts in making a preliminary evaluation of expert testimony before admitting it: (1) whether a theory or technique has been or can be tested; (2) whether the technique has been subjected to peer review and publication; (3) the known or potential rate of error; and (4) whether the technique has been accepted by the "relevant scientific community," or "has been able to attract only minimal support within the community." Daubert, 509 U.S. at 593-94. Subsequent decisions have further refined the requirements of Daubert. The Supreme Court has extended Daubert to include any testimony based on "technical" and "other specialized knowledge." See Kumho Tire Co., Ltd., 526 U.S. at 152. We have previously held that the mandates of Daubert and Kumho Tire also apply to decisions of the United States Tax Court. See Conti v. Commissioner, 39 F.3d 658, 662 (6th Cir. 1994).

The Court has stopped short of turning the Daubert test into a straightjacket. Rather, it has insisted that trial courts must enjoy "the same kind of latitude in deciding how to test an expert's reliability, and to decide whether or when special briefing or other proceedings are needed to investigate reliability, as it enjoys when it decides whether or not that expert's relevant testimony is reliable." Kumho Tire Co., Ltd., 526 U.S. at 152. Thus, though helpful, the Daubert factors are not dispositive in every case. Instead, the Supreme Court has instructed trial courts to consider the specific factors identified in Daubert where they are reasonable measures of the reliability of expert testimony. Furthermore, "[w]hether Daubert's specific factors are, or are not, reasonable measures of reliability in a particular case is a matter that the law grants the trial judge broad latitude to determine." Id. at 139. Nonetheless, this call for broad discretion cannot be interpreted as an invitation for the trial judge "to adopt an excessive level of generality in his gate-keeping inquiry." See Black v. Food Lion, 171 F.3d 08, 313 (5th Cir. 1999). With this admonition in mind, we now consider the tax court's basis for accepting Bajaj's testimony in the instant case.

1. Testimony Regarding Tax Affecting G&J's Earnings

The tax court acknowledged that Bajaj's testimony was of a "technical nature" and, therefore, determined that Daubert applied in the instant case. But Taxpayers contend that the court abused its discretion by terminating its reliability review of the expert's testimony regarding tax affecting upon determining that his methodology was appropriate. Bajaj testified that under the discounted cash flow method, considering a hypothetical corporate tax rate of 40% would be improper. Thus, he testified that his valuation of the G&J stock was based upon use of the discounted cash flow approach with a 0% tax affect.

The tax court found that when properly applied, the discounted cash flow method, which was used by both parties, is a reliable tool for financial analysis. Noting that "value is a question of fact," the court found that the "difference in opinions as to value reached by the two expert witnesses, at least to the extent it is attributable to the discounted cash-flow approach, is exclusively the result of differences between them as to the values of certain variables." (J.A. at 186.) Thus, the court concluded that Bajaj used the same discounted cash flow methodology as Taxpayers' experts and his decision not to tax affect G&J's earnings was "not a difference as to methodology." (J.A. at 186). The court determined that

a challenge to Bajaj's approach to tax affecting was "nonsensical" and declined to apply any of the other factors suggested in Daubert, including determining whether Bajaj's method had not been subjected to peer review. (J.A. at 186.)

We disagree with the tax court's characterization of the respective experts' approaches to tax affecting as a mere difference in variables. There was no spectrum of tax percentages from which the court could have selected. Rather, the choice was either a corporate tax rate of 40% or a rate of 0%, the latter meaning no tax affect at all. But while the tax court's analysis was rather cursory, we do not believe that further evaluation was necessary under the circumstances. Taxpayers argue that Bajaj's use of the discounted cash flow analysis without tax affecting is not supported by testing, peer review, publication, or acceptance by the relevant scientific community. To a large extent, Taxpayers' claim that Bajaj's testimony was inadmissible hinges upon the correctness of their assertions that tax affecting was a generally accepted practice under the discounted cash flow method as of July 31, 1992. In this respect, we believe that Taxpayers' Daubert claim is misguided, for they are attacking the correctness of that ultimate valuation more than the reliability of the expert's methods in deriving the value of the shares of stock. The evidence on the record suggested that as of 1992 there was a growing dispute as to the validity of tax affecting the earnings of closely held corporations. In fact, one of Taxpayers' own experts indicated that if charged with the task of valuing the same stock today, he would have to give further consideration to whether he would tax affect the G&J stock. Thus, we do not believe that using a 0% tax affect in calculating the value of stock under a discounted cash flow methodology is scientifically unreliable. For the same reasons we are undeterred by Taxpayers' claim that the use of a 0% tax affect has not been published or submitted for peer review. As the Court recognized in Daubert, "in some instances well-grounded but innovative theories will not have been published. . . . Some propositions, moreover, are too particular, too new, or of too limited interest to be published." Daubert, 509 U.S. at 593 (citation omitted). "The fact of publication (or lack thereof) in a peer reviewed journal thus will be a relevant, though not dispositive, consideration in assessing the scientific validity of a particular technique or methodology on which an opinion is premised." Id.

Although we could imagine challenges to Bajaj's suitability to deliver testimony on what tax affecting approach buyers and sellers would have utilized in 1992, Taxpayers do not assert those claims here. Thus, we believe that further application of the Daubert test was unnecessary as to Bajaj's testimony regarding tax affecting, and the court properly admitted Bajaj's expert testimony on this issue. We note, however, that this finding of admissibility bears no relation to the weight to be given this evidence in determining the value of the shares of G&J stock.

2.Testimony Regarding the Lack of Marketability Discount

Taxpayers also contest the admissibility of Bajaj's testimony indicating that the lack of marketability discount should be 25%. Taxpayers challenge the reliability of what they term the "novel" methodology Bajaj used in calculating this figure and the tax court's failure to fully analyze these methods using the Daubert factors. We disagree with Taxpayers' arguments and instead find that the tax court correctly considered statistics relevant to what a reasonable buyer and seller would have considered as of the valuation date. Bajaj's testimony was based upon his own empirical analysis which included a sample of 157 transactions, 79 of which were announced subsequent to the date on which Taxpayers made the transaction at issue. In their motion in limine Taxpayers claimed that the data used by Bajaj was

unavailable as of the valuation date and that a willing buyer and seller could therefore not have relied upon such data in negotiating a sale price for G&J stock. The tax court rejected this challenge, finding that it is not improper to consider subsequent events that may shed light upon the circumstances that existed as of the valuation date. We have previously held that "subsequent events may only be considered if they were reasonably known on the date of valuation and also that such could be reasonably contemplated on that date." Morris v. Commissioner, 761 F.2d 1195, 1201 (6th Cir. 1985) (citing Estate of Jephson v. Commissioner, 81 T.C. 999, 1002 (1983) (quoting Couzens v. Commissioner, 11 B.T.A. 1040, 1165 (1928)). In Morris we held that the tax court did not abuse its discretion in refusing to permit introduction of evidence concerning the state of development on decedent's property eight years after the valuation date. The tax court has interpreted our holding as a rule of relevance. See Estate of Gilford v. Commissioner, 88 T.C. 38, 53 (1987).(4) Thus, the tax court has considered relevant subsequent events that took place less than one year from the valuation date due to its relevance. See id. Inasmuch as the 79 post-valuation date transactions used in Bajaj's study could have been anticipated, their inclusion in his empirical analysis does not impede the admissibility of his testimony on this issue. Furthermore, the record indicates that Bajaj repeated his analysis using only pre-valuation date data. This re-analysis resulted in an even smaller lack of marketability discount, which would have been less favorable to Taxpayers. Based upon these facts we do not believe that Bajaj's opinion regarding the lack of marketability discount was based upon unsound or irrelevant analysis or data. We therefore hold that the tax court did not abuse its discretion in admitting this testimony.

II. VALUATION OF THE GIFTS

Taxpayers also contend on appeal that even if Bajaj's testimony was admissible, the tax court's ultimate valuation decision was clearly erroneous. Their argument is based upon a challenge to the use of a 0% tax affect and the use of a 25% lack of marketability discount. Although a majority of the factors the tax court used in calculating the valuation amount were proper, I take issue with the court's use of a 0% tax affect and would therefore hold that to the extent the valuation was based upon the use of a 0% tax affect, the court's ultimate finding that the G&J stock was worth $10,190 per share was clearly erroneous. However, Judge Daughtrey and Judge Cohn disagree with me on this point, so that our majority holding is that the tax court's use of the 0% tax affect was proper.

A.

The parties dispute the proper standard of review to be utilized by this Court. Generally, we review the tax court's findings of fact for clear error and its application of law de novo. See Friedman v. Commissioner, 216 F.3d 537, 541 (6th Cir. 2000); Ekman v. Commissioner, 184 F.3d 522, 524 (6th Cir. 1999). The Commissioner contends that the determination of "fair market value" of G&J stock is a question of fact and the tax court's determination may be reversed only if it is clearly erroneous. See Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); Akers v. Commissioner, 798 F.2d 894, 897 (6th Cir. 1986) (both holding that determining the value of a gift is an issue of fact and the tax court's factual findings as to fair market value may be reversed only if the determination is clearly erroneous). Yet the question of whether the tax court used the correct standard to determine the fair market value is a legal issue. See Powers v. Commissioner, 312 U.S. 259, 260 (1941); Razavi v. Commissioner, 74 F.3d 125, 127 (6th Cir. 1996) (holding that the determination of whether the tax court used the correct standard to measure "fair rental value" is a legal issue); Ruehlmann v. Commissioner, 418 F.2d 1302, 1304 (6th Cir. 1969) (holding that the criterion to be applied in determining value is a matter of law). It is

undisputed that for federal gift tax purposes the fair market value is the price at which the stock would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 551 (1973); Heyen v. United States, 945 F.2d 359 (10th Cir. 1991); I.R.C. § 2512. This legal standard has come to be known as the "willing buyer/willing seller" standard. In the case at bar, the tax court clearly cited the correct legal standard (the willing buyer/willing seller standard), which was the same standard advocated by Taxpayers. But Taxpayers allege that the court deviated from this standard by not "tax affecting" the G&J stock and by considering post-valuation date data. They therefore argue that the proper standard of review is de novo because the issue is a mixed question of law and fact. See Razavi, 74 F.3d at 127.

We find that this dispute is not over the proper criteria to be used in determining fair market value, but rather over whether those criteria were properly applied. Essentially, Taxpayers are merely arguing that the tax court erred in its final valuation by failing to tax affect G&J's stock and by finding that the lack of marketability discount should be 25%. These contentions do not challenge the actual standard; rather they reflect a difference in opinion as to the methodologies used to arrive at the valuation amount. "The choice of the appropriate valuation methodology for a particular stock is, in itself, a question of fact." Estate of Newhouse, 94 T.C. at 245 (citing O'Malley v. Ames, 197 F.2d 256, 258 (8th Cir. 1952); Riss v. Commissioner, 56 T.C. 388, 430 (1971), aff'd sub nom. Commissioner v. Transport Mfg. & Equipment Co., 478 F.2d 731 (8th Cir. 1973), aff'd, cause remanded 478 F.2d 1160 (8th Cir. 1973)). Thus, we will review the tax court's valuation decision only for clear error.

A finding is clearly erroneous when, although there is evidence to support it, a review of the entire record leaves the reviewing court with the definite and firm conviction that a mistake has been made. See Commissioner v. Duberstein, 363 U.S. 278, 291 (1959); Faulconer v. Commissioner, 748 F.2d 890, 895 (4th Cir.1984). This standard of review requires that we accord great deference to the values established by the tax court, but it does not render us a mere rubber stamp. See Miami Valley Broad. Corp. v. Commissioner, 594 F.2d 556, 557 (6th Cir. 1979). This Court can only overturn the tax court's decision if it is "left with a definite and firm conviction that a mistake has been committed." Anderson v. Bessemer City, 470 U.S. 564, 573 (1985) (quoting United States v. United States Gypsum Co., 333 U.S. 364, 394095 (1948)). When reviewing for clear error, the court cannot substitute its judgment for that of the tax court but rather must uphold the tax court's account of the evidence if it is plausible in light of the record viewed in its entirety. Id. at 574. "Where there are two permissible views of the evidence, the fact finder's choice between them cannot be clearly erroneous." Id. Thus, where the tax court's findings of fact rest upon credibility determinations, the fact finder's choice must be accorded more deference. Moreover, the Commissioner's determination of a tax deficiency is presumptively correct and the taxpayer has the burden of proving that the determination is erroneous or arbitrary. See Kearns v. Commissioner, 979 F.2d 1176, 1178 (6th Cir. 1992) (citing United States v. Janis, 428 U.S. 433, 440 (1976)); see also Tx Ct. R. 142(a).(5)

B.

The Internal Revenue Code imposes a tax on the transfer of property by gift. The valuation of a gift of stock is the fair market value on the date the gift was made. See I.R.C. § 25.2512-2(a). Fair market value has been defined as the "price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable

knowledge of the relevant facts." Treas. Reg. § 25.2512-1; see also United States v. Cartwright, 411 U.S. 546, 551 (1973); cf. Razavi, 74 F.3d at 127 (defining the term "fair rental value" in a similar fashion and by reference to the term "fair market value").

Moreover, the IRS's published regulations indicate that "determination of fair market value, being a question of fact, will depend upon the circumstances in each case . . . [and a] sound evaluation . . . [requires] common sense, informed judgment and reasonableness." Rev. Rul. 59-60 § 3.01, 1959-C.B. 237, 238, modified by Rev. Rul. 65-193, 1965-2 C.B. 370. Section 4 of Revenue Ruling 59-60 provides:

> It is advisable to emphasize that in the valuation of the stock of closely held corporations or the stock of corporations where market quotations are either lacking or too scarce to be recognized, all available financial data, as well as all relevant factors affecting the fair market value, should be considered. The following factors, although not all-inclusive are fundamental and require careful analysis in each case:
>
> (a) The nature of the business and the history of the enterprise from its inception.
>
> (b) The economic outlook in general and the condition and outlook of the specific industry in particular.
>
> (c) The book value of the stock and the financial condition of the business.
>
> (d) The earning capacity of the company.
>
> (e) The dividend-paying capacity.
>
> (f) Whether or not the enterprise has goodwill or other intangible value.
>
> (g) Sales of the stock and the size of the block of stock to be valued.
>
> (h) The market price of stocks of corporations engaged in the same or a similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter.

Rev. Rul. 59-60 § 4, 1959-1 C.B. 237.

After hearing the evidence on these issues, the tax court found that the fair market value of a share of G&J stock on July 31, 1992 was $10,910. In so holding, the court noted that valuation is an issue of fact on which Taxpayers' beared the burden of proof. Taxpayers contend that the tax court lost sight of the willing buyer and willing seller standard. They assert that the tax court made no attempt to discuss or analyze any of the relevant facts which a hypothetical buyer of a minority interest in G&J stock would be legally presumed to know and act upon with respect to two key variables--the decision whether to tax affect G&J's earnings and the extent of the lack of marketability discount.

1.Tax Affecting(6) (http://pacer.ca6.uscourts.gov/cgi-bin/getopn.pl?OPINION=01a0405p.06#ft6)

Taxpayers contend that a willing buyer in 1992 would have tax affected the stock by 40% in determining a purchase price. Their main argument in support of this contention is that a hypothetical willing buyer in 1992 would be presumed to know that tax affecting earnings was the generally accepted practice of the business appraisal community in valuing a minority interest in S corporations. The Commissioner argues that tax affecting was not a generally accepted business practice at the time. At trial, both parties presented conflicting evidence on this issue. Bajaj testified to that it would be unreasonable to subtract hypothetical corporate income taxes from G&J's projected future income because the corporation did not, in fact pay any taxes. But Taxpayers largely discredited Bajaj's testimony by pointing out that by his own admission he had no first hand knowledge of what willing buyers did in 1992. In fact, Bajaj testified that he had no first hand knowledge as to what the accepted practice among tax appraisers was in 1992 regarding tax affecting S corporation stock. Conversely, both McCoy and Wilhoite testified on behalf of Taxpayers that tax affecting was the approach generally followed in 1992 by the appraisal community in evaluating S corporations. On cross-examination, McCoy did admit that there was a growing controversy in 1992 as to the propriety of the tax affecting. McCoy also agreed that the matter was still being debated as of the time of trial and that if he had to value stock of the G&J corporation as of that time, he would give further consideration as whether he would use the tax affecting method. But, as Taxpayers note, the fact that there was a growing controversy on the issue does not necessarily mean that the method was not generally relied upon in 1992. McCoy averred that despite a sprinkling of articles questioning tax affecting, it was the recognized practice for appraising S corporations at the time. In fact, McCoy testified that although there may have been other approaches to appraising the stock of S corporations, all that he had seen had tax affected.

Taxpayers attempted to justify use of tax affecting by arguing that although an S corporation does not have to pay property taxes, there are costs or trade-offs in electing S corporation status which tax affecting is intended to address. But the court found that as a "theoretical matter" and "as a matter of economic theory," that tax affecting was inappropriate to offset these concerns. In addition the court found, and the Commissioner now argues, that despite Taxpayers' contention that tax affecting was the recognized practice, it would be imprudent to tax affect the stock of an S corporation absent the existence of circumstances indicating that these trade-offs were at play with respect to G&J. One of these trade-offs was that S corporations sacrifice growth opportunities and capital appreciation in exchange for current income. Through the expert testimony of McCoy and Wilhoite, Taxpayers also claimed that S corporation shareholders were at risk that the corporation might not distribute enough of its income to through dividends to cover the shareholders' tax obligations. They argued that tax affecting

is appropriate because an S corporation is "committed" to distributing enough income to its shareholders to cover their tax liabilities and this "imbedded cost" must be recognized. The tax court rejected the notion that tax affecting was necessary to offset the possibility that G&J might not distribute enough income to cover its shareholder liabilities. The court noted that the evidence on the record indicated that G&J distributes nearly all of its income to the shareholders and found that this fact, combined with G&J's strong growth record made it unlikely that the corporation would be unable to distribute sufficient income to cover shareholder tax liabilities. But in fact, McCoy testified and Bajaj seemed to agree that in 1992, G&J had limited growth opportunities for the next several years. (J.A. at 252, 254.) Absent a strong projected growth pattern, the fact that a corporation distributes nearly all of its income to the shareholders does not guarantee that it will distribute dividends sufficient to cover all tax liabilities while leaving a desirable net profit.

McCoy also indicated that tax affecting was necessary in order to protect against the danger that an S corporation might lose its "S" status. But the tax court found that it was illogical to tax affect an S corporation's income without facts or circumstances that established the likelihood that its S corporation status would be lost. In support of this finding the court noted that G&J's majority shareholders had already signed restrictive agreements that would preempt any transfers that would jeopardize G&J's S corporation status and that there was no indication in the record that they planned to terminate this practice. But these agreements were only designed to protect the S corporation status, which the corporation entered into by written agreement, for at least ten years. The restrictive agreements governed only the transfer of stock. Although they were designed to protect the S corporation status, that status could have been shed absent a transfer of shares. Thus, the restrictive agreements were not the final authority. Although there is no indication that G&J sought to immediately shed its S corporation status, the period of agreement was to expire soon after the transactions at issue took place. Even if G&J's shareholders had no immediate plans to alter the company's S corporation status, there was no guarantee that the company would retain this status for a significant time beyond the transaction date at issue in this case. It is this prospective period which concerns buyers and sellers of stock insofar as events occurring during that time period have a bearing on the current sale price. Therefore, a willing buyer and seller anticipating the corporation's future earnings and would have to note the fact that G&J's S corporation status was not guaranteed.(7)

Aside from its attempt to distinguish the particular characteristics of G&J, the tax court's opinion focused on its theoretical belief that tax affecting was not an appropriate substitute for certain "difficult to quantify disadvantages" of S corporation status. The court believed that the principle benefit that shareholders of an S corporation expected was reduced taxes and it saw "no reason why that savings ought to be ignored . . . in valuating an S corporation." (J.A. at 192-194.) Cf. In re Radiology Assocs., Inc. Litig., 611 A.2d 485, 495 (Del. Ch. 1991) (holding that ignoring taxes altogether is the only way that the discounted cash flow analysis can reflect accurately the value of a company's cash flows to its investors). I recognize that in making this factual determination, the tax court is not bound by the opinion of any expert witness and may accept or reject that testimony in the exercise of its sound judgment. See Helverina v. Nat'l Grocery Co., 304 U.S. 282, 295 (1938). But I believe that in the instant case the tax court's judgment was less than sound in many respects, for it flies in the face of the evidence on the record.

On appeal Taxpayers assert that tax affecting was an accepted practice because it had been "specifically approved" by the tax court, citing Maris v. Commissioner, 41 T.C.M. (CCH) 127, 138 (1980) and Hall v. Commissioner, 34 T.C.M. (CCH) 648, 667 (1975). Although not specifically holding that tax affecting was an acceptable approach to valuation in every circumstance, in both of these cases the tax court did use after-tax earnings in valuing the stock of S corporations.(8)

But perhaps Taxpayers most persuasive argument is that the IRS itself has implicitly endorsed the policy of tax affecting in valuating stock of S corporations. In support of this claim, Taxpayers point to two internal IRS documents which mention making adjustments for taxes of S corporations. The IRS Valuation Guide for Income, Estate and Gift Taxes: Valuation Training for Appeals Officers states at pages 7-14:

> S corporations lend themselves readily to valuation approaches comparable to those used in valuing closely held corporations. You need only adjust the earnings from the business to reflect estimated corporate income taxes that would have been payable had the Subchapter S election not been made.

(J.A. at 864.) In addition, the IRS Examination Technique Handbook provides:

> If you are comparing a Subchapter S corporation to the stock of similar firms that are publicly traded, the net income of the former must be adjusted for income taxes using the corporate tax rates applicable for each year in question, and certain other items, such as salaries. These adjustments will avoid distortions when applying industry ratios such as price to earnings.

(J.A. at 865.) In rebuttal, the Commissioner argues that these documents were intended for internal IRS use only. This much is evident in the express language included on the cover of IRS Valuation Guide, which warns: "This material was designed specifically by the IRS for training purposes only. Under no circumstances should the contents be used or cited as authority for setting or sustaining a technical position." (J.A. at 862.) Indeed, Taxpayers' own expert, McCoy, acknowledged that these documents were intended solely for the use of IRS employees. But McCoy responded to this argument by asserting that it was irrelevant because in the real world professionals still relied on the manuals and, therefore, their clients did, too. The tax court determined that Taxpayer's did not show that they had actually relied on these internal guidelines and therefore failed to show the type of detrimental reliance that would justify estopping the Commissioner from disregarding the tax affecting methodology. But I do not believe that Taxpayers must show that they actually relied on these materials in preparing their tax returns. Rather, the principles stated in these materials bear evidentiary weight in support of the notion that a willing buyer and seller would have used the same tax affecting approaches stated therein in valuating shares of G&J stock. Although I do not agree with Taxpayers' contention that the IRS is somehow estopped from now disclaiming tax affecting as a recognized practice, I recognize that these documents reflect a certain acceptance of tax affecting as a valid method of valuation.

The notion that willing buyers and sellers would have used tax affecting under the discounted cash flow methodology is further supported by the fact that the IRS had previously approved 1988 taxes paid by Taxpayers based on gifts of G&J stocks valued at $3,900 per share -- a sum determined by tax

affecting G&J stock. Taxpayers assert that the Commissioner's review and approval of these previous returns entitles them to rely upon tax affecting at a later date, claiming that the Commissioner somehow acted "retroactively" to their detriment. In support of this proposition they cite E.W. Bliss Co. v. United States, 224 F. Supp. 374 (N.D. Ohio 1963), aff'd 351 F.2d 449 (6th Cir. 1965), in which the court held that the Commissioner cannot act retroactively in a particular case where his own regulations are "broad enough to allow a taxpayer's method as one in accordance with generally accepted accounting principles or best accounting practices and one which was consistently followed." Id. at 384. In Bliss, the court stated:

> [if a taxpayer's] method of valuing its inventory of work in process is substantially in accord with the regulations, great weight must be given to its long record of consistent application of the same method . . . The Government's most vigorous objection to the taxpayer's method of valuing its inventory is to the latter's allowance of a normal margin of profit. The Government asserts that the allowance of a normal profit in evaluating inventories is not recognized by the American Accountants Association or by the Chartered Accountants of England was Wales. Such an allowance, however, is recognized by the Commissioner of Internal Revenue in Regulation 29.22(C)-8 as being applicable to retail merchants and also has the approval of the American Institute of Certified Public Accountants.

Id. at 383-84 (emphasis added). I acknowledge that the facts of the instant case do not reflect numerous returns using tax affecting. Nonetheless, I believe that given the amount of time since the 1988 tax returns, the Commissioner's decision not to allow tax affecting in the returns at issue in this case brings Taxpayers within the aegis of E.W. Bliss. Furthermore, although in the instant case the Commissioner had not adopted a specific regulation or policy (such as the allowance regulation in E.W. Bliss) that specifically approves tax affecting, the agency's regulations are broad enough to permit the practice and definitely do not ban it outright. See Rev. Ruling 59-60 (suggesting reliance upon a wide variety of factors in appraising the value of closely held corporations). Moreover, as I have already discussed, the agency's internal directives seem to permit the practice of tax affecting.

Taxpayers also contend that the Commissioner should not have discretion to treat taxpayers in a manifestly unfair and inequitable manner, especially given the fact that the IRS has not adopted uniform rules or regulations banning tax affecting S corporations. Taxpayers cite Righter v. United States, 439 F.2d 1204 (Ct. Cl. 1971), which stands for the proposition that the IRS should not treat parties who are similarly situated in a different manner. In that case, the court held that in determining the value of certain stock held by an estate the IRS's valuations of "other estates, involving the same stock" were probative for valuation of the taxpayer's estate. Righter, 439 F.2d at 112-13. In the instant case we are not confronted with two different parties, but rather the same parties. But we are dealing with two different tax returns, both of which tax affected G&J stock but only one of which was approved by the Commissioner. Thus, I do not believe that this case presents a situation so different from Righter as to require a different result. The Commissioner argues that no general rule of law exists that could permit a taxpayer to avoid paying a tax rightfully due by showing that he had escaped his obligation in the past. This much is true, but a principle of law does require that the IRS establish practices and procedures that are consistent and predictable, not subject to the whim of the Commissioner. See Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981) (rejecting the proposed practice of family attribution

based upon "the important policy that the law should be stable and predictable" and noting that such a policy "is especially important in the tax laws, because there is widespread reliance by taxpayers upon established tax principles in planning their affairs") (citing Estate of Hattie L. McNary v. Commissioner of Internal Revenue, 47 T.C. 467 (1967)).

I must recognize that we are merely determining those factors that hypothetical parties to a sale of G&J stock would have considered as of the gift date. In this regard, I believe that past practices, which the IRS had not deemed to create a deficiency, are demonstrative of the idea that such hypothetical actors would have considered tax affecting G&J stock. This fact in conjunction with the testimony of the experts informs my conclusion that the court's decision to use a 0% tax affect in deriving the value of G&J stock was implausible.

2.Lack of Marketability Discount

With respect to the lack of marketability discount, Taxpayers contend that the court erred in using post-valuation date statistics that a reasonable buyer in 1992 could not have relied upon. We disagree and instead find that the tax court correctly considered statistics relevant to what a reasonable buyer and seller would have done in 1992.

At trial, both sets of experts agreed that because the shares of a closely held S corporation such as G&J are not readily marketable, Taxpayers were entitled to a lack of marketability discount. Taxpayer's expert McCoy cited the lack of marketability discounts listed in three independent studies. Using the average of the lack of marketability discounts in the three studies, he asserted that the "minimum" lack of marketability discount for valuating G&J stock was 30 to 35%. He also listed what he called "risk premiums" and "risk reductions" that were particular to G&J stock to account for this figure. One of these "risk premiums" was the fact that under the shareholders' restrictive agreement, a G&J shareholder could sell his stock to someone outside of the family groups only if he got someone from the other family group to offer the same number of shares to the outside buyer such that the two family groups could maintain equal ownership.(9)

Taxpayers claim that in arriving at the 35% lack of marketability figure, McCoy relied partly upon studies that have been generally accepted by the appraisal profession and partly upon an intuitive and necessarily subjective weighting of company-specific facts, one of which was that the restrictive agreements signed by the majority shareholders required balanced ownership of G&J stock between the two family groups. But McCoy acknowledged that he had not actually read many of the studies upon which he relied in coming up with the thirty to 50% figure. Rather, he merely relied upon summaries of those studies. McCoy also admitted that the studies showed a wide range of discounts and that several of them showed correlations between certain characteristics of the firms, such as quantity of sales, and the amount of the lack of marketability discount.

In his analysis, Bajaj analyzed the same commonly published studies of lack of marketability discounts that McCoy cited. But Bajaj noted some problems with these studies. He therefore conducted his own independent analysis and, rather than simply applying the average discounts listed in those studies, analyzed G&J specifically to determine the proper lack of marketability discount. Although 79 of the sample transactions used in the study occurred after the valuation date, Bajaj concluded that using post-1992 data was appropriate because there is no reason to believe that the underlying economics

would have changed after the valuation date. The tax court found that reliance on such figures was appropriate because they demonstrated more accurately than the flawed earlier studies what willing buyers and willing sellers were actually doing in 1992. On appeal, Taxpayers contend that even if the prior studies were indeed flawed, that willing buyers and sellers still relied upon them and they could not have relied on Bajaj's figures because they did not exist as of July 31, 1992. But Taxpayers fail to note that Bajaj repeated his analysis using only pre-valuation date data. This re-analysis resulted in an even smaller lack of marketability discount, which would have been less favorable to Taxpayers. Furthermore, Taxpayers do not reconcile their position with this Court's acknowledgment that subsequent events may be considered if they could be reasonably contemplated on the valuation date. See Morris v. Commissioner, 761 F.2d at 1201.

Admittedly, there is a fair amount of conflicting evidence on this issue. But we note that the tax court's determination hinged in large part upon the credence it gave to the testimony of the respective witnesses. Indeed, the court indicated that it found Bajaj's testimony regarding the lack of marketability discount "thorough and more persuasive" than McCoy's. (J.A. at 196.) As the Eighth Circuit recognized, the tax court "does not have to accept 'in toto, in part' or at all" opinions of value provided by experts," Estate of Ford v. Commissioner, 53 F.3d 924, 927 (8th Cir. 1995) (quoting Palmer v. Commissioner, 839 F.2d 1308, 1310 (8th Cir. 1975)). This holding reiterates the fact that the tax court is in the best position to make factual determinations as to the fair market value of stocks. We cannot conclude that the tax court erred in finding that Bajaj's indicated what a willing buyer and seller would have contemplated on July 31, 1992. Aside from questioning the admissibility of this testimony, a claim which we have already rejected, Taxpayers have done nothing to show that Bajaj's opinion as to the amount of the lack of marketability discount was in error. In this regard, we find that the tax court's application of a 25% lack-of marketability discount was not clearly erroneous.

III.

In considering the parties' arguments on appeal, I would find that the record does not support the tax court's ultimate valuation of G&J stock at $10,910 per share. The tax court derived this figure by considering multiple factors, only two of which Taxpayers contested in this case -- tax affecting and the lack of marketability discount. Despite the finding that the testimony of the Commissioner's expert was admissible with respect to both of these factors, this testimony was insufficient to support the court's valuation decision. Although I would conclude that the tax court's decision to apply a 25% lack of marketability discount was supported by facts on the record, I also am of the belief that the court's decision to tax affect the stock by 0% did not accurately reflect the fair market value of G&J stock as determined under the willing buyer/willing seller standard. Instead of relying upon real-world evidence, the court reverted to its own perception of the proper approach to tax affecting, thereby deviating from the time-sensitive willing buyer/willing seller standard. I therefore would hold that to the extent it was based upon the use of a 0% tax affect the court's ultimate valuation of $10,910 was clearly erroneous. However, as explained in Judge Cohn's opinion, neither he nor Judge Daughtrey believe that the tax court erred in utilizing the 0% tax affect in order to determine the stock's valuation.

CONCLUSION

For the aforementioned reasons, I would reverse the valuation decision of the tax court and remand for revaluation in a manner not inconsistent with my opinion; however, Judge Cohn's opinion constitutes the holding of the court in this case; that is, that the tax court's decision is AFFIRMED.

CONCURRING IN PART, DISSENTING IN PART

COHN, Senior District Judge.

I. Introduction

I concur with Parts I., II.A., and II.B.2 of the lead opinion. However, because I believe that the Tax Court did not clearly err in concluding that it was appropriate not to tax affect the stock in order to determine its fair market value, I respectively disagree with Part II.B.1 and therefore find that the decision of the Tax Court must be affirmed on this ground.

II. Analysis

A.

Taxpayers essentially argue that the valuations presented by their experts are more credible than Dr. Bajaj's valuation and the Tax Court erred in accepting Dr. Bajaj's valuation. This appeal really presents a battle of the experts on the question of how the stock of a closely held S Corporation, such as G&J, should be valued.

Section 2501 of the Internal Revenue Code imposes a gift tax "on the transfer of property by gift during [the] calendar year by any individual." 26 U.S.C. § 2501(a)(1) (1988). Section 2512(a) addresses the valuation of gifts, stating, "[i]f the gift is made in property, the value thereof at the date of the gift shall be considered the amount of the gift." 26 U.S.C. § 2512(a) (1988). In interpreting this provision, section 25.2512-1 of the Treasury Regulations on gift tax provides, "[t]he value of the property is the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." 26 C.F.R. § 25.2512-1 (1992). This is known as the willing buyer willing seller rule.

Where, as here, the gift is stock, its value for gift tax purposes is the fair market value of the stock on the date of the transfer, and "[a]ll relevant facts and elements of value as of the time of the gift shall be considered." 26 C.F.R. § 25.2512-1 (1992). For publicly traded stock, valuation can generally be based on market selling prices. See 26 C.F.R. § 25.2512-2(b) (1992). For closely held corporations, such as G&J, for which there is no public trading market, valuation of stock is therefore based on of a variety of factors.

Revenue Ruling 59-60 outlines the general approach, methods and factors to be considered in valuing the shares of stock of closely held corporations for estate and gift tax purposes, stating:

> 3.01. A determination of fair market value, being a question of fact, will depend upon the circumstances in each case. No formula can be devised that will be generally applicable to the multitude of different valuation issues arising in estate and gift tax cases.... A sound valuation will be based upon all the relevant facts, but the elements of common sense, informed judgment and reasonableness must enter into the process of weighing those facts and determining their aggregate significance.

Rev. Rul. 59-60, 1959-1 C.B. 237, 238.

Valuing closely held stock incorporates a number of alternative methods of valuation, and the appellate courts have afforded the tax court broad discretion in determining what method of valuation most fairly represents the fair market value of the stock in light of the facts presented at trial. See Palmer v. Comm'r of Internal Rev., 523 F.2d 1308 (8th Cir. 1975). Moreover, "complex factual inquiries such as valuation require the trial judge to evaluate a number of facts: whether an expert appraiser's experience and testimony entitle his opinion to more or less weight; whether an alleged comparable sale fairly approximates the subject property's market value; and the overall cogency of each expert's analysis." Ebben v. Comm'r of Internal Rev., 783 F.2d 906, 909 (9th Cir. 1986).

B.

1.

Dr. Bajaj opined that tax affecting G&J's earnings was inappropriate because G&J does not pay corporate taxes, and given this closely held status and restriction on stock transfers, there was no reason to believe that G&J would not continue as an S Corporation. Dr. Bajaj also reasoned that based on G&J's past practice of distributing nearly all of its income to its shareholders, a zero percent corporate tax rate was appropriate to make in determining G&J's corporate earnings available for distribution. Moreover, Dr. Bajaj emphasized that because an S Corporation receives a tax benefit (no corporate taxes), such a benefit should not be ignored in valuing G&J's stock.

McCoy, on the other hand, opined that applying a fictitious 40% tax rate to reduce G&J's earnings was appropriate. McCoy testified that tax affecting is an accepted practice in valuation of an S Corporation. McCoy explained that the tradeoffs shareholders incur as a result of being part of an S Corporation must be accounted for, which is accomplished by tax affecting. McCoy indicated that if an S Corporation distributes less than all of its income to its shareholders, the distributions might not cover the shareholders' tax obligations. Thus, tax affecting offsets that potential burden.

McCoy also cited to two internal documents of the Internal Revenue Service that apparently says tax affecting an S Corporation's earnings for valuation: a valuation guide for income, estate, and gift taxes (the guide), an examination technique handbook for estate tax examiners (the handbook) (collectively, the IRS materials). The guide states in part:

> [S] corporations are treated similar to partnerships for tax purposes. S Corporations lend themselves readily to valuation approaches comparable to those used in valuing closely held corporations. You need only to adjust the earnings from the business to reflect estimated corporate income taxes that would have been payable had the Subchapter S election not been made.

The handbook provides in part:

> If you are comparing a Subchapter S Corporation to the stock of similar firms that are publicly traded, the net income of the former must be adjusted for income taxes using that corporate tax rates applicable for each year in question, and certain other items, such as salaries. These adjustments will avoid distortions when applying industry ratios such as price to earnings.

2.

The Tax Court found that applying a 0% corporate tax rate, effectively not tax affecting, G&J's stock was appropriate. The Tax Court discussed the competing expert's opinions, paying particular attention to Taxpayers' experts and examined their opinions in light of the facts of the case. The Tax Court first noted that the IRS materials quoted above "neither require tax affecting nor lay[] the basis for a claim of detrimental reliance" inasmuch as Taxpayers "failed to prove that they relied on [the IRS materials] in any way." (JA at 190-91). The Tax Court also rejected the Taxpayers' justification for tax affecting that it addresses the possibility that an S corporation may distribute less than all of its income, which would not be sufficient to cover the shareholder's tax obligations. The Tax Court explained that "G&J had a strong growth record and a history of making cash distributions to shareholders that nearly equaled its income [and] . . . it would not be reasonable to assume G&J would not continue this practice." (JA at 191). The Tax Court also rejected the argument that G&J might lose its Subchapter S status as a basis for tax affecting its stock because there was not sufficient evidence that G&J's status would be lost. Overall, the Tax Court was not convinced that tax affecting was an appropriate valuation method for valuing G&J's stock. The Tax Court explained that "the principle benefit that shareholders expect from an S corporation election is a reduction in the total tax burden imposed on the enterprise. The owners expect to save money, and we see no reason why that savings ought to be ignored as a matter of course in valuing the S corporation." (JA at 194).

C.

1.

As noted in the lead opinion, Dr. Bajaj and McCoy disagreed over whether tax affecting was a generally accepted practice in 1992. Indeed, McCoy's testimony, when carefully reviewed, reveals that even he was not certain whether tax affecting was generally accepted, acknowledged some disagreement on this point, and was equivocal on whether he would continue to tax affect. The lead opinion, however, finds that the Tax Court clearly erred in its decision to not tax affect G&J's stock because willing buyers and willing sellers would have tax affected the stock in 1992. While I do not necessarily disagree with framing the issue in this manner, I do disagree with the way in which the lead opinion analyzes the issue. The lead opinion accuses the Tax Court of focusing on "its theoretical belief

that tax affecting was not [] appropriate." The lead opinion also states that "the tax court's judgment was less than sound" and "flies in the face of the evidence on the record." I read the record differently. The Tax Court was faced with the opinions of competing valuation experts and accepted one over the other. While the Tax Court did not explicitly state that it found Dr. Bajaj's valuation more "credible," the Tax Court certainly found as much when it declined to tax affect G&J's stock. Moreover, while the Tax Court did state that it did not believe that tax affecting was "appropriate as a matter of economic theory," (JA at 194), this statement was made in the context of deciding whether or not to tax affect, and reflects the Tax Court's opinion that McCoy's valuation including tax affecting was not appropriate. Given the disagreement on the propriety of tax affecting, and applying the proper standard of review, I do not believe that the Tax Court clearly erred in this regard.

2.

The lead opinion appears to emphasize the apparent unfairness to Taxpayers if G&J's stock is not tax affected and accuses the IRS and the Tax Court of being "hypocritical" and "arbitrary" in their valuations. Unfairness, however, is not the issue and even if it was, the Taxpayers were not unfairly treated by not tax affecting G&J's stock. First, the lead opinion disagrees with the Tax Court's finding that the IRS policy manuals do not establish that tax affecting is a necessary part of valuing an S Corporation. I do not believe that this finding is clearly erroneous and in fact is well supported in the record. Not only do the statements in the IRS manuals fail to affirmatively advocate tax affecting for all S Corporation valuation, both the guide and handbook provide that are not to be relied upon as binding authority, thus even if Taxpayers relied on these materials, their reliance was not justified.

Moreover, focusing solely on the perceived unfairness to the Taxpayers is improper because the willing buyer willing seller rule does not permit a determination of fair market value based solely on the price-lowering desires of the willing buyer. See Mandelbaum v. Comm'r of Internal Rev., 69 T.C.M. (CCH) 2852, 2866 (1995), aff'd without published opinion, 91 F.3d 124 (3d Cir. 1996)("[i]gnoring the views of a willing seller is contrary to the willing buyer/willing seller test"). Thus, determining fair market value also requires consideration of the standpoint of the willing seller.

Secondly, the lead opinion discusses the possibility of G&J losing its Subchapter S status, concluding that "a willing buyer and seller anticipating the corporation's future earnings would have to note the fact that G&J's S corporation status was not guaranteed." To the extent that the lead opinion finds that G&J's Subchapter S status "was not guaranteed," this conclusion appears to contradict the Tax Court's factual finding that "[w]e do not however, think it is reasonable to tax affect an S corporation's projected earnings with an undiscounted corporate tax rate without facts or circumstances sufficient to establish the likelihood that the election would be lost." (JA at 192). The lead opinion's conclusion that willing buyers and willing sellers might consider that G&J would lose its Subchapter S status is contrary to the evidence of record at the time the gift was made and reflects its own independent opinion of what willing buyers and sellers would consider when valuing G&J's stock.

The lead opinion also criticizes the Tax Court's decision regarding tax affecting because prior decisions permitted tax affecting, and because the IRS accepted prior returns of the Taxpayers which contained valuations that were tax affected. The lead opinion relies on E.W. Bliss Co. v. United States, 224 F. Supp. 374 (N.D. Ohio 1963), aff'd 351 F.2d 449 (6th Cir. 1965) to support its conclusion that the IRS acted arbitrarily in refusing to accept the returns at issue. Bliss, however, is inapposite. In Bliss, the district court held that the "Commissioner is without authority to act retroactively in a particular case

where his own regulations are broad enough to allow the taxpayer's method as one in accordance with generally accepted accounting principles or best accounting practices and one which was consistently followed." 224 F. Supp. at 384. First of all, as noted above, there was disagreement among the experts as to whether tax affecting was generally accepted. Second, Bliss involved an appeal from a decision of the Commissioner to the district court, not an appeal from a decision of the Tax Court. Thus, the district court presumably had more latitude in reviewing the Commissioner's decision to make the determination that the Commissioner acted arbitrarily in that case.

Most significantly, however, as the Commissioner points out, the Commissioner is not precluded from correcting an error. See Sirbo Holdings, Inc. v. Commissioner, 509 F.2d 1220, 1222 (2d Cir. 1975); Wagner v. United States, 387 F.2d 966, 968 (Ct. Cl. 1967); Kehaya v. United States, 355 F.2d 639, 641 (Ct. Cl. 1966), Ward v. Comm'r Internal Rev., 240 F.2d 184 (6th Cir. 1957). Thus, the fact that tax affecting may have been approved in other cases, and was even approved in prior returns filed by the Taxpayers, does not, and should not, preclude a different result in another case, particularly where there is disagreement over whether to tax affect in determining the value of stock in the first place.

III. Conclusion

Reviewing the conflicting experts' opinions, it appears that Dr. Bajaj's valuation was from an academic perspective, and he clearly took a scholarly approach to the valuation issue. McCoy's valuation, on the other hand, was from the perspective of a business professional, who has performed numerous valuations in his professional career. This distinction is observed not to diminish McCoy's expertise or elevate Dr. Bajaj's, but simply to point out the different ways the experts approached the valuation question to the facts at hand. Ultimately, the Tax Court found that Dr. Bajaj's method was the better reasoned one under the facts and circumstances of the case. I cannot say this was clear error.

The Taxpayers spend a good deal of time arguing that willing buyers would not know Dr. Bajaj's valuation techniques, and that Dr. Bajaj used data available after the date of the gift, and therefore the Tax Court erred in applying the willing buyer- willing seller rule. This argument is poorly conceived. First, the Tax Court is not prohibited from considering post-valuation data if relevant to shed light on facts existing on the date of the valuation. See Estate of Gilford v. Comm'r of Internal Rev., 88 T.C. 38, 52-53 (1987). Second, the purpose of valuation is to determine what a willing buyer would pay, and what a willing seller would accept, for the stock on the date of the valuation; it is not to determine what methodology the willing buyer would apply. The willing buyer-willing seller rule presupposes that the price will be the fair market value. Valuation, through the use of expert methodology, is the means, not the end, to application of the willing buyer willing seller rule.

Overall, the entire valuation process is a fiction - the purpose of which is to determine the price that the stock would change hands from a willing buyer and a willing seller. However, a court is not required to presume hypothetical, unlikely, or unreasonable facts in determining fair market value. See Estate of Watts, 823 F.2d 483, 487 n.2 (11th Cir. 1987). Valuation is a fact specific task exercise; tax affecting is but one tool in accomplishing that task. The goal of valuation is to create a fictional sale at the time the gift was made, taking into account the facts and circumstances of the particular transaction. The Tax Court did that and determined that tax affecting was not appropriate in this case. I do not find its conclusions clearly erroneous.

Footnotes

[*]The Honorable Avern Cohn, Senior United States District Judge for the Eastern District of Michigan, sitting by designation.

[1] Members of the Jarson family group entered into a similar restrictive agreement regarding their G&J shares on April 1, 1983. This agreement was also in effect as of July 31, 1992.

[2] McCoy's initial report used three separate methods to determine the value of the stock shares: the market price comparison approach, the discounted future free cash-flow method, and valuation by capitalization of earnings. He determined a weighted average value of the results of these three approaches and then applied a discount for the lack of marketability, eventually arriving at a value of $5,680 per share.

Under the discounted future free cash-flow method, McCoy considered G&J to be an asset capable of producing cash flows to its owners for an infinite number of periods. He then determined the present value of G&J's stock by hypothesizing the amount of available cash for each such period, discounting each amount to reflect the delay in payment and the risk of nonpayment, and then summing the results.

[3] To this end, the Court found that "knowledge" as used in Rule 702 means "more than subjective belief or unsupported speculation" and the term "applies to any body of known facts or to any body of ideas inferred from such facts or accepted as truth on good grounds." Daubert v. Merrill Dow Pharmaceuticals, Inc., 509 U.S. 579, 590 (1993).

[4] The tax court held:

> In light of the Sixth Circuit's opinion in Morris v. Commissioner, we believe that the rule against admission of subsequent events is a rule of relevance. Rule 401, Federal Rules of Evidence, applicable in this Court pursuant to Rule 143, Tax Court Rules of Practice and Procedure, and section 7453, defines relevant evidence as "evidence having any tendency to make the existence of any [fact] that is of consequence to the determination of the action more or less probable than it would be without the evidence."

Estate of Gilford, 88 T.C. 38, 53-54 (1987) (citation omitted).

[5] Tax Court Rule 142(a) provides that "[t]he burden of proof shall be upon the petitioner, except as otherwise provided by statute or determined by the Court; and except that, in respect of any new matter, increases in deficiency, and affirmative defenses, pleaded in the answer, it shall be upon the respondent." Tx Ct. R. 142(a); I.R.C. § 7453; see also Friedman v. Commissioner, 216 F.3d 537, 542 (6th Cir. 2000).

[6] The opinion expressed in this section, II.B.1, is solely that of Judge Clay, and not the opinion of the majority.

[7] Taxpayers also contended that tax affecting was necessary to compensate for the disadvantages G&J faced as an S corporation in raising capital. But the court dismissed this concern, finding that it was not a proper justification for tax affecting inasmuch as this disadvantage is more appropriately addressed in determining the appropriate "cost of capital." Taxpayers have not attacked this rationale on appeal.

[8] In addition, these cases noted the imprecise nature of valuing such stocks:

> We recognize that the valuation process is not an exact science . . . . [S]ince this unwelcomed onus has been placed on this Court, we have, in the exercise of our 'Solomon-like wisdom,' . . . arrived at our determination of fair market value, as reflected in our ultimate finding of fact, by weighing all of the facts and circumstances contained in the entire record.

Estate of Hall v. Commissioner, 34 T.C.M. (CCH) 648, 666 (1975) (citation omitted).

> Once again we are asked to determine the value of shares of stock in a closely-held corporation, a science which, to use Winston Churchill's words, usually results in a "gross terminal logical inexactitude". Determinations of value of closely held stock involve a melding of numerous objective criteria, prior human experience and personal judgment.

Maris v. Commissioner, 41 T.C.M. 127, 137 (1980).

[9] On cross-examination, however, McCoy admitted that the restrictive agreements between the family groups did not contain any limitation requiring balanced ownership. Rather, the Gross/Linnemann and Jarson family groups each had their own agreements restricting the transfer of stock outside of the respective family groups. Although functionally, the force of both agreements would maintain the status quo of each family group owning 50% of the outstanding shares of G&J stock, they did not explicitly require that the 50% balance be maintained.

34 T.C.M. (CCH) 648 (1975)
T.C. Memo. 1975-141.

Estate of Oakley J. Hall, Deceased, Southern California First National Bank, Executor
v.
Commissioner.

Docket No. **8611-71**.

United States Tax Court.

Filed May 15, 1975.

Jack M. Harrison, 2201 First Nat'l Bank Bldg., San Diego, Calif., and Raymond L. Heidemann, for the petitioner. Melvern Stein, for the respondent.

Memorandum Findings of Fact and Opinion

DRENNEN, Judge:

Respondent determined a deficiency in Federal estate tax due from petitioner-estate in the amount of $587,953.96. By amendment to his answer respondent seeks additional deficiencies in the amount of
649 $313,836.49. Following certain concessions by the parties, the issues remaining *649 for decision are: (1) The fair market value at the date of decedent's death of 700,000 shares of stock of San Diego Marine Construction Co., which were properly included in decedent's gross estate, exclusive of certain investment real estate owned by the corporation; and (2) the fair market value at the date of decedent's death of the investment real estate located at 201 West Broadway, San Diego, Calif., which the parties agreed should be valued separately and added to the value of the stock of the corporation.

Findings of Fact

Certain facts have been stipulated and are found accordingly.

The petitioner, Southern California First National Bank is a national banking association and is the duly appointed and qualified executor of the will of **Oakley J**. **Hall**, decedent in the present case. The decedent died a resident of San Diego, Calif., on September 24, 1967. The estate of the decedent was administered under the jurisdiction of the State of California.

On December 24, 1968, the petitioner filed an estate tax return with the district director of internal revenue at Los Angeles, Calif. The date of death was used as the date of valuation of the estate.

At the time of his death, decedent owned as his separate property 700,000 shares of common stock of San Diego Marine Construction Co. (hereinafter Marine), a California corporation. These shares represented all of the outstanding shares of stock of Marine.

Marine was incorporated under the laws of the State of California in 1938. There have never been any sales of shares of capital stock of Marine from which the fair market value of such shares could be determined as of September 24, 1967.

As of September 24, 1967, Marine operated three divisions, the Marine Division, the Boat Division, and the Investment Division.

The type of work undertaken by the Marine Division consisted principally of naval ship repair and commercial repair, primarily of tuna fishing vessels.

For the taxable year ended September 30, 1967, the Marine Division accounted for 86.7 percent of the corporation's total revenues from operations other than the investment in the property at 201 West Broadway. The Marine Division's gross receipts from government work versus nongovernment work for the fiscal years 1958 through 1967 are set forth below as follows:

	Government Work		Nongovernment Work		
Year Ended Sept. 30	Amount	Percent of Total	Amount	Percent of Total	Total Amount
1958	$1,049,665	50.3	$1,038,017	49.7	$2,087,682
1959	540,089	33.5	1,073,257	66.5	1,613,346
1960	806,670	38.2	1,306,744	61.8	2,113,414
1961	626,979	34.2	1,206,747	65.8	1,833,726
1962	612,753	30.3	1,411,888	69.7	2,024,641
1963	990,396	39.7	1,507,151	60.3	2,497,547
1964	948,485	40.7	1,381,805	59.3	2,330,290
1965	2,567,933	56.6	1,970,152	43.4	4,538,085
1966	3,999,808	66.9	1,982,361	33.1	5,982,169
1967	4,022,644	75.2	1,327,260	24.8	5,349,904

The Marine Division occupied a 19.2-acre site leased from the San Diego Unified Port District, which consisted of approximately 7.22 acres of industrial land, the remainder being tide land and harbor area seaward of the shipyard bulkheads and shoreline. In addition to this main site, the Marine Division also occupied a 12,525-square-foot area adjacent to the shipyard leased from San Diego Gas and Electric Co.
650 and two *650 parking lots located across the shipyard frontage road leased from the Atchison, Topeka and Santa Fe Railway.

Marine did not have facilities at the above location to repair naval vessels made of steel. This work was done either on the navy vessel or at U.S. Navy drydock facilities at San Diego and Coronado.

On the valuation date, Marine was operating under a lease entered into with the San Diego Unified Port District on February 1, 1944. This lease was due to expire on January 31, 1969. A new lease with the Port Authority was executed on December 3, 1968, in which Marine agreed to spend a minimum of $1,250,000 within the next 5 years to restore the yard. Between October 1, 1967 and June 30, 1972, Marine did make restoration expenditures of over $1,800,000. This new lease ran for a period of 5 years and gave Marine the option to extend it for nine additional 5-year terms.

Marine, on September 24, 1967, employed approximately 350 people of which 300 represented the Marine Division yard's work force, all of whom were union members. These union members began a strike against the Marine Division on June 30, 1967, which was not settled until September 30, 1967.

As of September 24, 1967, the directors of the corporation were **Oakley J**. **Hall**, Sr., **Oakley J**. **Hall**, Jr., and William G. Mirow.

The corporate books showed an indebtedness to O.J. **Hall**, Sr., in the following amounts:

Date	Amount
9-30-62	$465,611
9-30-63	447,611

9-30-64 273,611
9-30-65 213,611
9-30-66 253,611
9-30-67 193,611

For the years ending September 30, 1962 through September 30, 1967, the decedent did not draw a salary from the corporation nor did he receive or earn interest on the amount shown as loans on the corporate books.

The Boat Division, known as the Star and Crescent Boat Co., which was acquired on March 1, 1961, was a commercial towing and harbor excursion business with a float-pier and a gift shop located at Broadway Pier on Harbor Drive, San Diego, Calif. The assets of the Boat Division included three harbor excursion vessels, four commercial tugboats, and ten assorted barges.

Marine's profit and loss statements for the taxable years ending September 30, 1962, through September 30, 1967, are as follows:

REVENUE:	1962	1963	1964
Construction operations	$2,022,278	$2,497,241	$2,329,234

1 Acquired from stockholder — Principally land and buildings.

The following table is a comparative statement of the income of Marine for the taxable years ending September 30, 1962 through September 30, 1967. This table reflects adjustments to exclude net rental

income from the investment property of Marine and nonrecurring gain on the sale of capital assets in fiscal 1964 as an extraordinary income item. Since Marine in the fiscal years 1965 through 1967 elected to be treated as a subchapter S corporation, taxes, as estimated in the table, were computed on a standard corporate tax basis. With the one exception noted below, both parties obtained the results as shown in this table.

1 Respondent failed to exclude this item and as a result, computed the net income for FYE 9/30/62 as $64,566.

654 *654 In July 1972, Marine sold the Marine Division to Campbell Industries, Inc., a competitor shipyard company in San Diego, for total consideration of approximately $4.6 million, payable through a combination of cash of $694,130, a promissory note in the amount of $750,000, and the remainder by assumption of liabilities. During this time, Campbell had a large backlog of work and needed additional facilities. Consequently Campbell acquired the Marine Division in order to obtain its assets, primary consideration being given to the relatively new lease held by the Marine Division as a very important asset and a major factor in the price paid for the facilities of the Marine Division. Campbell was not interested in acquiring the stock of Marine as a going business.

Marine, on the date of decedent's death, also held investment real property located at 201-251 West Broadway in San Diego, Calif. This property is on the south side of Broadway between Front and Union Streets. The legal description of this property is Lots A, B, C, D, I, **J**, K, and L, Block 56, Horton's Addition. This real estate has a 200-foot frontage on Broadway and a depth of 200 feet containing 40,000 square feet.

At the valuation date, a part of the property was used as a bus depot for Continental Trailways and had a large parking garage in the rear which was separately rented. The Broadway frontages were divided into smaller store spaces used as a jewelry store, a souvenir shop, a cocktail lounge, a restaurant, and a waiting room for Continental Trailways.

Improvements on the land consisted of a one-story masonry building containing 40,000 square feet. The northerly 70 feet of the building was divided into stores catering to retail trade. The southerly or rear portion of the building was used as garage and storage space. During the period in issue, this building was approximately 50 years old.

As of the date of valuation, there had been no development of property for commercial office buildings or otherwise of any significance south of Broadway in San Diego.

The U.S. Government had under consideration the construction of a Federal office building and courthouse in San Diego since 1961 or 1962. Marine's investment property was one of several locations considered to be a suitable site for the building. However, a letter from the General Services Administration of the United States to the mayor of San Diego, dated September 8, 1967, indicates that, as of that date, no specific land in San Diego had been selected or approved by the General Services Administration as a site for the Federal buildings project. This letter contained a list of numerous sites which were deemed acceptable.

Additionally, this Federal building project was not approved by the Public Works Committees of Congress until May 9, 1968.

Eventually the Federal government, under a purchase agreement dated December 28, 1969, involving an exchange of properties, obtained this property plus additional property as the building site for a new Federal courthouse.

The Federal building site included not only the investment property which had been owned by Marine but also land owned by Mary F. Amaral, the First Gray Line West Corporation, and the City of San Diego. Amaral and First Gray Line were willing to sell their real property for cash but were not interested in trading for excess Federal land.

After the death of decedent, Marine conveyed the investment property to decedent's sons, **Oakley J**. **Hall**, Jr., and G.E. **Hall**, by a deed recorded June 7, 1968. In order to consummate a deal with the Federal government, it was necessary for the Halls to purchase the parcels owned by Amaral, First Gray Line, and the City of San Diego.[1]

The parcel owned by Amaral was purchased by the Halls on November 6, 1969, for a consideration of $75,000. On March 16, 1970, the Halls also purchased the land owned by the City of San Diego for $350,000, and the land owned by First Gray Line for $250,000.

The investment property at 201 West Broadway, and the adjoining parcels which were purchased by **Oakley J**. **Hall**, Jr., and G.E. **Hall** for a total consideration of $675,000, were subsequently transferred to the
655 United States of America in exchange for excess Federal land known as the Warren *655 Housing property. The purchase agreement covering this transfer was dated December 28, 1969. The Warren property was conveyed to **Oakley J**. **Hall**, Jr., and G.E. **Hall** by quitclaim deed dated February 27, 1970. Simultaneously, but under a purchase agreement dated November 19, 1969, the Warren property was sold by **Oakley J**. **Hall**, Jr., and G.E. **Hall** to Swan Constructors, Inc., for $2,300,000. The Halls paid a real estate commission in the amount of $200,000 to the several real estate brokers who had put the deal together.

The parties have stipulated that for estate tax purposes the value of decedent's separate property interest in a diesel yacht named the "Caronia," as of September 24, 1967, was $275,000.

Ultimate Findings of Fact

(1) The fair market value of the 700,000 shares of San Diego Marine Construction Co. on September 24, 1967, exclusive of the investment real estate at 201 West Broadway, was $1,680,000.

(2) The fair market value of the investment real estate located at 201 West Broadway, San Diego, Calif., and owned by Marine on September 24, 1967, was $850,000.

Opinion

The sole issue in this case involves the determination of the fair market value of 700,000 shares of stock in San Diego Marine Construction Co. owned by decedent, **Oakley J**. **Hall**, on September 24, 1967, the date of his death. These shares represent all of the outstanding stock of Marine.

By agreement, both parties addressed themselves to this valuation issue as follows. First, these shares of Marine were valued by each party exclusive of the investment real estate owned by Marine and located at 201 West Broadway, San Diego, Calif. Secondly, separate determinations were made of the value of this real estate. Finally each party added together the two separately computed values to arrive at his determination of the fair market value of the Marine stock. We have followed the approach taken by the parties in determining the total value of the stock in question.

On its Federal estate tax return, petitioner reported the value of the 700,000 shares of Marine to be $2,185,000. Petitioner now claims that the value of the stock, exclusive of the investment real estate, was $1,216,000 and that the value of the real estate was $800,000.

In the notice of deficiency respondent determined the value of the 700,000 shares of Marine to be $3,133,000. In his answer to an amended petition and in support of his claim for an increased deficiency, respondent claims that the value of the stock, exclusive of the investment real estate, was $2,600,000 and that the value of the real estate was $1,100,000.

Section 2001, I.R.C. 1954,[2] imposes an estate tax on the transfer of the taxable estate of a decedent, which, under section 2051, shall be determined by deducting from the value of the gross estate the exemption and deductions provided in Part IV. Sections 2031(a) and 2033 provide in general that the value of the gross estate of a decedent shall be determined by including the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated, to the extent of decedent's interest therein.

Value of the Stock Exclusive of the Real Estate

The first question for resolution is the fair market value at the date of decedent's death of his 700,000 shares of stock in Marine, exclusive of the investment real estate. Marine's stock is not listed on a stock exchange nor have there been any sales of the stock to assist in determining its fair market value.

The long-standing and accepted definition of fair market value is contained in section 20.2031-1(b), Estate Tax Regs., which states, in pertinent part:

> The fair market value is the price at which the property would change hands between a willing buyer and a willing seller neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. * * *

Estate of Maurice Gustave Heckscher [Dec. 33,023], 63 T.C. 485 (1975).

Since the stock of Marine was not traded on the open market, we must first follow the dictates of section 2031(b), which provides:

656 > Valuation of Unlisted Stock and Securities. — In the case of stock and securities of a corporation the value of which, by *656 reason of their not being listed on an exchange and by reason of the absence of sales thereof, cannot be determined with reference to bid and asked prices or with reference to sales prices, the value thereof shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange.

In addition, section 20.2031-2(f), Estate Tax Regs., provides that in valuing stocks and bonds where selling prices or bid and asked prices are lacking, the fair market value is established by taking the following factors into consideration:

> In the case of shares of stock, the company's net worth, prospective earning power and dividend-paying capacity, and other relevant factors.
>
> Some of the "other relevant factors" referred to in subparagraphs (1) and (2) of this paragraph are: The good will of the business; the economic outlook in the particular industry; the company's position in the industry and its management; the degree of control of the business represented by the block of stock to be valued; and the values of securities of corporations engaged in the same or similar lines of business which are listed on a stock exchange. However, the weight to be accorded such comparisons or any other evidentiary factors considered in the determination of a value depends upon the facts of each case. * * *

The evidence pertinent to this issue consisted primarily of the testimony and valuation reports of petitioner's expert, Thomas P. Morrissey (sometimes hereinafter Morrissey), and respondent's expert, Matthew **J**. Donohue (sometimes hereinafter Donohue).

Both experts appear to agree that around the valuation date the prospects of the economy in general were favorable. Petitioner's expert, in his report noted that shipyards, such as Marine, which engage primarily in ship repair work, tend to show somewhat erratic records. Additionally, respondent's expert concluded that the shipbuilding and repair industry is highly competitive and has a tendency to experience cycles of high and low levels of activity. The experts agreed that the industry as a whole had reached a peak of profitability in 1966-7 and that there would continue to be relatively high levels of activity within the industry as a result of the continuing needs of the military, particularly the Navy, due to the conflict in Southeast Asia. Respondent's expert added the caveat that "the industry was faced by problems and uncertainties which led many to believe that 1968 and 1969 would not match very favorable operating results achieved by industry members in 1967."

Because of the nature of the stock involved, both experts followed the guidelines enunciated in section 2031(b) and section 20.2031-2(f), Estate Tax Regs. Unfortunately the final opinions of these experts as to the fair market value of the stock of Marine on the valuation date, exclusive of the investment real property, differed dramatically with petitioner's expert valuing the stock at $1,216,000, and respondent's expert at $2,600,000. While these experts considered similar factors the vast difference in their respective appraisals of approximately $1,400,000 resulted from the different application of these factors and the emphasis they placed on each of these separate factors.

Both experts relied heavily on the capitalization of earnings of Marine to determine the value of its stock and in doing so considered the price-earnings ratios and other factors relative to prices being paid for the stock of other corporations listed on stock exchanges which they considered were comparable to Marine. In fact, they chose and analyzed a number of the same corporations in establishing the multiples they applied to the earnings of Marine to determine value. Nevertheless, the large gap between the two experts necessitates a discussion of each appraisal.

Petitioner's expert, Morrissey, in arriving at the fair market value of the stock of Marine, used three basic approaches: (1) capitalization of earnings; (2) capitalization of dividends; and (3) the application of a ratio based on the relationship of market price to book value. After Morrissey arrived at three separate valuation figures, he averaged these amounts together counting the capitalization of earnings approach three

times and the other two approaches once.

In establishing a valuation under the earnings approach, Morrissey readjusted the net income of Marine by estimating a salary for decedent at $50,000 per annum. He also estimated interest charges at a rate
657 of 6 percent on the noninterest-bearing debt which Marine owed to decedent. These additional estimated expenses lowered the *657 net income of Marine to the following amounts:

FYE Sept. 30	Adjusted net income
1962	$(23,996)
1963	3,312
1964	78,166
1965	108,013
1966	425,494
1967	212,646

Morrissey next determined price-earnings multiples for companies which he considered comparable to Marine. He established yearly price-earnings ratios for each company by dividing the yearly earnings by the *average price of the stock during that year.* The following table of price-earnings ratios was constructed by Morrissey:

658 *658

Notes: (a)Excluded from averages as atypical,
Parentheses indicate red figures.

Source: Appendix C. Computations by Standard Research Consultants.

659 *659 As stated in a footnote in the table, Morrissey excluded certain ratios which he considered atypical and he also eliminated American Ship Building Company and Todd Shipyards Corp. from consideration claiming that these firms were not comparable. Petitioner's expert was left with three comparables whose average price-earnings ratio for 1964, 1965, and 1966 were 5.5, 5.2, and 4.5, respectively. The overall average for this 3-year period was 5.1.

Morrissey concluded that based on all relevant factors, the appropriate multiple to be used in capitalizing the historical earnings of Marine should be 5.0. He also determined that the earnings for the latest 3 years and for the latest year were the most significant in view of the upward trend of earnings. Consequently, when the 5.0 multiple was applied to the latest 3-year average adjusted net income and latest year net income of Marine and the two resulting figures were then averaged together, Morrissey obtained the following fair market value based on capitalization of earnings:

Latest 3-year (1965-67)
average earnings of
$248,717 × 5 ..... = $1,243,585
Latest fiscal year (1967)
earnings of
$212,646 × 5 ..... = $1,063,230
Indicated fair market
value on earnings basis
(average) ..... = $1,153,407

Under his dividend approach to fair market value, Morrissey created the following table of dividend yields and dividend payout ratios of his five comparable companies:

DIVIDEND YIELDS AND DIVIDEND PAYOUT RATIOS

FIVE COMPARABLE COMPANIES

1962-66

Company	1962 %	1963 %	1964 %	1965 %	1966 %

Maryland Shipbuilding & Drydock Company	128.9(c)	(d)	19.5	23.6	22.3
Todd Shipyards Corporation	71.8(c)	85.4(c) (d)		26.8	22.4
Average(b)	32.4	34.1	29.1	18.6	21.1
San Diego Marine Construction Co.	Nil	Nil	Nil	Nil	Nil

Notes: (a)Of companies paying dividends. (b)Excluding atypical ratios.
(c)Considered as atypical. (d)Deficit earnings.

660 *660 Based on these computations, dividend yield averaged between a high of 5.5 percent in 1962 to a low of 3.2 percent in 1965. Average dividend payout ratio, excluding those which Morrissey deemed atypical, ranged from a high of 34.1 percent in 1963 to 18.6 percent in 1965. Although Marine did not pay any dividends during these years, Morrissey made the assumption that Marine had a dividend paying capacity of 25 percent on the average earnings for the last 3 years (1965-67) of $248,717, or $62,179. He also assumed a dividend yield of 5 percent thereby obtaining a fair market value under the dividend approach of $1,243,580.

Finally, in considering the question of fair market value as related to the book value of a company, Morrissey concluded that there is generally a relationship between the percent earned on common equity and the ratio of market price to book value, i.e., the more a company earns on its common equity, the higher its stock tends to sell in relationship to book value. Following this theory, petitioner's expert devised the following chart for the comparable companies and Marine:

661 *661

RELATIONSHIP OF PERCENT EARNED ON AVERAGE COMMON

STOCK EQUITY AND RATIO OF MARKET PRICE TO BOOK VALUE

COMPARABLE COMPANIES

1962-67

Company	Five-Year (1962-66) Averages: Percent Earned on Average Common Stock Equity %	Five-Year (1962-66) Averages: Ratio of Market Price to Book Value %	Three-Year (1964-66) Averages: Percent Earned on Average Common Stock Equity %	Three-Year (1964-66) Averages: Ratio of Market Price to Book Value %	Latest Available 1967 Data Related to Average Market Price Nine Months Through September, 1967: Percent Earned on Average Common Stock Equity %	Latest Available 1967 Data Related to Average Market Price Nine Months Through September, 1967: Ratio of Market Price to Book Value %
Campbell Machine, Inc.	26.3	125.6	32.7	130.0	48.1	365.9
Levingston Shipbuilding Company	9.8	58.7	15.6	74.7	19.6	131.5
American Ship Building Company (The)	5.7	81.9	10.1	93.6	13.7	177.2
Maryland Shipbuilding & Drydock Company	4.7	48.2	9.3	51.5	9.8	64.1
Todd Shipyards Corporation	4.7	44.9	5.9	48.5	9.4	54.9
San Diego Marine Construction Co.	4.0		6.9		6.3	

Sources: Appendix C, Table No. 6, Exhibit No. 8. Computations by Standard Research Consultants.

662 *662 Considering Marine's earnings rate in comparison to the alleged trends for the comparable companies, Morrissey determined a ratio of market value to book value for Marine of 40 percent would be appropriate in determining the price at which the stock would sell if it were freely traded. By applying the 40 percent to Marine's book value at September 30, 1967, of $3,442,000, petitioner's expert arrived at a

fair market value of $1,376,800.

It was Morrissey's position that although the stock in question constituted 100 percent of the outstanding stock of Marine and carried with it the authority to liquidate the entire corporation, this factor should not be controlling because there was no indication of an intention to liquidate and a substantial amount of the company's fixed assets investment was in leasehold improvements which could not be liquidated.

After arriving at the three separate fair market value figures, Morrissey averaged them together assigning three times the weight to the value obtained under the earnings approach. The following table represents Morrissey's final calculations of the fair market value of the Marine stock:

FAIR MARKET VALUE

OF

CAPITAL STOCK

OF

SAN DIEGO MARINE CONSTRUCTION CO.

SEPTEMBER 24, 1967

Valuation Approach	Indicated Value $	Weight (Times)	Total $
Earnings based on:			
Three-year (1965-67) average	1,243,585		
Fiscal 1967	1,063,230		
Average	1,153,407	3	3,460,221
Dividends	1,243,580	1	1,243,580
Book value	1,376,800	1	1,376,800
Total		5	6,080,601
Indicated fair market value ($1,216,120 rounded) ...			1,216,000

Respondent's expert, Donohue, used two approaches in reaching his determination of the fair market value of the Marine stock: (1) Capitalization of earnings, and (2) what could possibly be termed capitalization of cash flow.

Donohue first created a chart which purportedly showed for a 10-year period revenues, adjusted earnings, depreciation, and cash flow of Marine. In determining the adjusted earnings of Marine, Donohue did not further decrease this amount by either an estimated salary for decedent or estimated interest on decedent's loan to Marine. Cash flow as defined by Donohue was the addition of depreciation deductions to earnings. Donohue's table is as follows:

663 *663

Summary of Revenue, Earnings and Cash Flow
9/30/58 - 9/30/67

Fiscal Year	Revenue	Earnings (Adjusted)	Depreciation	Cash Flow
	(---------- 000 ---------)			
1967	$6,174	$248	$214	$462
1966	6,157	462	170	632
1965	4,031	144	146	290
1964	2,888	117	138	255
1963	3,691	45	272	317
1962	2,947	65	225	290
1961	2,328	80	69	149
1960	2,108	93	62	155
1959	1,608	42	60	102
1958	2,079	71	56	127
Five-year average		203	188	391
Ten-year average		137	141	278

Next, respondent's expert analyzed other companies in order to develop multiples. For comparison purposes, he chose six companies whose stocks are publicly traded:

(1) American Ship Building Co.

(2) Campbell Machine, Inc.

(3) Levingston Shipbuilding Co.

(4) Maryland Shipbuilding and Drydock Co.

(5) Todd Shipyards Corp.

(6) St. Louis Shipbuilding-Federal Barge, Inc.

Donohue concluded that of these six companies, American Ship Building Co. and Campbell Machine, Inc., were not proper comparables. Consequently, he based his analysis on the other four.[3]

To establish a valuation under the ratio of price to earnings and cash flow approach, Donohue also computed price-earnings and price-cash flow multiples for the companies which he considered comparable with Marine. Donohue developed his price-earnings and price-cash flow ratios by dividing the selling price of the stock of each corporation at date of death over a set number of years. In doing so Donohue developed the following table which he included in and referred to in his appraisal report:

664 *664

Comparative Corporations to
San Diego Marine Construction Co. In re: Estate of **Oakley J. Hall** - Valuation Date: September 24, 1967

1 Information for 10-year averages not available.

665 *665 Donohue believed that the most significant tests of value would come from 5 years' average production of earnings. After eliminating American Ship Building and Campbell Machine, Inc., Donohue found he had price-earnings ratios for the four other companies which ranged between 13 to 16. He computed Marine's latest 5-year average income as $203,000 and when he applied the four price-earnings ratios to this figure he obtained values which ranged between $2,639,000 to $3,248,000.

Donohue also used another method of valuation which could be characterized as capitalization of cash flow. Cash flow, as used by Donohue, was the earnings plus depreciation deductions. First, respondent's expert established the cash flow for Marine and the other six companies for each year from 1958 through 1967. He then established price-cash flow ratios for the six comparative companies by dividing their respective market prices *at the date of death* by the cash flow of each company for the latest year, for a 10-year period and for a 5-year period. The following is the result of these calculations:

	Latest Year Cash Flow	10-Year Average Cash Flow	5-Year Average Cash Flow
American Shipbuilding Co.	10.78	19.55	14.38
Campbell Machine Inc.	8.38	1 --	19.71
Levingston Shipbuilding Co.	4.87	10.72	7.97
Maryland Shipbuilding & Drydock Co.	5.62	7.09	8.71
St. Louis Shipbuilding-Federal Barge, Inc.	4.48	1 --	7.45
Todd Shipyards Corp.	5.17	11.61	8.61
Total	39.30	48.97	66.83
Averages -			
Arithmetic	6.55	12.24	11.14
Median	5.40	11.17	8.66

1 Information for 10-year averages not available.

Donohue again excluded American and Campbell and chose the 5-year average cash flow as most significant. He computed Marine's 5-year average cash flow as $391,000 and applied to this figure price-cash flow ratios between 7½ and 8½ thereby obtaining values which ranged between $2,933,000 and $3,324,000.

Finally, respondent's expert listed the following factors which were instrumental in his final determination of the value of the Marine stock:

(1) The interest valued was a controlling interest;

(2) The shipbuilding industry is highly competitive, thereby attaching a higher risk to investment;

(3) The general condition of the industry was good but a down-turn was predicted;

(4) Marine's earnings peaked in 1966 and

(5) Marine's net tangible asset value exclusive of investment real estate was $3.1 million;

(6) Long-term debt was relatively small;

(7) Executive salaries were understated; and

666 *666 (8) Marine compared favorably with other industry members.

Donohue concluded that the fair market value of the stock on the valuation date was $2,600,000.

We recognize that the valuation process is not an exact science. By placing this case before us, these parties are asking us to establish a true fair market value for the property on the valuation date. As we

have stated previously, this difficult task could have been better resolved through a discussion and bargaining process involving the acknowledged experts of both the petitioner and respondent whom we believe should be better equipped to reach a proper result. See *Estate of Maurice Gustave Heckscher, supra*. Nonetheless, since this unwelcomed onus has been placed upon this Court, we have, in the exercise of our "Solomon-like wisdom," *Morris T. Messing* [Dec. 28,532], 48 T.C. 502 (1967), arrived at our determination of fair market value, as reflected in our ultimate finding of fact, by weighing all of the facts and circumstances contained in the entire record.

Since Marine was an operating company, both experts accorded primary significance to Marine's earning capacity in valuing its stock. We agree with this approach in this case but since the two experts reached such diverse results with the same approach it is obvious that we, as well as knowledgeable investors, should analyze the variables in the expert's approaches and make our own determination as to how best to use the various factual elements that enter into the computation under the existing circumstances. We must also decide what other factors should be considered, and the weight to be given them, in our search for a realistic, though hypothetical, fair market value.

It appears from a comparison of the two approaches that the single factor which causes the largest divergence in the experts' results is the price to be used in determining the price-earnings ratio of the comparable companies. Donohue used the stock exchange price on the valuation date and applied it to the average earnings over the latest 5 years of the comparable companies to arrive at a multiple of 13 to 16 to be applied to the average of the latest 5 years' earnings of Marine. Morrissey, on the other hand, determined the average price of the comparable's stock for each year taken into consideration and applied those prices to the earnings of the comparables for each of those years to develop his price-earnings ratios. He then totaled these multiples and divided the total by the number of years considered to arrive at the price-earnings ratio he determined for each of the comparables. This reflected multiples of slightly above or below 5 for the various comparables and he decided that a multiple of 5 should be applied to the average of Marine's latest 3 years' earnings, and its latest year's earnings, to determine fair market value on the earnings approach.

We prefer Morrissey's method of arriving at the multiple to be used in determining the value of this stock. In times of wide speculation and resulting fluctuations in the stock market we are extremely doubtful that the price at which a stock is traded on the stock exchange on any particular day is a true reflection of what an investor would pay for the stock if he was looking primarily to the historical earnings of the corporation to determine a fair price. We believe such an investor would give more weight to price-earnings ratio of comparable stocks during each of the years under consideration in determining a multiple that he can apply to the historical earnings of a corporation whose stock he is buying to determine the price he would pay for that stock.

However, we cannot ignore entirely the multiples arrived at by Donohue. We think they are obviously too high for use with respect to a corporation engaged in a very competitive, high-risk, and volatile business. The greater the risk, the shorter the time an investor would be willing to count on to recover his investment out of a corporation's earnings, and the smaller the multiples he would use. We conclude that Donohue's multiples are too high despite the fact that he claims support for the value produced by their uses in his cash-flow analysis. We accept the fact that a cash-flow analysis may be a useful supplementary tool to be used by an appraiser or investor to determine whether there are factors in a corporation's financial condition not revealed by an analysis of earnings that would make him hesitate to accept the indicated value, but we do not believe the cash-flow analysis used by Donohue would be used per se by investors to determine value. We find ample support for this conclusion in Exh. 48 "Cash Flow" Analysis and the Funds Statement, by Perry Mason, introduced into evidence by petitioner but relied on by both parties on brief.

667 *667 Nevertheless, giving due weight to Donohue's appraisal and to other factors which we believe should be taken into consideration, we believe the multiple of 5 developed by Morrissey is too low.

In addition to the comparable companies and their respective price-earnings ratios, we believe the following factors would also be critical in the development of a proper multiple if the fair market value of Marine's stock is to be stated in terms of price-earnings ratios:

(1) The interest being valued is a 100-percent interest. This should add to the value of decedent's stock because of the unencumbered control it gives for determining what will be done with the business.

(2) The lease from the Port Authority was one of the most important assets of Marine and the existing lease was due to expire on January 31, 1969. There was no assurance at the time of decedent's death that this lease would be renewed; and it was recognized that, if renewed, Marine would be required to spend a considerable sum to upgrade the improvements on the property;

(3) At the valuation date, Marine was experiencing a strike, which began in June 1967 and ended after decedent's death;

(4) Decedent appears to have been the guiding genius of Marine and he apparently kept such tight reins on the business that neither of his sons could develop much interest in the business;

(5) Marine's operation was relatively small in comparison with other companies in the industry and its facilities were rather limited;

(6) Marine's adjusted book value at September 30, 1967, was $3,442,000.

We have concluded that based on all the available evidence a hypothetical buyer of decedent's stock in Marine at the time of decedent's death would be willing to pay 7 times the earning capacity of Marine.

There is also a difference in the experts' opinions of the earning capacity of Marine, but the difference is not so great as to cause us much concern. By taking the average of the latest 5 years of Marine's earnings, with no adjustments for salaries or interest, Donohue arrived at a figure of $203,000 as Marine's earning power. Strangely enough, Morrissey arrived at the higher figure of $248,000 as Marine's earning power despite adjusting its reported income downward for salaries and interest. This was because he concluded that the latest 9 months' earnings and the average of the latest 3 years' earnings would better reflect Marine's potential earnings in the future. We would take a middle position on this and use Marine's earnings over the latest 4 years as a guide to prognosticate the future earnings. A turnaround in Marine's profitability appears to have occurred in 1964 and despite the falloff in Marine's profits in 1967 when compared to 1966, the prospects of continued good business activity in the industry seem well founded. Giving special emphasis to its latest 4 years' earnings, but without simply relying on the mathematical average of those years, we conclude that a reasonable earning capacity for Marine to be used in arriving at a valuation figure through the capitalization of earnings would be $240,000. As stated by the Court of Claims in *Central Trust Company v. United States* [62-2 USTC ¶ 12,092] 305 F. 2d 393, 404:

> "Prior earnings records usually are the most reliable guide as to the future expectancy, but resort to arbitrary five-or-ten-year averages without regard to current trends or future prospects will not produce a realistic valuation. * * *"

By applying our multiple of 7 to this earning capacity we arrive at a figure of $1,680,000 which, in our best judgment, was the fair market value of decedent's stock of Marine at the time of his death.

In reaching our conclusion we have given little weight to petitioner's theory of capitalizing assumed dividend paying capacity because we do not believe it is relevant here. Marine paid no dividends until it became a subchapter S corporation and then it distributed all of its earnings. We have not overlooked the fact that Marine had a book value of $3,442,000 at September 30, 1967, but we deem it quite unlikely that such a value could have been realized if the company had been liquidated; furthermore, there was no indication in the evidence that there was any intent to liquidate the company at the time of decedent's death. Nor have we ignored completely the fact that Marine's assets were sold to Campbell for approximately $4,600,000 in 1972. However, this sale occurred about 5 years after decedent's death after Marine had obtained a renewal lease with options to extend it to 50 years, and after Marine had spent about $1,800,000 for improvements to the property. Furthermore, not much cash was received on the sale and the
668 sale took *668 place because of Campbell's special need of the facilities at that time, so we have given little weight to this factor.

Value of the Investment Real Estate

Our next task is to determine the fair market value at the date of decedent's death of the real property owned by Marine located at 201-251 West Broadway in San Diego, Calif.

Petitioner offered as evidence in support of its position that the value of the property was $800,000 the appraisal report and testimony of its expert, Emmett **J**. McKanna. McKanna had been commissioned by the General Services Administration in 1968 to render an opinion on the fair market value of eleven parcels of real estate, in-including subject property, in connection with a study of possible sites for a Federal building project. McKanna's appraisal report and opinion reflected a value as of September 15, 1968, approximately 1 year after decedent's death. McKanna employed the following three generally accepted approaches in valuing real property:

(1) The cost approach;

(2) The income approach, and

(3) The comparative market approach.

Using these approaches he arrived at a fair market value for the subject real estate of $850,000 as of September 15, 1968.

McKanna's appraisal report appears to be a well-documented study of the subject property. McKanna defined the highest and best use of land concept, which is an important ingredient in land valuations, as the most profitable, likely, and legal use to which the property is adapted and for which there is demand. In his report McKanna stated;

> Highest and best use of the property is considered to be a combination commercial and retail usage in line with the existing [*sic*] usages of the building. This estimate is made in light of the existing improvements and is in keeping with other usages of property in the neighborhood.

We will forego a detailed analysis of McKanna's methods of analysis because respondent's primary attack on McKanna's appraisal was disagreement with his conclusion as to the highest and best use of the property. Furthermore, McKanna's evidence was the only evidence offered which we would consider to be an expert's opinion of value.

Respondent's only evidence of value offered at the trial was the testimony of Harold Pierce, an estate and gift tax agent for the Internal Revenue Service who had prepared the report on which the Commissioner determined the fair market value of this property in his notice of deficiency. We do not question Pierce's qualifications as an expert real estate appraiser, but his testimony was limited to an explanation of how he arrived at the valuation figure used in his report, which was a mathematical calculation from what we consider to be unjustified assumptions based on hindsight. Pierce's report was prepared in late 1969 or 1970. He testified that he did not appraise this real estate "in the sense of making a formal appraisal report * * *" Pierce concluded that the property had a fair market value as of the date of decedent's death of $1,100,000. While respondent argues that Pierce concluded that the highest and best use of this property was for an office building, we believe it is clear from Pierce's testimony and his method of determining the value of this property that he concluded its highest and best use was for the Federal courthouse and office building that is presently being constructed on the property. By the time Pierce made his report the site for the Federal building had become fixed and Pierce apparently thought the project had been approved prior to decedent's death. The evidence is to the contrary; the project itself was not approved by Congress until May of 1968 and the site was not actually settled until sometime after that. There was no assurance on the valuation date that subject property would be used for a Federal office building and a valuation based on the assumption that it would be used for that purpose was neither justified nor well founded.

Pierce's assumption also led him to use a method for determining the value of this property which is questionable. While Pierce testified that he took into consideration sales of comparable properties he offered no evidence about the comparables he used. It appears that Pierce relied primarily on the transactions by which the Halls acquired the remainder of the property needed by the Federal government, exchanged it and subject property for the Warren tract which was owned by the government, and then sold the Warren tract to Swan Constructors, Inc., in November of 1969.

669 *669 The Halls acquired the remainder of the land needed by the government for a total of $675,000. After the exchange they sold the Warren tract for $2,300,000. Pierce subtracted the $675,000 and a $200,000 real estate commission paid by the Halls from the $2,300,000 sales price of the Warren tract and attributed the balance of $1,425,000 to the Broadway property originally owned by Marine. He then discounted that figure by about 6 percent for each of the years between the valuation date and the date of the sale to arrive at his value of $1,100,000 for the Broadway property as of the date of decedent's death. This is not an acceptable method for determining the fair market value of subject property as of the date of decedent's death and we can give it no weight.

We are thus left with McKanna's appraisal as the only reliable evidence of fair market value. His appraisal approach was sound and in accord with generally accepted appraisal methods and we have no reason to question the validity of the comparables he used. We accept his appraisal figure of $850,000 as the fair market value of the property as of September 24, 1967. Petitioner would have us discount this figure by 6 percent for the claimed increase in value of the property between the valuation date and McKanna's appraisal date. McKanna did not testify that a 6-percent discount should be applied to his valuation figure and we have no competent evidence that would justify a 6-percent discount.

Furthermore, we believe some consideration should have been given to the possibility that the property might be used for a Federal or other office building location. The property was well located in downtown San Diego and the building on the property was a one-story structure about 50 years old. We believe there was a likelihood that in a growing city like San Diego this property would be converted to a more profitable use than the commercial and retail use for which it was being used in September of 1967. Consideration of this factor would tend to raise the value even at the date of decedent's death. So we will not apply a discount to McKanna's appraised value but will accept it as the fair market value of subject property on the valuation date.

Adding the $850,000 value of the real estate to the $1,680,000 we have found as the value of the stock exclusive of the real estate, we conclude that the total value of decedent's stock in Marine at the date of his death was $2,530,000.

Decision will be entered under Rule 155.

[1] Some of this land was encumbered by leases but they were apparently eliminated prior to the ultimate exchange between decedent's heirs and the Federal government.

[2] All section references are to the Internal Revenue Code of 1954, as amended, unless otherwise stated.

[3] Parenthetically, we note that petitioner's expert studied five of the six corporations examined by respondent's expert, the only exception being St. Louis Shipbuilding — Federal Barge, Inc.; however, petitioner's expert excluded American Shipbuilding and Todd Shipyards Corp. as comparables.

T.C. Memo. 2002-121

UNITED STATES TAX COURT

ESTATE OF MORTON B. HARPER, DECEASED, MICHAEL A. HARPER, EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 19336-98. Filed May 15, 2002.

HFLP, a limited partnership, was established in 1994 and was capitalized by the contribution thereto by D of the majority of his assets. D was initially named as the sole limited partner and his children, M and L, were designated as general partners. D subsequently gave to M and L 24- and 36-percent limited partnership interests, respectively. At his death in 1995, D continued to hold a 39-percent limited partnership interest in HFLP.

Held: The property contributed by D to HFLP is includable in his gross estate pursuant to sec. 2036(a), I.R.C.

Held, further, value of the assets to be included in the gross estate determined.

Warren J. Kessler and Joan B. Kessler, for petitioner.

Donna F. Herbert and Jonathan H. Sloat, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

NIMS, Judge: Respondent determined, as a primary position, a Federal estate tax deficiency in the amount of $331,171 with respect to the estate of Morton B. Harper (the estate). In the alternative, respondent determined a Federal estate tax deficiency of $150,496 and a Federal gift tax deficiency of $180,675 for the 1994 calendar period. The principal issue for decision is the proper treatment for estate and gift tax purposes of interests in a limited partnership, some of which were transferred by Morton B. Harper (decedent) prior to his death, and another of which was held by decedent at his death.

Unless otherwise indicated, all section references are to sections of the Internal Revenue Code in effect during the relevant periods, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. The stipulations of the parties, with accompanying exhibits, are incorporated herein by this reference. Decedent was a resident of Palm Springs, California, when he died testate in Portland, Oregon, on February 1, 1995. No probate proceeding was ever

filed by or on behalf of the estate. Decedent is survived by his two children, Michael A. Harper (Michael) and Lynn H. Factor (Lynn). Decedent's wife, Ruth Harper, died in 1988. Michael serves as executor of the estate and provided a mailing address in Lake Oswego, Oregon, at the time the petition in this case was filed.

Decedent was born on September 1, 1908, in Cincinnati, Ohio. He later attended law school, graduating in 1931, and began practicing law in Chicago. His practice initially specialized in corporate and "political" law and subsequently expanded to include bankruptcy, tax, real estate, and wills and trusts law. After World War II, decedent and his family moved to California where decedent continued his legal practice, focusing in particular on the entertainment industry. Decedent was a member of the California bar from 1946 until his death. Decedent was diagnosed with prostate cancer in 1983 and with cancer of the rectum in 1989.

On December 18, 1990, decedent created a revocable living trust entitled the Morton B. Harper Trust (the Trust). The trust instrument designated decedent as the original trustee and as the initial primary beneficiary. The document further provided: "During the lifetime of the Trustor, the Trustee, in Trustee's sole discretion may pay or apply the net income and/or corpus, or so much as Trustee chooses, to or for the benefit of the

Trustor". Michael and Lynn were named as successor trustees and were to receive the trust assets upon decedent's death, with 60 percent thereof being distributed to Lynn and 40 percent to Michael. The percentages were based on perceived need; Michael has pursued a successful career in business as a real estate professional, while Lynn has been less consistent in fiscal matters.

At all relevant times, Lynn maintained a residence in Hawaii. On December 18, 1990, a complaint was filed by the Association of Apartment Owners of International Colony Club (AOAO) against Lynn in the Circuit Court of the Second Circuit, State of Hawaii. Lynn owned a home within the International Colony Club condominium project, and the AOAO was the condominium association overseeing that project. The complaint alleged that Lynn had engaged in unauthorized and illegal construction and renovation of her property and requested both injunctive and monetary relief. Subsequently, in November of 1992, the AOAO demanded arbitration of its claims. An arbitration award was then entered against Lynn in December of 1993 and required extensive reconstruction work as well as payment of fees, costs, and expenses.

Lynn and Michael testified that following entry of the above award, Lynn told Michael about her litigation versus the AOAO and the concomitant award, which Michael then communicated to

decedent. Thereafter, in approximately February of 1994, Michael and decedent met in California with John G. Coulter, Jr., an experienced real estate developer familiar with the Hawaii market. Michael had previously contacted Mr. Coulter, asking him to review documents relating to the Hawaii lawsuit and to offer his advice. After reviewing the documents and speaking to a gentleman involved in management of the condominium, Mr. Coulter expressed his concern that Lynn had gotten herself into "deep water"; that is, into a situation where "if she takes additional steps which could injure her further, her loss could go beyond the judgment". He also recommended that they evaluate her legal counsel and suggested that "they get involved with her in the management of her assets through a trust or some other form of involvement." Several weeks after the meeting, Michael accompanied Mr. Coulter to Hawaii for the purpose of being introduced to other potential representatives for Lynn. On March 23, 1994, the attorney who had represented Lynn in the AOAO proceeding filed a complaint against her alleging unpaid legal fees in the amount of $18,153.92.

At a time not entirely clear from the record, decedent made the decision to form a limited partnership and to contribute thereto the majority of his assets. An Agreement of Limited Partnership for Harper Financial Company, L.P. (HFLP), was prepared and sets forth the governing provisions for the entity.

The document begins with language stating that the Agreement was made "as of the 1st day of January, 1994", but later recites that the partnership shall commence its existence upon the date a certificate of limited partnership is duly filed with the California Secretary of State. The primary purpose for HFLP's formation, according to the Agreement, was as follows:

> The acquisition, including by purchase of, sale of, management of, holding, investing in and reinvesting in stocks (both common and preferred), options with respect thereto, bonds, mutual funds, debt instruments, money market funds, notes and deeds of trust and similar instruments and investments (the "Portfolio").

Michael and Lynn were named as the general partners of HFLP and the Trust as the sole limited partner, with interests of .4 percent, .6 percent, and 99 percent, respectively. Michael was also designated to serve as the managing general partner. As regards his authority, the Agreement provides:

> Subject to the provisions of Paragraph 7.3, the Managing General Partner shall have the full, exclusive and complete authority and discretion in the management and control of the business of the Partnership for the purposes stated herein and shall have the right to make any and all decisions affecting the business of the Partnership. Subject to the provisions of this Agreement, the Managing General Partner shall have full and exclusive authority with respect to the Portfolio, including rights of sale, reinvesting and voting. * * *

The referenced Paragraph 7.3 then specifies the following limitations:

> Notwithstanding the provisions of this Paragraph 7, neither General Partner shall have any right, power or authority to:

(a) Do any act in contravention of this Agreement, without first obtaining the written consent thereto of a "Majority in Interest of the Limited Partners" * * * [defined as limited partners holding more than 50 percent of the interest in the ordinary income of the partnership held by limited partners].

(b) Do any act * * * which would (i) make it impossible to carry on the ordinary business of the Partnership, or (ii) change the nature of the Partnership's business, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(c) Confess a judgment against the Partnership, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(d) Possess Partnership property, or assign the Partnership's right in such property, for other than a Partnership purpose without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(e) Admit a person as a limited partner, otherwise than as permitted by this Agreement, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(f) Elect to dissolve and wind up the Partnership, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(g) Sell or reinvest 5% or more of the Portfolio (based on their fair market value) in a single transaction or in a related series of transactions, other than in the ordinary course of business, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

(h) Issue or sell new interests in the Partnership (or admit new partners in connection therewith) or permit the contribution of new capital to

> the Partnership, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.
>
> (i) Enter into any transactions, other than those transactions contemplated by Paragraph 7, in which a General Partner has an actual or potential conflict of interest with the Trust or the Partnership, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.
>
> (j) Admit a person as a general partner, without first obtaining the written consent thereto, and to any related transactions with such person, of a Majority in Interest of the Limited Partners.
>
> (k) Amend this Agreement, without first obtaining the written consent thereto of a Majority in Interest of the Limited Partners.

In addition, Paragraph 12.5 provides explicitly that "The Trust is entitled to vote, prior to any such action being taken to" approve any of the above-enumerated actions.

Regarding capital accounts and contributions, the Agreement states that capital accounts were to be established and maintained in accordance with section 704(b) and the regulations promulgated pursuant thereto; namely, section 1.704-1(b)(2)(iv), Income Tax Regs. In general, Paragraph 10.2 of the document requires that profits and losses be allocated 0.6 percent, 0.4 percent, and 99 percent to the capital accounts of Lynn, Michael, and the Trust, respectively. The Agreement also sets forth the following with respect to contributions: "Concurrently with the execution of this Agreement (or as soon thereafter as is reasonably possible), the Trust shall make an initial capital

contribution to the Partnership consisting of the Portfolio. The General Partners shall have no obligation to make any contribution to the capital of the Partnership."

Although "the Portfolio" is not defined in the Agreement, there appears to be no dispute between the parties that it consisted of: (1) Securities held in a brokerage account at M.L. Stern & Co., Inc., (2) securities held in a Putnam Investments account, (3) securities held in two Franklin Fund accounts, (4) 2,500 shares of Rockefeller Center Properties, Inc., and (5) a $450,000 note receivable from Jack P. Marsh. The parties value these assets at between $1.6 and $1.7 million (rounded), an amount representing approximately 94 percent of decedent's total assets. The Trust's capital account in HFLP was credited with 99 percent of the value of the property contributed. Decedent retained, personally or through the Trust, his personal effects, a checking account, an automobile, and his Palm Springs condominium.

As regards distributions, Paragraph 11.1 of the Agreement states: "Subject to all of the provisions of this Agreement, funds of the Partnership from any source shall be distributed to the Partners at such times and in such amounts as are determined in the sole and absolute discretion of the Managing General Partner." Paragraph 11.2 then goes on to recite:

> Funds of the Partnership shall be distributed as follows:

> (a) First, to any Partner, the amount then due on any Advances [loans to the entity] * * *
>
> (b) Ordinary Net Cash Flow [revenues from dividends, interest, and other items of ordinary income in excess of ordinary and necessary operating expenses] shall be distributed 0.6% to Lynn, 0.4% to Michael and 99% to the Trust.
>
> (c) Extraordinary Net Cash Flow [revenues from capital gains in excess of capital losses, less consequent expenses] shall be distributed to the Partners with positive Capital Account balances, pro rata to the extent thereof.

The Agreement also specifies that "No distribution of funds of the Partnership shall be made until the allocations described in Paragraph 10 hereof [regarding the allocation of profits and losses to the partners' capital accounts] have first been made."

The Agreement prohibits transfer, sale, assignment, or encumbrance of a limited partnership interest without the consent of all partners. Any transfer attempted in violation of this restriction is declared by the Agreement to be null and void ab initio. Under provisions of the Agreement, the entity is to be dissolved upon the earlier of: (1) January 1, 2034; (2) the retirement, withdrawal, death, or insanity of any general partner or any other event or condition, other than removal, which results in a general partner's ceasing to be a general partner, unless (i) at the time there is at least one remaining general partner to continue the business of the partnership and such remaining general partner chooses to do so, or (ii) all partners agree in writing within 60 days thereof to continue the business

and, if necessary, to the admission of one or more general partners; (3) an election to dissolve the partnership made in writing by the general partners and the limited partners; or (4) the failure to elect a successor general partner within 60 days after the removal of the last general partner.

Although the Agreement contains no express provision regarding the removal of a general partner, it specifies that rights and duties of the partners are governed by the California Revised Limited Partnership Act except to the extent the Agreement states otherwise. This Act includes the following: "The limited partners shall have the right to vote on the removal of a general partner, and that action shall be effective without further action upon the vote or written consent of a majority in interest of all partners". Cal. Corp. Code sec. 15636(f)(2) (West 1991).

The Agreement was signed by decedent on behalf of the Trust, by Michael, and by Lynn. Although the signatures are undated, the document was executed by Michael in May or June of 1994. Lynn could not remember when she signed the Agreement and did not read it prior to signing. A certificate of limited partnership was filed on behalf of HFLP with the California Secretary of State on June 14, 1994.

From June 17 to June 20, 1994, decedent was hospitalized in Palm Springs. Medical records prepared at that time contain the explanation set forth below:

> This is one of multiple Desert Hospital admissions for this 85-year-old Caucasian who is well known to have metastatic colonic carcinoma and prostatic carcinoma and admitted at the present time for poor oral intake, poor fluid intake, dehydration and for further rehydration, close observation, nutrition support, etc.

After his release, decedent went to Oregon, where he resided until his death. He first stayed with Michael for approximately a month and then moved into a nearby Oregon retirement facility known as Carmen Oaks. Carmen Oaks served independent individuals and was not a nursing center.

Thereafter, by a document entitled Assignment of Partnership Interest and Amendment No. 1 to Agreement of Limited Partnership for Harper Financial Company, L.P., dated and made effective as of July 1, 1994, the Trust transferred to Michael and Lynn 60 percent of the Trust's partnership interest. As a result, Michael and Lynn became holders of 24- and 36-percent limited partnership interests, respectively, and were given corresponding percentages of the Trust's capital account balance. The limited partnership interests held by Michael and Lynn were designated as "Class B Limited Partnership Interest[s]" and were entitled to 60 percent of the income and loss of the entity, with 40 percent thereof going to Michael and 60 percent to Lynn.

The Amendment also reclassified the Trust's remaining 39-percent limited partnership interest as a "Class A Limited Partnership Interest" which was entitled to 39 percent of the entity's income and losses and to a "Guaranteed Payment" of "4.25% annually of its Capital Account balance on the Effective Date, payable quarterly no later than twenty (20) days after the close of any such calendar quarter (or sooner, if cash flow permits)." Decedent, as trustee of the Trust, Michael, and Lynn signed the document.

On July 26, 1994, decedent commenced the process of transferring the Trust's portfolio to the partnership, which process continued for approximately the next 4 months. On July 26, 1994, decedent executed as trustee an allonge endorsement assigning to HFLP the Trust's interest in the Marsh note. A collateral assignment of the Trust's interest in property securing the note was also signed on that date. Then, on August 28, 1994, a letter agreement confirming and/or finalizing the transfer was executed by or on behalf of Mr. Marsh, the Trust, and HFLP.

Next, a letter dated September 29, 1994, was sent by decedent to M.L. Stern & Co. confirming instructions for (1) the sale of all securities held in the Trust's account and (2) the use of the proceeds for the immediate repurchase of the same securities for an account established on behalf of the

partnership. Michael, as managing general partner, completed the requisite form opening a new account with M.L. Stern & Co. for the partnership. The form designated Michael as the "individual * * * authorized to enter orders on behalf of customer". Neil Hattem served as decedent's broker and subsequently as the broker on the HFLP account.

Letters dated September 30, 1994, were then sent by decedent to Putnam Investor Services and to Franklin Templeton requesting transfer of the respective Putnam and Franklin Fund accounts to HFLP. Lastly, by a letter dated November 22, 1994, decedent requested transfer of the Trust's stock in Rockefeller Center Properties to the partnership.

During this period, on September 23, 1994, Michael opened a checking account at Bank of America in the name of the partnership with a $200 deposit. Thereafter, the first activity in the account, other than the debiting of a monthly service charge, was a deposit on October 13, 1994, of $3,750 representing interest paid on the Marsh note. The check register maintained by Michael, in conjunction with his explanatory testimony, reflects checks written for the benefit of HFLP partners in 1994 and 1995, as follows:

Date	Lynn	Michael	Trust	Description and/or Purpose
11/9/94	$120			reimbursement of contribution to checking account opening deposit
11/9/94		$80		reimbursement of contribution to checking account opening deposit
11/9/94	4,200			distribution
11/9/94		2,800		distribution
11/9/94			$3,800	distribution
12/19/94	2,250			distribution
12/19/94		1,500		distribution
12/19/94			3,750	distribution
1/10/95	2,250			distribution
1/10/95		1,500		distribution
1/10/95			3,750	distribution
1/17/95			6,520	“additional distribution” to cover tax voucher
1/30/95			4,000	“additional distribution” to complete gift
5/30/95			5,000	“return of capital” for an estate expense
8/30/95			5,000	“return of capital” for an estate purpose
10/13/95			5,000	“capital return” for an estate expense
10/30/95			195,000	“return of capital” to cover estate taxes
11/15/95	7,200			distribution
11/15/95		4,800		distribution

The funds to make the $195,000 payment on October 30, 1995, were obtained through two deposit transactions. Proceeds in the amount of $135,000 from the liquidation of a money market account with M.L. Stern & Co. and in the amount of $60,000 from a reduction in principal on the Marsh note were placed into the bank account on October 30, 1995. Michael negotiated the $60,000 payment on the Marsh note in return for agreeing to extend the maturity date of the remaining principal balance.

Prior to establishment of the partnership account, amounts received with respect to securities contributed to HFLP were deposited in the Morton B. Harper Trust checking account.

In January of 1995, decedent entered hospice care in Oregon. Preceding that time, he had been hospitalized on three occasions, in late September, early October, and late November. He had also renewed his vehicle registration on September 23, 1994, and his driver's license was current at the time of his death. Decedent passed away on February 1, 1995.

Thereafter, in March or April of 1995, Michael engaged a certified public accountant, David S. Blankstein, to prepare financial books and tax returns for the partnership and also to prepare the income, gift, and estate tax returns due with respect to decedent. In furtherance of these objectives, Mr. Blankstein reviewed the partnership Agreement; the certificate of limited partnership; the Amendment; checking account records for the

partnership, the Trust, and decedent; M.L. Stern & Co. statements for the partnership and the Trust; Putnam Investments statements for the partnership and the Trust; Franklin Funds statements for the partnership and the Trust; the Rockefeller Center Properties stock certificate; and the Marsh note.

Mr. Blankstein set up a general ledger for HFLP to categorize and account for all transactions affecting partnership assets and income beginning June 14, 1994. Capital accounts were established for each partner, as well as ledger accounts to show distributions to partners, income received by the partnership on the various portfolio assets, proceeds from the sale of securities, and costs and charges incurred. In addition, an account labeled “Receivable from Trust” was created primarily to reflect amounts received by the Trust after June 14, 1994, that should properly have been received by the partnership. This account was presumably necessitated in large part by the delay in transferring title to the portfolio securities and in opening the partnership bank account. The balance in this account was then treated as a distribution to the Trust; no funds were actually transmitted between the two entities. Mr. Blankstein also conceded that several items which should have been attributed to the partnership were omitted.

A Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, and a Form 706, United States Estate (and

Generation-Skipping Transfer) Tax Return, were filed on behalf of decedent and were received by the Internal Revenue Service on October 16, 1995, and November 2, 1995, respectively. The gift tax return reported the .4-percent general and 24-percent limited partnership interests given to Michael and the .6-percent general and 36-percent limited partnership interests given to Lynn. The estate tax return included as part of decedent's gross estate the Trust's 39-percent limited partnership interest in HFLP.

Notices of deficiency were issued with respect to the above returns on October 21, 1998. As previously stated, respondent therein advanced a primary and an alternative position. Under the primary position, the full value of the assets held by HFLP was included in decedent's gross estate, and prior taxable gifts were reduced to $0, resulting in an estate tax deficiency of $331,171 and no deficiency in gift tax. Under the alternative position, respondent determined an estate tax deficiency of $150,496 and a gift tax deficiency of $180,675.

OPINION

I. Contentions of the Parties

The parties in this case disagree regarding how properly to treat the partnership interests transferred by decedent to his children during life and the interest included through the Trust in his estate at death. Respondent contends that the full fair market value of the assets contributed to HFLP is includable in

decedent's gross estate upon either of two alternative theories. Respondent argues that the partnership lacked economic substance and should thus be disregarded for transfer tax purposes or, alternatively, that section 2036(a) applies to include the value of the contributed property in decedent's gross estate due to decedent's retention of the economic benefit of the assets.

Furthermore, respondent maintains that even if the partnership is respected and section 2036(a) is found not to apply, the discounts claimed by the estate with respect to valuation of the subject partnership interests are excessive, unsupported, and should not be sustained. Respondent offers and relies upon the expert reports of John A. Thomson in connection with this latter argument.

Conversely, the estate emphasizes that HFLP was a duly organized and operating limited partnership established with the business purpose of protecting from Lynn's creditors the assets that Lynn would receive or inherit from decedent. Hence, according to the estate, the partnership must be recognized for tax purposes. Moreover, it is the estate's position that section 2036(a) has no application here because the Trust unconditionally transferred the portfolio assets to HFLP, the Trust received adequate and full consideration for the transfer in the form of a credit to its capital account, and there existed no express or implied agreement that decedent would retain a right to control

over or income generated by the contributed property. The estate thus contends that this controversy devolves to a valuation case where the property to be valued takes the form of partnership interests in HFLP and where the analysis provided by the estate's expert Clint Cronkite establishes a sound appraisal thereof.

II. Evidentiary Issues

As a preliminary matter, we address several evidentiary objections reserved by the parties in the stipulation of facts. The estate objected to the admission of Exhibit 27-J on grounds of authenticity, relevance, and prejudice. Exhibit 27-J is a facsimile of medical records for decedent requested by and sent to the Internal Revenue Service. The estate pointed out at trial that the lines within the document for the doctor's signature are blank. During the proceeding, respondent offered as Exhibit 53-R signed copies of key portions of the records. The estate agreed that no objection would be pressed as to the authenticity of Exhibit 53-R, at which time the document was admitted into evidence with the estate renewing objections as to relevance and prejudice. Given this posture, Exhibit 27-J is largely cumulative, and we sustain the estate's objection thereto. We also overrule any remaining objections to Exhibit 53-R.

The estate similarly objected to Exhibit 28-J on grounds of authenticity, relevance, and prejudice. This document is a letter to the Internal Revenue Service from one of decedent's

physicians, and the estate again cites concerns with the signature thereon. In light of these concerns and the fact that the letter does not appreciably add to the information reported in the admitted medical records, we sustain the estate's objection.

The estate's final objection in the stipulation was to the admission of Exhibit 29-J, a letter to Michael from decedent's doctor, on grounds of relevance and prejudice. These objections, however, were overruled at trial, and the document was taken into evidence.

Respondent in the stipulation objected to the admission of Exhibits 33-J through 37-J, which pertain to the Hawaii arbitration, on the ground of relevance. On reply brief, respondent expressly waived objection to these documents. Exhibits 33-J through 37-J are admitted into evidence.

Respondent also in the stipulation raised relevancy objections to Exhibits 41-J, 44-J, and 45-J. Since these documents (a photo of decedent taken in the 1950s and copies of various checks written for gifts and charitable contributions) all relate to periods prior to those at issue and do not bear in any meaningful way on matters considered herein, we sustain respondent's objections.

III. Inclusion in the Gross Estate--Section 2036

A. General Rules

As a general rule, section 2501 imposes a tax for each calendar year "on the transfer of property by gift" by any taxpayer, and section 2511(a) further clarifies that such tax "shall apply whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible". For purposes of determining whether a gift has been made, section 2512(b) provides: "Where property is transferred for less than an adequate and full consideration in money or money's worth, then the amount by which the value of the property exceeded the value of the consideration shall be deemed a gift". The tax is then computed based upon the statutorily defined "taxable gifts", which term is explicated in section 2503. Section 2503(a) states generally that taxable gifts means the total amount of gifts made during the calendar year, less specified deductions.

Similarly, the Internal Revenue Code imposes a Federal tax "on the transfer of the taxable estate of every decedent who is a citizen or resident of the United States." Sec. 2001(a). Such taxable estate, in turn, is defined as "the value of the gross estate", less applicable deductions. Sec. 2051. Section 2031(a)

specifies that the gross estate comprises "all property, real or personal, tangible or intangible, wherever situated", to the extent provided in sections 2033 through 2045.

Section 2033 broadly states that "The value of the gross estate shall include the value of all property to the extent of the interest therein of the decedent at the time of his death." Sections 2034 through 2045 then explicitly mandate inclusion of several more narrowly defined classes of assets. Among these specific sections is section 2036, which reads in pertinent part as follows:

> SEC. 2036. TRANSFERS WITH RETAINED LIFE ESTATE.
>
> (a) General Rule.--The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death--
>
> (1) the possession or enjoyment of, or the right to the income from, the property, or
>
> (2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

Regulations likewise explain that the gross estate under section 2036 includes the value of transferred property if the decedent

retained the "use, possession, right to the income, or other enjoyment of the transferred property". Sec. 20.2036-1(a)(i), Estate Tax Regs.

Given the language used in the above-quoted provisions, it has long been recognized that "The general purpose of this section is 'to include in a decedent's gross estate transfers that are essentially testamentary' in nature." Ray v. United States, 762 F.2d 1361, 1362 (9th Cir. 1985) (quoting United States v. Estate of Grace, 395 U.S. 316, 320 (1969)). Accordingly, courts have emphasized that the statute "describes a broad scheme of inclusion in the gross estate, not limited by the form of the transaction, but concerned with all inter vivos transfers where outright disposition of the property is delayed until the transferor's death." Guynn v. United States, 437 F.2d 1148, 1150 (4th Cir. 1971).

As used in section 2036(a)(1), the term "enjoyment" has been described as "synonymous with substantial present economic benefit." Estate of McNichol v. Commissioner, 265 F.2d 667, 671 (3d Cir. 1959), affg. 29 T.C. 1179 (1958); see also Estate of Reichardt v. Commissioner, 114 T.C. 144, 151 (2000). Moreover, possession or enjoyment of transferred property is retained for purposes of section 2036(a)(1) where there is an express or implied understanding to that effect among the parties at the time of the transfer, even if the retained interest is not

legally enforceable. Estate of Maxwell v. Commissioner, 3 F.3d 591, 593 (2d Cir. 1993), affg. 98 T.C. 594 (1992); Guynn v. United States, supra at 1150; Estate of Reichardt v. Commissioner, supra at 151; Estate of Rapelje v. Commissioner, 73 T.C. 82, 86 (1979). Regulations likewise provide that "An interest or right is treated as having been retained or reserved if at the time of the transfer there was an understanding, express or implied, that the interest or right would later be conferred." Sec. 20.2036-1(a), Estate Tax Regs.

The existence or nonexistence of such an understanding is determined from all of the facts and circumstances surrounding both the transfer itself and the subsequent use of the property. Estate of Reichardt v. Commissioner, supra at 151; Estate of Rapelje v. Commissioner, supra at 86. However, an exception to the treatment mandated by section 2036(a) exists where the facts establish "a bona fide sale for an adequate and full consideration in money or money's worth".

B. Burden of Proof

Typically, the burden of disproving the existence of an agreement regarding retained enjoyment has rested on the estate, and this burden has often been characterized as particularly onerous in intrafamily situations. Estate of Maxwell v. Commissioner, supra at 594; Estate of Reichardt v. Commissioner, supra at 151-152; Estate of Rapelje v. Commissioner, supra at 86.

With respect to the case at bar, however, respondent conceded on reply brief that the opposite burden applies here. The estate had asserted on opening brief that the burden of proof regarding nonvaluation issues shifted to respondent, to which contention respondent replied as follows:

> The respondent agrees that the lack of economic substance and I.R.C. § 2036 issues are new matters within the meaning of Tax Court Rule 142(a). As such, the petitioner correctly states that the respondent bears the burden of proof on these issues under Shea v. Commissioner, 112 T.C. 183 (1999). * * * [Fn. ref. omitted.]

For purposes of this litigation, we have accepted respondent's concession and have considered its role in our analysis. Nonetheless, after reviewing all of the evidence presented, we have found that our resolution does not depend on which party bears the burden of proof. Both parties adduced testimony and offered exhibits in support of their respective positions, and the evidence so introduced was not evenly balanced in favor of the competing alternatives. Accordingly, we have based our conclusions upon the preponderance of the evidence rather than upon an allocation of the burden of proof.

C. Existence of a Retained Interest

As previously indicated, section 2036 mandates inclusion in the gross estate of transferred property with respect to which the decedent retained, by express or implied agreement, possession, control, enjoyment, or the right to income. The

focus here is on whether there existed an implicit agreement that decedent would retain control or enjoyment, i.e., economic benefit, of the assets he transferred to HFLP.

Respondent avers that section 2036's applicability is established on these facts, emphasizing in particular actual conduct with respect to partnership funds. Respondent further maintains that this case is indistinguishable from the situations presented in Estate of Reichardt v. Commissioner, supra, and Estate of Schauerhamer v. Commissioner, T.C. Memo. 1997-242. The estate, on the other hand, discounts the evidence and cases relied on by respondent, emphasizing instead the formal terms of the partnership arrangement and the accounting treatment of entity assets.

In Estate of Reichardt v. Commissioner, supra at 147-148, the decedent formed a family limited partnership, the general partner of which was a revocable trust created on the same date. The decedent and his two children were named as cotrustees, but only the decedent performed any meaningful functions as trustee. Id. at 147, 152. He was the only trustee to sign the articles of limited partnership, to open brokerage accounts, or to sign partnership checks. Id. at 152. He transferred his residence and all of his other property (except for his car, personal effects, and a small amount of cash in his checking account) to the partnership and subsequently gave his two children limited

partnership interests. Id. at 148-149, 152-153. The decedent deposited partnership income in his personal account, used the partnership checking account as his personal account, and lived at his residence without paying rent to the partnership. Id. at 152. Based on these facts, we concluded that nothing but legal title changed in the decedent's relationship to his assets after he transferred them to the partnership. Id. at 152-153.

In Estate of Schauerhamer v. Commissioner, supra, the decedent formed three limited partnerships. The decedent and one of her three children were named as the general partners of each partnership, with the decedent's being designated as the managing partner. Id. The decedent transferred business assets, including real estate, partnership interests, and notes receivable, to the partnerships in undivided one-third shares. Id. Limited partnership interests in these entities were given to family members. Id. Partnership bank accounts were opened, but the decedent deposited the income earned by the partnerships into the account she used as her personal checking account, where it was commingled with funds from other sources. Id. Checks were then written from this account to pay both personal and partnership expenses. Id. The decedent's children later acknowledged at trial that formation of the partnerships was merely a way to enable the decedent to assign interests in the partnership assets to family members, with the assets to be

managed by the decedent exactly as in the past. Id. We therefore found the assets includable under section 2036(a). Id.

We agree with respondent that the circumstances before us bear many similarities to those in Estate of Reichardt v. Commissioner, 114 T.C. 144 (2000), and Estate of Schauerhamer v. Commissioner, supra, and are convinced that a like result should obtain. We focus particularly on the commingling of funds, the history of disproportionate distributions, and the testamentary characteristics of the arrangement in support of our conclusion that there existed an implied agreement that decedent would retain the economic benefit of the assets transferred to HFLP.

As regards commingling of funds, we note that this fact was one of the most heavily relied upon in both Estate of Reichardt v. Commissioner, supra at 152, and Estate of Schauerhamer v. Commissioner, supra. We find the disregard here for partnership form to be equally egregious. The Agreement specified: "All funds of the Partnership shall be deposited in a separate bank account or accounts". Yet no such account was even opened for HFLP until September 23, 1994, more than 3 months after the entity began its legal existence. Prior to that time, partnership income was deposited in the Trust's account, resulting in an unavoidable commingling of funds.

Michael testified concerning this delay as follows:

> Inadvertently, either my account or I failed to apply timely for any--an employee [sic] identification

> number. That is required before a checking account is open. So I just made the determination that without a checking account and I wanted the flow of cash, what we would do is use the Morton B. Harper Trust account as a holding account, and then I instructed the accountant to properly credit and account for those funds. * * *

This explanation, however, seems to beg the question. Had Michael sought promptly upon HFLP's creation to establish a bank account, he would have been immediately alerted to the need for an EIN. Hence, he either neglected to attempt opening and/or using an account or allowed the lack of an EIN to continue for several months after having been reminded of its necessity. Both reflect at best a less than orderly approach to the formal partnership structure so pressed by the estate.

Moreover, we find Michael's reliance on post mortem accounting manipulations to be especially unavailing. Michael and Mr. Blankstein, HFLP's accountant, each testified that no moneys actually changed hands in connection with the adjustments. In response to similar contentions in Estate of Reichardt v. Commissioner, supra at 154-155, we stated:

> The 1993 yearend and 1994 post mortem adjusting entries made by Hannah's firm were a belated attempt to undo decedent's commingling of partnership and personal accounts. There is no evidence that the partnership or decedent transferred any funds to the other as a result of the adjusting entries. After-the-fact paperwork by decedent's C.P.A. does not refute that decedent and his children had agreed that decedent could continue to use and control the property during his life. [Fn. ref. omitted.]

Here Michael did not even hire Mr. Blankstein until after decedent's death, strengthening the inference that the partners had little concern for establishing any precise demarcation between partnership and other funds during decedent's life.

Closely related to the delay in opening the partnership bank account and consequent commingling of income is the delay in formally transferring the underlying portfolio assets to HFLP. No attempt was made to begin the process of title transfer until July 26, 1994, when decedent executed an allonge endorsement assigning the Marsh note to HFLP. No action was taken with respect to any of the other securities until September 29 and 30, 1994, when letters addressing transfer of the M.L. Stern & Co., Putnam, and Franklin accounts were drafted and an account with M.L. Stern & Co. was opened on behalf of HFLP. A letter requesting transfer of the Rockefeller Center Properties stock was not prepared until November 22, 1994.

When Michael was asked on cross-examination to explain this delay between the effective date of the partnership and the formal transfer of assets into the entity, he replied: "Probably for different reasons, some mechanical delays and who we're dealing with, but generally, there was no rush to do it. We were just doing it in an orderly fashion." Next, in response to a further question asking why there was no rush, he continued: "There was no rush. I mean, we were just handling the business

in an orderly fashion. There wasn't any deadline or urgency to do it and get it done." The following colloquy then ensued:

> Q Now let's talk for a moment about the income from the portfolio assets. Before the title to the assets was transferred to the partnership, your father or his trust continued to receive the income from those assets. Isn't that right?
>
> A Would you restate that? I'm lost.
>
> Q Okay. At a certain point in time the assets were contributed to the partnership, correct?
>
> A Yes.
>
> Q Okay. Before that happened, your father's trust continued to receive the income from those assets, correct?
>
> A Probably.
>
> Q Well, why isn't it Yes?
>
> A Well, before he contributed it, he was in control of that. Who else would get it? I say probably.

Hence, we are again met with an example of indifference by those involved toward the formal structure of the partnership arrangement and, as a corollary, toward the degree of separation that the Agreement facially purports to establish. Moreover, until title to the assets was transferred to HFLP, decedent would not have forfeited the control over the underlying securities that he through the Trust possessed as legal holder. Thus, at the time of the June 14, 1994, creation of HFLP and for some months following, decedent's Trust retained title to the underlying assets and was issued the dividends and interest

generated thereby. In addition, according to Michael's own testimony, the partners were in no hurry to alter this state of affairs. This speaks volumes concerning how little the partners understood to have changed in decedent's relationship to his assets as a result of the entity's formation.

Turning to facts regarding distribution of partnership funds, we find equally compelling indicia of an implied understanding or agreement that the partnership arrangement would not curtail decedent's ability to enjoy the economic benefit of assets contributed to HFLP. In addition to the deemed distributions engendered by the commingling discussed above, even the distributions made by Michael from the partnership checking account are heavily weighted in favor of decedent. The check register indicates that during the period extending from September of 1994 through early November 1995, partnership funds were distributed for the benefit of Michael and Lynn in the amounts of $5,800 and $8,700, respectively. These distributions occurred on November 9, 1994, December 19, 1994, and January 10, 1995. During that same time frame, partnership checks totaling $231,820, were remitted to the Trust, with the last being written on October 30, 1995. Only then did distributions to Michael and Lynn resume with checks drawn on November 15, 1995, in the amounts of $4,800 and $7,200, respectively. Given this pattern, we would be hard pressed to conclude other than that the

partnership arrangement did little to curtail the access of decedent or his estate to the economic benefit of the contributed property.

Similarly significant is the evidence that certain of the distributions to the Trust were linked to a contemporaneous expense of decedent personally or of his estate. These amounts, variously labeled by Michael "additional distribution", "return of capital", or "capital return", totaled $220,520 and even included $4,000 to enable decedent to complete a gift 2 days before he died. This evidence buttresses the inference that decedent and his estate had ready access to partnership cash when needed.

On the issue of distributions, the estate repeatedly intones, in mantralike fashion: "The managing general partner's right to make distributions was unlimited and could be made 'at such times and in such amounts as are determined in the sole and absolute discretion of the Managing General Partner.'" Once again, however, this point begs the question. The more salient feature is not that Michael did or did not have authority to make the distributions but that he frequently used his position to place partnership funds at the Trust's disposal in response to personal or estate needs. No other partner was afforded the same luxury of "additional" distributions or capital returns.

Furthermore, the fact that the contemporaneous check register labels various disbursements to the Trust a "return of capital", regardless of whether such are proper under the Agreement and/or should be otherwise classified, also supports the clear implication that Michael understood decedent's capital could and would be made available to him if necessary. Additionally, Michael even liquidated an M.L. Stern & Co. money market account and renegotiated the Marsh note in order to obtain the requisite cash to enable the Trust to pay decedent's estate taxes. These facets, in turn, provide strong evidence of an implied agreement under which decedent did not divest himself economically of the contributed assets.

The estate also argues that the distributions to the Trust were consistent with the guaranteed payment obligation. Nonetheless, without regard once again to the veracity of this allegation, we find it of little import in our analysis. The record supports a conclusion that in making the payments Michael was motivated by concern not with meeting HFLP's guaranteed payment obligation but rather with facilitating underlying partner expenditures. Michael testified as follows on this subject:

> Q Did you regularly pay the guaranteed payments to your father during 1994?
>
> A Payments were made, yes.
>
> Q Were they made regularly?

A I don't know what you mean by "regularly."

Q Were they made as provided for in the partnership agreement?

A To the best of my ability, yes.

Q Were you aware that the partnership agreement called for them to be paid quarterly?

A Not specifically, no.

Q You recall how often you made guaranteed payments to him?

A I took the approach that I would look at receivables, and distributions were entirely within my control, and if the dollars were sitting there, I would possibly make distributions. It could have been as often as monthly; I don't recall, as I sit here.

Q How did you compute the amount of the guaranteed payments?

A I don't understand. What do you mean, how did I compute it?

Q How did--how did you compute the amounts that you paid? Did you compute them? I mean, they were 4.25 percent of the portfolio, right?

A Oh, I don't know if I did it--

Q Of the capital--I'm sorry; I stand corrected. The capital account. They were supposed to be 4.25 percent of the capital account.

A That's my--that's my understanding, yes.

Q Did you make computations when you made those guaranteed payments?

A It seems to me I did, yes.

Q Did you do them in writing?

A Well, I did them, and then I asked the accountant to double-check me on all of them--

Q When?

A --because I'm not an accountant.

Q When did you ask him to double-check you on that?

A Regularly.

The foregoing exchange solidifies our belief that moneys were not remitted to the Trust in a calculated effort to comply with the 4.25-percent entitlement. The vague nature of the testimony makes clear that the guaranteed payment averments are nothing more than an attempted after-the-fact justification for Michael's actions.

In addition, given that Mr. Blankstein was not engaged until March or April of 1995, after decedent's death, his help was unavailable to Michael for purposes of any of the 1994 or early 1995 distributions, a circumstance which apparently did not deter Michael from proceeding despite his admitted lack of accounting expertise. There are also questions with regard to whether profit and loss allocations called for by the Agreement should have been made prior to any distribution of funds. In any event, we are satisfied that respect for the Agreement was not the catalyst for the disproportionate distributions made to the Trust.

We are equally unimpressed by the estate's references to the fiduciary capacity in which Michael purportedly acted as managing general partner. The estate claims: "Michael, as the managing

general partner, is a fiduciary and must act on behalf of the Partnership and all of its partners and cannot favor any one of them over any other of them. He cannot make distributions to one partner without making distributions to all partners and did not do so." The record, on the other hand, shows a consistent pattern of acting in response to particular needs of decedent or his estate. We simply are unable to agree that Michael was acting in these instances first and foremost for the good of HFLP and not primarily as the son of his father.

Lastly, we focus on testamentary characteristics of the partnership arrangement. According to the estate:

> It is clear from the record that the organization of the Partnership and the contribution by the Trust of the Portfolio to the Partnership's capital was not "testamentary." No part of such transaction was intended to be effective at the time of Morton's death. The terms and conditions of the Partnership Agreement and the funding of the Portfolio were complete and unconditional and changed the relationship of the parties to the Portfolio assets. * * *

While we acknowledge that HFLP did come into existence prior to decedent's death and that some change ensued in the formal relationship of those involved to the assets, we are satisfied that any practical effect during decedent's life was minimal. Rather, the partnership served primarily as an alternate vehicle through which decedent would provide for his children at his death.

As previously discussed, decedent continued to be the principal economic beneficiary of the contributed property after HFLP's creation. The few minor distributions made to Michael and Lynn, which tellingly ceased throughout the entire period that funds were being disbursed for final gifts and estate expenses, hardly evidence a meaningful economic stake in the assets during decedent's life. Michael's technical control over management and distributions is likewise of little import. Although there was testimony that Michael reinvested proceeds of maturing bonds, and he presumably collected interest and dividends paid on securities held in HFLP's name, these activities are more akin to passively administrating than to actively managing the contributed portfolio. From the documents in the record, it appears that the composition of the portfolio changed little prior to decedent's death. We also note that a significant percentage of the portfolio consisted of professionally managed bond funds.

Given the above, we place little weight on averments concerning change, during decedent's life, in the partners' relationships to the contributed property. In addition, we believe that our conclusions in this regard are corroborated by the alleged reason advanced at trial and on brief for establishment of the partnership. The estate contends:

> Morton's primary reason for transferring the Portfolio to the Partnership was to create an arrangement that would protect from Lynn's creditors, the assets that Lynn would receive or inherit from Morton. * * *
>
> * * * * * * *
>
> Once Morton learned of the [arbitration] award and its seriousness, he knew that he needed to address his concerns about Lynn's handling of her finances in a different manner than that provided in the Trust. Pursuant to Article V of the Trust agreement, on Morton's death, Lynn' [sic] share would be distributed to her outright. Following such distribution, Lynn would have the responsibility to manage her assets and Lynn's creditors could reach them without restriction or limitation. This was unacceptable to Morton.
>
> * * * * * * *
>
> Therefore, by placing Michael in charge of the Partnership and providing by gift and on Morton's death that all but a fraction of Lynn's interest would be held as a limited partner, Morton addressed his concerns about Lynn. Lynn's creditors would be inhibited due to the legal limitations of collecting a judgment from a limited partner's interest. [Citations omitted.]

The emphasis of this discussion is patently post mortem as opposed to inter vivos. Hence, not only the objective evidence concerning HFLP's history but also the subjective motivation underlying the entity's creation support an inference that the arrangement was primarily testamentary in nature. The objective record belies any significant predeath change, particularly from the standpoint of economic benefit, in the partners' relationship to the assets. Likewise, the subjective impetus prompting

decedent to form HFLP centered on what would happen to his property after death. He wanted to protect what Lynn would receive from him, not what she currently possessed.

Other facets of the entity's establishment are similarly consistent with a testamentary arrangement. In particular, the largely unilateral nature of the formation, the extent and type of the assets contributed thereto, and decedent's personal situation are indicative. Michael testified that decedent made all decisions regarding the creation and structure of the partnership. During cross-examination he stated: "We really didn't discuss anything. He told me what he wanted to do and he explained why, and I accepted the assignment." Later, when asked why the guaranteed payment clause was added to the HFLP Agreement, Michael replied: "The same reason every provision was put in the agreement. * * * Specifically, because that's what he wanted." Such statements are far more consistent with a description of one man's estate plan than with any sort of arm's-length transaction or joint enterprise between partners.

The fact that the contributed property constituted the majority of decedent's assets, including nearly all of his investments, is also not at odds with what one would expect to be the prime concern of an estate plan. We additionally take note of decedent's advanced age, serious health conditions, and experience as an attorney.

In summary, we are satisfied that HFLP was created principally as an alternate testamentary vehicle to the Trust. Taking this feature in light of all that is discussed above, we conclude that decedent retained enjoyment of the contributed property within the meaning of section 2036(a).

D. Existence of Consideration

Having decided that decedent retained enjoyment of the transferred assets for purposes of section 2036(a), we turn to the question whether the statute's application may nonetheless be avoided on the basis of the parenthetical exception for "a bona fide sale for an adequate and full consideration in money or money's worth". The estate contends:

> The primary reason why I.R.C. §2036 does not apply to Petitioner is that the Trust's transfer of the Portfolio to the Partnership in exchange for a credit to its capital account for 99% of the fair market value of the Portfolio assets and a 99% interest in profits and losses is a "bona fide sale for an adequate and full consideration in money or money's worth." * * *

We, however, disagree on the ground that the estate's position fails to take into account significant aspects of the jurisprudence addressing this exclusionary language. The phrase, as used in a predecessor statute, was explained in early caselaw of this Court, as follows:

> Accordingly, the exemption from tax is limited to those transfers of property where the transferor or donor has received benefit in full consideration in a genuine arm's length transaction; and the exemption is not to be allowed in a case where there is only contractual

> consideration but not "adequate and full consideration in money or money's worth." * * * [Estate of Goetchius v. Commissioner, 17 T.C. 495, 503 (1951).]

It has similarly been stated in construing the "bona fide sale" terminology: "The word 'sale' means an exchange resulting from a bargain". Mollenberg's Estate v. Commissioner, 173 F.2d 698, 701 (2d Cir. 1949). The foregoing interpretations have subsequently been cited with approval in related contexts by both this and other Federal courts. See, e.g., Bank of N.Y. v. United States, 526 F.2d 1012, 1016-1017 & n.6 (3d Cir. 1975) (noting that "the statutory basis for requiring an arm's length bargain would seem to be the requirement of a 'bona fide' contract"); Estate of Morse v. Commissioner, 69 T.C. 408, 418 (1977) (observing that judicial decisions refer to a bona fide contract "as an arm's-length transaction or a bargained-for exchange"), affd. 625 F.2d 133 (6th Cir. 1980); Estate of Musgrove v. United States, 33 Fed. Cl. 657, 663-664 (1995). From the above language it can be inferred that applicability of the exception rests on two requirements: (1) A bona fide sale, meaning an arm's-length transaction, and (2) adequate and full consideration.

On the facts before us, HFLP's formation at a minimum falls short of meeting the bona fide sale requirement. Decedent, independently of any other anticipated interest-holder, determined how HFLP was to be structured and operated, decided

what property would be contributed to capitalize the entity, and declared what interest the Trust would receive therein. He essentially stood on both sides of the transaction and conducted the partnership's formation in absence of any bargaining or negotiating whatsoever. It would be an oxymoron to say that one can engage in an arm's-length transaction with oneself, and we simply are unable to find any other independent party involved in the creation of HFLP.

Furthermore, lack of a bona fide sale aside, we believe that to call what occurred here a transfer for consideration within the meaning of section 2036(a), much less a transfer for an adequate and full consideration, would stretch the exception far beyond its intended scope. In actuality, all decedent did was to change the form in which he held his beneficial interest in the contributed property. We see little practical difference in whether the Trust held the property directly or as a 99-percent partner (and entitled to a commensurate 99-percent share of profits) in a partnership holding the property. Essentially, the value of the partnership interest the Trust received derived solely from the assets the Trust had just contributed. Without any change whatsoever in the underlying pool of assets or prospect for profit, as, for example, where others make contributions of property or services in the interest of true joint ownership or enterprise, there exists nothing but a

circuitous "recycling" of value. We are satisfied that such instances of pure recycling do not rise to the level of a payment of consideration. To hold otherwise would open section 2036 to a myriad of abuses engendered by unilateral paper transformations.

We note that the foregoing interpretation is supported by our holdings in both Estate of Reichardt v. Commissioner, 114 T.C. 144 (2000), and, by implication, Estate of Schauerhamer v. Commissioner, T.C. Memo. 1997-242. In Estate of Reichardt v. Commissioner, supra at 155-156, the taxpayer contended that the parenthetical exception should apply. We, however, rejected this argument, observing that neither did the decedent's children give anything to him or to the partnership at the time he contributed his assets nor did he sell the transferred property to the entity. Id. In Estate of Schauerhamer v. Commissioner, supra, the contributed assets were included in the decedent's gross estate under section 2036(a) without discussion of the exception, leading to the inference that it would not apply in such circumstances.

We further are convinced that the cases cited by the estate do not require a contrary conclusion. The estate points in particular to Estate of Jones v. Commissioner, 116 T.C. 121 (2001); Estate of Strangi v. Commissioner, 115 T.C. 478 (2000); Shepherd v. Commissioner, 115 T.C. 376 (2000), affd. 283 F.3d 1258 (11th Cir. 2002); Estate of Harrison v. Commissioner, T.C.

Memo. 1987-8; and Church v. United States, 85 AFTR 2d 2000-804, 2000-1 USTC par. 60,369 (W.D. Tex. 2000), affd. without published opinion 268 F.3d 1063 (5th Cir. 2001). The estate apparently argues that the just-cited cases establish that a proportionate partnership interest constitutes per se adequate and full consideration for contributed assets. We believe, however, that any such global formulation would overreach what can be drawn from the decisions.

First, with respect to Estate of Jones v. Commissioner, supra, Estate of Strangi v. Commissioner, supra, and Shepherd v. Commissioner, supra, none of these opinions involved section 2036. Rather, they considered whether gifts were made at the inception of family limited partnership arrangements. Estate of Jones v. Commissioner, supra at 127-128; Estate of Strangi v. Commissioner, supra at 489-490; Shepherd v. Commissioner, supra at 384-389. The cases therefore do not control interpretation of the requirements of section 2036. Furthermore, while section 2512(b) describes a gift as a transfer of property "for less than an adequate and full consideration in money or money's worth", there exists an equally fundamental principle that a gift requires a donee--some other individual must be enriched. In this connection, we note that Estate of Jones v. Commissioner, supra at 127-128, and Estate of Strangi v. Commissioner, supra at 489-490, which find no gift at inception, say nothing explicit

about adequate and full consideration but do refer to enhancement, or lack thereof, of other partners' interests. Hence, even if relevant here, we would be unable to conclude that these rulings resolve the question of whether a proportionate entity interest, in and of itself, constitutes adequate and full consideration for contributed assets.

Second, although Estate of Harrison v. Commissioner, supra, and Church v. United States, supra, do address section 2036, there exist significant differences between these cases, on the one hand, and Estate of Reichardt v. Commissioner, supra, and Estate of Schauerhamer v. Commissioner, supra, on the other, which distinguish the two groups. In both Estate of Harrison v. Commissioner, supra, and Church v. United States, supra, the other partners made contributions at the formation of the entity which were not de minimis in nature. The partnership entity thus served as the vehicle for a genuine pooling of interests. The court in each case then went on to conclude that the partnerships had been created for a business purpose. Estate of Harrison v. Commissioner, supra; Church v. United States, supra.

Accordingly, it is not unreasonable to assume that a genuine pooling for business purposes injects something different into the adequate and full consideration calculus than does mere, unilateral value "recycling" as seen in Estate of Reichardt v. Commissioner, supra, Estate of Schauerhamer v. Commissioner,

supra, and the present matter. In the former situation, there is at least the potential that intangibles stemming from a pooling for joint enterprise might support a ruling of adequate and full consideration. We also note that section 25.2512-8, Gift Tax Regs., specifies that transfers "made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent), will be considered as made for an adequate and full consideration in money or money's worth."

We therefore hold that where a transaction involves only the genre of value "recycling" described above and does not appear to be motivated primarily by legitimate business concerns, no transfer for consideration within the meaning of section 2036(a) has taken place. Hence, the exception provided in that statute is inapplicable. Furthermore, although section 2043 can entitle taxpayers to an offset for partial consideration in cases where a transfer is otherwise subject to section 2036, this section, too, is inapplicable where, as here, there has been only a recycling of value and not a transfer for consideration.

E. Conclusion

We conclude that the property contributed by decedent to HFLP is included in his gross estate pursuant to section 2036(a). We further note that, given the foregoing conclusion, we need not reach respondent's additional argument for includability, which argument is premised on disregard of the partnership for lack of

economic substance, a judicial doctrine. Likewise, we need not address respondent's contentions with respect to gift tax liability, as those determinations were made in the alternative to full inclusion based on either section 2036(a) or the economic substance doctrine. Accordingly, we now turn to valuation of the assets to be included in the gross estate.

IV. Valuation

A. Introduction and General Rules

Given our resolution above, the valuation inquiry with which we are concerned is the value on February 1, 1995, decedent's date of death, of the property previously transferred by decedent to the partnership. In other words, we must ascertain the value of HFLP's underlying portfolio assets, without regard to any claimed discounts attributable to the partnership form.

As used in transfer tax statutes, value denotes fair market value, meaning "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." Sec. 20.2031-1(b), Estate Tax Regs. Both parties submitted expert reports in support of their contentions regarding the fair market value of all property held by the partnership, referred to as HFLP's net asset value. Clint

Cronkite, CA, ASA, prepared reports on behalf of the estate,[1] and John A. Thomson, ASA, MAI, prepared reports on behalf of respondent. We evaluate expert testimony in light of all evidence contained in the record and may accept or reject the proffered opinions, in whole or in part, according to our own judgement. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Shepherd v. Commissioner, 115 T.C. at 390. In particular, "'The persuasiveness of an expert's opinion depends largely upon the disclosed facts on which it is based.'" Shepherd v. Commissioner, supra at 390 (quoting Estate of Davis v. Commissioner, 110 T.C. 530, 538 (1998)).

The respective appraisals by Mr. Cronkite and Mr. Thomson of HFLP's net asset value are summarized below:

ASSET	Mr. Cronkite	Mr. Thomson
Cash	$2,517	$2,517
Marketable Securities (M.L. Stern & Co. Account)	832,299	832,299
California Tax-Free Income Fund (M.L. Stern & Co. Account)	63,817	63,817
Franklin AGE High Income Fund	69,130	69,130
Franklin California Tax-Free Fund	249,979	249,979
Putnam American Government Income Fund	71,017	71,017

[1] The report submitted on behalf of the estate valuing HFLP as of February 1, 1995, contains a certification signed by both Mr. Cronkite and Helena Nam Reich, ASA. However, because it is Mr. Cronkite who testified at trial, whom both parties refer to as petitioner's expert, and whose qualifications have been stipulated by the parties, we adopt a similar convention of referring solely to Mr. Cronkite.

Rockefeller Center Properties, Inc. - Common	14,375	14,375
Note Receivable (Marsh note)	300,000	405,000
NET ASSET VALUE	$1,603,134	$1,708,134

As can be seen from the foregoing table, the only difference reflected in the net asset value analyses of the parties' experts lies in their valuation of the Marsh note.[2] This level of agreement is logical in light of the fact that the remaining assets, in addition to cash, consisted of marketable securities and mutual funds. Before proceeding to address the Marsh note specifically, however, we deal with a question that has arisen concerning burden of proof.

B. Burden of Proof

The estate's opening brief contains the statement that "the only matter as to which Petitioner bore the burden of proof was the determination of fair market value." Respondent's opening brief refers to the estate's failing to satisfy its burden but also includes the following remark: "Even if respondent had the burden with respect to the valuation of the property, the evidence produced by respondent clearly satisfies any such burden. See Estate of Mitchell v. Commissioner, 250 F.3d 696

[2] Although one of the summary tables contained in Mr. Thomson's report states a value of $69,310 for the Franklin AGE High Income Fund, the $69,130 figure is used elsewhere in the report and is necessary to derive the oft-repeated total of $1,708,134. We conclude that the $69,310 amount should be disregarded as a transcription error.

(9th Cir. 2001) [affg. in part and vacating and remanding in part T.C. Memo. 1997-461]." The estate's reply brief then focuses on the foregoing citation to Estate of Mitchell v. Commissioner, supra, in arguing that respondent does in fact bear the burden of proof in this situation.

The Court of Appeals for the Ninth Circuit, to which appeal in this case would normally lie, has addressed the issue of burden of proof in valuation cases in a series of three recent decisions. Estate of Mitchell v. Commissioner, supra; Estate of Simplot v. Commissioner, 249 F.3d 1191 (9th Cir. 2001), revg. and remanding 112 T.C. 130 (1999); Morrissey v. Commissioner, 243 F.3d 1145 (9th Cir. 2001), revg. and remanding Estate of Kaufman v. Commissioner, T.C. Memo. 1999-119. In each of these cases, the Commissioner determined an estate tax deficiency based upon an increase in the fair market value, over that claimed on the tax return, of shares in a closely held corporation. Estate of Mitchell v. Commissioner, supra at 698-699; Estate of Simplot v. Commissioner, supra at 1193; Morrissey v. Commissioner, supra at 1147. Subsequently, the Commissioner submitted for trial expert reports opining, and/or the Commissioner conceded, that the value of the subject stock was less than that asserted in the statutory notice. Estate of Mitchell v. Commissioner, supra at 702; Estate of Simplot v. Commissioner, supra at 1193-1194; Morrissey v. Commissioner, supra at 1147. Confronting this scenario, the

Court of Appeals in each instance indicated that the deviation in the Commissioner's litigation posture from the valuation stated in the notice resulted in a forfeiture of any presumption of correctness and/or a placing of the burden of proof on the Commissioner. Estate of Mitchell v. Commissioner, supra at 702; Estate of Simplot v. Commissioner, supra at 1193; Morrissey v. Commissioner, supra at 1148-1149.

Under the rule of Golsen v. Commissioner, 54 T.C. 742, 757 (1970), affd. 445 F.2d 985 (10th Cir. 1971), this Court will "follow a Court of Appeals decision which is squarely in point where appeal from our decision lies to that Court of Appeals". We also acknowledge that the notice of deficiency issued with respect to decedent's estate tax placed a value of $1,750,000 on decedent's interest in the assets held by HFLP, while the expert report and posttrial briefs submitted by respondent advocate a value of $1,708,134. Nonetheless, the record in this case is such that our conclusion would be the same regardless of any presumption of correctness or the falling of the burden of proof. We therefore need not further probe the implications here of the above-described decisions by the Court of Appeals for the Ninth Circuit and shall base our ruling on the preponderance of the evidence.

C. Value of Marsh Note

The subject note, with principal amount of $450,000, was issued on April 15, 1991. Jack P. Marsh was the maker, and the Trust was the payee. The original due date was April 14, 1992, and the original interest rate borne by the note was 10.75 percent. As of decedent's date of death, the note had been renewed annually for 1-year extensions, the interest rate had been reduced to 10 percent, and payments of interest were current.

The Marsh note was secured by collateral in the form of a 45-percent interest in a $1 million note, which note in turn was secured by a deed of trust on Carson Harbor Village, a mobile home park. Jack P. Marsh was the payee of the $1 million note and beneficiary of the deed of trust, and Carson Harbor Village, Ltd., was the payor and trustor. Carson Harbor Village, Ltd., was a limited partnership of which Goldstein Properties, Inc., was the general partner. James F. Goldstein, as president of Goldstein Properties, signed the $1 million note and related deed of trust on behalf of Carson Harbor Village, Ltd.

i. Mr. Cronkite's Report

Mr. Cronkite, at the outset of his report, states the terms of the Marsh note and indicates that it is secured by a collateral interest in the aforementioned note secured by deed of trust. He continues: "In addition to this note, there is a

first trust deed in the amount of approximately $10-$11 million." In estimating the fair market value of the Marsh note, Mr. Cronkite utilized two approaches: (1) An income approach, discounting future interest income to present value at its required yield; and (2) a market approach, discussing the loan with Mr. Marsh, an alleged secondary loans expert.

With respect to the income approach, Mr. Cronkite explained that the higher the inherent risk in an income stream, the higher the required yield to be used in computing present value. The portion of his report concerning selection of the required yield to be employed here reads:

> The appropriate yield for an investment in this note was estimated based on a review of the May 1, 1991 Note Secured By Deed Of Trust, which stipulates that in the event of default, the unpaid amounts will bear interest at the Contract Rate plus 5% per annum. We concluded that 15% was an appropriate yield on this basis.

This 15-percent rate is then used in conjunction with a present value formula to produce a $300,000 fair market value for the subject note.

The section of Mr. Cronkite's report addressing the market approach references discussions with Mr. Marsh and then sets forth the following:

> According to Mr. Marsh, the $1,000,000 loan was intended to be interim financing only. Harbor Village intended to refinance its property, but encountered environmental issues.

> Although the loan is current, Mr. Marsh estimates that he could only get $0.70 to $0.80 on the dollar for a 100% interest, and perhaps $0.60 to $0.70 for a 45% interest (due to liquidity factors).
>
> Based on the above, we conclude that the fair market value of the Marsh note is $300,000 (approximately 65% of $450,000).

ii. Mr. Thomson's Report

Mr. Thomson in his report preceded valuation of the Marsh note with a discussion of certain factual assumptions underlying his analysis. The report refers to the $1 million note as equating to "more than 2 to 1 coverage" for the Marsh note and mentions personal guaranties by Mr. Marsh and Mr. Goldstein. Mr. Thomson also addresses several items relating to the security for the $1 million note; namely, the value of the mobile home park, the existence of any prior liens against the park, and possible environmental issues pertaining to the park.

Mr. Thomson appraised the 410-unit mobile home park and concluded that it "could command a price of $40,000 to $50,000 per unit or $16.0 to $20.0 million based on other mobile home park sales we are familiar with in Southern California." As regards potential prior liens, the report states:

> We requested any other Trust Deeds (notes), if any, against the Carson Harbor Village Mobile Home Park which may have a senior position to the $1,000,000 Deed of Trust. However, we were not provided any data on this request from the taxpayor [sic]. We did obtain a property profile from Chicago Title which showed no recorded liens as of the appraisal date.

Concerning environmental issues, Mr. Thomson reviewed Park Environmental Corporation's environmental analysis dated June 10, 1994, and requested, but was not provided, sections of a remedial action plan dated January 26, 1995, outlining procedures for removal and disposal of waste material. Cleanup was ultimately assumed to require minimal cost in comparison to the overall property value, such that it would not significantly influence refinancing or sale.

In then determining whether the Marsh note should be valued at a discount to its face value, Mr. Thomson weighed five factors. These were: (1) The collateral securing the note; (2) the existence of guaranties relating to the note and its collateral; (3) the interest rate on the note; (4) previously granted extensions of the note's maturity date and the currency of payments; and (5) environmental concerns related to the collateral. Mr. Thomson concluded that, of the foregoing factors, the first three enumerated would tend to support no discount or a slight premium while the latter two would tend to support a discount.

More specifically, Mr. Thomson opined that the following facts would tend to decrease any applicable discount: (1) The Marsh note possessed good collateral coverage in that it was secured by a $1 million note, which in turn was secured by a deed of trust on a well-located mobile home park; and (2) the $450,000

note was personally guaranteed by Mr. Marsh and the $1 million note was personally guaranteed by Mr. Goldstein. Neither increasing nor decreasing any applicable discount was the fact that the interest rate, at 10 percent, was a reasonable 87 basis points over the conventional mortgage rate of 9.13 percent for the week ended January 27, 1995. Identified as tending to increase any applicable discount were facts indicating: (1) The note had been extended several times, such that there could be no assurance it would be paid in full at the upcoming maturity date without legal action, although all interest payments were current; and (2) there could be environmental concerns relative to a small section of the mobile home property, which could delay the refinancing and/or sale of the property.

After setting forth the above factors, Mr. Thomson's report concludes:

> In our opinion, based on our experience with real property and promissory notes, we believe a range of 5 to 15 percent discount would be applicable to the subject $450,000 note. Therefore, based on the factors considered and the note itself, it is our opinion that a discount of 10.0 percent is reasonable to apply to the $450,000 note in HFCL.P., as of February 1, 1995. Accordingly, we have estimated the fair market value of the $450,000 note in HFCL.P. at $405,000, or ($450,000 x (1.0-.10)).

iii. Analysis

In our comparison of the foregoing views, we generally found those of Mr. Thomson to be better explained, better supported, and more convincing. While we conclude that certain factual assumptions described in Mr. Thomson's report were not established by a preponderance of the evidence, the level of detail in the report's treatment of individual factors considered enabled us to make adjustments within what was a reasonable framework. In contrast, Mr. Cronkite's report was highly conclusory and revealed little about the underlying analysis. As a result, we could neither perform any meaningful evaluation nor ascertain that the conclusions were supported by an appropriate foundation. We therefore found Mr. Cronkite's report unpersuasive and of minimal assistance in the valuation endeavor. Accordingly, we sustain respondent's position to the extent of the reduced valuation amount discussed below for the Marsh note.

Mr. Cronkite's Approaches: We begin by addressing the difficulties encountered with Mr. Cronkite's approaches. As previously mentioned, Mr. Cronkite included in his report an income approach discounting interest income at 15 percent. Although the report explains that the required yield should reflect inherent risk in the income stream, it fails to offer any satisfactory link between this premise and the chosen 15-percent rate. Mr. Cronkite apparently added the 5-percent default

increase specified in the $1 million note to the 10-percent contract rate of the $450,000 note.[3] Why the default provisions negotiated with a different debtor nearly 4 years earlier accurately reflect the inherent risk in the Marsh note as of decedent's date of death is not elucidated. We are afforded no information on relative conditions and circumstances that would facilitate a useful comparison. It is for these reasons that we were unable to give Mr. Cronkite's income approach any significant weight in our analysis. In addition, we observe that Mr. Cronkite testified at trial to having relied primarily on the market approach in his valuation.

As regards Mr. Cronkite's market approach, our concerns in many respects parallel those highlighted above in connection with the income approach. Again, the report is cursory, conclusory, and reveals little underlying reasoning that would enable us to evaluate the result reached. The report sets forth value estimates made by Mr. Marsh and characterizes Mr. Marsh as "a secondary loans expert". Mr. Cronkite explained at trial only that Mr. Marsh "represented to me that he was an expert in the secondary loan market." When questioned regarding Mr. Marsh's

[3] Although the estate on brief refers to 15 percent as "the default rate under the Marsh Note" and respondent similarly characterizes 15 percent as "the default rate on the note", the copy of the Marsh note itself in the record does not contain any provisions regarding a default rate. Rather, the $1 million note, which bears a contract rate of 11.25 percent, specifies a default rate of the contract rate plus 5 percent.

role in the valuation, Mr. Cronkite testified: "I relied primarily on an expert in the field to establish what the fair market value of the note was. I did some checking on that for reasonableness, determined that his analysis was reasonable." Mr. Cronkite also answered in the affirmative to an inquiry asking: "So, then, you essentially took your value of the note from Mr. Marsh, or based a good part of your conclusions on Mr. Marsh's own opinion?"

We, however, know almost nothing about the qualifications of Mr. Marsh beyond the fact that he was involved in lending the $1 million to Carson Harbor Village, Ltd., and was payee of the note for that amount and beneficiary of the related deed of trust. We are equally uninformed about the nature of the discussions that led to his appraisal. To wit, we are unaware of whether the figures were merely an offhand estimate or followed a period for study or evaluation. Mr. Marsh did not appear or testify at trial. Accordingly, we are asked to accept his opinions, as reported by Mr. Cronkite, without any opportunity to probe their foundation or any assurances that he was qualified to render them. We also note that his independence for purposes of offering a neutral opinion is not free from doubt. Furthermore, although Mr. Cronkite stated that he checked Mr. Marsh's analysis for reasonableness, he gave no indication whatsoever of the

materials or information that figured in such corroboration. His assertions therefore can do little to increase our confidence.

Another difficulty we have with the valuation produced by Mr. Cronkite's market approach is the lack of explanation concerning the factors taken into account in arriving at the discount. Environmental issues are mentioned, and Mr. Cronkite testified that this factor was very important to Mr. Marsh. When asked what studies he reviewed in making a conclusion as to the environmental problem, Mr. Cronkite responded:

> You know, I don't--I don't recall actual studies. I believe I had a lot of correspondence regarding the environmental issues. My discussion with Mr. Marsh--he was certainly well aware of them. The fact that they couldn't get, you know, refinancing due to the environmental concerns was an issue, but my understanding was, there was no dollar amount, you know, put on this, this liability.

These remarks, and the reference to environmental issues in the report, fall short not only of assuring us that Mr. Cronkite had a reliable foundation for his understanding of the seriousness of the environmental problem but also of permitting us to assess the role it played relative to any other factors. We therefore are unable to accept portions of the analysis while making adjustments in other aspects that we might find unsupported by the evidence. Nor can we usefully compare components as between the two experts. We are placed in a position of having largely to embrace or reject Mr. Cronkite's

conclusions in wholesale fashion. As a consequence, Mr. Cronkite's market approach, too, offers only a modicum of guidance in valuing the subject note.

Mr. Thomson's Approach: We now address Mr. Thomson's approach, which weighed five factors in arriving at a 10-percent discount for the Marsh note. We deal with each of these components seriatim, beginning with the factor addressing collateral coverage. Mr. Thomson opined that collateral coverage on the Marsh note was good and cited both the $1 million note secured by deed of trust and the underlying mobile home park in support of this assertion. The estate raises several points in response to Mr. Thomson's position on coverage, one of which involves the existence of a senior lien on the mobile home park.

As previously mentioned, Mr. Cronkite's report references a first trust deed in the amount of $10 to $11 million; Mr. Cronkite testified at trial that this statement was based on his discussion with Mr. Marsh and that he had seen no documents related to the encumbrance.

We pause here to note that the estate attempted at trial to introduce public records from the Los Angeles County Recorder's Office relating to the alleged first lien. Respondent's objection to these documents was sustained on the grounds that the information was requested from the estate during discovery, was not provided, and should have been stipulated and/or

exchanged prior to trial in accordance with Rule 91 and this Court's Standing Pre-Trial Order. Presumably Mr. Thomson was unaware of these documents when formulating his expert opinion, since he makes no mention of them. The Court deemed the consequent surprise significant in these circumstances. The estate then sought by requests and motions filed after trial to have judicial notice taken of the documents. Such submissions were denied as an improper attempt to augment the closed record without the concurrence of the opposing party.

Mr. Thomson relied on a property profile from Chicago Title showing no prior liens, but this document has not been made a part of the record. The record also leaves unclear the extent to which the property profile would have contained historical data reflecting encumbrances as of February 1, 1995. As a result, we are not satisfied that either expert relied on adequate information in developing his opinion.

However, even if we were to hypothesize the existence of a first lien, we do not believe that Mr. Thomson's more general reliance in valuing the Marsh note on good collateral coverage would be appreciably weakened. Because Mr. Thomson appraised the mobile home park at $16 to $20 million, generous coverage would not cease to exist merely on account of a first trust deed in the $10- to $11-million range.

Furthermore, the record contains no materials that undermine the value placed by Mr. Thomson on the park, prior to consideration of environmental issues, or offer an alternative figure. Mr. Cronkite did not inspect the mobile home park or perform a real estate appraisal, and his professional qualifications do not reveal any expertise in the real estate area. Mr. Thomson, on the other hand, is a licensed real estate appraiser and broker in the State of California. He testified to having appraised mobile home parks. We thus are confident that he would have been in a position to make an informed judgment about a general value range in comparison to other Southern California mobile home park sales. In addition, the fact that the park was refinanced in 1997, after the year in issue, for nearly $16 million also lends a degree of credence to Mr. Thomson's numbers.

Another point raised by the estate concerns references in Mr. Thomson's report to the coverage provided by the primary collateral, the $1 million note, as "more than 2 to 1". Although the actual coverage is only "1 to 1", inasmuch as the Marsh note was secured by a 45-percent interest in the $1 million note, we again do not believe that this fact, in and of itself, eviscerates the basic premise of good coverage. We are equally unconvinced that any of the various other contentions made by the estate on brief render unreasonable the conclusion that the Marsh

note was well covered by collateral. Hence, while we acknowledge that the level of coverage was not as great as Mr. Thomson may have assumed, we remain satisfied that good coverage could appropriately be considered as a positive factor enhancing the value of the subject note.

We next address the factor involving personal guaranties, about which the parties express significant differences. Mr. Cronkite indicated at trial that he was not aware of any personal guaranties at the time he prepared his report, while Mr. Thomson took guaranties into account in his valuation. The record contains no guaranty agreement or document relating to either the Marsh note or the $1 million note, and the notes themselves bear no evidence of a guarantor. Instead, guaranties are referred to in several items of correspondence which passed between Mr. Marsh and either decedent or Michael. The first is an April 15, 1991, letter from Mr. Marsh to decedent. This letter adverts to the new $450,000 promissory note and concludes with the following paragraph:

> I am proceeding with the closing of the $1,000,000.00 loan to James Goldstein that will be adequately secured by a Note secured by Deed of Trust on real property. I, of course, will have all the necessary personal guarantees, etc. on same. If, for any reason whatsoever, this loan does not close within the next fifteen days, your funds will be returned to you upon demand plus 10 3/4% interest from April 15, 1991. If the loan closes, Morton B. Harper, Trustee of the Morton B. Harper Revocable Trust Dated December 18, 1990, will be assigned, as collateral, a 45% interest

> in the $1,000,000.00 Note. Your investment will also be personally guaranteed by myself along with the personal guarantee of James Goldstein.

Then, in a second letter from Mr. Marsh to decedent, dated June 6, 1991, Mr. Marsh enumerates five enclosed documents. The first four pertain to the $1 million note and deed of trust. The fifth item is "Personal Guarantee dated May 1, 1991, executed by Jack P. Marsh."

Later, an August 15, 1994, letter from Michael to Mr. Marsh advised that the Trust's interest in the Marsh note had been assigned to the partnership and asks Mr. Marsh to acknowledge his agreement that "all preexisting assignments of the collateral Note and Deed of Trust security and also your Guarantee dated May 1, 1991 remain in full force and effect for the benefit of" HFLP. The August 28, 1994, letter agreement between Mr. Marsh and the Trust then similarly declares that security for the $450,000 investment funds is assigned to the partnership and that "Jack P. Marsh's personal guarantee for the $450,000.00 investment funds is still in effect and is transferred to" HFLP.

Lastly, a February 10, 1995, letter from Mr. Marsh to Michael states that the "$450,000.00 Note is personally guaranteed by Jack P. Marsh" and that the "$1,000,000.00 Carson Harbor Village, Ltd. Note is personally guaranteed by James Goldstein."

In assessing the import of this documentary evidence, we must also be conscious of relevant provisions of State law. Cal. Civ. Code sec. 2787 (West 1993) defines "guarantor" for purpose of the statutes relating to rights and obligations which arise out of a guaranty relationship:

> The distinction between sureties and guarantors is hereby abolished. The terms and their derivatives, wherever used in this code or in any other statute or law of this State now in force or hereafter enacted, shall have the same meaning, hereinafter in this section defined. A surety or guarantor is one who promises to answer for the debt, default, or miscarriage of another, or hypothecates property as security therefor. * * *

Against the foregoing backdrop, we first consider the existence of any guaranty by Mr. Marsh. Clearly, Mr. Marsh and the Harpers were under the impression that Mr. Marsh had executed a personal guaranty on May 1, 1991. However, to the extent that the purported guaranty existed and was of the $450,000 note, we conclude that it should be disregarded in the valuation process. The $450,000 note on its face is an unrestricted personal obligation of "Jack P. Marsh". Accordingly, any personal guaranty thereof would fail to conform to the definition of a guaranty under California law, would be no more than a redundant second promise to pay personally, and would not appreciably enhance the value of the note. Furthermore, to the extent that the context provided by certain of the above letters could support an inference that Mr. Marsh's alleged May 1, 1991,

guaranty was actually of the $1 million note, the evidence is ambiguous and fails to establish such a guaranty by a preponderance.

Concerning a possible guaranty of the $1 million note by Mr. Goldstein, we again find the record insufficient to meet respondent's burden. While the April 15, 1991, letter indicates prospectively that Mr. Marsh intended to seek a guaranty from Mr. Goldstein, the absence of any reference to a Goldstein guaranty in the June 6, 1991, letter is conspicuous. The June 6, 1991, letter specifically enumerates documents pertaining to the $1 million note, as well as a personal guaranty by Mr. Marsh. The omission of any mention of a guaranty by Mr. Goldstein could certainly imply that the anticipated assurance was not obtained. The only other item which alludes to a Goldstein guaranty is the February 10, 1995, letter written nearly 4 years later. Given this record, we are not convinced that the latter document sufficiently overcomes the inference which can be drawn from the more contemporaneous letters. In summary then, we conclude that, on the evidence before us, personal guaranties should not be considered as a factor enhancing the value of the Marsh note.

As regards the factor directed toward the interest rate on the note, Mr. Thomson found this element to be neutral. Mr. Thomson compared the 9.13-percent conventional mortgage rate for the week ended January 27, 1995, as reported in the Federal

Reserve Statistical Release, to the 10-percent rate born by the Marsh note. He concluded that the spread of 87 basis points was reasonable. Mr. Cronkite indicated that he did not research interest rates, the estate has offered no alternative evidence or position, and we have no grounds for doubt of Mr. Thomson's assumptions on this matter.

Turning to the two factors that Mr. Thomson felt would increase any applicable discount, we begin with that pertaining to maturity date and extensions. Mr. Thomson indicated that, given the repeated annual extensions of maturity, there existed a lack of assurance that the note would be paid in full at its upcoming due date. He viewed this circumstance as one which would favor an increase in discount. Again, the estate has not challenged the foregoing premise, and we note Mr. Cronkite testified with similar import. Mr. Cronkite stated: "whether there's a pending maturity date, I think is kind of moot. I believe everyone thought it wouldn't--it wouldn't be paid at the maturity date." We find Mr. Thomson's analysis of maturity issues to be logical.

The remaining factor identified by Mr. Thomson as tending to support an increased discount focuses on environmental concerns. Both parties and their experts are in agreement insofar as the notion that environmental issues relating to the mobile home park detract from the value of the Marsh note. The estate, however,

places a far greater emphasis on this factor and alleges that Mr. Thomson trivialized the seriousness of the Carson Harbor Village property's environmental condition. Mr. Cronkite, as we have previously discussed, offered generalized testimony portraying the environmental issues as very important to Mr. Marsh but conceded that he had not reviewed any environmental studies in preparing his report. He also cited the fact that refinancing for the property was not obtained until 1997 as an indication of the seriousness of the problem.

Mr. Thomson reviewed an analysis by Park Environmental Corporation and requested, but was not provided, portions of a study by McLaren/Hart addressing remedial action. Mr. Thomson testified that in reading the materials obtained he did not perceive any groundwater contamination but did see mentioned a surface tarlike substance which seemed to be confined to a relatively small, 20- to 30-foot area of the property. Mr. Thomson described his assessment of this information: "Well, as an investor wanting to buy that note, I would be concerned about the environmental, and that did--that's what really generated our discount. I would be concerned. I didn't think it was a big impact, but it was an impact that was--could delay the

refinancing." In a similar vein, his report assumes a comparatively minimal cleanup cost but does recognize the factor as a contingency detracting from the value of the note.

On this record, we believe that Mr. Thomson has taken the better supported and more convincing position on environmental issues. He reviewed objective materials and was able to offer specifics relating to the physical condition of the property. Mr. Cronkite relied almost exclusively on the generalized opinion of Mr. Marsh. While we understand that Mr. Marsh was the beneficiary of the $1 million note secured by the park, we are uninformed as to the nature, extent, or basis of his knowledge regarding the park's environmental profile. Additionally, although both sides acknowledge a delay in refinancing that could have been attributable to environmental problems, we saw before us no evidence confirming the degree to which environmental concerns figured in financing negotiations. We therefore conclude that Mr. Thomson appropriately took environmental issues into account as one of several factors affecting value and was not compelled to give greater emphasis to this feature.

The foregoing evaluation thus results in a scenario comprising one factor tending to decrease and two tending to increase any applicable discount, with the other two factors being either neutral or irrelevant. Mr. Thomson used these five factors to place the discount for the Marsh note within a 5- to

15-percent range. With two positive and two negative elements, Mr. Thompson appears to have selected the midpoint of the range, or 10 percent.

As to the range itself, Mr. Thomson's report states that the numbers are "based on our experience with real property and promissory notes". When asked at trial whether he was aware of any note transactions or published compilations of note transactions to use as comparables, Mr. Thomson responded: "Specific transactions? As a California real estate broker, I get information all the time. I'm not specifically aware of any source that necessarily tracks--are you saying trust deeds? * * * [Counsel replies affirmatively.] I get brokers sending me stuff all the time, but I don't have anything specific to track them." Mr. Thomson also indicated that he could conceive of situations where discounts would be 33 percent or greater, as where a note was unsecured or bore a below-market interest rate.

Mr. Cronkite's report states: "Mr. Marsh estimates that he could only get $0.70 to $0.80 on the dollar for a 100% interest, and perhaps $0.60 to $0.70 for a 45% interest (due to liquidity factors)." These remarks would seem to refer to discount ranges for interests in the $1 million note. Mr. Cronkite thus apparently selected a discount for the Marsh note based on what Mr. Marsh "estimate[d]" he could "perhaps" get for sales of the $1 million note. Yet Mr. Cronkite at trial neither expounded

upon the basis for Mr. Marsh's ranges nor provided any exegesis for his derivation therefrom of a 33.33-percent discount for the Marsh note.

Faced with this limited record, we observe that both sides' treatments of discount ranges leave something to be desired in terms of support and explanation. Nonetheless, we again are satisfied that Mr. Thomson has submitted the more convincing position. We know that he is a licensed real estate broker and appraiser, and his testimony tied the selected range to data regularly received from professionals in the real estate brokerage field. In contrast, we reiterate that Mr. Marsh's alleged expertise in this area is not established by the record. We additionally repeat our concern about the complete absence of information as to the underpinnings for his views. We therefore accept Mr. Thomson's 5- to 15-percent range.

Within the above-stated range, however, we seek a discount reflective of one factor tending to decrease and two tending to increase the applicable figure, rather than an even split of factors. Accordingly, we conclude that 12 percent, or two-thirds of the spread from 5 to 15 percent (rounded), is an appropriate discount. The fair market value of the Marsh note is thus held

to be $396,000 ($450,000 x (1-.12)). This results in a total value for the HFLP assets to be included in decedent's gross estate under section 2036 of $1,699,134.

To reflect the foregoing,

Decision will be entered under Rule 155.

T.C. Memo. 2002-34

UNITED STATES TAX COURT

ESTATE OF RICHIE C. HECK, DECEASED,
GARY HECK, SPECIAL ADMINISTRATOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 11619-99. Filed February 5, 2002.

Decedent owned 630 shares of F. Korbel & Bros., Inc. stock representing a 39.62-percent ownership interest in the corporation.

Held: Fair market value of the shares determined. Sec. 2031, I.R.C.

Richard J. Sideman, Steven M. Katz, and George I. Hoffman, for petitioner.

Marion T. Robus, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

HALPERN, Judge: By notice of deficiency dated April 16, 1999, respondent determined a deficiency in Federal estate tax of $5,427,983. Of the adjustments giving rise to that determination, the only one remaining in dispute is respondent's increase in the value of certain shares of stock included in the gross estate.

Unless otherwise noted, all section references are to the Internal Revenue Code in effect at the time of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some facts are stipulated and are so found. The stipulation of facts, with accompanying exhibits, is incorporated herein by this reference.

Introduction

Richie C. Heck (decedent) died on February 15, 1995 (the date of death or the valuation date). Gary Heck (sometimes, petitioner) is the special administrator of decedent's estate. At the time of the petition, petitioner resided in Santa Rosa, California. Among the assets includable in decedent's gross estate are 630 shares of stock (the shares), representing 39.62 percent, of the outstanding common stock of F. Korbel & Bros., Inc. (Korbel), a California corporation. Petitioner

timely filed a Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return (the estate tax return) on May 15, 1996. Petitioner did not elect alternate valuation. See sec. 2032. In the estate tax return, petitioner valued the shares at $16,380,000, or $26,000 a share. In determining a deficiency in estate tax, respondent valued the shares at $30,177,000, or $47,900 a share.

Organization and Operation of Korbel

Korbel was formed in 1903. Its business began in 1860, when three Korbel brothers purchased property in Guerneville, California, for the logging of timber. A decade later, vinifera grapes were planted on the property, and, in 1882, the first bottle of champagne was produced. Korbel has produced champagne on the property, utilizing the traditional "methode champenoise",[1] ever since.

[1] Champagne or sparkling wine (although the name "champagne", technically, refers to sparkling wine produced in the Champagne region of France, the terms "champagne" and "sparkling wine" are often used interchangeably, and are so used herein) is, in essence, wine that has been subject to a second fermentation. Premium brands, such as Korbel, utilize the French "methode champenoise", pursuant to which the second fermentation and all subsequent steps such as the removal of impurities and the addition of flavoring components take place while the champagne is in the bottle that is ultimately sold to the public. That method is much more expensive and is considered far superior to methods, such as the "Charmat process" or the "transfer method", pursuant to which certain steps do not take place in the bottle.

The Heck family purchased control of Korbel in 1954, and, in 1976, Adolf Heck (decedent's husband) became the sole shareholder of the 1,900 shares of common stock outstanding. As of 1984, Adolf and decedent each owned 950 shares. In 1984, Gary Heck acquired 380 shares (190 each from Adolf and decedent). Also, in 1984, Adolf died, Korbel redeemed 310 of his remaining 760 shares from his estate, and the remaining 450 shares passed in trust for decedent's benefit. In or around 1987, Gary Heck purchased the 450 of the shares in trust, giving him 830 shares (52.2 percent of the 1,590 shares outstanding) and leaving decedent with the remaining 760 shares. In 1989, decedent transferred 130 shares in trust for the benefit of her two grandchildren. That left decedent with 630 shares, the value of which, on the date of death, is in dispute herein.

Primarily, Korbel produces economically priced premium champagne. During the 3-year period ending with 1994, champagne sales represented approximately 70 percent of Korbel's total sales, brandy represented approximately 27 percent of such sales, and still wine accounted for the approximately 3-percent balance. At the beginning of 1995, 95 percent of Korbel's gross profits were attributable to sales of champagne and just under 5 percent to sales of brandy.

As of the valuation date, Korbel's facilities were located on 1,800 acres of land, mostly in Sonoma County. Of that

acreage, 1,099 acres were not used in Korbel's business activities, and, on the valuation date, such land had a value of $2,000 an acre.

In January 1986, Korbel elected to become an S corporation (within the meaning of section 1361(a)(1)). That election was in effect on the valuation date. Korbel's financial statements and tax returns are prepared on a calendar-year basis.

Distribution Agreement Between Korbel and Brown-Forman Corp.

In 1965, Korbel signed a marketing agreement with Jack Daniel Distillery, Lem Motlow, Prop., Inc. (Jack Daniel), granting Jack Daniel worldwide rights to buy, sell, and distribute all Korbel beverage products. Thereafter, Jack Daniel was consolidated into Brown-Forman Corp. (Brown-Forman), and, in 1987, Brown-Forman contracted to be the exclusive distributor of Korbel products.

In 1991, Korbel and Brown-Forman entered into a new distribution agreement (the agreement or the Brown-Forman agreement), effective through April 30, 2003, automatically renewable on a year-to-year basis thereafter, and cancelable on or after May 1, 1998, upon 5 years' written notice by either party to the other of its intent to cancel. The agreement granted to Brown-Forman the U.S. distribution rights for Korbel's champagne and brandy products, except for Korbel's right to sell through its on-premises wine shop. The agreement was amended in

October 1994 to grant Brown-Forman worldwide distribution rights.

In addition to dealing with the distribution of Korbel's products, the agreement grants to Brown-Forman a right of first refusal with respect to offers of Korbel's stock by family members. In that respect, the agreement provides:

> RIGHT OF FIRST REFUSAL. In the event any member of the Heck family desires to sell his or her shares of stock in KORBEL to a person who is not a lineal descendant of ADOLF L. HECK, he or she shall notify BROWN-FORMAN, in writing, giving the name of the prospective purchaser, a copy of the offer to purchase, the number of shares and the price per share. BROWN-FORMAN shall have thirty (30) days from receipt of such notice to elect to purchase and pay for the said stock at the price stated for cash. If BROWN-FORMAN does not purchase such stock within said 30 day period, it may be sold to the stated person at the stated price without any further obligation to BROWN-FORMAN, meaning that BROWN-FORMAN shall not have any further right to purchase any of the KORBEL stock sold. If KORBEL has a prospective purchaser for 50% or more of KORBEL stock who is not a lineal descendant of ADOLF L. HECK and BROWN-FORMAN does not exercise its prior right to purchase said stock, then BROWN-FORMAN shall have no further first right of refusal to buy that stock of KORBEL at any time. * * *

Financial Performance

From 1985 through 1994, Korbel's sales and net income were as follows:

Year	Revenues	Net Income
1986	$76,955,000	$17,527,000
1987	85,582,000	25,317,000
1988	86,920,000	20,177,000
1989	79,294,000	12,728,000
1990	78,646,000	11,961,000
1991	75,677,000	7,735,000
1992	77,551,000	6,720,000
1993	78,569,000	7,179,000
1994	82,758,000	11,955,000

As of December 31, 1994, Korbel's audited balance sheet showed assets valued at $83,985,000, liabilities of $10,115,000 (current liabilities of $5,456,000 and long-term obligations of $4,659,000), and shareholder equity of $73,870,000. Among Korbel's assets was a $2,209,000 interest-bearing note receivable from KFTY Broadcasting (KFTY), a company owned by Gary Heck.

In 1994, although sales of Charmat process and transfer method brands declined 11 percent, sales by domestic methode champenoise producers increased by 4 percent. Korbel's sales of champagne increased by 6 percent in 1994. That year, although Korbel was responsible for only 8.8 percent of total sales of champagne in the United States, it represented 47.6 percent of the domestic market for champagne produced by the methode champenoise.

Respondent's Expert

Respondent offered Herbert T. Spiro, Ph.D. (Dr. Spiro), as an expert witness, to testify concerning the valuation of closely held companies. Dr. Spiro is president of the American Valuation Group, Inc. (AVG), and has directed and conducted valuation studies of various types of business enterprises. The Court accepted Dr. Spiro as an expert in the valuation of closely held companies and received written reports of AVG into evidence as Dr. Spiro's direct testimony and his rebuttal testimony,

respectively. In his direct testimony, Dr. Spiro reached the conclusion that the aggregate fair market value of the shares as of the valuation date was $30,300,000, or $48,100 a share, rounded.[2]

In reaching his conclusion, Dr. Spiro utilized both a market approach and an income approach, the latter of which is based upon the discounted cashflow method. He then applied to the results under both approaches a 15-percent "liquidity discount" and a 10-percent discount for "additional risks associated with S corporations" including "the potential loss of S corporation status and shareholder liability for income taxes on S corporation income, regardless of the level of distributions." He reconciled the two approaches by applying a 70-percent weighting factor to the "indicated value" of each share under the income approach ($36,150) and a 30-percent weighting factor to such value under the market approach ($65,209), resulting in a

[2] The AVG report that constitutes Dr. Spiro's direct testimony is dated Apr. 26, 2000. The parties have stipulated, and we have received into evidence, an earlier report from AVG to respondent, dated Oct. 3, 1997, in which AVG concludes that the fair market value of the shares on the valuation date was $30,177,000. That value agrees with the value used by respondent in preparing the notice of deficiency here in issue, but it is lower than the value reached in the Apr. 26, 2000, report. On brief, respondent asks us to find that, on the valuation date, the fair market value of the shares was $30,177,000. We conclude that respondent is not asking for any increased deficiency, even though the report that constitutes Dr. Spiro's direct testimony finds a slightly higher valuation of the shares.

"weighted" share value of $44,868. He explained that "[t]he market approach is weighted less at 30 percent due to the lack of perfect comparables". Lastly, he adjusted that value upward to account for certain nonoperating assets: 1,099 acres of so-called excess land with a stipulated value of $2,000 an acre (total value: $2,198,000) and $5.25 million of "excess cash". Before making that upward adjustment, however, he applied certain discounts. He applied a 25-percent "minority" discount and, sequentially, the above mentioned 25-percent "liquidity" discount to the stipulated value of the land, reducing such stipulated value to $1,236,375, or $778 a share. He applied the additional 25-percent "minority" discount in recognition of the fact that the land value "cannot be readily realized by the minority shareholder." He applied the same 25-percent minority discount (but not the liquidity discount) to the so-called excess cash, resulting in a value of $3,939,000, or $2,477 a share. He derived his share value for Korbel of $48,123 ($48,100 rounded) and total value of decedent's 630 shares (rounded) of $30,300,000 after making the aforesaid adjustments to the value of the nonoperating assets.

Petitioner's Expert

Petitioner offered Mukesh Bajaj, Ph.D (Dr. Bajaj), as an expert witness, to testify concerning the valuation of closely held companies. Dr. Bajaj is a managing director, finance and

damages practice, of LECG, Inc. Dr. Bajaj has experience as a university professor of finance and business economics, he has lectured on valuation issues, and he has performed business valuations for purposes of litigation. The Court accepted Dr. Bajaj as an expert in the valuation of closely held companies and received his written reports into evidence as his direct and rebuttal testimony, respectively. In his direct testimony, Dr. Bajaj reached the conclusion that the aggregate fair market value of the shares as of the valuation date was $18,707,000, or $29,694 a share.

Dr. Bajaj rejected the market approach and relied exclusively upon a discounted cashflow analysis. He rejected the market approach on the ground that there were no publicly traded companies that were comparable to Korbel.

Dr. Bajaj's discounted cashflow analysis resulted in a net operating asset value for Korbel of $72,041,711. To that amount he (like Dr. Spiro) added an additional amount for nonoperating assets: $5,517,000, consisting of $2,198,000 for the excess land, $1,110,000 representing the proceeds from insurance policies on decedent's life, and $2,209,000 for the note receivable from KFTY. He then subtracted $4,918,000 of interest-bearing debt, resulting in a fair market value for Korbel as of the valuation date of $72,640,711.

Dr. Bajaj then applied a 35-percent discount to the value derived under his discounted cashflow approach, which consisted of a 25-percent marketability discount and an additional 10-percent discount to reflect the negative impact of Brown-Forman's right of first refusal and what Dr. Bajaj refers to as "agency problems" (the inability of a purchaser of decedent's minority interest to influence dividend distributions, which would be at the discretion of the controlling shareholder, Gary Heck). Application of those discounts, totaling 35 percent, resulted in Dr. Bajaj's being of the opinion that the marketable minority value of Korbel's equity as of the valuation date was $47,216,462, resulting in a value of $18,707,162 for decedent's 630 shares, or $29,694 a share.

OPINION

I. Introduction

We must determine the fair market value of decedent's 630 shares of Korbel on the valuation date. The shares were included in decedent's gross estate and reported on the estate tax return at a value of $26,000 a share. Based upon the expert testimony of Dr. Bajaj, petitioner now argues that the value of each share on the valuation date was $29,694. We interpret petitioner's change in position as a concession that the estate is liable for a portion of the deficiency, and we accept that concession. In

determining the deficiency in estate tax, respondent valued the shares at $47,900 a share.

Petitioner bears the burden of proof. Rule 142(a).

II. Law

Section 2001(a) imposes a tax on "the transfer of the taxable estate of every decedent who is a citizen or resident of the United States." Section 2031(a) provides: "The value of the gross estate of the decedent shall be determined by including to the extent provided for in this part, the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated."

Fair market value is the standard for determining the value of property for Federal estate tax purposes. United States v. Cartwright, 411 U.S. 546, 550-551 (1973). Section 20.2031-1(b), Estate Tax Regs., defines fair market value as: "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts." The willing buyer and willing seller are hypothetical persons, rather than specific individuals or entities, and their characteristics are not necessarily the same as those of the actual buyer or seller. Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990) (citing Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981)). The hypothetical willing

buyer and seller are presumed to be dedicated to achieving the maximum economic advantage, which advantage must be achieved in the context of market conditions, the constraints of the economy, and, assuming shares of stock are to be valued, the financial and business experience of the subject corporation existing on the valuation date. Estate of Newhouse v. Commissioner, supra.

In valuing shares of stock in a corporation whose shares are not publicly traded, the factors we take into account include net worth, prospective earning power and dividend paying capacity, and other relevant factors, including the economic outlook for the particular industry, the company's position in the industry, the company's management, the degree of corporate control represented by the block of stock to be valued, and the value of publicly traded stock or securities of corporations engaged in the same or similar lines of business. See sec. 2031(b); sec. 20.2031-2(f)(2), Estate Tax Regs.; Rev. Rul 59-60, 1959-1 C.B. 237, 238-242.

III. Expert Opinions

A. Introduction

In this case, the parties rely heavily, if not exclusively, on expert testimony to establish the fair market value of the shares as of the valuation date. Indeed, respondent's only witness was Dr. Spiro. In addition to Dr. Bajaj, petitioner called Gary Heck, decedent's son and Korbel's president and

chairman of the board, and David Faris, a Korbel assistant vice president. Formerly, Mr. Faris was a partner in the tax department of Pisenti & Brinker, C.P.A.s. In that role, he oversaw the preparation of Korbel's income tax returns, the estate tax return filed on behalf of decedent's estate, and the valuation, for gift tax purposes, of the stock that, in 1989, decedent transferred in trust for the benefit of her grandchildren. Mr. Heck did not testify as to the value of the shares, and, although Mr. Faris testified that the Pisenti & Brinker gift tax valuation, in part, formed the basis for the value of the shares set forth on the estate tax return, it is the value arrived at by Dr. Bajaj, not the value on the return, that petitioner urges us to adopt.

In deciding valuation cases, courts often look to the opinions of expert witnesses. Nonetheless, we are not bound by the opinion of any expert witness, and we may accept or reject expert testimony in the exercise of our sound judgment. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Estate of Newhouse v. Commissioner, supra at 217. Although we may accept the opinion of an expert in its entirety, see Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), we may be selective in determining what portions of an expert's opinion, if any, to accept, Parker v. Commissioner, 86 T.C. 547, 562 (1986). Finally, because valuation necessarily involves an

approximation, the figure at which we arrive need not be directly traceable to specific testimony if it is within the range of values that may be properly derived from consideration of all the evidence. Estate of True v. Commissioner, T.C. Memo. 2001-167 (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285).

B. Differences Between the Experts

The major difference between Drs. Bajaj and Spiro is their disagreement as to the propriety of utilizing a market approach (i.e., the guideline company method) in valuing the shares. Also, although both experts utilized a discounted cashflow approach in valuing the shares (Dr. Bajaj, exclusively; Dr. Spiro, in part), they disagree sharply over methodology in applying that approach. We shall analyze the arguments presented by both experts in support of their respective positions.

IV. Propriety of Dr. Spiro's Application of the Guideline Company Method

A. Introduction

The guideline company method of appraisal is commonly used in valuing shares of stock in a closely held corporation. When appropriate, its usage is mandated by section 2031(b), which provides that the value of unlisted shares of stock or securities "shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of

corporations engaged in the same or a similar line of business which are listed on an exchange." See also sec. 20.2031-2(f), Estate Tax Regs.; Rev. Rul. 59-60, 1959-1 C.B. 237, 242.

The parties sharply dispute whether (1) the two guideline companies chosen by Dr. Spiro, the Robert Mondavi Corp. (Mondavi) and Canandaigua Wine Co. (Canandaigua), were comparable to Korbel for purposes of section 2031(b), (2) Dr. Spiro actually utilized only one company, Mondavi, as a guideline company, and (3) if so, the use of a single guideline company is permissible. The parties also disagree as to the propriety of the financial ratios chosen by Dr. Spiro and his adjustments to those ratios. Petitioner also claims, and respondent denies, that Dr. Spiro's 30-percent weighting of the result of his market approach was essentially arbitrary.

B. Dr. Spiro's Guideline Companies: Mondavi and Canandaigua

1. Dr. Spiro's Method

Dr. Spiro first identified 1,317 companies listed under the Standard Industrial Classification Code (SIC) 2084, wines, brandy, and brandy spirits. Of those companies he identified only 11 that were publicly traded, and he rejected 9 of the 11 as potential comparables because, for the most part, they were either too large or diverse (or both), too small, unprofitable, or conducted business in a different manner than Korbel.

Dr. Spiro considered the remaining two companies, Mondavi and Canandaigua, comparable to Korbel.

Dr. Spiro valued Korbel's stock under the guideline company method (as of the valuation date), by reference to the 1994 fiscal yearend price to earnings (P/E) and price to operating cashflow (P/OCF) ratios for Mondavi and Canandaigua. For Mondavi, those ratios, when reduced to multiples (of earnings and OCF, respectively), were 17.51 and 9.57 and, for Canandaigua, they were 22.09 and 14.54. Dr. Spiro based Korbel's corresponding multiples on Mondavi alone, but he "adjusted" them downward, to a P/E multiple of 13 and a P/OCF multiple of 8, "to account for Korbel's additional risk factors" (i.e., the differences, discussed below, between Korbel and the guideline companies in terms of size, product mix, consumption patterns, etc.). Those derived multiples were applied, and a mean value was determined, which mean, $86,945, was Dr. Spiro's valuation (before discounting) of each share of Korbel under his market approach.

2. Comparability

Dr. Spiro treated Mondavi and Canandaigua as comparable (guideline) companies despite acknowledging that, in many significant respects, they differ markedly from Korbel.

Size: In 1994, in terms of both revenue and total assets, Canandaigua was approximately 10 times as large as Korbel.

Mondavi's gross revenue for its 1994 fiscal year was more than twice that of Korbel for its 1994 calendar year ($176,236,000 versus $82,758,000), and Mondavi's total assets at yearend were approximately triple those of Korbel ($244,236,000 versus $84,043,000).

Product Lines: Although Korbel produces some brandy and an insignificant amount of still wine, it is essentially a single product company, producing economically priced premium champagne. In 1992, Canandaigua's products included table wines, dessert wines, sparkling wines, imported beer, and distilled spirits. Sparkling wines constituted only 3.79 percent of the firm's total shipments for 1993.

As of the valuation date, Korbel marketed its champagne under two labels, Armstrong Ridge and Korbel. Canandaigua marketed its products under many brand names including Paul Masson, Inglenook, Manischewitz, Almaden, and Taylor California Cellars, for wine, and Corona, for beer. Although Canandaigua also produced and marketed six different brands of sparkling wine and maintained a 32-percent share of the sparkling wine market for 1994, all of its sparkling wines were produced using the less expensive Charmat process or transfer method, whereas Korbel utilized the methode champenoise exclusively. Canandaigua produced for the low end of the champagne market, whereas Korbel was the leading producer of premium champagne, controlling almost

50 percent of the methode champenoise or high-end market and 8.8 percent of the total domestic market. For the period 1985 through 1994, the low-end and high-end champagne markets fared differently. Sales of champagne produced by means of the Charmat process or transfer method (the low-end market) fell steadily between 1985 and 1994. In 1994, sales of the lower priced domestically produced Charmat process and transfer method labels dropped 11 percent, when compared to 1993. Canandaigua's sparkling wine sales reflected that trend in 1994, declining by about 8 percent from 1993. In sharp contrast, led by Korbel's 6-percent increase in champagne sales for 1994, 1994 sales by domestic methode champenoise producers as a whole grew 4 percent, when compared to 1993.

Mondavi markets premium still wine under seven different labels, but it produces little or no sparkling wine.[3]

Other Factors: Dr. Spiro testified that, as of the valuation date, compared to Mondavi and Canandaigua, Korbel was smaller, more profitable, and growing more slowly. It also had

[3] Both Drs. Bajaj and Spiro state that Mondavi does not produce any champagne. Gary Heck testified, however, that Mondavi produces "about 1500 cases [of champagne] that they only sell through their wine shop, kind of like we do with still wines." Even if Mr. Heck is correct, the amount of champagne produced by Mondavi is negligible in comparison with its wine production, which, for 1994, was 4,274,000 cases. Thus, as a practical matter, Mondavi was a producer of still wines, whereas Korbel was a producer of high-end champagne and a small amount of brandy.

substantially lower debt to asset and debt to equity ratios than either Canandaigua or Mondavi.

Dr. Spiro summarized the totality of the differences between Korbel and both Mondavi and Canandaigua as follows:

> Whereas both comparable companies produce and/or market many products, Korbel essentially only produces two products, champagne and brandy. Korbel also has less revenue and greater revenue variability during the course of a fiscal year than the two comparables. Korbel's greater revenue variability results from the nature of champagne consumption in the U.S., which is closely linked to celebrations and parties. This results in a seasonal sales pattern with most sales coinciding with the holiday season between Thanksgiving and New Year's Eve. In contrast, wine is consumed more steadily throughout the year, often with dinner or as a social drink. Korbel's lack of product diversification and comparatively small size tend to increase investor risk, necessitating a greater investment return. * * *

Gary Heck testified to the following significant differences between the production and marketing of wine as opposed to methode champenoise champagne: The second fermentation in the bottle, which makes production of the latter more complex, expensive, and time consuming than the production of wine; the fact that sales of champagne do not benefit from the so-called "French Paradox" (i.e., reports that link the moderate daily consumption of red wine to cardiovascular health); and the fact that champagne sales are subject to higher Federal excise taxes than are sales of wine.

3. Dr. Spiro's Opinion

In Dr. Spiro's opinion, comparability is established by the fact that both Mondavi and Canandaigua, like Korbel, produce, a

form of wine ("While Korbel occupies a specialized niche, it crushes grapes, ferments the juice and bottles the product like other producers. To argue that comparables do not exist is incorrect.").[4]

C. Rejection of Mondavi and Canandaigua as Guideline Companies

Dr. Spiro discussed the similarities and differences between both Mondavi and Canandaigua and Korbel, and he computed price to earnings and price to operating cashflow multiples for both Mondavi and Canandaigua. Nevertheless, when he applied those multiples to Korbel, he referred only to Mondavi, and he adjusted downward from the Mondavi figures. We fail to see how Canandaigua influenced Dr. Spiro's guideline analysis. It appears to us that Dr. Spiro, himself, effectively disregarded Canandaigua as a guideline company. Assuming that to be the case, respondent has failed to persuade us that we should have any confidence in Dr. Spiro's guideline analysis. In Estate of Hall v. Commissioner, 92 T.C. 312 (1989), the Commissioner's expert selected only one comparable company. The proposed comparable, American Greetings Corp. (American Greetings), was selected because it, along with Hallmark Cards, Inc. (Hallmark),

[4] Dr. Spiro's oral testimony echoed that view: "Sir, we selected * * * [Mondavi and Canandaigua] as guideline companies, as the only game in town. We did not say they were exactly like Korbel. We say they have the same general production approach. They have the same general customer base. They are all in the grape processing business. In that sense they are comparable."

the company subject to valuation, were the two leaders in the greeting card industry. The Commissioner's expert concluded that American Greetings "was the only reasonably comparable company to Hallmark because it had a similar product mix and capital structure and served the same markets." Id. at 331. We rejected the valuation report submitted by the Commissioner's expert in light of his reliance on a single comparable company in employing the market approach. In so doing, we observed that "[a]ny one company may have unique individual characteristics that may distort the comparison." Id. at 340. A sample of one tells us little about what is normal for the population in question.[5] Dr. Spiro has failed to convince us of the reliability of his guideline analysis.

Even if we were to accept that Dr. Spiro relied on both Canandaigua and Mondavi as guideline companies, as respondent argues, we would still reject Dr. Spiro's use of the market approach in this case. Respondent points out that we have approved the use of the market approach based upon as few as two guideline companies. See Estate of Desmond v. Commissioner, T.C. Memo. 1999-76. But in that case, all three companies were in the same, and not just a similar, line of business (manufacture and

[5] In his rebuttal report, Dr. Bajaj states: "The superior quality of Mondavi's wines, its innovative packaging [a new bottle with a flange top that prevented dripping and used a dot of wax instead of a foil capsule as a seal] and strong advertising coupled with its reputation as an environment-friendly producer * * * [were attributes that] were largely unique to * * * [Mondavi]". (Fn. ref. omitted.) Respondent does not challenge Dr. Bajaj on that point, which point indicates that Mondavi may not be reflective of the norm.

sale of paint and coatings). Here, Mondavi and Canandaigua were, at best, involved in similar lines of business. Under section 2031(b) and section 20.2031-2(f), Estate Tax Regs., publicly held companies involved in similar lines of business may constitute guideline companies, and we have so held. See, e.g., Estate of Gallo v. Commissioner, T.C. Memo. 1985-363, where, in valuing the stock of the largest producer of wine in the United States, we approved the use by taxpayer's experts of comparables consisting of companies in the brewing, distilling, soft drink, and even food processing industries. But, in that case, the experts used at least 10 companies as guideline companies. See also Estate of Hall v. Commissioner, supra at 325, where we adopted an expert report utilizing a market approach based upon a comparison with six somewhat similar companies. As similarity to the company to be valued decreases, the number of required comparables increases in order to minimize the risk that the results will be distorted by attributes unique to each of the guideline companies. In this case, we find that Mondavi and Canandaigua were not sufficiently similar to Korbel to permit the use of a market approach based upon those two companies alone.[6]

[6] Dr. Bajaj argues that only companies that are "primarily champagne/sparkling wine producers like Korbel" constitute permissible guideline companies. Because no such publicly traded company existed, Dr. Bajaj rejected the market approach. We find Dr. Bajaj's approach to be unduly narrow (in theory), in light of the case law cited in the text. Nonetheless, we agree, albeit for different reasons, that respondent improperly applied the market approach in this case.

Our conclusion that Dr. Spiro improperly applied the guideline company approach based upon Mondavi and Canandaigua makes it unnecessary to address petitioner's other criticisms of Dr. Spiro's application of that approach: The selection of inappropriate financial ratios, the arbitrary adjustment of those ratios, and the arbitrary nature of the weight given to the result reached by Dr. Spiro under the market approach.

D. Conclusion

Dr. Spiro improperly applied the guideline company approach in valuing the stock of Korbel.

V. Utilization of the Discounted Cashflow Method in Valuing the Stock of Korbel

A. Introduction

This Court considers the discounted cashflow (DCF) method employed by both experts to be an appropriate method for use in valuing corporate stock. See, e.g., N. Trust Co. v. Commissioner, 87 T.C. 349, 379 (1986). Moreover, where we have rejected use of the market approach as unreliable, we have based the value of a closely held corporation on the DCF approach alone. See Estate of Jung v. Commissioner, 101 T.C. 412, 433 (1993). We, therefore, find that the DCF method utilized by both experts in this case is an appropriate method for valuing the stock of Korbel as of the valuation date.

B. Analysis of the Experts' Application of the Discounted Cashflow Method

1. Introduction

Recently, in Estate of True v. Commissioner, T.C. Memo. 2001-167, we described the DCF method as follows:

> The discounted cash-flow method is an income approach based on the premise that the subject company's market value is measured by the present value of future economic income it expects to realize for the benefit of its owners. This approach analyzes the subject company's revenue growth, expenses, and capital structure, as well as the industry in which it operates. The subject company's future cash-flows are estimated, and the present value of those cash-flows is determined based on an appropriate risk-adjusted rate of return.

Drs. Bajaj and Spiro are in agreement as to the elements of the DCF valuation method: The discounted present value of cashflow projections for Korbel over a 5-year (1995-1999) period, plus Korbel's residual value at the end of the fifth year (also discounted back to present value), plus the value of nonoperating assets, less long-term debt, and less appropriate discounts, e.g., for lack of marketability. They disagree, however, regarding the computation of almost every element, including projected revenues, operating costs, capital expenditures, the rate of return to be incorporated into the discount factor, the nature and amount of the nonoperating assets, the amount of long-term debt, and the nature and amount of the discounts. We find neither of the experts totally persuasive. We accept, however, portions of the testimony of each. We shall discuss and evaluate

the various elements of both experts' DCF computations in arriving at a value for the shares.

2. Projected Cashflows

a. Sales

In projecting post-1994 sales growth for Korbel, Dr. Bajaj determined that there would be 2-percent sales growth for 1995, that the growth rate would steadily increase to 4.5 percent in 1999, and that the latter rate would prevail indefinitely for post-1999 years. Dr. Bajaj considered his forecast optimistic in light of wine industry analysts' predictions of a 2.9-percent decline in champagne consumption during the 1995-1999 period. Dr. Spiro projected a 4.5-percent sales increase for 1995, increases of 4.0, 3.5, and 3.0 percent for 1996, 1997, and 1998, respectively, and 3-percent annual increases thereafter. Dr. Spiro's forecast was primarily based upon the strong growth in Korbel's sales during 1994 and the first quarter of 1995.

We find Dr. Spiro's sales growth assumptions to be the more realistic. Projected growth for 1995 is based upon Korbel's 1994 sales growth, and subsequent years' growth is assumed to gradually decrease to the 3-percent growth rate applicable to 1992-1994, which does not differ materially from the annual compound growth rate of 3.1 percent since 1984. Dr. Bajaj's more modest sales growth projections for the early years are based upon projected sales for the champagne industry as a whole, which

includes low-end Charmat and transfer process brands. Moreover, we find no evidence in Korbel's recent sales history to justify an assumed 4.5-percent sales growth for 1999 and thereafter.

b. Operating Margin

Dr. Bajaj's projected annual operating (pretax)[7] margin (total revenues less cost of goods sold, excise taxes, depreciation, officers' compensation, and selling, general, and administrative expenses (SG&A)) for 1995 and all subsequent years is 12 percent of sales revenues. He bases his projection upon the 5-year simple average of operating margins for the 1990-1994 period. Dr. Spiro's projected annual operating margin for 1995-1999 and subsequent years is 13.3 percent of sales revenues. Dr. Spiro computes each element of cost entering into his projection of operating margin separately, in some cases based upon 2-year averages, in others, based upon 5-year averages. In computing average annual SG&A for 1990-1994, Dr. Spiro fails to include $420,000 of promotional expenses incurred by Korbel in 1993, which Dr. Spiro attributes to the launching of a new product (Armstrong Ridge champagne). Dr. Spiro considers that to be a special, nonrecurring cost that, in future years, will be borne by Brown-Forman pursuant to the Brown-Forman agreement. We do not agree with Dr. Spiro's treatment of the 1993 promotional

[7] The parties agree that the only tax applicable to the income of Korbel is California's 1.5-percent income tax on S corporations.

expense as a nonrecurring cost. Mr. Heck testified that new label promotional expenditures are a recurring feature of Korbel's business. Although the Brown-Forman agreement relieves Korbel of any responsibility to pay marketing or selling expenses ("Brand Expense") for Korbel champagne or brandy, Korbel incurred the promotional expenses in question subsequent to the 1991 effective date of the agreement, and Mr. Heck testified that a similar "spike" in Korbel's promotional costs could occur at any time. Projecting the mean annual SG&A costs for a 5-year period that includes a year of extraordinary promotional expenses associated with the introduction of a new label does not seem unreasonable.

Dr. Spiro criticizes Dr. Bajaj for relying on a simple 5-year average in projecting an annual operating margin. Yet for cost of goods sold, where Dr. Spiro uses a 2-year average to make projections, he testified, in rebuttal: "The * * * [rate chosen by Dr. Bajaj] appears reasonable although we once again question the use of a simple average." Dr. Spiro, himself, uses a 5-year average in projecting officers' compensation and SG&A. Korbel's annual operating margins for the 1990-1994 period do not show a trend, and Dr. Spiro has failed to convince us that Dr. Bajaj's use of a 5-year simple average is inappropriate. At least, it has the virtue of consistency, and for that reason, we prefer it to Dr. Spiro's approach, the inconsistency of which he did not

adequately explain. We modify Dr. Bajaj's approach only to take into account small amounts of other income, which he takes into account in his rebuttal testimony. Dr. Bajaj's projected profit margin, based upon an unweighted arithmetic average of operating margins from 1990-1994, and including "other income" (interest and "Heck Cellars" revenue), is 12.3 percent. We find that to be the proper assumed operating margin for purposes of determining Korbel's value on the valuation date under the DCF method.

c. Cashflow Adjustments

To determine cashflow, it is necessary to modify after-tax income by adding back depreciation and subtracting working capital additions and capital expenditures.

Depreciation averaged 3.8 percent of sales revenues during the 1990-1994 period and 4.1 percent for 1993 and 1994. Dr. Bajaj, relying on a 5-year average, projected depreciation at 3.8 percent of gross sales and Dr. Spiro, relying on a 2-year average, projected it at 4.0 percent of gross sales. Although, for 4 out of the 5 years, total depreciation grew as a percentage of sales revenues, the question is whether the most recent 2 years is a better measure of the trend than the last 5 years. Neither expert took the other head-on with respect to this point, and, since, in general, we found Dr. Bajaj's analysis to be more thorough than Dr. Spiro's, we shall rely on his 5-year average as determinative.

Both Drs. Bajaj and Spiro project inventory expenditures to remain constant at 50 percent of sales revenue. However, Dr. Bajaj projects "other working capital" (including cash) at 5 percent of sales whereas Dr. Spiro projects noninventory working capital at 3.5 percent of sales (in both cases, based on historical data). Dr. Spiro justifies his lower figure by discounting the 1993 and 1994 average working capital level (11.7 percent) on the ground that it was largely attributable to "excess cash". As we discuss, infra (in connection with our analysis of Korbel's nonoperating assets), we do not believe Korbel retained excess cash in 1993 and 1994. We are persuaded that Dr. Bajaj's projection of working capital levels is justified based on historical performance, and we find in accordance with his calculation.

Dr. Spiro projected annual capital expenditures by Korbel equal to $4 million for 1995 and every year thereafter. Dr. Bajaj projected annual capital expenditures on the assumption that they would equal depreciation plus 30 percent of Korbel's annual sales increases. Dr. Bajaj projected that capital expenditures would increase in an amount adequate to maintain Korbel's net fixed asset to sales ratio at 30 percent, which is slightly below the average of such ratios for the 1990-1994 period. Each expert points to unreasonable aspects of the other's approach: Dr. Bajaj to the fact that Dr. Spiro's

approach will eventually lead to negative net asset value, Dr. Spiro to the fact that Dr. Bajaj's projected increases in capital expenditures more than double his projected sales increases over the 1995-1999 period.

Korbel's financial statements for the 1985-1994 period show that, whereas depreciation increased annually, capital expenditures ("property, plant and equipment purchased") have fluctuated significantly over that same period, the low of $2,315,000 occurring in 1990 and the high of $6,142,000, in 1991. Average annual capital expenditures for the 1990-1994 period were $3,817,000. Therefore, we consider Dr. Spiro's projection of $4 million in annual capital expenditures to be reasonable, and we adopt it. Conversely, we find nothing in Korbel's financial history to support Dr. Bajaj's projection of ever-increasing annual capital expenditures.

3. Rate of Return

The DCF method involves the computation of the present value of expected future cashflows. The present value of a cashflow equals the cashflow multiplied by a discount factor (less than 1). The discount factor is usually expressed as the reciprocal of 1 plus a rate of return: Discount factor (for one period) = $1/(1 + r)$.[8] Drs. Bajaj and Spiro agree that the rate of return

[8] See Brealey & Myers, Principles of Corporate Finance 16 (6th ed. 2000) ("The rate of return *r* is the reward that

(continued...)

to be used in applying the DCF method to Korbel's cashflows is Korbel's "weighted average cost of capital" (WACC).[9] Dr. Bajaj computed the WACC as 14.22 percent; Dr. Spiro computed it as 16.54 percent. Their only significant disagreement is as to one component of the WACC, the cost of equity capital.[10] Dr. Bajaj computed the cost of equity capital as 14.70 percent; Dr. Spiro computed it as 16.71 percent.

We need not engage in an extended discussion of the appropriate cost of equity capital since, in computing the WACC, other things being equal, the higher the cost of equity capital (i.e., the larger the percentage), the larger the WACC. Given the DCF method, the larger the WACC, the lower the present value of expected cashflows. The parties endorse the DCF method, differing only as the value of certain variables. Since we are

---

[8](...continued)
investors demand for accepting delayed payment.").

[9] As expressed by Dr. Spiro:

$$WACC = W_d \times K_d \times (1-t) + W_e \times K_e$$

Where:

- $WACC$ = weighted average cost of capital,
- W_d = weight of debt in capital structure,
- K_d = estimated pretax cost of debt,
- t = income taxes at 1.5 percent,
- W_e = weight of equity in capital structure, and
- K_e = cost of equity capital.

[10] Dr. Spiro defined the cost of equity capital as follows: "[T]he rate of return required by an investor as sufficient compensation for committing equity funding to the business."

deconstructing each expert's DCF analysis, and assembling our own, our adopting Dr. Bajaj's cost of equity capital cannot, in isolation, be objectionable to respondent, since respondent has proposed that we find a higher, 16.71-percent cost of equity capital. Dr. Bajaj relied on the capital asset pricing model (which takes into account exclusively systematic (or market) risk) to compute the cost of equity capital, while Dr. Spiro relied on the so-called buildup method (which pays attention to the unsystematic (or individual) risk that an investor would face in investing in Korbel). Neither expert convinced us that his approach was significantly better (on the facts at hand) than the other expert's approach, and we are satisfied that 14.70 percent (the percentage reached by Dr. Bajaj) is a reasonable figure for Korbel's cost of equity capital, and we so find.[11] We find that the WACC is 14.22 percent.

[11] In recent cases, we have criticized the use of both the capital asset pricing model (CAPM) and WACC as analytical tools in valuing the stock of closely held corporations. See Furman v. Commissioner, T.C. Memo. 1998-157. See also Estate of Maggos v. Commissioner, T.C. Memo. 2000-129 and Estate of Hendrickson v. Commissioner, T.C. Memo. 1999-278, which reaffirm that view, citing Furman, and Estate of Klauss v. Commissioner, T.C. Memo. 2000-191, where we rejected an expert valuation utilizing CAPM in favor of one utilizing the buildup method. In other recent cases, however, we have adopted expert reports which valued closely held corporations utilizing CAPM to derive an appropriate cost of equity capital. See BTR Dunlop Holdings, Inc. v. Commissioner, T.C. Memo. 1999-377; Gross v. Commissioner, T.C. Memo. 1999-254, affd. 272 F.3d 333 (6th Cir. 2001)

4. Present Value Computation: Yearend Versus Mid-Year Cashflow Convention

In computing the present value of all cashflows, Dr. Bajaj adopted a yearend convention (cashflows discounted as of yearend), while Dr. Spiro adopted a midyear convention (cashflows assumed to be received at, and discounted from, midyear). Because, under the midyear convention, the cashflow for a year is deemed to have been received 6 months earlier, the discount factor for the year is slightly greater (and the dollar amount of the discount itself is slightly smaller) than if the yearend convention is adopted. Given the same cashflow but a greater discount factor, the present value of the cashflow is greater.

The parties agree that (1) approximately 60 percent of Korbel's champagne sales occur during the last quarter of the calendar year and (2) as much as 20 percent of such sales occur during the last week of December. Since Korbel's revenues are not spread evenly throughout the year, we are unconvinced that Dr. Spiro's use of the midyear convention results in a more accurate valuation than Dr. Bajaj's use of the yearend convention. We adopt the yearend convention.

5. Increase in Korbel's Value for Nonoperating Assets

a. Introduction

The question here is whether the value of certain nonoperating assets should be added to the value determined under the DCF method in determining the value of the shares.

b. Excess Land; Insurance Proceeds; KFTY Receivable

The parties agree, and we find, that the excess land constitutes a nonoperating asset to be added to the present value of Korbel's cashflows at a value of $2,198,000 and that insurance proceeds in the amount of $1,110,000 likewise are to be so added. Although they differ in exactly how a receivable from KFTY in the amount of $2,209,000 is to be taken into account, they agree that it is to be taken into account. We agree and so find. The total of the aforesaid nonoperating assets is $5,517,000

c. Excess Cash

Dr. Spiro considered $5,250,000 of cash held by Korbel on December 31, 1994, to be a nonoperating asset, which he referred to as "excess cash". Dr. Spiro reached that conclusion by examining historical cash levels in relation to gross revenue, in order to determine the appropriate "normalized" cash level, which he determined to be 6.55 percent of gross revenue. Applying that percentage to 1994 gross revenue, Dr. Spiro concluded that Korbel had excess cash in the amount stated. In determining the value of the shares, he included only a portion of the excess cash to reflect the inability of minority shareholders to force a distribution of such cash. Dr. Bajaj concluded that there was no excess cash, and, in his rebuttal testimony, he persuasively explained his basis for that conclusion. We were impressed with his interpretation of the historical data, in light of the

information he received (the need to retain funds for a number of contingencies) on interviewing Mr. Heck. On the basis of his testimony, we find that there was no nonoperating asset consisting of excess cash.

6. Decrease in Korbel's Value by Amount of Long-Term Debt

Putting aside Drs. Bajaj and Spiro's disagreement over the treatment of the KFTY receivable, see supra p. 35, the remaining disagreement is over whether the current portion of long-term bank borrowings is a component of working capital or a long-term liability. On brief, respondent states that any resulting difference in the value of the shares is immaterial, and the choice of treatment is "a valid choice of the appraiser". We shall treat such current portion as a long-term liability.

7. Discounts

a. The Expert Testimony

Dr. Bajaj determined that the shares were subject to a 25-percent basic marketability discount. Dr. Bajaj then added an additional 10 percent to his basic marketability discount, which addition was attributable to both the right of first refusal (ROFR) held by Brown-Forman and what he refers to as "agency problems", the fact that the shares represented a minority interest unable to influence the majority shareholder's control over cash distributions. The addition of those two discounts

resulted in Dr. Bajaj's determination of an overall 35-percent discount, which he treats, in total, as a marketability discount.

Dr. Spiro determined a basic 15-percent liquidity discount,[12] increased by an additional 10 percent for risks associated with Korbel's status as an S corporation. Thus, Dr. Spiro's total liquidity discount is 25 percent, which he applies to the values that he determined under his market and income approaches (i.e., values exclusive of the value of nonoperating assets). Dr. Spiro applied specific, separate discounts to nonoperating assets: A 25-percent minority discount followed by his overall 25-percent liquidity discount applicable to "excess land"[13] and a 25-percent minority discount applicable to "excess cash".

b. Marketability Versus Minority Discounts

We have recognized that there is a distinction between a discount for lack of marketability and a discount for the minority position of the interest to be valued. As we stated in Estate of Andrews v. Commissioner, 79 T.C. 938, 953 (1982):

> The minority shareholder discount is designed to reflect the decreased value of shares that do not convey control of a closely held corporation. The lack of marketability discount, on the other hand, is

[12] We interpret Dr. Bajaj's references to a "marketability" discount and Dr. Spiro's references to a "liquidity" discount as references to the same type of discount.

[13] Because Dr. Spiro applies the two discounts consecutively, the total discount is 43.75 percent: 0.25 + (0.25 x 0.75) = 0.4375.

> designed to reflect the fact that there is no ready market for shares in a closely held corporation. Although there may be some overlap between these two discounts in that lack of control may reduce marketability, it should be borne in mind that even controlling shares in a nonpublic corporation suffer from lack of marketability because of the absence of a ready private placement market and the fact that flotation costs would have to be incurred if the corporation were to publicly offer its stock. * * *

c. Basic Discount for Lack of Marketability

Dr. Bajaj's 25-percent marketability discount is based upon a number of empirical studies, his critical evaluation of those studies, and his own multiple regression analysis of the "explanatory variables". Dr. Spiro, in his rebuttal testimony, finds no fault with Dr. Bajaj's methodology.

Dr. Spiro cites many of the same empirical studies as suggesting that liquidity discounts can range from 10 to 45 percent. He states that the average discounts were "often in excess of 35 percent." Yet, Dr. Spiro concludes that the basic liquidity discount for the shares, taking into account the ROFR, is appropriately set at 15 percent. Dr. Spiro fails to make clear, in either his primary or rebuttal report, the basis for his determination that the appropriate liquidity discount is at the low end of the acceptable range of such discounts. In his oral testimony, he set forth his theory that there was a specialized group of purchasers who would value the shares on other than an investment basis (who would eye Korbel as a possible future joint venture partner). Dr. Spiro failed to

quantify or explain how he adjusted his analysis to take account of that factor. Indeed, such factor has recently been rejected by the Court of Appeals for the Ninth Circuit, the likely venue of any appeal in this case. Estate of Simplot v. Commissioner, 249 F.3d 1191, 1195 (9th Cir. 2001), revg. 112 T.C. 130 (1999). We did not find Dr. Spiro's oral testimony to be persuasive. It did not bolster what we found to be weak analysis in his written reports.

We found Dr. Bajaj's analysis in support of his 25-percent basic discount to be both thorough and convincing, and we find that a basic discount for lack of marketability in the amount of 25 percent is appropriate.

d. Additional Discounts

(1) Discount for Lack of Control

Dr. Bajaj describes his entire 35-percent discount as a discount for lack of marketability. We view his proposed discount for "agency problems", however, as a discount for minority status (or lack of control), as it is based upon the inability of the owner of the shares to force the majority shareholder, Gary Heck, to make dividend distributions. Dr. Bajaj's discount for minority status takes into account factors similar to what Dr. Spiro took into account in addressing problems associated with Korbel's S corporation status, at least to the extent that Dr. Spiro's discount relates to the same lack

of control problem.[14] Thus, we view Drs. Bajaj and Spiro in basic agreement as regards the need for a discount for lack of control, which we view as a minority status discount.

(2) Discount for Brown-Forman's ROFR

Both experts agree that some discount for the ROFR is warranted. Dr. Spiro includes the ROFR as part of his basic 15-percent liquidity discount, Dr. Bajaj as part of his additional 10-percent discount for both the ROFR and the minority interest's lack of control.

Dr. Bajaj views the ROFR as a much more serious impediment to marketability than does Dr. Spiro. He argues that, because of its ROFR, Brown-Forman is always a potential bidder for an available block of Korbel stock. He further argues that, because it had been the sole distributor of Korbel champagne and brandy for a number of years, Brown-Forman knows more about Korbel than any potential outside bidder. As a result, any other outside bidder would have to expend a great deal of effort and money to even approach Brown-Forman's knowledge level concerning Korbel, without which it may offer too little and risk losing out to Brown-Forman, or too much and risk making a bad deal. Also, because Brown-Forman has a special interest in retaining its sole

[14] Dr. Spiro also states that, as an S corporation, Korbel is subject to several restrictions impairing liquidity, including restrictions on the number and type of persons that can be shareholders. Nevertheless, he views S corporation status as a benefit and fails to quantify the relevant advantages and disadvantages.

distributor position, it will have a tendency to drive up the price beyond what a potential buyer would be willing to pay based upon the present value of anticipated cashflows. According to Dr. Bajaj, both of those factors act as a significant deterrence to would-be bidders for the shares, and, therefore, they reduce the value of the shares.

In his rebuttal testimony, Dr. Spiro responds that Korbel is not "such a complex organization that the costs of analyzing the company for bidding purposes would be prohibitively high." Dr. Spiro argues that Dr. Bajaj's concerns regarding Brown-Forman's ROFR "are more appropriately applied to * * * [complex high-tech companies] where the 'hidden' value of * * * [intellectual property] can make accurate analysis difficult and expensive, especially for an outsider." Dr. Spiro agrees, however, that some discount is warranted for the ROFR and, as noted above, has included it as part of its basic 15-percent liquidity discount.

(3) Amount of Additional Discounts

We agree with Dr. Bajaj that an additional 10-percent discount for Brown-Forman's ROFR and the purchaser's lack of control over future dividend-liquidation policy (i.e., the purchaser's minority status) is warranted. We ascribe most of that discount to the minority status issue, which both Drs. Bajaj and Spiro agree deserves recognition. Both Drs. Bajaj and Spiro

also believe that the ROFR would reduce value, but disagree both as to rationale and quantum. We are satisfied that some amount of discount is attributable to the ROFR and that 10 percent is an appropriate discount for both the ROFR and the purchaser's minority status, given Dr. Spiro's addition of a 10-percent discount for only Korbel's status as an S corporation.

(4) AVG's Discounts From the Value of Nonoperating Assets

Dr. Bajaj applied an overall 35-percent marketability discount to his total valuation of Korbel, which included nonoperating assets. Dr. Spiro applied a 25-percent liquidity discount to his valuation of Korbel, not including nonoperating assets. As noted supra p. 37, he then applied separate additional discounts to what he considered nonoperating assets. We reject Dr. Spiro's 25-percent minority discount applied to "excess cash" on the basis of our finding that Korbel retained no excess cash as of the valuation date. We also reject Dr. Spiro's 43.75-percent combination minority/liquidity discount applied by him to the excess land in favor of Dr. Bajaj's 35-percent overall discount applied to his total valuation of Korbel, including such excess land. We see no reason to limit a minority discount to particular assets of Korbel even if they are nonoperating assets and, therefore, more readily available for distribution to shareholders than are Korbel's operating assets. As we observed in Estate of Fleming v. Commissioner, T.C. Memo. 1997-484, a

minority discount generally "reflects the minority shareholder's inability to compel liquidation and thereby realize a pro rata share of the corporation's net asset value"; i.e., the minority shareholder's share of total corporate net asset value.

C. Conclusion

On the basis of the foregoing application of the DCF method, taking into account certain discounts, we find that the fair market value of the shares as of the valuation date was $20,269,736, or $32,174 a share. See Appendix.

VI. Conclusion

We shall redetermine a deficiency in Federal estate tax commensurate with our finding that the value of the shares as of the valuation date was $20,269,736.

Decision will be entered under Rule 155.

Heck v. Commissioner

103 Wis.2d 327 (1981)
309 N.W.2d 343

Judith B. HOLBROOK, Plaintiff-Respondent,

v.

John S. HOLBROOK, Jr., Defendant-Appellant.[†]

No. 80-1290.

Court of Appeals of Wisconsin.

Submitted on briefs April 15, 1981.
Decided June 4, 1981.

330 *330 For the defendant-appellant the cause was submitted on the briefs of *Harry F. Peck* and *Louise A. Ptacek* of *Petrie, Stocking, Meixner & Zeisig, S.C.,* of Milwaukee.

For the plaintiff-respondent the cause was submitted on the brief of *Burton A. Strnad* of *Strnad & Gossens, S.C.,* of Milwaukee.

Before Decker, C.J., Moser, P.J., and Cannon, J.

MOSER, P.J.

This is an appeal from the property division, family support and attorneys' fees awards of the amended divorce judgment dated September 5, 1980. We vacate, in part, the property division and the award of attorneys' fees and remand for further findings consistent with this opinion. We affirm the family support award.

John and Judith **Holbrook** were married on July 28, 1962, and remained married for eighteen years. At the time of their divorce they had four minor children, ages 16, 14, 11 and 3. Their youngest child is physically disabled due to cerebral palsy. Judith worked as a school teacher for the first two years of the marriage while John attended law school. After John's graduation from law school, Judith did not work outside of the home.

John is currently a partner in the law firm of Quarles & Brady, and, at the time of the divorce, was earning $112,000 per year.

The trial court divided and valued the assets of the parties, as follows:

331 *331

Judith:	Homestead	$152,300
	Household furnishings	$ 15,000
	Checking and Savings Accounts in her name[1]	
	1975 Buick Station Wagon	$ 1,000
	All securities owned by either or both of the parties except the stock in Ashbourne, Ltd.	$ 3,138
	Life insurance policies on her life[2]	
	Cash payment	$ 35,000[3]
John:	Partnership Interest in Quarles & Brady (capital account value of $23,790 plus "intangible or goodwill value" of $161,330[4])	$185,120

332 *332

1977 Plymouth Voyager Van	$ 3,000
Checking and savings accounts in his name[5]	
Household goods in his possession	$ 2,000
Stock in Ashbourne, Ltd.[6]	

Additionally, the court valued John's retirement benefits at $12,179, but determined that the benefits accrued to the date of the original decision should be equally divided when John actually receives them, after he retires.

The court found that John's gross income was $112,000. Judith was awarded custody of the children. The court ordered family support payments to Judith and the children of $60,000 per year, or $5,000 per month (in addition to the cash payment ordered as part of the property division). John was also ordered to pay $1,000 per month for seven months, and $500 in the eighth month immediately following the entry of judgment. This provision appears to have been included to cover Judith's attorneys' 333 fees. The court further ordered that *333 John pay Judith for the income taxes payable for the 1980 temporary family support and that the pay for all health care costs for the children.

John makes several claims of error on appeal regarding the valuation and distribution of the marital estate, as well as the family support and attorneys' fees awards. He contends:

1. that the trial court improperly valued:

a. the homestead, b. the automobiles, and c. the retirement benefits;

2. that sale of the homestead should have been ordered;

3. that the $60,000 annual maintenance award was excessive;

4. that he should not have been required to contribute to Judith's attorneys' fees;

5. that the trial court erred in finding that John's partnership has a goodwill or intangible value which is a marital asset to be included in the property division; and,

6. that the trial court erred in establishing a goodwill value of $161,300 because the calculation of that figure was based upon an unproven factual assumption.

VALUATIONS OF HOMESTEAD, AUTOMOBILES AND RETIREMENT BENEFITS

Homestead

The trial court found that the homestead, a large brick home on Newton Avenue in Shorewood, Wisconsin, had a value of $152,300, subject to a mortgage of $41,962. John claims that the trial court erroneously valued the homestead as of December 1979, and should have valued it as of the date of the commencement of the trial, September 26, 1979. John's expert testified that on September 26, 1979, the home had a value of $185,000. Judith's expert testified at the December 10, 1979, hearing that 334 he appraised the home in August of 1979, and *334 estimated its value to be $162,000. He testified also that between August of 1979, and December 1979, the market had changed and the value of the home had fallen by about five percent to seven percent.

[1]

Assets of the marital estate are valued as of the date the divorce is granted.[7] This court will not upset the trial court's valuations of assets unless the valuations are against the great weight and clear preponderance of the evidence.[8] Weighing the evidence and determining the credibility of witnesses are matters for the trial court and, where more than one inference can reasonably

be drawn from the evidence, we are obliged, on review, to accept the one drawn by the trier of fact.[9]

The divorce in this case was granted orally from the bench on December 10, 1979.[10] It is settled law in Wisconsin that this is the date for determining the value of assets.[11] In the absence of exceptional intervening circumstances,[12] we are not at liberty to conclude that some other date should have been used.

The valuation of assets is a difficult and imprecise obligation of a trial judge in a divorce action. The values of some assets can fluctuate markedly throughout the months of a divorce proceeding and, even on one given date, there may be several conflicting
335 opinions of the *335 value of a certain asset. As the fact finder, it is the trial judge who must draw reasonable inferences and come to reasonable, albeit disputable, conclusions as to the value of assets as of the date the divorce is granted.[13]

[2]

In this case, the trial court's valuation of the homestead was properly made as of the date the divorce was granted and is not against the great weight and clear preponderance of the evidence.

Automobiles

We do find error, however, in the valuation of the automobiles. The only testimony in the record regarding the value of the automobiles was John's testimony, based on Bluebook values, that the Buick station wagon was worth $2,795 and the Plymouth van was worth $2,675. There was no other evidence of the value of these automobiles. However, in the amended findings of fact, the trial court valued the Buick station wagon at $1,000 and the Plymouth van at $3,000.

[3]

A court is not required to adopt uncontradicted testimony if it is inherently improbable.[14] However, "[p]ositive uncontradicted testimony as to the existence of some fact, or the happening of some event, cannot be disregarded by a court or a jury in the absence of something in the case which discredits the same or renders it against reasonable probabilities."[15]

The trial court gave no explanation of its reasons for rejecting the uncontradicted valuations of the automobiles. The failure to
336 set forth its reasoning rendered its analysis of the valuations incomplete, and was an abuse *336 of discretion.[16] Accordingly, we vacate the trial court's valuation of the automobiles and instruct the court on remand to either adopt the uncontradicted values testified to at trial ($2,795 for the Buick station wagon and $2,675 for the van) or to explain what in the case discredited these valuations or rendered them improbable.

Retirement Benefits

In reference to John's retirement benefits from Quarles & Brady, the amended findings of fact and conclusions of law equivocally state: "That the pension plan of Quarles & Brady and salary continuation program pursuant to the partnership agreement have an aggregate value of $12,179. That said amount does not truly reflect the value of the program." The latter statement
337 apparently refers to the admissions by the expert who valued the plan at $12,179[17] that there were certain *337 errors made in
338 computing that amount.[18] The court then went on, not to divide the present value of the retirement *338 benefits, but to order that when they become due "[t]he proceeds shall be divided equally between the parties based upon the pension benefits accrued as of the date of the original Decision in this action."

John contends on appeal that the court was obligated to distribute the present value of the benefits at the time of the divorce and that it was error for the trial court to postpone, for at least twenty-five years, the division of the retirement benefits.

In *Bloomer v. Bloomer*[19] our supreme court recognized that the valuation and division of pension rights is a matter for the trial court's discretion.[20] The court explained that there are at least three ways that pension rights can be valued and divided:

339 *339 1. the trial court may determine the amount of the employee-spouse's contribution to the fund, plus interest, and award the other spouse an appropriate share;

2. the court may award the nonemployee-spouse a share of the present value of the employee-spouse's retirement benefits when they vest under the plan. In addition to discounting to present value, further discounting should be made to account for the probability of death before qualification for benefits and for vesting. Consideration should also be given to the employee-spouse's life expectancy as a retiree. This approach may be too speculative in some situations;[21]

3. the trial court may determine a fixed percentage of any future payments under the employee-spouse's pension plan attributable to earnings during marriage to which the nonemployee-spouse is entitled.[22] This requires no calculation of present value. This method is best where present value of a pension fund is difficult or impossible to assess.[23]

Which, if any, of these methods is appropriate is a discretionary decision dependent "upon the circumstances of the case, the status of the parties, and whether the result is a reasonable valuation of the marital asset."[24]

Although it was a discretionary matter for the trial court to determine which valuation and division method should be used, the record does not show why the court determined a present value for the pension plan[25] and then ordered a future division of the payments as they become due.

[4, 5]

340 Appellate review of discretionary decisions is virtually impossible where there is no record of the trial court's *340 reasoning in reaching a particular conclusion. Our supreme court has explained that the exercise of discretion is more than simply making a decision: it requires a reasoning process dependent upon facts in, or reasonable inferences from, the record and a conclusion based on proper legal standards.[26] "There should be evidence in the record that discretion was in fact exercised and the basis of that exercise of discretion should be set forth."[27] The failure to set forth the reasoning used to reach a decision is an abuse of discretion.[28]

[6]

In deciding which method of dividing the retirement benefits should be adopted in this case, the trial court should consider the advantages and disadvantages of the various methods. We believe that a trial court should be particularly alert to the advantages of dividing retirement benefits at the time of divorce rather than postponing the actual division for a number of years until the employee-spouse actually retires. Determining the present value of retirement benefits is admittedly speculative, but this is true of valuation of any asset. We believe that where there are sufficient assets available at the time of divorce to divide the present value of the retirement benefit without causing an undue hardship on either spouse, this method is preferred. This method is especially preferred where, as here, there is uncontradicted expert testimony on valuation.

[7]

341 Although the future division method adopted by the trial court in this case is an acceptable method of division, *341 we believe that it should only be used where the record shows that present value determinations are unacceptably speculative or where there are not enough assets to equitably require that benefits due in the future be split presently.

[8]

In this case, the method of computing the present value of the retirement benefits was undisputed (although the actual computation contained errors which are corrected in our footnote 18). The court indicated no reasons for rejecting this method and for opting for the less preferred future division method. Accordingly, on remand we instruct the trial court to either adopt the present value method or to set forth its reasoning, under the facts and circumstances of this case, for delaying the division until some undetermined future date.

SALE OF THE HOMESTEAD

[9]

John contends on appeal that in order to accomplish an equitable division of the marital estate, the homestead should be sold and the proceeds divided. We think the conclusion that Judith and the children should be permitted to remain in the home is reasonable. The amount of equity the Holbrooks have in the home, the costs and disruption of moving, the age of the children, and the current cost of financing a new home are factors which support the trial court's conclusion. There is also a statutory preference for this result.[29] How Judith allocates the funds provided by the property division and family support to cover the upkeep of the home should be left to her.

342 *342 ## FAMILY SUPPORT

[10]

Judith was awarded $60,000 per year for family support. John contends that this is excessive. We do not believe that the family support award is unreasonable under the circumstances in this case.

Family support is to be determined by assessing the family's need and the paying spouse's ability to pay.[30] We think both considerations support the award in this case.

Judith has the responsibility of feeding, clothing and generally caring for four minor children, one of whom is, at least to some extent, physically disabled by cerebral palsy. The record also shows that Judith is disabled by an ankle injury which makes her unable to work. In contrast, John is a partner in a large and reputable law firm where he is earning $112,000 a year.

The trial court indicated its reasons for awarding $60,000 in family support in its memorandum decision written in response to a motion to amend the original findings of fact and conclusions of law and the original judgment. The court indicated that it had reexamined the award and declined to change its determination that the amount was fair and reasonable. The court determined that, although two of the children were approaching the age of majority, the award should not be changed and when the childen do reach majority, John can bring a motion for reduction of family support based on the change of circumstances.

The memorandum decision and the findings of fact and conclusions of law indicate that the trial court exercised its discretion
343 based upon proper factors and set forth at least some of its reasoning in the record. We *__343__ find no abuse of discretion and therefore defer to the trial court's judgment.

ATTORNEYS' FEES

Originally, John was ordered to pay $15,000 toward Judith's attorneys' fees. On reconsideration of this issue, the court stated:

The court has again reviewed the file and determines that that would be the amount of [Judith's attorneys'] total fee and agrees with counsel for the defendant that to require defendant to pay the total fee would be unfair. Therefore the court sets as a reasonable contribution, under *Anderson v. Anderson,* 72 Wis.2d 631, the sum of $7,500 to be paid in the manner described earlier.

The court further finds that there is a demonstrated need for the plaintiff to receive this assistance by way of a contribution and further there is a demonstated ability on behalf of the defendant to pay the same, and that the sum fixed by the court is a fair and reasonable sum.

Before awarding attorney's fees, the trial court is required to make the following factual determinations:

1. the spouse receiving the award needs the contribution;

2. the spouse ordered to pay has the ability to do so; and,

3. the total fee is reasonable (this provides guidance in determining what is a reasonable contribution).[31]

John disputes the trial court's determination that Judith needed the contribution to her attorneys' fees. We do not believe that the trial court's finding of need was against the great weight and clear preponderance of the evidence.

344 *344 [11]

However, we must, nonetheless, remand the issue to the trial court for a determination of the amount of Judith's total attorneys' fees and the reasonableness of that amount. "In the absence of some indication as to what the total fee is, this court is left to surmise as to whether the proper balance was struck between the former wife's needs and the divorced husband's ability to pay."[32] This requirement is not satisfied by the trial court's determination that $7,500 was a *reasonable contribution.* It must first be determined what the total fee actually is and whether it is reasonable. Without this determination, we cannot review the reasonableness of the contribution.

INCLUSION OF GOODWILL AS AN ASSET

The major dispute in this appeal focuses on the trial court's determination that the goodwill or intangible value of John's partnership interest in Quarles & Brady is a marital asset which must be considered in the property division. John also disputes
345 the court's determination that this asset had a value of $161,300.[33] He claims *345 that the method of calculating this value was based on completely unsupported factual assumptions, specifically, the assumption of a $100 per hour billing rate.

John contends that the intangible or goodwill value of the partnership is not an asset or any kind of property. He argues that the only property interest in the partnership consists of his "capital account" of $23,790.36, the contractually determined, fixed amount payable to him upon withdrawal from the firm.

We conclude that the trial court erred in determining that the marital estate included the goodwill value of John's partnership. We therefore do not address the issue of the method of valuation.

Defining the Concept

Goodwill has been defined thusly:

[T]he advantage or benefit which is acquired by an establishment beyond the mere value of the capital stock, funds, or property employed therein, in consequence of the general public patronage and encouragement which it receives from constant or habitual customers on account of its local position, or common celebrity, or reputation for skill or affluence, or punctuality, or from other accidental circumstances or necessities, or even from ancient partiality or prejudices.[34]

The favor which the management of a business wins from the public . . . . The fixed and favorable consideration of customers arising from established and well-conducted business . . . . The favorable consideration shown by the purchasing public to goods known to emanate from a particular source . . . . Something in business which gives reasonable expectancy of preference in race of competition.[35]

346 *346 Originally, goodwill was said to exist only in commercial business, and not in a professional business which depends upon the skill and reputation of a particular person.[36]

Because goodwill has no existence apart from the business to which it attaches, courts have determined that there can be no income tax deduction for loss of goodwill;[37] the loss of goodwill cannot be compensated for in eminent domain proceedings;[38] goodwill cannot be used to satisfy debts;[39] nor is it subject to depreciation.[40]

In an article criticizing the rather unstable and inconsistent development of the concept of professional goodwill in marital

dissolutions in California, Ira Lurvey points out that some view goodwill as something that can only be ascertained upon the actual sale of a business.[41] However, "[s]uch protection of the real marketplace is missing . . . from the *hypothetical* sale ordered on dissolution of marriage. There is neither a real buyer nor a real seller."[42] Mr. Lurvey asserts that in light of this and the other attributes of goodwill discussed above it is:

at least arguable that "goodwill," by whatever name designated, is only an entry in an accounting statement arrived at by hindsight to accommodate any amount paid or received on transfer of a going business beyond the value attributable to its tangible assets.

347 *347 Thus at best "goodwill" is intangible.

It is also amorphous, ephemeral, elusive; and, by general definition, speculative and uncertain except to the extent that it has already been established by an armslength bargaining in the open market place.[43]

Professional Goodwill as a Marital Asset in Other Jurisdictions

With an apparent lack of deliberativeness, the California courts have developed the view that the goodwill of a professional practice is an asset which must be accounted for upon dissolution of a marriage.[44] However, the cases are inconsistent in their treatment of goodwill. It is not clear whether it is truly a separate asset to be valued and divided,[45] or whether it is actually "the vehicle whereby the *established employment or earning capacity of the husband,* which often `constitutes the most valuable economic asset of the parties,' was divided as community property."[46] The California position is further obscured by the determination in one case involving the dissolution of a law partnership and not a divorce, in which it was ruled that goodwill cannot be divided between partners when a law partnership is dissolved because it had attached to the individual partners, had no monetary value, and could not be sold.[47] Subsequently, in the first California divorce case involving the issue of goodwill in
348 which the husband-professional was not a *348 sole practitioner, but a partner,[48] the court stated that the existence and value of goodwill must be determined regardless of "whether related to that of a sole practitioner, a professional partnership or a professional corporation."[49]

The California rule has been adopted in Washington.[50]

The California approach has been deservedly criticized as a "confusion of rules and methods of valuation, compounded by inconsistencies in logic and application and conceptual problems over possible duplication of spousal support and denial of equal protection."[51]

An equally criticizable and anomalous situation exists in Texas where the inclusion of professional goodwill as an asset in the marital estate is dependent upon whether the professional involved is a sole practitioner or a member of a professional partnership or corporation.

349 *Nail v. Nail*[52] involved an opthalmologist who had established a sole medical practice. The Texas Supreme *349 Court determined that the goodwill of a sole practitioner's business does not possess value or constitute an asset separate from the individual and his ability to continue practicing and would cease to exist if the individual withdrew from the business.[53] Accordingly, the supreme court determined that the wife's community interest in the medical business did not extend to the enhanced value attributable to goodwill. This enhanced value, the court said, was merely an expectancy completely contingent on the continuation of existing circumstances and therefore was not a vested property right subject to division upon divorce.[54]

However, in *Geesbreght v. Geesbreght*[55] the court of civil appeals determined that goodwill may exist as an asset of a professional partnership or corporation separate from any individual member. That case involved a multi-member medical corporation, which the court said could acquire its own reputation or goodwill, despite changes in personnel. Hence, the goodwill of the corporation should be accounted for in evaluating the practitioner's interest in the business.[56]

The inconsistencies and inequity of the distinctions of *Nail* and *Geesbreght* have been noted and criticized.[57]

Even greater problems arise when, after it has been determined that professional goodwill is a marital asset divisible upon divorce, attempts are made to place a dollar value on the goodwill that is part of the marital estate. This would be especially problematic, where, as here, the business involved has several members, all of whom have presumably contributed to the goodwill of the business. Valuation of one individual's goodwill interest in the business would be almost pure speculation.

350 *350 ***Professional Goodwill in Wisconsin***

We are not persuaded that the concept of professional goodwill as a divisible marital asset should be adopted in Wisconsin. We are not obliged nor inclined to follow the twisted and illogical path that other jurisdictions have made in dealing with this concept in the context of divorce.

The concept of professional goodwill evanesces when one attempts to distinguish it from future earning capacity. Although a professional business's good reputation, which is essentially what its goodwill consists of, is certainly a thing of value, we do not believe that it bestows on those who have an ownership interest in the business, an actual, separate property interest. The reputation of a law firm or some other professional business is valuable to its individual owners to the extent that it assures continued substantial earnings in the future. It cannot be separately sold or pledged by the individual owners. The goodwill or reputation of such a business accrues to the benefit of the owners only through increased salary.

We think this case is analogous to the situation in *DeWitt v. DeWitt*[58] in which this court determined that a professional education or the increased earning capacity that it confers upon the spouse who holds it is not a divisible marital asset, even though the acquisition of the degree is partly attributable to the earnings and efforts of the other spouse. This court quoted, with approval, the reasoning of *In re Marriage of Graham:*[59]

An educational degree . . . is simply not encompassed even by the broad views of the concept of "property." It does not have an exchange value or any objective transferable value on an open market. It is personal to the holder. It terminates on death of the
351 holder and is not inheritable. It cannot be assigned, sold, transferred, *351 conveyed, or pledged. An advanced degree is a cumulative product of many years of previous education, combined with diligence and hard work. It may not be acquired by the mere expenditure of money. It is simply an intellectual achievement that may potentially assist in the future acquisition of property. In our view, it has none of the attributes of property in the usual sense of that term.

It was further explained in *DeWitt* that valuing a professional degree as a marital asset necessarily requires division of the post-divorce earnings of the degree-holding spouse, which is inconsistent with the requirement that only assets acquired during marriage can be divided.[60]

[12]

Like an educational degree, a partner's theoretical share of a law firm's goodwill cannot be exchanged on an open market: it cannot be assigned, sold, transferred, conveyed or pledged. Although we recognize the factual distinction between a degree-holder and a partner or shareholder in a law firm, we think the similarities compel analogous treatment in a divorce setting. In both cases, the "asset" involved is not salable[61] and has computable value to the individual only to the extent that it promises increased future earnings.

There is a disturbing inequity in compelling a professional practitioner to pay a spouse a share of intangible assets at a judicially determined value that could not be realized by a sale or another method of liquidating value.[62]

352 *352 There is no dispute in this case that upon withdrawal from the partnership, John would be entitled to receive only his capital account value of $23,790. Ethically and contractually, he is prevented from otherwise disposing of his interest in Quarles & Brady. The capital account value is the only value that should have been assigned to his partnership as an asset.

As stated earlier, the goodwill or reputation of Quarles & Brady is reflected in John's substantial salary. This salary was

considered in setting the family support award. To also treat the goodwill of the law firm as a separate divisible asset, would constitute double counting.[63] The fact that John is a partner in a reputable law firm is, however, a proper factor to consider in dividing the assets, as well as determining the amount of family support.[64] If circumstances warrant future amendment of the family support award, this may be done.[65] We think that this is a more direct and reasonable way of accounting for John's professional position.

Judith's contribution to the furtherance of John's legal career is reflected in the home, furnishings and other tangible assets that the family has acquired over the years. Indeed, she was awarded a great deal of these family assets in the divorce.

Accordingly, we vacate the trial court's valuation of John's partnership to include goodwill and order on remand that the undisputed value of $23,790 be assigned to that property.

353 *353 *By the Court.* — That part of the judgment regarding the family support award is affirmed; the valuation and disposition of the homestead are also affirmed. The remainder of the property division section of the judgment is vacated and the matter remanded for further findings consistent with this opinion with regard to the following items: the valuation of the automobiles, the valuation of the retirement benefits, the valuation of the parties' individual bank accounts, the valuation of the stock in Ashbourne, Ltd., and the valuation of John's partnership interest at Quarles & Brady. The portion of the judgment granting the award of attorneys' fees is vacated and remanded for further findings consistent with this opinion. The trial court is instructed to reconsider the division of the assets after these findings are made.

[†] Petition to review denied. ABRAHAMSON, J., took no part.

[1] No value for either Judith's or John's bank accounts was determined by the trial court. The record shows that as of September 26, 1979, Judith had $650 in a checking account and $1,880 in a savings account. There is no way for this court to determine the amounts the parties had in their individual accounts as of September 5, 1980, the date of the amended judgment of divorce. This is a factual determination that should be made on remand by the trial court.

[2] The trial court did not indicate any value for any such policies.

[3] The trial court ordered that as a further division of the estate, John pay Judith $25,000 forthwith and $500 per month for twenty months with nine-percent interest on the remaining balance.

[4] This "goodwill" value was based upon the testimony by Judith's expert witness, Mr. Powers. The valuation process used by Mr. Powers is as follows:

a. "gross income from personal services" is calculated by multiplying billable hours times the hourly billing rate. Mr. Powers used John's total billable hours in 1978, 1,569 hours, and multiplied this by a billing rate of $100 per hour. (There is nothing in the record that indicates that $100 per hour was or is John's billing rate). The total arrived at was $156,900.

b. "contribution to overhead" was computed by multiplying "gross income from personal services" ($156,900) times the reciprocal of the percentage of the law firm's gross income (which is represented by the net income to partners). It was determined that 53.8% of the firm's income was distributed to partners. The overhead was therefore determined to be 46.2%. The "contribution to overhead" was calculated as $72,488. ($156,900 × 46.2%).

c. "salary earned from personal efforts" was calculated by subtracting the "contribution to overhead" from the "gross income from personal services:" $156,900 minus $72,488 equals $84,412.

d. "earnings in excess of salary" was calculated by subtracting "salary earned from personal efforts" ($84,412) from gross income for 1978 ($111,000) resulting in $26,588.

e. one-half of "earnings in excess of salary" was subtracted to allow for income taxes, with the rounded result of $13,500.

f. finally, 13,500 was capitalized over twenty years at 5½% to get a present value of $161,330.

[5] *See* note 1, *supra.*

[6] No valuation of this stock was included in the original findings of fact and conclusions of law or the original judgment nor in either the amended findings of fact and conclusions of law or the amended judgment. According to John's testimony, Ashbourne, Ltd. is a family-owned corporation and the stock has no market value.

[17] John had two forms of retirement benefits: a basic pension and a supplemental benefit for partners. The total retirement benefits were valued through the use of the following calculation process:

```
1. Accrued benefits calculated
   a. average final compensation                      $111,176.00
      × 20% (provided for in the plan)                      × .20
      × accrual fraction                                    ×  15/40
      (number of years employed divided by expected
      total number of employment years at
      retirement)
                                                      ---------------
      equals accrued basic pension benefit            $  8,338.20.

   b. average final compensation                      $111,176.00
      × 5% (provided for in the plan)                       × .05
      × accrual fraction                                    ×   8/33
      (number of years as partner divided by expected
      number of partnership years upon
      retirement)
                                                      ---------------
      equals accrued supplemental benefit             $  1,347.59.

2. Present value calculated

   a. basic pension benefit
      accrued benefit                                 $  8,338.20
      × annuity value                                      × 8.0353
      × survival factor                                    ×  .70084
      × present value discount                             ×  .23300
                                                      ---------------
      present value of basic pension benefit          $ 10,941.00.

   b. supplemental benefit
      accrued benefit                                 $  1,347.59
      × annuity value                                      × 8.0353
      × survival factor                                    ×  .70084
      × discount for withdrawal prior to retirement        ×  .70
                                                      ---------------
      present value of supplemental benefit           $  1,238.00.
```

```
Total present value of retirement benefits          $ 12,179.00.
```

[18] Two errors were made in this calculation and were disclosed in the record: first, the basic pension benefit plan contained a provision limiting the "average final compensation" amount to $100,000 (this limit does not apply to the supplemental benefits); and second, the retirement plan applicable to John excluded the first five years of employment so that the "accrual fraction" for the basic benefit would be 10/35, rather than 10/40. Correcting for both of these errors, the present value for the benefits would be:

```
basic pension
      $100,000
            × .20
            ×  15/35
      --------------
      $ 5,714.00
          × 8.0353
          ×  .70084
          ×  .23300
      --------------
      $ 7,498.00

supplemental benefits
      $111,176.00
            × .05
            × 8/33
      --------------
      $ 1,348.00 (rounded)
          × 8.0353
          ×  .70084
          ×  .2330
          ×  .70
      --------------
     $  1,238.00
Total = $8,736.
```

On remand, should the trial court decide to presently divide the pension benefits, it must adjust the present value amount of these benefits as indicated above to account for the undisputed errors in computation used to arrive at the $12,179 figure. However, the trial court is not bound by the recalculation set out above to the extent that it deems it proper to accept John's argument that the "final compensation" figure used to begin the calculations should be the actual income average for the five years preceding the divorce rather than using the then-current year's compensation or the $100,000 maximum.

[32] *Anderson, supra* note 31, at 646, 242 **N.W.2d** at 173. Although the court stated in the above quoted excerpt from its memorandum decision that the original award of $15,000 would cover Judith's attorneys' total fee, we find no indication from the record of the actual amount of attorneys' fees owed. In the trial brief, Judith's attorneys state that Judith "incurred substantial expense in the litigation of this matter" due to the use of many experts, the custody dispute, various motions, depositions and conferences with doctors and experts. It was asserted that many hours were spent preparing for trial. In conclusion it was asserted that "a reasonable contribution towards attorneys' fees and expert witness fees would be $13,500.00." It is not at all clear if that was meant to be a statement of what the total fee was. If so, we are at a loss to determine where the court arrived at its original $15,000 figure.

130 T.C. No. 12

UNITED STATES TAX COURT

THOMAS H. HOLMAN, JR. AND KIM D.L. HOLMAN, Petitioners v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 7581-04. Filed May 27, 2008.

Ps transferred D stock of substantial value to a newly formed family limited partnership and then made gifts of limited partnership units (LP units) to a custodian for one of their children and in trust for the benefit of all of their children. Ps made a large gift in 1999 and smaller gifts in 2000 and 2001. In valuing the gifts for Federal gift tax purposes, they applied substantial discounts for minority interest status and lack of marketability. With respect to the 1999 gift, R argues that the gift should be treated as an indirect gift of D shares and not as a direct gift of LP units. For all of the gifts treated as gifts of LP units, R argues that the restrictions in the partnership agreement on a limited partner's right to transfer her interest should be disregarded pursuant to I.R.C. sec. 2703(a)(2). R also disagrees with Ps' application of discounts.

1. Held: The limited partnership was formed and the shares of D stock were transferred to it almost 1 week in advance of the 1999 gift, so that, on the facts before us, the transfer cannot be viewed as an indirect gift of the shares to the donees under sec. 25.2511-1(a) and (h)(1), Gift Tax Regs.

2. Held, further, the 1999 gift may not be viewed as an indirect gift of the shares to the donees under the step transaction doctrine.

3. Held, further, in valuing the gifts, the transfer restrictions are disregarded pursuant to I.R.C. sec. 2703(a)(2).

4. Held, further, values of the gifts determined.

John W. Porter, Stephanie Loomis-Price, and J. Graham Kenney, for petitioners.

Lillian D. Brigman and Richard T. Cummings, for respondent.

HALPERN, Judge: By separate notices of deficiency (the notices), respondent determined deficiencies in each petitioner's Federal gift tax of $205,473, $8,793, and $16,009 for 1999, 2000, and 2001, respectively. In response to the notices, petitioners jointly filed a single petition. Respondent answered, and, by amendment to answer, he increased by $2,304 and $13, the deficiencies he had determined for each petitioner for 1999 and 2001, respectively.

Unless otherwise indicated, all section references are to the Internal Revenue Code in effect for the years in issue, and all Rule references are to the Tax Court Rules of Practice and Procedure.

After concessions, the principal issues for decision are (1) whether petitioners' transfer of assets to a family limited partnership constitute an indirect gift to another member of the partnership; (2) if not, whether, in valuing the gifts of limited

partner interests that are the subject of this litigation, we must disregard certain restrictions on the donees' rights to sell those interests; and (3) assuming that we must value those interests, those values.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. The stipulation of facts, with accompanying exhibits, is incorporated herein by this reference. Petitioners resided in St. Paul, Minnesota, at the time they filed the petition.

Background

Petitioners are husband and wife. They have four minor children, the initials of whose first names are L., C., V., and I. (collectively, the children).

Petitioner Thomas H. Holman, Jr. (Tom), was employed by Dell Computer Corp. (Dell) from October 1988 through November 2001. While employed by Dell, Tom received substantial stock options, some of which he has exercised. Tom and petitioner Kim D.L. Holman (Kim) have purchased additional shares of Dell stock.

In 1996 and 1997, as their net worth increased, petitioners grew more concerned with managing their wealth, particularly as their wealth might affect the children.

Texas UTMA Accounts

Beginning in 1996, when they lived in Texas, and continuing through early 1999, petitioners made annual gifts of Dell stock to three custodial accounts under the Texas Uniform Transfer to Minors Act (Texas UTMA), one for each of their then three

daughters, L., C., and V. Tom served as custodian for the three Texas UTMA accounts until August 1999, when, for estate planning reasons, he resigned and was replaced by his mother, Janelle S. Holman (Janelle). At the time of his resignation, each of the Texas UTMA accounts held 10,030 shares of Dell stock.

Move to Minnesota and Discussions with Mr. LaFave

In August 1997, the Holman family moved from Texas to St. Paul, Minnesota. At that time, petitioners had no wills.

In late 1997, petitioners met with business and estate planning attorney E. Joseph LaFave (Mr. LaFave) to discuss estate planning and wealth management issues. They continued those discussions with Mr. LaFave and with others over the next 2 years. They recognized that they were wealthy, and they anticipated transferring substantial wealth to the children. They wished to make the children feel responsible for the wealth they expected them to receive. They discussed with Mr. LaFave and others various ways simultaneously to meet their goals of transferring their wealth to the children and making the children feel responsible for that wealth. They learned from Mr. LaFave about family limited partnerships. Mr. LaFave discussed with petitioners forming a partnership, contributing property to it, and making gifts of interests in the partnership to (or for the benefit of) the children. Mr. LaFave described, and Tom understood, the gift tax savings from valuation discounts that could result if Tom made gifts of limited partner interests rather than gifts of some or all of the property contributed to

the partnership. Tom discussed those tax savings with Kim. Tom's understanding of the potential for gift tax savings played a role in his decision to form a family limited partnership and make gifts (indirectly) to the children of limited partner interests. Tom had four reasons for forming a family limited partnership: "very long-term growth", "asset preservation", "asset protection", and "education". At trial, he elaborated:

> Long-term asset growth to us means that we're looking at assets for the benefit of the family over decades. Preservation really means that we wanted a vehicle where our children would be demotivated and disincentivized to spend the assets. Protection –- we were worried that the assets that the girls would eventually come into would be sought after by third party people, friends, spouses, potential creditors. The fourth one [education] is interesting in that we wanted something that we could use to educate our daughters on business management concerns.

He further elaborated on his understanding of asset preservation: "The preservation of capital is important to us. We did not want our daughters to just go blow this money." And: "[W]e really are concerned about negatively affecting their lives with the wealth, so by creating a partnership, we can establish a vehicle that preserves the wealth and such that the kids won't go off and spend it." Asset preservation motivated Tom to include transfer restrictions in the limited partnership agreement described infra. He testified with respect to those restrictions: "Remember, the big goal of this thing is to preserve the assets and to disincentivize the girls from getting rid of these assets, spending these assets, feeling entitled to these assets."

Minnesota UTMA Account

I., the Holmans' youngest daughter, was born in June 1999. In August 1999, Tom opened an account at Dean Witter (now Morgan Stanley Dean Witter; hereafter, MSDW) for I.'s benefit. He opened the account under the Minnesota Uniform Transfers to Minors Act (Minnesota UTMA). Janelle was appointed custodian. Tom caused MSDW to transfer 30 shares of Dell stock to that account on August 16, 1999.

Wills

On November 2, 1999, petitioners executed wills prepared by Mr. LaFave.

The Trust

Mr. LaFave drafted an agreement (the trust agreement) establishing "The Holman Irrevocable Trust U/A dated September 10, 1999" (the trust). The trust agreement names petitioners as grantors, Janelle as trustee, and the children as the primary beneficiaries. Petitioners executed the trust agreement on November 2, 1999, and Janelle executed it on November 4, 1999. The trust agreement provides that it is effective as of September 10, 1999. Previously, on August 3, 1999, Tom had opened an account at MSDW for the to-be-established trust. Tom caused MSDW to transfer 100 shares of Dell stock and $10,000 to that account on August 16, 1999.

The Holman Limited Partnership

An attorney in Mr. LaFave's office drafted an agreement (the partnership agreement) to establish the Holman Limited Partnership (the partnership), a Minnesota limited partnership. The partnership agreement recites that petitioners are both general and limited partners and Janelle, as trustee of the trust (as trustee) and as custodian, separately, for each of the children, is a limited partner. Tom suggested changes to preliminary drafts of the partnership agreement to insure that his goals of long-term growth, asset preservation, asset protection, and education were reflected in the final agreement. Petitioners executed the partnership agreement on November 2, 1999. Janelle executed it thereafter.

November 2, 1999, Transfers

On November 2, 1999, Janelle, as trustee, caused MSDW to transfer 100 shares of Dell stock from the trust's account to a new MSDW account established for the partnership (the partnership's account). On that same date, Tom caused MSDW to transfer 70,000 shares of Dell stock owned one-half by him and one-half by Kim from another MSDW account to the partnership's account. In exchange for their contributions to the partnership, petitioners and Janelle, as trustee, received the following general and limited partner interests:[1]

[1] Each contributor received an interest in the partnership equal to the number of Dell shares contributed by that individual divided by the total number of Dell shares contributed by all of the individuals. In that respect, no distinction was drawn

(continued...)

Table 1

Partner	Class	Shares of Dell Stock Contributed	Partnership Units	% Owned
Tom	General	625	89.16	0.89
Kim	General	625	89.16	0.89
Tom	Limited	34,375	4,903.71	49.04
Kim	Limited	34,375	4,903.71	49.04
Trust	Limited	100	14.26	0.14
Total		70,100	10,000.00	100.00

The partnership was formed on November 3, 1999, pursuant to the partnership agreement and the laws of Minnesota, when a certificate of limited partnership for it was filed with the Minnesota secretary of state.

Since its creation, the partnership has been a validly existing Minnesota limited partnership.

Partnership Agreement

The following are among the provisions of the partnership agreement:

> 1.6 Family. "Family" means Thomas H. Holman, Jr. and Kim D.L. Holman and their descendants.
>
> 1.7 Family Assets. "Family Assets" mean all property owned by the Family, individually, in trust or in combination with others, which has been contributed to or acquired by the Partnership.
>
> * * * * * * *
>
> 3.1 Purposes. The purposes of the Partnership are to make a profit, increase wealth, and provide a means for the Family to gain knowledge of, manage, and preserve Family Assets. The Partnership is intended to accomplish the following:

---

[1](...continued)
between general and limited partner interests.

(1) maintain control of Family Assets;

(2) consolidate fractional interests in Family Assets and realize the efficiencies of coordinated investment management;

(3) increase Family wealth;

(4) establish a method by which gifts can be made without fractionalizing Family Assets;

(5) continue the ownership of Family Assets and restrict the right of non-Family persons to acquire interests in Family Assets;

(6) provide protection to Family Assets from claims of future creditors against Family members;

(7) provide flexibility in business planning not available through trusts, corporations, or other business entities;

(8) facilitate the administration and reduce the cost associated with the disability or probate of the estates of Family members; and

(9) promote the Family's knowledge of and communication about Family Assets.

* * * * * * *

6.1 Management. The General Partners shall have exclusive management and control of the business of the Partnership, and all decisions regarding the management and affairs of the Partnership shall be made by the General Partners. * * * [Specifically,] they shall have the power and authority * * * :

(1) to determine the investments and investment strategy of the Partnership;

* * * * * * *

8.4 No Withdrawal. No Limited Partner may withdraw from the Partnership except as may be expressly provided in this Agreement.

* * * * * * *

9.1 Assignment of Interest. A Limited Partner may not without the prior written consent of all

Partners assign (including by encumbrance), whether voluntarily or involuntarily, all or part of his or her Interest in the Partnership, except as permitted by this Agreement. * * *

9.2 Permitted Assignments. A Limited Partner may assign all or any portion of his or her Interest in the Partnership to a revocable trust the entire beneficial interest of which is owned by the Partner. In addition, a Limited Partner may assign all or any portion of his or her Interest in the Partnership, at any time or from time to time, during lifetime or upon death, to a Family member; to a custodian for a Family member under an applicable Uniform Transfers to Minors Act; to another Partner; or to trustees, inter vivos or testamentary, holding property in trust for Family members (notwithstanding that someone who is not a Family member may also be a beneficiary of such trust.) * * *

9.3 Acquisition of Partnership Interest in Event of Non-Permitted Assignment. If an assignment of a Partnership Interest occurs which is prohibited or rendered void by the terms of this Agreement, but the General Partners determine that such assignment is nevertheless effective according to then applicable law,[2] the Partnership shall have the option (but not the obligation) to acquire the Interest of the assignee or transferee upon the following terms and conditions:

(1) The Partnership will have the option to acquire the Interest by giving written notice of its intent to purchase to the transferee or assignee within ninety (90)days from the date the Partnership is notified in writing of the transfer or assignment.

(2) Unless the Partnership and the transferee or assignee agree otherwise, the purchase price for the Interest, or any fraction to be acquired by the Partnership, shall be its fair market value based upon the assignee's right to share in distributions from the Partnership, as determined by an appraisal performed by an independent appraiser selected by the General Partners.

---

[2] As examples of assignments of a partnership interest that would be violative of the partnership agreement but still effective, petitioners suggest transfers upon death or divorce of a limited partner and a transfer to a creditor.

(3) The valuation date for the determination of the purchase price of the Interest will be the date of death in the case of an assignment due to death or, in all other cases, the first day of the month following the month in which the Partnership is notified in writing of the assignment.

(4) The closing of the purchase of the Interest shall occur no later than one hundred eighty (180) days after the valuation date, as defined in (3) above.

(5) In order to reduce the burden upon the resources of the Partnership, the Partnership will have the option, to be exercised in writing delivered at closing, to pay ten percent (10%) of the purchase price at closing and pay the balance of the purchase price in five (5) equal annual installments of principal (or equal annual installments over the remaining term of the Partnership if less than five (5) years), together with interest at the Applicable Federal Rate (as that term is defined in the Code) which is in effect for the month in which the closing occurs. The first annual installment of principal, with accrued interest, will be due and payable exactly one year after the date of closing, and subsequent annual installments of principal, with accrued interest, will be due and payable each year thereafter on the anniversary date of the closing until five (5) years after the date of closing (or shorter term, if applicable), when the remaining amount of the obligation, with unpaid accrued interest, shall be paid in full. The Partnership will have the right to prepay all or any part of the remaining obligation at any time without penalty.

(6) By consent of the Partners (other than the Partner whose interest is to be acquired), the General Partners may assign the Partnership’s option to purchase to one or more Partners and when done, any rights or obligations imposed upon the Partnership will instead become, by substitution, the rights and obligations of such Partners.

(7) If the option to purchase under this paragraph 9.3 is not exercised, the assignee

> may retain the assigned Interest provided the assignee agrees in writing to be bound by the terms and conditions of this Agreement. The assignee shall not become a Limited Partner unless all of the other Partners consent, which consent may be granted or withheld in their sole discretion, and the other conditions for admission contained in this Article IX are satisfied. The rights of an assignee who does not become a Limited Partner shall be limited to the right to receive, to the extent assigned, only the distributions to which the assignor would be entitled under this Agreement.
>
> * * * * * * *
>
> 12.1 Events Causing Dissolution. The Partnership shall be dissolved and its affairs shall be wound up upon the first to occur of the following:
>
> (1) on December 31, 2049, * * * ;
>
> * * * * * * *
>
> (4) written consent of all Partners; * * *
>
> * * * * * * *

November 8, 1999, Gift

As of November 8, 1999, petitioners made a gift of limited partner interests (LP units) in the partnership to Janelle, both as custodian for I. under the Minnesota UTMA and as trustee. Apparently, the gift to Janelle as custodian for I. was one step in petitioners' plan to equalize gifts among their daughters. Each petitioner transferred (1) 713.2667 LP units (together, 1,426.5334 LP units) to Janelle as custodian for I. and (2) 3,502.6385 LP units (together, 7,005.367 LP units) to Janelle as trustee. As a result of that gift, the partnership was owned as follows:

Table 2

Partner	Class	Partnership Units	% Owned
Tom	General	89.16	0.89
Kim	General	89.16	0.89
Tom	Limited	687.76	6.88
Kim	Limited	687.76	6.88
Trust	Limited	7,019.63	70.20
I. Custodianship	Limited	1,426.53	14.26
Total		10,000.00	100.00

Each petitioner timely filed a Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, for 1999, electing to split gifts (i.e., treating gifts made to third parties as being made one-half by each spouse) and reporting the fair market value of the November 8, 1999, transfer of LP units from each petitioner (one-half of the total gift) as $601,827 on the basis of an independent appraisal of the LP units transferred. The appraiser making that appraisal applied a discount of 49.25 percent to the partnership's net asset value (the value of the Dell shares) in reaching his conclusion as to the value of 1 LP unit on November 8, 1999.

December 13, 1999, Transfers

On December 13, 1999, MSDW transferred 10,030 shares of Dell stock to the partnership's account from each of three custodial accounts maintained for L., C., and V. under the Texas UTMA.

Also on December 13, 1999, MSDW transferred 30 shares of Dell stock to the partnership's account from the custodial account maintained for I. under the Minnesota UTMA.

As a result of those transfers, the partnership owned 100,220 shares of Dell stock, and the partners held interests in the partnership as follows:[3]

Table 3

Partner	Class	Partnership Units	% Owned
Tom	General	89.16	0.62
Kim	General	89.16	0.62
Tom	Limited	687.76	4.81
Kim	Limited	687.76	4.81
Trust	Limited	7,019.63	49.10
I. Custodianship	Limited	1,430.81	10.01
L. Custodianship	Limited	1,430.81	10.01
C. Custodianship	Limited	1,430.81	10.01
V. Custodianship	Limited	1,430.81	10.01
Total		14,296.71	100.00

January 4, 2000, Gift

As of January 4, 2000, petitioners transferred 469.704 LP units to Janelle as custodian, one quarter (117.426 LP units) for each of the daughters.

As a result of those transfers, interests in the partnership were held as follows:

[3] Janelle, as custodian for the various custodial accounts, received a limited partner interest in the partnership equal to the number of Dell shares contributed from each account divided by the total number of Dell shares contributed then, or before, by all of the partners.

Table 4

Partner	Class	Partnership Units	% Owned
Tom	General	89.16	0.62
Kim	General	89.16	0.62
Tom	Limited	452.91	3.17
Kim	Limited	452.91	3.17
Trust	Limited	7,019.63	49.10
I. Custodianship	Limited	1,548.24	10.83
L. Custodianship	Limited	1,548.24	10.83
C. Custodianship	Limited	1,548.24	10.83
V. Custodianship	Limited	1,548.24	10.83
Total		14,296.73	100.00

Each petitioner timely filed a Form 709 for 2000, electing to split gifts and reporting the fair market value of the January 4, 2000, transfer of LP interests from each petitioner (one-half of the total gift) as $40,000 on the basis of an independent appraisal of the LP interests transferred (which, as with the appraisal of the 1999 gift, applied a discount of 49.25 percent to the partnership's net asset value to determine the value of 1 LP unit on January 4, 2000).

January 5, 2001, Transfers

On January 5, 2001, petitioners contributed an additional 10,880 shares of Dell stock to the partnership (allocated as 5,440 from each), and each received 1,552.07 new LP units, which increased each of their limited partner interests in the partnership by 4.58 percent.

As a result of those transfers, the partnership owned 111,100 shares of Dell stock, and the partners held interests in the partnership as follows:[4]

Table 5

Partner	Class	Partnership Units	% Owned
Tom	General	89.16	0.56
Kim	General	89.16	0.56
Tom	Limited	1,229.08	7.75
Kim	Limited	1,229.08	7.75
Trust	Limited	7,019.63	44.29
I. Custodianship	Limited	1,548.24	9.77
L. Custodianship	Limited	1,548.24	9.77
C. Custodianship	Limited	1,548.24	9.77
V. Custodianship	Limited	1,548.24	9.77
Total		15,849.07	99.99

February 2, 2001, Gift

As of February 2, 2001, petitioners transferred 860.772 LP units to Janelle as custodian, one quarter (215.193 LP units) for each of the daughters.

As a result of those transfers, interests in the partnership were held as follows:

[4] Petitioners received limited partner interests equal to the number of Dell shares contributed by each divided by the total number of Dell shares contributed then, or before, by all of the partners.

Table 6

Partner	Class	Partnership Units	% Owned
Tom	General	89.16	0.56
Kim	General	89.16	0.56

Trust	Limited	7,019.63	44.29
I. Custodianship	Limited	1,763.43	11.13
L. Custodianship	Limited	1,763.43	11.13
C. Custodianship	Limited	1,763.43	11.13
V. Custodianship	Limited	1,763.43	11.13
Total		15,849.07	100.01

Each petitioner timely filed a Form 709 for 2001, electing to split gifts and reporting the fair market value of the February 2, 2001, transfer of LP interests from each petitioner (one-half of the total gift) as $40,000 on the basis of their estimates of the value of the transferred interests in the light of prior independent appraisals of LP interests transferred.

Assets and Operation of the Partnership

Upon formation of the partnership, Tom had no immediate plan other than that it would hold the Dell shares it had received. At no time from formation through 2001 did the partnership have a business plan.

The partnership has no employees and no telephone listing in any directory.

At formation and on each of the dates for valuing the transfers here in question, the partnership's assets consisted solely of shares of stock of Dell.

From the formation of the partnership through 2001, the partnership prepared no annual statements.

At the time Tom decided to create the partnership, he had plans to make the gifts of LP units that were made in 1999, 2000, and 2001.

The partnership had no income to report, and it filed no Federal income tax return for 1999, 2000, or 2001.

On December 5, 2001, the partnership received $67,573.84 on the sale of covered call options on some of its Dell shares. That transaction was not reportable for Federal income tax purposes until the following year, when the options expired.

Values of Dell Shares

For the dates indicated, the high, low, average, and closing prices of a share of Dell stock were as follows:

Table 7

Date	High	Low	Average	Closing
Nov. 2, 1999	$41.19	$40.13	$40.660	$41.1875
Nov. 8, 1999	40.94	39.31	41.125	40.1250
Jan. 4, 2000	49.25	46.50	47.875	46.6250
Feb. 2, 2001	27.25	25.00	26.125	25.1875

The Notices

As pertinent to the issues before us, in support of each notice, respondent made the following adjustments with respect to the gifts of LP units described above:

Table 8

Gifts of LP Units

Year	Respondent's Determined Value	Reported Value	Increase
1999	$1,184,684	$601,827	$582,857
2000	78,912	40,000	38,912
2001	78,760	40,000	38,760

Respondent explained those adjustments for 1999 as follows:

(1) It is determined that the transfer of assets to the Holman Limited Partnership, [sic] is in substance an indirect gift within the meaning of I.R.C. Section 2511 of the assets to the other partners.

(2) Alternatively, it is determined that in substance and effect the taxpayer's interest in Holman Limited Partnership is more analogous to an interest in a trust than to an interest in an operating business, and should be valued as such for federal transfer tax purposes.

(3) Alternatively, it is determined that the transferred interest in the Holman Limited Partnership should be valued without regard to any restriction on the right to sell or use the partnership interest within the meaning of I.R.C. Section 2703(a)(2).

(4) Alternatively, it is determined that certain restrictions on liquidation of the Holman Limited Partnership interests contained in the articles of organization and operating agreement should be disregarded for valuation purposes pursuant to I.R.C. Section 2704(b).

(5) Alternatively, it is determined that the fair market value of such gifts is $871,971.00, after allowance of a discount for lack of marketability or minority interest of 28%.

Respondent's explanations of his adjustments for 2000 and 2001 are the same except that, in the fifth alternative, the

determination of the fair market value of the gifts is $56,817 and $56,707 for 2000 and 2001, respectively.

OPINION

I. Introduction

Petitioners transferred Dell stock of substantial value to a newly formed family limited partnership and then made gifts of limited partnership units in the partnership (LP units) to a custodian for one of their children and in trust for the benefit of all of their children. Petitioners made a large gift in 1999 and smaller gifts in 2000 and 2001 (collectively, the gifts; individually, the 1999, 2000, or 2001 gift, respectively). In valuing the gifts for Federal gift tax purposes, they applied substantial discounts for minority interest status and lack of marketability. With respect to the 1999 gift, respondent argues that the gift should be treated as an indirect gift of Dell shares and not as a direct gift of LP units. For all of the gifts treated as gifts of LP units, respondent argues that the restrictions contained in the partnership agreement on a limited partner's right to transfer her interests in the partnership should be disregarded pursuant to section 2703(a)(2). Respondent also disagrees with petitioners' application of discounts. Respondent has abandoned his reliance on section 2704(b) ("Certain restrictions on liquidation disregarded."), and he no longer argues that the partnership should be treated as if it were a trust. We shall address respondent's remaining arguments in turn.

II. Indirect Gifts

A. Law

Section 2501(a) imposes a tax on the transfer of property by gift during the year. The tax is imposed on the values of the gifts made during the year. See sec. 2502(a). The amount of a gift of property is the value thereof on the date of transfer. See sec. 2512(a). That value of a gift of property is determined by the value of the property passing from the donor and not necessarily by the measure of enrichment resulting to the donee from the transfer. Sec. 25.2511-2(a), Gift Tax Regs. Where property is transferred for less than adequate and full consideration in money or money's worth (hereafter, simply, adequate consideration), then the excess of the value of the property transferred over the consideration received is generally deemed a gift. See sec. 2512(b). The gift tax applies whether the gift is direct or indirect. Sec. 2511(a). Section 25.2511-1(h)(1), Gift Tax Regs., illustrates an indirect gift made by a shareholder of a corporation to the other shareholders of the corporation. The shareholder transfers property to the corporation for less than adequate consideration. The regulation concludes that, generally, such a transfer represents gifts by the shareholder to the other individual shareholders to the extent of their proportionate interests in the corporation. Similarly, if a partner transfers property to a partnership for less than adequate consideration, the transfer generally will be treated as an indirect gift by the transferor to the other

partners. See, e.g., Shepherd v. Commissioner, 115 T.C. 376, 389 (2000), affd. 283 F.3d 1258 (11th Cir. 2002). Indeed, in affirming the Tax Court, the Court of Appeals said: "[G]ifts to a partnership, like gifts to a corporation, are deemed to be indirect gifts to the stakeholders 'to the extent of their proportionate interests' in the entity. See * * * [sec. 25.2511-1(h)(1), Gift Tax Regs.]." Shepherd v. Commissioner, 283 F.3d at 1261.

B. Parties' Arguments

1. Respondent's Indirect Gift Arguments

Respondent's arguments are simple and straightforward:

> The gift tax is imposed on the donor, and is based on the value of the transferred property on the date of the gift. * * * Here, the property that passed from the donors is Dell stock, not the * * * LP units. Therefore, Tom and Kim's transfers of Dell stock, not the * * * LP units, as of November 8, 1999, are taxed under the terms of § 2501(a)(1).
>
> Alternatively, the formation, funding, and gifts of * * * LP units dated as of November 8, 1999 are steps of an integrated donative transaction. Once the intermediate steps are collapsed, Tom and Kim's gifts are gifts of Dell stock in the form of * * * LP units. * * *

2. Petitioners' Responses

Petitioners' responses are equally simple and straightforward:

> First, no donative transfer occurred on formation of the Partnership because each partner contributed Dell stock to the Partnership, and each received interests in the Partnership precisely in proportion to the assets contributed by each. Further, because the Partnership was clearly and properly established under Minnesota law on November 3, 1999, Petitioners' gifts of Partnership interests on November 8, 1999, to the Trust and to the Minnesota UTMA Account cannot

constitute indirect gifts of the Dell stock owned by the Partnership on that date.

C. Discussion

1. A Gift to the Partners on Account of a Transfer to the Partnership

Respondent's first alternative indirect gift argument invokes the illustration in section 25.2511-1(h)(1), Gift Tax Regs., of an indirect gift made by a shareholder of a corporation to the other shareholders of the corporation. The regulation concludes that, generally, where a shareholder transfers property to a corporation for less than adequate consideration, the transfer represents gifts by the shareholder to the other shareholders to the extent of their proportionate interests in the corporation. Respondent asks us to compare the facts at hand to the facts in Shepherd and in Senda v. Commissioner, T.C. Memo. 2004-160, affd. 433 F.3d 1044 (8th Cir. 2006), in both of which we concluded that transfers by a partner to a partnership were indirect transfers to the other partners.

In Shepherd v. Commissioner, 115 T.C. at 380-381, the taxpayer transferred real property and shares of stock to a newly formed family partnership in which he was a 50-percent owner and his two sons were each 25-percent owners. Rather than allocating contributions to the capital account of the contributing partner, the partnership agreement provided that any contributions would be allocated pro rata to the capital accounts of each partner according to ownership. Id. at 380. Because the contributions were reflected partially in the capital accounts of the

noncontributing partners, the values of the noncontributing partners' interests were enhanced by the contributions of the taxpayer. Accordingly, we held that the transfers to the partnership were indirect gifts by the taxpayer to his sons of undivided 25-percent interests in the real property and shares of stock. Id. at 389.

In Senda v. Commissioner, supra, the Commissioner contended that the taxpayers' transfers of shares of stock to two family limited partnerships, coupled with their transfers of limited partner interests to their children, were indirect gifts of the shares to those children. In both instances, the stock transfers and the transfers of the partnership interests occurred on the same day. We said that the taxpayers' transfers of shares were similar to the transfer of property in the Shepherd case: "In both cases, the value of the children's partnership interests was enhanced by their parents' contributions to the partnership." We rejected the taxpayers' attempt to distinguish the Shepherd case on the ground that they first funded the partnership and then transferred the partnership interests to their children. We found: "At best, the transactions were integrated (as asserted by respondent) and, in effect, simultaneous." We held that the taxpayers' transfers of the shares of stock to the two partnerships were indirect gifts of the shares to their children.

The facts in the instant case are distinguishable from those of both the Shepherd and Senda cases. On November 3, 1999, the partnership was formed, petitioners transferred 70,000 Dell

shares to the partnership, and Janelle, as trustee, transferred 100 Dell shares to the partnership. On account of those transfers, petitioners and Janelle received partnership interests proportional to the number of shares each transferred to the partnership. It was not until November 8, 1999, that petitioners are deemed to have made (and, on that date, they did make)[5] a gift of LP units to Janelle, both as custodian for I. under the Minnesota UTMA and as trustee. Petitioners did not first transfer LP units to Janelle and then transfer Dell shares to the partnership, nor did they simultaneously transfer Dell shares to the partnership and LP units to Janelle. The facts of the Shepherd and Senda cases are materially different from those of the instant case, and we cannot rely on those cases to find that petitioners made an indirect gift of Dell shares to Janelle, either as custodian for I. under the Minnesota UTMA or as trustee. We shall proceed to respondent's alternative argument.

[5] On the basis of stipulated facts, we have found that, "[a]s of November 8, 1999," petitioners made a gift of LP units to Janelle, both as custodian for I. under the Minnesota UTMA and as trustee. The stipulated facts are based on undated instruments assigning the LP units "effective November 8, 1999". On the basis of a stipulated fact, we have also found that petitioners each filed a 1999 gift tax return reporting the fair market value of "the November 8, 1999," transfer of LP units. The parties have also stipulated an appraisal of that gift that recites that the gift was made on Nov. 8, 1999. Respondent's valuation expert, Francis X. Burns, assumed that the 1999 gift was made on Nov. 8, 1999, as did petitioners' valuation expert, Troy D. Ingham. While it is not free from doubt, we conclude, and find, that the 1999 gift was made on Nov. 8, 1999. For similar reasons, we conclude and find that the gifts made "as of" Jan. 4, 2000, and Jan. 5, 2001, were made on those dates, respectively.

2. Indirect Gift Under the Step Transaction Doctrine

Alternatively, respondent argues that petitioners made an indirect gift under the step transaction doctrine. As we recently summarized that doctrine in Santa Monica Pictures, L.L.C. v. Commissioner, T.C. Memo. 2005-104:

> The step transaction doctrine embodies substance over form principles; it treats a series of formally separate steps as a single transaction if the steps are in substance integrated, interdependent, and focused toward a particular result. Penrod v. Commissioner, 88 T.C. 1415, 1428 (1987). "Where an interrelated series of steps are taken pursuant to a plan to achieve an intended result, the tax consequences are to be determined not by viewing each step in isolation, but by considering all of them as an integrated whole." Packard v. Commissioner, 85 T.C. 397, 420 (1985).
>
> There is no universally accepted test as to when and how the step transaction doctrine should be applied to a given set of facts; however, courts have applied three alternative tests in deciding whether to invoke the step transaction doctrine in a particular situation: the "binding commitment," the "interdependence," and the "end result" tests. Cal-Maine Foods, Inc. v. Commissioner, 93 T.C. 181, 198-199 (1989); Penrod v. Commissioner, supra at 1429-1430. * * *

We have considered the step transaction doctrine in transfer (gift and estate) tax cases. See, e.g., Daniels v. Commissioner, T.C. Memo. 1994-591.

Respondent does not explicitly state which of the above three tests he is relying on, although it appears he is arguing that the 'interdependence' test is applicable. In Santa Monica Pictures, we described the interdependence test as follows:

> Under the "interdependence" test, the step transaction doctrine will be invoked where the steps in a series of transactions are so interdependent that the legal relations created by one transaction would have been fruitless without a completion of the series. * *

> * We must determine whether the individual steps had independent significance or whether they had significance only as part of a larger transaction. * * * [Citations omitted.]

In his brief, respondent argues:

> If none of the individual events occurring between the contribution of the property to the partnership and the gifts of partnership interests had any significance independent of its status as an intermediate step in the donors' plan to transfer their assets to their donees in partnership form, the formation, funding, and transfer of partnership units pursuant to an integrated plan is treated as a gift of the assets to a partnership of which the donees are the other partners. Treas. Reg. § 25.2511-1(h)(1).

The nub of respondent's argument is that petitioners' formation and funding of the partnership should be treated as occurring simultaneously with their 1999 gift of LP units since the events were interdependent and the separation in time between the first two steps (formation and funding) and the third (the gift) served no purpose other than to avoid making an indirect gift under section 25.2511-1(h), Gift Tax Regs. While we have no doubt that petitioners' purposes in forming the partnership included making gifts of LP units indirectly to the children, we cannot say that the legal relations created by the partnership agreement would have been fruitless had petitioners not also made the 1999 gift. Indeed, respondent does not ask that we consider either the 2000 gift (made approximately 2 months after formation of the partnership) or the 2001 gift (made approximately 15 months after formation of the partnership) to be indirect gifts of Dell shares. We must determine whether the fact that less

than 1 week passed between petitioners' formation and funding of the partnership and the 1999 gift requires a different result.

Respondent relies heavily on the opinion of the Court of Appeals for the Eighth Circuit in Senda v. Commissioner, 433 F.3d 1044 (8th Cir. 2006).[6] In affirming our decision in the Senda case, the Court of Appeals concluded that we did not clearly err in finding that the taxpayers' transfers of shares of stock to two family limited partnerships, coupled with their transfers on the same days of limited partner interests to their children, were in each case integrated steps in a single transaction. Id., at 1049. The taxpayers argued that the order of transfers did not matter since, pursuant to the partnership agreements in question, their contributions of the shares of stock were credited to their partnership capital accounts before being credited to the children's accounts. Id. at 1047. Invoking the step transaction doctrine, the Court of Appeals rejected that step-dependent argument. Id. at 1048. It said: "In some situations, formally distinct steps are considered as an integrated whole, rather than in isolation, so federal tax liability is based on a realistic view of the entire transaction." Id.

This case is distinguishable from Senda because petitioners did not contribute the Dell shares to the partnership on the same day they made the 1999 gift; indeed, almost 1 week passed between

[6] The Court of Appeals for the Eighth Circuit is the court to which, barring the parties' stipulation to the contrary, any appeal in this case would lie. See sec. 7482(b).

petitioners' formation and funding of the partnership and the 1999 gift. Nevertheless, the Court of Appeals in Senda did not say that, under the step transaction doctrine, no indirect gift to a partner can occur unless, on the day property is transferred to the partnership, the partner is (or becomes) a member of the partnership. As respondent's failure to argue indirect gifts on account of the 2000 and 2001 gifts suggests, however, the passage of time may be indicative of a change in circumstances that gives independent significance to a partner's transfer of property to a partnership and the subsequent gift of an interest in that partnership to another.

Here the value of an LP unit changed over time. The parties have stipulated the high, low, average, and closing prices of a share of Dell stock on November 2, 1999, the date petitioners initially transferred Dell shares to the partnership's account, and the subsequent dates of the gifts, and we have found accordingly. See supra table 7. Beginning on November 2, 1999, and ending on the dates of the gifts, the percentage changes in the average price of a share of Dell stock were as follow:

Table 9

Percentage Changes in the Average Price of a Share of Dell Stock

Date	Percentage
11/2/1999 to 11/8/1999	-1.316
11/2/1999 to 1/4/2000	+17.745
11/2/1999 to 2/2/2001	-35.748

The value of an LP unit, based on its proportional share of the average value of the Dell shares held by the partnership, fell or rose between the dates indicated by the percentage indicated. Respondent has proposed as a finding of fact, and we have found, that, at the time Tom decided to create the partnership, he had plans to make the 1999, 2000, and 2001 gifts. Petitioners bore the risk that the value of an LP unit could change between the time they formed and funded the partnership and the times they chose to transfer LP units to Janelle. Indeed, the absolute value of the rate of change in the value of an LP unit was greater from November 2 to November 8, 1999, than it was from November 2, 1999, to February 2, 2001. Morever, the partnership held only shares of Dell stock on both November 8, 1999 (the date of the 1999 gift), and January 4, 2000 (the date of the 2000 gift), and the partnership agreement was not changed in the interim. Respondent apparently concedes that a 2-month separation is sufficient to give independent significance to the funding of the partnership and a subsequent gift of LP units. We assume that concession to be on account of respondent's recognition of the economic risk of a change in value of the partnership that petitioners bore by delaying the 2000 gift for 2 months. We draw no bright lines. Given, however, that petitioners bore a real economic risk of a change in value of the partnership for the 6 days that separated the transfer of Dell shares to the partnership's account and the date of the 1999 gift, we shall treat the 1999 gift the same way respondent

concedes the 2000 and 2001 gifts are to be treated; i.e., we shall not disregard the passage of time and treat the formation and funding of the partnership and the subsequent gifts as occurring simultaneously under the step transaction doctrine.[7]

D. Conclusion

The 1999 gift is properly treated as a direct gift of LP units and not as an indirect gift of Dell shares.

III. Section 2703

A. Introduction

In pertinent part, section 2703(a) provides that, for purposes of the gift tax, the value of any property transferred by gift is determined without regard to any right or restriction (without distinction, restriction) relating to the property. Paragraphs 9.1, 9.2, and 9.3 of the partnership agreement (paragraphs 9.1, 9.2, and 9.3, respectively), set forth supra, govern the assignment of LP units, and the parties agree that those paragraphs contain restrictions on the right of a limited partner in the partnership (a limited partner) to sell or assign her partnership interest. Section 2703(b) provides that section

[7] The real economic risk of a change in value arises from the nature of the Dell stock as a heavily traded, relatively volatile common stock. We might view the impact of a 6-day hiatus differently in the case of another type of investment; e.g., a preferred stock or a long-term Government bond.

2703(a) does not apply to disregard a restriction if the restriction meets each of the following three requirements:

> (1) It is a bona fide business arrangement.
>
> (2) It is not a device to transfer such property to members of the decedent's family for less than full and adequate consideration in money or money's worth.
>
> (3) Its terms are comparable to similar arrangements entered into by persons in an arm's length transaction.

Because we find that paragraph 9.3 fails at least the first and second restrictions, we shall disregard it in determining the values of the LP units transferred.

B. Bona Fide Business Arrangement

1. Parties' Arguments

Respondent argues that paragraph 9.3 is not part of a bona fide business arrangement since "[c]arrying on a business requires more than holding securities and keeping records." As authority for that proposition, respondent cites an income tax case, Higgins v. Commissioner, 312 U.S. 212 (1941) (taxpayer's managerial activities in connection with collecting interest and dividends on securities held for investment did not amount to carrying on a business for purposes of deducting associated expenses). Besides, respondent adds, Tom's primary purpose in forming the partnership were to preserve his Dell wealth and "disincentivize" the children from spending it, while Kim's primary purpose in forming it was to educate the children about family wealth. Those, respondent argues, "are personal, not

business[,] goals. Personal goals, with nothing more, do not create a business arrangement."

Petitioners argue:

> The restrictions on transferability, the right of first refusal, and the payout mechanism in paragraphs 9.1, 9.2, and 9.3 of the Partnership Agreement serve a bona fide business purpose * * * by preventing interests in the Partnership from passing to non-family members. * * * The creation of a mechanism to ensure family ownership and control of a family enterprise has long been held by this Court to constitute a bona fide and valid business purpose. See Estate of Stone v. Comm'r, 86 T.C.M. (CCH) 551 (2003); Estate of Bischoff v. Comm'r, 69 T.C. 32, 39-41 (1977); Estate of Reynolds v. Comm'r, 55 T.C. 172, 194 (1970), acq., 1971-2 C.B. 1; Estate of Littick v. Comm'r, 31 T.C. 181, 187 (1958), acq., 1984-2 C.B. 1; Estate of Harrison v. Comm'r, 52 T.C.M. (CCH) 1306, 1309 (1987) (holding that "[w]ith respect to business purpose, petitioner presented convincing proof that the partnership was created as a means of providing necessary and proper management of decedent's properties and that the partnership was advantageous to and in the best interests of decedent").

2. Discussion

Section 2703 contains no definition of the phrase "bona fide business arrangement". Nevertheless, we have held that the subject of the restrictive agreement need not directly involve an actively managed business. See, e.g., Estate of Amlie v. Commissioner, T.C. Memo. 2006-76 (citing Estate of Bischoff v. Commissioner, 69 T.C. 32, 40-41 (1977), a pre-section 2073 case in which we found it irrelevant that the restrictive agreements necessary to maintain continuity of management in, and control over, corporations carrying on active businesses were agreements with respect to the ownership of a holding company not actively conducting a trade or business and requiring no management). In

Estate of Amlie, the asset in question was the decedent's minority interest in a bank. Before her death the decedent voluntarily became the ward of a conservator appointed to oversee her affairs. The conservator entered into a series of agreements that, among other things, fixed the value of the decedent's bank shares for purposes of satisfying the decedent's obligations to transfer those shares to a prospective heir both in satisfaction of promised bequests and by sale upon her death. The fixed value was lower than the price obtained by the heir on his resale of the shares a month after the decedent's death. The Commissioner sought to disregard the value-fixing agreements entered into by the conservator. We found that, in securing the agreements, the conservator "was seeking to exercise prudent management of decedent's assets by mitigating the very salient risks of holding a minority interest in a closely held bank, consistent with the conservator's fiduciary obligations to decedent." We held:

> [A]n agreement that represents a fiduciary's efforts to hedge the risk of the ward's holdings may serve a business purpose within the meaning of section 2703(b)(1). In addition, planning for future liquidity needs of decedent's estate, which was also one of the objectives underlying * * * [one of the relevant agreements], constitutes a business purpose under section 2703(b)(1). * * *

In reaching that conclusion, we referred to the legislative history of section 2703, which includes an informal report of the Senate Committee on Finance, Informal Senate Report on S. 3209, 101st Cong., 2d Sess. (1990), 136 Cong. Rec. 30,488, 30,539 (1990) (the Committee on Finance report). The Committee on Finance report observes that buy-sell agreements

> are common business planning arrangements * * * that * * * generally are entered into for legitimate business reasons * * * . Buy-sell agreements are commonly used to control the transfer of ownership in a closely held business, to avoid expensive appraisals in determining purchase price, to prevent the transfer to an unrelated party, to provide a market for the equity interest, and to allow owners to plan for future liquidity needs in advance. * * *

Indeed, we have held that buy-sell agreements serve a legitimate purpose in maintaining control of a closely held business. E.g., Estate of Bischoff v. Commissioner, supra; Estate of Reynolds v. Commissioner, 55 T.C. 172 (1970); Estate of Fiorito v. Commissioner, 33 T.C. 440 (1959).[8]

Here, however, we do not have a closely held business. From its formation through the date of the 2001 gift, the partnership carried on little activity other than holding shares of Dell stock. Dell was not a closely held business either before or after petitioners contributed their Dell shares to the partnership. While we grant that paragraphs 9.1 through 9.3 (and paragraph 9.3 in particular) aid in control of the transfer of LP units, the stated purposes of the partnership, viewed in the light of petitioners' testimony as to their reasons for forming the partnership and including paragraphs 9.1 through 9.3 in the partnership agreement, lead us to conclude that those paragraphs do not serve bona fide business purposes. Paragraph 3.1 of the

[8] Nevertheless, the existence of a valid business purpose does not necessarily exclude the possibility that a buy-sell agreement is a tax-avoidance testamentary device to be disregarded in valuing the property interest transferred. St. Louis County Bank v. United States, 674 F.2d 1207, 1210 (8th Cir. 1982).

partnership agreement includes among the stated purposes of the partnership: "to * * * provide a means for the Family to gain knowledge of, manage, and preserve Family Assets." Tom testified at some length as to his understanding of the term "preservation" and his reasons for making asset preservation a purpose of the partnership. On the basis of that testimony, we find that his reason for making asset preservation a purpose of the partnership was to protect family assets from dissipation by the children. Tom also testified that paragraph 9.1 "lays out pretty strong limitations on what the limited partners can do in assigning or giving away their interests to other people." He viewed the buy-in provisions of paragraph 9.3 as a "safety net" if an impermissible person obtained an assignment of a limited partner interest from one of the girls. He considered the provisions of paragraphs 9.1, 9.2, and 9.3, together, as important in accomplishing his goal of keeping the partnership a closely held partnership of family members: "If there are ways for the family [the children] to wiggle out of that and bring other people in, then it will prevent us from accomplishing our goals, so we wanted a couple of levels here of restriction that would prevent that from happening." Kim testified that the purpose of organizing the partnership was to establish a tool for Tom and her "to be able to teach * * * [the] children about wealth and the responsibility of that wealth."

We believe that paragraphs 9.1 through 9.3 were designed principally to discourage dissipation by the children of the

wealth that Tom and Kim had transferred to them by way of the gifts. The meaning of the term "bona fide business arrangement" in section 2703(b)(1) is not self apparent. As discussed supra, in Estate of Amlie v. Commissioner, T.C. Memo. 2006-76, we interpreted the term "bona fide business arrangement" to encompass value-fixing arrangements made by a conservator seeking to exercise prudent management of his ward's minority stock investment in a bank consistent with his fiduciary obligations to the ward and to provide for the expected liquidity needs of her estate. Those are not the purposes of paragraphs 9.1 through 9.3. There was no closely held business here to protect, nor are the reasons set forth in the Committee on Finance report as justifying buy-sell agreements consistent with petitioners' goals of educating their children as to wealth management and "disincentivizing" them from getting rid of Dell shares, spending the wealth represented by the Dell shares, or feeling entitled to the Dell shares.

3. Conclusion

We find that paragraphs 9.1 through 9.3 do not serve bona fide business purposes. Those paragraphs do not constitute a bona fide business arrangement within the meaning of section 2703(b)(1).

C. Device Test

The second requirement of section 2703(b) is that the restriction not be a device to transfer the encumbered property to members of the decedent's family for less than full and

adequate consideration in money or money's worth (hereafter, simply adequate consideration). Sec. 2703(b)(2). The Secretary's regulations interpreting section 2703 substitute the term "the natural objects of the transferor's bounty" for the term "members of the decedent's family", apparently because he interprets section 2703 to apply to both transfers at death and inter vivos transfers. Sec. 25.2703-1(b)(1)(ii), Gift Tax Regs.[9] Clearly, the gifts of the LP units were both (1) to natural objects of petitioners' bounty and (2) for less than adequate consideration. They were not, however, a "device" to transfer the LP units to the children for less than adequate consideration. The question we must answer is whether paragraphs 9.1 through 9.3, which restrict the children's rights to enjoy the LP units, constitute such a device. We believe that they do. Those paragraphs serve the purposes of Tom and Kim to discourage the children from dissipating the wealth that Tom and Kim had transferred to them by way of the gifts. They discourage dissipation by depriving a child desirous of making an impermissible transfer of the ability to realize the difference in value between the fair market value of his LP units and the units' proportionate share of the partnership's NAV. If a child persists in making an impermissible transfer, paragraph 9.3

[9] Petitioners argue: "Of course, there is no decedent in this case, so § 2703(b)(2) appears to be satisfied on its face." They fail, however, to challenge the validity of sec. 25.2703-1(b)(1)(ii), Gift Tax Regs., upon which respondent relies. We assume that they concede the validity of the regulation in applying the device test to transfers to "the natural objects of the transferor's bounty".

allows the general partners (currently Tom and Kim) to redistribute that difference among the remaining partners. Thus, if the provisions of paragraph 9.3 are triggered and the partnership redeems the interest of an impermissible transferee for less than the share of the partnership's net asset value proportionate to the impermissible transferee's interest in the partnership (which is likely, given the agreement of the parties' valuation experts as to how the valuation discounts appropriate to an LP unit are applied; see infra section IV.A. of this report), the values of the remaining partners' interests in the partnership will increase on account of that redemption. See infra note 17 and the accompanying paragraph. The partners benefiting from the redemption could (indeed, almost certainly, would) include one or more of the children, natural objects of petitioners' bounty.

Tom participated in the drafting of the partnership agreement to ensure, in part, that "asset preservation" as he understood that term (i.e., to discourage the children from dissipating their wealth) was addressed. Tom impressed us with his intelligence and understanding of the partnership agreement, and we have no doubt that he understood the redistributive nature of paragraph 9.3. and his and Kim's authority as general partners to redistribute wealth from a child pursuing an impermissible transfer to his other children. We assume, and find, that he intended paragraph 9.3 to operate in that manner, and this intention leads us to conclude, and find, that paragraph 9.3 is a

device to transfer LP units to the natural objects of petitioners' bounty for less than adequate consideration.

D. Comparable Terms

The third requirement of section 2703(b) is that the terms of the restriction be comparable to similar arrangements entered into by persons in an arm's-length transaction. Comparability is determined at the time the restriction is created. Sec. 25.2703-1(b)(1)(iii), Gift Tax Regs. The parties rely on expert testimony to show that the elements of section 2703(b)(3) have or have not been satisfied.

Respondent called Daniel S. Kleinberger, professor of law at William Mitchell College of Law, St. Paul, Minnesota. Professor Kleinberger was accepted as an expert on arm's-length limited partnerships. In his direct testimony, he expressed the opinion that the overall circumstances of the partnership arrangement made it unlikely that a person in an arm's-length arrangement with the general partners would accept any of the "salient" restrictions on sale or use contained in the partnership agreement. He explained:

> In virtually every material respect, the * * * [partnership] agreement blocks for 50 years the limited partners' ability to sell or use their respective limited partner interests. In an arm's length transaction, a reasonable investor faced with such a prospect would ask, "What is so special about this opportunity, what do I get out of this arrangement that justified so restricting and enfeebling my rights?" The answer, in an arm's length context, is nothing.

On cross-examination, he agreed with counsel for petitioners that transfer restrictions similar to those found in paragraphs

9.1 through 9.3 are common in agreements entered into at arm's length. That, however, he concluded, was beside the point since "The owners of a closely held business at arm's length would never get into this deal with the Holmans, period, so the issue [transfer restrictions] wouldn't come up." In response to petitioner's counsel's expression of doubt as to what he meant, he answered:

> What I mean is that when you look at the overall context, when you look at the nature of the assets, when you look at the expertise or non-expertise of the general partner, when you look at the 50-year term, when you look at the inability to get out, when you look at the susceptibility of this single asset, * * * the issue [transfer restrictions] wouldn't arise, because nobody at arm's length would get into this deal."

Using a colorful expression, he summed up his view as follows:

> [B]ased on my experience and based on conversations with more than a dozen practitioners who do this stuff, I couldn't find anybody would do this deal, who would let their client into a deal like this as a limited partner without writing a very large CYA memo, saying: "We advise against this."

Petitioners called William D. Klein (Mr. Klein), a shareholder in the Minnesota law firm of Gray, Plant, Mooty, Mooty & Bennett, P.A. Mr. Klein has "practiced, written, and lectured about" partnership taxation and law for more than 20 years. He has participated in the drafting of, or reviewed drafts of, more than 300 limited partnership agreements. He was accepted as an expert with respect to the comparability of the provisions of the partnership agreement to provisions in other partnership agreements entered into by parties at arm's length. He was asked by petitioners to express his opinion as to whether

various provisions of the partnership agreement are "'comparable to similar arrangements entered into by persons in an arm's length transaction'". With respect to paragraphs 9.1 and 9.2, Mr. Klein is of the opinion that the paragraphs "are comparable to provisions one most often finds in limited partnership agreements among unrelated partners." As to paragraph 9.3, he is of the opinion that the paragraph "is not out of the mainstream of what one typically finds in arm's length limited partnership agreements."

Petitioners must show that paragraph 9.3 is "comparable to similar arrangements entered into by persons in an arm's length transaction." See sec. 2703(b)(3). The experts agree that transfer restrictions comparable to those found in paragraphs 9.1 through 9.3 are common in agreements entered into at arm's length. That would seem to be all that petitioners need to show to satisfy section 2703(b)(3). Nevertheless, respondent relies on one of his expert's, Professor Kleinberger's, testimony "that the overall circumstances of the * * * [partnership] arrangement make it unlikely that arm's length third parties would agree to any one of its restrictions on sale or use." Even were we to find that paragraph 9.3 is comparable to similar arrangements entered into by persons in arm's-length transactions (thus satisfying section 2703(b)(3)), we would still disregard it because it fails to constitute a bona fide business arrangement, as required by section 2703(b)(1), and is a prohibited device within the meaning of section 2703(b)(2). Therefore, we need not

(and do not) decide today whether respondent is correct in applying the arm's-length standard found in section 2703(b)(3) to the transaction as a whole.

IV. Valuation

A. Introduction

We must determine the values of the gifts. Although the gifts were of LP units, the parties agree that the starting point for determining those values is the net asset value (NAV) of the partnership. Since, on the dates of the gifts, the partnership held only shares of Dell stock and had no liabilities, the parties agree that the NAV on each of those dates equals the value of the Dell shares then held. The parties also agree that, in valuing the gifts of LP units, we are to look to the pro rata portion of the NAV of the partnership allocable to the LP units transferred but are to make negative adjustments to the values so determined to reflect the lack of control and lack of marketability inherent in the transferred interests. The parties disagree on the magnitude of those discounts. They also disagree on the effect of disregarding paragraph 9.3. We have set forth as appendixes A through D hereto comparisons based on materials prepared by respondent of the parties' valuation positions for each of the gifts. There appear to be no discrepancies between the information in those appendixes and petitioners' computations of like amounts.

B. Law

Pertinent to our determination of the values of the gifts is section 25.2512-1, Gift Tax Regs., which provides that the value of property for Federal gift tax purposes is "the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." The willing buyer and willing seller are hypothetical persons, rather than specific individuals or entities, and their characteristics are not necessarily the same as those of the donor and the donee. See, e.g., Estate of Davis v. Commissioner, 110 T.C. 530, 535 (1998). The hypothetical willing buyer and the hypothetical willing seller are presumed to be dedicated to achieving the maximum economic advantage. E.g., id.

C. Expert Opinions

1. Introduction

The parties rely exclusively on expert testimony to establish the appropriate discounts to be applied in determining the fair market values of the gifts of LP units. Of course, we are not bound by the opinion of any expert witness, and we may accept or reject expert testimony in the exercise of our sound judgment. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990). Because valuation necessarily involves an approximation, the figure at which we arrive need not be directly traceable to specific testimony if it is within the range of values that may

be properly derived from consideration of all the evidence. E.g., Peracchio v. Commissioner, T.C. Memo. 2003-280.

2. Petitioners' Expert

Petitioners called Troy D. Ingham (Mr. Ingham) as an expert witness to testify concerning the values of the gifts. Mr. Ingham is a vice president and director with Management Planning, Inc., a business valuation firm. He has been performing valuation services since 1996. He is a candidate for the American Society of Appraisers. The Court accepted Mr. Ingham as an expert on business valuation and limited partnership valuation, and we received into evidence as his direct testimony four reports he had participated in preparing. Three of those reports express his opinions as to the fair market value of an LP unit on November 8, 1999, January 4, 2000, and February 2, 2001, respectively (the dates of the 1999, 2000, and 2001 gifts, respectively). In each report, Mr. Ingham gives his opinion alternatively regarding and disregarding the effect of paragraph 9.3. Mr. Ingham's opinions are summarized in appendixes A through D. Petitioners offered Mr. Ingham's fourth report in rebuttal to respondent's valuation expert witness's testimony, and that report expresses Mr. Ingham's opinion that some of respondent's valuation expert witness's conclusions are flawed.

3. Respondent's Expert

Respondent called Francis X. Burns (Mr. Burns) as an expert witness to testify concerning the values of the gifts. Mr. Burns is a vice president of CRA International, Inc., an international

consulting firm that provides business valuation services. He is an accredited senior appraiser in business valuation within the American Society of Appraisers and a member of the Institute of Business Appraisers. He has been performing valuation services for more than 18 years, and he has testified as an expert in several valuation cases. The Court accepted Mr. Burns as an expert in the valuation of business entities and partnerships, and we received into evidence as his direct testimony the report he had prepared. In that report, he expresses his conclusions as to the fair market values of the gifts, alternatively regarding and disregarding the effect of paragraph 9.3. His opinions are summarized in appendixes A through D.

D. Discussion

1. Net Asset Value of Partnership

The parties agree on the numbers of Dell shares the partnership held on the dates of the gifts. They further agree that the value of those shares establishes the NAV of the partnership on each of those dates. They agree that the partnership's NAV was $2,812,763 (rounded) on the date of the 1999 gift. They disagree as to the partnership's NAV on each of the dates of the 2000 and 2001 gifts. Relying on Mr. Ingham's calculation of the closing values of a share of Dell stock on the dates of those gifts, petitioners argue that the partnership's NAVs on those dates were $4,672,758 and $2,798,331, respectively. Relying on Mr. Burns's calculations of the averages of the high and low prices of a share of Dell stock on those dates,

respondent argues that the partnership's NAVs on those dates were $4,798,033 and $2,902,488, respectively. Section 25.2512-2, Gift Tax Regs., deals with the valuation of stocks and bonds for purposes of the gift tax. See sec. 25.2512-2(a), Gift Tax Regs. In pertinent part, section 25.2512-2(b)(1), Gift Tax Regs., provides: "In general, if there is a market for stocks * * *, on a stock exchange, in an over-the-counter market or otherwise, the mean between the highest and lowest quoted selling prices on the date of the gift is the fair market value per share". Petitioners argue that, because the gifts here being valued are gifts of partnership interests that do not trade in a public market, the regulation is inapplicable. Moreover, argue petitioners, in determining his discount for lack of control, Mr. Ingham relied on data showing that shares of publicly held investment companies generally trade at a discount from NAV, determined by comparing the price of the company to its end-of-day NAV.

We cannot dismiss the regulation, as petitioners would have us do. The starting point for valuing the gifts is determining the NAV of the partnership, which is defined exclusively by the value of shares of Dell stock, which Mr. Ingham opines are "traded over-the-counter". The rules for valuing marketable shares of stock found in section 25.2512-2(b)(1), Gift Tax Regs., are not gift-specific rules whose application makes no sense if it is only the value of the shares, indirectly, that is at issue, and petitioners provide no authority for disregarding the rules.

To the contrary, petitioners cite a case that supports a contrary view: Estate of Cook v. Commissioner, T.C. Memo. 2001-170 (annuity tables appropriate to value installment payoff of lottery ticket held by partnership notwithstanding marketability discount that might apply to valuation of partnership interest), affd. 349 F.3d 850 (5th Cir. 2003).

Petitioners' argument with respect to Mr. Ingham's methodology for determining a lack of control discount is equally unpersuasive. Data from the universe of trades of publicly held investment companies may well show that shares of those companies generally trade at a discount from NAV determined at the end of the day, but petitioners have failed to show that any statistical inference to be drawn from that data would be any different if an average of the highs and lows of the component securities were used to determine NAV.

We shall rely on Mr. Burns's computations of $4,798,033 and $2,902,488 as the partnership's NAVs on the dates of the 2000 and 2001 gifts, respectively.

2. Minority Interest (Lack of Control) Discount

a. Introduction

Pursuant to the partnership agreement, a hypothetical buyer of an LP unit would have limited control of his investment. For instance, such a buyer (1) would have no say in the partnership's investment strategy, and (2) could not unilaterally recoup his investment by forcing the partnership either to redeem his unit or to undergo a complete liquidation. The parties agree that the

hypothetical "willing buyer" of an LP unit would account for such lack of control by demanding a reduced price; i.e., a price that is less than the unit's pro rata share of the partnership's NAV.

b. Comparison to Closed-End Investment Funds

Both Messrs. Ingham and Burns apply minority interest discounts in valuing the gifts by reference to the prices of shares of publicly traded, closed-end investment funds, which typically trade at a discount relative to their share of fund NAV by definition.[10] The idea is that since, by definition, such shares enjoy a high degree of marketability, those discounts must be attributable, at least to some extent, to a minority shareholder's lack of control over the investment fund. The minority interest discounts applied by Messrs. Ingham and Burns in valuing the gifts are as follows:

Table 10

Valuation expert	1999 gift	2000 gift	2001 gift
Mr. Ingham	14.4%	16.3%	10%
Mr. Burns	11.2	13.4	5

In determining those discounts, both experts rely on samples of closed-end investment funds with investment portfolios comprising predominantly domestic equity securities; viz, shares

[10] We understand from the expert testimony of Messrs. Ingham and Burns that, unlike a shareholder of an open-end fund (and similar to a holder of a limited partner interest in the partnership), a shareholder of a closed-end fund cannot obtain the liquidation value of his investment (i.e., his pro rata share of the fund's net asset value (NAV)) at will by tendering his shares to the fund for repurchase.

of common stock. Each expert relies on three samples, one for the date of each gift (the valuation dates). Mr. Ingham's sample sizes are 28, 28, and 27, and Mr. Burns's are 28, 27, and 25. For the first two valuation dates, 20 of the closed-end investment funds in each of the four sets of samples are the same. For the third date, 18 are the same. Mr. Burns relies solely on general equity funds, which contain a diversified portfolio of stocks across industries. Mr. Ingham includes in his samples seven specialized equity funds with investments in the healthcare, petroleum and resources, and banking industries. Mr. Ingham computes (and relies on) only the median discount for each of his samples. Mr. Burns computes not only the median discount for each of his samples but also the mean and interquartile mean discounts for each.[11] The following table shows the results of each expert's computations.

[11] The following description of the terms "mean", "median", and "interquartile mean" is drawn from Kaye & Freedman, "Reference Guide on Statistics", in Reference Manual on Scientific Evidence, 83, 113–115 (Federal Judicial Center, 2d ed. 2000). "Mean" and "median" are common descriptive statistics used to describe the central tendency (i.e., the middle or "expected" value) of a set of numerical data. The mean (commonly, "average") is found by adding up all the numbers and dividing by how many there are. By comparison, the median is defined so that half the numbers are bigger than the median, and half are smaller. The mean takes account of all the data – it involves the total of all the numbers. Particularly with small data sets, however, a few unusually large or small observations may have too much influence on the mean. The median is resistant to such outliers. See the definition of the term "outlier" infra note 12. The interquartile mean is the mean of the 50 percent of the data points falling between the 25th and 75th percentiles. Like the median, it is resistant to outliers. Also, to remove the influence of outliers on the mean, it may be recomputed disregarding outliers.

Table 11

Valuation expert's computation	1999 gift	2000 gift	2001 gift
Mr. Ingham: Median	13.1%	14.8%	9.1%
Mr. Burns: Mean	10.8	11.7	3.4
Mr. Burns: Median	12.1	14.8	3.8
Mr. Burns: Interquartile mean	11.2	13.4	5.0

Mr. Ingham considers adjustments to his median discount figures to reflect what he describes as quantitative factors (i.e., aggregate size of the partnership's NAV, relative volatility of the partnership's portfolio, measures of return and yield) but determines that those factors had an insignificant influence. He considers qualitative factors (i.e., the lack of diversification of the partnership's portfolio, the depth and quality of the partnership's management, the partnership's income tax status), and he determines that, "[b]ased on all relevant factors, including the fact that * * * [the partnership's] portfolio is neither well diversified nor professionally managed on a daily basis", an investor or willing buyer of an LP unit would require a discount 10 percent greater than the median discount he had determined. Table 10 reflects his final determination that the appropriate minority interest discounts are 110 percent of the median discounts he determined. Mr. Burns relies on the interquartile mean discount. Although he considers a downward adjustment to reflect the large size of the limited partner interest held by Janelle as trustee (and the influence that would

give her over the general partners), he rejects any adjustment "as a point of conservatism".

We must determine (1) the composition of the appropriate samples of closed-end investment funds (i.e., whether Mr. Ingham appropriately includes specialized funds); (2) the appropriate descriptive statistic to measure the central tendency of the samples; and (3) whether Mr. Ingham's adjustments to his sample medians are justified.

c. Discussion

On cross-examination, Mr. Ingham agreed with counsel for respondent that the seven specialized equity funds that he had included in his samples of closed-end equity funds resembled the partnership only in that they were specialized in their investments. Indeed, that was his reason for including them, although he agreed that he could find no correlation between quantitative factors particular to the funds in his samples and the discounts at which those funds traded. He further agreed that he had included no explanation in his report as to why he had included the specialized funds in his samples. We have examined the data Mr. Ingham presented with respect to discounts from NAV for the seven specialized funds for the first valuation date (November 8, 1999) and have determined that the discounts for that subset of his sample range from a minimum of 9.8 percent to a maximum of 24.9 percent, with mean and median discounts of 17.1 and 17.8 percent, respectively, as compared to the range of discounts for the full sample, 1 to 24.9 percent, with mean and

median discounts of 12 and 13 percent, respectively. Both experts agree that general equity funds are sufficiently comparable to the partnership so that useful information as to an appropriate minority discount can be drawn from a sample of those funds. They disagree as to whether useful information can be obtained by considering funds specializing in industries different from Dell's computer business. Mr. Burns believes that it cannot. Given that disagreement and the significant differences we found in comparing the range, mean, and median of the subset and the sample, we are content to rely on the area of the experts' agreement; i.e., that a sample of general equity funds is reliable for purposes of determining an appropriate minority discount. We shall construct samples for each valuation date from the intersection of the experts' data sets for that date (i.e., the 20 funds selected for both the first and second valuation dates and the 18 funds selected for the third valuation date).

Mr. Ingham dealt with his concern for outliers[12] by relying on the median of each sample. He is of the opinion that the median does not put any weight on outliers as the mean would. In response to the Court's question as to whether he relied on the median because outliers caused a significant difference between the means and the medians in his samples, he answered that he did

[12] Outlier: "An observation that is far removed from the bulk of the data. Outliers may indicate faulty measurements and they may exert undue influence on summary statistics, such as the mean * * *." Kaye & Freedman, supra at 168.

not know since he had not computed the mean. Mr. Burns computed the mean, the median, and the interquartile mean for each of his samples. His approach to the problem of outliers appears to have been more thoughtful than Mr. Ingham's, and we shall follow his lead and deal with the problem of outliers by relying on the interquartile mean of each sample we construct.

We shall also follow Mr. Burns's lead and make no adjustments to the averages so obtained. Simply put, Mr. Ingham has failed to convince us that lack of portfolio diversity and professional management justify an increased adjustment on account of lack of control of 10 percent (or, indeed, any adjustment at all). In his report, Mr. Ingham concedes: "the Partnership's relatively simple investment portfolio negates [lack of professional management]". Nor can we see how lack of diversity could exacerbate lack of control since the partnership was, on the valuation dates, transparently, the vehicle for holding shares of stock of a single, well-known corporation. Mr. Ingham's 10-percent adjustment, based on "all relevant factors", is without sufficient analytical support to convince us that any adjustment should be made to the sample averages we obtain. See Casey v. Commissioner, 38 T.C. 357, 381 (1962) ("An expert's opinion is entitled to substantial weight only if it is supported by the facts.").

d. Conclusion

We determine minority interest discounts to be applied in valuing the gifts as follows:

Table 12

1999 gift	2000 gift	2001 gift
11.32%	14.34%	4.63%

3. Marketability Discount

a. Introduction

The parties agree that, to reflect the lack of a ready market for LP units (or, more pertinently, assignee interests in the partnership), an additional discount (after applying the minority interest discounts) should be applied to the partnership's NAV to determine the fair market values of the gifts. Such a discount is commonly referred to as marketability discount. The experts differ sharply on two points: (1) The existence of a market for LP units, and (2) the weight that should be given various qualitative factors.

b. Mr. Ingham's Opinion

To determine an appropriate marketability discount, Mr. Ingham looks at his and others' studies of restricted stock transactions, which compare the private-market price of restricted shares of public companies (i.e., shares that, because they have not been registered with the Securities and Exchange Commission (SEC), generally cannot be sold in the public market

for a 2-year period)[13] with their coeval public market price. Mr. Ingham combines data from the restricted stock approach with his analysis of the "investment quality" of the LP units to support a marketability discount of 35 percent.

c. Mr. Burns's Opinion

Mr. Burns's approach requires more explanation. He also considers various studies of marketability discounts with respect to restricted stock sales. He looks at studies of the mean discount (in two cases, the median discount) on sales of restricted stock during three periods: (1) before 1990; (2) from 1990 to 1997; and (3) during 1997 and 1998. In 1972, the SEC adopted rule 144, 17 C.F.R. sec. 230.144 (1972), imposing a 2-year holding period on the resale of restricted stock. In 1990, the SEC adopted rule 144A, 17 C.F.R. sec. 230.144A (1990), allowing institutional buyers to buy and sell restricted stock. In 1997, the SEC amended rule 144, 17 C.F.R. sec. 230.144 (1997), reducing the required holding period to 1 year. For the first period (pre-1990), which Mr. Burns characterizes as "lack[ing] * * * a resale market", the average of the discounts for the studies he considered is 34 percent. For the second period (1990 to 1997), the similar average is 22 percent, and, for the third period (1997 and 1998), it is 13 percent. He concludes:

> Based on the evolution of restricted stock discounts, there appear to be at least two factors that influence investors: 1) the limited access to a liquid market

[13] See 17 C.F.R. sec. 230.144(d) (1972). The required holding period was shortened to 1 year in 1997. See 62 Fed. Reg. 9242 (Feb. 28, 1997).

> and 2) the required holding period before the restricted stock can be freely traded. These factors suggest an explanation as to why average marketability discounts have decreased since the implementation of Rule 144A and the Amendment to Rule 144A [sic., Rule 144]. Rule 144A allowed for institutional trading of restricted stocks. The difference between average marketability discounts before and after Rule 144A would appear to reflect the discount investors required for having virtually no secondary market. In contrast, the difference between average discounts found prior to and after 1997 is a logical result of the reduction in holding period from two years to one year.

Mr. Burns recognizes that the partnership is very different from the operating companies that are the subject of the restricted stock studies he examined. Nevertheless, he thinks that the changes in restricted stock discounts over time evidenced by those studies are instructive with respect to the pricing decisions of investors holding securities that cannot readily be resold. He starts with the premise that, before SEC rule 144A, holders of restricted stock had virtually no access to any secondary (resale) market and, therefore, demanded a discount (34 percent being the average of the studies he examined) to account for that lack of market access. The promulgation of SEC rule 144A, he argues, opened a resale market (albeit a limited one), and the average discount of the studies he examined for the period from 1990 to 1997 is, at 22 percent, 12 percentage points lower than the average discount he observed for the prior period, before the promulgation of rule 144A. He concludes that the difference is due to the availability of a resale market after 1990. Put another way, Mr. Burns believes that 12 percent is indicative of the charge that the buyer imposed on the seller of

restricted stock before 1990 to account for the buyer's lack of access to a ready resale market. Mr. Burns concludes that the remaining 22 percentage points of the average pre-1990 discount of 34 percent are attributable to holding period restrictions and factors unrelated to marketability. He explains the effect of holding period restrictions as follows: "Legally mandated holding periods can be particularly onerous for investors when the restricted shares are subject to extreme price volatility, as is the case with many financially distressed companies." He concludes:

> For investment holding companies such as the Partnership –- those not hindered by legal holding periods, nor subject to the operating and financial risks of typical restricted shares -– the measure of discount based on restricted stock research suggests a lack of marketability adjustment closer to 12 percent.

That, he explains "is the incremental level of discounts that investors demanded before 1990, when the trading market became more liquid."

Mr. Burns next turns his attention to the circumstances of the partnership. He believes that there are factors particular to the partnership that must be considered in determining an appropriate marketability discount. Mr. Burns lists the following factors: the failure to make distributions, a nondiversified portfolio, the restrictions on transferring LP units, the dissolution provisions of the partnership agreement, and the liquidity of Dell shares. He considers the last two factors as increasing marketability. He believes that the provisions of the partnership agreement providing for the

voluntary dissolution of the partnership (and distribution of its assets on a pro rata basis to its partners) would benefit a limited partner wishing to sell her interest. He believes that a voluntary dissolution of the partnership would be of little detriment to the remaining partners, who could reconstitute the partnership less the withdrawing partner (who might agree to pay the costs attendant to dissolution and reconstitution), and the dissolution would significantly benefit the withdrawing partner, who would save the large discount to her proportional share of the partnership's NAV attendant to any assignment of her interest. He notes that, on each valuation date, the partnership's portfolio consisted of only highly liquid, marketable securities; viz, Dell shares: "These assets have an easily discernible value and can be sold quickly and easily."[14] Mr. Burns concludes that a reasonable negotiation between a buyer and seller over the price of a limited partner interest in the partnership would result in a price concession for lack of marketability in the range of 10 to 15 percent. He starts with the notion that traditional studies of unregistered shares of public companies suggest a price concession of 12 percent due to the lack of a ready market. Because of his belief that, unlike restricted stock, a limited partner interest in the partnership is not burdened by prescribed holding period limitations on

[14] He adds: "The Partnership owns a substantial block of Dell stock. However, these shares represented less than 0.28% of Dell's trading volume on the dates of valuation, which suggests that the Partnership's shares could be readily absorbed by the market."

resale, nor does it carry the business or financial risk associated with the typical issuer of private placement shares, he adds little for those factors. He settles on a marketability discount of 12.5 percent.

d. Discussion

(1) Introduction

The experts agree on the usefulness of restricted stock studies in determining appropriate marketability discount for the gifts. They further agree that (1) no secondary market exists for LP units; (2) an LP unit cannot be marketed to the public or sold on a public exchange; and (3) an LP unit can be sold only in a private transaction. They disagree principally on the likelihood of a private market among the partners for LP units.

(2) Mr. Ingham's Opinion

Mr. Ingham's approach is relatively straightforward. He believes that "restricted shares [of publicly held companies] sell at a price below their publicly traded (unrestricted) counterparts because of the lack of access to a ready market due to SEC Rule 144." He has sampled private transactions in the common stocks of actively traded companies. His sample shows median and mean discounts of 24.8 and 27.4 percent, respectively, "for equities with access to public stock market liquidity in about two years." He believes that "these private placement transactions * * * are an appropriate starting point from which to measure the diminution in valuing arising from lack of marketability." He adds: "The * * * [marketability] discounts

demanded by potential investors in privately held business interests with potentially very long holding periods should be much larger [than for restricted shares with access to a ready market in 2 years]." In particular, with respect to the partnership, he concludes that (1) the willing buyer of a limited partner interest "has no real prospects of being able to sell the interest in the public market at the full, freely traded value at any time," and (2) "there is virtually no ready market for * * * [interests in the partnership]". He appears to dismiss altogether the possibility of a private sale of LP units:

> Further, there is no market for a limited partnership unit in * * * [the partnership]. There have never been any purchases or sales of * * * [partnership] limited partnership units. Sales of partnership units are restricted by the Agreement. A buyer has no assurance, as well, of being admitted as a substitute partner, as such admission requires the consent of all the partners.

He concludes: "Considering all relevant factors, * * * [I] believe that the discount for lack of marketability should be at least 35%." (Emphasis added.) He settles for a 35-percent discount for lack of marketability in determining the value of an LP unit.

Respondent observes about Mr. Ingham's analysis: If Mr. Ingham's assumptions about the absence of a market for LP units are accepted, "then the conclusion is unavoidable that the value of limited partnership interests in the * * * [partnership] is virtually zero, or that they cannot be valued at all." Respondent criticizes Mr. Ingham for being arbitrary in stopping at 35 percent when his analysis would seem to lead to the

conclusion that, since he believes that an LP unit cannot be sold, the appropriate discount for lack of marketability should be 100 percent. Respondent has a point. Mr. Ingham's analysis is predicated on the assumption that he can extrapolate the marketability discount appropriate to an LP unit from the typical discount found by him with respect to a sample of sales of restricted stock barred from resale in a ready market for 2 years. The obstacle he must overcome is his belief that there is not now, nor will there ever be, a ready market (indeed, any market) for LP units. If we are to assume (as he would have us do) that the size of the marketability discount is a function of the length of time that a holder of an interest in a business is barred access to a ready market, then Mr. Ingham has not persuaded us that his stopping point, 35 percent, is anything but a guess. He does not build from his observed sample median and mean discounts of 24.8 and 27.4 percent, respectively, to his 35 percent conclusion by quantitative means. He considers the "investment quality" of the LP units, concluding that the lack of public information about the partnership is a detriment that is mitigated "somewhat" by the transparency of the partnership (since its only assets are shares of Dell stock). He takes into account that there is no market for LP units, and an investor wishing to acquire Dell shares could do so outside of the partnership without encountering the various restrictions attaching to a partnership interest. Without any further analysis, he concludes, as stated supra: "Considering all

relevant factors, * * * the discount for lack of marketability should be at least 35 percent."[15] Given his assumptions that (1) there is virtually no ready market for LP units, and (2) the size of any marketability discount is a function of the length of time that a holder of an interest in a business is barred access to a ready market, it would seem that he could only draw the conclusion that an LP interest is simply not salable, which is not the conclusion that he draws. We do not reject per se Mr. Ingham's reliance on restricted stock studies. We simply lack confidence in the result he reaches given the assumptions he makes. We need not rely on the unsupported opinion of an expert witness. See Casey v. Commissioner, 38 T.C. at 381.

(3) Mr. Burns's Opinion

Mr. Burns looks at the marketability discount as comprising principally two components: a market access (liquidity) component and a holding period component. We assume that petitioner's expert, Mr. Ingham, accepts that division since, in his rebuttal report, he states: "[Mr. Burns] concluded, correctly, that private placement discounts have declined because of relaxations for institutional trading and reductions in

[15] A clue to his settling on 35 percent may be contained in a reference in his direct testimony to a group of 13 restricted stock studies, which he describes as having a range of observed discounts from 13 to 45 percent and "an observed clustering of discounts between 30% and 35%." We have computed the group's mean and median discounts to be 29.36 and 31.9 percent, respectively. The data set is skewed to the left (with more extreme measurements among the lower percentages), which indicates that the median is the preferred measure of central tendency. Mr. Ingham does not explain what further significance he attaches to his clustering observation.

required holding periods under Rule 144." (Emphasis added.) Mr. Burns pegs at 12 percent the difference in private placement discounts between a period in which holders of restricted stock had no access to a ready market and could only dispose of their restricted stock in private transactions and a period in which certain holders of restricted stock were allowed limited access to a ready market.[16] He concludes: "[That] difference * * * would appear to reflect the discount investors required for having virtually no secondary market." That difference suggests to Mr. Burns the market access component of the marketability discount appropriate to an LP unit; i.e., the price concession that a buyer of an LP unit would demand to reflect that the unit could only be liquidated in a private transaction.

Mr. Burns recognizes that factors particular to the partnership (such as the restrictions on transferring LP units) might elicit an additional discount, and, on the basis of those factors and the discounts suggested by his empirical research studies, he settles on a marketability discount of 12.5 percent. He makes little, if any, adjustment on account of holding period restrictions. He notes that the partners can agree to dissolve the partnership; and, although he did not determine the likelihood of a dissolution, he testified that, so long as the

[16] In his rebuttal testimony, Mr. Ingham criticizes Mr. Burns for referring in a portion of his testimony to a reduction in "average marketability discounts" rather than a reduction in private placement discounts. It is clear to us that Mr. Burns is referring to the average of his summary of marketability discount studies based on restricted stock sales. We see no ambiguity or error.

partnership continued to hold only shares of Dell stock (which he characterizes as having "an easily discernible value"), "[he could not] envision an economic reason why * * * [the partnership] would not be willing to let somebody be bought out, because * * * [the remaining partners would] be holding the same proportion of assets, the same type of assets, after * * * [the buyout]." Indeed, given the significant minority interest and marketability discounts from an LP unit's proportional share of the partnership's NAV that each expert would apply in valuing the gifts, it would appear to be in the economic interest of both any limited partner not under the economic necessity to do so but wishing to make an impermissible assignment of LP units and the remaining partners to strike a deal at some price between the discounted value of the units and the dollar value of the units' proportional share of the partnership's NAV. The wishing-to-assign partner would get more than she would get in the admittedly "thin" market for private transactions, and the dollar value of each remaining partner's share of the partnership's NAV would increase.[17] So long as the partnership's assets remain

[17] Thus, for instance, assume that a hypothetical limited partnership organized under an agreement identical to the partnership's has one general and four limited partners, all sharing equally in profits and losses, an NAV of $100, and, because of minority interest and marketability discounts, no impermissible assignment of a limited partner interest could be made for a price greater than 60 percent of the interest's share of NAV. If a limited partner with bargaining power and wishing to dispose of her 20-percent interest and the limited partnership were to settle on a redemption price of $14 for her interest, she would receive $2 more than she could receive on an impermissible assignment, the limited partnership's remaining NAV would be $86, (continued...)

highly liquid (as they were on each of the valuation dates), the remaining partners would appear to bear little or no economic risk in agreeing to a redemption or similar transaction to accommodate a wishing-to-assign partner.

A transaction of the type described would (if petitioners' proposed discounts are to be credited) increase the wealth of the family members post hoc. While such a transaction is perhaps inconsistent with the stated purpose of the partnership to "preserve Family assets", the provision in the partnership agreement allowing for the consensual dissolution of the partnership convinces us that preservation of family assets is not an unyielding purpose. We think that Mr. Burns was correct to take into account the prospect of such a dissolution of the partnership as a significant factor in the private market for LP units, and we think that the economic self-interest of the partnership (more precisely, any remaining partners) must be considered in determining any marketability discount. We agree with Mr. Burns that the holding period component of the marketability discount is of little, if any, influence here.[18]

---

[17](...continued)
and each of the four remaining partners' share of that NAV would increase by $1.50, from $20 to $21.50. Of course, we cannot say where between $12 and $20 the redemption price would settle, but, putting transaction costs aside, it would be in the economic interest of both the withdrawing partner and the remaining partners to have it settle somewhere in between.

[18] We are mindful of one of respondent's expert's, Professor Kleinberger's, testimony that "nobody at arm's length would get into this deal" (meaning the partnership), and the implication to be drawn from that testimony that it would be hard to market an interest in the partnership. Professor Kleinberger, (continued...)

(4) Conclusion

Mr. Burns has persuaded us that a hypothetical purchaser of an LP unit would demand and get a price concession to reflect the market access component of the marketability discount but would get little if any price concession to reflect the holding period component of that discount. On the record before us, and considering the expert testimony presented, we cannot determine any better estimate of an appropriate marketability discount than Mr. Burns's estimate, 12.5 percent, and we find accordingly.

(5) Paragraph 9.3

Since we have determined to disregard paragraph 9.3 in determining the values of the gifts, we need not address the parties' differences with respect to its effects on those values.[19]

---

[18](...continued)
however, was not called as an expert on valuation; he did not offer any opinion as to the value of an existing LP unit, and, although we are unpersuaded by one of petitioners' expert's, Mr. Ingham's, opinion as to an appropriate marketability discount, he stopped at 35 percent.

[19] We note in passing that when asked to determine the fair market values of the gifts disregarding the impact of paragraph 9.3, the parties' experts took different approaches. Mr. Burns simply disregarded the additional discount on account of paragraph 9.3 that he had applied sequentially after applying the minority interest and marketability discounts that he thought appropriate. See infra appendixes A–D. Mr. Ingham added an amount to what he had determined to be the freely traded value of an LP unit (i.e., the unit's proportional share of the partnership's NAV) minus his calculation of the appropriate minority interest discount. See infra appendixes A–D, final portion: "Mr. Ingham's computation –- effect of par. 9.3". We fail to see the logic of Mr. Ingham's approach, since he did not take into account paragraph 9.3 in determining the freely traded value of an LP unit. He is adding back an amount to show his disregard of a provision (par. 9.3) that he had not taken into
(continued...)

V. Conclusion

On the premises stated, we calculate the fair market values of the gifts as follows:

Table 13

	Date of gift			
	11/8/1999 f/b/o I.	11/8/1999 in trust	1/4/2000 in trust	2/2/2001 in trust
Net asset value	$2,812,763	$2,812,763	$4,798,033	$2,902,488
Gift interest	14.265%	70.054%	3.285%	5.431%
Pro rata portion of net asset value	401,241	1,970,453	157,615	157,634
Discount for lack of control (11.32, 11.32, 14.34, and 4.63% respectively)	(45,420)	(223,055)	(22,602)	(7,298)
	355,820	1,747,398	135,013	150,336
Discount for lack of marketability (12.5%)	(44,478)	(218,425)	(16,877)	(18,792)
Fair market value	311,343	1,528,973	118,137	131,544

We find accordingly, except that, on the basis of respondent's position on brief that the amount of the 2001 gift is $131,033, we find that the total amount of that gift is that amount.

Decision will be entered under Rule 155.

[19](...continued)
account. If, for instance, the minority interest discount is set to zero, Mr. Ingham's approach would increase the freely traded value of an LP unit to an amount greater than its proportional share of the partnership's NAV, a result that we do not think he would support.

United States Court of Appeals
FOR THE EIGHTH CIRCUIT

No. 08-3774

Thomas H. Holman, Jr.; Kim D.L. Holman, Donors,	*	
Appellants,	*	
	*	Appeal from the
v.	*	United States Tax Court.
Commissioner of Internal Revenue,	*	
Appellee.	*	

Submitted: September 22, 2009
Filed: April 7, 2010 (Corrected: 04/07/2010)

Before MELLOY, BEAM, and GRUENDER, Circuit Judges.

MELLOY, Circuit Judge.

Thomas H. Holman, Jr. and Kim D.L. Holman (the "donors") created a limited partnership, funded it with common stock of Dell, Inc., and gifted limited partnership shares to their children. In a gift-tax return, the donors asserted lack-of-marketability and minority-interest discounts to claim a value for the gifts substantially below the value of the underlying Dell stock. In doing so, the donors relied in part on transfer restrictions contained in the partnership agreement, asserting that the transfer restrictions would depress the value of the partnership shares relative to the value of the underlying assets.

The Commissioner challenged the return, characterizing the gifts as gifts of Dell stock rather than gifts of limited partnership shares. In addition, the Commissioner applied Internal Revenue Code § 2703 and disregarded the partnership agreement's transfer restrictions for valuation purposes. Finally, the Commissioner agreed that lack-of-marketability and minority-interest discounts should apply but asserted that the discounts should be smaller than claimed by the donors.

The Tax Court[1] held that the gifts were gifts of limited partnership shares. The Tax Court also held that the Commissioner correctly applied I.R.C. § 2703 and properly disregarded the partnership agreement's transfer restrictions. Finally, the Tax Court applied smaller lack-of-marketability and minority-interest discounts than claimed by the donors.

In doing so, the Tax Court adopted the lack-of-marketability discount as asserted by the Commissioner's expert based on historical studies of restricted stock sales. The Tax Court noted that the partnership held only highly liquid, easily valued assets and that the agreement contained a consensual dissolution provision and granted broad management discretion to the general partners. According to the Tax Court, because economically rational actors would take advantage of the dissolution provision to dissolve and reconstitute the partnership or otherwise buy out a departing partner, there was a natural cap on any lack-of-marketability discount.

On appeal to our court, the Commissioner does not challenge the determination that the gifts were gifts of partnership shares. The donors challenge the Tax Court's application of I.R.C. § 2703, its determination of marketability and minority-interest discounts, and its overall valuation determination. We affirm the judgment of the Tax Court.

---

[1]The Honorable James S. Halpern, United States Tax Court.

I. Background

The donors amassed wealth primarily in the form of Dell stock during Thomas's tenure as a Dell employee. They sought to transfer wealth to their children, preserve wealth within their family, and prevent their children from dissipating assets. At the same time, they sought to teach their children basic investing principles and impart to their children a general understanding of responsibility attendant to wealth. As part of an overall estate-planning process seeking to achieve these goals, Thomas and Kim met with counsel and developed an estate and gifting plan that involved execution of wills, creation of the limited partnership, transfer of Dell stock into the limited partnership, and transfer of limited partnership shares to a trustee and conservator for the children. The children, who already owned some Dell stock through the trustee and conservator or in accounts under different states' versions of the Uniform Transfers to Minors Act, transferred their Dell stock into the partnership in exchange for additional partnership shares.

Several provisions of the partnership agreement are material to the issues in this appeal. Section 3.1 lists the purposes of the partnership:

> 3.1 Purposes. The purposes of the Partnership are to make a profit, increase wealth, and provide a means for the Family to gain knowledge of, manage, and preserve Family Assets. The Partnership is intended to accomplish the following:
>
> > (1) maintain control of Family Assets;
> > (2) consolidate fractional interests in Family Assets and realize the efficiencies of coordinated investment management;
> > (3) increase Family wealth;
> > (4) establish a method by which gifts can be made without fractionalizing Family Assets;
> > (5) continue the ownership of Family Assets and restrict the right of non-Family persons to acquire interests in Family Assets;

> (6) provide protection to Family Assets from claims of future creditors against Family members;
> (7) provide flexibility in business planning not available through trusts, corporations, or other business entities;
> (8) facilitate the administration and reduce the cost associated with the disability or probate of the estates of Family members; and
> (9) promote the Family's knowledge of and communication about Family Assets.

Section 6.1 grants the general partners "exclusive management and control of the business of the Partnership" including "the power and authority . . . to determine the investments and investment strategy of the Partnership." Sections 8.4 and 9.1 provide that limited partners may not withdraw from the partnership or involuntarily or voluntarily assign or encumber their limited partnership interests except as permitted by the agreement. Section 9.2 describes various permitted assignments such as assignments to family members or assignments to trusts or to certain custodians where such trusts or custodians hold the partnership interests exclusively for the benefit of family members. Section 9.3, which we address in more detail below, describes conditions under which the partnership may acquire partnership interests that are lawfully assigned in a manner prohibited by the agreement. Finally, section 12.1 provides that the partnership may be dissolved by the written consent of all partners.

Section 9.3 provides that the partnership has an option to purchase at an appraised value any partnership interest assigned in a manner that is prohibited by the agreement but that is otherwise lawful. Specifically, section 9.3 provides that the partnership may purchase such an interest over a five-year period at a determined interest rate with a ten-percent down payment. Further, the partnership may assign the right to acquire such an interest to one or more current partners. Finally, the partners may consent to let the prohibited assignee become a limited partner. If the partners refuse such consent and elect not to exercise the right to acquire the assigned shares, the otherwise impermissible holder of the assigned shares does not gain the

rights of a limited partner. Rather, such a holder gains merely the limited right to receive distributions to which the assignor–partner would have been entitled.

The gifts of partnership shares occurred in 1999, 2000, and 2001. In gift tax returns for these years, the donors claimed overall discounts of slightly over 49% relative to then-prevailing market prices for the underlying Dell stock. These discounts were based on appraisal recommendations that considered minority status and lack of marketability. These discounts also took into consideration the perceived impact of sections 8.4 and 9.1–9.3 upon the value of limited-partnership shares. In notices of deficiency, the Commissioner initially asserted that it would be proper to allow an overall discount of 28% for minority status and lack of marketability. The Commissioner based this lower discount on the view that the partnership units "should be valued without regard to any restriction on the right to sell or use the partnership interest within the meaning of [I.R.C. § 2703(a)(2)]."

Ultimately, when the case progressed before the Tax Court, the Commissioner employed an appraiser and argued that an even smaller discount should apply. The donors also employed an appraiser, and the appraisers' methods were detailed and require some discussion. We describe their methods and their detailed opinions below in the section of our analysis addressing the valuation.

In testimony before the Tax Court, the donors described their purposes for creating and funding the partnership, gifting shares to their children, and including transfer restrictions in the partnership agreement. Neither donor claimed an intent to maintain Dell stock as the sole asset of the partnership nor described any particular investment strategy they intended to employ, other than a future intent to diversify the portfolio's holdings. Neither donor claimed an intent to hold anything other than passive investments in the partnership nor described any business activity related to the partnership. Between formation of the partnership and the submission of the case, the partnership held only Dell stock. The total amount of stock the partnership held

represented approximately 0.28 % of the outstanding stock of Dell, and the parties agree that the broader market could easily absorb this amount.

Mr. Holman testified as to the goal of asset preservation, and the Tax Court interpreted this to mean protection of assets from dissipation by the children. Mr. Holman explained his understanding of sections 9.1–9.3 and how these sections would preclude the children from assigning or giving away their interests. Mrs. Holman testified that the purpose of the partnership was "to be able to teach . . . [the] children about wealth and the responsibility of that wealth."

In light of the purposes stated in section 3.1 of the Agreement, and in light of the donors' testimony, the Tax Court concluded:

> We believe that paragraphs 9.1 through 9.3 were designed principally to discourage dissipation by the children of the wealth that Tom and Kim had transferred to them by way of the gifts. The meaning of the term "bona fide business arrangement" in section 2703(b)(1) is not self apparent. As discussed supra, in Estate of Amlie v. Commissioner, [91 T.C.M. (CCH) 1017], we interpreted the term "bona fide business arrangement" to encompass value-fixing arrangements made by a conservator seeking to exercise prudent management of his ward's minority stock investment in a bank consistent with his fiduciary obligations to the ward and to provide for the expected liquidity needs of her estate. Those are not the purposes of paragraphs 9.1 through 9.3. There was no closely held business here to protect, nor are the reasons set forth in the Committee on Finance report as justifying buy-sell agreements consistent with petitioners' goals of educating their children as to wealth management and "disincentivizing" them from getting rid of Dell shares, spending the wealth represented by the Dell shares, or feeling entitled to the Dell shares.

> We find that paragraphs 9.1 through 9.3 do not serve bona fide business purposes. Those paragraphs do not constitute a bona fide business arrangement within the meaning of section 2703(b)(1).

Holman v. C.I.R., 130 T.C. 170, 195 (2008).

The Tax Court also concluded that the restrictions were merely a testamentary device such that the donors failed to satisfy § 2703(b)(2). The Tax Court did not reach the arms-length transaction test of § 2703(b)(3). Having determined that the transfer restrictions of sections 9.1–9.3 were to be disregarded for valuation purposes, the Tax Court assessed the remaining aspects of the competing experts' valuation opinions. The Tax Court accepted lack-of-marketability discounts of 12.5% for each tax year and minority-interest discounts of 4.63–14.34%, all as asserted by the Commissioner's expert. The donors appeal.

II. Discussion

a. I.R.C. § 2703

Restrictions on the sale or use of property generally tend to depress the value of the property. Oftentimes, such restrictions serve legitimate business purposes, impose actual and meaningful limitations on the use or transferability of property, and are accepted by parties dealing with one another in arms-length transactions. When carefully crafted and applied in certain circumstances, however, such restrictions can minimize the tax consequences of gifts or transfers without imposing substantial additional limitations on the transferability or use of the property. This is particularly true in the context of family transfers where a donor may hold some degree of practical control over a recipient's actions, even in the absence of formal restrictions, and where transactions often do not occur at arms length. In this context and in others, Congress has expressed concern over the abusive use of such restrictions. See, e,g., Explanatory Material Concerning Committee on Finance 1990 Reconcilia-tion

Submission Pursuant to House Concurrent Resolution 310, 136 Cong. Rec. S15629-04, S15681 (1990) ("Finance Committee Report") ("[T]he committee is aware of the potential of buy-sell agreements for distorting transfer tax value. Therefore, the committee establishes rules that attempt to distinguish between agreements designed to avoid estate taxes and those with legitimate business agreements. These rules generally disregard a buy-sell agreement that would not have been entered into by unrelated parties acting at arm's length.").

In attempting to sort between permissible and impermissible uses of such restrictions, Congress repealed an earlier Code provision, I.R.C. § 2036(c) (1987) because "the committee [was] concerned that the statute's complexity, breadth, and vagueness posed an unreasonable impediment to the transfer of family businesses." Finance Committee Report, 136 Cong. Rec. S15680. In 1990, Congress enacted in its place a statute that broadly prohibits consideration of restrictions for valuation purposes, see I.R.C. § 2703(a), but allows taxpayers to prove eligibility for an exception that permits valuation based on such restrictions, see I.R.C. § 2703(b).

To be eligible for the exception and gain the benefit of having such restrictions considered for valuation purposes, the taxpayer must satisfy a three-part test: the restriction must be "a bona fide business arrangement," it must not be "a device to transfer such property to members of the decedent's family for less than full and adequate consideration," and its terms must be "comparable to similar arrangements entered into by persons in an arms' length transaction."[2] Because we conclude that

---

[2]Section 2703 provides:

> (a) General rule.–For purposes of this subtitle, the value of any property shall be determined without regard to–
>
> (1) any option, agreement, or other right to acquire or use the property at a price less than the fair market value of the

the Tax Court correctly held the present restrictions are not "a bona fide business arrangement" in accordance with § 2703(b)(1), we address only that first part of the test.

The ultimate question of whether there was a bona fide business arrangement is a question of fact to be reviewed for clear error. See Estate of True v. Comm'r, 390 F.3d 1210, 1218–19 (10th Cir. 2004) (holding that the question of whether an "agreement was entered into for bona fide business reasons and is not a testamentary substitute" is a question of fact reviewed for clear error); cf. St. Louis County Bank v. United States, 674 F.2d 1207, 1210–11 (8th Cir. 1982) (affirming a finding that stock-purchase agreement "had a bona fide business purpose" but finding an outstanding question of fact as to whether it was merely a testamentary transfer).

As noted, the Tax Court in the present case viewed the restrictions as failing the "bona fide business arrangement" test. The Tax Court emphasized Mr. Holman's testimony in which he failed to identify any current or planned activity by the partnership other than holding passive investments without a clearly articulated

---

property (without regard to such option, agreement, or right), or

(2) any restriction on the right to sell or use such property.

(b) Exceptions.–Subsection (a) shall not apply to any option, agreement, right, or restriction which meets each of the following requirements:

(1) It is a bona fide business arrangement.
(2) It is not a device to transfer such property to members of the decedent's family for less than full and adequate consideration in money or money's worth.
(3) Its terms are comparable to similar arrangements entered into by persons in an arms' length transaction.

investment strategy. In addition, he made clear that asset preservation meant preservation from dissipation by the children, not the pursuit of any particular investment strategy. Mrs. Holman emphasized the personal goals of educating the children as to financial responsibility.

In support of the opposite conclusion, the donors cite several Tax Court cases addressing the business-purpose element of § 2703(b)(1) or similar clauses in other provisions of the Tax Code. The donors argue the Tax Court in the present case applied an overly restrictive definition for the phrase "business arrangement" and effectively imposed an "operating business nexus" or requirement that the underlying partnership be an actively managed enterprise. The donors also argue that the "business arrangement" test should be applied looking solely at the taxpayer's stated intentions and at the language of the restrictions in the partnership agreement without considering the actual context of this case and the nature of the underlying assets. The donors sum up their position in their brief, asserting that "the nature of the assets of the Partnership is irrelevant for purposes of determining whether the restrictions in paragraphs 9.1 and 9.3 constitute a bona fide business arrangement. There is no dispute that the Partnership was an enterprise with the business purpose of generating profits through long-term growth."

We agree with the Tax Court's conclusion and reject the donor's attempt to characterize the Tax Court's opinion as creating an "operating business nexus." In answering the question of whether a restriction constitutes a bona fide business arrangement, context matters. Here that context shows that the Tax Court correctly assessed the personal and testamentary nature of the transfer restrictions. Simply put, in the present case, there was and is no "business," active or otherwise. The donors have not presented any argument or asserted any facts to distinguish their situation from the use of a similar partnership structure to hold a passbook savings account, an interest-bearing checking account, government bonds, or cash. We and other courts have held that "maintenance of family ownership and control of [a] business" may be

a bona fide business purpose. St. Louis County Bank, 674 F.2d at 1207; see also Estate of Bischoff v. Comm'r, 69 T.C. 32, 39–40 (1977). We have not so held, however, in the absence of a business.[3]

That is not to say we necessarily believe it will always be easy to apply § 2703(b)(1) or that investment-related activities cannot satisfy the subsection (b)(1) test. When the restrictions at issue, however, apply to a partnership that holds only an insignificant fraction of stock in a highly liquid and easily valued company with no stated intention to retain that stock or invest according to any particular strategy, we do not view this determination as difficult. See, e.g., Higgins v. Comm'r, 312 U.S. 212, 217–18 (1941) (holding in another context that merely keeping records and collecting interest and dividends did not amount to "carrying on a business"); Estate of Thompson v. Comm'r, 382 F.3d 367, 380 (3d Cir. 2004) ("Other than favorable estate tax treatment resulting from the change in form, it is difficult to see what benefit could be derived from holding an untraded portfolio of securities in this family limited partnership with no ongoing business operations.").

One case the donors cite in support of their position is Estate of Amlie v. Comm'r, 91 T.C.M. (CCH) 1017 (2006). There, the Tax Court found that a buy–sell

[3] In St. Louis County Bank, for example, the transferred interests were shares in a family company that had started out as a moving, storage, and parcel-delivery business and evolved into a real estate management company. St. Louis Bank, 674 F.2d at 1208–09. When engaged in the moving and storage business, the company had created a stock-purchase agreement based on a valuation formula keyed to income. Id. at 1209. Later, the family exited the moving and storage business but kept the business structure as a vehicle for renting real estate. Id. With this new activity, the formula resulted in a dramatically lower value. Id. We stated, "We have no problem with the District Court's findings that the stock-purchase agreement provided for a reasonable price at the time of its adoption, and that the agreement had a bona fide business purpose—the maintenance of family ownership and control of the business. Courts have recognized the validity of such a purpose." Id. at 1210.

agreement was a bona-fide business arrangement where a fiduciary had entered into the agreement to ensure the ability to sell stock that represented an otherwise illiquid minority interest in a closely held bank. Id. at *12. The Tax Court viewed this purpose as patently business oriented and likely necessary to ensure that the fiduciary could fulfill his duty of protecting the beneficiary by ensuring the ability to sell the underlying assets. Id.

Here, in contrast, the donors did not enhance the liquidity of an otherwise illiquid asset through their actions nor do they claim their actions were necessary as a matter of business necessity to ensure a market for the assets. The underlying Dell stock is widely held, easily valued, and highly liquid. The donors placed it into the partnership thereby burdening it with illiquidity as part of an overall estate and gift planning process. As such the donor's reliance on Amlie is misplaced.

In Estate of Bischoff v. Comm'r, 69 T.C. 32 (1977), the question was whether the price contained in a buy–sell agreement regarding limited-partnership shares was controlling for valuation purposes. In that case, the Tax Court stated, "the cases have held that the maintenance of family ownership and control constituted a legitimate business consideration." Id. at 39–40. The underlying asset in Bischoff was "a pork processing business organized, controlled, and managed by three families" who sought "to assure their continuing ability to carry on their pork processing business without outside interference, including that of a dissident limited partner." Id. at 40. In Bischoff then, there was a perceived risk of an outsider interfering with management.

There is no similarity between the facts of Bischoff and the present case because limited partners in the Holman partnership held little-to-no ability to interfere with asset management. Further, the donors have made no allegation that they, as the general partners, are skilled or savvy investment managers whose expertise is needed or whose investment philosophy needs to be conserved or protected from interference

as might justify placement of stock assets into the partnership. Finally, the assets of the partnership—passively held Dell stock—are not assets with which an outsider or dissident owner might interfere. In the quantities held by the partnership, the value of the underlying assets are largely unaffected by the individual actions of the general partners or other owners of relatively insignificant fractions of outstanding stock (unlike the actions of potentially dissenting co-owners of a pork-processing enterprise).

Arguably, the strongest cases for the donors are a line of cases involving investment entities with restrictions imposed to ensure perpetuation of an investment model or strategy. See Estate of Black v. Comm'r, 133 T.C. 15 (2009); Estate of Murphy v. United States, No. 07-CV-1013, 2009 WL 3366099 (W.D. Ark. Oct. 2, 2009); Estate of Schutt v. Comm'r, 89 T.C.M. (CCH) 1353 (2005). The donors cite Schutt for the proposition that relatively inactive investment trusts or shells involving restricted rights may nevertheless involve legitimate business purposes and gain favored tax treatment. In making this point, the donors again attempt to portray the present Tax Court opinion as imposing an "operating business nexus" arguably contrary to Schutt. These cases, however, are more nuanced than the donors assert, and each involves unique facts not present in our case.[4]

In Schutt, the Tax Court addressed a different code section, but one of the underlying questions at issue was similar: whether the transfer of publicly traded stock into a business trust was a bona fide sale for full and adequate consideration. Id. at *18 (discussing the "bona fide sale" exception to 26 U.S.C. § 2036(a)). Under relevant Third Circuit authority, the Tax Court viewed this requirement as having a

[4]These cases address a slightly different, albeit similar, question under I.R.C. § 2036(a), the presence of a "legitimate business purpose." We, nevertheless, feel compelled to comment on these cases because they do not stand for the apparently broad proposition the donors would have us adopt, namely, that holding investments for gain necessarily satisfies the "bona fide business arrangement" test.

good faith element and also a "legitimate business purpose" element. Id. at *19–20 (applying Estate of Thompson, 382 F.3d at 383). Regarding the legitimate business purpose, the Tax Court ultimately concluded that the maintenance and perpetuation of a specific buy-and-hold investment strategy was, in that case, a legitimate business purpose. Id. at *25. The court based its decision on an express factual finding that the transferor's primary objective was to preserve his very specific investment strategy. Id. In so holding, however, the Tax Court appeared to recognize that it was approaching an outside limit as to the meaning of legitimate business purpose and noted the "unique circumstances of this case." Id. In fact, the court noted the general position that "the mere holding of an untraded portfolio of marketable securities weighs negatively in the assessment of potential nontax benefits." Id.

The facts of Schutt did not end up being as unique as suggested, and the Tax Court and a district court subsequently reached similar results in Murphy and Black. In Estate of Erickson v. Comm'r, 93 T.C.M. (CCH) 1175 (2007), however, the Tax Court distinguished Schutt, effectively illustrating an important difference between cases like Schutt and the present case:

> We have found a significant nontax purpose where the justification for the transaction was the decedent's personal views and concerns regarding the operation of an income-producing activity and not a business exigency. There is no significant nontax purpose, however, where a family limited partnership is just a vehicle for changing the form of the investment in the assets, a mere asset container.

Id. at *10 (internal citations omitted).

Here, as in Erickson, the family partnership is "a mere asset container." Id. The donors do not purport to hold any particular investment philosophy or possess any particular investing insight. The present partnership agreement does not require that the general partners retain the Dell stock held by the partnership and the donors

apparently intend to diversify their investments, although they have articulated no time frame or strategy for doing so. The donors admit that holding Dell stock as the exclusive asset of the limited partnership is not part of an overall, long-term plan. Here, then, unlike Schutt, the family membership, educational, and tax-reduction purposes overshadow any claim of a business purpose for the restrictions.

If anything, the important rule that we believe may be taken from Schutt and cases like it is that context matters such that it is appropriate to defer to the reasoned judgment and fact-finding ability of the Tax Court. In this regard, we note that in St. Louis County Bank, our case that set forth two of the three steps that Congress subsequently adopted in § 2703(b), we clearly emphasized the importance of context in this factually intense inquiry. We emphasized that the transaction at issue had taken place in the context of a donor who was facing a present heart condition and had a history of heart conditions suggesting a predominately testamentary motive to the transactions. St. Louis County Bank, 674 F.2d at 1210. In the present case, looking at the entirety of the surrounding transactions—including the contemporaneous execution of wills, Mr. Holman's understanding of the potential tax benefits of his actions, Mrs. Holman's educational goals, and the absence of any business activity—we find ample support for the Tax Court's determination. When viewed in this context, there is little doubt that the restrictions included in the Holmans' limited partnership agreement were not a bona fide business arrangement, but rather, were predominately for purposes of estate planning, tax reduction, wealth transference, protection against dissipation by the children, and education for the children.[5]

[5]Given our resolution of the "business arrangement" issue, we need not address the additional requirements of § 2703. Our election not to address these issues, however, should not be interpreted as implicit agreement with the dissent. We note that the Tax Court elected not to decide the § 2703(b)(3) requirement regarding the comparability of terms to those found in arms-length transactions. The dissent, however recites limited agreement between the parties' experts on this issue as recognized in dicta from the Tax Court. We are compelled, therefore, to note that we do not believe the parties' experts were as aligned on this issue as suggested by the

b. Valuation

In the Tax Court, the parties disagreed as to the value of the underlying Dell stock on the dates of the gifts as well as the appropriate marketability and minority-interest (lack-of-control) discounts. On appeal, aside from the § 2703 issue, the donors challenge only the Tax Court's determination of a marketability discount. The determination of an appropriate discount is a question of fact that we review for clear error. Estate of Ford v. Comm'r, 53 F.3d 924, 926–27 (8th Cir. 1995).

The donor's expert, Mr. Ingham, and the Commissioner's expert, Mr. Burns, employed methodologies there were similar in part. They looked to studies comparing the private sales of restricted, unregistered stock in public companies with contemporaneous, unrestricted sales of registered stock in those same companies. According to the experts, although these studies were not perfect analogs for sales of partnership interests, they did serve as examples providing insight as to price discrepancies between freely transferable stock in publicly traded companies and less marketable versions of the same stock, thereby illustrating pricing discounts that could be attributed to the absence of ready market.

The Tax Court agreed with the experts that the studies were useful, and we also agree. In general, Securities and Exchange Commission (SEC) rules limit owners' ability to sell unregistered stock in public companies other than (1) sales to institutional buyers, or (2) sales subject to certain holding periods. Rule 144, adopted

---

dissent. For example, the Commissioner's expert opined that "when you look at the overall context . . . the issue of [transfer restrictions] wouldn't arise, because nobody at arm's length would get into this deal." He later stated, "[B]ased on my experience . . . I couldn't find anybody who would do this deal, who would let their client into a deal like this as a limited partner without writing a very large CYA memo, saying: 'We advise against this.'" Given this disagreement and the absence of a Tax Court ruling, we believe it is prudent not to address the § 2703(b)(3) requirement on appeal.

in 1972, imposed a two-year holding period on the resale of restricted stock. 17 C.F.R. § 230.144 (1972); 37 Fed. Reg. 591 (Jan. 14, 1972). Rule 144A, adopted in 1990, permits qualified institutional buyers to buy and sell unregistered, restricted stock. 17 C.F.R. § 144A (1990); 55 Fed. Reg. 17933-01 (April 30, 1990). In 1997, the SEC amended Rule 144 to reduce the holding period from two years to one year. 17 C.F.R. § 230.144 (1997); 62 Fed. Reg. 9242-01 (Feb. 28, 1997).

The experts' opinions in the present case differed in the degree of detail with which they discussed these evolving rules and the general inferences about marketability discounts that might be drawn from sales throughout the years that these rules were in effect. Mr. Ingham studied a sample of transactions with median and mean discounts of 24.8% and 27.4%, respectively. He then concluded, without additional quantitative explanation, that qualitative differences between the restricted-stock studies and the present, limited partnership situation justified a marketability discount of 35%. Mr. Burns criticized this upward adjustment as speculative and unsupported. The Tax Court agreed with Mr. Burns and rejected Mr. Ingham's conclusion, noting that it "need not rely on the unsupported assumption of an expert witness."

Mr. Burns examined restricted-stock sales with greater detail. He looked at sales during separate windows of time corresponding to the SEC's adoption of its different regulations. Mr. Burns explained that marketability discounts as per the studies included holding-period components and liquidity components.[6] He observed that for sales of restricted stock between 1972 and 1990, when there was a two-year holding period and no institutional-buyer market, the sale price for restricted shares was, on average 34% lower than sales of corresponding unrestricted shares. He then noted that between 1990 and 1997, when a limited market was created among

[6]Mr. Ingham appears to have conceded that Mr. Burns was correct in this qualitative explanation for different components of overall marketability discounts.

institutional buyers, the average price difference between restricted stock and corresponding non-restricted stock was 22%. He opined that the 12% difference in these two periods of time was reflective of the fact that buyers demanded a 12% discount to account for the lack of a secondary market. He concluded that the remaining portion of the discounts observed in the studies were due to holding-period restrictions not applicable in the context of the Holman partnership shares. He concluded, therefore, that the 12% lack-of-market or liquidity discount was similar to what private buyers of the limited-partnership shares would demand.

Mr. Burns continued his analysis by explaining why he believed it was appropriate to accept a marketability discount in the range of 12% rather than adjusting this amount substantially upward. Looking at the terms of the Agreement, he found a natural limit or cap on any discounts. He discussed the fact that the Agreement permitted all shareholders, by unanimous agreement, to dissolve the partnership and that it permitted partners or the partnership to buy out an exiting partner. He also noted the ease with which the value of the underlying assets could be determined on any given day. He opined that if outside buyers were to demand too great a discount relative to the then-prevailing price of Dell stock, economically rational insiders would have a clear incentive to step into the void and purchase the exiting partner's shares at a lesser discount, thereby providing a cap or ceiling to any potential discount.

The donors on appeal do not vigorously defend their expert's opinion regarding a 35% discount based on studies of restricted-stock sales. They do not claim that their expert disagreed with Mr. Burns's characterization of marketability discounts as including holding-period and liquidity components. Nor do they discuss their expert's failure to address this distinction. They do note that their expert's opinion is commensurate in scope with the discounts Mr. Burns cited for restricted stock sales between 1972 and 1990. They do not point to anything in the record, however,

suggesting that Mr. Ingham based his overall recommendation on the prevailing discount from that era.

The donor's primary argument on appeal focuses on the later aspect of Mr. Burn's opinion discussing what insiders likely would do in the face of potentially large discounts in partnership share price relative to Dell stock prices. The donors argue that this line of reasoning violates the hypothetical willing buyer/willing seller test by asking what the partnership or particular family members in this case would do rather than asking what hypothetical buyers and sellers would do. See Treas. Reg. § 25.2512-1 ("The value of the property is the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts."); id. § 2512-3 ("The fair market value of any interest in a business, whether a partnership or a proprietorship, is the net amount which a willing purchaser, whether an individual or a corporation, would pay for the interest to a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of the relevant facts.").

When assessing hypothetical transactions between hypothetical buyers and sellers, it is improper to ascribe motivations that are personal and reflective of the idiosyncracies of particular individuals. See Estate of Jung v. Comm'r, 101 T.C. 412, 438 (1993) (refusing to cast a family corporation as the willing buyer where the attempt to do so was based on the non-economic-based view that the family corporation would purchase an interest merely to keep ownership within the family); Propstra v. United States, 680 F.2d 1248, 1251–52 (9th Cir. 1982) (refusing to cast executor and beneficiaries as hypothetical willing sellers to avoid "delicate inquiries into the feelings, attitudes, and anticipated behavior of those holding undivided interests in . . . property."). Rather, it is necessary to view such persons as economically rational actors possessing all relevant information and seeking to maximize their gains. See Estate of Jameson v. Comm'r, 267 F.3d 366, 370 (5th Cir.

2001) ("The buyer and seller are hypothetical, not actual persons, and each is a rational economic actor, that is, each seeks to maximize his advantage in the context of the market that exists at the date of valuation."); Curry's Estate v. United States, 706 F.2d 1424, 1431 (7th Cir. 1983) ("[T]he sole relevant consideration in determining whether the company here should be valued as liquidated or as a going concern is *which alternative could be expected to yield the profit-maximizing result.* . . . [T]he subjective intention or 'idea' of this particular plaintiff corporation . . . is irrelevant . . . . To hold otherwise would be to command future juries to wade into the thicket of personal corporate idiosyncrasies and non-market motives as part of their valuation quest . . . .") (emphasis added); Estate of Newhouse v. Comm'r, 94 T.C. 193, 218 (1990) ("The hypothetical willing buyer and seller are presumed to be dedicated to achieving the maximum economic advantage.").

Here, we believe the Tax Court's approach in adopting Mr. Burns's analysis comports with this general rule of casting the potential buyer merely as a rational economic actor. A buyer possessed of all relevant information would know that (1) the underlying assets are highly liquid and easily priced; (2) the amount held by the partnership could be absorbed by the broader market and represents but a small fraction of the total outstanding market capitalization of Dell corporation; (3) the partnership agreement permits the buying out of exiting partners or dissolution upon unanimous consent of all partners; and (4) there would be little or no economic risk and likely no additional capital infusion necessary for remaining partners to buy out an exiting partner.

Against this backdrop, it is not necessary to look at the personal proclivities of any particular partner or the idiosyncratic tendencies that might drive such a specific person's decisions. Rather it is only necessary to examine what is technically permissible in accordance with the agreement and forecast what rational actors would do in the face of a pending sale at a steep discount relative to net asset value. Simply put, the Tax Court did not ascribe personal non-economic strategies or motivations to

hypothetical buyers; it merely held that, presented with the opportunity, rational actors would not leave money on the table.

We affirm the judgment of the Tax Court.

BEAM, Circuit Judge, dissenting.

Because I would reverse the Tax Court's applications of I.R.C. § 2703's property valuation rules and Treasury Regulation § 25.2512-1's willing buyer/willing seller test, I respectfully dissent.

I. I.R.C. § 2703

I.R.C. § 2703(a)(2) provides that the value of any property shall be determined without regard to "any restriction on the right to sell or use such property." As an exception to this general rule, § 2703(b) provides that a restriction is considered for property valuation purposes if it meets each of the following requirements:

> (1) It is a bona fide business arrangement.
> (2) It is not a device to transfer such property to members of the decedent's family for less than full and adequate consideration in money or money's worth.
> (3) Its terms are comparable to similar arrangements entered into by persons in an arms' length transaction.

The court majority halted its analysis after its discussion of § 2703(b)(1), holding that the Holman partnership restrictions were not bona fide business arrangements. I, however, would hold that the restrictions safely satisfy § 2703(b)(1)'s bona fide business arrangement test as well as the remaining tests in § 2703(b)(2) and (3).

A. Bona Fide Business Arrangement Test–§ 2703(b)(1)

The Holman family limited partnership was created to maintain family control over family assets, coordinate investment management, protect family assets from future creditors and other third parties, and to educate the Holman children as to wealth management. See ante at 3-4. To aid in achieving these goals, the partnership agreement includes transfer restrictions and a right of first refusal (the "restrictions"). The agreement also grants the general partners, Thomas and Kim Holman, exclusive control over the partnership's business, including the power to determine the investments and investment strategy of the partnership.

Despite conceding that the partnership agreement's restrictions "aid in control of the transfer" of partnership interests, Holman v. Commissioner, 130 T.C. 170, 194 (2008), the Tax Court concluded that the provisions did not satisfy § 2703(b)(1)'s "bona fide business arrangement" test. After reviewing case law and § 2703's legislative history, the Tax Court reasoned that partnership restrictions aimed at maintaining family control over a partnership and its assets do not serve a "bona fide business purpose" where, as here, "the partnership carried on little activity other than holding shares of [publicly-traded stock]." Id. Moreover, the Tax Court concluded that § 2703(b)(1)'s legislative history did not list educating children or preventing children from dissipating family assets as legitimate business purposes. Id. at 195.

As a preliminary matter, I disagree with the court majority's decision to review the Tax Court's application of § 2703(b)(1) for clear error based on its conclusion that "[t]he ultimate question of whether there was a bona fide business arrangement is a question of fact." Ante at 9-10. To be sure, the ultimate determination of whether restrictions are bona fide business arrangements is likely a question of fact. However, the fundamental question before us is whether the Tax Court employed the correct criteria, framework, or test to make this factual determination. This is a question of law, subject to de novo review. Cf. Estate of Palmer v. Comm'r, 839 F.2d 420, 423

(8th Cir. 1988) (while "the ultimate determination of fair market value is a finding of fact . . . [t]he question of what criteria should be used to determine value is a question of law"); IHC Health Plans, Inc. v. Comm'r, 325 F.3d 1188, 1193 (10th Cir. 2003) ("The appropriate legal standard for determining whether an organization operates for a 'charitable' purpose is a legal question, which we review de novo."). Moreover, this question requires a review of the Tax Court's interpretation of § 2703(b)(1), and we review the Tax Court's statutory interpretations de novo. Scherbart v. Comm'r, 453 F.3d 987, 989 (8th Cir. 2006). Thus, we are presented with *at least* a mixed question of law and fact, if not a pure question of law. Either way, our precedent requires de novo review. Blodgett v. Comm'r, 394 F.3d 1030, 1035 (8th Cir. 2005).

While interpreting § 2703(b)(1), our ultimate goal is to "give effect to the Congressional intent behind the statute's enactment." Estate of Farnam v. Comm'r, 583 F.3d 581, 584 (8th Cir. 2009). Where, as here, the statute's language is ambiguous,[7] it is appropriate to examine legislative history to determine legislative intent. Id. In light of § 2703(b)(1)'s legislative history, the court's interpretation and application of § 2703(b)(1) does not give effect to the statute's legislative intent.

The court, like the Tax Court, essentially holds that "maintaining family control" is a legitimate business purpose for partnership restrictions *only* when the "control" being preserved is the right to manage an operating business or an actively-managed asset. See ante at 10-11. While the court narrowly reads Estate of Bischoff v. Commissioner, 69 T.C. 32, 39-41 (1977) to bolster its holding, congressional committees cited Bischoff to support much broader propositions. First, the Joint Committee on Taxation cited Bischoff for the proposition that maintaining family control is a legitimate business purpose for buy-sell agreements, "even when the

[7]The Tax Court noted that § 2703 "contains no definition of the phrase 'bona fide business arrangement,'" Holman, 130 T.C. at 192, and acknowledged that "[t]he meaning of the term 'bona fide business arrangement' . . . is not self apparent," id. at 195. I agree.

'control' being preserved is a right to receive income from investment assets." Staff of Joint Comm. on Taxation, 101st Cong., 2d Sess., Federal Transfer Tax Consequences of Estate Freezes 14 (Comm. Print 1990). Furthermore, the parenthetical following the Committee's Bischoff citation explains that "maintenance of control is [a] business purpose even if the interest being sold is a limited partnership interest in a holding company." Id. at 14 n.44. Finally, the Senate Finance Committee cited Bischoff for the proposition that "[c]ontinuation of family ownership" is a legitimate business purpose for buy-sell agreements "even when the 'control' being preserved is only the right to participate as a limited partner." Explanatory Material Concerning Committee on Finance 1990 Reconciliation Submission Pursuant to House Concurrent Resolution 310, 136 Cong. Rec. 30,488, 30,538 (1990) [hereinafter Finance Committee Report]. Accordingly, I think the Holman partnership restrictions served the congressionally-recognized legitimate business purposes of maintaining family control over the right to participate as a limited partner and the right to receive income from the partnership's investment assets.

Next, the court attempts to distinguish the value-fixing agreement in Estate of Amlie v. Comm'r, 91 T.C.M. (CCH) 1017, 2006 WL 995337 (2006), from the restrictions in the present case. In Amlie, the Tax Court determined that a conservator's value-fixing agreement qualified as a bona fide business arrangement, in part, because it aided in "planning for future liquidity needs" of the ward's estate. Id. at *12. To support it's holding, the Tax Court in Amlie cited to a portion of the Finance Committee Report that provides:

> The committee believes that buy-sell agreements are common business planning arrangements and that buy-sell agreements generally are entered into for legitimate business reasons that are not related to transfer tax consequences. Buy-sell agreements are commonly used to control the transfer of ownership in a closely held business, to avoid expensive appraisals in determining purchase price, to prevent the transfer to an

> unrelated party, to provide a market for the equity interest, and *to allow owners to plan for future liquidity needs in advance*.

Finance Committee Report, 136 Cong. Rec. at 30,539 (emphasis added); Amlie, 2006 WL 995337, at *12 (citing the same); see also Holman, 130 T.C. at 193-94 (quoting the same). Notably, the Tax Court recognized planning for future liquidity needs as a legitimate business purpose for the agreement despite the fact that the ward's stock "was not an actively managed business interest but merely an investment asset."[8] Amlie, 2006 WL 995337, at *12.

The court asserts that Amlie is distinguishable from the present case because the Holman partnership restrictions were not created to provide for the future liquidity needs of the partnership. This is a distinction without merit. Here, the Tax Court conceded that the Holman partnership restrictions aided in controlling the transfer of partnership interests to third parties. The court majority's attempt to distinguish the present case from Amlie ignores that the *same portion of legislative history* cited by the Tax Court in Amlie, and quoted by the Tax Court in the present case, recognizes that buy-sell agreements serve the legitimate business purpose of "prevent[ing] the transfer to an unrelated party." Finance Committee Report, 136 Cong. Rec. at 30,539. If the absence of an "actively managed business interest" was irrelevant in Amlie, it is unclear why an actively managed business interest is required in the present case to legitimize the Holman partnership restrictions.

In light of Amlie and § 2703(b)(1)'s legislative history, the Holman partnership restrictions serve the legitimate business purpose of protecting partnership assets from

---

[8]In Amlie, the Commissioner argued that the agreement could not satisfy § 2703(b)(1) unless the stock was an actively managed business interest. The Tax Court explained: "We rejected such an argument in Estate of Bischoff v. Commissioner, 69 T.C. 32, 40-41, 1977 WL 3667 (1977), and find it equally unpersuasive here." Amlie, 2006 WL 995337, at *12.

unrelated parties.[9] Protecting partnership assets from creditors is surely a legitimate business purpose for transfer restrictions, regardless of whether the partnership manages an operating business or merely holds publicly-traded stock. Cf. Estate of Mundy v. Comm'r, 35 T.C.M. (CCH) 1778, 1976 Tax Ct. Memo LEXIS 8, at *46 (1976) (finding that insulating corporate assets from possible liabilities was a valid business purpose for restricting transferability of stock). Similarly, protecting partnership assets from the Holman daughters' potential future ex-spouses is a legitimate business purpose for the restrictions. Cf. Keller v. United States, No. V-02-62, 2009 WL 2601611, at *19 (S.D. Tex. Aug. 20, 2009) (recognizing protecting family assets from depletion by ex-spouses through divorce proceedings as a "legitimate business purpose" for the creation and funding of a partnership).

Additionally, the Holman partnership restrictions serve the legitimate business purpose of preserving the partners' fundamental right to choose who may become a partner.[10] See In re Schick, 235 B.R. 318, 324 (Bankr. S.D.N.Y. 1999) (recognizing that, although arguably more important in the general partnership context, the right to

---

[9]The Tax Court acknowledged that the Holman partnership agreement restrictions were intended, in part, to place "strong limitations on what the limited partners can do in assigning or giving away their interests to other people" and to provide a "'safety net' if an impermissible person obtained an assignment of a limited partner interest from one of the girls." Holman, 130 T.C. at 194 (quotation omitted). Indeed, the partnership agreement provides that the Holman partnership was created to "restrict the right of non-Family persons to acquire interests in Family Assets" and to "provide protection to Family Assets from claims of future creditors against Family members." Id. at 176. Moreover, at trial, Thomas Holman testified: "[W]e were worried that the assets that the girls would eventually come into would be sought after by third-party people, friends, spouses, potential creditors."

[10]At trial, Thomas Holman explained that the partnership allowed the Holmans "to give [their] daughters a seat at the table, to become real partners in the operation of [the] business." Moreover, one of Thomas Holman's long-term goals was to have his daughters "become more and more engaged in the partnership over time."

choose partners "still provides the underlying rationale for restricting the admission of new or substitute limited partners"). As the Holmans' partnership expert explained:

> Partnership agreements contain [transfer] restrictions because persons who join together as partners generally desire a high degree of certainty as to who their partners are and will be, especially where they establish the entity with commonly-shared investment goals and the intention that the entity be closely-held. They want the ability to limit who may become their partner without their agreement that such person may take a place at the table.

Without restrictions on who may become a limited partner, Thomas and Kim Holman, as general partners, could find themselves owing obligations[11] and fiduciary duties to third parties to whom they never envisioned owing such obligations and duties–e.g., the Holman daughters' future spouses. Such obligations and duties exist regardless of whether the Holman limited partnership operates a lemonade stand or holds Dell stock. And, as the Holmans' partnership expert explained, "[h]aving an unwanted partner or assignee of a partnership interest is likely to increase the general partner's risk of personal liability."

Finally, I think the court's decision is contrary to the underlying purposes of § 2703. Section 2703 is one of several special valuation rules Congress enacted, in part, "to allow business owners who are not abusing the transfer tax system to freely engage in standard intrafamily transactions without being subject to severe transfer tax consequences." Finance Committee Report, 136 Cong. Rec. at 30,538. Congress enacted § 2703, in particular, to "distinguish between agreements designed to avoid estate taxes and those with legitimate business agreements." Id. at 30,539. This

[11]For example, section 6.1 of the Holman partnership agreement provides: "The General Partners shall use their best efforts to carry out the purposes and business of the Partnership in a prudent and businesslike manner."

legislative history suggests that the bona fide business arrangement test was designed to determine whether restrictions are created primarily to avoid transfer taxes.

Here, the Tax Court made the express factual determination that the partnership agreement restrictions were "designed *principally*" to protect family assets from dissipation by the Holman daughters. Holman, 130 T.C. at 195 (emphasis added). In other words, the Tax Court determined that the restrictions were designed primarily to serve a *non-tax* purpose. Notably, the Tax Court did *not* find that the Holmans merely paid lip service to legitimate business purposes for the restrictions while, in reality, using the restrictions for the primary purpose of avoiding taxes.[12] Additionally, the Tax Court did *not* find that the restrictions failed to match the partnership's legitimate, non-tax goals.[13] The underlying purposes of § 2703 are not served where, as here, the bona fide business arrangement test is applied in a manner that discourages partners in family partnerships from creating restrictions principally to achieve non-tax, economic goals.

---

[12]While the Tax Court determined that Thomas Holman understood the tax benefits of creating a partnership, it did not determine that tax avoidance was the principal purpose of the partnership restrictions. Indeed, understanding tax benefits and using transfer restrictions for the primary purpose of avoiding taxes are two different things.

[13]The court majority states that restrictions on the sale or use of property, "[w]hen carefully crafted and applied in certain circumstances . . . can minimize the tax consequences of gifts or transfers without imposing substantial additional limitations on the transferability or use of the property." Ante at 7. Here, however, there is apparently no question that the Holman partnership restrictions imposed actual, substantial limitations on the transfer of partnership interests. Indeed, even the Commissioner's expert recognized that "[i]n virtually every material respect" the Holman partnership agreement "blocks for 50 years the limited partners' ability to sell or use their respective limited partner interests." Holman, 130 T.C. at 197.

Thus, I would hold that the Holman partnership agreement restrictions are "bona fide business arrangements" because they were not created for the primary purpose of avoiding taxes, and they served the following legitimate business purposes: (1) maintaining family control over the right to participate as a limited partner; (2) maintaining family control over the right to receive income from the partnership's investment assets; (3) protecting partnership assets from creditors and potential future ex-spouses; and (4) preserving the partners' fundamental right to choose who may become a partner.

B. Device Test–§ 2703(b)(2)

Having determined that the partnership restrictions satisfy § 2703(b)(1), I now turn to § 2703(b)(2)'s "device" test. Under this test, the Holman partnership restrictions must not be a "device to transfer such property to *members of the decedent's* family for less than full and adequate consideration in money or money's worth." I.R.C. § 2703(b)(2) (emphasis added). Treasury Regulation § 25.2703-1(b)(1)(ii) excises the phrase "members of the decedent's family" found in § 2703(b)(2) and substitutes in its place the phrase "natural objects of the transferor's bounty," apparently because the Secretary of the Treasury interprets § 2703(b)(2) to apply to both inter vivos transfers and transfers at death. Holman, 130 T.C. at 195-96. Applying this regulation, the Tax Court held that the Holman partnership restrictions operate as a device to transfer property to the natural objects of the Holmans' bounty. The Holmans argue that Treasury Regulation § 25.2703-1(b)(1)(ii) is invalid because it fails to give effect to § 2703(b)(2)'s plain language. I agree.

The validity of a treasury regulation is a question of law, which we review de novo. Walshire v. United States, 288 F.3d 342, 345 (8th Cir. 2002). We afford treasury regulations interpreting the Internal Revenue Code "substantial deference." Mayo Found. for Med. Educ. & Research v. United States, 568 F.3d 675, 679 (8th Cir. 2009). That said, our first question in reviewing an agency's interpretation of a statute

is "whether Congress has directly spoken to the precise question at issue." Chevron, U.S.A., Inc. v. Natural Res. Def. Council Inc., 467 U.S. 837, 842 (1984). If so, we, "as well as the agency, must give effect to the unambiguously expressed intent of Congress." Id. at 843. If, however, "the statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute." Id.

The parties primarily dispute whether § 2703(b)(2) is ambiguous. The Holmans assert that the term "decedent" unambiguously refers to a deceased person and, therefore, § 2703(b)(2) asks only whether restrictions operate as a device to transfer property to family members at death. The Holmans point out that only the term "decedent," not the broader term "transferor," is used throughout § 2703(b)(2)'s legislative history. Conversely, the Commissioner argues that the term "decedent" is ambiguous due to § 2703's location in the Internal Revenue Code. Specifically, § 2703 is located in Subtitle B of the Code, which includes three transfer taxes–the estate, gift and generation-skipping transfer taxes. More precisely, § 2703 is located in Subtitle B, Chapter 14. In Chapter 14, § 2703 joins a set of special valuation rules targeting transfer tax avoidance schemes.

It is clear that the phrase "members of the decedent's family" unambiguously limits § 2703(b)(2)'s application to transfers at death. First, the term "decedent" is itself unambiguous. Black's Law Dictionary 465 (9th ed. 2009) plainly defines "decedent" as "[a] dead person." Moreover, the phrase "members of decedent's family" is not ambiguous when read in the greater context of Chapter 14. While Congress used the term "decedent" in § 2703(b)(2), it used the broader term "transferor" in Chapter 14's other valuation statutes. See I.R.C. §§ 2701(a)(1) & 2702(a)(1). And, as the Holmans point out, the term "decedent" consistently appears in § 2703(b)(2)'s legislative history. Finally, I find it telling that members of Congress have failed in their attempts to amend § 2703(b)(2) by substituting the legislative phrase "members of the decedent's family" with the Commissioner's phrase "natural

objects of the transferor's bounty." See Smith v. United States, No. C.A. 02-264 ERIE, 2004 WL 1879212, at *6 n.3 (W.D. Pa. June 30, 2004). Thus, although Congress enacted Chapter 14 to generally address transfer tax avoidance schemes, § 2703(b)(2) applies specifically to transfers at death.

Therefore, Treasury Regulation § 25.2703-1(b)(1)(ii) is invalid because it does not give effect to the plain language of § 2703(b)(2). Since the Holmans are living persons, they are, by definition, not "decedents" and § 2703(b)(2)'s device test is satisfied.

C. Comparable Terms Test–§ 2703(b)(3)

Since the Holman partnership restrictions satisfy § 2703(b)(1) and (2), I now analyze the restrictions under § 2703(b)(3). Under § 2703(b)(3)'s "comparable terms" test, the Holman partnership restrictions' terms must be "comparable to similar arrangements entered into by persons in an arms' length transaction." While the Tax Court did not decide whether the restrictions satisfied the comparable terms test, it noted that both parties' experts "agree that transfer restrictions comparable to those found in [the Holman partnership agreement] are common in agreements entered into at arm's length."[14] Holman, 130 T.C. at 198-99. The Tax Court explained that this "would seem to be all that [the Holmans] need to show to satisfy section 2703(b)(3)." Id. at 199. I agree, and I would hold that the Holman partnership restrictions satisfy § 2703(b)(3)'s comparable terms test.

[14]The court in footnote 5 appears to import language from one of the Commissioner's experts to impeach the Tax Court's statements concerning the requirements of § 2703(b)(3). At best, the cited emanations of this particular witness are barely relevant to a proper interpretation of this portion of the statute.

Thus, because the partnership restrictions satisfy all three of § 2703(b)'s tests, I would reverse and remand to the Tax Court for a valuation of the limited partnership interests that does not disregard the partnership restrictions.

II. MARKETABILITY DISCOUNT CALCULATION

As a preliminary matter, I also disagree with the court's decision to review the Tax Court's marketability discount calculation for clear error. "The mathematical computation of fair market value is an issue of fact, but determination of the appropriate valuation method is an issue of law that we review de novo." Estate of Jelke v. Comm'r, 507 F.3d 1317, 1321 (11th Cir. 2007) (quotation and alteration omitted); see also Palmer, 839 F.2d at 423 (the "question of what criteria should be used to determine value is a question of law subject to de novo review"). Since the real issue here is whether the Tax Court used a proper valuation method–i.e., properly applied the willing buyer/willing seller test to calculate an appropriate marketability discount, I would review this legal issue de novo.

Under Treasury Regulation § 25.2512-1, the value of property for gift tax purposes is "the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." While the hypothetical willing seller and willing buyer "are presumed to be dedicated to achieving the maximum economic advantage," Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990), "the Commissioner cannot tailor 'hypothetical' so that the willing seller and willing buyer [are] seen as the particular persons who would most likely undertake the transaction." Morrissey v. Comm'r, 243 F.3d 1145, 1148 (9th Cir. 2001) (internal quotation omitted).

While assessing the partnership interests' marketability for valuation purposes, the Tax Court conceded that the private market for such interests was "thin." Holman,

130 T.C. at 214. However, the Tax Court adopted the opinion of the Commissioner's expert that this "thin" market did not justify a substantial marketability discount because the wishing-to-assign partner could convince the remaining partners to voluntarily dissolve the partnership and buy him out. Specifically, the Tax Court reasoned:

> [G]iven the significant minority interest and marketability discounts from an LP unit's proportional share of the partnership's [net asset value] that each expert would apply in valuing the gifts, it would appear to be in the economic interest of both any limited partner not under the economic necessity to do so but wishing to make an impermissible assignment of LP units and the remaining partners to strike a deal at some price between the discounted value of the units and the dollar value of the units' proportional share of the partnership's [net asset value]. The wishing-to-assign partner would get more than she would get in the admittedly 'thin' market for private transactions, and the dollar value of each remaining partner's share of the partnership's [net asset value] would increase.

Id. at 214.

The Tax Court's analysis violates the hypothetical willing buyer/willing seller test because it assumes the *hypothetical* buyers own Holman limited partnership interests. See Estate of Jung v. Comm'r, 101 T.C. 412, 438 (1993). The court majority asserts that the Tax Court properly cast the hypothetical willing buyer "*merely* as a rational economic actor," but the Tax Court did more than that. Ante at 20 (emphasis added). The Tax Court effectively plucked rational economic actors out of the existing "thin" private market,[15] placed Holman limited partnership shares in their pockets, and asked them what they would pay for a wishing-to-assign partner's

[15]A rational actor "seeks to maximize his advantage in the context of the *market* that exists at the date of valuation." Estate of Jameson v. Comm'r, 267 F.3d 366, 370 (5th Cir. 2001) (emphasis added).

interest in light of the partnership's dissolution provisions. In fact, the Tax Court's analysis is essentially based on the idea that a *mere* rational economic actor in the existing market would pay *less* than rational actors who already hold Holman limited partnership interests.[16] Courts commit legal error where, as here, they substitute hypothetical buyers for "particular possible purchasers" based on "imaginary scenarios as to who a purchaser might be." Estate of Simplot v. Comm'r, 249 F.3d 1191, 1195 (9th Cir. 2001).

That is not to say that courts err whenever they consider partnership agreements' dissolution provisions while calculating an appropriate marketability discount. For example, if the Holman limited partnership had a significant history of dissolving and buying out wishing-to-assign partners, a hypothetical willing buyer would consider this fact while assessing the partnership interests' marketability. See, e.g., Estate of Neff v. Comm'r, 57 T.C.M. (CCH) 669, 1989 Tax Ct. Memo LEXIS 278, at *27 (1989) (determining that "the hypothetical willing buyer would certainly take into account the [corporation's history of] stock repurchases, at premium prices, in valuing the stock"). Indeed, hypothetical willing buyers and willing sellers are considered to have "reasonable knowledge of relevant facts" surrounding the hypothetical sale. Treas. Reg. § 25.2512-1.

Here, the Commissioner's expert never determined the actual likelihood of the Holman limited partnership executing a dissolution and buy-out scheme. Holman, 130 T.C. at 214. The expert merely opined that he could not "envision an economic reason why" the partnership would not engage in such a scheme. Id. (quotation

[16]The Tax Court reasoned that the remaining partners and the wishing-to-assign partner could "strike a deal *at some price between the discounted value of the units* and the dollar value of the unit's proportional share of the partnership's [net asset value]" and, as a result, "[t]he wishing-to-assign partner *would get more than she would get in the admittedly 'thin' market for private transactions*." Holman, 130 T.C. at 214 (emphasis added).

omitted). This analysis is not helpful because it does not consider the fact that the Holman limited partnership has never engaged in such a scheme, see Jung, 101 T.C. at 437 n.9, or whether the Holman limited partnership or limited partnership owners do or do not have sufficient liquidity to buy out a wishing-to-assign partner. The expert's analysis also does not consider that dissolving and buying out a wishing-to-assign partner may be contrary to the partnership's stated goals–maintaining control of family assets, continuing ownership of family assets, and restricting the ability of unrelated parties to acquire interests in family assets. Against this factual backdrop, the hypothetical willing buyer may find that the actual probability of the remaining partners unanimously consenting to a dissolution and buy-out scheme is quite low.

Thus, the Tax Court's misapplication of the willing buyer/willing seller test constitutes reversible error. Accordingly, I would also reverse and remand to the Tax Court for a new marketability discount determination.

For the foregoing reasons, I respectfully dissent.

Full Text of Court Cases

Howell v. Howell

Case name: Howell v. Howell
Citation: 31 Va. App. 332, 523 S.E. 2d 514, 2000 Va. App. LEXIS 24
Date of decision: January 27, 2000
Country: US
State or Federal: State
State/Jurisdiction: Virginia
Court: Court of Appeals
Type of action: Marital Dissolution
Judge: Bumgardner
Experts: Robert R. Raymond (for wife)
Williams Stephens (for husband)
SIC: 8111 Legal Services
NAICS: 541110 Offices of Lawyers
1806, 1826, 767

Keywords: Intrinsic value, Marital dissolution, Partnership interest, Peer group, Practice goodwill

---

Counsel: Ronald S. Evans (Lawrence D. Diehl; Brenner, Dohnal, Evans & Yoffy, P.C., on briefs), for appellant.

James C. Roberts (Dawn B. DeBoer; Mays & Valentine, L.L.P., on brief), for appellee.

Judges: Judges Coleman, Willis and Bumgardner

Opinion by: Bumgardner

George C. Howell, III appeals from the final decree divorcing Margaret H. Howell and him and distributing their marital estate. He complains primarily that the trial court erred in valuing his interest in his law firm, but he also asserts it erred in classifying a money market account, in allocating marital debt, and in setting spousal support. The trial court referred all issues to a commissioner in chancery and adopted nearly all of the commissioner's findings in its final decree. Concluding that the trial court did not err, we affirm.

The parties married in 1982 after the husband graduated from law school but before he began practicing law with Hunton & Williams, a large firm based in Richmond. The husband specialized in tax law, established a successful practice with the firm, became a partner in 1989, and earned an income of more than $ 400,000 by 1998. After the first of their two children was born in 1984, the wife no longer worked outside the home. She took care of their two children and maintained the household. When the parties separated November 17, 1995, she maintained custody of the children, and when they divorced November 4, 1998, she received sole physical custody of the children with the husband's consent.

The husband conceded that his partnership interest was marital property because he acquired it during the marriage. The partnership agreement at Hunton & Williams defined the value of the partnership interest upon termination or death. It entitled the partner to receive only the balance of his capital account and his share of the net income. As applied to this case, those two items amounted to $ 85,614. The husband maintains that the agreement fixed the value of his partnership interest for equitable distribution purposes and that it precluded consideration of whether his interest had goodwill. He argues that Kaufman v. Kaufman, 7 Va. App. 488, 375 S.E.2d 374 (1988), ruled that restrictive agreements control the valuation of business interests and limit the value to that established by the agreement. The husband argues that the trial court erred in finding that his partnership interest had goodwill because the Hunton & Williams agreement made no provision for goodwill.

Code § 20-107.3(A) directs that the trial court value all property of the parties, but it does not define the term, "value," for equitable distribution purposes. The statute does not set the standard of value, that is, the measure of property's worth for equitable distribution. "Value" is a mercurial term; the term has numerous, distinct meanings. The various meanings are not interchangeable. The meaning of the term, "value," depends on what is being valued, who is interested, and why it is being valued. A piece of property may have different values for different purposes. The purpose for which it is being valued determines which definition, which standard of value, is proper. Purpose determines the standard of value; that, in turn, determines the appropriate methods of valuation.

Bosserman v. Bosserman, 9 Va. App. 1, 384 S.E.2d 104 (1989), defined "value" for equitable distribution purposes; it set intrinsic value as the standard of value. "Trial courts valuing marital property for the purpose of making a monetary award must determine from the evidence that value which represents the property's intrinsic worth to the parties ...." Id. at 6, 384 S.E.2d at 107. The value of an item of marital property is its intrinsic worth to the parties: the worth to the husband and wife, the parties; the value to the marital partnership that the court is dissolving.

Intrinsic value is a very subjective concept that looks to the worth of the property to the parties. The methods of valuation must take into consideration the parties themselves and the different situations in which they exist. The item may have no established market value, and neither party may contemplate selling the item; indeed, sale may be restricted or forbidden. Commonly, one party will continue to enjoy the benefits of the property while the other must relinquish all future benefits. Still, its intrinsic value must be translated into a monetary amount. The parties must rely on accepted methods of valuation, but the particular method of valuing and the precise application of that method to the singular facts of the case must vary with the myriad situations that exist among married couples.

Because intrinsic value must depend on the facts of the case, we give great weight to the findings of the trial court. We affirm if the evidence supports the findings and if the trial court finds a reasonable evaluation based on proven methodology and on the application of it to the particular facts of the case. See Russell v. Russell, 11 Va. App. 411, 415-16, 399 S.E.2d 166, 168 (1990). "The trial court's valuation of goodwill will not be disturbed if it appears that the court made a reasonable approximation of the goodwill value, if any, of the professional practice based on competent evidence and the use of a sound method supported by that evidence." Id. at 417, 399 S.E.2d at 169 (citation omitted).

In Kaufman, the husband purchased a one-third interest in a medical practice six months after the parties separated. The purchase contract required stockholders to resell their interest to the corporation at a value excluding any provision for accounts receivable or work in progress. The trial court held that

the value set by the contract controlled because the terms were made at arm's length and were devoid of fraud. This Court affirmed that valuation and ruled it was bound by the finding because there was evidence to support it. See 7 Va. App. at 502, 375 S.E.2d at 381 (citing Code § 8.01-680).

In Bosserman, the wife asked the court to value the husband's interest in a family-owned, closely-held corporation. A restrictive agreement required a shareholder to offer the stock first to the corporation at "true book value." The husband argued that the restriction defined the value. See 9 Va. App. at 3, 384 S.E.2d at 106. This Court recognized that the value set by such agreements "is often artificial and does not always reflect true value," even though the agreements may be binding on business partners. Id. at 6, 384 S.E.2d at 108. "The sale price set by restrictive provisions on transfer is not conclusive as to the value of the stock." Id. at 7, 384 S.E.2d at 108. A restriction on transfer does not control its value, "but the restriction on transfer is a factor which affects the value of the stock for purposes of equitable distribution." Id. (citations omitted). Interestingly, Bosserman relied upon an article discussing goodwill valuation in law firms to conclude restrictive provisions are not conclusive of value.

Russell established that a psychiatric practice could have goodwill that had value. "If the trial court determines from the greater weight of the evidence that a professional practice has goodwill value, that amount must be subject to valuation as part of the marital property. To hold otherwise would result in a windfall to the professional spouse." 11 Va. App. at 416, 399 S.E.2d 168. Goodwill may be an asset of a professional practice, and if it is, it is subject to valuation for equitable distribution purposes.

All three decisions turned upon the particular findings made from the precise evidence presented to the trial court. The holdings establish that the value of property is an issue of fact, not of law. Goodwill may exist, or may not; an agreement may restrict its value, or may not. The existence of goodwill must be proven, and if it exists, its value must be proven. The evidence presented at trial determines the result, and the result may vary from case to case as the evidence differs. If conflicting, competent evidence is presented, that found more credible will determine whether goodwill exists and its value if it does exist. The existence is not fixed as a matter of law, nor is the method of valuation; both are functions of the fact finding process.

In this case, the commissioner found that the husband's partnership interest had intangible value, goodwill, and that the partnership agreement did not reflect its true worth to the parties, its intrinsic value. After hearing extensive expert testimony, the commissioner accepted the opinion of the wife's expert and valued the partnership interest at $ 319,569. The trial court accepted the commissioner's findings.

The wife's certified public accountant testified that the husband's interest in his law firm had value in the nature of goodwill. The husband's expert witness, also a certified public accountant, disagreed and testified that the partnership agreement controlled. Both opinions were made by qualified and experienced experts, were reasoned and based on accepted principles, and either might have been found credible by the trial court. In resolving the conflicting opinions, the commissioner gave greater weight to the wife's expert, and the trial court accepted that finding.

The trial court has discretion to resolve conflicting expert testimony to determine an asset's value. See Rowe v. Rowe, 24 Va. App. 123, 140, 480 S.E.2d 760, 768 (1997); McDavid v. McDavid, 19 Va. App. 406, 413, 451 S.E.2d 713, 718 (1994). Where the court accepts the commissioner's findings of fact, "the findings are presumed to be correct when reviewed on appeal and are to be given 'great weight' by this

Court." Rowe, 24 Va. App. at 140, 480 S.E.2d at 768 (citation omitted). The court's decision will not be disturbed on appeal unless plainly wrong or without evidence to support it. See Blank v. Blank, 10 Va. App. 1, 9, 389 S.E.2d 723, 727 (1990).

The standard of value has a critical impact on the effect of a restrictive agreement. The standard in equitable distribution, intrinsic value, looks to the value to the parties to the divorce action. When the parties do not contemplate sale and one of the two is going to enjoy the benefits of the property with no likelihood of leaving the business, a restrictive agreement may have less bearing on the value to the parties. The agreement should be considered but it is not conclusive. "The reason for rejecting the value set by buyout provisions is that they do not necessarily represent the intrinsic worth of the stock to the parties." Bosserman, 9 Va. App. at 6, 384 S.E.2d at 107.

The commissioner considered the restrictive agreement as one factor in determining whether goodwill existed, but he did not find it to be the sole, controlling factor. Credible evidence supported the finding that the partnership agreement was but one factor to consider in determining the intrinsic value of the husband's partnership interest. The trial court did not err in finding that the Hunton & Williams partnership agreement did not control the existence of goodwill in the husband's interest in the firm.

The husband contends that even if the trial court did not err in rejecting the partnership agreement valuation, it did err in the method and application used to value the interest. Both sides presented expert testimony valuing the goodwill of the partnership interest. The commissioner found that the wife's expert was persuasive and accepted his evaluation. The trial court affirmed those findings fixing the value at $ 319,569.

The wife's expert used the excess earnings method to value the practice goodwill, a method acknowledged by the husband's expert as the most popular method for evaluating professional goodwill. The wife's expert began by comparing the husband's average income for three years to that of a peer group. The difference between the two was the excess earnings due to the husband's association with the firm, but not the earnings due to his personal efforts. It was the additional income he received from being associated with his law firm. The wife's expert projected those excess earnings over the husband's expected career with Hunton & Williams. Using the discounted future earnings method, he then calculated the present value of the husband's total future excess earnings.

The wife's expert began by comparing the husband's earnings to those of a peer group. The husband argues that this method, described as working from the "bottom up," is incorrect. He contends that the peer group selected by the wife's expert compared him to merely average attorneys, did not reflect his special reputation and expertise, and failed to distinguish his personal credentials from those of Hunton & Williams. He also contends that the discounted future earnings method is an improper method of valuation because it is based on future earnings projections. Finally, he argues he can have no excess earnings due to his association with Hunton & Williams because he had received offers from other firms for 150-175% more income.

The wife's expert carefully explained why he selected the methodology that he used. A major reason was the unavailability of partnership financial data. Before getting the appraisal, the wife attempted to discover the partnership's financial records. Hunton & Williams successfully had the request quashed

and did not make any partnership financial data available. The wife's expert felt the "bottom up" method was more accurate under those circumstances. The trial court accepted that opinion and analysis. We cannot say that the opinion was unworthy of belief as a matter of law.

The wife's expert selected the husband's peer group based on factors that included comparable geographic location, population, firm size, specialization, and years of practice. The husband argued that the group did not reflect his special talents and that the appropriate peer group was the one selected by his expert. The trial court carefully examined these conflicting opinions and rejected the one offered by the husband. The trial court found the peer group suggested by the husband's expert was flawed because the group only included firms located in very large cities, such as New York or San Francisco, and it was a selection provided by the husband.

The wife's expert valued the husband's excess earnings due solely to his association with his firm at $ 38,269. He then projected this figure to the husband's expected retirement year, 2021. After adding the terminal value of the husband's capital account, he applied a discount rate of 6.9%. The result was the present value of the husband's partnership interest, $ 319,569. The court accepted the wife's expert's use of a discount rate of only 6.9%. The expert justified that rate, one applicable to nearly risk-free investments, and the record does not suggest that it was incredible. As presented, the proper discount rate was an expert opinion that could be accepted if the trier of fact found it persuasive and believable.

Discounting future earnings is not an inherently flawed method of valuation because it is based on projected future earnings. The value of goodwill can have two components. Professional goodwill (also designated as individual, personal, or separate goodwill) is attributable to the individual and is categorized as separate property in a divorce action. Practice goodwill (also designated as business or commercial goodwill) is attributable to the business entity, the professional firm, and may be marital property. The commissioner and the trial court carefully distinguished between these two components and selected a value that was solely attributable to the husband being a partner in Hunton & Williams. It represented the premium due to the husband's association with Hunton & Williams, the economic advantage he enjoyed because he was a partner in that firm. It included no value attributable to him personally, and it did not rely upon any earnings due to the husband's own expertise, reputation, experience, skill, knowledge, or personality. As applied, the discounted future earnings method was not a flawed method of valuation.

In valuing the goodwill of the partnership interest, courts must take special care not to confuse the owner spouse's personal future earning capacity with practice goodwill attributable to the law firm in order to avoid double counting. "Further, particular care must be given that future earnings capacity and reputation not be confused with professional goodwill." Russell, 11 Va. App. at 417, 399 S.E.2d at 168.

Though the husband's expert first stated that in his opinion the partnership interest could have no goodwill value, he offered an alternative opinion that recognized the husband's interest did have goodwill value. The trial court found that the alternative opinions offered by the husband, that his interest did and did not have goodwill value, were contradictory and confusing. The husband's expert used the capitalized historic earning method. His method required comparison of earnings to those of a peer group. The trial court found the husband's peer group inherently flawed, and it noted the group data was for the wrong year and compared group data to a single year of the husband's income.

The husband's expert calculated the value of a theoretical, marketable, controlling partnership interest in Hunton & Williams. To that figure, the expert applied a discount of 40% for lack of marketability and 30% for minority status. That reduced the market value of the husband's interest to $ 105,177. The trial court rejected the husband's reasoning for discounting for minority status and marketability. It found the discounts inappropriate because no transfer of the partnership interest was foreseeable and no one in the firm, nor any group within it, exercised majority control. See Bosserman, 9 Va. App. at 7-9, 384 S.E.2d at 108-09 (discussing restriction on marketability and minority shareholder status as affecting value to owning spouse). The trial court also rejected the argument that offers of employment at substantially higher compensation meant all goodwill was personal. The trial court would not accept the conclusion, suggested by that argument, that Hunton & Williams had no practice goodwill.

The experts disagreed on which of two accepted methods of valuation to use and on the application of those methods. They differed on the following: whether to value the individual interest first; whether to capitalize historic earnings or to discount future earnings; the proper peer group; the proper income data; and the application of discounts. The opinions of the experts conflicted, but neither was erroneous as a matter of law. "Depending on the circumstance of each case, different methods of valuation may reflect more accurately the actual value of the stock to the shareholder." Id. at 7, 384 S.E.2d at 108. No single method for determining the value of professional goodwill is preferred. See Russell, 11 Va. App. at 417, 399 S.E.2d at 169. We conclude that the trial court did not err in selecting the method of valuation or in the application of it to the facts presented in this case. The wife's valuation of the husband's interest in his law firm was supported by substantial and competent evidence.

The husband argues that the trial court erred in classifying a portion of a $ 203,288.46 money market account as marital property. The trial court designated $ 38,355 of the fund as marital property and $ 164,933 as the husband's separate property. The husband established the account in his name alone after the parties separated. He made the first deposit in March 1996 when he received his annual partnership earnings distribution.

Hunton & Williams operated on a fiscal year that ended in March, and it paid the partners the balance of their earnings in March of each year. The husband had to report his entire partnership income on his individual tax return for the calendar year in which the fiscal year ended. For example, he had to report all income earned from April 1, 1995 to March 31, 1996 on his individual income tax return for the calendar year 1996. That would throw nine months' worth of earnings, the portion earned in 1995, into the next individual income tax year, 1996.

The receipt of annual earnings in a lump at the end of the partnership's fiscal year created an irregular cash flow. The couple's income trailed their expenditure of it. To balance expenditures with receipts of income, the parties borrowed temporarily. They established an equity line of credit when they first purchased the marital home. Throughout the marriage, they had used that as a source of funds to pay expenses that came due before the partnership distributed its earnings. When they received the distribution at the end of the fiscal year, they would pay the credit line down. They used the distribution to repay the temporary financing incurred over the preceding twelve months.

At the time the parties separated, the balance due on the equity line was $ 126,801. The husband borrowed an additional $ 70,000 after the separation, but the wife froze the account when she learned of these draws. He then borrowed on two additional accounts and used the proceeds to pay taxes and tuition. The husband claimed that the funds borrowed after separation were used for marital purposes.

From July 1995 the husband only paid interest on the equity line account, and after separation, he did not curtail the account except to apply $ 71,652.71 from the portion of the March 1996 distribution that he considered to be marital property.

The fiscal year-end distribution that husband received in March 1996 was for work done both before and after the date of separation, November 1995. The husband calculated that $ 72,795 was marital property. He applied $ 71,652.71 of that to the balance due on the equity line of credit. The remaining portion of the March 1996 distribution became the initial deposit to his new separate money market account. In June 1996, he received a $ 50,000 bonus that also represented work done before and after the separation. The husband calculated that $ 31,350 of that bonus was earned before separation and thus was marital property. He applied $ 27,000 of the marital portion toward payment of his 1996 estimated income tax and the balance to what he claimed were joint expenses. He deposited the portion that he considered separate property, $ 18,470, to his separate money market account.

The trial court classified $ 38,355 of the money market fund as marital property because it disallowed as marital expenses the estimated tax payment of $ 27,000 and $ 11,355 claimed as expenses for maintaining the marital residence. The husband argues that the use of his separate money market fund to make the wife whole is inappropriate. The husband contends these funds paid taxes, tuition, and household expenses of the marital residence. He argues that the marital share of the June 1996 bonus paid the joint 1996 tax liability and not simply the taxes due on the bonus.

The trial court disallowed $ 38,355 of his claimed marital expenditures finding that the payment of $ 27,000 toward estimated 1996 taxes was not reasonable and that $ 11,355 of household expenses were not adequately proven. The court held that the use of a substantial portion of the marital share of the June 1996 bonus to pay taxes under the guise of a joint obligation was not a valid marital purpose. The court also held the husband's evidence was insufficient to satisfy his burden to prove that the expenditures of $ 11,355 were for valid marital purposes. The husband did not provide a detailed explanation of these expenses, but the trial court still found that $ 54,955 was expended for marital purposes.

The husband had the burden to establish by a preponderance of the evidence that post-separation withdrawals of marital funds were used for a legitimate marital purpose. See Alphin v. Alphin, 15 Va. App. 395, 402, 424 S.E.2d 572, 576 (1992) (court satisfied that husband's expenses, for which detailed accounting was provided, were for valid marital purpose); Amburn v. Amburn, 13 Va. App. 661, 666-67, 414 S.E.2d 847, 850-51 (1992) (wife did not squander away marital funds by paying for living expenses husband failed to pay). We conclude that the decision to classify a portion of the money market account to make up for the husband's non-legitimate marital expenditures was supported by the evidence and not plainly wrong when considering the way the parties normally managed their finances and used the credit line in tandem with their income.

The trial court ordered the husband to pay the balance due on the equity line loan, on two additional bank loans, and on a credit card account used by the wife. The equity line balance was $ 122,129.50. The husband incurred the two loans of $ 54,344.75 and $ 22,461 after the separation to pay tuition and estimated taxes. The wife possessed only one major credit card after the separation, but the husband stopped paying the balance, began paying only the required minimum, and reduced the limit to $ 2,500. The balance on the account was $ 2,191. The husband contends that the trial court erred in allocating the entire marital debt to him.

Throughout the marriage the parties used the equity credit line as a source of available funds until they received the partnership income distribution. After the separation, the husband stopped using his income to pay recurring family expenses. He prorated receipts, and he segregated the portion he designated as separate property into the money market account where it accumulated as a separate asset. He paid marital expenses or debts incurred to pay such expenses with the portion he designated as marital property. The husband used the date of separation to divert arbitrarily his income from its established allocation to reducing debt incurred over the previous year for ordinary living expenses. The husband's action of not reducing the equity line permitted the joint debt to rise while he diverted the offsetting income to accumulate as his separate asset. This turned marital expenses into marital liabilities of the couple and reduced the marital wealth available for distribution. At the same time, any income earned after separation was diverted and not available for continuing family obligations. The combined effect permitted the husband to decrease the marital estate while increasing his personal estate, to distort their financial condition to his advantage.

The trial court recognized the distorting effect upon obtaining a correct understanding of the marital debts of the parties. The trial court found that the equity line and credit card account were marital debts and found the other two debts, while incurred for marital expenses, would not have been incurred under normal circumstances. It allocated payment of all the debts, with the exception of the first deed of trust, to the husband. The court carefully noted that wife could not receive a double benefit from the equity in the home increasing if the husband paid that debt because it excluded the equity line debt from the calculation of the value of the marital residence. The trial court allocated the marital debt to the husband because the debt would never have been incurred if the cycle of incurring and discharging debt, established during the marriage, had been allowed to complete its final circuit.

Code § 20-107.3(E) empowers trial courts to distribute marital debt. Because making an equitable distribution award is often a difficult task, '"we rely heavily on the discretion of the trial judge in weighing the many considerations and circumstances that are presented in each case."' Moran v. Moran, 29 Va. App. 408, 417, 512 S.E.2d 834, 838 (1999) (distribution of marital debt) (quoting Klein v. Klein, 11 Va. App. 155, 161, 396 S.E.2d 866, 870 (1990)). Absent an abuse of discretion, "the trial judge's determination will not be reversed on appeal." Id.

The allocation of the debt to the husband is proper given the manner in which this couple managed their finances. To prevent an inequity, the trial court properly ordered the husband to pay the debt, and it considered all the statutory factors of Code § 20-107.3. We find no abuse of discretion.

Finally, we consider the court's award of spousal support to the wife. The court ordered the husband to pay $ 7,500 per month in spousal support and awarded child support of $ 2,181 based on the statutory guidelines. On appeal, he claims the wife's expenses include some non-recurring expenses; the wife's award should be reduced by the payment on the first deed of trust; and that some expenses, such as mortgage payment, automobile, utilities, and household expenses, should be reduced by two-thirds because they include expenses factored into the child support guidelines.

The wife had no independent source of income. She submitted two exhibits to substantiate her claim for spousal support. One listed her average monthly expenses during the marriage ($ 8,746.92), and the other listed post-separation expenses ($ 8,013.76). She also presented two exhibits showing the corresponding child expenses of $3,017.23 and of $ 3,116.07. The wife's post-separation expenses included non-recurring expenses for legal bills and car rental which the court excluded from the support

award. The court declined to reduce the support award by the amount of the mortgage payment because it found that the wife was entitled to a reasonable housing allowance and, when taxes on the support award were considered, she would not have sufficient funds to cover her monthly expenses. The court also found the husband's request to reduce the wife's living expenses by two-thirds unreasonable in view of her demonstrable needs. If so reduced, the wife would not be able to meet her demonstrated financial needs, and the support award would leave her below the standard of living to which she was accustomed during the marriage.

The husband cites Rein v. Rein, 1994 Va. App. LEXIS 699, Record No. 1120-93-1 (unpublished, Va. Ct. App. Nov. 29, 1994), as authority for reducing these items. However, that case did not mandate such a reduction. At most it directed that the trial court consider whether there might have been double consideration of items such as housing and utilities.

The husband is obligated to maintain the wife, within the limits of his ability to pay, "according to the station in life in which [she] was accustomed during the marriage." Gamble v. Gamble, 14 Va. App. 558, 574, 421 S.E.2d 635, 644 (1992). A spousal support award is subject to the trial court's discretion and will not be disturbed on appeal unless plainly wrong or without evidence to support it. See Moreno v. Moreno, 24 Va. App. 190, 194-95, 480 S.E.2d 792, 794 (1997). Based on all the evidence and appropriate factors, we conclude that the record supports the spousal support award of $ 7,500 per month.

For the foregoing reasons, we affirm the trial court's ruling.

Affirmed.

Full Text of Court Cases

Estate of Huntsman v. Commissioner

Case name: Estate of Huntsman v. Commissioner
Citation: 66 T.C. 861
Date of decision: August 17, 1976
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Simpson
SIC: 3441 Fabricated Structural Metal
NAICS: 332312 Fabricated Structural Metal Manufacturing

Keywords: Estate tax

COUNSEL:

Leon L. Rice, Jr., and R. Stephen Camp, for the petitioner.

Gary F. Walker, for the respondent.

JUDGES:

Simpson, Judge.

OPINIONBY:

SIMPSON

OPINION:

In his notice of deficiency, the Commissioner determined a deficiency in the Federal estate tax of the Estate of John L. Huntsman in the amount of $97,991.40. In his second amendment to the answer, he determined such deficiency to be $107,470.13. The primary issue involves determining the fair market value of the decedent's stock in Asheville Steel Co. and Asheville Industrial Supply Co., including determining how certain life insurance proceeds payable to such corporations by reason of the death of the decedent, are to be taken into consideration. We must also decide whether the Commissioner properly raised a new issue in his second amendment to the answer.

FINDINGS OF FACT

Some of the facts have been stipulated, and those facts are so found.

John L. Huntsman (the decedent) died testate, a resident of North Carolina, on February 5, 1971. His will was probated in Buncombe County, N.C. Anthony Redmond and Wachovia Bank & Trust Co., N.A., the executors, had their legal address in Asheville, N.C., at the time of filing the petition herein. A

Federal estate tax return for the estate was filed with the District Director of Internal Revenue, Greensboro, N.C.

Asheville Steel Co. (Steel), which is located in Asheville, N.C., was chartered as a North Carolina corporation in 1944 and was originally named Asheville Steel & Salvage Co., Inc. (Salvage), but its name was changed to Steel on March 1, 1965. The decedent was originally one of the four equal shareholders in Steel, but by 1959, he had become its sole shareholder. From its creation, the decedent was the dominating force that operated the company.

Asheville Industrial Supply Co. (Supply) was originally organized as a division of Salvage in 1949. It was chartered as a North Carolina corporation on March 1, 1965, and pursuant to a plan of reorganization, it acquired all the assets and liabilities of Steel allocable to the Supply division. The decedent then acquired all the outstanding stock of Supply, and at the time of his death, he owned all the outstanding stock, 25,000 shares, of each of the corporations, Steel and Supply.

Asheville Machine & Foundry Co. (Machine & Foundry) was organized as a North Carolina corporation in 1950 by the decedent and three others, who each owned one-fourth of its stock. Beacon Manufacturing Co. (Beacon), one of the larger industries in the Asheville area, had requested the decedent to start this company as a workshop to service its textile machinery. Prior to October 1, 1970, the decedent's proportionate interest in the stock of Machine & Foundry had been increased to one-third, and Beacon had become the owner of the other two-thirds. On October 1, 1970, the decedent contributed his stock in Machine & Foundry to Steel, which purchased a portion of Beacon's stock in Machine & Foundry; the remainder of Beacon's stock in Machine & Foundry was redeemed. Machine & Foundry thereupon became a wholly owned subsidiary of Steel.

Steel was engaged in the business of fabricating and erecting structural steel for industrial and commercial buildings, with about 70 percent of its business consisting of fabrication and 30 percent consisting of erection and millwright work. To perform a typical job, steel, which had been received by rail, normally in 60-foot lengths, was cut to the desired length and brought into the shop. Using blueprints made in the drafting room, holes were pierced in the steel and clip angles added to allow the steel beam to be attached to a column or another steel beam. Any other changes necessary to make the steel beam fit into the building to be constructed were also made. The steel beams were then cleaned, painted, and shipped to the construction site, where they were erected by the use of a mobile crane. The steel was then bolted together to make the skeletal framework of the building. Because of its limited crane capacity, Steel did not handle heavy jobs for large buildings or highway bridges; nor did it engage appreciably in operating a warehouse or service center for its customers.

Steel's customers were primarily general contractors in the construction business. At the time of the decedent's death, Steel's principal sales area was western North Carolina, extending to a radius of about 100 miles from Asheville. Although occasionally a project was secured outside this area, it was usually not feasible to do so because of the transportation costs involved. Approximately 70 percent of Steel's business was obtained by negotiations, rather than competitive bidding. The margin of profit on a negotiated contract was much greater than on a bid contract. Prior to the decedent's death, he was the chief negotiator, and Steel did not have a sales force as such. Following his death, the bid work increased, and salesmen were used. Steel's principal competitor in Asheville was Dave Steel Co.,

although Dave usually handled the bigger and heavier jobs, while Steel handled the smaller ones. Outside the immediate Asheville area, it had competitors in Bristol, Tenn., Knoxville, Tenn., Hickory, N.C., and Greenville, S.C.

Steel's plant and office facilities were located on an 11-acre tract of land. The facilities included a main shop building, 120 feet by 300 feet; an office building, 54 feet by 90 feet; a warehouse, 100 feet by 70 feet; and a garage. It had about 50,000 square feet of production area. At the time of the decedent's death, the company had 67 production employees and 27 office employees. Among the larger pieces of production equipment were 6 overhead cranes in the shop having a capacity of 3 tons each. Some of the equipment was purchased used and was getting quite old, requiring considerable maintenance. Steel's production capacity was about 20 tons per week, or 1,000 tons per year.

Prior to the decedent's death, Steel began to modernize and renovate its equipment. In the fiscal year ending January 31, 1971, it purchased a 45-ton mobile crane for $ 105,000 and spent approximately $ 35,000 improving existing equipment. It borrowed $ 100,000 to purchase the crane. At a board of directors meeting shortly after the decedent's death, a preliminary schedule of capital needs, with estimated costs of $ 333,000, was presented for acquisition over a 5-year period. Of this amount, equipment costing about $ 262,000 had been purchased by November 1975, and other equipment costing over $ 280,000 had been purchased between February 1, 1971, and January 31, 1975. By November 1975, Steel's production capacity had been increased to almost 80 tons per week.

Supply was a wholesale business which sold supplies such as bolts, nuts, fasteners, tools, ladders, and paint to industrial and manufacturing plants. It did not deal in heavy equipment or high-priced items, and not more than 10 percent of its business related to the construction business. It had several competitors in the Asheville area. Its customers were located in generally the same area as Steel, but the two companies did not have the same customers and did not feed each other business. Before the decedent's death, about 60 percent of Supply's business involved bidding or quoting prices. About 90 percent of the business was outside sales, and 10 percent was over-the-counter sales. It was not the exclusive agent for any of the products which it sold, and no single customer made up more than 10 percent of its sales. The decedent negotiated many of the sales to the industrial plants, and the company also employed four salesmen. Less than 10 percent of Supply's sales were to Steel, and such sales were strictly at arm's length.

Supply was located about 1 mile from Steel's plant on 1 acre of land. It had a building, 120 feet by 180 feet, and had about 25 employees at the time of the decedent's death.

Machine & Foundry operated a custom machine shop, doing small, miscellaneous job work, utilizing equipment such as lathes and grinders, but it did no foundry work. Its shop was a building, 100 feet by 200 feet, located on a 2-acre lot about 1 mile from Steel's plant. At the time of the decedent's death, it had about 20 employees. Its business was negotiated, and it had no sales force.

The decedent was the president and treasurer of Steel, Supply, and Machine & Foundry and was on the payroll of each corporation. He was closely identified by the public with these three corporations and was the one person that came to mind when one of the companies was mentioned. He was in complete control of all three corporations and made all decisions of any importance, keeping in close contact with each business. He negotiated practically all of the important contracts and sales of the companies up to

the time of his death. During the fiscal year ended January 31, 1971, Steel obtained some unusually large one-time contracts involving sales of more than $ 500,000, which were negotiated in large part by the decedent.

The decedent worked 5 days per week, from 7 a.m. to at least 5 p.m. For many years, he took a vacation in Florida during January and February, which was a slack period for the companies. While in Florida, he was in daily contact with the companies and received sales and cash flow reports. He returned from Florida if he was needed in Asheville. The decedent always attended the meetings of the boards of directors. He had very good relations with the employees of the three companies and was friendly with them.

The decedent's general health up to the time of his death was very good. He died unexpectedly of a heart attack at the age of 62 while on vacation in Florida. His death gave rise to concern as to what was going to happen to the companies. The boards of directors and others connected with the corporations were apprehensive about the loss to the companies caused by the decedent's death. There was special concern about the loss of the decedent's ability to acquire negotiated business.

Steel and Supply owned several life insurance policies (or interests therein) issued on the life of the decedent. Upon the decedent's death, Steel received $ 250,371.03, and Supply received $ 153,174.81. Most of such insurance policies were "keyman" insurance policies while two were "split-dollar" policies. The parties have stipulated that the decedent had no interest in, ownership of, or control of such insurance policies (other than the split-dollar policies) except and to the extent, if any, he is considered to have had such interest, ownership, or control by virtue of his ownership of all the outstanding stock of Steel and Supply.

The keyman life insurance policies were acquired "to tide the company over in case that anything did happen" to the decedent. The last policy obtained was in the face amount of $ 200,000; $ 130,000 was payable to Steel, and $ 70,000 was payable to Supply. The board of directors of each company ratified the purchase of the policy at meetings on May 27, 1969. At such meetings, the decedent presented a letter to the boards which requested each company to redeem enough of his stock to pay his estate's administration costs and death taxes. The letters provided that the price to be paid for the stock so redeemed was to be 11 times the 5-year average earnings of each company. The board of directors of each company adopted a resolution agreeing to the request in the decedent's letters. Each resolution stated that the corporation would be bound to carry out the redemption when the corporation's executive vice president drafted and signed a reply to the decedent's letter. A copy of the corporation's acceptance was to be annexed to the corporate minutes, but there was no acceptance in the corporate records of either Steel or Supply.

Prior to the decedent's death, Steel and Supply paid the premiums on the keyman insurance in the proportions that the proceeds were payable to them. Neither corporation claimed an income tax deduction for such premiums. Prior to the decedent's death, the cash surrender value of each policy was carried as an asset on the balance sheet of the corporation maintaining the policy, to the extent of its interest in the policy. Upon the death of the decedent, the difference between the cash surrender value of each policy and the amount of the proceeds of the policy was reflected as an extraordinary credit to income of the corporation for accounting purposes but was not reported as taxable income for income tax purposes.

Steel paid the annual premium on the two split-dollar policies to the extent of the increase in the cash surrender value of each policy and was the beneficiary of each policy to the extent of the cash surrender value at the decedent's death. The balance of the proceeds was paid to the decedent's estate, which reported them on its Federal estate tax return. The cash surrender values of these policies were carried as an asset on Steel's balance sheets.

Except for the policies on the life of the decedent, the only corporate life insurance owned by Steel from January 1, 1965, to October 29, 1975, were two policies totaling $ 31,000 on the lives of two former officers and one policy for $ 200,000 on the life of its executive vice president. Neither Supply nor Machine & Foundry maintained any such policies during this period. On January 31, 1971, the total cash surrender value of all the life insurance policies on the decedent's life owned by Steel and Supply was $ 95,903 and $ 42,127, respectively. The cash surrender value of Steel's policies included $ 15,080, which represented the cash surrender value of the two split-dollar policies.

On November 22, 1971, the boards of directors of Steel and Supply each agreed to redeem 7,300 shares of its stock held by the decedent's estate pursuant to section 303 of the Internal Revenue Code of 1954. n1 The redemption price was $ 18.4025 per share for the Steel stock and $ 5.5845 per share for the Supply stock. The resolution providing for each redemption included a provision to the effect that if it should be finally determined for Federal estate tax purposes that the value per share of the stock redeemed was different from the value reported for estate tax purposes, the number of shares to be redeemed should be adjusted to accord with such final determination of value, either by the payment of additional cash or by adjusting the number of shares redeemed, or a combination of both. As a result of the redemptions, the decedent's estate received payment of $ 134,338.25 from Steel and $ 40,766.85 from Supply.

n1 All statutory references are to the Internal Revenue Code of 1954 as in effect for the year in issue.

Of the approximately $ 403,000 in insurance proceeds received by Steel and Supply, approximately $ 175,000 was used to redeem stock from the decedent's estate, $ 128,000 was taken into working capital, and $ 100,000 was held in reserve for possible additional redemptions from the decedent's estate. Of the amounts added to the working capital of Steel, $ 100,000 was paid toward the cost of capital additions made from February 1, 1971, to January 31, 1975.

Due to the close relationship between the general construction business and the steel fabrication industry, both businesses generally experience the same business cycles. Such industries do not operate on a constant basis, and their business cycles involve sharp rises and declines. Therefore, in order to evaluate a business in the steel fabrication industry, an investor should view the business over a 5- to 10-year period.

The net sales and the earnings per share (based upon 25,000 shares outstanding) of Steel and Supply were as follows:

	Steel n1	Supply
	Earnings	Earnings

FYE	Sales	per share	Sales	per share
1/31/67	$ 1,533,517	$ 4.12	$ 1,284,660	$ .95
1/31/68	1,641,280	3.60	1,310,101	1.28
1/31/69	1,782,279	3.19	1,539,769	1.09
1/31/70	1,870,121	1.13	1,633,690	.29
1/31/71	2,340,947	4.65	1,531,478	1.21
1/31/72	2,302,979	n2 2.78	1,654,063	n2 2.33

n1 The table does not include the net sales and earnings of Machine & Foundry, which was acquired on Oct. 1, 1970.

n2 The extraordinary credit for the life insurance proceeds is not included.

Neither company paid a dividend for the fiscal years 1967 through 1971. Steel's earnings for the fiscal year 1971 were unusually high due to some extraordinary contracts acquired that year, the use of first-in-first-out inventory accounting during a period of substantially rising costs, and a change in inventory auditing procedures. The net result was to make the earnings for the fiscal year 1971 unusually high, while making the earnings for 1970 unusually low.

The book values per share of Steel and Supply were as follows:

FYE	Steel	Supply
1/31/67	$ 23.72	$ 15.74
1/31/68	27.33	17.02
1/31/69	30.55	18.12
1/31/70	31.04	17.72
1/31/71	n1 39.06	18.93

n1 The book value of the assets of Machine & Foundry, acquired Oct. 1, 1970, is included.

If the life insurance proceeds received by the two companies were taken into account at the end of the fiscal year 1971, the book value per share of Steel and Supply would be $ 45.24 and $ 23.37, respectively. Steel's current assets less current liabilities would be $ 762,945, and it would have $ 562,043 cash on hand. Supply's current assets less current liabilities would be $ 492,967, and it would have $ 214,805 cash on hand.

The net sales and profits of Machine & Foundry were as follows:

FYE	Net sales n1	Profits
6/30/67	$ 302,000	Unknown
6/30/68	354,000	Unknown
6/30/69	352,000	Unknown
6/30/70	310,000	Unknown
1/31/71 n2	162,137	$ 11,182

1/31/72	333,964	22,836
1/31/73	382,087	34,758

n1 For the fiscal years 1967 through 1970, only the approximate sales are known.

n2 Machine & Foundry changed its fiscal year to correspond to that of its parent, Steel, when it was acquired on Oct. 1, 1970.

If Steel had acquired Machine & Foundry prior to February 1, 1969, its earnings per share would have been increased by 93 cents in fiscal 1970 and by 66 cents in fiscal 1971. Since Machine & Foundry was actually acquired on October 1, 1970, its earnings actually increased Steel's earnings per share by 26 cents for the fiscal year ending January 31, 1971.

On the Federal estate tax return for the Estate of John L. Hunstman, the decedent's stock in Steel and Supply was valued at $ 18.40 per share and $ 5.58 per share, respectively, at the date of the decedent's death. In his notice of deficiency, the Commissioner determined that the proceeds of the life insurance received by Steel and Supply were includable in the decedent's gross estate since the decedent possessed the incidents of ownership over the insurance policies at his death within the meaning of section 2042. He further determined that the fair market value of the decedent's stock in Steel and Supply was $ 26.64 and $ 7.44 per share, respectively. In his amendment to the answer, filed prior to the trial of this case, the Commissioner specifically abandoned his position that the life insurance proceeds, payable to the corporations, were included in the decedent's gross estate. However, he alleged that the insurance proceeds must be considered in determining the value of the stock of the two corporations and that the fair market values of the Steel and Supply stock were $ 36.64 and $ 13.56 per share, respectively.

At the trial of this case, the petitioner and the Commissioner each presented expert testimony as to the fair market value of the stock. The petitioner's expert stated that in his opinion, on February 5, 1971, the fair market value of the Steel stock was $ 23.83 per share and the fair market value of the Supply stock was $ 8.50 per share. The Commissioner's expert stated that the fair market value of the Steel stock was $ 30 per share without the insurance proceeds and $ 40 per share with such proceeds. He also stated that the fair market value of the Supply stock was $ 6.60 without the insurance proceeds and $ 12.72 with such proceeds. At the close of the trial, the Commissioner's counsel orally advised the Court that he would move to amend the answer to conform the allegations concerning the value of the stock in the two corporations to the opinion of his expert. Thereafter, the Commissioner moved to file a second amendment to the answer, and such motion was granted. In his second amendment to the answer, the Commissioner alleged that the evidence at the trial showed that, although the life insurance proceeds were paid to the corporations in the first instance, most of them were eventually used for the benefit of the decedent's estate and therefore are includable as a separate asset in such estate under sections 2033 and 2042. In a reply to the second amendment to the answer, the petitioner stated that the Commissioner's new allegations were contrary to the stipulated facts and were not established during the trial of this case.

OPINION

The first matter to be decided is whether the issue set forth in the Commissioner's second amendment to the answer is properly before us. Rule 41(b)(1) of the Tax Court Rules of Practice and Procedure provides:

(1) Issues Tried by Consent: When issues not raised by the pleadings are tried by express or implied consent of the parties, they shall be treated in all respects as if they had been raised in the pleadings. The Court, upon motion of any party at any time, may allow such amendment of the pleadings as may be necessary to cause them to conform to the evidence and to raise these issues; but failure to amend does not affect the result of the trial of these issues.

The Commissioner asserts that the issue set forth in his second amendment to the answer was tried with the consent of the petitioner. The petitioner, on the other hand, argues that in no way was such issue raised by the evidence admitted at the trial and that, in fact, it was unaware of the Commissioner's new theory until the second amendment to the answer was received, long after the trial of this case. We agree with the petitioner.

In his first amended answer and his counsel's opening statement at trial, the Commissioner unequivocally stated that the only issue in this case was the proper valuation of the stock owned by the decedent in Steel and Supply. Now, the Commissioner asserts that the petitioner was put on notice of the new issue by the cross-examination of one of its witnesses concerning the stock redemption, without objection from the petitioner. However, such testimony appeared to be offered merely to explain a corporate resolution which was included in the records of the corporations to which the parties had stipulated, and the admission of such testimony was not sufficient to indicate that the Commissioner was shifting his position or presenting the alternative position that the life insurance proceeds were in fact used for the benefit of the estate. Indeed, when at the close of the trial, the Commissioner's counsel orally requested leave to amend his answer to conform to the evidence, he did not, even then, express any intention to present such new position. The only reason given by him for the amendment to his answer was to reflect the higher valuations testified to by his expert.

Under these circumstances, we find that the position set forth in the Commissioner's second amendment to his answer was not raised by the evidence admitted at the trial and that such issue was not tried by the implied consent of the parties. Edwin E. Markwardt, 64 T.C. 989, 998 (1975). Moreover, at no time did the Commissioner put the petitioner on notice that he would argue that the insurance proceeds were paid for the benefit of the estate because the corporations redeemed some of the estate's stock, and since the Commissioner was fully aware of the redemption and the surrounding facts prior to the trial, there is no excuse for his failure to timely raise the issue. In view of the fact that the petitioner was not given timely notice of such issue, it was deprived of any opportunity to present relevant evidence concerning such matter. Daniel D. Palmer, 62 T.C. 684, 698 (1974), affd. 523 F.2d 1308 (8th Cir. 1975). Accordingly, we hold that the issue as to whether the life insurance proceeds are includable in the estate of the decedent because some of them were used to redeem the stock held by him is not properly before us, and that the only issue raised by the pleadings is the fair market value of the decedent's stock in Steel and Supply. We express no views concerning the claim set forth in the Commissioner's second amendment to his answer.

The principal issue to be decided in valuing the stock of Steel and Supply is the effect of the life insurance proceeds received by them. The petitioner argues that such proceeds are simply another corporate asset which must be considered in valuing the stock. Whereas, the Commissioner argues that the value of the stock is ascertained by first finding the value of such stock without the life insurance

proceeds and by then adding such proceeds to such value. The resolution of this issue turns upon the proper interpretation of two recently amended regulations: sections 20.2042-1(c) and 20.2031-2(f) of the Estate Tax Regulations.

The estate tax regulations concerning the treatment of corporate-owned life insurance, when the insured is the sole or controlling shareholder, have recently undergone substantial change. From 1943 until April 1974, the regulations provided that the sole shareholder of a corporation was considered to possess all of the incidents of ownership retained by the corporation in corporate-owned life insurance on his life. Sec. 20.2042-1(c)(2), Estate Tax Regs. (1958); sec. 81.27, Regs. 105 (1943). Thus, under such regulations, the sole shareholder's estate was required to include the full amount of any life insurance proceeds paid to the corporation, if the corporation had any incidents of ownership in the insurance policies. Sec. 2042(2). The regulations were apparently based upon an example contained in the legislative history of the predecessor of section 2042. See H. Rept. No. 2333, 77th Cong., 1st Sess. (1942), 1942-2 C.B. 372, 491; S. Rept. No. 1631, 77th Cong., 2d Sess. (1942), 1942-2 C.B. 504, 677. The validity of such regulations has never been specifically challenged. See Cockrill v. O'Hara, 302 F. Supp. 1365 (M.D. Tenn. 1969) (validity of regulations assumed); cf. Landorf v. United States, 408 F.2d 461, 471 (Ct. Cl. 1969) (in dicta, referred to the rule of the regulations); but see Osborn, "Corporate-Owned Life Insurance: Recent Developments in Estate Planning," 32d Ann. N.Y.U. Tax Inst. 293, 296-302 (1974).

In Rev. Rul. 71-463, 1971-2 C.B. 333, the IRS ruled that although section 20.2042-1(c)(2) of the Estate Tax Regulations expressly attributed the corporation's incidents of ownership only to a sole shareholder, it was also applicable to situations where the corporation owned life insurance on the life of a shareholder who had voting control of the corporation. This ruling was the subject of much criticism and was subsequently withdrawn, and it was announced that the regulations concerning corporate-owned life insurance were being reconsidered. Rev. Rul. 72-167, 1972-1 C.B. 307; see Walker, "What will effect of Proposed Regulations on corporate-owned life insurance be?", 39 J. Tax. 206 (1973).

In April 1974, new regulations concerning the estate tax treatment of corporate-owned life insurance where the decedent was a shareholder were adopted. T.D. 7312, 1974-1 C.B. 277. Both parties agree that the new regulations govern this case.

The new regulations deleted the statement concerning a sole shareholder in section 20.2042-1(c)(2), Estate Tax Regs., and substituted a cross-reference to a new paragraph (c)(6) of such section, which provides in pertinent part:

(6) In the case of economic benefits of a life insurance policy on the decedent's life that are reserved to a corporation of which the decedent is the sole or controlling stockholder, the corporation's incidents of ownership will not be attributed to the decedent through his stock ownership to the extent the proceeds of the policy are payable to the corporation. * * * See § 20.2031-2(f) for a rule providing that the proceeds of certain life insurance policies shall be considered in determining the value of the decedent's stock. * * *

The Commissioner maintains the position that since the former regulations carried out the legislative purpose, and since those regulations had been approved by the courts, no change was intended in the treatment of life insurance proceeds when a sole shareholder is involved, and that therefore the life insurance proceeds should be added to the value of the stock otherwise determined under section

20.2031-2(f), Estate Tax Regs. He argues that the only effect of the change is to prorate the life insurance proceeds over the shares of stock when the life insurance is on a controlling shareholder who does not own all the stock. However, his proposed interpretation of the new regulations is not supported by the language contained therein.

Prior to the adoption of the new regulations, the entire proceeds of corporate-owned life insurance were includable in the gross estate of the sole shareholder pursuant to section 2042 because the shareholder was considered to retain the incidents of ownership of the policy. However, the new regulations provide that the mere ownership of stock in a corporation is not sufficient to attribute the incidents of ownership of corporate-owned insurance policies to the sole or controlling shareholder, but such policies shall be considered in valuing the decedent's interest in the stock. Consequently, section 2042 does not apply to any of the life insurance proceeds received by the two corporations on account of the decedent's death. n2

n2 Since the Commissioner did not timely raise the issue, we have not considered whether the use of the insurance proceeds by the two corporations to redeem some of the petitioner's stock pursuant to sec. 303 would result in the proceeds not being paid for the benefit of the corporations so that the incidents of ownership would be attributable to the decedent. See sec. 20.2042-1(c)(6), Estate Tax Regs. The Commissioner does not contend that the proceeds of the split-dollar insurance received by Steel are to be treated differently from the proceeds of the keyman insurance. See Rev. Rul. 76-274, 1976-29 I.R.B. 13.

Section 20.2031-2(f), Estate Tax Regs., as amended by the new regulations, merely provides that in addition to the normal factors considered in determining the value of stock in a closely held corporation, life insurance policies payable to or for the benefit of the corporation shall be considered in the same manner as other nonoperating assets. The purpose of the rules contained in such section is to determine the fair market value of stock, which is defined as:

the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. * * * [Sec. 20.2031-1(b), Estate Tax Regs.]

In determining the price a willing buyer would pay, it is obvious that life insurance proceeds must be given "consideration," but it is equally obvious that the price paid by a willing buyer would not necessarily be increased by the amount of the life insurance proceeds. A buyer would take into consideration such proceeds in the same manner as he would consider other liquid assets of the corporation. If the corporation is operating a going business, the willing buyer will be influenced by the prospective earning power and dividend-earning capacity of the business, as well as its net worth, including any life insurance proceeds. See Hamm v. Commissioner, 325 F.2d 934, 941 (8th Cir. 1963), affg. a Memorandum Opinion of this Court, cert. denied 377 U.S. 993 (1964); Central Trust Co. v. United States, 305 F.2d 393, 408 (Ct. Cl. 1962); see also Rev. Rul. 59-60, 1959-1 C.B. 237. Even if the value of the stock is based on the net worth of the corporation, such value may not be increased concomitantly by the amount of life insurance proceeds payable to the corporation. For example, if a corporation has liabilities of $ 100, and if its only asset consists of a life insurance policy providing for the payment of $

75, a willing buyer would not pay $ 75 for the stock of such corporation. Thus, the treatment of the life insurance proceeds urged by the Commissioner is contrary to the regulations and contrary to well-established principles of valuation.

Moreover, section 20.2031-2(f), Estate Tax Regs., calls for life insurance proceeds to be treated in the same manner as other nonoperating assets of the corporation in determining the value of the stock, and our proposed treatment of the life insurance proceeds accomplishes that result. However, the interpretation urged by the Commissioner would treat the life insurance proceeds differently than other nonoperating assets. For example, at the time of the decedent's death, Steel had on hand over $ 300,000 of cash, some or all of which may be considered a nonoperating asset; yet, the Commissioner does not propose that such $ 300,000, or any part of it, be added to the value of the stock of Steel otherwise determined.

The Commissioner argues that our interpretation of section 20.2031-2(f), Estate Tax Regs., frustrates the clear intent of Congress to include corporate-owned life insurance in the estate of its sole shareholder. See H. Rept. No. 2333, 77th Cong., 1st Sess. (1942), 1942-2 C.B. 372, 491; S. Rept. No. 1631, 77th Cong., 2d Sess. (1942), 1942-2 C.B. 504, 677. However, the statements in the legislative history relied upon by the Commissioner indicate only that Congress believed that a sole shareholder was deemed to have the incidents of ownership possessed by his corporation on insurance policies on his life. The regulations now provide that the incidents of ownership held by a corporation are not to be attributed to its shareholder, and no indication is included in the committee reports that Congress intended property owned by a decedent to be includable in his gross estate at other than its fair market value. Consequently, our interpretation of such section does not frustrate a congressional intent. In accordance with section 20.2031-2(f), Estate Tax Regs., we must determine the fair market value of the decedent's stock in the two corporations by applying the customary principles of valuation and by giving "consideration" to the insurance proceeds.

Where there is an ongoing business, such as Steel or Supply, and where there are no sales near the valuation date, neither the asset value nor the earning power is generally used as the sole criteria in determining stock value. See Hamm v. Commissioner, 325 F.2d at 941; Portland Manufacturing Co., 56 T.C. 58, 80 (1971), affd. in an unreported case (9th Cir. 1975); Trianon Hotel Co., 30 T.C. 156, 181 (1958). However, in the case of an operating business, primary consideration is given to earning power. Levenson's Estate v. Commissioner, 282 F.2d 581 (3d Cir. 1960), affg. on this issue a Memorandum Opinion of this Court; see Rev. Rul. 59-60, 1959-1 C.B. at 242.

The petitioner's expert witness was a bank vice president in charge of the bank's closely held business service, a valuation service offered to clients throughout the Southeast United States. In preparing his valuation of the stock of Steel and Supply, he interviewed the principal management of the companies, toured the production facilities, reviewed the books and records of the companies, and made a general review of the economic data of the industry. After acquiring such information, he consulted various financial publications in order to compare Steel and Supply with publicly traded companies in comparable businesses. The Commissioner's expert witness, a financial analyst for the Internal Revenue Service, used only information supplied by the IRS, did not interview the corporate officers, and made no independent investigation of the two companies. As a result, his valuation report contained several material factual errors.

The petitioner's expert determined that Steel was comparable to two publicly traded companies. Using the 5-year average earnings, he found that the price-earnings ratios of the two comparable companies were 6.1 and 5.9 at the date of the decedent's death. He also found that a much larger and more diversified company, partially engaged in the same business as Steel, had a price-earnings ratio of 10.9 on the date of the decedent's death. He thus concluded that based on these comparables, a price-earnings ratio of 7 should be used in valuing Steel's stock. He also determined that there was no publicly traded company comparable to Supply. Based upon the general market conditions and his opinion that the business was somewhat risky, he concluded that a price-earnings ratio of 5 was appropriate for Supply.

The Commissioner's expert treated the two companies as if they were one business. Due to the factual errors in his report, he mistakenly found that Steel and Supply were comparable to businesses which were in fact significantly different. Furthermore, the Commissioner's expert used only a 3-year weighted average of earnings, even though at trial, he admitted that a 5-year average was preferable in this case. Consequently, we find that his determination of a price-earnings ratio of 10 for each company to be erroneous.

The Commissioner also relies upon the stock acquisition of Hickory Steel & Iron Co. (Hickory) by Carolina Steel Corp. (Carolina) in November 1968 to support his expert's determination. Hickory was also in the steel fabrication business but did not do steel erection work. He argues that the value of the Carolina stock exchanged for the Hickory stock indicates that the price-earnings ratio of the Hickory stock was in excess of 15. However, the evidence does not support the Commissioner's argument. The earnings which the Commissioner used to calculate his price-earnings ratio were but part of 1 year's earnings. Obviously, to be meaningful, a price-earnings ratio must be based upon an entire year's earnings. Furthermore, due to the cyclical nature of the steel fabrication business, even 1 year's earnings do not give a true indication of a corporation's earning potential. In addition, the petitioner's expert testified that there were substantial economic differences between the time of the acquisition of the Hickory stock in 1968 and the time of the decedent's death in 1971 which were not fully considered by the Commissioner's expert. Finally, there were apparently some restrictions on the marketability of the Carolina stock received in exchange for the Hickory stock that may have reduced its value. Consequently, when the necessary adjustments are made to reflect these differences, the price paid for the Hickory stock does not support the determination of the Commissioner's expert.

In valuing the stock of the two companies based upon earnings, the petitioner's expert determined the 5-year average earnings and multiplied that amount times the appropriate price-earnings ratio. We believe that the price-earnings ratios used by him were generally reasonable, but in computing the earnings of Steel, he neglected to account for the acquisition of Machine & Foundry in 1970. To reflect the amount a purchaser would have paid for the Steel stock, the average earnings of Machine & Foundry must be taken into account. Although there is only evidence of Machine & Foundry's earnings for 2 of the 5 years prior to the decedent's death, the petitioner's expert should have made an adjustment to the 5-year average earnings of Steel to reflect the average earnings of Machine & Foundry over such period. Using our best judgment, we find that based solely upon earnings, the value of the stock in Steel and Supply at the date of the decedent's death was $ 29 and $ 5 per share, respectively.

The petitioner's expert determined that valuing the stock of the two corporations solely on their earnings would be unwarranted in view of the high book value n3 of the stocks. In valuing the Steel stock, he applied a formula giving four times as much weight to the earnings value as the net asset value. In the case of the Supply stock, he gave the earnings value three times the weight of the net asset value. While we agree generally with the approach of the petitioner's expert, we find that he did not give sufficient weight to the strong cash position of the two corporations, due in part to the insurance proceeds. It is true that Steel needed capital for the major purchases it was planning, but we are convinced that a potential purchaser of the stock of each company would give greater consideration to the net asset value of the corporations than did the petitioner's expert. Using our best judgment, we find that the value of the stock in Steel and Supply, on the date of the decedent's death, based upon both their earnings and net asset values, giving consideration to the insurance proceeds received by each, was $ 33 and $ 11 per share, respectively.

n3 Both experts used book value rather than net asset value. Since neither party has raised the issue, we will treat the book value as if it were the net asset value.

One final adjustment is necessary to determine the actual price a willing buyer would pay for the stock of these two companies. The decedent was the dominant force in both businesses, and his untimely death obviously reduced the value of the stock in the two corporations. However, both corporations had competent officers who were able to assume successfully the decedent's duties. Both experts agreed that some discount must be made to reflect the loss of the decedent. Using our best judgment, we find that after discounting the value of the stock to reflect the loss of the decedent, the fair market value of the Steel and Supply stock at the date of the decedent's death was $ 29 and $ 10 per share, respectively.

Decision will be entered under Rule 155.

IN THE UNITED STATES COURT OF APPEALS

FOR THE ELEVENTH CIRCUIT

FILED
U.S. COURT OF APPEALS
ELEVENTH CIRCUIT
NOV 15, 2007
THOMAS K. KAHN
CLERK

No. 05-15549

Tax Court No. 3512-03

ESTATE OF FRAZIER JELKE, III,
Deceased,
WACHOVIA BANK, N.A.,
f.k.a. First Union National Bank, Personal Representative,

Petitioners-Appellants,

versus

COMMISSIONER OF INTERNAL REVENUE,

Respondent-Appellee.

Appeal from a Decision of the
United States Tax Court

(November 15, 2007)

Before TJOFLAT, CARNES and HILL, Circuit Judges.

HILL, Circuit Judge:

This estate tax case presents on appeal an issue of first impression in this circuit.[1] It involves the proper valuation for estate tax purposes of a 6.44% stock interest, or 3,000 shares, owned by the decedent, Frazier Jelke III (Jelke or decedent or estate),[2] in a closely-held, investment holding company, Commercial Chemical Company (CCC), owning appreciated, marketable securities.[3]

The issue is whether or not the Tax Court used the appropriate valuation methodology in computing the net asset value of CCC to determine the value of Jelke's interest in CCC for estate tax purposes on the date of death. The Tax Court, adopting the Commissioner's expert witness appraiser's approach, allowed the estate only a partial $21 million discount for CCC's built-in capital gains tax liability, indexed to reflect present value on the date of Jelke's death, using projections based upon the court's findings as to when the assets would likely be

---

[1] The issue has been previously addressed by the Second Circuit in 1998, the Sixth Circuit in 2000, and the Fifth Circuit in 2001 and 2002. See IV.C.2 & 3, infra.

[2] The 3,000 shares were held in a revocable trust of which Jelke was the primary beneficiary. The revocable trust terminated at Jelke's death, and its assets were distributed to his issue.

[3] At all times, CCC was a C corporation for tax purposes. From 1922 to 1974, CCC was a successfully operating chemical manufacturing business, producing chemicals such as arsenic acid and calcium arsenate. In 1974, CCC sold its manufacturing assets to an unrelated third party, yet maintained its name, CCC, as a holding company investing the sales proceeds. At the date of Jelke's death, CCC's stock portfolio was comprised of 92% blue-chip domestic equities and 8% international equities, the market values of which were readily and easily available.

sold and when the tax liability would likely be incurred, i.e., in this case, over a sixteen-year period. Using what could be termed an economic market reality theory, the estate argued, under the rationale set forth by the Fifth Circuit Court of Appeals in Estate of Dunn v. Comm'r, 301 F.3d 339 (5th Cir. 2002), that a 100% dollar-for-dollar discount was mandated for CCC's entire contingent $51 million capital gains tax liability. Under this theory, it is assumed that CCC is liquidated on the date of Jelke's death, the valuation date, and all assets of CCC are sold, regardless of the parties' intent to liquidate or not, or restrictions on CCC's liquidation in general.

Based upon the following historical overview, discussion, and precedential authority, we are in accord with the simple yet logical analysis of the tax discount valuation issue set forth by the Fifth Circuit in Estate of Dunn, 301 F.3d at 350-55, providing practical certainty to tax practitioners, appraisers and financial planners alike. Under a de novo review, as a matter of law, we vacate the judgment of the Tax Court and remand with instructions that it recalculate the net asset value of CCC on the date of Jelke's death, and his 6.44% interest therein, using a dollar-for-dollar reduction of the entire $51 million built-in capital gains tax liability of CCC, under the arbitrary assumption that CCC is liquidated on the date of death

and all assets sold.[4]

I. FACTUAL BACKGROUND[5]

Jelke died testate on March 4, 1999, in Miami, Florida. On the date of his death, CCC's marketable securities had a fair market value of $178 million, plus a built-in contingent capital gains tax liability of $51 million on those securities. Combined with $10 million in other CCC assets, without regard to the tax liability, CCC's net asset value totaled $188 million.[6]

On the estate's federal estate tax return filed December 6, 1999, Jelke's 6.44% interest in CCC, held through his revocable trust, was included in his gross estate under Section 2031 at a value of $4,588,155. I.R.C. § 2031. The estate

---

[4] Upon our thorough review of the record, we are satisfied that the Tax Court did not clearly err when it determined and discounted the value of Jelke's 6.44% interest in CCC for lack of control by 10%, and for lack of marketability by 15%. These two issues are affirmed without further discussion.

[5] Many of the facts were stipulated to by the parties and set forth in the Tax Court's findings of fact. Estate of Jelke v. Comm'r, 89 T.C.M. (CCH) 1397 (2005). Only facts pertinent to this appeal will be recited here.

[6] All parties agree that CCC is well managed by experienced individuals. Its board of directors is elected by CCC shareholders. Under CCC's articles of incorporation, shareholders are not allowed to participate in the operation or management of the investment holding company, nor do they show any interest to do so. CCC's primary investment goal is long-term capital stock growth. CCC had a relatively high annual rate of return, or 23%, for the five-year period [1994-1998] prior to death, lagging just behind the S & P 500's historical average for the same time period. CCC paid steady annual dividends. Its long-term investment goals produced a low asset annual turnover rate of 6%, and $51 million in unrealized capital gains. During the five years prior to death, there was no intent to liquidate CCC.

calculated this figure by reducing CCC's $188 million net asset value by $51 million, or 100% of the built-in capital gains tax liability. It then applied a 20% discount for lack of control and a 35% discount for lack of marketability.

In his December 2, 2002, notice of deficiency issued to the estate, the Commissioner determined that Jelke's estate owed a deficiency in estate tax of $2,564,772, resulting from an undervaluation of Jelke's 6.44% interest in CCC.[7] The Commissioner determined that the value of Jelke's 6.44% interest in CCC was $9,111,000, not the $4,588,155, claimed by the estate. Unlike the estate's 100% discount, he calculated the $9,111,000 using a zero discount for built-in capital gains taxes, and what he described as "reasonable" discounts for lack of control and lack of marketability.

II. PROCEDURAL BACKGROUND

The estate filed a petition in Tax Court in March 2003, contesting the Commissioner's $9,111,000 fair market value of Jelke's 6.44% interest in CCC stock on the date of death. It claimed that the Commissioner had based his value on an incorrect net asset value of CCC, by declining to discount CCC's net asset

[7] The other CCC shareholders are irrevocable trusts, holding interests in CCC ranging from 6.18% to 23.668%, the beneficiaries of which are all related Jelke family members. From 1988 to the date of trial, there were no sales of CCC stock. There are no restrictions on the sale or transfer of CCC stock under the terms of any of the Jelke family trusts. One trust does not terminate before the year 2019.

value of $188 million, by the $51 million in contingent built-in capital gains tax liability, accrued as of the date of death. The estate also claimed that the Commissioner undervalued the two additional discounts available to the estate, one for lack of marketability and one for lack of control.[8]

After a two-day bench trial, the Tax Court rejected the estate's position that CCC's net asset value must be reduced dollar-for-dollar by the entire amount of the built-in capital gains tax liability under Estate of Dunn, 301 F.3d at 351-53, as the Estate of Dunn was a Fifth Circuit, not an Eleventh Circuit, case. It determined that a discount was available, but not one for 100%.

The Tax Court noted that a hypothetical buyer of 6.44% of CCC stock single-handedly would be unable to cause or force a liquidation of CCC. It stated that CCC's long-term history of dividends and appreciation, with no immediate plans to liquidate (one trust continues until 2019), together with its low annual turnover of securities in the portfolio, belied the Estate of Dunn's threshold, arbitrary assumption of complete liquidation on the valuation date. Further, the Tax Court distinguished Estate of Dunn on the fact that the Fifth Circuit in Estate of Dunn was valuing a majority, not a minority, shareholder interest as was present here. Also the company valued in the Estate of Dunn was primarily (85%) an

[8] See supra note 4.

operating company, unlike CCC, a 100% investment holding company.

Under the net asset valuation approach, the Tax Court adopted the Commissioner's argument that the capital gains tax discount should be reduced to present value, as computed on an annualized, indexed basis, over the sixteen-year period it was expected to be incurred as the assets turned over.[9] Instead of a $51 million reduction, the Tax Court's present value application to net asset value resulted in a $21 million tax discount reduction, and a net deficiency in estate tax of $1 million.[10]

This appeal follows.

III. STANDARD OF REVIEW

The question of whether the Tax Court used the correct standard to determine fair market value is a legal issue. See Powers v. Comm'r, 312 U.S. 259, 260 (1941). We review de novo the Tax Court's rulings on the interpretation and application of the tax code. See Estate of Blount v. Comm'r, 428 F.3d 1338, 1342

[9] The estate attacks this approach on the basis that it is incomplete and inconsistent, as over this sixteen-year period, CCC's securities could appreciate in value, increasing tax payments and obviating the need to reduce built-in capital gains by present value principles. The same could be true if the assets were to depreciate in value over the projected period.

[10] In addition, the Tax Court applied a 10% discount for lack of control and a 15% discount for lack of marketability. As stated, supra note 4, we find no clear error in the Tax Court's analysis and calculation of the other two discounts available to the estate. These two issues need no further discussion.

(11th Cir. 2005) (citation omitted). The Tax Court's findings of fact are reviewed for clear error. Id. Where a question of fact, such as valuation, requires legal conclusions, we review those underlying legal conclusions de novo. See Adams v. United States, 218 F.3d 383, 386 (5th Cir. 2000). A determination of fair market value is a mixed question of fact and law: the factual premises are subject to a clearly erroneous standard while the legal conclusions are subject to de novo review. See Estate of Dunn, 301 F.3d at 348 (citations omitted). "The mathematical computation of fair market value is an issue of fact, but determination of the appropriate valuation method is an issue of law that we review de novo." Id.

IV. DISCUSSION

A. Introduction

The issue in this case is, for estate tax purposes, the proper calculation of the magnitude of the discount for built-in capital gains taxes in valuing stock in a closely-held corporation on the date of death. A general overview of the applicable tax statutes, regulations and revenue rulings is appropriate.

1. The Tax Code and Treasury Regulations

Section 2031(a) provides that the value of a decedent's gross estate shall be determined by including the value at the time of death of all property, real or

personal, tangible or intangible, wherever situated. I.R.C. § 2031(a). Section 20.2031-1(b) provides that the value of every item of property includable in a decedent's gross estate . . . is its fair market value at the time of the decedent's death. Treas. Reg. § 20.2031-1(b). The fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts.[11] Id. All relevant facts and elements of value as of the applicable valuation date shall be considered. Id.

2. Internal Revenue Service Guidelines

Revenue Ruling 59-60 provides the foundation for undertaking an analysis of a closely-held stock's value. Rev. Rul. 59-60, 1959-1 C.B. 237.[12] Although it has been modified and amplified over the years, Revenue Ruling 59-60 still remains the focal point for the proper method of valuing closely-held securities.[13]

---

[11] The buyer and seller are hypothetical, not actual persons, and each is a rational economic actor; that is, each seeks to maximize his advantage in the context of the market that exists on the valuation date. See Estate of Newhouse v. Comm'r, 94 T.C. 193, 218 (1990).

[12] While Revenue Ruling 59-60 sets forth the basic approach for valuing closely-held securities, it recognizes that there is no one correct method. Rev. Rul. 59-60, 1959-1 C.B. 237. All of the facts and circumstances of each individual case must be analyzed by the appraiser who is expected to use common sense and informed judgment and maintain "a reasonable attitude in recognition of the fact that valuation is not an exact science." Id. at § 3.01.

[13] Rev. Rul. 59-60, 1959-1 C.B. 237, modified by Rev. Rul. 65-193, 1965-2 C.B. 370, amplified by Rev. Rul. 77-287, 1977-2 C.B. 319, amplified by Rev. Rul. 80–214, 1980-2 C.B. 101, amplified by Rev. Rul. 83-120, 1983-2 C.B. 170.

Closely-held corporations, are, by definition, corporations of which the shares are owned by a relatively limited number of shareholders. Id. at § 2.03. Their shares are traded little, if any, in the marketplace so there are usually no asked prices or third-party sales that would represent an ascertainable basis for determining the fair market value of the stock under the rules generally applicable to publicly traded stock. Id.

The fair market value of closely-held securities also clearly depends upon the potential buying public's estimate of the worth of the securities. Id. at § 3.02. The level of risk that a buyer will be willing to accept in purchasing stock of a closely-held company will directly impact the value of that stock. Id.

Revenue Ruling 59-60 states that "[t]he value of the stock of a closely-held investment or real estate holding company, whether or not family owned, is closely related to the value of the assets underlying the stock." Id. at § 5(b). The net asset value method of valuation, which assumes that the value of the corporation is based upon the fair market value of its underlying assets, is in turn determined by applying the venerable willing buyer-willing seller test. Id. The net asset value method is the best method to use in valuing corporations that are essentially holding companies, while an earnings-based method applies to

operating companies. Id.[14]

B. Historical Overview of the Issue Presented on Appeal

1. The Law Prior to the Tax Reform Act of 1986

In General Utilities & Operating Co. v. Helvering, 296 U.S. 200 (1935), the Supreme Court held that a C corporation did not recognize taxable income at the corporate level on a distribution of appreciated property to its shareholders. Id. at 206. Congress responded to this holding, later to become known as "the General Utilities doctrine," by enacting Section § 311(a).[15] From 1935 to 1986, the fair market value of the distributed corporate property became the shareholders' adjusted stepped-up basis in the property received. It was therefore possible for a corporation to distribute its appreciated assets to its shareholders without incurring any income tax liability at the corporate level. Id.; see also I.R.C. § 301(d).

With one exception during this fifty-one year period, case law did not allow a discount for built-in capital gains tax liability when a sale or liquidation was

[14] The Tax Court agrees. See, e.g., Estate of Smith v. Comm'r, 78 T.C.M. (CCH) 745, *5 (1999) (where the net asset valuation approach given greatest weight in valuing corporation engaged in farming operation, as the underlying value of the real property is the greatest contributor to the corporation's worth); Estate of Ford v. Comm'r, 66 T.C.M. (CCH) 1507 (1993), aff'd, 53 F.3d 924 (8th Cir. 1995); Estate of Andrews v. Comm'r, 79 T.C. 938 (1982).

[15] This new tax code statute provided in part: "[N]o gain or loss shall be recognized to a corporation on the distribution (not in complete liquidation) with respect to . . . (1) its stock (or rights to acquire its stock), or (2) property." I.R.C. § 311(a).

neither planned nor imminent, as it was deemed by the courts to be too uncertain, remote or speculative.[16] See Estate of Andrews v. Comm'r, 79 T.C. 938, 942 (1982) (projected capital gains taxes do not reduce the value of closely-held stock when liquidation is only speculative as it is unlikely taxes will ever be incurred); Estate of Piper v. Comm'r, 72 T.C. 1062, 1086-87 (1979) (in gift tax case, capital gains discount unwarranted under net asset value method where there is no evidence that a liquidation of the investment companies was planned); Estate of Cruikshank v. Comm'r, 9 T.C. 162, 165 (1947) (no sale of portfolio securities projected in closely-held family investment corporation).

The pre-1986 cases do not announce a rule of law that such taxes may never affect the value of stock, but that taxes will create an impact only when the taxpayers can prove that the assets will in fact be sold in the foreseeable short-term future, rather than held for long-term investment return. See Obermer v. United States, 238 F.Supp. 29, 35-36 (D.Haw. 1964). The pre-1986 cases are now, however superceded by statute. See Tax Reform Act of 1986, Pub. L. No. 99-514, § 631, 100 Stat. 2085.

[16] The exception was Obermer v. United States, 238 F.Supp. 29 (D. Haw. 1964), where a capital gains discount was permitted when the taxpayer established that the assets were required to be sold by the corporation to meet the terms of a restrictive agreement. Therefore, liquidation was proved by the taxpayer to be imminent and not speculative. Id. at 35-36.

2. The Tax Reform Act of 1986

The Tax Reform Act of 1986 (TRA 1986) made dramatic tax law changes. New rules were enacted to require the recognition of corporate-level gains on the distributions of appreciated property under Section § 311(b), thereby repealing the General Utilities doctrine and I.R.C. §§ 336 and 337. See I.R.C. § 311(b).

Prior to the repeal of the General Utilities doctrine by TRA 1986, no corporate tax would have been required to be paid and no discount would have been allowed. TRA 1986 required recognition of corporate-level gains and losses on liquidating sales and on distributions of corporate property.

With the repeal of the doctrine, courts began to recognize the possibility that a discount related to the capital gains taxes incurred should be allowable. Due to the taxpayer's inability to receive a step-up in basis to fair market value on the valuation date after TRA 1986, it now became more important than ever for a taxpayer to be able to quantify his or her loss in value of the stock due to inherent capital gains tax liability in the corporation.[17]

[17] At a decedent's death, appreciated property included in the decedent's gross estate generally receives a Section 1014 "step-up" in basis so that the fair market value of the property is equal to its basis. I.R.C. § 1014. However, if the decedent's property is stock in a corporation and that corporation owns appreciated capital gains property, then, as a result of the repeal of the General Utilities doctrine, the corporation would have to pay tax on such gain on its liquidation, reducing the value of the corporation. See Bittker & Eustice, Federal Income Taxation of Corporations and Shareholders ¶¶ 8.20, 8.21 (Warren, Gorham & Lamont, 7th ed. 2000).

3. Post-TRA 1986 until Estate of Davis in 1998

Although subject to the 1986 legislation, as late as 1991, the Commissioner continued to adhere to his pre-1986 position that no capital gains discount was permitted on distributions of closely-held corporate stock, ignoring the fact that a corporate-level income tax now would be incurred upon its liquidation. See I.R.S. Tech. Adv. Mem. 91-50-001 (1991) (the Commissioner will continue to adhere to his historical rule against allowing a capital gains tax discount).[18] During this twelve-year period, the Commissioner, while agreeing that a capital gains discount is allowable in theory, and as a matter of law, uniformly denied the discount unless the taxpayer could prove that payment was imminent. See Estate of Gray v. Comm'r, 73 T.C.M. (CCH) 1940, *9 (1997) (no capital gains tax discount for stock in corporation that held installment note because payment of the note depended upon sale of land by the maker, making the risk of capital gains too speculative to be a factor in valuation).

From 1986 to 1998, taxpayers were unsuccessful in their arguments that the repeal of the General Utilities doctrine made it difficult to avoid capital gains at

[18] See also AOD 1999-001 (Jan. 29, 1999) (the Commissioner will take potential capital gains taxes into account when determining the appropriate discounts for a C corporation, but the amount of the discount and the cases in which it will be allowed will be determined on a case-by-case basis).

the corporate level, and that, therefore, ipso facto a discount for built-in capital gains should be allowed. See Estate of Bennett v. Comm'r, 65 T.C.M. (CCH) 1816, *12 (1993); Estate of Ward v. Comm'r, 87 T.C. 78, 104 (1986) (no discount as there was no evidence that liquidation is imminent or even contemplated). The courts continued to adhere to the rigid position that the highly speculative nature of the tax mandated that its present value be zero. See Estate of Luton v. Comm'r, 68 T.C.M. (CCH) 1044, *8 (1994).

C. Historical Evolution of Precedential Case Law on the Issue on Appeal

1. Estate of Davis - The Tax Court Case

Then, in 1998, twelve years after the TRA 1986 was enacted, the Tax Court began to relax its historical stance in keeping with the "new" statute.[19] In Estate of Davis v. Comm'r, 110 T.C. 530 (1998), the donor gave two blocks of the common stock of a closely-held holding company to his sons. The holding company owned shares of a publicly traded corporation. Id. at ___.

No liquidation of the holding company or sale of its assets was planned or contemplated on the valuation date. No tax was due and owing on the valuation date. Estate of Davis, 110 T.C. at ___. Nevertheless, citing section 5(b) of Rev.

[19] It could be speculated that the Tax Court's reversal of position in 1998 was a fait accompli, forced by the Commissioner's own expert appraiser witness's testimony that he included within his calculations a discount for capital gains taxes. Estate of Davis, 110 T.C. ___.

Rul. 59-60, 1959-1 C.B. at 242-43, the Tax Court determined, under an economic reality theory, that a hypothetical buyer and seller would *not* have agreed on that date on a stock price that took *no* account of the corporation's built-in capital gains tax.[20] Id. at ___.[21]

The Tax Court permitted discounts in Estate of Davis, both for a lack of marketability and for a lack of control of the shares. It did not permit a separate discount for contingent tax liability. Id. at ___. The Tax Court concluded that approximately $9 million of the permitted $28 million lack of marketability discount could be attributed to the built-in capital gains of the public corporation's

---

[20] "The value of the stock of a closely-held investment or real estate holding company, whether or not family owned, is closely related to the value of the assets underlying the stock. For companies of this type the appraiser should determine the fair market values of the assets of the company. . . ." Rev. Rul. 59-60, 1959-1 C.B. at 242; see also IV.A.2., supra.

[21] The court stated:

> We are convinced on the record in this case, and we find, that, even though no liquidation of [the corporation] or sale of its assets was planned or contemplated on the valuation date, a hypothetical willing seller and a hypothetical willing buyer would not have agreed on that date on a price for each of the blocks of stock in question that took no account of [the corporation's] built in capital gains tax. We are also persuaded on that record, and we find, that such a willing seller and such a willing buyer of each of the two blocks of [the corporation's] stock at issue would have agreed on a price on the valuation date at which each such block would have changed hands that was less than the price that they would have agreed upon if there had been no . . . built-in capital gains tax as of that date . . . . We have found nothing in the . . . cases on which respondent relies that requires us, as a matter of law, to alter our view . . . .

Estate of Davis, 110 T.C. at ___.

stock.[22] Id. at ___. By so doing, the Tax Court conceded that built-in capital gains could now be considered, not separately, but as one of the components of the marketability discount. Id.

The Commissioner's position was beginning to erode. The stage was set for other courts to become involved.[23]

2. Estate of Eisenberg and Estate of Welch - The Circuit Courts of Appeal Cases

In Estate of Eisenberg v. Comm'r, 74 T.C.M (CCH) 1046 (1997), the donor gave away shares of stock in her closely-held corporation. She owned all 1,000 shares in a corporation whose only asset was a commercial office building. Id. at *1. The corporation's only activity was renting office space in the building to clients. There were no plans to sell the building or liquidate the corporation. Id.

Nevertheless, the donor sought to reduce the value of the gifted shares of the closely-held corporation to account for the fact that, if its asset was sold, the

[22] Accord Estate of Borgatello v. Comm'r, 80 T.C.M. (CCH) 260, 264 (2000) (where, consistent with the Estate of Davis, the Tax Court allowed a 24% valuation discount for future corporate income taxes, but treated it as part of the aggregate 33% discount for lack of marketability); Estate of Dailey v. Comm'r, 82 T.C.M. (CCH) 710 (2001) (where a discount for unrealized capital gains was allowed as part of the lack of marketability discount).

[23] See however Estate of Rodgers v. Comm'r, 77 T.C.M. 1931 (CCH) (1999) (although the taxpayer relied upon the Estate of Davis, the Tax Court refused to allow a discount, also citing the Estate of Davis, this time for the proposition that valuation is necessarily an approximation and a matter of judgment, rather than one of mathematics).

sale would trigger a tax gain to the corporation. Estate of Eisenberg, 74 T.C.M. at *2. The Tax Court, notwithstanding the repeal of the General Utilities doctrine, and still citing its pre-1986 cases, declined to allow the tax discount to the donor on the basis that it was unlikely that a hypothetical buyer would want to liquidate the corporation or sell its underlying assets on the transfer date. Id. at *4. "[T]he primary reason for disallowing a discount for capital gains taxes in this situation is that the tax liability itself is deemed to be speculative," therefore, its discount value should be zero. Id.

The Second Circuit Court of Appeals disagreed. Estate of Eisenberg v. Comm'r, 155 F.3d 50, 57 (2d Cir. 1998). Buoyed by the Tax Court's own recent decision in Estate of Davis, the Second Circuit concluded that, although no liquidation of the corporation or sale of corporate assets was imminent or contemplated at the time of the gift, the requirement of an imminent sale was unnecessary. Id. It was the opinion of the court that a willing buyer would demand a discount to take account of the fact that, sooner or later, the tax would have to be paid.[24] Id.

[24] The Second Circuit cited a (then) recent study surveying CPA valuation experts, attorneys involved in business transactions, and business brokers. The survey illustrated that a large majority of buyers of closely-held stock demanded a discount for contingent capital gains tax liability. See John Gilbert, "After the Repeal of General Utilities: Business Valuations and Contingent Income Taxes on Appreciated Assets," Montana L.Rev. 5 (Nov. 1995).

For the first time since the enactment of TRA 1986, the mandate by the Commissioner and the Tax Court of an imminent sale or liquidation, *notwithstanding* the revocation of the General Utilities doctrine, was addressed directly by a circuit court of appeal:

> The issue is not what a hypothetical willing buyer plans to do with the property, but what considerations affect the fair market value of the property he considers buying. While prior to the [TRA 1986] any buyer of a corporation's stock could avoid potential built-in capital gains tax, there is simply no evidence to dispute that a hypothetical willing buyer today would likely pay less for the shares of a corporation because of a buyer's inability to eliminate the contingent tax liability.

Estate of Eisenberg, 155 F.3d at 57.

"Further, we believe, contrary to the opinion of the Tax Court, since the General Utilities doctrine has been revoked by statute, a tax liability upon liquidation or sale for built-in gains is not too speculative in this case." Id. at 58. The Second Circuit vacated and remanded the Tax Court decision for recalculation.[25]

---

[25] The Second Circuit used an example from tax treatise, Bittker & Eustice, Federal Income Taxation of Corporations and Shareholders ¶ 10.41[4] n.11 (Warren, Gorham & Lamont, 6th ed. 1998), to illustrate that a hypothetical buyer and seller would allow a discount for built in capital gains tax:

> In the example, A owns 100% of the stock of X corporation, which owns one asset, a machine with a value of $1,000, and a basis of $200. Bittker assumes a 25% tax rate and points out that if X sells the machine to Z for $1,000, X will pay tax of $200 on the $800 gain. Bittker adds that if Z buys the stock for $1,000 'on

There is dicta in Estate of Eisenberg to suggest, however, that it would be incorrect to conclude that the full amount of the potential capital gains tax should be used. Id. at 58 n.15.[26] After the Estate of Eisenberg, disputes between the taxpayers and the Commissioner focused upon the magnitude of the discount allowable, not the legal right of the taxpayers to claim them.[27]

In 2000, the trend continued and moved to a different circuit. See Estate of Welch v. Comm'r, (unpublished) 208 F.3d 213 (6th Cir. 2000).[28] In Estate of Welch, the decedent was a minority shareholder of two closely-held corporations. The primary assets of both corporations consisted of real property, i.e.,

---

> the mistaken theory that the stock is worth the value of the corporate assets,' Z will have lost $200 economically 'because it paid too much for the stock, failing to account for the built-in tax liability (which can be viewed as the potential tax on disposition of the machine, or as the potential loss from lock of depreciation on $800 [of] basis that Z will not enjoy.' Because of Z's loss, Bittker concludes, 'Z will want to pay only $800 for the stock, in which even A will have effectively 'paid' the $200 built-in gains tax.'

Estate of Eisenberg, 155 F.3d at 58 n.15.

[26] Based upon the Bittker example, the Second Circuit stated that "[o]ne might conclude . . . that the full amount of the capital gains tax should be subtracted from what would otherwise be the fair market value of the real estate. This would not be a correct conclusion. In this case, we are only addressing how potential tax consequences - the capital gains tax may affect the fair market value of the share of stock appellant gifted to her relatives in contrast to the fair market value of the estate." Estate of Eisenberg, 155 F.3d at 58 n.15.

[27] The Commissioner acquiesced in Estate of Eisenberg, 74 T.C.M. (CCH) 1046 (1997), acq. in result, 1999-4 I.R.B. 4.

[28] While we are aware that this case is unpublished, it is integral to our discussion and has long been included in other analyses of the issue before us.

commercial buildings rented to various tenants. The assets were subject to condemnation and sale after the decedent's death. Id. at *1.

The Tax Court denied the decedent's estate a tax discount on the basis that the estate failed to prove that liquidation of the corporations' assets was likely to occur on the valuation date. Id. at *3. The court so held even though the condemnation and subsequent sale were clearly foreseeable and imminent on the valuation date. Id.

Relying upon the rationale of the Second Circuit in Estate of Eisenberg, the Sixth Circuit found the Tax Court's judgment disallowing any discount in any amount erroneous as a matter of law and remanded to the Tax Court for a hearing. Id. at *5. The court was instructed to determine what a hypothetical, willing buyer would likely pay for the Estate of Welch stock on the valuation date, considering all the facts and circumstances at the time, including the built-in capital gains tax on the corporation's real estate.[29] Id. Similarly to the Second Circuit in the Estate of Eisenberg, there is language to suggest that the Sixth Circuit did not think it appropriate that the discount be on a dollar-for-dollar basis either.[30] Id.

---

[29] The Tax Court had made no previous attempt to undertake this valuation discount. Estate of Welch, 208 F.3d at *6.

[30] See also Martin Bros. Container & Timber Prods. Corp. v Martin, et al., 241 F.Supp.2d 815 (N.D.Ohio 2003), aff'd without opinion, 112 Fed.Appx. 395 (6th Cir. 2004) (unpublished).

While neither the Second Circuit in Estate of Eisenberg, nor the Sixth Circuit in the Estate of Welch, seemed keen on granting a 100% discount, neither court prescribed a specific alternative approach either as to the amount of the reduction or a method by which to calculate it. Now that taxpayers have historically prevailed on this issue and are entitled to a discount as a matter of law, the issue shifts to the amount of the discount to be allowed.

3. The Fifth Circuit In Estate of Jameson and Estate of Dunn - A Further Shift in Emerging Case Law

By 2001, the issue presented itself squarely in the Fifth Circuit. In Estate of Jameson v. Comm'r, 267 F.3d 366 (5th Cir. 2001), the decedent owned 98% of the stock of her predeceased husband's closely-held operating company. Id. at 367. The company was both an operating timber company and an investment company. Id. at 367-69.

The Tax Court, based on its recent decision in Estate of Davis, concluded that some discount for built-in capital gains should be acknowledged. Estate of Jameson, 267 F.3d at 371. Using a net asset valuation approach, the Tax Court allowed a partial discount based upon the court's estimate of the net present value for the capital gains tax liability on the timber property that would be incurred as

the timber was cut, over a nine-year period.[31] Id. As to the investment property, the Tax Court refused to allow any capital gains discount for that property. Id. at 370.

Relying on the Second Circuit case of Estate of Eisenberg, the Fifth Circuit in the Estate of Jameson concluded that the Tax Court had clearly erred in crafting its own valuation method. Id. at 371. The method was flawed because it was based upon the Tax Court's conclusive assumption that a strategic, not a hypothetical, buyer would continue to operate the company for timber production. Id. at 371-72.

The Fifth Circuit determined that the first, or economically rational, purchaser of the stock *cannot* be presumed to operate the company. Estate of Jameson, 267 F.3d at 371-72. The rational economic actor or willing buyer would *have to take into account* the consequences of the unavoidable, substantial built-in tax liability on the property. Id. The economic reality was that any reasonable willing buyer would consider the company's low basis in the investment property in determining a purchase price. Id.

[31] This nine-year period was calculated based upon assumptions furnished by the estate, i.e., a 10% annual growth to harvest rate of the timber; a 4% annual inflation rate in the value of the harvest; a 34% capital gains tax rate; and a 20% discount rate. Estate of Jameson, 267 F.3d at 370.

Citing internally inconsistent assumptions within the Tax Court opinion, the Fifth Circuit vacated the judgment and remanded the case back to the Tax Court. The instructions given were that the Tax Court reconsider the amount of capital gains on the operating timber property, and, to consider and allow a discount for the built-in capital gains on the investment property. Estate of Jameson, 267 F.3d at 372.

A year later, the Fifth Circuit went one step further in Estate of Dunn v. Comm'r, 301 F.3d 339 (5th Cir. 2002). At the time of her death, Mrs. Dunn owned a majority 62.96% of the stock of a family-owned corporation engaged in the rental of heavy equipment. The family company also managed certain commercial property as an investment. Id. at 347.

As Texas corporate law required a 66.66% interest in the voting shares to affect a liquidation, with 62.9%, Mrs. Dunn did not own a "supermajority," or 66.6%, that could force a liquidation. Id. The facts further indicated that the family company planned to remain viable and in operation for some time.[32] Id.

Using a willing buyer-willing seller fair market value test, the Tax Court in the Estate of Dunn, while agreeing with the Commissioner's argument that the tax

[32] The Commissioner, continuing to adhere to his historical pre-1986 stance, took the position that the tax was "too speculative" to consider and disallowed any discount. Estate of Dunn, 301 F.3d at 346.

was certainly speculative, still agreed to discount the stock price by 5% of the built-in capital gains as a matter of law. Id. at 347. This holding was in response to the existence of a very small possibility that a hypothetical buyer would liquidate the company. The 5% discount was in lieu of the 34% reduction sought by the taxpayers. Id. The Tax Court concluded that it was much more likely that a hypothetical buyer would continue to operate the company. Id.

The Fifth Circuit disagreed emphatically with the Tax Court. In the Estate of Dunn, under a net asset valuation approach, the Fifth Circuit determined value by totaling the corporation's assets and subtracting its liabilities. It held that a hypothetical willing buyer-willing seller ***must always be assumed*** to immediately liquidate the corporation, triggering a tax on the built-in gains.[33] Id. at 354. Thereby substantially altering the Tax Court's fair market value test, the Fifth Circuit held, as a matter of law, that, ***as a threshold assumption***, liquidation must always be assumed when calculating an asset under the net asset value approach.[34] Id. The Fifth Circuit labeled as a 'red herring' the fact that no liquidation was

[33] See also Stephens, Maxfield, Lind et al., Federal Estate and Gift Taxation ¶ 4.02 (Warren, Gorham & Lamont, 8th ed. 2002).

[34] "[T]he 'likelihood' is 100%." Estate of Dunn, 301 F.3d at 350.

imminent or even likely.[35] Id.

Turning to the proper amount of the discount, the Fifth Circuit concluded that the value of the assets must be reduced by a discount equal to 100% of the capital gains liability, dollar for dollar.[36] Id. at 352. The court relied upon the assumption that, in a net asset valuation context, the hypothetical buyer is predisposed to buy stock to gain control of the company for the sole purpose of acquiring its underlying assets. Id. This, in turn, triggers a tax on the built-in gains.[37] Id. Hence, the discount should be 100%, dollar-for-dollar. An era of

---

[35] It involves the "quintessential mixing of apples and oranges." Estate of Dunn, 301 F.3d at 353.

[36] The Fifth Circuit held that:

> We are satisfied that the hypothetical willing buyer of the Decedent's block of Dunn Equipment stock would demand a reduction in price for the built-in gains tax liability of the Corporation's assets at essentially 100 cents on the dollar, regardless of his subjective desires or intentions regarding use or disposition of the assets. Here, that reduction would be 34%. This is true "in spades" when, for purposes of computing the ***asset***-based value of the Corporation, we assume (as we must) that the willing buyer is purchasing the stock to get the assets, whether in or out of corporate solution. We hold as a matter of law that the built-in gains tax liability of this particular business's assets must be considered as a dollar-for-dollar reduction when calculating the ***asset***-based value of the Corporation, just as, conversely, built-in gains tax liability would have no place in the calculation of the Corporation's ***earnings***-based value.

Estate of Dunn, 301 F.3d at 352-53 (emphasis in original). Perhaps by so doing, the court was sending a strong message to the Commissioner about capitalizing on valuation uncertainties to force enhanced compromise tax settlements for the government.

[37] The Fifth Circuit illustrated the dollar-for-dollar reduction by the following example:

> Buyer B wants an assemblage of assets identical to Corporation C's assets. Those

valuation certainty had begun.[38]

4. Cases After the Estate of Dunn

In 2004, the Fifth Circuit in Estate of Smith v. Comm'r, 391 F.3d 621 (5th Cir. 2004), was asked to decide the issue of whether or not, for estate tax purposes, the value of a decedent's individual retirement accounts (IRAs), containing marketable stocks and bonds, should be reduced by the amount of potential income tax liability of the beneficiaries upon distribution from the accounts. Estate of Smith, 391 F.3d at 626. While acknowledging the recent trend of considering potential tax liability in valuation cases, the Fifth Circuit declined to extend Estate of Davis and its progeny, including the Estate of Dunn, to the

---

> assets are worth $1 million on the open market but are depreciated on C's books to a tax basis of $500,000. B has two options: (1) He can buy the assets from C for $1 million and depreciate them to zero over, e.g., seven years (or buy them on the open market and have the same cash flow and tax experience), leaving C to pay its own 34% tax ($170,000) on its gain; or (2) he can buy C's stock, get no depreciation deductions other than, at the corporate level, to the extent the asset are further depreciable, and have a 34% built-in corporate tax liability at sale of the assets. Surely a buyer of the stock rather than the asset would insist on a price reduction to account for the full amount of the built-in gain tax and the loss of the depreciation opportunity.

Estate of Dunn, 301 F.3d at 353 n.23; see also n.42 infra.

[38] In at least one case, the Commissioner has taken an inconsistent position as to dollar-for-dollar recognition. In Simplot v. Comm'r, 112 T.C. 130, 166 n.22 (1999), rev'd on other grounds 249 F.3d 1191 (9th Cir. 2001), the Commissioner presented testimony of an expert witness who concluded that, when valuing a closely-held corporation's interest in publicly traded stock, full recognition of built-in capital gains was appropriate.

valuation of IRAs held by a decedent.[39] Id.

Most recently, in Estate of McCord v. Comm'r, 461 F.3d 614 (5th Cir. 2006), another Fifth Circuit case, the "trend" continues. The case presented an issue of first impression regarding a donee's contingent liability for additional estate taxes after receipt of the gift. Id. at 630-32.

In Estate of McCord, the Commissioner asserted in a notice of deficiency that donor taxpayers had understated the fair market value of their gifted partnership interests on their gift tax returns. Id. at 621. The Commissioner claimed that this error resulted from the donor taxpayers' discounting the fair market value of those gifted interests by the mortality-based, actuarially-calculated present value of the donees' assumed obligations for additional estate taxes. Id.

Finding no error in undervaluation, the Fifth Circuit in Estate of McCord, citing Estate of Dunn, stated:

> For purposes of our willing buyer/willing seller analysis, we perceive no distinguishable difference between the nature of the capital gains tax and its rates on the one hand and the nature of the estate tax and its rates on the other hand. Rates and particular features of both the

[39] The value of an IRA should not reflect the potential income tax liability of the beneficiaries upon distribution from the accounts, as an IRA is a different asset, with different tax consequences. See also Estate of Kahn v. Comm'r, 125 T.C. 11 (2005) (where the Tax Court declined to extend Estate of Davis and its progeny, including Estate of Dunn, to IRAs). With IRAs, the tax does not survive the transfer to an unrelated third party, unlike capital gains tax potential which does survive the transfer. See Estate of Smith, 391 F.3d at 629.

> capital gains tax and the estate tax have changed and likely will continue to change with irregular frequency; likewise, despite considerable and repeated outcries and many aborted attempts, neither tax has been repealed. Even though the final amount owed by the Taxpayer as *gift* tax on their January 1996 gifts to non-exempt donees has yet to be finally determined (depending, as it does, on the final results of this case), we are satisfied that the transfer tax law and its rates that were in effect when the gifts were made are the ones that willing buyer would insist on in applying in determining whether to insist on, and calculate a discount for § 2035 estate tax liability.

Estate of McCord, 461 F.3d at 630.

The Fifth Circuit thereby extended the rationale of Estate of Davis to a gift tax case involving contingent estate taxes.[40]

D. Applying the Fifth Circuit Estate of Dunn Rationale to the Present Appeal

Juxtaposed against the backdrop of this emerging case law, the question before the Tax Court in this case, and now before us, is what was the value of Jelke's 6.44% interest in CCC on March 4, 1999? Which dollar figure do we use to discount the fair market value of CCC's securities for built-in capital gains on March 4, 1999? Is it dollar-for-dollar, as the estate contends, under the rationale set forth in 2002 by the Fifth Circuit in the Estate of Dunn, or $51 million? Or is

[40] The Fifth Circuit, in the Estate of McCord, was never asked to decide whether or not the dollar-for-dollar analysis of the Estate of Dunn applied in the context of contingent estate taxes generated by a gift, as the maximum amount that the donor taxpayers had claimed on their gift tax returns was a discount only for the present value of the date-of-gift of the contingent estate tax obligations assumed by the donees. See Estate of McCord, 461 F.3d at 631.

it the present value of the capital gains indexed over a sixteen-year period, as the Commissioner contends, or $21 million?

Is the Commissioner's present value approach incomplete and inconsistent, as the estate contends, as CCC's securities will very likely appreciate over this time period, thereby increasing capital gains tax liabilities and undermining the rationality of a present value approach? What if the value of CCC's securities were to decline over this sixteen-year period, and, concomitantly, the capital gains tax also declined?

Is the Commissioner correct in contending that the Estate of Dunn's threshold "assumption of liquidation" is unreasonable and unrealistic in the present case as CCC is precluded from liquidation until 2019? Does such a minority interest such as we have here, with no power to "force" CCC's liquidation, render the Estate of Dunn distinguishable, as it concerned a majority interest? Does it matter that the corporation in the Estate of Dunn was primarily an operating company, while CCC is exclusively an investment holding company?

Recently, on other issues and other facts, in Estate of Blount v. Comm'r, 428 F.3d 1338 (11th Cir. 2005), we were also asked to determine the fair market value of shares of stock in a closely-held corporation owned by a decedent for

estate tax purposes.[41] Id. An economic reality approach to valuation, in its dicta, is referenced: "To suggest that a reasonably competent business person, interested in acquiring a company, would ignore a $3 million liability strains credulity and defies any sensible construct of fair market value." Id. at 1346. To properly reflect the economic realities of the transaction, in other words, it is important to take liability costs into account when negotiating a market-supported price for a share of a company's stock, such as CCC, for example.

In our case, why would a hypothetical willing buyer of CCC shares not adjust his or her purchase price to reflect the entire $51 million amount of CCC's built-in capital gains tax liability? The buyer could just as easily venture into the open marketplace and acquire an identical portfolio of blue chip domestic and international securities as those held by CCC. Yet the buyer could accomplish this without any risk exposure to the underlying tax liability lurking within CCC due to its low cost basis in the securities.[42]

---

[41] Insurance proceeds paid to a company upon a shareholder's death are not to be included in calculating the company's fair market value due to the company's contractual obligation to buy the decedent's shares. Estate of Blount, 428 F.3d at 1345.

[42] Consider the following example:

> [T]wo corporations each owning a portfolio of publicly traded securities having the same aggregate fair market value. Where these two companies differ concerns the purchase price each had to pay to amass the respective portfolios. The higher investment cost for one of the corporations will produce a lower corporate income tax liability in comparison to the other corporation even though each corporation,

Here, the Tax Court distinguished the majority interest held by the decedent in the Estate of Dunn from our case on the basis that the Jelke estate's minority interest was single-handedly insufficient to "force" a liquidation on its own. The Tax Court chose a sixteen-year period to reflect when the corporation would reasonably incur the tax. This distinction is not persuasive to us. We are dealing with hypothetical, not strategic, willing buyers and willing sellers. As a threshold assumption, we are to proceed under the arbitrary assumption that a liquidation takes place on the date of death. Assets and liabilities are deemed frozen in value on the date of death and a "snap shot" of value taken. Whether or not a majority or a minority interest is present is of no moment in an assumption of liquidation setting.

The Commissioner also argues that the Estate of Dunn is distinguishable on its facts as the company being valued was primarily an operating company and CCC is an investment holding company. As the company in the Estate of Dunn was both an operating company and an investment company, the Fifth Circuit was

---

> should it decide to, sells the portfolio for the same price. In choosing which corporation to acquire, little doubt exists that a prospective purchaser of the stock of either of these corporations would be unwilling to pay the same price for each corporation knowing full well the potential for a greater income tax bite for the corporation with the lower investment cost in its assets.

Mark R. Siegel, "Recognizing Asset Value and Tax Basis Disparities to Value Closely-held Stock," 58 Baylor L.Rev. 861, 862-63 (Fall 2006); see also supra note 37.

forced to use two different methods of valuation, an earnings-based valuation method for the operating side of the company, and a net asset valuation method for the investment side. It assigned a percentage weight to them of 85% and 15%, respectively. Estate of Dunn, 301 F.3d at 358-59.

Here, CCC was solely an investment holding company. We need examine only the Estate of Dunn analysis as it applies to the net asset valuation method used in valuing investment holding companies; there is no need for weighting. The Commissioner's argument on this point is without merit.

It is only recently that, the Tax Court in the Estate of Davis, the Second Circuit in the Estate of Eisenberg and the Sixth Circuit in the Estate of Welch, courts are receptive to the concept that some sort of discount for capital gains tax liability exists.[43] Yet, in the more than twenty years since the TRA 1986 was enacted, none of these three cases provide any precise rules for calculating the downward adjustment with any specificity, nor give guidance to tax practitioners in future cases.

The Fifth Circuit in the Estate of Dunn is the first court to emerge with a precise valuation approach as to the amount of the reduction and how to calculate

[43] We are aware that dicta in the courts of appeal cases indicates a discount of less than 100%.

it. As a threshold matter, the court creates the arbitrary assumption that all assets are sold in liquidation on the valuation date, and 100% of the built-in capital gains tax liability is offset against the fair market value of the stock, dollar-for-dollar.[44] Estate of Dunn, 301 F.3d at 352-54.

Cases prior to the Estate of Dunn, prophesying as to when the assets will be sold and reducing the tax liability to present value, depending upon the length of time discerned by the court over which these taxes shall be paid, require a crystal ball. The longer the time, the lower the discount. The shorter the time, the higher the discount.

The downside of this approach is that, not only is it fluidly ethereal, it requires a type of hunt-and-peck forecasting by the courts. In reality, this method could cause the Commissioner to revive his "too speculative a tax" contentions made prior to the Estate of Davis in 1998. This methodology requires us to either gaze into a crystal ball, flip a coin, or, at the very least, split the difference between the present value calculation projections of the taxpayers on the one hand, and the present value calculation projections of the Commissioner, on the other.

[44] Even the Commissioner in this case agrees that the fair market value of CCC's assets and liabilities must be frozen on the valuation date. See Red Brief, at 41. Other than to describe the Fifth Circuit's methodology in Estate of Dunn as "unreasonable" and "unrealistic," the Commissioner provides no authority in support of his position.

We think the approach set forth by the Fifth Circuit in the Estate of Dunn is the better of the two. The estate tax owed is calculated based upon a "snap shot of valuation" frozen on the date of Jelke's death, taking into account only those facts known on that date. It is more logical and appropriate to value the shares of CCC stock on the date of death based upon an assumption that a liquidation has occurred, without resort to present values or prophesies.

The rationale of the Fifth Circuit in the Estate of Dunn eliminates the crystal ball and the coin flip and provides certainty and finality to valuation as best it can, already a vague and shadowy undertaking. It is a welcome road map for those in the judiciary, not formally trained in the art of valuation.

The Estate of Dunn dollar-for-dollar approach also bypasses the unnecessary expenditure of judicial resources being used to wade through a myriad of divergent expert witness testimony, based upon subjective conjecture, and divergent opinions. The Estate of Dunn has the virtue of simplicity and its methodology provides a practical and theoretically sound foundation as to how to address the discount issue.

The Fifth Circuit preempted its critics by stating: "As the methodology we employ today may well be viewed by some (valuation) professionals as unsophisticated, dogmatic, overly simplistic, or just plain wrong, we consciously

assume the risk of incurring such criticism from the business appraisal community. . . In this regard, we observe that on the end of the methodology spectrum opposite *oversimplification* lies *over-engineering*." Estate of Dunn, 301 F.3d at 358 n.36 (emphasis in original).

This type of "economic reality approach" mimics the marketplace and places a practical, transactional overlay upon the proverbial willing buyer-willing seller analysis. It allows the issue to conform to the reality of the depressing economic effect that the lurking taxes have on the market selling price. The hypothetical willing buyer is a rational, economic actor. Common sense tells us that he or she would not pay the same price for identical blocks of stock, one purchased outright in the marketplace with no tax consequences, and one acquired through the purchase of shares in a closely-held corporation, with significant, built-in tax consequences.

This 100% approach settles the issue as a matter of law, and provides certainty that is typically missing in the valuation arena. We thereby follow the rationale of the Fifth Circuit in the Estate of Dunn, that allows a dollar-for-dollar, $51 million discount for contingent capital gains taxes in valuing CCC on the date of Jelke's death, and his 6.44% interest therein. This result prevents grossly inequitable results from occurring and also prevents us, the federal judiciary, from

assuming the role of arbitrary business consultants.[45]

V. CONCLUSION

Based upon the foregoing discussion, as a matter of law, under a de novo review, we vacate the judgment of the Tax Court and remand with instructions that the Tax Court recalculate the net asset value of CCC on the date of Jelke's death, and his 6.44% interest therein, using a dollar-for-dollar reduction of the entire $51 million in built-in capital gains tax liability, under the assumption that CCC is liquidated on the date of death and all assets sold.

VACATED and REMANDED with INSTRUCTIONS.

[45] Given the maximum capital gains tax rate at this writing of 15% for future cases, one can only speculate that the maximum capital gains tax rate will not again approach the 34% range seen in previous cases.

CARNES, Circuit Judge, dissenting:

The tax code is nowhere near the center of my intellectual life, and generally I find estate tax law about as exciting as Hegel's metaphysical theory of the identity of opposites. There is, however, more involved in this case than just the estate tax issue presented, which is how to determine the fair market value of the decedent's distinctly minority interest in CCC, a closely held corporation whose assets consist primarily of marketable securities with a built-in capital gains tax liability.

The broader principles implicated by the majority opinion are timeless. They were discussed by Teddy Roosevelt at the close of the century before last:

> I wish to preach not the doctrine of ignoble ease but the doctrine of the strenuous life; the life of toil and effort; of labor and strife; to preach that highest form of success which comes not to the man who desires mere easy peace but to the man who does not shrink from danger, from hardship, or from bitter toil, and who out of these wins the splendid ultimate triumph.

Vice President Theodore Roosevelt, The Strenuous Life, Address before the Hamilton Club in Chicago, Illinois (April 10, 1899), in The Penguin Book of Twentieth-Century Speeches 1 (Brian MacArthur ed., 1992). By adopting and extending the arbitrary assumption rule of least effort from Estate of Dunn v. Commissioner, 301 F.3d 339 (5th Cir. 2002), the majority gives in to the judicial

equivalent of the doctrine of ignoble ease. To avoid the effort, labor, and toil that is required for a more accurate calculation of the estate tax due, the majority simply assumes a result that we all know is wrong. We can do better than that. The tax court did.

The corporation whose assets are being valued in this case is a holding company with a portfolio of widely traded securities whose value can be readily determined. Estate of Jelke v. Comm'r, No. 3512-03, 2005 WL 1277407, at *1, 3 (T.C. May 31, 2005). The rate at which the company had liquidated the securities it held in the five years before the decedent's death is also known to one one-hundredth of a percent. Id. at *2, 8. The parties agreed that the value of the company's net assets at the time of death is what counts, and they agreed that the market value of the securities it held at the time of death should be reduced by some amount for the capital gains tax liability attached to the securities. Id. at *3. That is what the law provides. See 26 C.F.R. § 20.2031-1(b) ("The value of every item of property includible in a decedent's gross estate . . . is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts."); Estate of Blount v. Comm'r, 428 F.3d 1338, 1346 (11th Cir. 2005). The disagreement is over how to calculate that reduction in

value. Jelke, 2005 WL 1277407, at *3 ("[T]he parties differ as to the amount of the reduction from the value for the potential capital gain tax liability that would arise upon sale of the marketable securities held by the corporation.").

The estate contends that the full amount of the capital gains tax liability should be deducted from the value of the securities as though they had been sold at the time of death, even though they were not. Id. The IRS wants the capital gains reduction calculated based on projecting the average rate of past liquidation forward and then discounting the taxes that will come due in the future back to present value at the time of death. Id.

The Tax Court summarized the estate's contention, which was put forward by its expert, Mr. Frazier, as follows:

> After discussing several methods, Mr. Frazier used what he described as a combination of the market and asset approaches. Mr. Frazier used the market approach to value CCC's securities. Purporting to rely on the asset approach to valuation, Mr. Frazier then reduced the total of the market prices for CCC's securities by the liabilities shown on CCC's books and the tax liability that would have been incurred if all of CCC's securities had been sold on decedent's date of death. Mr. Frazier did not make adjustments to the tax liability for the possibility that sales of CCC's securities would have occurred after decedent's date of death. In other words, Mr. Frazier relied on the net asset method to employ an assumption of liquidation as of the valuation date, an event which would trigger recognition of $51,626,884 in capital gain tax. This method produced a $137,008,949 [] value for CCC. Mr. Frazier then computed an undiscounted value of $8,823,062 for decedent's 6.44-percent interest

(3,000 of 46,585.51 shares) held in trust.

Id. at *8.

The Tax Court summarized the IRS's contention, put forward by its expert, Mr. Shaked, as follows:

> Respondent's expert, Mr. Shaked, started with the same market value of CCC's securities. Mr. Shaked then reduced the assets by liabilities, but he used a different approach from Mr. Frazier's in arriving at a reduction for the built-in capital gain tax liability. First, he computed CCC's average securities turnover by reference to the most recent data (1994–98). Using that data, Mr. Shaked computed a 5.95-percent average annual turnover derived from the parties' stipulated asset turnover rates for 1994–98. Mr. Shaked believed that the 5.95-percent rate was conservative, because the turnover trend was generally decreasing. The use of the 5.95-percent turnover rate results in the capital gain tax's being incurred over a 16.8-year period (100 percent divided by 5.95 percent).
>
> Mr. Shaked then divided the $51,626,884 tax liability by 16 years to arrive at the average annual capital gain tax liability that would have been incurred each year over this 16-year period – $3,226,680.25 ($51,626,884 divided by 16). Next, he selected a 13.2-percent discount rate based on the average annual rate of return for large-cap stocks in the period from 1926 to 1998, as described in Ibbotson Associates Stocks, Bonds, Bills & Inflation, 1999 Yearbook (Ibbotson 1999). He then computed the present value of the $3,226,680.25 annual tax liability discounted over 16 years using a 13.2-percent interest rate to arrive at a present value for the total capital gain tax liability of $21,082,226. By reducing the $188,635,833 net asset value by the $21,082,226 future tax liability, Mr. Shaked arrived at a $167,553,607 value for CCC. Finally, Mr. Shaked concluded that the undiscounted value for decedent's 6.44-percent interest in CCC was $10,789,164 in contrast to Mr. Frazier's undiscounted value of $8,823,062. This difference reflects

> numerically the parties' differing approaches to the amount of capital gain tax that should be used to reduce the net asset value of CCC.

Id. at *8–9 (footnote omitted).

The Tax Court adopted the IRS's real value approach, even though it is more complicated than the estate's simple but arbitrary assumption that all of the assets were sold at the time of death. Id. at *11–12. The court chose the real value approach because it produces a result closer to the actual value of the company's assets, which in turn leads to a more accurate determination of the sales price a willing buyer and seller would agree on for the shares of the holding company that Jelke owned on the date of his death. Id.

While the real value approach is not perfect and itself makes some assumptions—such as the past rate of liquidation continuing in the future—it produces a more accurate result than the arbitrary assumption method because it more closely reflects the economic interests of those who control the company. The death of one who holds only 6.44 percent of the shares of a holding company, id. at *2, that has been producing an average annual rate of return of more than 23 percent on securities, id., and that has substantial built-in capital gains taxes, id. at *3, is not going to prompt the liquidation of all of the company's assets. It would be economically foolish for the majority shareholders to gut the golden goose and

bring down on their heads the embedded capital gains tax liability simply because of the death of a minority shareholder, an event of no relevance to their economic interests.

The majority's approach assumes that the holding company was liquidated on the date of Jelke's death, and therefore all of its built-in capital gains were incurred (and therefore passed on to its shareholders) immediately. Maj. Op. at 36–37. The majority makes that assumption despite the fact that: historically the company has sold only 5.95 percent of its investments and therefore precipitated only that small portion of the total built-in capital gains liability per year, Jelke, 2005 WL 1277407, at *8; the company is earning an annual return of more than 23 percent on its portfolio investments, id. at *2; and, "[a]s of the date of decedent's death, CCC's board of directors had no plans to liquidate an appreciable portion of CCC's portfolio, and they intended to operate CCC as a going concern," id. Under these circumstances, the notion that the company would suddenly dispose of its highly profitable portfolio, ending the enviable earnings stream, and inflicting a substantial capital gains tax on its shareholders is preposterous. The fact that Jelke died does not make it any less so.

The death of a human being is profoundly important to the person who dies, but it matters not one whit to the laws of economics, which dictate the self-interest

of the living. Because the interests of the majority shareholders did not change when Jelke died, the only reasonable expectation is that the holding company will continue to be run as it was before that immaterial event occurred. Yet, the majority insists on pretending that contrary to the economic interests of its shareholders, and contrary to everything that has come before, the company must be assumed to have sold all of its securities on the date of Jelke's death.

The majority suggests that subtracting the entire $51 million in embedded capital gains liability from the $188.6 million value of the company's portfolio is the best approach, because "why would a hypothetical willing buyer of CCC shares not adjust his or her purchase price to reflect the entire $51 million amount of CCC's built-in capital gains tax liability?" Maj. Op. at 31. The answer, of course, is that the buyer would adjust downward the price he was willing to pay in order to reflect that liability, but the buyer could not reasonably expect the seller to agree to a price that ignored completely the time value of money. No rational seller would accept a price that subtracted the entire amount of the future tax liability as though it were due immediately, when that liability will almost certainly be spread out over future years instead—the next 16.8 years if existing practices continue. Jelke, 2005 WL 1277407, at *8. Assets with liabilities that will not come due until future years are worth more than those with the same

amount of liabilities that are due immediately.

Any rational being would prefer to pay $51 million in taxes spread out over the next 16.8 years, which is how long it would take for the embedded tax liability to come fully due under the company's historical rate of liquidation, instead of paying the entire $51 million immediately. Ask yourself: If you had the choice would you prefer to pay the taxes you are going to owe over the next 16 or so years in advance, right now, or would you choose to pay those taxes only when they come due in the future? The majority would assume, because it makes the calculations easier, that you would choose to pay all of your future taxes now.

When tax liabilities and payments are spread out over future years a taxpayer is able to use the unpaid funds to earn more money until the taxes actually do come due. When the amount involved is $51 million and the portion of it that can be invested declines at a rate of only 5.95 percent per year, the interest, dividends, and capital gains that can be earned using that slowly declining balance (and the accumulated earnings that flow from it) are enormous. Ask yourself: Would you put any value on the earnings you could get from investing a declining balance of $51 million, which diminishes at the rate of only 5.95 percent per year, or would you think that all of the money you could earn with the use of that declining principal over the next 16 years would be negligible? The

majority's assumption makes sense only to those who would place no value on the earnings that could be made with the use of $51 million in investment principal as it declines at a rate of 5.95 percent each year for the next 16.8 years.

The majority asserts that a buyer "would not pay the same price for identical blocks of stock, one purchased outright in the marketplace with no tax consequences, and one acquired through the purchase of shares in a closely-held corporation." Maj. Op. at 36. Of course not. But we are not talking about the same price. We are talking about a price between two extremes. One extreme is the majority's approach, which assumes that tax consequences that are likely to come due gradually, over a period of 16.8 future years, have the same effect on price as those that are due immediately. The other extreme, which is the straw man the majority erects, assumes that tax consequences have no effect at all on price. But that is not the position the Tax Court took. Instead, the Tax Court position recognizes that the embedded tax liability will affect price and calculates how much effect it will have, taking into account the size of the tax liability and when it is likely to become due. The Tax Court's calculation, which is based on the facts, produces a result that is closer to reality than the majority's assumption of instant liquidation.

To its credit, the majority concedes that its approach is arbitrary. The

majority describes its operating premise that a holding company would instantly liquidate its entire investment portfolio on the date of a minority shareholder's death as an "arbitrary assumption." Maj. Op. at 34. Seeking to justify its approach, the majority argues that being arbitrary "provides certainty and finality" and "bypasses the unnecessary expenditure of judicial resources" that is required to make a more realistic calculation. Id. at 35. Indeed, it does. Of course, the same could be said about any arbitrary assumption, including one that the securities had no value at all or that the capital gains tax liability would never actually be paid for some unknown reason. Either of those arbitrary assumptions would also avoid the unnecessary expenditure of judicial resources while providing certainty and finality. Once the doctrine of ignoble ease and seductive simplicity is allowed to reign, there is no end to the shortcuts that can be taken.

If the majority's approach is good, the good it provides should not be confined to estate tax law. It should be shared with all areas of the law. To take one example of how the majority's approach can work its magic, consider the daunting task of calculating the lost future earnings award in the case of one who has been disabled or killed by a tortfeasor. In Culver v. Slater Boat Co., 722 F.2d 114 (Former 5th Cir. 1983) (en banc), our predecessor Court held that: "The calculation of damages suffered either by a person whose personal injuries will

result in extended future disability or by the representatives of a deceased person involves four steps: estimating the loss of work life resulting from the injury or death, calculating the lost income stream, computing the total damage, and discounting that amount to its present value." Id. at 117. Doing all of that requires a lot of judicial effort as even a cursory reading of the Culver opinion shows.

But no longer is all that bother necessary. The parties need not quarrel over, and courts need not concern themselves with, all the variables that go into calculating a fair award for lost future earnings. After all, the quest for a best estimate of economic reality in such a case is, in the majority's view: "fluidly etheral," it involves "hunt-and-peck forecasting," it is like "flip[ping] a coin," and it is no better than "gaz[ing] into a crystal ball." Maj. Op. at 34.

The alternative to its arbitrary assumption, the majority says, is having courts "prophesying." Id. So it is, and so it has been throughout the history of our judicial system, because sometimes prophesying is necessary. As is so often the case, the words of Justice Holmes are instructive. In Ithaca Trust Co. v. United States, 279 U.S. 151, 49 S. Ct. 291 (1929), he wrote for the Court, holding that for the purposes of calculating an estate's charitable deduction for bequeathing the remainder interest in a trust, the value of the trust assets given to the charity had to

be discounted by the decedent's widow's life estate in the trust. The value of the life estate, in turn, had to be calculated based on the statistically probable (or as our majority would say, "prophesied") length of the widow's life. Holmes explained:

> [T]he value of property at a given time depends upon the relative intensity of the social desire for it at that time, expressed in the money that it would bring in the market. Like all values, as the word is used by the law, it depends largely on more or less certain prophecies of the future, and the value is no less real at that time if later the prophecy turns out false than when it comes out true.

Id. at 155, 49 S. Ct. at 292 (citations omitted); accord Rev. Rul. 59-60 § 3.03, 1959-1 C.B. 237 ("Valuation of securities is, in essence, a prophesy as to the future and must be based on facts available at the required date of appraisal."); see also Culver, 722 F.2d at 123 ("Courts are not prophets and juries are not seers. In making awards to compensate injured plaintiffs or the dependents of deceased workers for loss of future earnings, however, these fact-finders must attempt, in some degree, to gauge future events.").

From now on, the majority opinion indicates, there are to be no more prophesies. For example, in cases like Culver we can just arbitrarily assume that whenever someone dies or is injured the value of the future earnings they have lost is $1 million dollars, or $10 million, or zero dollars. Or we can take the

decedent's previous year's earnings, if it is not too much trouble to figure them out, and multiply that amount by some arbitrary number (perhaps the number of years the dead man's father or grandfather lived), and we can forget about discounting future losses to present value. Which dollar figure or multiple of the last year of earnings that we arbitrarily assume will not matter, except of course to the parties themselves and to those who believe that the law ought to strive for results that seek to approximate reality, even when it requires a little prophesy.

The advantages of the majority's method flow from the simplicity that comes from being arbitrary. The more arbitrary the assumption the less that application of it will be hindered by the reality of bothersome facts which are burdensome to find. Adopting this method will "provide[] certainty and finality" and "bypass[] the unnecessary expenditure of judicial resources," relieving courts of the burden of doing what courts are designed to do, which is find facts and apply the law to them. Maj. Op. at 35. Writing the doctrine of ignoble ease into the law will have its advantages.

Of course, we are going to have to overrule some precedent, or perhaps in keeping with the majority's decisional motif we can just arbitrarily assume that the conflicting precedent does not exist. The precedent established by the en banc Court in the Culver case nearly a quarter of a century ago will have to be thrown

overboard, but it is just an admiralty decision anyway.

We will also have to get rid of the Meader ex rel. Long v. United States, 881 F.2d 1056 (11th Cir. 1989), precedent and decisions like it. The Meader case arose under the Federal Tort Claims Act and involved the calculation of an award for future medical expenses and lost future earnings. We held, among other things, that "[i]t is a settled principle of law that [such] an award . . . must be adjusted to its present value to account for two factors: first, the interest the award will earn before it is used to pay for medical expenses or to replace earnings; second, the depreciation the award will suffer over time on account of inflation." Meader, 881 F.2d at 1057–58; see also Dempsey ex rel. Dempsey v. United States, 32 F.3d 1490, 1492 (11th Cir. 1994) (FTCA medical malpractice case stemming from injuries to a newborn, required not only calculating an award for future medical expenses but also calculating a dollar value for the parent's "loss of society and affection of the child" and their loss of the child's services in the future).

Then there is our decision of just a few months ago in Advanced Telecommunications Network, Inc. v. Allen (In re Advanced Telecommunications Network, Inc.), 490 F.3d 1325 (11th Cir. 2007). There the bankruptcy court had been faced with the difficulty of valuing a company's contingent liability arising

from pending litigation against it in state court. Not sure how the result of that litigation against the company could have been predicted, the bankruptcy court took the easy way out and arbitrarily assumed that the value of the contingent liability was zero. Id. at 1335–36. In reversing, we explained:

> Although it may be true, as the bankruptcy court put it, that "no one could have predicted this result with any reasonable certainty," such a precise prediction was not required. The court was instead required to calculate the present value of the liability—the expected cost of the liability times the estimated chance of it ever occurring. Unless either the expected cost or the chances of it occurring are equal to zero (that is, the liability is costless, or the chances of it happening are negligible), the estimated value should be more than zero.

Id. at 1335 (emphasis omitted).

The majority approach in the present case cannot be reconciled with our holding in the Advanced Telecommunications case. Requiring a district court to predict the amount of damages that may be awarded in a pending lawsuit and then to discount that amount by its estimate of the chance of a liability verdict is, the majority here would say, equivalent to "flip[ping] a coin" and is no better than "gaz[ing] into a crystal ball." Maj. Op. at 34. So, the Advanced Telecommunications decision, like so many others of ours that require estimating present value based on predictions about future events, will have to go. All of those prior precedents will have to yield to the easy arbitrary assumption method

of valuation, to the judicial equivalent of the doctrine of ignoble ease.

Teddy Roosevelt is not the only one who extolled the virtue of toil and effort. Henry James once advised a young friend that, "I have in my own fashion learned the lesson that life is effort, unremittingly repeated, and . . . I feel somehow as if real pity were for those who had been beguiled into the perilous delusion that it isn't." Letter from Henry James to Charles Eliot Norton (May 6, 1872), in 1 Henry James Letters,1843–1875, at 276 (Leon Edel ed., 1974). I dissent from the majority's perilous delusion.

T.C. Memo. 2010-182

UNITED STATES TAX COURT

ESTATE OF MARIE J. JENSEN, DECEASED,
VIRGINIA E. MAURER, EXECUTRIX, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 25681-08. Filed August 10, 2010.

Jack Mitnick and Mindy K. Smolevitz, for petitioner.

Michelle L. Maniscalco, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

VASQUEZ, Judge: Respondent determined a $333,244.59 deficiency in the Federal estate tax of the Estate of Marie J. Jensen (decedent). The issue for decision is the amount of the discount for built-in long-term capital gains tax (LTCG tax) that is allowable in computing the fair market value of the estate's

interest in Wa-Klo, Inc (Wa-Klo). The parties agree that: (1) Wa-Klo's net asset value is $3,772,176[1] before reductions for lack of marketability and built-in LTCG tax discounts; (2) the estimated Federal built-in LTCG tax liability is $965,000; and (3) the estate is entitled to a 5-percent reduction for lack of marketability discount. Unless otherwise indicated, all section references are to the Internal Revenue Code (Code) in effect for the date of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. We incorporate by this reference the stipulation of facts and the attached exhibits.

Decedent was a resident of New York when she died on July 31, 2005. When the petition was filed, Virginia E. Maurer (executrix) resided in New York.

In February 2003 decedent created the Marie J. Jensen Revocable Trust, a revocable trust (the trust), and appointed herself trustee. As of decedent's death, the corpus of the trust

[1] The parties stipulated pursuant to Rule 91 that Wa-Klo's net asset value was $4,243,969. Respondent's expert, Klaris, Thomson, & Schroeder, Inc. (KTS), discovered that the estate's expert, Margolin, Winer, & Evens LLP (MWE), overstated Wa-Klo's net asset value by $471,793. The parties on brief agree that $3,772,176 is the correct value, which we accept.

included 164 shares of common stock in Wa-Klo,[2] a closely held C corporation incorporated in 1956 under New Hampshire law.

As of the date of decedent's death Wa-Klo's principal asset was a 94-acre waterfront parcel of real estate that extended across the city lines of Jaffrey and Dublin, New Hampshire. The improvements to the real estate include state-of-the-art facilities such as playing fields, an indoor gymnasium, a horse stable, a dining hall, cottages, and bunkhouses. Wa-Klo operates a summer camp for girls, Camp Wa-Klo, on the real estate.

The estate hired MWE, see supra note 1, to value the estate's 82-percent interest in Wa-Klo as of the date of decedent's death. MWE used the adjusted book value method[3] and attributed to Wa-Klo a net asset value of $4,243,969 (before

[2] The shares of Wa-Klo were held as follows: (1) The trust--164 shares (82-percent interest); (2) Ina Fletcher--18 shares (9-percent interest); and (3) Kathleen Cocoman--18 shares (9-percent interest).

[3] Generally, three kinds of valuation methods are used to determine the fair market value (FMV) of stock in a closely held corporation: (1) The market method; (2) the income method; and (3) the cost method. See Estate of Noble v. Commissioner, T.C. Memo. 2005-2; Estate of Borgatello v. Commissioner, T.C. Memo. 2000-264. The adjusted book value method is a variation of the cost method that restates the assets and liabilities of a company to their FMV as of the valuation date and reduces the restated FMV of the assets by the restated value of the liabilities in order to determine the company's net worth. See Julian v. Julian, No. 1892-VCP, slip op. at 5 n.13 (Del Ch. Mar. 22, 2010); Shooltz v. Shooltz, 498 S.E.2d 437, 443 (Va. Ct. App. 1998).

discounts for lack of marketability and built-in LTCG tax).[4] MWE estimated a built-in LTCG tax of $965,000.[5] MWE subtracted the $965,000 built-in LTCG tax from the $4,243,969 net asset value and calculated a $3,278,969 after-tax net asset value for Wa-Klo,

---

[4] MWE based its valuation on the following:

Assets	Book value	Restated value
Cash	$934,973	$934,973
Salary advances	22,932	22,932
Federal prepaid tax	27,032	27,032
State prepaid tax	10,047	10,047
Real estate, buildings, and other depreciable assets	471,793	[1]3,776,793
Total	1,466,777	4,771,777
Liabilities		
Payroll tax payable	$2,808	$2,808
Accrued liabilities	-0-	525,000
Total	2,808	527,808
Equity	$1,463,969	$4,243,969

[1] $3,300,000 (restated FMV of the real estate and improvements based on appraisal by Whitney Associates) + $5,000 (estimated salvage value of equipment) + $471,793 (MWE math error, see supra note 1). MWE relied on Whitney Associates' appraisal of the real estate and its improvements. Whitney Associates is a residential and commercial real estate appraiser. The estate hired Whitney Associates to appraise the real estate and its improvements. Whitney Associates employed a cost method and a market method. Under the cost method it calculated a value of $3,600,000; under the market method it calculated a value of $3 million. Whitney Associates reconciled the two values on the basis of a number of factors and calculated a final value of $3,300,000. Whitney Associates did not use an income method because it concluded that it was unreliable and not an applicable method for the purpose of the appraisal.

[5] $3,300,000 (FMV real estate) - $500,000 (estimated tax basis) x 34% (tax rate) + $13,000 (tax increase for income over $100,000). The estate on brief now asserts that it is entitled to a discount of $1,133,283 for State and Federal tax.

of which $2,688,755 was attributable to the estate's 82-percent interest (before discount for lack of marketability). MWE concluded that a dollar-for-dollar discount for the built-in LTCG tax was appropriate because:

> The adjusted book value method is based on the inherent assumption that the assets will be liquidated, which automatically gives rise to a tax liability predicated upon the built-in capital gains that result from appreciation in the assets. This was clearly recognized in the decision of the United States Court of Appeals for the Fifth Circuit in the case of the Estate of Dunn v. Commissioner, * * * [which allowed a 34-percent discount]. [Citation omitted.]

MWE did not use any income methods to value the estate's interest in Wa-Klo because it concluded that: (1) Wa-Klo did not generate substantial cashflows from its operation of Camp Wa-Klo; (2) the best use of Wa-Klo could be derived from a sale of its assets because its operating performance declined in fiscal years 2004 and 2005 and because the "profitability benchmark" for summer camps with revenues below $1 million was only 5.3 percent; (3) Wa-Klo's value was driven by the appreciated value of its assets; and (4) the estate's 82-percent interest in Wa-Klo was a controlling interest.

MWE did not use any market methods to value the estate's 82-percent interest in Wa-Klo because it concluded that: (1) Wa-Klo owned a specific asset, appreciated real estate, that had a

specific appraised value; and (2) the market method was incorporated into Whitney Associates' appraisal of the real estate.

As of the date of decedent's death, neither a sale or liquidation of Wa-Klo nor a sale of its assets was imminent or planned. There is no evidence in the record of any arm's-length sale of Wa-Klo's common stock near the date of decedent's death.

The executrix filed a Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return. The executrix initially reported a value of $2,600,000 for the estate's 82-percent interest in Wa-Klo (after discounts for lack of marketability and built-in LTCG tax) based on MWE's appraisal. The executrix filed an amended Form 706 and reduced the value of the estate's interest in Wa-Klo to $2,554,317, reporting a total taxable estate of $4,296,449 and a Federal estate tax liability of $1,306,736.

Respondent examined the amended Form 706 and determined a value of $3,268,465 for the estate's interest in Wa-Klo (after a discount for lack of marketability of 5 percent and a discount of $250,042[6] for built-in LTCG tax). He determined the estate tax deficiency of $333,244.59 and sent the executrix a notice of deficiency.

[6] There is no evidence in the record as to how respondent determined the $250,042 discount for built-in LTCG tax.

Respondent's expert, KTS, like the estate's expert, used a cost method to value the estate's interest in Wa-Klo. Using the financial statements prepared by MWE, KTS also calculated Wa-Klo's net asset value at $4,243,969 (before discounts for lack of marketability and built-in LTCG tax).

KTS then analyzed data for other investments that have exposure to built-in capital gains to determine the discount for the built-in LTCG tax. Specifically, KTS undertook to measure the amount by which the built-in LTCG tax exposure of each of six closed-end funds[7] depressed the value of the closed-end funds in relation to their net asset values. As shown in the table infra note 8, KTS found that the built-in capital gains exposure for those six closed-end funds ranged from 10.7 to 41.5 percent. KTS also found that two of the closed-end funds with high built-in capital gains exposure, Royce Value Trust and Gabelli Equity Trust, were selling at a premium to net asset value, while the closed-end fund with the least built-in capital gains exposure, Tri-Continental Corp., was selling at the highest discount from net asset value. On the basis of those findings, KTS concluded that it was "unable to find a direct correlation, at least up to

[7] A closed-end fund is a type of investment company with the following characteristics: (1) Not continuously offered; (2) secondary market pricing; (3) not redeemable; (4) trading during the day; and (5) greater illiquidity. See Moriarty & McNeily, Closed-End Mutual Funds, 19 Reg. Fin. Pl. § 3:422 (May 2010).

41.5 percent of net asset value, between higher exposure to built-in capital gains tax and discounts from net asset value" among the six closed-end funds that it examined.[8]

KTS also compared closed-end funds that primarily hold real estate investments with those that hold non-real-estate financial securities. As shown in the table infra note 9, KTS found, as between those two categories of funds, that the discounts from net asset value were generally larger for closed-end funds that primarily held real estate investments.[9]

---

[8] KTS' analysis was based on the following six closed-end funds:

Fund	Net asset value	Stock price	Percent difference	Percent unrealized investment appreciation
Adams Express	15.49	13.29	-14.20	25.8
Gabelli Equity Trust	8.83	9.07	.72	26.2
General American Investors	39.32	34.18	-13.10	41.5
Liberty All-Star Equities	9.06	9.5	4.90	13.8
Royce Value Trust	19.02	20.15	5.90	36.7
Tri-Continental Corp.	22.02	18.46	-16.20	10.7

[9] KTS calculated the following range of values:

(continued...)

KTS divided the $2,800,000 value of Wa-Klo's real estate and its improvements (net of basis) by Wa-Klo's $4,243,969 net asset value and concluded that 66 percent of that net asset value was subject to tax at the corporate and shareholder levels. KTS concluded that with a built-in capital gain equal to 66 percent of Wa-Klo's net asset value, a discount would be considered by a prudent willing buyer. KTS opined that since it could not find, from its examination of the closed-end funds listed supra note 8, any direct correlation between exposure to built-in capital gains tax and discounts from net asset value at levels of exposure of 41.5 percent or less, KTS could not conclude that any consideration should be given for Wa-Klo's built-in LTCG tax exposure up to 41.5 percent of its net asset value. But KTS opined that full consideration (i.e., a dollar-for-dollar discount) should be given for Wa-Klo's built-in LTCG tax exposure above 41.5 percent.

KTS found that the portion of Wa-Klo's exposure to built-in LTCG tax in excess of 41.5 percent of net asset value was 24.5

---

[9](...continued)

Percent discount from net asset value	Specialized equity funds	Specialized equity funds holding real estate
Minimum	-16.0	-16.8
Mean	-6.1	-14.8
Median	-8.9	-15.2
Maximum	32.5	-10.8
Fund count	30	11

percent (66% - 41.5%). KTS multiplied 24.5 percent by Wa-Klo's $4,243,969 net asset value for a total of $1,039,772. KTS applied a combined State and Federal tax rate of 40 percent and calculated a combined tax liability of $415,909 (40% x $1,039,772), which it concluded was 9.8 percent of Wa-Klo's $4,243,969 net asset value ($415,909 ÷ $4,243,969).

KTS concluded that the estate was entitled to a discount of 10 percent (i.e., $424,397, about 45 percent of the built-in LTCG tax). KTS reasoned that a 10-percent discount was supported by the fact that the difference in the mean or average discount between closed-end funds with investments in real estate and those with investments in marketable securities was 8.7 percent (14.8% - 6.1%) or 9 percent rounded. See supra note 9.

KTS also opined in its report that generally there are methods to avoid paying the built-in LTCG tax by engaging in a section 1031 like-kind exchange or by converting a C corporation to an S corporation. It also acknowledged that there are certain limits to avoidance. For example, a like-kind exchange "limits the properties which may be acquired to those whose owner also [wished] to make" an exchange, and conversion to S corporation status requires a 10-year holding period before the potential tax liability would be eliminated. KTS did not, however, discuss in its report whether a like-kind exchange or conversion to S

corporation status was a viable method for a hypothetical purchaser of the estate's Wa-Klo stock.

At trial, KTS discovered that the adjusted balance sheet prepared by MWE incorrectly listed the restated value for the land, buildings, and salvage value of the equipment as $3,776,793 whereas the correct value was $3,305,000. See supra note 1. Accordingly, KTS opined that Wa-Klo's correct net asset value was $3,772,176 and calculated a revised discount of 13 percent for the built-in LTCG tax (i.e., $490,382.88 (about 50 percent of the built-in LTCG tax)). Respondent on brief asserts the correct discount for the built-in LTCG tax attributable to the estate's 82-percent interest in Wa-Klo is about $402,114 ($490,383 x 82%).

OPINION

I. Burden of Proof

As a general rule, a notice of deficiency is entitled to a presumption of correctness, and the taxpayer bears the burden of proving the Commissioner's deficiency determinations incorrect. Rule 142(a); Welch v. Helvering, 290 U.S. 111, 115 (1933). Section 7491(a), however, provides that if a taxpayer introduces credible evidence and meets certain other prerequisites, the Commissioner shall bear the burden of proof with respect to

factual issues[10] relating to the taxpayer's liability for a tax imposed under subtitle A or B of the Code.

Our conclusions are based on a preponderance of the evidence, and thus the allocation of the burden of proof is immaterial. See Estate of Bongard v. Commissioner, 124 T.C. 95, 111 (2005).

II. FMV of the Estate's 82-Percent Interest in Wa-Klo

A. General Principles

Property includable in the value of a decedent's gross estate is to be valued as of the date of the decedent's death. Sec. 2031(a). For purposes of the estate tax, property value is determined by finding the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts. Sec. 20.2031-1(b), Estate Tax Regs. The willing buyer and willing seller are hypothetical persons. Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990) (citing Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981)). The hypothetical buyer and seller are presumed to be dedicated to

[10] Valuation is a factual determination, and the trier of fact must weigh all relevant evidence and draw appropriate inferences. Estate of Deputy v. Commissioner, T.C. Memo. 2003-176.

achieving the maximum economic advantage. Id. (citing Estate of Curry v. United States, 706 F.2d 1424, 1429 (7th Cir. 1983)).

B. Expert Opinions Generally

Each party relies on an expert opinion to determine the discount for built-in LTCG tax that the estate is entitled to. In deciding valuation cases, courts often look to the opinions of expert witnesses. We evaluate expert opinions in the light of all the evidence in the record, and we are not bound by the opinion of any expert witness. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Shepherd v. Commissioner, 115 T.C. 376, 390 (2000), affd. 283 F.3d 1258 (11th Cir. 2002). The persuasiveness of an expert's opinion depends largely upon the disclosed facts on which it is based. Estate of Davis v. Commissioner, 110 T.C. 530, 538 (1998). We may reject, in whole or in part, any expert opinion. See id. Because valuation necessarily involves an approximation, the figure at which we arrive need not be directly traceable to specific testimony or a specific expert opinion if it is within the range of values that may be properly derived from consideration of all the evidence. Estate of True v. Commissioner, T.C. Memo. 2001-167, affd. 390 F.3d 1210 (10th Cir. 2004) (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285).

C. The Estate's Arguments

The estate raises the following arguments against respondent's valuation. First, the estate argues that it is entitled to a 100-percent discount (i.e., $1,133,283), or something very close thereto, for the built-in LTCG tax pursuant to the Court of Appeals for the Second Circuit's decision in Eisenberg v. Commissioner, 155 F.3d 50 (2d Cir. 1998), vacating T.C. Memo. 1997-483.[11] Second, according to the estate, if given the opportunity to review the discount for built-in capital gains tax issue again, that court would consider the recent decisions in Estate of Dunn v. Commissioner, 301 F.3d 339 (5th Cir. 2002), revg. T.C. Memo. 2000-12, and Estate of Jelke v. Commissioner, 507 F.3d 1317 (11th Cir. 2007), vacating T.C. Memo. 2005-131, which allowed discounts for the built-in LTCG tax in full, and might adopt the approach of those courts. Third, the estate argues that respondent's expert's reliance on closed-end funds to determine the discount for the built-in LTCG tax is misplaced. Finally, the estate argues that respondent's reliance on alternate methods, such as a section 1031 like-kind exchange, to avoid or defer payment of the built-in LTCG tax is also

[11] Under the Golsen rule, we follow the law of the circuit in which the case is appealable, here the Second Circuit. See Golsen v. Commissioner, 54 T.C. 742 (1970), affd. 445 F.2d 985 (10th Cir. 1971).

misplaced. Naturally, respondent has asserted arguments to the contrary. We now turn to analyzing the parties' contentions.

1. Built-In LTCG Tax Generally

The General Utilities doctrine,[12] as codified in former sections 336 and 337, allowed the tax-free liquidation of a corporation, and thus, the complete avoidance of corporate-level capital gains. See Eisenberg v. Commissioner, supra at 54-55. Before the General Utilities doctrine was repealed in the Tax Reform Act of 1986, Pub. L. 99-514, sec. 631, 100 Stat. 2269, we consistently rejected taxpayers' attempts to discount a corporation's value on the basis of any inherent capital gain tax liability. We noted that the liability could be avoided at the corporate level by employing that doctrine. See, e.g., Estate of Piper v. Commissioner, 72 T.C. 1062, 1087 n.27 (1979). In Estate of Davis v. Commissioner, supra, however, we allowed a discount for the built-in LTCG tax liability on the basis of the facts and circumstances.[13]

---

[12] The General Utilities doctrine originated in General Utils. & Operating Co. v. Helvering, 296 U.S. 200 (1935).

[13] Since Estate of Davis v. Commissioner, 110 T.C. 530 (1998), we have frequently applied a present-value approach based on all the facts and circumstances in subsequent valuation cases to determine the taxpayer's discount for the built-in LTCG tax liability. See Estate of Litchfield v. Commissioner, T.C. Memo. 2009-21; Estate of Jelke v. Commissioner, T.C. Memo. 2005-131, vacated 507 F.3d 1317 (11th Cir. 2007); Estate of Borgatello v. Commissioner, T.C. Memo. 2000-264; Estate of Dunn v. Commissioner, T.C. Memo. 2000-12, revd. 301 F.3d 339 (5th Cir.

(continued...)

Subsequently, the Court of Appeals for the Second Circuit held that a discount for built-in capital gains tax was allowable. See Eisenberg v. Commissioner, supra at 57-59 (citing Estate of Davis v. Commissioner, supra). The court reasoned that since the General Utilities doctrine was repealed, a hypothetical willing buyer would likely pay less for the shares of a corporation because of the contingent capital gains tax liability. Id. It also reasoned that the contingent liability was not too speculative to preclude a discount. Id. The court opined:

> Where there is a relatively sizable number of potential buyers who can avoid or defer the tax, the fair market value of the shares might well approach the pre-tax market value of the real estate. Potential buyers who could avoid or defer the tax would compete to purchase the shares, albeit in a market that would include similar real estate that was not owned by a corporation. However, where the number of potential buyers who can avoid or defer the tax is small, the fair market value of the shares might be only slightly above the value of the real estate net of taxes. In any event, all of these circumstances should be determined as a question of valuation * * * [Emphasis added.[14]]

---

[13](...continued)
2002); Estate of Jameson v. Commissioner, T.C. Memo. 1999-43, vacated 267 F.3d 366 (5th Cir. 2001). In the latter cases, we have projected the tax liability into future years, in some cases allowing for appreciation of the assets, and discounted the built-in LTCG tax liability to its present value as of the valuation date.

[14] The Court of Appeals for the Second Circuit, however, did not prescribe the method to calculate the discount.

Id. at 59 n.16. The court did not determine the amount of the discount and remanded the matter to our Court.

As stated supra, the estate asks us to embrace the dollar-for-dollar approach for valuations adopted by the Court of Appeals for the Eleventh Circuit in Estate of Jelke v. Commissioner, supra, and applied by the Court of Appeals for the Fifth Circuit in Estate of Dunn v. Commissioner, supra, and to speculate as to how the Court of Appeals for the Second Circuit might now rule in view of those decisions.

Respondent, on the other hand, asserts that the estate's position is inconsistent with Eisenberg and, citing Golsen v. Commissioner, 54 T.C. 742 (1970), affd. 445 F.2d 985 (10th Cir. 1971), asserts that the Court must follow the rule of the Second Circuit.

We decline to speculate as to how the Court of Appeals for the Second Circuit may hold in the future. See Estate of Charania v. Commissioner, 608 F.3d 67, 75 (1st Cir. 2010) (and cases cited thereat), affg. in part and revg. in part 133 T.C. 122 (2009). But we shall consider the parties' positions in view of Eisenberg and this Court's prior decisions.

2. Use of Closed-End Funds To Value the Estate's Interest

As stated supra, the estate argues that KTS' calculation of a $490,382.88 discount for Wa-Klo's built-in LTCG tax using data collected for certain closed-end funds is erroneous.

Under the facts of this case, we agree and do not believe that the closed-end funds are comparable to the estate's interest in Wa-Klo. First, Wa-Klo operates a summer day camp, and its assets consist mainly of the single parcel of real estate, its related improvements, and equipment. See sec. 2031(b); Rev. Rul. 59-60, sec. 4.02(h), 1959-1 C.B. 237, 242 (stock of a closely held corporation should be valued by taking into consideration, in addition to other factors, the value of stock of publicly traded corporations engaged in the same or similar lines of business). Closed-end funds, on the other hand, typically invest in various sectors (e.g., utilities and healthcare) and in various asset classes (e.g., securities, real estate, and fixed income).[15] See Schonfeld & Kerwin, "Organization of a Mutual Fund", 49 Bus. Law. 107, 113 (1993).[16] Moreover, closed-end funds invest indirectly in real estate through real estate investment trusts and typically hold multiple investments in

[15] Indeed, the closed-end funds that KTS selected invested in various business sectors including energy, healthcare, and utilities.

[16] For information about closed-end funds generally see "The Closed-End Fund Market, 2009", ICI Research Fundamentals, Vol. 19, No. 4 (2010), available at http://www.ici.org/pdf/fm-v19n4.pdf; Closed-End Fund Types and Strategies, CEFConnect.com, available at http://www.cefconnect.com/Education/TypesStrategiesCEF.aspx, and Charles, Wortz, & Kemler, "Closed-End Funds 101", Equity Research, June 30, 2009, available at http://www.closed-endfunds.com/_/docs/content/Learn/ResearchArticles/CEF101_0630.pdf?time=20100707100637.

various types of real estate such as office complexes, apartment buildings, and shopping centers.[17] Second, discounts from a closed-end fund's net asset value are attributable to several factors including supply and demand, manager or fund performance, investor confidence, or liquidity. See Kraakman, "Taking Discounts Seriously: The Implications of 'Discounted' Share Prices as an Acquisition Motive", 88 Colum. L. Rev. 891, 902-905 (1988); Smith, "A Capital Markets Approach to Mass Tort Bankruptcy", 104 Yale L.J. 367, 412-413 (1994). Moreover, studies on the effects of unrealized capital gains on the discounts from a closed-end fund's net asset value are inconclusive. See Kraakman, supra at 904; Smith, supra at 413. Consequently, we do not accord KTS' valuation much weight.

3. Alternate Methods To Avoid Payment of the Built-In LTCG Tax

Respondent, on the basis of his expert's report and testimony, argues that the discount for Wa-Klo's built-in LTCG tax is significantly less than $1,133,283 (or 100 percent) since there are, according to respondent, numerous methods by which potential buyers of the estate's Wa-Klo stock could avoid or defer the tax.

The suggested methods can at best only defer the recognition of the built-in LTCG tax, which we think a hypothetical seller

[17] For the definition of a real estate investment trust see sec. 856.

and buyer would consider in their negotiations. See Estate of Davis v. Commissioner, 110 T.C. at 550; Estate of Litchfield v. Commissioner, T.C. Memo. 2009-21; cf. Estate of Jones v. Commissioner, 116 T.C. 121, 136-138 (2001) (the hypothetical buyer and seller of certain partnership interests would negotiate with the understanding that a section 754 election, which would eliminate any gains for the purchaser, would be made and the price would not reflect a discount for built-in capital gains). Moreover, each method has its limitations, which a hypothetical seller and buyer would also consider in their negotiations.[18] Eisenberg v. Commissioner, 155 F.3d at 56; Estate of Jameson v. Commissioner, T.C. Memo. 1999-43, vacated 267 F.3d 366 (5th Cir. 2001).

In short, we are not convinced that any viable method for avoidance of the built-in LTCG tax exists for a hypothetical buyer of the estate's Wa-Klo stock. Thus, we do not think that

[18] For example, electing S corporation status would require the unanimous consent of Wa-Klo's shareholders, and the impact of sec. 469 or 1374 might affect the decision to convert Wa-Klo from C to S corporation status. See Eisenberg v. Commissioner, 155 F.3d 50, 56 (2d Cir. 1988), vacating T.C. Memo. 1997-483; Estate of Jameson v. Commissioner, T.C. Memo. 1999-43. Sec. 1031 would require both a willing exchanger and availability of property of the same nature and character. See Fredericks v. Commissioner, T.C. Memo. 1994-27; Greene v. Commissioner, T.C. Memo. 1991-403; sec. 1.1031(a)-1(b), Income Tax Regs.; see also C. Bean Lumber Transp., Inc. v. United States, 68 F. Supp. 2d 1055, 1058-1059 (W.D. Ark. 1999).

the discount for the built-in LTCG tax is significantly reduced as respondent argues.

D. The Estate's Discount for the Built-In LTCG Tax

As stated supra, the estate argues that it is entitled to a 100-percent discount (i.e., $1,133,283), or something very close thereto, for the built-in LTCG tax.

As also stated supra, we do not give much weight to respondent's expert's valuations. Aside from the flaws discussed supra, respondent's expert did not account for the likelihood that Wa-Klo's assets would appreciate (and that concomitantly the built-in LTCG tax would increase) nor take into account time value of money concepts. See Estate of Litchfield v. Commissioner, T.C. Memo. 2009-21; Estate of Borgatello v. Commissioner, T.C. Memo. 2000-264. We may assume arguendo, on the evidence in the record, that a present-value approach is applicable to determine the estate's discount for the built-in LTCG tax. Taking into account all the facts and circumstances, we have determined a range of values as follows.[19] We have

[19] We agree with both experts that a cost method rather than an income method or a market method should be used to determine the value of the estate's interest in Wa-Klo. See Rev. Rul. 59-60, sec. 5, 1959-1 C.B. 237, 242-243 ("The value of the stock of a closely held investment or real estate holding company * * * is closely related to the value of the assets underlying the stock. For companies of this type the appraiser should determine the fair market values of the assets of the company.").

calculated future values of the $3,300,000[20] fair market value of the land and the related improvements using interest (or appreciation) rates of 5[21] and 7.725[22] percent compounded annually over 17 years as follows: $7,563,660.44 and $11,692,152.92, respectively.[23] See Estate of Litchfield v. Commissioner, supra;

---

[20] This amount is based on the formula $FV = P(1+r)^y$ where P is the principal, r is the rate of interest, and y is the compound period in years. See, e.g., Hall v. Birchfield, 718 S.W.2d 313, 340 (Tex. App. 1986).

We also note that neither expert discussed the amount of the built-in LTCG tax, if any, attributable to the $5,000 of equipment; thus, we do not do so either.

[21] Whitney Associates applied a 5-percent appreciation rate in its sale comparison analysis.

[22] We have calculated an average 7.725-percent pretax return of income based on the data provided by MWE using the following: 7.8% (2001) + 9.3% (2002) + 8.8% (2003) + 5.0% (2004). We did not include as outliers the 1.6- and the 63.3-percent figures for 2005.

[23] We have calculated an average useful or depreciable life remaining in the real estate and its related improvements of 16.6 years, which we have rounded up to 17 years, using the depreciation figures estimated by Whitney Associates in its cost method and allowing zero as the depreciation allowance for the real estate. See Estate of Borgatello v. Commissioner, T.C. Memo. 2000-264 (applying a 1.75-percent capitalization rate and a 24-percent discount rate based on the evidence in the record). Neither party introduced evidence of a turnover period. We therefore use 17 years as a proxy for the turnover rate on the theory that an asset would be retired once its useful life is exhausted. See Estate of Litchfield v. Commissioner, T.C. Memo. 2009-21 (accepting expert's estimated annual turnover or sale rates for the assets); Estate of Borgatello v. Commissioner, supra n.10 (assuming a 10-year holding period). We apply it to the real estate and its related improvements because neither party has provided evidence allocating the $3,300,000 value among the real estate and its related improvements, evidence allocating

(continued...)

[23](...continued)
the estimated tax basis of $500,000 among the real estate and its related improvements, or evidence allocating the built-in LTCG tax among the real estate and its related improvements. Cf. Gates v. Commissioner, 135 T.C. __, __ n.18 (2010) (slip op. at 23 (Court would not allocate gain among the real estate and the house because the parties did not provide evidence to allow for an allocation).

(continued...)

Estate of Borgatello v. Commissioner, supra.

After taking into account the future values of $7,563,660.44 and $11,692,152.92 and the estimated tax basis of $500,000, we have calculated long-term capital gains of $7,063,660.44 and $11,192,152.92, respectively. See sec. 1001(a).

The parties have represented that the combined Federal and State tax rate is 40 percent. Applying a 40-percent tax rate to the long-term capital gains of $7,063,660.44 and $11,192,152.92, we have determined tax liabilities of $2,825,464.18, and $4,476,861.17, respectively.

Applying discount rates of 5 and 7.725 percent compounded annually over 17 years to the built-in LTCG tax liabilities of $2,825,464.18 and $4,476,861.17, we have determined present values[24] (or discounts) for those built-in LTCG tax liabilities of $1,232,740.66 and $1,263,551.88, respectively.[25] See Estate of Litchfield v. Commissioner, supra; Estate of Borgatello v. Commissioner, supra.

---

[23](...continued)

Real estate	-0-
Total	583

583 (total depreciable years) ÷ 35 (total properties) = 16.7.

[24] These values are based on the formula Present Value = Future Value ÷ $(1 + r)^n$ where n is the compound period in years and r is the interest rate.

[25] We note that the estate's share of that discount is 82 percent.

As stated supra, KTS calculated a discount of $490,382.88 for the built-in LTCG tax. The estate, on the other hand, now asserts that it is entitled to a discount of $1,133,283 for State and Federal taxes. See supra note 5.

On the basis of the range of values we and the parties have calculated, we accept the estate's value for the built-in LTCG tax discount of $1,133,283 because although not precise, it is within the range of values that may be derived from the evidence (and the estate did not argue for a greater amount).[26] See Estate of Davis v. Commissioner, 110 T.C. at 537; see also Estate of Litchfield v. Commissioner, supra; Estate of Borgatello v. Commissioner, supra. We do not give much weight to the $490,382.88 discount that KTS calculated. The estate's share of that $1,133,283 discount is $929,292.06 (82 percent x $1,133,283).

To reflect the foregoing,

Decision will be entered under Rule 155.

[26] Applying a compound period of zero (assuming an immediate sale of the assets), with either interest rate the present value of the built-in LTCG is $1,200,000.

116 T.C. No. 11

UNITED STATES TAX COURT

ESTATE OF W.W. JONES II, DECEASED, A.C. JONES IV, INDEPENDENT EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 13926-98. Filed March 6, 2001.

D formed a family limited partnership (JBLP) with his son and transferred assets including real property, to JBLP in exchange for a 95.5389-percent limited partnership interest. D also formed a family limited partnership (AVLP) with his four daughters and transferred real property to AVLP in exchange for an 88.178-percent limited partnership interest. D's son contributed real property in exchange for general and limited partnership interests in JBLP, and the daughters contributed real property in exchange for general and limited partnership interests in AVLP. All of the contributions were properly reflected in the capital accounts of the contributing partners. Immediately after formation of the partnerships, D transferred by gift an 83.08-percent limited partnership interest in JBLP to his son and a 16.915-percent limited partnership interest in AVLP to each of his daughters.

Held: The transfers of property to the partnerships were not taxable gifts. See Estate of Strangi v. Commissioner, 115 T.C. 478 (2000).

Held, further, sec. 2704(b), I.R.C., does not apply to this transaction. See Kerr v. Commissioner, 113 T.C. 449 (1999).

Held, further, the value of D's gift to his son was 83.08-percent of the value of the underlying assets of JBLP, reduced by a lack-of-marketability (8%) discount. The value of D's gift to each of his daughters was 16.915 percent of the value of the underlying assets of AVLP, reduced by secondary market (40%) and lack-of-marketability (8%) discounts.

Held, further, the gifts of limited partnership interests are not subject to additional lack-of-marketability discounts for built-in capital gains. Estate of Davis v. Commissioner, 110 T.C. 530 (1998), distinguished.

William R. Cousins III, Robert Don Collier, Robert M. Bolton, and Todd A. Kraft, for petitioner.

Deborah H. Delgado and Gerald L. Brantley, for respondent.

COHEN, Judge: Respondent determined a deficiency of $4,412,527 in the 1995 Federal gift tax of W.W. Jones II. The issues for decision are (alternatively): (1) Whether the transfers of assets on formation of Jones Borregos Limited Partnership (JBLP) and Alta Vista Limited Partnership (AVLP) (collectively, "the partnerships") were taxable gifts pursuant to section 2512(b); (2) whether the period of limitations for assessment of gift tax deficiency arising from gifts on formation

is closed; (3) whether restrictions on liquidation of the partnerships should be disregarded for gift tax valuation purposes pursuant to section 2704(b); and (4) the fair market value of interests in the partnerships transferred by gift after formation. Unless otherwise indicated, all section references are to the Internal Revenue Code in effect on the date of the transfers, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated, and the stipulated facts are incorporated in our findings by this reference. W.W. Jones II (decedent), resided in Corpus Christi, Texas, at the time the petition in this case was filed. Decedent subsequently died on December 17, 1998, and a motion to substitute the estate of W.W. Jones II, deceased, A.C. Jones IV, independent executor, as petitioner was granted. The place of probate of decedent's estate is Nueces County, Texas. At the time of his appointment as executor, A.C. Jones IV (A.C. Jones), also resided in Nueces County, Texas.

For most of his life, decedent worked as a cattle rancher in southwest Texas. Decedent had one son, A.C. Jones, and four daughters, Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, and Lorine Jones Booth.

During his lifetime, decedent acquired, by gift or bequest, the surface rights to several large ranches, including the Jones Borregos Ranch, consisting of 25,669.49 acres, and the Jones Alta Vista Ranch, consisting of 44,586.35 acres. These ranches were originally acquired by decedent's grandfather and have been held by decedent's family for several generations. The land on these ranches is arid natural brushland, and commercial uses include raising cattle and hunting.

Motivated by his desire to keep the ranches in the family, decedent became involved in estate planning matters beginning in 1987. In 1994, decedent's certified public accountant suggested that decedent use partnerships as estate and business planning tools. Following up on this suggestion, A.C. Jones prepared various projections for decedent concerning a hypothetical transfer of the ranches to partnerships and the discounted values that would attach to the partnership interests for gift tax purposes.

A.C. Jones, Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, and Lorine Jones Booth each owned a one-fifth interest in the surface rights of the Jones El Norte Ranch. They acquired this ranch by bequest from decedent's aunt in 1979. The Jones El Norte Ranch was also originally owned by decedent's grandfather and has also been owned by decedent's extended family for several generations.

Effective January 1, 1995, decedent and A.C Jones formed JBLP under Texas law. Decedent contributed the surface estate of the Jones Borregos Ranch, livestock, and certain personal property in exchange for a 95.5389-percent limited partnership interest. The entire contribution was reflected in the capital account of decedent. A.C. Jones contributed his one-fifth interest in the Jones El Norte Ranch in exchange for a 1-percent general partnership interest and a 3.4611-percent limited partnership interest.

On January 1, 1995, the same day that the partnership was effectively formed, decedent gave to A.C. Jones an 83.08-percent interest in JBLP, leaving decedent with a 12.4589-percent limited partnership interest. Decedent used a document entitled "Gift Assignment of Limited Partnership Interest" to carry out the transfer. The document stated that decedent intends that A.C. Jones receive the gift as a limited partnership interest.

Federal income tax returns for 1995, 1996, 1997, and 1998 were filed for JBLP and signed by A.C. Jones as tax matters partner. Attached to each return were separate Schedules K-1 for each general partnership interest and each limited partnership interest. The Schedules K-1 for the limited partnership interest of A.C. Jones included the interest in partnership received by gift from decedent.

Also effective January 1, 1995, decedent and his four daughters formed AVLP under Texas law. Decedent contributed the surface estate of the Jones Alta Vista Ranch in exchange for an 88.178-percent limited partnership interest. The contribution was reflected in decedent's capital account. Susan Jones Miller and Elizabeth Jones each contributed their one-fifth interests in the Jones El Norte Ranch in exchange for 1-percent general partnership interests and 1.9555-percent limited partnership interests, and Kathleen Jones Avery and Lorine Jones Booth each contributed their one-fifth interest in the Jones El Norte Ranch in exchange for 2.9555-percent limited partnership interests. The following chart summarizes the ownership structure of AVLP immediately after formation:

Partner	Percentage	Interest
Elizabeth Jones	1.0	General
	1.9555	Limited
Susan Jones Miller	1.0	General
	1.9555	Limited
Kathleen Jones Avery	2.9555	Limited
Lorine Jones Booth	2.9555	Limited
Decedent	88.178	Limited

On January 1, 1995, the same day that the partnership was effectively formed, decedent gave to each of his four daughters a 16.915-percent interest in AVLP, leaving decedent with a 20.518-percent limited partnership interest. Decedent used four separate documents, one for each daughter, entitled "Gift Assignment of Limited Partnership Interest" to carry out the

transfers. Each document stated that decedent intended for his daughters to receive the gifts as limited partnership interests.

Federal income tax returns for 1995, 1996, 1997, and 1998 were filed for AVLP and signed by Elizabeth Jones as tax matters partner. Attached to each return were separate Schedules K-1 for each general partnership interest and each limited partnership interest. The Schedules K-1 for each daughter's limited partnership interest included the partnership interest received by gift from decedent.

Decedent's attorney drafted the partnership agreements of both JBLP and AVLP with the intention of creating substantial discounts for the partnership interests that were transferred by gift. Both partnership agreements set forth conditions for when an interest that is transferred by gift or by other methods may convert to a limited partnership interest. Section 8.3 of the JBLP agreement provides that the general partner and 100 percent of the limited partners must approve the conversion to a limited partnership interest in writing, and section 8.3 of the AVLP agreement provides that the general partners and 75 percent of the remaining limited partners must approve the conversion in writing. Both agreements also require that an assignee execute a writing that gives assurances to the other partners that the assignee has acquired such interest without the intention to distribute such interest, and the assignee must execute a

counterpart to the partnership agreement adopting the conditions therein.

Sections 8.4 and 8.5 of the partnership agreements provide that, before a partner may transfer an interest in the partnerships to anyone other than decedent or any lineal descendant of decedent, the partnership or remaining partners shall have the option to purchase the partnership interest for the lesser of the agreed upon sales price or appraisal value. The partnership may elect to pay the purchase price in 10 annual installments with interest set at the minimum rate allowed by the rules and regulations of the Internal Revenue Service.

Section 9.2 of the agreements provides that the partnerships will continue for a period of 35 years. Section 9.3 provides that a limited partner will not be permitted to withdraw from the partnership, receive a return of contribution to capital, receive distributions in liquidation, or redemption of interest except upon dissolution, winding up, and termination of the partnership.

Section 9.4 of the partnership agreements provides for the removal of a general partner and the dissolution of the partnership. The AVLP agreement provides that a general partner may be removed at any time by the act of partners owning an aggregated 75-percent interest in the partnership. The JBLP agreement provides that a general partner may be removed at any time by the act of the partners owning an aggregated 51-percent

interest in the partnership. After removal, if there is no remaining general partner, the remaining limited partners shall designate a successor general partner. If the limited partners fail to designate a successor general partner within 90 days, the partnership will dissolve, affairs will be wound up, and the partnership will terminate. Except upon dissolution, windup, and termination, both partnership agreements prohibit a limited partner from withdrawing and receiving a return of capital contribution, distribution in liquidation, or a redemption of interest.

Section 5.4 of the AVLP agreement originally provided that the general partners could not sell any real property interest that was owned by the partnership without first obtaining the consent of partners owning a majority interest in the partnership. This section was later amended so that partners owning 85 percent of the partnership must consent to a sale of real property.

On January 1, 1995, the Jones Alta Vista Ranch had a fair market value of $10,254,860, and the Jones Borregos Ranch, livestock, and personal property that were contributed by decedent to JBLP had a fair market value of $7,360,997. Neither partnership ever made a section 754 election. At the time that decedent transferred interests in the partnerships by gift to his children, the net asset values (NAV) of the underlying

partnership assets that were held by AVLP and JBLP were $11,629,728 and $7,704,714, respectively. JBLP and AVLP had bases in their assets of $562,840 and $1,818,708, respectively.

Attached to his 1995 Federal gift tax return, decedent included a valuation report prepared by Charles L. Elliott, Jr. (Elliott), who also testified as the estate's expert at trial. The partnerships were valued on the return and by Elliott at trial using the NAV method on a "minority interest, nonmarketable" basis. Nowhere in his report did Elliott purport to be valuing assignee interests in the partnership. The valuation report arrived at an NAV for the partnerships and then applied secondary market, lack-of-marketability, and built-in capital gains discounts. The expert report concluded that a 66-percent discount from NAV is applicable to the interest in JBLP and that a 58-percent discount is applicable to the interest in AVLP. On the return, decedent reported gifts of "an 83.08 percent limited partnership interest" in JBLP valued at $2,176,864 and a "16.915 percent limited partnership interest" in AVLP to each of his four daughters, valued at $821,413 per interest.

In an affidavit executed on January 12, 1999, A.C. Jones stated that the gifts that he and his sisters received from decedent were "limited partnership interests". The sole activity

of AVLP is the rental of its real property. AVLP produces an average annual yield of 3.3 percent of NAV.

OPINION

Gift at the Inception of the Partnerships

In an amendment to the answer, respondent contends that decedent made taxable gifts upon contributing his property to the partnerships. Using the value reported by decedent on his gift tax return, respondent argues that, if decedent gave up property worth $17,615,857 and received back limited partnership interests worth only $6,675,156, decedent made taxable gifts upon the formation of the partnerships equal to the difference in value.

In Estate of Strangi v. Commissioner, 115 T.C. 478, 489-490 (2000), a decedent formed a family limited partnership with his children and transferred assets to the partnership in return for a 99-percent limited partnership interest. After his death, his estate claimed that, due to lack-of-control and lack-of-marketability discounts, the value of the limited partnership interest was substantially lower than the value of the property that was contributed by the decedent. The Commissioner argued that the decedent had made a gift when he transferred property to the partnership and received in return a limited partnership interest of lesser value. The Court held that, because the taxpayer received a continuing interest in the family limited partnership and his contribution was allocated to his own capital

account, the taxpayer had not made a gift at the time of contribution.

In Shepherd v. Commissioner, 115 T.C. 376, 379-381 (2000), the taxpayer transferred real property and stock to a newly formed family partnership in which he was a 50-percent owner and his two sons were each 25-percent owners. Rather than allocating contributions to the capital account of the contributing partner, the partnership agreement provided that any contributions would be allocated pro rata to the capital accounts of each partner according to ownership. Because the contributions were reflected partially in the capital accounts of the noncontributing partners, the value of the noncontributing partners' interests was enhanced by the contributions of the taxpayer. Therefore, the Court held that the transfers to the partnership were indirect gifts by the taxpayer to his sons of undivided 25-percent interests in the real property and stock. See id. at 389.

The contributions of property in the case at hand are similar to the contributions in Estate of Strangi and are distinguishable from the gifts in Shepherd. Decedent contributed property to the partnerships and received continuing limited partnership interests in return. All of the contributions of property were properly reflected in the capital accounts of decedent, and the value of the other partners' interests was not

enhanced by the contributions of decedent. Therefore, the contributions do not reflect taxable gifts.

Because the contributions do not reflect taxable gifts, we need not decide whether the period of limitations for assessment of a deficiency due to a gift on formation has expired.

Section 2704(b)

Respondent determined in the statutory notice, and argues in the alternative, that provisions in the partnership agreements constitute applicable restrictions under section 2704(b) and must be disregarded when determining the value of the partnership interests that were transferred by gift.

Section 2704(b) generally states that, where a transferor and his family control a partnership, a restriction on the right to liquidate the partnership shall be disregarded when determining the value of the partnership interest that has been transferred by gift or bequest if, after the transfer, the restriction on liquidation either lapses or can be removed by the family. Section 25.2704-2(b), Gift Tax Regs., provides that an applicable restriction is a restriction on "the ability to liquidate the entity (in whole or in part) that is more restrictive than the limitations that would apply under the State law generally applicable to the entity in the absence of the restriction."

Respondent argues that both partnership agreements contain provisions limiting the ability of a partner to liquidate that are more restrictive than the default Texas partnership provisions. Specifically, respondent points to section 9.2 of the partnership agreements, which provides that each partnership shall continue for a period of 35 years. Respondent also points to section 9.3 of the partnership agreements, which prohibits a limited partner from withdrawing from the partnership or from demanding the return of any part of a partner's capital account except upon termination of the partnership.

Respondent compares sections 9.2 and 9.3 of the partnership agreements with section 6.03 of the Texas Revised Limited Partnership Act (TRLPA). TRLPA section 6.03 provides:

> A limited partner may withdraw from a limited partnership at the time or on the occurrence of events specified in a written partnership agreement and in accordance with that written partnership agreement. If the partnership agreement does not specify such a time or event or a definite time for the dissolution and winding up of the limited partnership, a limited partner may withdraw on giving written notice not less than six months before the date of withdrawal to each general partner * * *.

Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 6.03 (West Supp. 1993).

Respondent's argument is essentially the same as the argument we rejected in Kerr v. Commissioner, 113 T.C. 449, 469-474 (1999). In Kerr, the taxpayers and their children formed two

family limited partnerships with identical liquidation restrictions. Shortly after formation, the taxpayers transferred limited partnership interests to their children by gift. On their Federal gift tax return, the taxpayers claimed substantial discounts in the value of the interests compared to the value of the underlying assets due to lack of control and lack of marketability. The partnership agreements provided that the partnerships would continue for 50 years.

The Court held:

> Respondent's reliance on TRLPA section 6.03 is misplaced. TRLPA section 6.03 governs the withdrawal of a limited partner from the partnership--not the liquidation of the partnership. TRLPA section 6.03 sets forth limitations on a limited partner's withdrawal from a partnership. However, a limited partner may withdraw from a partnership without requiring the dissolution and liquidation of the partnership. In this regard, we conclude that TRLPA section 6.03 is not a "limitation on the ability to liquidate the entity" within the meaning of section 25.2704-2(b), Gift Tax Regs.

Id. at 473. In sum, the Court concluded that the partnership agreements in Kerr were not more restrictive than the limitations that generally would apply to the partnerships under Texas law. See id. at 472-474. Respondent acknowledges that Kerr is applicable to this issue but argues that Kerr was incorrectly decided. However, we find no reason to reach a result that is different than the result in Kerr. Thus, section 2704(b) does

not apply here. See also Knight v. Commissioner, 115 T.C. 506, 519-520 (2000); Harper v. Commissioner, T.C. Memo. 2000-202.

Valuation of Decedent's Gifts of Limited Partnership Interests

A gift of property is valued as of the date of the transfer. See sec. 2512(a). The gift is measured by the value of the property passing from the donor, rather than by the property received by the donee or upon the measure of enrichment to the donee. See sec. 25.2511-2(a), Gift Tax Regs. The fair market value of the transferred property is the price at which the property would change hands between a willing buyer and willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 551 (1973); sec. 25.2512-1, Gift Tax Regs. The hypothetical willing buyer and the hypothetical willing seller are presumed to be dedicated to achieving the maximum economic advantage. See Estate of Davis v. Commissioner, 110 T.C. 530, 535 (1998). Transactions that are unlikely and plainly contrary to the economic interests of a hypothetical willing buyer or a hypothetical willing seller are not reflective of fair market value. See Estate of Strangi v. Commissioner, 115 T.C. 478, 491 (2000); Estate of Newhouse v. Commissioner, 94 T.C. 193, 232 (1990); Estate of Hall v. Commissioner, 92 T.C. 312, 337 (1989).

As is customary for valuation issues, the parties rely extensively on the opinions of their respective experts to support their differing views about the fair market value of the gifts of partnership interests. The estate relies on Elliott, a senior member of the American Society of Appraisers and a principal in the business valuation firm of Howard Frazier Barker Elliott, Inc. Respondent relies on Francis X. Burns (Burns), a candidate member of the American Society of Appraisers and a principal in the business valuation firm of IPC Group, Inc. Each expert prepared a report.

We evaluate the opinions of the experts in light of the demonstrated qualifications of each expert and all other evidence in the record. See Estate of Davis v. Commissioner, supra at 536. We are not bound by the formulae and opinions proffered by expert witnesses, especially when they are contrary to our judgment. Instead, we may reach a determination of value based on our own examination of the evidence in the record. Where experts offer contradicting estimates of fair market value, we decide what weight to give those estimates by examining the factors used by the experts in arriving at their conclusions. See id. Moreover, because valuation is necessarily an approximation, it is not required that the value that we determine be one as to which there is specific testimony, provided that it is within the range of figures that properly may

be deduced from the evidence. See Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285. The experts in this case agree that, in ascertaining the fair market value of each gift of interest in the partnerships, one starts with the fair market value of the underlying assets of each partnership and then applies discounts for factors that limit the value of the partnership interests.

A. Nature of Interests Transferred

The first argument of the estate is that the partnership interests that were transferred by decedent were assignee interests rather than limited partnership interests. The estate claims that decedent and the recipients of the gifts did not fulfill the necessary requirements set forth in the partnership agreements for transferring limited partnership interests. The JBLP agreement provides that, upon an exchange of an interest in the partnership, the general partner and 100 percent of the remaining limited partners must approve, in writing, of a transferred interest becoming a limited partnership interest. The AVLP agreement provides that the general partners and 75 percent of the limited partners must approve, in writing, of a transferred interest's becoming a limited partnership interest. Because these written approvals were not carried out, the estate contends that the recipients of the gifts are entitled only to the rights of assignees.

In Kerr v. Commissioner, 113 T.C. 449, 464 (1999), the taxpayers held greater than 99 percent of the partnership interests of two family limited partnerships as general and limited partners. The taxpayers' children held the remaining partnership interests, totaling less than 1 percent of overall ownership, as general partners. The partnership agreements provided that no person would be admitted as a limited partner without the consent of all general partners. In 1994, the taxpayers transferred a large portion of their limited partnership interests to trusts for which they served as trustees. At trial, the taxpayers argued that, although they made these transfers to themselves as trustees, pursuant to the family limited partnership agreement, their children as general partners had to consent to the admission of the trustees as limited partners. The taxpayers argued that the interests held by the trusts should be valued as assignee interests. The Court looked at all of the surrounding facts and circumstances in holding that the interests that were transferred by the taxpayers were limited partnership interests. See id. at 464.

On review of the facts and circumstances of the case at hand, decedent, like the taxpayers in Kerr, transferred limited partnership interests to his children rather than assignee interests. The evidence shows that decedent intended for the transfers to include limited partnership interests and that the

children consented to the transfer of limited partnership interests, having waived the requirement of a writing.

Pursuant to the AVLP agreement, Susan Jones Miller and Elizabeth Jones as general partners would have had to consent in writing to the transfer of the interests as limited partnership interests. Also, 75 percent of the remaining limited partners, i.e., Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, Lorine Jones Booth, and decedent, would have had to consent in writing. Pursuant to the JBLP agreement, A.C. Jones as general partner would have had to consent in writing to the transfer as a limited partnership interest. Also, all of the remaining limited partners, i.e., A.C. Jones and decedent, would have had to consent in writing.

Although the estate argues that the absence of written consents leads to the conclusion that the interests transferred were assignee interests, it is difficult to reconcile that position with the language that decedent, his children, and Elliott used to document and characterize the transfers. First, the documents entitled “Gift Assignment of Limited Partnership Interest”, created by decedent to carry out the transfers, state that, after the transfers are complete, each child will hold his or her newly acquired interest as a “limited partnership interest”. Second, in his 1995 Federal gift tax return, decedent describes the gifts as “limited partnership interests” rather

than assignee interests. Third, in an affidavit executed on January 12, 1999, A.C. Jones states that the gifts that he and his sisters received from decedent were "limited partnership interests". Fourth, the 1995, 1996, 1997, and 1998 Federal income tax returns for JBLP and AVLP, signed by A.C. Jones and Elizabeth Jones, respectively, designate the interests as limited partnership interests on the Schedules K-1. Fifth, although he claimed at trial that he was valuing assignee interests, Elliott's written report referred only to limited partnership interests. These factors lead to the conclusion that the estate's argument, that decedent transferred assignee interests, was an afterthought in the later stages of litigation.

Also, after giving the gifts to his daughters, decedent was left with a 20.518-percent limited partnership interest. Section 5.4 of the AVLP agreement was modified so that consent of 85 percent of the partners was required in order for a general partner to sell a real estate interest belonging to the partnership. With this modification, decedent could retain the power to block unilaterally a sale of a real estate interest even after giving the gifts. This amendment would not have been necessary if the daughters had received only assignee interests.

This case is distinguishable from Estate of Nowell v. Commissioner, T.C. Memo. 1999-15, relied on by petitioner. In Estate of Nowell, the partnership agreements specified that the

recipient of limited partnership interests would become an assignee and not a substitute limited partner unless the general partners consented to the assignee's admission as a limited partner. The Court there decided that interests in the partnerships should be valued for estate tax purposes as assignee interests rather than as limited partnership interests.

The transactions in Estate of Nowell differ from the gifts in the case at hand in that the beneficiaries, the estate, and the decedent in Estate of Nowell never treated the passing interests in the partnerships as limited partnership interests. The record was void of evidence that showed that a limited partnership interest was in fact transferred. Here, the conduct of decedent, A.C. Jones, and the daughters reflects that limited partnership interests were actually transferred by decedent.

B. Value of the Transferred Interest in JBLP

Having concluded that decedent transferred an 83.08-percent limited partnership interest in JBLP to A.C. Jones, the next issue for decision is the value of the limited partnership interest. The estate relies on the conclusions of Elliott, who opined that the value of the interest in JBLP is subject to a secondary market discount of 55 percent, a lack-of-marketability discount of 20 percent, and an additional discount for built-in capital gains. Respondent relies on the valuation of Burns, who opined that no discounts apply.

Section 9.4 of the JBLP agreement provides that a general partner may be removed at any time by the act of the partners owning an aggregate 51-percent interest in the partnership. After removal, if no general partners remain, the limited partners shall designate a successor general partner. If the limited partners fail to designate a successor general partner within 90 days, the partnership will dissolve, affairs will be wound up, and the partnership will terminate.

Section 9.4 effectively gives ultimate decision-making authority to the owner of the 83.08-percent limited partnership interest. Under the threat of removal of the general partner, the 83.08-percent limited partner would have the power to control management, to compel a sale of partnership property, and to compel partnership distributions. If the general partner refused, the 83.08-percent limited partner could force liquidation within 90 days. Having the ability to force liquidation also gives the 83.08-percent limited partner the right to force a sale of the partnership assets and to receive a pro rata share of the NAV. Because the 83.08-percent limited partner has the power to control the general partner or to force a liquidation, the discounts proffered by Elliott are unreasonable and unpersuasive. The size of the interest to be valued and the nature of the underlying assets make the secondary market an improbable analogy for determining fair market value.

We do not believe that a seller of the 83.08-percent limited partnership interest would part with that interest for substantially less than the proportionate share of the NAV.

Burns opined that no discount for lack of control should apply for the reasons stated above. We agree. He also concluded that "the size and the associated rights of the interest would preclude the need for a marketability discount." He recognized that section 8.4 of the partnership agreement purported to give family members the power to prevent a third-party buyer from obtaining an interest in the JBLP, but he maintained that "to adhere to the fair market value standard, an appraiser must assume that a market exists and that a willing buyer would be admitted into the partnership." We believe that there is merit to this position. Self-imposed limitations on the interest, created with the purpose of minimizing value for transfer tax purposes, are likely to be waived or disregarded when the owner of the interest becomes a hypothetical willing seller, seeking the highest price that the interest will bring from a willing buyer. The owner of the 83.08-percent interest has the ability to persuade or coerce other partners into cooperating with the proposed sale. Nonetheless, liquidation of a partnership and sale of its assets, the most likely threat by which the owner of such a controlling interest would persuade or coerce, would involve costs and delays. The possibility of litigation over a

forced liquidation would reduce the amount that a hypothetical buyer would be willing to pay for the interest. See Adams v. United States, 218 F.3d 383 (5th Cir. 2000); Estate of Newhouse v. Commissioner, 94 T.C. 193, 235 (1990). A marketability discount would apply, but we believe that, under the circumstances of this case, an 8-percent discount more accurately reflects reality. This amount approximates the discount for lack of marketability proposed by Burns with respect to AVLP, as discussed below.

The experts also disagree about whether a discount attributable to built-in capital gains to be realized on liquidation of the partnership should apply. The parties and the experts agree that tax on the built-in gains could be avoided by a section 754 election in effect at the time of sale of partnership assets. If such an election is in effect, and the property is sold, the basis of the partnership's assets (the inside basis) is raised to match the cost basis of the transferee in the transferred partnership interest (the outside basis) for the benefit of the transferee. See sec. 743(b). Otherwise, a hypothetical buyer who forces a liquidation could be subject to capital gains tax on the buyer's pro rata share of the amount realized on the sale of the underlying assets of the partnership over the buyer's pro rata share of the partnership's adjusted basis in the underlying assets. See sec. 1001. Because the JBLP

agreement does not give the limited partners the ability to effect a section 754 election, in this case the election would have to be made by the general partner.

Elliott opined that a hypothetical buyer would demand a discount for built-in gains. He acknowledged in his report a 75- to 80-percent chance that an election would be made and that the election would not create any adverse consequences or burdens on the partnership. His opinion that the election was not certain to be made was based solely on the position of A.C. Jones, asserted in his trial testimony, that, as general partner, he might refuse to cooperate with an unrelated buyer of the 83.08-percent limited partnership interest (i.e., the interest he received as a gift from his father). We view A.C. Jones' testimony as an attempt to bootstrap the facts to justify a discount that is not reasonable under the circumstances.

Burns, on the other hand, opined, and respondent contends, that a hypothetical willing seller of the 83.08-percent interest would not accept a price based on a reduction for built-in capital gains. The owner of that interest has effective control, as discussed above, and would influence the general partner to make a section 754 election, eliminating any gains for the purchaser and getting the highest price for the seller. Such an election would have no material or adverse impact on the preexisting partners. We agree with Burns.

Petitioner relies on Eisenberg v. Commissioner, 155 F.3d 50 (2d Cir. 1998), revg. T.C. Memo. 1997-483, and Estate of Davis v. Commissioner, 110 T.C. 530, 546-547 (1998). Those cases, however, are distinguishable. In the contexts of those cases, the hypothetical buyer and seller would have considered a factor for built-in capital gains in determining a price for closely held stock in a corporation. In Eisenberg, the Court of Appeals emphasized that earlier Tax Court cases declining to recognize a discount for unrealized capital gains were based on the ability of the corporation, under the doctrine of General Utilities & Operating Co. v. Helvering, 296 U.S. 200 (1935), to liquidate and distribute property to its shareholders without recognizing built-in gain or loss and thus circumvent double taxation. The Court of Appeals went on to explain that the tax-favorable options ended with the Tax Reform Act of 1986, Pub. L. 99-514, sec. 631, 100 Stat. 2085, 2269. In reversing our grant of summary judgment on this issue and remanding the case for determination of gift tax liability, the Court of Appeals cited and quoted from Estate of Davis v. Commissioner, supra, in support of its reasoning.

In Estate of Davis, the Court rejected the Government's argument that no discount for built-in capital gains should apply because of the possibility that the corporation could convert to an S corporation and avoid recognition of gains on assets

retained for 10 years. Applying the hypothetical buyer and seller test, the Court, based on the record presented, including the testimony of experts for both parties, concluded that a discount for tax on built-in gains would be applied.

In the cases in which the discount was allowed, there was no readily available means by which the tax on built-in gains would be avoided. By contrast, disregarding the bootstrapping testimony of A.C. Jones in this case, the only situation identified in the record where a section 754 election would not be made by a partnership is an example by Elliott of a publicly syndicated partnership with "lots of partners * * * and a lot of assets" where the administrative burden would be great if an election were made. We do not believe that this scenario has application to the facts regarding the partnerships in issue in this case. We are persuaded that, in this case, the buyer and seller of the partnership interest would negotiate with the understanding that an election would be made and the price agreed upon would not reflect a discount for built-in gains.

C. Value of Interests in AVLP

The estate relies on the conclusions of Elliott, who opined that the value of each transferred interest in AVLP is subject to a secondary market discount of 45 percent, a discount for lack of marketability equal to 20 percent, and an additional discount for built-in capital gains. Burns opined that the transferred

interests are entitled to a secondary market discount of 38 percent, a discount for lack of marketability equal to 7.5 percent, and no discount for built-in capital gains.

An owner of a 16.915-percent limited partnership interest in AVLP does not have the ability to remove a general partner. As such, a hypothetical buyer would have minimal control over the management and business operations. Also, a 16.915-percent limited partnership interest in AVLP is not readily marketable, and any hypothetical purchaser would demand a significant discount. In calculating the overall discount for the AVLP interests, both experts use data from different issues of the same publication regarding sales of limited partnership interests on the secondary market. The publication was the primary tool used by both experts.

Burns, using the May/June 1995 issue, opined that interests in real estate-oriented partnerships with characteristics similar to AVLP traded at discounts due to lack of control equal to 38 percent on January 1, 1995. The May/June 1995 issue contained data regarding the sale of limited partnership interests during the 60-day period ended May 31, 1995. Burns classified AVLP as a low-debt partnership making current distributions.

Elliott, using the May/June 1994 issue, opined that similar partnerships traded at a secondary market discount of 45 percent. The secondary market discount is an overall discount encompassing

discounts for both lack of control and lack of marketability for minority interests in syndicated limited partnerships. The May/June 1994 issue contained data regarding the sale of limited partnership interests during the 60-day period ended May 31, 1994.

The estate argues that Burns' conclusion, which is based on data found in the May/June 1995 issue, is flawed because such information was not available on January 1, 1995, the date the gift was made. The estate contends that, since a gift of property is valued, pursuant to section 2512(a), as of the date of the transfer, posttransfer data cannot affect our decision. However, Burns does not use the posttransfer data to prove directly the value of the transferred interests. Instead, he uses the May/June 1995 issue to show what value would have been calculated if, on January 1, 1995, decedent had looked at transactions involving the sale of interests in similarly situated partnerships occurring at that point in time. Data regarding such transactions involving similarly situated partnerships were available on the valuation date. Therefore, the data available in the May/June 1995 issue are relevant as they provide insight into what information would have been found if, on January 1, 1995, decedent had looked at transactions occurring on or near the valuation date.

The data on which Burns relied show that interests in similarly situated partnerships were trading at a 38-percent discount from April 2 to May 31, 1995. The data on which Elliott relied show that interests in similarly situated partnerships were trading at a 45-percent discount from April 2 to May 31, 1994. Therefore, transfers of interests on or around January 1, 1995, would have been trading at a discount somewhere between 38 and 45 percent. Because the data on which Burns relied are closer in time to the transfer date of the 16.915-percent AVLP interests, we give greater weight to his determination. Recognizing that the valuation process is always imprecise, a 40-percent discount is reasonable. This discount is a reduction in value for an interest trading on the secondary market and encompasses discounts for lack of control and lack of marketability.

Elliott opines that an additional 20-percent discount for lack of marketability is applicable because the partnerships that are the subject of the data in the publication are syndicated limited partnerships. He believes that, although there is a viable market for syndicated limited partnership interests, a market for nonsyndicated, family limited partnership interests does not exist. The additional 20-percent discount opined by Elliot is also attributable to sections 8.4 and 8.5 of the AVLP agreement, which attempt to limit the transferability of

interests in AVLP. In calculating the additional discount, Elliott relied on data found in various restricted stock and initial public offering studies.

Elliott acknowledges that the secondary market for syndicated partnerships is not a strong market and that a large discount for lack of marketability is already built into the secondary market discount. Although Elliott adjusts his analysis of the data found in the restricted stock and initial public offering studies to take into consideration the lack-of-marketability discount already allowed, his adjustment is inadequate. His cumulation of discounts does not survive a sanity check.

Sections 8.4 and 8.5 of the AVLP agreement do not justify an additional 20-percent discount. An option of the partnership or the other partners to purchase an interest for fair market value before it is transferred to a third party, standing alone, would not significantly reduce the value of the partnership interest. Nevertheless, the right of the partnership to elect to pay the purchase price in 10 annual installments with interest set at the minimum rate allowed by the rules and regulations of the Internal Revenue Service would increase the discount for lack of marketability. Texas courts have been willing to disregard option clauses that unreasonably restrain alienation. See Procter v. Foxmeyer Drug Co., 884 S.W.2d 853, 859 (Tex. App.

1994). We express no opinion whether this election is enforceable under Texas law. Because this clause would cause uncertainty as to the rights of an owner to receive fair market value for an interest in AVLP, a hypothetical buyer would pay less for the partnership interest. See Estate of Newhouse v. Commissioner, 94 T.C. 193, 232-233 (1990); Estate of Moore v. Commissioner, T.C. Memo. 1991-546. We believe that an additional discount equal to 8 percent for lack of marketability, to the NAV previously discounted by 40 percent, is justified.

For the reasons set forth in the built-in capital gains analysis for JBLP, an additional discount for lack of marketability due to built-in gains in AVLP is not justified. Although the owner of the percentage interests to be valued with respect to AVLP would not exercise effective control, there is no reason why a section 754 election would not be made. Elliott admits that, because AVLP has relatively few assets, a section 754 election would not cause any detriment or hardship to the partnership or the other partners. Thus, we agree with Burns that the hypothetical seller and buyer would negotiate with the understanding that an election would be made. Elliott's assumption that Elizabeth Jones and Susan Jones Miller, as general partners, might refuse to cooperate with a third-party purchaser is disregarded as an attempt to bootstrap the facts to justify a discount that is not reasonable under the

circumstances. Therefore, a further discount for built-in capital gains is not appropriate in this case.

D. Conclusion

The schedules below summarize our conclusions as to fair market value for the transferred JBLP and AVLP limited partnership interests:

83.08-Percent Interest in JBLP

NAV of limited partnership	$ 7,704,714
	83.08%
Pro rata NAV	6,401,076
Lack of marketability (8%)	(512,086)
Fair market value	$ 5,888,990

16.915-Percent Interest in AVLP

NAV of limited partnership	$11,629,728
	16.915%
Pro rata NAV	1,967,168
Secondary market (40%)	(786,867)
	1,180,301
Lack of marketability (8%)	(94,424)
Fair market value	$ 1,085,877

We have considered all remaining arguments made by both parties for a result contrary to those expressed herein, and, to the extent not discussed above, they are irrelevant or without merit.

To reflect the foregoing,

Decision will be entered under Rule 155.

Full Text of Court Cases

Estate of Jung v. Commissioner

Case name: Estate of Jung v. Commissioner
Citation: 101 T.C. 412, 101 T.C. No. 28
Date of decision: November 10, 1993
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Chabot
SIC: 6719 Offices of Holding Companies, NEC
NAICS: 551112 Offices of Other Holding Companies
8488, 9485

Keywords: Estate tax

COUNSEL:

Michael E. Neiheisel, James M. Moore, Paul D. Ratterman, and Thomas H. Clark, for petitioner.

Joseph P. Grant, for respondent.

JUDGES:

Chabot, Judge.

OPINIONBY:

CHABOT

OPINION:

CHABOT, Judge: Respondent determined a deficiency in Federal estate tax against petitioner in the amount of $ 2,396,902.92. By amendment to answer, respondent asserts an addition to tax of $ 719,070.90 under section 6660 n1 (valuation understatement).

n1 Unless indicated otherwise, all section references are to sections of the Internal Revenue Code of 1954 as in effect for the date of decedent's death.

After concessions by both sides, the issues are as follows:

(1) What the fair market value of decedent's 168,600 shares of Jung Corp. stock was on the date of her death (Oct. 9, 1984); and

(2) whether petitioner is liable for an addition to tax under section 6660.

FINDINGS OF FACT n2

n2 Rule 151(e)(3) provides, in pertinent part, as follows:

RULE 151. BRIEFS

(e) Form and Content: All briefs shall contain the following in the order indicated:

* * *

(3) * * * In an answering or reply brief, the party shall set forth any objections, together with the reasons therefor, to any proposed findings of any other party, showing the numbers of the statements to which the objections are directed; in addition, the party may set forth alternative proposed findings of fact.

In the instant case, the parties filed simultaneous briefs. Petitioner's answering brief does not include responses to respondent's proposed findings of fact. Under the circumstances, we have assumed that petitioner does not object to respondent's proposed findings of fact except to the extent that petitioner's proposed findings of fact are clearly inconsistent therewith.

Unless indicated otherwise, all Rule references are to the Tax Court Rules of Practice and Procedure.

Some of the facts have been stipulated; the stipulation and the stipulated exhibits are incorporated herein by this reference.

When the petition was filed in the instant case, petitioner was an Ohio estate with a legal residence in Cincinnati, Ohio. Decedent died a resident of Ohio on October 9, 1984. Decedent's estate was probated in Hamilton County, Ohio.

At her death decedent owned 168,600 voting shares of Jung Corp., which represented 20.83 percent of the outstanding voting shares and 20.74 percent of all the outstanding shares of Jung Corp. n3

n3 On Oct. 9, 1984, 900,000 voting shares were authorized and 809,560 were outstanding; 100,000 nonvoting shares were authorized and 3,360 were outstanding. Neither the parties nor the expert witnesses appear to attribute different values to the voting and nonvoting shares.

In the early 1900's decedent's husband cofounded Jung Arch Brace Co., the predecessor to Jung Corp. In 1949, a year after decedent's husband died, Jung Corp. was incorporated in Ohio as Jung Products, Inc. As of January 1, 1982, the name was changed to Jung Corp. Jung Corp.'s principal place of business was in Cincinnati, Ohio.

On October 9, 1984, Jung Corp. owned all of the outstanding stock of the following companies: Jung International, Inc. (hereinafter sometimes referred to as JII), J.R.A. Industries, Inc. (hereinafter sometimes referred to as JRA), Rampon Products (hereinafter sometimes referred to as Rampon), Ione Realty (hereinafter sometimes referred to as Ione), and Calley & Currier; Jung Corp. also owned 96.3 percent of the stock of Theradyne.

Jung Corp and its subsidiaries were primarily operating companies, except that Ione was a holding company for the real estate occupied by the operating companies. Jung Corp. consisted of two divisions -- (1) the corporate division, which provided management services to the Jung Corp. subsidiaries, and (2) the Futuro division (hereinafter sometimes referred to as Futuro), which manufactured and marketed health care products and other products, including the products of Jung Corp. subsidiaries. n4 Jung Corp. and its subsidiaries together comprised an integrated manufacturer and distributor of elastic textile goods and products, including elastic braces and supports, support stockings, and thermo comforters (elastic gloves and braces knitted with wool, which provide warmth and compression to swollen joints).

n4 So stipulated. Apparently Jung Corp. also had an MIS division, which coordinated all the management information services activities within Jung Corp.

Futuro marketed health supports (such as elastic braces, athletic supporters, support socks and stockings, and hernia belts), patient aids (such as wheelchairs, canes, crutches, walkers, bed pans, and sitz baths), and thermo comforters. Futuro products were marketed almost entirely through drugstores, both nationally and internationally. About 95 percent of the health supports and 70-75 percent of the patient aids that Futuro marketed were manufactured by Jung Corp. and its subsidiaries. Futuro also marketed sporting goods through its All American and Grid lines. Futuro was Jung Corp.'s most profitable business. Futuro's health supports products were number one or number two in drug stores.

JII, incorporated in 1968, was the export sales agent for Jung Corp. products. JII bought goods for resale only from Jung Corp. or its subsidiaries. JII was a domestic international sales corporation (DISC) until December 31, 1984, at which time the DISC was liquidated and its successor was incorporated as a foreign sales corporation (FSC).

JRA, incorporated in 1969, primarily produced coarse yarns for sale to other Jung Corp. subsidiaries and to third parties. JRA also used the yarns to make elastic webbing, and it made fine elastic yarn from which Rampon (acquired by Jung Corp. in 1965) and third parties made stockings. In 1983 JRA acquired the property, plant, and equipment of a yarn covering operation in Raeford, North Carolina, and the Raeford operations became part of JRA. The industry in which JRA competed is very capital-intensive and has very low profit margins. JRA had a low profit margin in 1984.

Rampon produced knitted products including hosiery.

Theradyne manufactured wheelchairs for sale to Jung Corp. subsidiaries and to third parties. Jung Corp. acquired 70 percent of Theradyne's stock in 1973. Most of the remaining stock was held by Jung family members. In 1983 Jung Corp. acquired most of the rest of Theradyne in a stock-for-stock transaction. On October 9, 1984, Jung Corp. held 96.3 percent of Theradyne's stock. In 1984 Theradyne was either marginally profitable or losing money.

Jung Corp. acquired Calley & Currier in March 1984. Calley & Currier principally manufactured wooden crutches; it was the second largest wooden crutch manufacturer, with about one-third of the domestic market.

Ione was incorporated in 1949 by Jung family members and was transferred to Jung Corp. in 1973. Its primary purpose was to hold real and personal property which was used by Jung Corp.'s operating subsidiaries. Ione owned the manufacturing facility that Futuro occupied, the plant that Theradyne occupied, and the Richard Grey plant (which was a part of Rampon). Ione also owned a condominium in Florida. Ione charged rent for the facilities it owned, but the rent charged was not market value.

Jung Corp. had industrial revenue bond (hereinafter referred to as IRB) financing for Futuro's manufacturing site. As of October 9, 1984, the outstanding balance of Jung Corp.'s IRB loan for Futuro was $ 970,000. JRA also had IRB financing. As of October 9, 1984, the outstanding balance of JRA'S IRB loan was $ 3,030,000. The interest rate on JRA'S IRB loan was computed at 69 percent of the current prime rate at the time of payment.

Jung Corp. kept its books and records on a calendar year basis. Jung Corp. and its subsidiaries filed consolidated tax returns. The net income after taxes of Jung Corp. and its subsidiaries for 1970 through 1979 is shown in table 1:

Table 1

Year	Net income
1970	$ 1,039,000
1971	379,000
1972	755,000
1973	1,009,000
1974	720,000
1975	805,000
1976	973,000
1977	1,477,000
1978	1,205,000
1979	1,344,000

The audited financial statements for 1980 through 1986 show net sales and net income after taxes for the consolidated operations of Jung Corp. in the rounded amounts set forth in table 2:

Table 2

Year	Net sales	Net income
1980	$ 41,939,000	$ 1,233,000
1981	46,352,000	944,000
1982	48,800,000	1,739,000
1983	62,757,000	1,889,000
1984	67,918,000	3,123,000
1985	71,606,000	2,098,000
1986	54,679,000	1,991,000

The unaudited interim financial statement for September 30, 1984 (9 days before decedent's death), shows year-to-date net sales (rounded) of $ 52,271,000, and year-to-date net income after taxes (rounded) of $ 2,192,000. A portion of Jung Corp.'s unaudited interim consolidated balance sheet for September 30, 1984, is attached as the appendix. Complete information concerning 1984 yearend adjusting entries is not available. However, for 1984 Jung Corp. made at least three yearend adjustments as follows: (1) The inventory of Theradyne was decreased by $ 426,677, most of which was because of the discontinuance of the Titann wheelchair line, (2) the inventory of Futuro was increased by an unknown amount to account for the increased costing of freight, and (3) deferred Federal income tax was decreased by $ 541,000.

Jung Corp. paid dividends of 4 cents per share from 1979 through 1983; in 1984 it paid dividends of 25 cents per share.

In November 1984 Jung Corp. employed 1,025 people.

In the early 1980s, Jung Corp. developed and installed computer programs which controlled its manufacturing and operating systems and produced financial statements, invoices, etc.

In the 1980s, governmental policies were introduced which were designed to reduce Medicare costs by discouraging hospital stays and encouraging home health care. Because Jung Corp. marketed its products primarily through drugstores rather than through hospitals, Jung Corp. stood to benefit from this trend. Almost all the products in Jung Corp.'s product lines would benefit from an increase in home health care expenditures.

Jung Corp. had formulated 5-year business forecast plans since 1975, but the emphasis was only on sales projections. In 1984 Jung Corp. began an in-depth analysis of its strengths, weaknesses, and opportunities, and it began to formulate specific business strategies. By mid-1984 Jung Corp. began to implement these strategies. Also, in 1984 Jung Corp. began involving employees in the planning and forecasting process. In mid-1984, to help with financial planning, Jung Corp. hired Jim Cox, a partner from Ernst & Whinney, and retained the services of an accounting firm. Jung Corp. decided to actively promote future growth through expanded domestic sales, and through acquisitions of other companies. It decided that Jung Corp. would become global in both sales and purchases, and it began searching for European companies to acquire. During 1984 Jung Corp. introduced additional products into the home health care market, and improved its then-current products. Beginning in 1984, each of Jung Corp.'s subsidiaries added a medical-surgical distribution service in order to provide products to surgical supply dealers, hospitals, and professionals. The year 1984 was the best sales and profit year in the history of Jung Corp.

Jung Corp. also experienced growth from October 1984 through 1986. During this time Futuro became number one in the drugstore market. During 1985 or 1985, Jung Corp. introduced neoprene athletic products, which increased sales in Futuro's Grid line by 3 to 5 percent. In 1985 and 1986 Jung Corp. upgraded its equipment, installed new computer programs to manage inventory, and trained personnel to use the computers. Jung Corp. bought two English companies, Solport and Lastonet. It began sending managers to management training schools at Harvard, Stanford, and Massachusetts Institute of Technology. The planning and forecasting procedures which Jung Corp. had begun in 1984 helped it to identify both weaknesses and opportunities, and helped to give it needed impetus for growth in 1985 and 1986. Jung Corp.'s net sales in 1985 were higher than 1984 net sales; however, Jung Corp.'s profits

for 1985 and 1986 were lower than 1984 profits. See supra table 2. The decline in profits in 1985 and 1986 was due to the above-mentioned increased expenditures, which ultimately helped Jung Corp. Also, in 1985 and 1986 JRA and Calley & Currier changed from profitable companies to unprofitable companies. Because of the foregoing activities, and changes in the market, Jung Corp. increased in value substantially between 1984 and 1986.

Since at least 1979, Jung Corp. had received letters inquiring about the possibility of acquiring Jung Corp. The standard response to these letters was that Jung Corp. was not for sale. In 1984 Jung Corp. was not for sale. From 1979 through 1986 there were not any arm's-length sales of the stock of Jung Corp. Jung Corp. stock was not publicly traded.

On October 9, 1984, Ruth J. Conway, decedent's daughter, was treasurer of Jung Corp., and Ruth J. Conway's husband, Robert A. Conway (hereinafter sometimes referred to as Conway), was chairman of the board of directors. Thomas H. Clark (hereinafter sometimes referred to as Clark), decedent's nephew, was legal counsel and secretary for Jung Corp. Mary Lois Jung, also a daughter of decedent, was a member of the board of directors of Jung Corp. and was one of two doctors who reviewed and approved the new product development literature that Jung Corp. distributed. No other members of decedent's family were employed by, or involved in, the management of Jung Corp. After a series of strokes in the period 1975-77, decedent had not been involved in the management of Jung Corp. Decedent's death had no impact on the running of Jung Corp. The Conways had eight children, none of whom was involved in the business. As of October 1984, Conway (then 57 years old) was not considering retirement; however, he was concerned about who his successor would be because none of his children was involved in the business.

The holders of voting common shares of record on the date of decedent's death were as shown in table 3:

Table 3

Decedent	168,600	Robert A. Conway, Trustee	
Mildred H. Jung Trust	24,000	u.a.d. 11/9/76 Ruth A.

	Alvin C. Drury	520

In May 1986, Kendall Co. (hereinafter sometimes referred to as Kendall) contacted Jung Corp. in regard to an acquisition of Jung Corp. Conway told Kendall's representatives that he was not interested in selling. In the summer of 1986, Conway was invited to meet with Kendall's representatives in Boston, Massachusetts. Conway then consulted with Ruth Conway and Mary Lois Jung. Conway raised the matter at a meeting of Jung Corp.'s board of directors in September 1986. The board of directors advised that, if Conway did not plan to have family succession at Jung Corp., then he should treat Jung Corp. as any other asset, to be held or sold when he thought appropriate.

Jung Corp. began negotiations with Kendall concerning the sale of certain assets of Jung Corp. The board of directors of Jung Corp. recommended that any sale be completed by December 31, 1986, because of changes in the tax law enacted by the Tax Reform Act of 1986. On December 29, 1986, Kendall bought certain assets of Jung Corp. for about $ 59.5 million. On the date of decedent's death this sale was not foreseeable.

The remaining assets of Jung Corp. were sold in transactions separate from the sale to Kendall. On July 7, 1986, Jung Corp. sold Theradyne to Surgical Appliances Industries, Inc., for $ 1 million. On December 1, 1986, Jung Corp. sold assets of Futuro's Grid line to CDC Liquidators for $ 552,705. On December 23, 1986, Jung Corp. sold certain assets of JRA to Spanco Co. for $ 5,076,200. On December 29, 1986, Calley & Currier was sold for $ 750,000.

In 1986 Jung Corp. did not discuss the possible sale of Jung Corp. assets with any entities other than those to which sales actually took place.

On December 15, 1986, the shareholders of Jung Corp. adopted a plan of liquidation. According to the plan of liquidation, Jung Corp. was to be liquidated upon the sale to Kendall, which was to be on December 29, 1986, and dissolved by December 31, 1986. In order to accommodate the liquidation, the Jung-Conway Trust was established to serve as a conduit for transferring assets from Jung Corp. to its shareholders. The total trust equity of about $ 64 million is net of liquidation expenses, and after the buyout of the voting and nonvoting stock and stock options. The buyout price was $ 75 per share. On the date of decedent's death, this liquidation was not foreseeable.

In connection with the preparation of the estate tax return, decedent's executrix relied on Clark's law firm to find an appraiser for decedent's stock in the Jung Corp. Clark's law firm retained Edwin T. Robinson (hereinafter sometimes referred to as Robinson) to prepare an appraisal report. On April 8, 1985, Robinson submitted his written valuation report to Clark, in which he valued decedent's Jung Corp. stock at $ 2,671,973 as of October 9, 1984. This valuation report was the basis for the estate's estate tax return's use of that amount as the reported value of decedent's Jung Corp. stock. Petitioner's estate tax return was filed timely, on July 9, 1985.

On the estate tax return, petitioner elected under section 6166 to pay the appropriate portion of the estate tax in installments. In the course of making this election, petitioner represented that the $ 2,671,973 reported value of decedent's Jung Corp. stock is 88.1 percent of the value of the adjusted

gross estate. On the estate tax return, petitioner reported the value of the gross estate as $ 3,418,971.52. The reported value of decedent's Jung Corp. stock is 78.2 percent of the value of the gross estate.

Robinson is a certified public accountant and an attorney. Robinson does not have formal training or accreditation in valuation. In 1966, after being graduated from law school, Robinson spent 6 years working for the Arthur Andersen accounting firm; his work there involved some valuation questions. In 1972 Robinson joined a law firm as a tax specialist. His work at the law firm included some valuation issues. From 1979 to 1984 Robinson worked for SHV North America Corp. (hereinafter sometimes referred to as SHV), which is a U.S. holding company for a privately owned Dutch company. Robinson was vice president of acquisitions, and president of the SHV Investment Fund (hereinafter sometimes referred to as the fund), a venture capital fund. His job was to make investments for the fund in privately held businesses. Although Robinson did not prepare formal appraisal reports while he was employed by SHV, his job involved valuing companies for potential acquisition, or valuing a company held by SHV for purposes of selling it.

In July 1984 Robinson joined Mayfield & Co., Inc. (hereinafter sometimes referred to as Mayfield). Mayfield provides consultation services for clients who wish to acquire businesses. Robinson's work for Mayfield involved valuing companies, and helping clients to negotiate price, contracts, and financing. Although Robinson was not in the business of issuing written appraisals until he began working for Mayfield in 1984, he already had extensive experience for several years in valuing businesses.

In preparing the appraisal report for petitioner, Robinson visited Jung Corp.'s facilities in Cincinnati and interviewed officers of Jung Corp. In his appraisal report, Robinson considered the history, economic outlook, products, and financial condition of Jung Corp. He valued Jung Corp. by (1) calculating its return on equity and its return on capital employed, and (2) using a price/earnings multiple based on market comparables and applying the multiple to Jung Corp.'s weighted earnings for 1980 through 1984. Robinson concluded that Jung Corp. should be valued at less than book value.

Table 4 shows the positions of the parties, of their expert witnesses, and of the Court as to the fair market value of decedent's 168,600 shares of Jung Corp. stock on October 9, 1984.

Table 4

	Total value
Petitioner:	
Estate tax return	$ 2,671,973
Petition	2,671,973
Expert -- Robinson	2,671,973
Expert -- McCoy	n1 2,529,000
Expert -- McCoy (revised) n2	n1 2,950,500
Expert -- Grabowski	2,585,000
Expert -- Grabowski (revised)	n1 3,372,000
Briefs	2,997,708

Respondent:	
Notice of deficiency	8,330,448
Experts -- Hanan, Mitchell	5,469,000
Experts -- Hanan, Mitchell (revised)	5,597,520
Briefs	8,000,000
Court:	
Ultimate finding of fact	4,400,000

n1 The indicated expert witness reports provided only per-share values. The total value numbers set forth in this table are the product of the respective per-share value and decedent's 168,600 shares.

n2 At trial, McCoy revised several of his numbers. Petitioner evaluated these changes as increasing McCoy's estimate of per-share value from $ 15 (rounded) to $ 17.50 (rounded).

On October 9, 1984, Jung Corp. was worth about $ 32-34 million; decedent's shares amounted to 20.74 percent of the total and were worth about $ 6.7 to $ 7 million, without regard to discounts; the value of decedent's shares should be discounted 35 percent for lack of marketability and should not be further discounted for lack of control; and the fair market value of decedent's shares was $ 4,400,000.

When Robinson prepared the appraisal report for petitioner, he was an experienced expert appraiser. Petitioner acted in good faith in claiming the valuation reported on the estate tax return. There was a reasonable basis for the valuation claimed on the estate tax return.

Respondent's refusal to waive the addition to tax under section 6660 was an abuse of discretion.

OPINION

I. Value of Decedent's Stock

The value of decedent's gross estate includes the fair market value of the stock in Jung Corp. that decedent owned at her death. Sec. 2031(a); n5 United States v. Cartwright, 411 U.S. 546, 551 (1973); sec. 20.2031-1(b), Estate Tax Regs. Because Jung Corp.'s stock was not listed on an exchange and cannot be valued with reference to bid and asked prices or historical sales prices, the statute requires us to consider the value of stock in comparable corporations engaged in the same or a similar line of business. Sec. 2031(b).

n5 Sec. 2031 provides, in pertinent part, as follows:

SEC. 2031. DEFINITION OF GROSS ESTATE.

(a) GENERAL. -- The value of the gross estate of the decedent shall be determined by including to the extent provided for in this part, the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated.

(b) VALUATION OF UNLISTED STOCK AND SECURITIES. -- In the case of stock and securities of a corporation the value of which, by reason of their not being listed on an exchange and by reason of the absence of sales thereof, cannot be determined with reference to bid and asked prices or with reference

to sales prices, the value thereof shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange.

The parties have not agreed on the fair market value of decedent's stock, and so we will have to find the fair market value. Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 451-452 (1980).

Generally, the fair market value of property is the price at which a willing buyer will purchase the property from a willing seller, when neither is acting under compulsion and both are fully informed of the relevant facts and circumstances. E.g., Palmer v. Commissioner, 523 F.2d 1308, 1310 (8th Cir. 1975), affg. 62 T.C. 684, 696 (1974); McShain v. Commissioner, 71 T.C. 998, 1004 (1979). Respondent's determination in the notice of deficiency as to the fair market value of the subject property is presumptively correct, and petitioner bears the burden of proving that the fair market value is lower. Rule 142; Welch v. Helvering, 290 U.S. 111 (1933).

At trial, both sides presented the testimony of expert witnesses to establish the fair market value of the Jung Corp. stock. It would serve no useful purpose to make a detailed analysis of the testimony of these experts to explain item by item the extent to which we agree or disagree with their analysis. Valuation is a not precise science, and the determination of the fair market value of property on a given date is a question of fact (Kaplan v. Commissioner, 43 T.C. 663, 665 (1965)), to be resolved on the basis of the entire record (McShain v. Commissioner, 71 T.C. at 1004), and without necessarily being bound by the opinions of the expert witness, Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), and cases there cited, affg. T.C. Memo. 1974-285; Palmer v. Commissioner, 523 F.2d at 1310. However, we will note considerations that we have taken into account in our determination and explain how we reach our conclusions. See Akers v. Commissioner, 798 F.2d 894, 897 (6th Cir. 1986), revg. and remanding T.C. Memo. 1984-208.

Petitioner contends that the value of decedent's stock on October 9, 1984, was $ 2,997,708 (after applying discounts). Petitioner averages the per-share amounts determined by its three experts and multiplies this average ($ 17.78) by the number of shares (168,600) to arrive at its position. This position is about 12 percent greater than the amount shown on the estate tax return. On brief, in regard to the prediscount value of Jung Corp., petitioner does not offer substantive criticism of respondent's expert witness reports.

In contrast, respondent finds error in all of the expert witness reports, including those of her own expert witnesses. Respondent contends that all the experts undervalued Jung Corp. Respondent criticizes each report on various grounds, and urges this Court to determine a value for Jung Corp. by determining each element used in the discounted cash-flow (hereinafter sometimes referred to as DCF) approach, n6 and by recomputing value based on that approach. Respondent contends that the DCF approach gives decedent's shares a prediscount value of $ 46.20 per share. Respondent contends that if we choose to rely in whole or in part on the comparable market approach, then we should refer to ratios of companies selected by both parties' expert witnesses, as compiled by respondent. Respondent contends that Jung Corp. is two-thirds health care operations and one-third elastic textile operations. Respondent contends that the Court would need only to determine the appropriate normalized income to be used in the market comparable analysis, and the emphasis to be given to the home health care and elastic textile segments of Jung Corp. Respondent contends that under the comparable market approach the prediscount value of decedent's shares is $ 56.11 per share. Respondent contends that

the Court should give the comparable market approach twice the weight as the DCF approach, so that the prediscount value of decedent's shares is $ 52.81 per share. As to discounts, respondent contends that a minority discount should not be applied, and that a marketability discount of 10 percent should be applied, giving decedent's stock a value after discounts of $ 47.53 per share, which results in a total that respondent rounds to $ 8 million. Respondent also contends that in valuing decedent's stock, proceeds of the 1986 sale and liquidation of Jung Corp. should be considered. Respondent's position on brief is about 4 percent less than the amount shown on the notice of deficiency and about 43 percent greater than the revised amount presented by her own expert witnesses.

n6 The DCF approach computes the present value of the estimated future cash-flow. First, the available cash-flow of the business is determined for a certain projection period. Second, a discount rate is applied to determine the present value of the cash-flow. Third, the residual value of the business at the end of the projection period is determined. Fourth, the present value of the residual value is computed. Fifth, the present value of the projected cash-flow is added to the present value of the residual value. The sum is the value of the business.

We agree with petitioner in part, and we agree with respondent in part.

First, we briefly summarize the approaches and conclusions of the experts. Then we analyze the value of Jung Corp. as of October 9, 1984. Then we consider the appropriateness and magnitude of discounts for marketability and minority interests. Finally, we reach our conclusion as to the fair market value of the property (i.e., decedent's 168,600 shares of Jung Corp.).

A. Expert Witnesses

Both sides submitted expert witness reports and presented expert witness testimony in regard to the value of decedent's stock at the date of death. Three expert witnesses testified for petitioner, and two expert witnesses testified for respondent.

Petitioner -- Robinson

Robinson is a 50-percent owner of Mayfield. He is an attorney and an accountant, and has had extensive experience in valuing businesses. Robinson submitted his report to petitioner on April 8, 1985, before the estate tax return was filed, and his valuation was the amount used on the tax return -- $ 2,671,973.

Robinson concluded that the best measure of value for Jung Corp. was by reference to Jung Corp.'s earning capacity. Robinson did not use the comparable sales method of valuation because he concluded that there were no public companies whose business was reasonably comparable to Jung Corp.'s. In particular, although there were publicly traded hosiery companies about the size of Jung Corp., "they are not significant participants in the health care or sports business in the [same] sense that Jung is. Competitors * * * in the sports and health care market are typically so large overall that comparisons are meaningless." Robinson concluded that Jung Corp. should be valued at less than book value, which he determined to have been $ 19,857,000, as adjusted to the first in, first out, method of inventory valuation. Robinson also valued Jung Corp. using a price earnings multiple of 9, which

produced a value for Jung Corp. of $ 18,405,000 at the date of death, and which Robinson concluded was the value of Jung Corp. This led to his determination of a prediscount value of $ 3,817,104, or $ 22.64 per share for decedent's stock. Robinson then discounted this value by 30 percent to account for both lack of control and lack of marketability. Robinson did not assign separate discount rates to the control and marketability factors. This resulted in a value for decedent's stock of $ 2,671,973.

Petitioner -- McCoy

David O. McCoy (hereinafter sometimes referred to as McCoy) has more than 20 years of experience in business valuation. McCoy used three approaches in his appraisal: A market comparable approach, a discounted cash-flow approach, and a capitalization of earnings approach. The amounts McCoy obtained for the value of Jung Corp. are shown in table 5.

Table 5

Market comparable method:	
Earnings	$ 20,942,000
Capital	18,510,000
Sales	18,889,000
Assets	18,249,000
DCF method:	
Growth rate 3%	18,247,000
Growth rate 5%	18,945,000
Growth rate 7%	19,722,000
Capitalization of earnings method	18,213,000

McCoy averaged the eight amounts, and rounded the result, obtaining a prediscount value of Jung Corp. of $ 18,966,000, and a prediscount value for decedent's stock of $ 23.34 per share. McCoy then applied a discount of 35 percent for lack of marketability, but no minority discount, giving decedent's stock a value of $ 15 (rounded) per share. This comes to a total of $ 2,529,000 for the 168,600 shares.

At trial, McCoy conceded a number of errors, and estimated the effects of correcting certain of these errors. As a result, petitioner evaluates McCoy's revised valuation estimate as $ 17.50 per share, which comes to a total of $ 2,950,500 for the 168,600 shares.

Petitioner -- Grabowski

Roger J. Grabowski (hereinafter sometimes referred to as Grabowski) is a principal and director of Price Waterhouse Valuation Services, and he has had extensive experience in valuing businesses. In valuing Jung Corp., Grabowski divided the various subsidiary companies of Jung Corp. into three separate groups. The health care product operations group comprises Futuro, JII, Theradyne, and Calley & Currier. The elastic textile operations group comprises JRA, Rampon, and the activities of the Richard Grey Co. (which was a part of Rampon). The third group comprises the real estate assets and machinery and equipment assets of Ione. Grabowski used the market comparable approach and the DCF approach, see supra note 6, in valuing the first two groups.

In Grabowski's revised report, his market comparable approach gave the following values shown in table 6.

Table 6

Health care operations	$ 17,910,150
Elastic textile operations	7,520,300
Book value of Ione	621,143
Prediscount value of Jung Corp.	26,051,593
Decedent's proportionate share	n1 5,373,483
Less: Marketability discount (35%)	1,880,719
Postdiscount value of decedent's share	3,492,764

n1 Before calculating decedent's proportionate share, Grabowski reduced the book value of Ione by 25 percent as a minority discount. In calculating decedent's proportionate share, Grabowski used 20.75 percent, rather than the 20.74 percent we have found.

Grabowski also used the DCF approach in valuing the health care products operations and the elastic textile operations.

In Grabowski's revised report, his DCF approach gives the values shown in table 7.

Table 7

Health care product operations	$ 21,931,000
Elastic textile operations	10,302,000
Book value of Ione Realty	621,143
Prediscount value of Jung Corp.	32,854,143
Decedent's proportionate share	n1 6,817,235
Less: Minority discounts	
Health care product operations (24%)	1,092,164
Elastic textile operation (26%)	555,973
Ione Realty (25%)	32,222
Decedent's share before marketability	5,137,056
Less: Marketability discount (35%)	1,797,970
Fair market value of decedent's stock	3,339,086

n1 In calculating decedent's proportionate share, Grabowski used 20.75 percent, rather than the 20.74 percent we have found.

Grabowski concluded that the average of the two approaches was the value of decedent's stock. He concluded that decedents's Jung. Corp. stock was worth $ 20 per share (rounded). This comes to a total of $ 3,372,000 for the 168,600 shares.

Respondent -- Hanan and Mitchell

Martin D. Hanan (hereinafter sometimes referred to as Hanan) and Mark L. Mitchell (hereinafter sometimes referred to as Mitchell) prepared a joint expert witness report, and both of them testified. Hanan is the founder and president of Business Valuation Services and Mitchell manages the financial valuation services for Business Valuation Services. Both Hanan and Mitchell have extensive experience in valuing businesses. Hanan and Mitchell computed value by using the market comparable approach and the DCF approach. Hanan and Mitchell did not rely on the market comparable approach because they had difficulty in developing a reliable sample of comparable firms.

In Hanan and Mitchell's revised report, their DCF approach gives the values shown in table 8.

Table 8

Value of operating assets (marketable, minority interest basis)	$ 33,413,952
Plus nonoperating assets	344,000
Prediscount value of Jung Corp.	33,757,952
Less 20% marketability discount (operating assets)	6,682,790
Less 25% minority discount (nonoperating assets)	86,000
Postdiscount value of Jung Corp.	26,989,162
Postdiscount value of decedent's stock	5,597,520

Summary

The conclusions of the expert witnesses and the Court may be summarized as shown in table 9.

Table 9

		Discounts (percentage)		
	Value of

DCF	26,355,143	n4 25	35	n5 51.25
DCF (revised)	32,854,143	n4 25	35	n5 51.25
Hanan, Mitchell	32,989,000	n6 -0-	20	20
Hanan, Mitchell (revised)	33,757,952	n6 -0-	20	20
Court	32-34 million	-0-	35	35

n1 Robinson's 30-percent discount is intended to take into account both marketability and minority holding consideration.

n2 As noted supra, petitioner understands the effect of McCoy's trial testimony as increasing his valuation of decedent's shares from $ 15 per share to $ 17.50. This table shows what would be the result if McCoy were to apply the same proportionate increase (i.e., one-sixth) to his estimate of fair market value for the Jung Corp.

n3 As may be seen from table 6 note 1, supra, Grabowski (in his market comparable approach) does not apply a minority discount to Jung Corp.'s operating assets, but does apply a 25-percent minority discount to Jung Corp.'s nonoperating assets only. Because the operating assets, in Grabowski's analysis, are about 97.5 percent of the total, this is the equivalent of applying a minority discount of about 0.6 percent across the board. After applying the method of calculating combined discounts, described infra note 7, this increases the combined discount to about 35.4 percent.

n4 This is the average of the minority discount rates that Grabowski applies to the different parts of Jung Corp.

n5 See infra note 7 for the method of calculating the combined discount.

n6 As may be seen from table 8, supra, Hanan and Mitchell apply a 20-percent marketability discount to Jung Corp.'s operating assets only, and a 25-percent minority discount to Jung Corp.'s nonoperating assets only. Because the operating assets, in Hanan's and Mitchell's analysis, are almost 99 percent of the total, this is the equivalent of applying one 20.05-percent discount across the board.

B. Value of Jung Corp.

1. Later-Occurring Events

Respondent contends that, in valuing Jung Corp. stock, this Court should consider the sale to Kendall, the other sales, and the ensuing liquidation of Jung Corp. Petitioner contends the 1986 sales and the liquidation are irrelevant because the sales and liquidation were unforeseeable at the valuation date.

We agree in part with respondent and in part with petitioner.

A distinction may usefully be drawn between later-occurring events which affect fair market value as of the valuation date, and later-occurring events which may be taken into account as evidence of fair market value as of the valuation date.

If a prospective October 9, 1984, buyer and seller were likely to have foreseen the 1986 sale to Kendall, and the other activities leading to the liquidation, then those later-occurring events could affect what a willing buyer would pay and what a willing seller would demand as of October 9, 1984. We conclude, and we have found that, on October 9, 1984, Jung Corp. was not for sale, the sale to Kendall was not foreseeable, and the liquidation was not foreseeable. Accordingly, we conclude that those later-occurring events did not affect the October 9, 1984, fair market of decedent's stock. Estate of Gilford v. Commissioner, 88 T.C. 38, 51-55 (1987).

However, we have stated that "for purposes of determining fair market value, we believe it appropriate to consider sales of properties occurring subsequent to the valuation date if the properties involved are indeed comparable to the subject properties." Estate of Thompson v. Commissioner, 89 T.C. 619, 628-629 n.7 (1987), revd. on other grounds 864 F.2d 1128 (4th Cir. 1989). To the same effect are, e.g., Krapf v. United States, 977 F.2d 1454, 1458-1460 (Fed. Cir. 1992); Estate of Kaplin v. Commissioner, 748 F.2d 1109, 1111 (6th Cir. 1984), revg. T.C. Memo. 1982-440; Estate of Brown v. Commissioner, 425 F.2d 1406, 1407 (5th Cir. 1970), affg. T.C. Memo. 1969-91. See Estate of Jung v. Commissioner, T.C. Memo. 1990-5, and cases cited therein.

Of course, appropriate adjustments must be made to take account of differences between the valuation date and the dates of the later-occurring events. For example, there may have been changes in general inflation, people's expectations with respect to that industry, performances of the various components of the business, technology, and the provisions of tax law that might affect fair market values between October 9, 1984, and the sales and liquidation some 2 years later. Although any such changes must be accounted for in determining the evidentiary weight to be given to the later-occurring events, those changes ordinarily are not justification for ignoring the later-occurring events (unless other comparables offer significantly better matches to the property being valued).

When viewed in this light -- as evidence of value rather than as something that affects value -- later-occurring events are no more to be ignored than earlier-occurring events.

Accordingly, we do not consider the sales and eventual liquidation as affecting the October 9, 1984, value of Jung Corp., but we do consider these events as evidence of the October 9, 1984, value.

2. Treatment by Expert Witnesses

Robinson did not consider the 1986 events in his expert witness report. This is to be expected -- his report was submitted to petitioner on April 8, 1985, and was the foundation for the valuation on the estate tax return, which was filed on July 9, 1985.

At trial, on re-cross-examination, Robinson was asked if he considered Jung Corp. to be an acquisition candidate, and whether, if a company were about to be acquired at a premium, that would affect its value. Robinson agreed that one would take that into account. However, he went on to emphasize that he was not aware of that potential, and that he did not think that Jung Corp. was an attractive acquisition candidate on October 9, 1984.

McCoy did not consider the 1986 events in his expert witness report. At trial, on direct examination, he stated that he was aware of the sale, but did not know any details about it. He testified that he considered whether he should take into account the liquidation values, and made a decision that he

should not take them into account. He said that the reasons the liquidation values are not relevant were (1) in 1984 there was no intention to sell Jung Corp., and (2) a minority interest holder has no power to force a liquidation or sale.

Hanan and Mitchell considered the liquidation proceeds in their appraisal. After taking into account the changes in the market and the changes in Jung Corp. between October 9, 1984, and the 1986 sales and liquidation, they concluded that the proceeds obtained in the 1986 liquidation supported their date of death valuation.

Grabowski did not consider the liquidation proceeds in his initial report. In his rebuttal report Grabowski contended that Hanan and Mitchell made errors in their calculations. Nevertheless, after taking into account his view of how the intervening events should be accounted for, he concluded that the proceeds obtained by the shareholders in liquidation were consistent with his date of death valuation.

Thus, Grabowski and Hanan and Mitchell evaluated the 1986 events in the manner we described supra as being appropriate (i.e., as evidence of fair market value as of the valuation date, and not as events affecting fair market value as of the valuation date) and concluded that this evidence was consistent with the results they derived from using the DCF approach.

3. Analysis

Respondent urges us "to determine the appropriate rate or amount for each DCF element." Respondent also urges us to give twice the weight to the comparable market approach as to the DCF approach. Respondent concludes that Jung Corp. was worth $ 52.81 per share, which amounts to a total of about $ 43 million.

In the instant case, we believe the DCF approach to valuing Jung Corp. is more reliable than the market comparable approach. The market comparable approach does not work well in the instant case because the comparable corporations do not have the same product mix (health and elastic textile) as Jung Corp. None of the experts relied exclusively on the market comparable approach, and Hanan and Mitchell and Robinson rejected the market comparable approach because they had difficulty finding companies which were similar to Jung Corp. At trial, Grabowski also stated that he did not rely on the market comparable approach.

Finally, the 1986 sales of parts of Jung Corp. have been shown by Grabowski and by Hanan and Mitchell to be consistent with their conclusions of an October 9, 1984, value of $ 32-34 million for Jung Corp. See supra table 9. The lower valuations by Robinson and McCoy (about $ 18.4 and $ 22.1 million, respectively) were not reconciled with the 1986 events, and we doubt that they could be so reconciled.

We conclude that Hanan and Mitchell and Grabowski accurately valued Jung Corp. using the DCF approach. We conclude (and we have found) that the prediscount value of Jung Corp. was about $ 32-34 million. Decedent's shares amounted to 20.74 percent of the total and were worth about $ 6.7 to $ 7.0 million, without giving effect to discounts.

C. Discounts

The parties agree that the date-of-death value to be assigned to decedent's shares should be discounted in some manner. Cases involving the valuation of minority holdings in close corporations ordinarily consider a discount or discounts because the stock is a minority holding and is not publicly

traded. Conceptually, (1) a minority discount reflects a minority shareholder's inability to compel liquidation and thus inability to realize a pro rata portion of the corporation's net assets value, while (2) a marketability discount reflects the hypothetical buyer's concern that there will not be a ready market when that buyer decides to sell the stock. Each of these prospects (lack of control and lack of ready market) is likely to depress the price that a hypothetical buyer is likely to be willing to pay for the stock. Although we analyze them separately, it is likely that there is a significant real-world overlap between these two discounts. Estate of Andrews v. Commissioner, 79 T.C. 938, 952-953 (1982).

Respondent does not dispute that a marketability discount should be applied. The only dispute is the amount of the discount. Respondent contends that a marketability discount of 10 percent is appropriate. Petitioner contends that decedent's stock should be discounted 35 percent for lack of marketability.

Petitioner contends that decedent's stock also should be discounted 25 percent because it is a minority interest in Jung Corp. Respondent acknowledges that a minority discount often is appropriate, but contends that under the DCF approach to valuation used in the instant case, no minority discount should be applied because the DCF approach used in the expert witness reports values the stock by reference to minority positions, so that the value obtained in the instant case is inherently the value of a minority interest.

Under petitioner's approach, the combined discounts amount to a 51.25-percent reduction n7 from the undiscounted value of decedent's shares. Respondent's approach would allow an overall 10-percent discount. The experts' views, and the Court's conclusions, are shown supra, in table 9.

n7 The discounts are calculated in series in Grabowski's report. Thus, the 35-percent marketability discount would reduce the value to 65 percent of the undiscounted value. The 25-percent minority discount would be applied to the remaining value and would reduce it by another 16.25 percent of the undiscounted value. (25 percent times 65 percent equals 16.25 percent.) Thus, application of the two discounts would result in an aggregate reduction of 51.25 percent. (35 percent plus 16.25 percent.) The commutative laws of mathematics cause the result to be the same, even if the multiplications are made in the reverse order.

We agree with petitioner as to the marketability discount and with respondent as to the minority discount. Thus, we apply a 35-percent reduction from the undiscounted value of decedent's shares.

1. Marketability

Grabowski reviewed six studies of transactions involving restricted stock. Grabowski's report indicated that these studies showed marketability discounts as follows:

	Percentage
Securities and Exchange Commission (hereinafter some-	
times referred to as SEC) Institutional Investor Study	25.8
Gelman study	33.0
Trout study	33.5
Maher study	35.4

Moroney study	35.6
Standard research consultants study	45.0

Based on these studies, Grabowski concluded that a 35-percent discount for lack of marketability was appropriate. Grabowski's rebuttal report considered two additional studies, the Baird and Willamette studies. These studies compared initial public offerings to private transactions before the public offering. The Baird and Willamette studies showed median discounts in the private transactions of 66 percent and 74 percent, respectively.

McCoy consulted a trade magazine that publishes information about private placements of common stock. The stocks are securities of companies that have other common shares that are registered with the SEC and are publicly traded in an active market. These securities are typically bought under an "investment letter" agreement. He reviewed all the private placements shown to have occurred in the 6 years from January 1, 1979, through December 31, 1984. After excluding certain categories of placements, he found 75 private transactions in the common stock of actively traded companies. Of the 75, 11 occurred at small premiums over the freely traded market price, 1 occurred at that market price, and 63 occurred at discounts (ranging up to 90 percent) from that market price. The average of these private placements was a discount of 27 percent. Under SEC rule 144(b), n8 17 C.F.R. sec. 230.144 (1984), such restricted securities will eventually become freely tradable through either registration or the passage of time. McCoy reasoned that, if such stocks with a temporary market restriction sold at an average discount of 27 percent, then Jung Corp. stock with a permanent market restriction should sell at a discount greater than 27 percent; he chose 35 percent. McCoy's rebuttal report added comments about a Maher study and a Solberg study that supported average and modal discounts of 35 percent. In his rebuttal, he also indicated that Hanan's and Mitchell's discussions about the marketability of Jung Corp. are irrelevant to the question of marketability of a minority interest in Jung Corp.

n8 The language of SEC rule 144(b) was unchanged during 1979-84 (the years from which the statistics were taken). The definition of "restricted securities" was revised during 1979-84, but we doubt that these changes affected the results of the statistics upon which McCoy based his marketability discount.

Robinson merely stated in his report: "We believe that a discount of 30% should apply to an interest such as Mrs. Jung's to account for the lack of control and lack of marketability." Robinson's report did not favor us with an explanation of his conclusion.

Hanan and Mitchell concluded that a 20-percent marketability discount was appropriate. They based this conclusion on the SEC Institutional Investor Study for 1966 through 1969. This was a study of publicly traded stock which was restricted from trading on the open market for a certain period of time. The study shows average discounts of about 25 percent for companies with earnings similar to Jung Corp. Hanan and Mitchell concluded that because a majority of Jung Corp. stock was controlled by the Jung family, the sale of Jung Corp. could be easily accomplished. Hanan and Mitchell also concluded that Jung Corp.'s size, history of profitability, and relatively strong position in the market, and the quality of its management, indicated that the marketability discount should be less than the average marketability discount in the SEC Institutional Investor Study. Hanan and Mitchell determined the appropriate discount to be 20 percent.

Here, too, respondent disagrees in part with her expert witnesses. Respondent contends that a 10-percent marketability discount is appropriate because Jung Corp. was an attractive acquisition candidate in 1984. Respondent states "that, without consideration of the acquisition potential, the marketability discount appropriate for Jung is between 15% and 20%, as was opined by BVS" (i.e., Hanan and Mitchell).

We are persuaded by the materials and analyses presented by McCoy and Grabowski. We believe that respondent, and to a lesser extent Hanan and Mitchell, gave too much weight to acquisition potential, or ease of sale, of Jung Corp. as a whole. We have found that, on October 9, 1984, Jung Corp. was not for sale, the sale to Kendall was not foreseeable, and the liquidation was not foreseeable. Also, as McCoy pointed out, we are concerned with the marketability of decedent's interest. We try to evaluate a market for decedent's 20.74-percent interest, not a market for Jung Corp. We assume a hypothetical willing seller of decedent's interest, not a hypothetical willing seller of Jung Corp. The hypothetical willing seller of decedent's shares would have to contend with an actual absence of interest in selling the entire corporation.

Neither respondent nor Hanan and Mitchell presented an explanation of why the inquiries about acquiring Jung Corp. would translate into a significant market for decedent's shares, and we decline to speculate on this point.

We conclude, and we have found, that a 35-percent marketability discount should be allowed.

Respondent contends that a small marketability discount should be applied because Jung Corp. itself would have repurchased decedent's shares in order to keep ownership in the family. n9 Respondent supports this argument by noting that in 1972 Jung Corp. bought a 20-percent block of stock from a shareholder who was not a family member. This argument is not persuasive. Firstly, although Conway testified that he would rather decedent's stock did not fall into the hands of a third party, he also testified that Jung Corp. could tolerate a 20-percent shareholder who was not a family member. Further, the fair market value test under section 20.2031-1(b), Estate Tax Regs., contemplates a hypothetical willing buyer and a hypothetical willing seller. Propstra v. United States, 680 F.2d 1248, 1251-1252 (9th Cir. 1982); Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981); Minahan v. Commissioner, 88 T.C. 492, 499 (1987); Estate of Andrews v. Commissioner, 79 T.C. at 952-956. We will not cast Jung Corp. in the role of the hypothetical willing buyer.

n9 Respondent relies on Estate of Neff v. Commissioner, T.C. Memo. 1989-278, where this Court considered the willingness of a corporation to repurchase its shares in determining the amount of a marketability discount. In Estate of Neff, Rand McNally repurchased stock because of its self-avowed commitment to maintain its status as a closely held corporation with a limited number of shareholders. Further, in repurchasing the stock, Rand McNally was willing to pay full or premium value. This Court considered Rand McNally's history of repurchases in determining the proper marketability discount. The instant case is distinguishable because (1) in the instant case there is a showing of one repurchase 12 years before the valuation date, while in Estate of Neff, the corporation "repurchased shares on numerous occasions" and made a major repurchase in the same year as the valuation date; and (2) in the instant case there was no evidence of a willingness to pay full value or premiums for repurchased

shares, while in Estate of Neff, there was a general offer to repurchase shares (which expired about 1 month before the first valuation date) at a price about 40 percent above what we determined to be a fair market value without any discount.

We hold, for petitioner, that a 35-percent marketability discount shall be applied.

2. Minority

As may be seen from table 9, supra, Grabowski did not provide for a minority discount under his market comparables approach (except for the minor matter discussed supra in table 9 note 3); McCoy did not provide for minority discount under any of the approaches he considered (see supra table 5; three-eighths of his final figures depend on a DCF approach); and Robinson's 30-percent discount was intended to take care of both marketability and minority considerations. Hanan and Mitchell provided for a 25-percent minority discount, but only for about 1 percent of the overall value, and so that minority discount had practically no effect on their conclusion. See supra table 9 note 6.

Only Grabowski, among the expert witnesses, argues for a minority discount, and then only if we accept the DCF approach to valuation of decedent's interest in Jung Corp. As noted supra, (1) we accept the DCF approach to valuation of decedent's interest in Jung Corp., and (2) we accept the general concept of a minority discount in appropriate circumstances.

The matter now before us is whether we should allow a minority discount in addition to the 35-percent marketability discount we have already determined to allow, and, if so, then in what amount. The resolution of this issue depends on the workings of the DCF approach as used by the expert witnesses before us and explained on the record in the instant case.

Grabowski contends that his DCF approach was designed to produce a control value, but concedes that a DCF approach could be used to produce a minority interest value (i.e., a value as to which a minority discount would not be appropriate). Hanan and Mitchell contend that their DCF approach embodies a minority interest value.

Grabowski contends that his DCF approach leads to a control value because (a) his cash-flow assumptions for Jung Corp. were based on what a controlling interest could do to Jung Corp. to make it run better, (b) the discount rate he used did not reflect minority interest evaluation, and (c) his equity risk premium assumed large company financing synergies. We consider these contentions seriatim.

(a) Grabowski's initial expert witness report states that a minority discount is needed because his DCF valuation was done on a controlling interest basis. The expert witness report states: "We presume that an investor is able to take the steps necessary to realize the projected results; therefore, a controlling interest is implicit." In his rebuttal expert witness report, Grabowski states as follows:

Third, we have included one, quantifiable major synergy into our calculation which causes the formulation of the discounted cash flow approach to be a control value. Premiums for control are paid in buying entire businesses. That is, the controlling shareholders of Jung could realize a higher price if they could sell the business to a buyer who could affect [effect?] savings or synergies. (Such synergies are oftentimes categorized as operating, financial and tax synergies.)

Operating savings on [or?] synergies result from increased sales or reduced costs by operating the business differently or combining businesses with a specific acquiring company.

Financial synergy results form [from?] lower costs of funds because the acquiring firm or combined firms are perceived as less risky. Tax synergy results from tax savings peculiar to combining with a specific buyer (i.e., operating loss carryforwards to a specific buyer).

We did not discover any major operating savings that a control-buyer of Jung could realize from changing the operations of Jung as a stand-along [alone?] company. Operating synergies and tax synergies are unique to each potential purchaser and could not be measured by the controlling shareholders of Jung. However, we did account for financing synergies which could only be realized if the existing controlling shareholders of Jung were to take action and sell their shares.

In his oral testimony, Grabowski explained as follows:

So we have measured available cash flow based on what we observe to be a reasonable way Jung Corp. was being run. We did not make, I grant you, any operating changes to Jung Corp. in the calculations of the cash flow. Sometimes, Your Honor, when you are doing a control basis, you will find that the controlling shareholder is taking $ 5 million of salary out. And if you are valuing on a control basis, you will add back the excess salary; he may or may not be worth $ 5 million. But if you determine that he is not, you would add that back. Because if I controlled the business, I would not run it that way.

But there was no excessive amounts of compensation that we determined, excessive items that required extensive adjustments, et cetera, in valuing the control interest.

In neither his expert witness reports nor his oral testimony did Grabowski suggest any other element of his calculation of the amount of the available cash-flow that would make his DCF approach a valuation of a controlling interest.

From the foregoing, we gather that the only element of Grabowski's calculation of the amount of the available cash-flow that would make his DCF approach a valuation of a controlling interest is the financing synergy, which we discuss infra. As far as we can tell, in all other respects Grabowski's calculation of the amount of the available cash-flow was done on a basis which, by itself, would not result in a control premium, or minority discount.

(b) The second area of dispute is whether the discount rate applied by the expert witnesses puts the DCF approach valuations on a minority basis. In their initial expert witness report, Hanan and Mitchell stated that no minority discount was needed in their DCF valuation because their discount rate was derived by using equity return data from the trading of minority interests in publicly traded companies.

As explained previously, supra note 6, the DCF approach involves calculating the sum of the present value of the available cash-flow and the present value of the terminal value. A discount rate, which represents the required rate of return of an investor in an alternate investment opportunity, is used in this calculation. The discount rate is the weighted average of the required rate of return on equity capital and the required rate of return on debt capital. Both Grabowski and Hanan and Mitchell determined the required rate of return on equity capital by using the capital asset pricing model (hereinafter sometimes referred to as CAPM). The CAPM is the risk-free rate plus the product of the beta n10 for the specific company and an equity risk premium.

n10 Hanan and Mitchell define and illustrate beta as follows in their expert witness report:

Systematic risk is measured by beta * * *, and is the risk associated with those economic factors that threaten all businesses. Such factors are the reason that stocks have a tendency to move together. Beta provides a measure of the tendency of a security's return to move with the overall market's return (e.g., the return on the S&P 500). For example, a stock with a beta of 1.0 tends to rise and fall by the same percentage as the market (i.e., S&P 500 index). Thus, "[beta] = 1.0" indicates an average level of systematic risk. Stocks with a beta greater than 1.0 tend, on average, to rise and fall by a greater percentage than the market. Likewise, a stock with a beta less than 1.0 has a low level of systematic risk and is therefore less sensitive to changes in the market.

Grabowski's use of this term is essentially the same.

The risk-free rate is the yield to maturity on 20-year (Grabowski) or 30-year (Hanan and Mitchell) U.S. Treasury bonds on the valuation date. This yield is available to investors in the market, without regard to control or minority status. Accordingly, this element of the discount rate does not affect the question of whether the DCF approach results in a controlling interest value or a minority interest value.

Although the establishment of a beta for Jung Corp. involves consideration of many matters (e.g., selecting comparable companies the securities of which are commonly traded on stock exchanges, "unlevering" and "relevering"), it is enough for our purposes to observe that Grabowski and Hanan and Mitchell agree that the Jung Corp. beta was a little under 1. Also, because the betas for the companies and industries that these expert witnesses used are derived from reported stock exchange trading data, which is almost entirely the data of trading in minority interests, this element of the discount rate suggests that ordinarily the DCF approach results in a minority interest value.

Grabowski and Hanan and Mitchell based their equity risk premiums on Ibbotson and Associates' publication, "Stocks, Bonds, Bills, and Inflation". Grabowski based his calculations --

on the arithmetic mean of actual investor returns over the period of 1950-1984 and consists of an overall excess return for the stock market as a whole of 7.34% (the additional return common stock investors earned in excess of the return on long-term government bonds).

Hanan and Mitchell used the same source and --

concluded that the market risk premium [a different term for equity risk premium] equals 6.9%, the average annualized total return on equity investments (defined as the S&P 500) in excess of the average annualized bond yield (income) return on long-term government bonds over the period January 1926 to December 1983.

The modest difference between Grabowski's equity risk premium and that used by Hanan and Mitchell is one of many differences between them that were largely balanced out so that their bottom-line values for Jung Corp. differed by less than 3 percent. See supra table 9. What is important for purposes of the minority discount question is that the basic data these experts used are the data of stock market trading, which is almost entirely the data of trading in minority interests. Thus, this element of the discount rate also suggests that ordinarily the DCF approach results in a minority interest value.

In his rebuttal expert witness report Grabowski contends that the discount rate represents the minimum rate of return which the corporation must earn on its investments, including acquisitions of controlling interests. He notes that the prospective controlling investor will control the total available cash-flow of

the acquired corporation. However, this explanation does not persuade us that the discount rate in Grabowski's DCF calculation implies control, because this rate of return is developed from data that reflect the actions of minority investors and generally not the actions of controlling investors.

We agree with respondent that the discount rates used by the expert witnesses in the instant case reflect the minority position. n11

n11 See Zukin & Mavredakis, Financial Valuation: Businesses and Business Interests, par. 6.9[2], at 6-39 (1990).

[2] Discount for Minority Interest

In many valuation situations, the block of stock to be appraised represents minority ownership interests in the company. Minority blocks of stock, by themselves, generally do not have the power to effect change in the bylaws of a corporation, effect any significant corporate change, sellout, recapitalization or other conversion of assets, determine dividend policies and employee shareholder salaries, or effect any other significant change in corporate policy. A minority stockholder without a ready market for his stock would also find it difficult to dispose of his stock and realize a capital gain.

The fair market value of a marketable minority interest is the price at which the securities trade in a free and active market. In essence, the prices quoted in the Wall Street Journal for public companies whose shares trade on any of the various exchanges or in the over-the-counter market represent the per-share value of marketable minority interests. It therefore follows that a discount is inapplicable in instances where the value of the subject company minority position is predicated upon indices derived from prices of securities of publicly traded companies.

On the other hand, where indications of value are predicated upon control or complete ownership, a discount must be applied to provide indications of value for a minority or less-than-controlling interest. In short, discounts for the subject minority interest are appropriate for some methodologies but inappropriate for others.

To the same effect, see Pratt, Valuing a Business: The Analysis and Appraisal of Closely-Held Companies 118-119 (2d ed. 1989).

(c) Grabowski's main argument is his third argument. He contends that his equity risk premium assumed large company financing synergies. He contends that his equity risk premium of 7.34 percent is appropriate only if Jung Corp. were to be acquired by a large company which could incorporate financing synergies into Jung Corp. He contends that Hanan and Mitchell also assumed financing synergies in determining their equity risk premium of 6.9 percent. In his rebuttal expert witness report Grabowski contends that taking into account Jung Corp.'s small size, the equity risk premium should be 16.73 percent rather than 7.34 percent. Grabowski asserts that a premium of 16.73 percent is appropriate based on the equity risk premiums of the smallest companies traded on the New York Stock Exchange. Stated otherwise, Grabowski is contending that a "small stock" premium of 16.73 percent should have been applied in the DCF valuation, and that because he did not apply a small stock premium, a minority discount is needed to make up for his error. Grabowski did not make this contention

in his initial expert witness report. He made this contention only when his minority discount was challenged. We do not agree that a small stock premium is appropriate in the instant case, and we do not agree that a minority discount is appropriate in the instant case.

Firstly, if Grabowski had applied the small stock premium in his DCF approach to Jung Corp.'s value, then his prediscount value would be only about $ 20 million. n12 That number is even less than McCoy's revised estimate. See supra table 9. Grabowski has not shown us how a $ 20 million October 9, 1984, valuation (or any valuation calculated with Grabowski's small stock premium) could be reconciled with the 1986 sales and liquidation proceeds. We rejected McCoy's $ 22 million valuation in part because of McCoy's failure to so reconcile, and accepted Grabowski's $ 33 million valuation because it could be reconciled with the 1986 events.

n12 In his rebuttal expert witness report, Grabowski explains that his small stock premium calculations would result in reducing by 35 percent the value of Jung Corp.'s health care component and by 55 percent the value of Jung Corp.'s elastic textiles component. He does not indicate any change in the value for Ione. Thus, he would reduce his original prediscount valuation for Jung Corp. from under $ 26.5 million, see supra table 9, to under $ 16 million, an overall reduction of about 40 percent. When Grabowski revised his calculations, increasing his original $ 26.5 million to $ 33 million, see supra table 9, he did not also recalculate the effect of his small stock premium calculations. We have assumed, for purposes of our analysis, that his revised valuation also would be reduced by 40 percent, thus reducing his prediscount valuation for Jung Corp. from under $ 33 million to under $ 20 million.

Accordingly, we reject Grabowski's contention that he had erred by failing to use a small stock premium in his initial expert witness report calculation in the instant case. Because a small stock premium would not have been appropriate in the instant case (whatever may be the general validity of the small stock premium concept), there is no force to Grabowski's contention that a minority discount is appropriate in order to make up for Grabowski's failure to use a small stock premium.

Secondly, Mitchell testified that small companies tend to be more risky because they tend to be in risky industries. Thus, the apparently greater equity risk premiums for small companies, on which Grabowski relies, are merely a reflection of the risk involved in the type of activity and not a greater risk arising merely or primarily because of corporate size. As a result, it is not at all clear that there is any general validity in the small stock premium concept, except as a substitute for a beta rating. See Pratt, Valuing a Business: The Analysis and Appraisal of Closely-Held Companies 76-77 (2d ed. 1989).

Thirdly, at trial when Grabowski was asked to explain the differences in risk and rates of return in regard to an investment in a small company like Jung Corp., and an investment in a large publicly traded company, Grabowski discussed lack of control and lack of marketability, factors which are taken into account by the DCF approach and a discount for lack of marketability. Grabowski did not provide the Court with any evidence that Jung Corp. is a riskier investment simply because of its small size. In addition, Grabowski did not provide any explanation of why the size of the corporation affects the appropriateness of a discount for a minority interest in the corporation.

We conclude that in the instant case financing synergies do not justify a minority discount, on top of the 35-percent marketability discount that we have already determined to allow.

At trial, the Court raised the question of whether some amount of minority discount is appropriate to account for the difference between a minority shareholder in a publicly traded corporation and a minority shareholder in a closely held corporation. On brief petitioner contends that there is a difference between minority shareholders in private and publicly traded companies, but petitioner provides neither authority nor persuasive reasoning to support the contention. Respondent contends that although there may be differences, the differences generally do not affect the value of the stock, and in any event do not affect the value of decedent's stock in the instant case. The Court has not found any authority for using the public-private distinction as a basis for applying a minority discount. Accordingly, in the instant case we do not apply a minority discount based on the differences between public and private minority shareholders.

We conclude that the DCF calculations by Grabowski and by Hanan and Mitchell in the instant case were on a minority basis, and we have found that in the instant case no minority discount should be applied to the values determined using the DCF approach.

Petitioner contends that in Northern Trust Co., Transferee v. Commissioner, 87 T.C. 349, 383 (1986), affd. sub nom. Citizens Bank & Trust Co. v. Commissioner, 839 F.2d 1249 (7th Cir. 1988), this Court approved the use of a minority discount when the DCF approach is used in valuation. Respondent tells us that the instant case provides us "with an opportunity to reconsider issues" in Northern Trust Co., Transferee.

In Northern Trust Co., Transferee, stock of a closely held corporation was valued. Grabowski submitted an expert witness report and testified in that case. Grabowski used the DCF approach, and he used the CAPM to determine the discount rate. After deciding on a value for the corporation, he applied a minority discount. 87 T.C. at 369. This Court concluded that the DCF approach correctly determined the value of the stock. We also allowed both minority and marketability discounts. Id. However, in Northern Trust Co., Transferee, respondent did not contend that no minority discount was appropriate. Rather, respondent merely argued for a lower minority discount than the discount for which the taxpayer contended. Id. Because the parties in Northern Trust Co., Transferee did not present to the Court the question of whether a minority discount could be allowed in conjunction with the DCF approach, the opinion in that case did not explore whether the DCF approach that Grabowski used in that case was calculated on a control basis rather than on a minority basis. See Estate of Fusz v. Commissioner, 46 T.C. 214, 215 n.2 (1966).

Thus, we do not accept respondent's invitation to reconsider our opinion in Northern Trust Co., Transferee v. Commissioner, supra, and we also conclude that that opinion does not require us to allow a minority discount in the instant case.

We hold, for respondent, that no minority discount shall be applied.

D. Conclusion

In determining the date-of-death value of decedent's shares in Jung Corp., we have concluded that the value of Jung Corp. was $ 32-34 million. We have concluded that the prediscount value of decedent's shares was $ 6.7 to $ 7 million, and that this must be discounted by 35 percent.

We are obligated to set a specific number on the value of decedent's interest. We are not so presumptuous as the parties, who claimed the wisdom in the estate tax return and in the notice of deficiency to determine the value to seven significant figures ($ 2,671,973 and $ 8,330,448, respectively). Taking into account the "inherently imprecise" nature of this issue, Messing v. Commissioner, 48 T.C. 502, 512 (1967), we determine this value to two significant figures -- $ 4,400,000. We have so found.

We hold for neither party on this issue, although we note that our conclusion is significantly closer to petitioner's position than it is to respondent's position.

II. Section 6660

In her amendment to answer, respondent asserts an addition to tax under section 6660. See sec. 6214(a). Respondent asserts that the value claimed on the tax return is less than 40 percent of the correct value, and so the addition to tax should amount to 30 percent of the underpayment attributable to the valuation understatement. On brief, respondent does not specifically ask for the 30-percent rate, but rather asks for an addition to tax "in an amount to be computed based upon the value of the decedent's interest in Jung as determined by the Court." Respondent contends that petitioner did not have a reasonable basis for the valuation claimed on its tax return and that respondent did not abuse her discretion in refusing to waive the addition.

Petitioner contends that there should be no addition to tax because (1) there is no valuation understatement, and (2) even if there is a valuation understatement, the addition to tax should be waived because (a) there was a reasonable basis for the estate tax return value, (b) petitioner claimed this value in good faith, and (c) respondent "wrongfully refused to waive the addition to tax".

Respondent relies on our opinion in Mailman v. Commissioner, 91 T.C. 1079 (1988). Petitioner seeks to distinguish that case because (1) it is based on a different Code section (sec. 6661, not sec. 6660, as is the instant case), (2) in Mailman we relied on regulations under section 6661 while there are no regulations under section 6660, and (3) in Mailman there was no expert evidence or evidence of the taxpayer's efforts to determine proper tax liability, while in the instant case there is substantial evidence in both categories.

We agree with respondent that there is a valuation understatement, but we agree with petitioner that the resulting addition to tax should be waived.

Section 6660 n13 provides for an addition to tax if there is an underpayment of tax of at least $ 1,000 attributable to a valuation understatement for purposes of estate or gift tax. There is a valuation understatement if the value stated on the tax return is 66 2/3 percent (or less) of the correct value. Respondent may waive all or part of this addition to tax if there was a reasonable basis for the valuation claimed on the return and the claim was made in good faith.

n13 SEC. 6660. ADDITION TO TAX IN THE CASE OF VALUATION UNDERSTATEMENT FOR PURPOSES OF ESTATE OR GIFT TAXES.

(a) ADDITION TO THE TAX. -- In the case of any underpayment of a tax imposed by subtitle B (relating to estate and gift taxes) which is attributable to a valuation understatement, there shall be added to the tax an amount equal to the applicable percentage of the underpayment so attributed.

(b) APPLICABLE PERCENTAGE. -- For purposes of subsection (a), the applicable percentage shall be determined under the following table:

If the valuation claimed is the following percent of the correct valuation --	The applicable percentage is:
50 percent or more but not more than 66 2/3 percent	10
40 percent or more but less than 50 percent	20
Less than 40 percent	30

(c) VALUATION UNDERSTATEMENT DEFINED. -- For purposes of this section, there is a valuation understatement if the value of any property claimed on any return is 66 2/3 percent or less of the amount determined to be the correct amount of such valuation.

(d) UNDERPAYMENT MUST BE AT LEAST $ 1,000. -- This section shall not apply if the underpayment is less than $ 1,000 for any taxable period (or, in the case of the tax imposed by chapter 11, with respect to the estate of the decedent).

(e) AUTHORITY TO WAIVE. -- The Secretary may waive all or any part of the addition to the tax provided by this section on a showing by the taxpayer that there was a reasonable basis for the valuation claimed on the return and that such claim was made in good faith.

(f) UNDERPAYMENT DEFINED. -- For purposes of this section, the term "underpayment" has the meaning given to such term by section 6653(c)(1).

[Subsec. (f) was added by sec. 1811(d), Tax Reform Act of 1986 (TRA 86), Pub. L. 99-514, 100 Stat. 2085, 2833, retroactively as if included in sec. 6660 when sec. 6660 was enacted, TRA 86 sec. 1881, 100 Stat. 2914. The subsequent amendments of this provision by TRA 86 sec. 1899A(57), 100 Stat. 2961; and by sec. 7721(c)(2) of the Omnibus Budget Reconciliation Act of 1989 (OBRA 89), Pub. L. 101-239, 103 Stat. 2106, 2399 (which repealed sec. 6660), do not affect the instant case.]

[As a result of OBRA 89, the substance of sec. 6660 may now be found in subsecs. (g) and (h)(2)(C) of sec. 6662.]

[The waiver provision has been replaced by a reasonable cause exception (which now appears as sec. 6664(c)(1)) which is similar to the circumstances which, under pre-OBRA 89 law, could have been the basis for consideration of a waiver.]

Because respondent did not determine the addition to tax in the notice of deficiency, but asserted it in the amendment to answer, respondent has the burden of proof on all of the elements of section 6660. Rule 142(a); see Reiff v. Commissioner, 77 T.C. 1169, 1173 (1981); Achiro v. Commissioner, 77 T.C. 881, 889-891 (1981).

We consider first whether there is a valuation understatement and, if so, then whether the addition to tax should be waived.

A. Valuation Understatement

As shown supra in table 4, we hold that the correct value of decedent's interest in Jung Corp. is $ 4,400,000, and petitioner claimed on its estate tax return that the value is $ 2,671,973. The claimed value thus is about 60.7 percent of the correct value. It follows that there is a valuation understatement, sec. 6660(c), and that the applicable percentage is 10 percent, sec. 6660(b). It is apparent that the underpayment of estate tax attributable to the valuation understatement is at least $ 1,000. Sec. 6660(d).

As a result, an addition to tax of 10 percent of the attributable underpayment is to be imposed on account of the valuation understatement, unless the addition to tax is waived.

B. Waiver

Section 6660(e) provides that the Secretary may waive all or part of the addition to tax under section 6660 if the taxpayer shows both (1) that there was a reasonable basis for the valuation claimed on the tax return, and (2) that the taxpayer acted in good faith in claiming that valuation. The denial of a waiver by the Secretary is reviewable by this Court on an abuse-of-discretion basis. Mailman v. Commissioner, 91 T.C. at 1082-1084. n14 In other words, for petitioner to win on this issue it is not enough for us to conclude that we would have waived the addition to tax -- we would have to conclude that, in refusing to waive the addition to tax, respondent has exercised this discretion "arbitrarily, capriciously, or without sound basis in fact." Mailman v. Commissioner, 91 T.C. at 1084; n15 see Capitol Fed. Sav. & Loan v. Commissioner, 96 T.C. 204, 213, 223 (1991).

n14 Although, as petitioner notes, Mailman v. Commissioner, 91 T.C. 1079 (1988), was a sec. 6661 case, the abuse of discretion standards there set forth have been used in other areas where the Internal Revenue Code has specifically given discretion to respondent. E.g., Citrus Valley Estates, Inc. v. Commissioner, 99 T.C. 379, 464 (1992), on appeal (9th Cir., May 19, 1993); Capitol Fed. Sav. & Loan v. Commissioner, 96 T.C. 204, 213 (1991). The use of the Mailman standard in the instant case is specifically appropriate because the language of sec. 6660(e) that we interpret is essentially similar to the language of sec. 6661(c) interpreted in Mailman. See, e.g., Zuanich v. Commissioner, 77 T.C. 428, 442-443 (1981).

n15 We conclude that respondent had adequate opportunity to exercise her discretion under sec. 6660(e). See Mailman v. Commissioner, 91 T.C. at 1084 n.5. Petitioner objected to the addition to tax in the reply to respondent's amended answer, stating as an "affirmative defense" the allegation that petitioner had a reasonable basis for the valuation and that the valuation was made in good faith. The waiver issue was discussed at trial. Further, respondent does not contend that she did not have adequate opportunity to exercise her discretion. Compare Estes v. Commissioner, T.C. Memo. 1992-531 with Klieger v. Commissioner, T.C. Memo. 1992-734 and Sotiros v. Commissioner, T.C. Memo. 1991-95.

In the instant case, respondent has the burden of proof on the section 6660 addition to tax. If respondent were to prove that either (1) there was not a reasonable basis for the valuation claimed on the tax return, or (2) the valuation claim was not made in good faith, then respondent would have proven that petitioner failed to meet the statutory predicate for consideration of a waiver. Failing that, respondent could prevail if she were to prove that her refusal to waive the addition to tax (1) was not arbitrary, (2) was not capricious, and (3) had a sound basis in fact.

We consider first whether the valuation claim was made in good faith, then whether there was a reasonable basis for the valuation, and finally whether respondent abused her discretion in failing to waive the addition to tax.

1. Good Faith

It was clear that decedent's interest in the Jung Corp. constituted substantially all of decedent's estate. The executrix proceeded promptly to retain the services of Robinson, an experienced appraiser. Robinson examined financial records and interviewed officials of Jung Corp. On April 8, 1985, he submitted a report which provided some explanation of his conclusions. Petitioner's estate tax return, incorporating Robinson's valuation, was filed timely, on July 9, 1985. Respondent does not direct our attention to any evidence pointing to lack of good faith.

We conclude (and we have found) that petitioner acted in good faith in claiming the valuation reported on the estate tax return.

2. Reasonable Basis

It is a close question whether there was a reasonable basis for the valuation claimed on the return.

On the one hand, Robinson undervalued decedent's stock by about $ 1.7 million -- an undervaluation of about 39 percent of what we have determined to be the correct value. Robinson's report is short, it is deficient in providing data and support for its conclusions, and the Court has given little weight to it in valuing the stock. n16

n16 See 15 Mertens, Law of Federal Income Taxation, sec. 59.08, at 26 (1992).

A common fallacy in offering opinion evidence is to assume that the opinion is more important than the facts. To have any persuasive force, the opinion should be expressed by a person qualified in background, experience, and intelligence, and having familiarity with the property and the valuation problem involved. It should also refer to all the underlying facts upon which an intelligent judgment of valuation should be based. The facts must corroborate the opinion, or the opinion will be discounted. [Fn. refs. omitted; emphasis added.]

On the other hand, Robinson's analysis does have some validity, and his conclusions were based on his extensive experience as an appraiser. Robinson's report, although poor for purposes of assisting the Court in determining the value of decedent's interest, does give some explanation of Robinson's conclusion, analysis, and process. Also, it is evident that valuing decedent's interest is a difficult task. After all, in the notice of deficiency respondent overvalued decedent's interest by about 89 percent. Even on brief, after having access to all the expert witness reports and other evidence of record (more

than 3 1/2 linear feet of exhibits and almost 1,000 pages of transcript), respondent overvalued decedent's interest by about 82 percent. Thus, petitioner's valuation was much closer to the mark than was respondent's valuation.

Petitioner does not contend that Robinson's value for Jung Corp. ($ 18,405,000) can be reconciled with the proceeds which were obtained by the shareholders through the sale of Jung Corp.'s subsidiaries and assets; however, this does not negate our finding of a reasonable basis. When the appraisal report was prepared and the estate tax return was filed, neither Robinson nor the executrix of the estate knew that Jung Corp.'s subsidiaries and assets would be sold, and what the liquidation proceeds would amount to.

Under the circumstances, we conclude (and we have found) that there was a reasonable basis for the valuation claimed on the estate tax return.

3. Abuse of Discretion

If our role were to determine whether petitioner had reasonable cause and acted in good faith, then our determinations under items 1 and 2, supra, would be enough, and petitioner would prevail. However, for the years before the Court our role is much more limited. See supra the last paragraph of note 13. As we stated in Mailman v. Commissioner, 91 T.C. 1079, 1084 (1988) --

Unlike other additions to tax such as for failure to timely file (sec. 6651(a)(1)), the statute does not provide that the taxpayer's proof of reasonable cause will excuse the taxpayer's misfeasance.

To put it another way, under the statute's language petitioner's showing of reasonable basis and good faith serve only to bring petitioner to the point where respondent "may waive all or any part of the addition to the tax". Sec. 6660(e) (emphasis added). That is, such a showing gets petitioner into the game; in order for petitioner to win the game, we must consider whether respondent's refusal to waive is an abuse of discretion. In the instant case we have to determine whether respondent has carried her burden of persuading us that her discretion was not exercised "arbitrarily, capriciously, or without sound basis in fact." Mailman v. Commissioner, 91 T.C. at 1084.

On the one hand, petitioner's actions have satisfied the good faith and reasonable basis requirements, but not so clearly as to make respondent's refusal to waive arbitrary or capricious. On the other hand, it is evident that respondent's view of the situation was affected by a view of the facts that was far from the view that we took.

As we have noted, respondent overvalued the property by $ 3.6 million on brief, while petitioner undervalued the property by a little more than $ 1.7 on the tax return. From respondent's position on brief, petitioner's tax return undervaluation was enormous. From our view of the facts, the amount of petitioner's tax return undervaluation was less than one-half the amount of respondent's overvaluation on brief. We conclude that respondent's discretion was exercised "without sound basis in fact." Mailman v. Commissioner, 91 T.C. at 1084.

We conclude, and we have found, that respondent's refusal to waive the addition to tax under section 6660 was an abuse of discretion.

In Estate of Berg v. Commissioner, T.C. Memo. 1991-279, affd. in part and revd. in part 976 F.2d 1163 (8th Cir. 1992), we held that respondent's discretion had not been abused in refusing to waive the section 6660 addition to tax. The Court of Appeals reversed on that issue. The record in the instant case

is far more favorable to petitioner than the record presented by the taxpayer in Estate of Berg.

In Estate of Berg, the taxpayer did not commission an appraisal until more than 4 years after the decedent's death; in the instant case petitioner did commission an appraisal promptly, and the value on the timely filed estate tax return was based on that appraisal. In Estate of Berg, the estate tax return did not provide support for the claimed valuation, except for a reference to another opinion of this Court; in the instant case, Robinson's appraisal was deficient in terms of evidentiary standards, but provided some substantive support for the claimed valuation. In Estate of Berg, we agreed with respondent's determination of value; in the instant case, respondent overvalued the property by more than twice as much as petitioner undervalued it. Thus, our conclusion in the instant case that respondent's discretion was abused is consistent with our conclusion in Estate of Berg that respondent's discretion was not abused.

In Estate of Berg, the Court of Appeals held that respondent's discretion was abused. This is the same result that we reach in the instant case.

We conclude that, under these circumstances, the instant case is not an appropriate vehicle for determining whether we agree with the analysis presented by the Court of Appeals for the Eighth Circuit in Estate of Berg v. Commissioner, 976 F.2d at 1166-1167.

We hold for petitioner on this issue.

To take account of the foregoing and concessions on other matters,

Decision will be entered under Rule 155.

APPENDIX

Jung Corp. -- Consolidated as of September 30, 1984

Assets

Kaczkowski v. Bolubasz

491 Pa. 561 (1980)

421 A.2d 1027

Theodore KACZKOWSKI, Administrator of the Estate of Eric K. Kaczkowski, Deceased, on behalf of the Estate of Eric K. Kaczkowski, Deceased, Appellant, v. John J. BOLUBASZ, Appellee.

Supreme Court of Pennsylvania.

Argued March 10, 1980.

Decided September 22, 1980.

Seymour Sikov, Sikov & Love, Pittsburgh, for appellant.

Cosmos J. Reale, Warren D. Ferry, Pittsburgh, for appellee.

Stephen M. Feldman, Feldman & Feldman, Philadelphia, for amicus curiae Pa. Trial Lawyers.

EAGEN, C.J., and O'BRIEN, ROBERTS, NIX, LARSEN, FLAHERTY and KAUFFMAN, JJ.

OPINION

NIX, Justice.

Appellant instituted a complaint in trespass in Allegheny County Court of Common Pleas. The suit arose from an automobile accident in which the decedent, Eric K. Kaczkowski, was riding as a passenger in a vehicle operated by appellee. At the original trial of this matter, the jury established the liability of the appellee. Upon appellant's Motion For a New Trial, the case was returned to the trial court for a retrial on the issue of damages.

During the retrial of the question of damages, the jury was presented with the following facts: the decedent was a white male, twenty years of age at the time of his death; he attended Alliance College, Cambridge Springs, Pennsylvania for two years; and at the time of his death, he was attending the Institute of Computer Management, a division of Litton Industries. Decedent's close friends and relatives testified that decedent was in good health, industrious, and interested in his course of study in computer operations.

The Director of Placement at the Institute for Computer Management testified to his familiarity with the decedent, that his progress was good for a beginning student, and that the decedent evidenced motivation and willingness to learn. Based upon his professional contact with employers and experience in placing graduates, the Placement Director testified to the range of salaries for which the decedent would have been qualified. He stated that in the private sector, the average salaries ranged from $538.36 to $585.77 per month, and in the public sector, the average salaries ranged from $600 to $900 per month.

During an in-chambers discussion, appellant's counsel offered to call as an expert witness, Doctor Reuben E. Slesinger, an Economics Professor at the University of Pittsburgh. By the testimony of Doctor Slesinger, counsel offered to prove a projection of the potential earning capacity of the decedent.[1] Although the trial court did not prohibit Dr. Slesinger from testifying as to his projection of future lost earnings reduced to present value, the court refused to allow Dr. Slesinger to use a four percent (4%) annual increment to the victim's base salary to represent the combined impact of inflation and productivity gains on the future increases in the victim's earnings. The trial court's refusal was based upon the recently decided case of *Havens v. Tonner,* 243 Pa.Super. 371, 365 A.2d 1271 (1976),[2] which the trial court interpreted to mandate that "an annual increment percentage whether called a productivity factor or inflation factor is not permitted to be used by a witness projecting future loss of earnings reduced to present worth." *Kaczkowski v. Bolubasz,* No. 1246 April Term, 1978, Court of Common Pleas of Allegheny County, at 3 (February 22, 1978).

Rather than have Dr. Slesinger project the future loss of earnings without the four percent (4%) annual increment, the plaintiff chose not to use any of Dr. Slesinger's testimony. Instead, the plaintiff relied upon the trial court's charge of impairment of future earning power for the guidance of the jury. The lower court charged the jury to consider the decedent's personal characteristics to: calculate the potential gross earnings of the decedent for the period of decedent's work life expectancy; to determine the maintenance costs of the decedent for the period of decedent's work life expectancy; to deduct the personal maintenance costs from the gross earnings to produce net earnings; and to discount the net earnings to present value by six percent (6%) simple interest. Based upon the judge's instructions, the jury returned a verdict of $30,000. on behalf of the estate of Eric K. Kaczowski. The appellant's Motion for a New Trial was denied. The appellant appealed to the Superior Court which per curiam affirmed the lower court based upon the Superior Court's prior decision in *Havens v. Tonner. Kaczkowski v. Bolubasz,* No. 755 April Term, 1978 (Superior Court of Pa., May

[1] The projection took into consideration factors which had previously been testified to by various witnesses called on behalf of appellant. Counsel for appellant advised the Court that Dr. Slesinger would have testified as to the effects of productivity increases and inflation on the potential earning capacity of the decedent. The proffered projection did not take into consideration pensions, social security benefits, fringe benefits, or the like, and this appeal is not concerned with these items.

[2] See discussion of *Havens v. Tonner,* 243 Pa.Super. 371, 365 A.2d 1271 (1976), beginning at page 1031, infra.

4, 1979). Appellant filed a Petition for Allowance of Appeal with this Court and we granted allocatur.[3]

The issue raised by appellant is whether the trial court erred in excluding reliable economic testimony showing the impact of inflation[4] and increased productivity[5] on decedent's future earning power.[6] In order to address this issue, we must consider current Pennsylvania law and reassess its effectiveness in light of the purported objective of awarding full compensatory damages for loss of future earnings. To the victims of negligence or their survivors, the law of damages is of at least the same concern as the substantive law of torts. We have been quick to change substantive tort law where it has been determined that the needs of a changing society so dictated. See e.g., *Sinn v. Burd,* 486 Pa. 146, 404 A.2d 672 (1979); *Azzarello v. Black Bros. Inc.,* 480 Pa. 547, 391 A.2d 1020 (1978); *Mayle v. Pa. Dept. of Hwy.,* 479 Pa. 384, 388 A.2d 709 (1978); *Fadgen v. Lenker,* 469 Pa. 272, 365 A.2d 147 (1976); *Ayala v. Phila. Bd. of Education,* 453 Pa. 584, 305 A.2d 877 (1973). We are now called upon to determine whether the law of damages is in need of similar adjustments due to changes of circumstances occasioned by the passage of time and conclude that both a productivity factor and inflation should be reflected in an award of lost future earnings.

I. Current Law

In this Commonwealth, we have consistently held that damages are to be compensatory to the full extent of the injury sustained. *Incollingo v. Ewing,* 444 Pa. 299, 307, 282 A.2d 206, 210 (1971); *McLane v. Pittsburgh Rys. Co.,* 230 Pa. 29, 79 A. 237 (1911); *Montgomery Bank v. Reese,* 26 Pa. 143, 146 (1850). The rule "is to give actual compensation, by graduating the amount of damages exactly to the extent of the loss."

---

[3] Jurisdiction over this appeal is pursuant to 42 Pa.C.S.A. § 724.

[4] Inflation is "the increase in the volume of money and credit relative to available goods resulting in a substantial and continuing rise in the general price level." Websters, Third International Dictionary (1965). Inflation gains are measured in terms of what the average person refers to as "cost of living increases." An example of inflation evidencing an increase in prices unrelated to an increase in intrinsic value is that the juice content of oranges has not increased in years, but their price continues to rise.

The presence of inflation plays two distinct roles in an award for prospective damages. The first role is determining the impact of inflation on the future earnings of the victim. The second place in which inflation plays a part is in determining the appropriate interest rate to discount the future damage award to its present value.

[5] Economist's recognize that there are at least four major elements which influence the rate of increase of an employee's income. These factors are: (1) the educational attainment of the participant prior to his entry into the labor marker; (2) the influence of age upon the earnings of participants over their life cycle; (3) the significance of productivity and growth; and (4) the impact of inflation. Henderson, The Consideration of Increased Productivity and Discounting of Future Earnings to Present Value, 20 S.D.L.Rev. 307 (1976). In our analysis, we will isolate the inflation element from the other three factors, collectively called "merit" increases, which are consumed in productivity. We recognize that merit increases are controlled by different variables than the inflationary factor, and deserve separate consideration.

[6] Since damages in personal injury and wrongful death actions involve the lost earning capacity of the victim, the proper period to calculate a loss is based upon work-life expectancy.

Forsyth v. Palmer, 14 Pa. 96, 97 (1850). Loss of future earnings is a distinct item of damages, which if properly proved, may result in recovery for the plaintiff.[7]

Inflation and productivity increasingly demand judicial attention, particularly with respect to personal injury action damages for lost future earnings. Traditionally, evidence of future inflation and productivity increases have been deemed too speculative to be included in calculating future damages even though inflation and productivity increases may drastically reduce an initially generous award. 18 *Washburn L.J.* 499 (1979). However, today, in light of clear scientific evidence of the fact that inflation and productivity have become an established part of our economy, it becomes necessary that these factors be considered in such awards.

The "law does not require that proof in support of claims for damages or in support of compensation must conform to the standard of mathematical exactness." *Lach v. Fleth,* 361 Pa. 340, 352, 64 A.2d 821, 827 (1949). All that the law requires is that "(a) claim for damages must be supported by a reasonable basis for calculation; mere guess or speculation is not enough." *Stevenson v. Economy Bank of Ambridge,* 413 Pa. 442, 453-54, 197 A.2d 721, 727 (1964). See also, *Small v. Flock,* 407 Pa. 148, 180 A.2d 59 (1962); *Getz v. Freed,* 377 Pa. 480, 105 A.2d 102 (1954). "If the facts afford a reasonably fair basis for calculating how much plaintiff's entitled to, such evidence cannot be regarded as legally insufficient to support a claim for compensation." *Western Show Co., Inc. v. Mix,* 308 Pa. 215, 162 A. 667 (1932).

Personal injury awards are usually lump-sum payments, and are not paid in weekly or monthly installments.[8] Thus, all damages for personal injuries, including damages expected to accrue in the future,[9] must be proved and calculated at trial. D. Dobbs, Remedies, § 8.1 (1973). The loss of future wages is discounted to its present value by using the six percent (6%) simple interest figure.[10]

---

[7] When an injury is a permanent one, one which will cause a loss or lessening of future earning power, a recovery may be had for the probable loss of future earnings. McCormick, Damages, 299 (20th reprint 1975). If the injured party survives, he should receive undiminished, his total estimated future earnings, but if he dies, the proper measure of damages includes a deduction based upon decedent's cost of personal maintenance. *Incollingo v. Ewing,* 444 Pa. 263, 307, 282 A.2d 206, 228 (1971). Today's opinion does not disturb our requirement for personal maintenance deductions.

[8] The Workmen's Compensation Act is the most notable exception, Act of February 28, 1956, P.L. 1120 § 1 et seq., (1955) as amended, 77 P.S. § 1 et seq. See also No-Fault Motor Vehicle Insurance Act, Act of July 19, 1974, P.L. No. 176, § 106(a)(7), 40 P.S. § 1009.106(a)(1).

[9] In order for the factfinder to assess the precise measure of damages, expert testimony is admissiblie if "the subject matter of the inquiry is one involving special skills and training beyond the ken of ordinary laymen." *Reardon v. Meehan,* 424 Pa. 460, 465, 227 A.2d 667, 670 (1967).

[10] The rationale for reducing a lump-sum award to its present value is that:

> it is assumed that the plaintiff will invest the sum awarded and receive interest thereon. That interest accumulated over the number of relevant years will be available, in addition to the capital, to provide the plaintiff with his future support until the total is exhausted at the end of the period. The projected interest must therefore be allowed in reduction of capital lest it be claimed that the plaintiff is overcompensated.

Specifically, the principles relating to the limitation of the proof and consideration of the economic factors affecting lost future earnings have been articulated recently in *Havens v. Tonner,* 243 Pa.Super. 371, 365 A.2d 1271 (1976). In Havens, the appellant and the appellee were involved in an automobile accident. The appellee suffered whiplash, as well as a weakness in his right arm and leg. After his employer's reorganization of the corporate sales office, appellee's employment was terminated. As of his termination date, appellee claimed a total and permanent disability.

In the common pleas court, the jury returned a verdict in favor of the appellee. On appeal to the Superior Court, the appellant objected to the admissibility of an economist's testimony on appellee's lost future earnings. During trial, the economist calculated lost future earnings based upon a projected work life of 20.69 years. He assumed that if appellee continued as an employee he would have earned $12,780. annually, plus fringe benefits. A 3½ percent productivity factor was added to this figure.

The economist explained his calculation of the productivity factor as follows:

> What I have taken into account here is the fact of productivity increases in the future, to try and allow for future increases in wages which would come about due to the fact that the economy over a long period of time has had a tendency to exhibit an increase in the propensity to produce goods and services at a faster more efficient rate. Namely, due to better technology. This, over the longrun [sic] is the principal cause or the principal reason why a person's wages rise; if he can

---

Fleming, Inflation and Tort Compensation, 26 *Am.J.Comp.Law* 51, 66 (1977).

"The measure of the lump-sum award for future pecuniary losses arising from a tort is the present worth of the full amount of what would have been received at a later time." Restatement of Torts (Second) § 913A, Wilkinson v. Northeast Borough, 215 Pa. 486, 74 A. 734 (1906). In Pennsylvania, since 1922 our courts have mandated that when discounting future damages to present worth "the interest must be computed at the lawful rate of six percent…." *Windle v. Davis*, 275 Pa. 23, 118 A. 503 (1922). The rationale for the mandatory six percent simple interest rule was explained by this Court in *Gregorius v. Safeway Steel Scaffolds Co.,* 409 Pa. 578, 585, 187 A.2d 646, 649 (1963):

> "We are all aware that present interest rates are different than as of the year this [fixed six per cent] rule was first written. In fact, they presently vary from day to day, place to place, and under different conditions in the same area. There must be a fixed rule to aid juries in calculating the present worth of such elements of damage and to guide the jury in resolving such difficult questions. It is our conclusion that a change in the rule would lead only to confusion and chaos and add greater difficulty in the trial of such cases."

The origin of this principle *is Chesapeake & Ohio RW Co. v. Kelly,* 241 U.S. 485 [36 S. Ct. 630, 60 L. Ed. 1117] (1916), in which the Supreme Court announced that awards for future damages had to be discounted to present value at some appropriate discount rate. Research reveals that the discounting theory is grounded in economic history of the latter part of the nineteenth century. "Between 1867 and 1896, for example, it is estimated that the price level dropped by about forty percent. At the turn of the century, one needed only approximately sixty percent of the dollars required at the end of the Civil War to purchase the same basket of goods." 20 *S.D.L.Rev.* at 309. When future prices are expected to decline or remain constant, there is no economic disagreement with the discounting theory. However, an economic lag of judicial practice occurs when courts perpetuate a 1916 rationale to the economic realities of the 1900's. Id.

> produce twice as much in an hour after learning to do his job better, his employer can afford to pay him more because the employer has more goods that this individual produced that he can now offer for sale and, in fact, in the longrun [sic] in the American economy, productivity has increased or the ability of American workers to produce more goods and services in an hour somewhere around three and a half per cent, therefore, I have allowed the wage increase here approximately of about three and a half percent perannum [sic] for the remaining period of his work-life expectancy. 243 Pa.Super. at 385, 365 A.2d at 277-78.

The Superior Court refused to accept the economist's testimony concerning a 3½% productivity factor. It reasoned that the productivity factor "was based upon nothing but the economist's assertion that experience demonstrated that industrial productivity increased annually by at least that much due to improved technology and that this improvement was normally passed along in the form of increased wages." Id., 243 Pa.Super. at 378, 365 A.2d at 1274. The Superior Court rationalized its holding as follows:

> Steadily rising wage rates over the next twenty years, whatever the cause, are simply one face of the coin of inflation. It may be that inflation will become so much an established pattern of our economy that it should be recognized in estimating loss of future earnings. Certainly the erratic behavior of the economy over the past half dozen years, plagued by war and other unusual circumstances, is not a sufficient demonstration that inflation at any predictable rate will continue for another twenty years. Furthermore, even if inflation is a part of the pattern of the future, one certain consequence is that interest rates on money will reflect that fact. Consequently, a sum representing the present worth of future earnings will earn more in dollars in an inflationary period than would otherwise be the case. This may not wholly compensate for the effect of inflation over the next twenty years. We view the "productivity factor" as simply a substitute for inflation and equally speculative and inadmissible in a calculation of future earnings. Id.

Thus, it appears that the Haven's Court misunderstood that inflation and productivity were separate and distinct phenomena and the court failed to distinguish between the two in its blanket rejection of the productivity factor that was offered in evidence. Therefore, under the teaching of Havens, a tort victim in Pennsylvania who institutes an action to recover lost future earnings only receives compensation based upon his or her salary as of the date of the debilitating event. The current earning amount is multiplied by the number of years remaining in the victim's worklife span. The total figure is then reduced to its alleged present value. There is no allowance made in the lost future earning formula for consideration of either potential productivity or inflation.

II. Fallacy of Havens

Ideally, a damage award computation should achieve the tripartite goals of accuracy, efficiency, and predictability. *Freeport Sulphur Co. v. S.S. Hermosa,* 526 F.2d 300, 308-12 (5th Cir. 1976). Commentators note that the Pennsylvania method of calculating lost

future earnings achieves the efficiency goal by precluding expert testimony on inflation and productivity while confining the relevant inquiry to determining wages at the date of the debilitating event. Comment, Inflation and Damages, 63 *Va.L.Rev.* 105, 108 (1977); Note, Considering Inflation in Calculating Lost Future Earnings, 18 *Wash.L.J.* 499, 500 (1979), Fleming, Inflation and Tort Compensation, 26 *Am.J.C.L.* 51, 65 (1977). Since the inflation and productivity variables are removed from consideration in calculating the damage award, the award is more predictable and the possibility of settlement out of court is enhanced. However, even assuming the premise that simplification is synonymous with efficiency and predictability, the Pennsylvania method sacrifices accuracy to the prejudice of the victim by failing to compensate the victim to the full extent of the injury sustained. By an obstinate refusal to give any recognition to inflation and productivity, we ignore our responsibility to attempt to "graduate the amount of the damage award exactly to the extent of the loss." *Forsyth v. Palmer,* 2 Harris 96, 97 (1850).

We are aware that "[T]he orderly development of the law must be responsive to new conditions and to the persuasion of superior reasoning." *Griffith v. United Air Lines,* 416 Pa. 1, 23, 203 A.2d 796, 806 (1964).

[W]hen a rule, after it has been duly tested by experience, has been found to be inconsistent with the sense of justice or with the social welfare, there should be less hesitation in frank avowal and full abandonment…. There should be greater readiness to abandon an untenable position when the rule to be discarded may not reasonably be supposed to have determined the conduct of the litigants, and particularly when in its origin it was the product of institutions or conditions which have gained a new significance or development with the progress of the years." Cardozo, The Nature of the Judicial Process, 150-51 (1921).

Despite the uninformed belief of the Haven's court, inflation and productivity factors are not speculative and are capable of definition and prediction by economic experts. For decades, economists have been refining tools to forecast economic growth and have used these tools with proven accuracy. Sophisticated economic forecasts are relied upon by every major government agency, corporation, and financial institution. These forecasts are based upon all that is known in the American economy and despite small tolerances of error, these projections have been accurate in the past. See, District of *Columbia v. Barriteau, D.C.App.,* 399 A.2d 563, 566 (1979). Thus, there exists a reasonable basis in fact for this court to consider the impact of inflation and productivity on lost future earnings. A court has a responsibility to the citizenry to keep abreast of changes in our society. In light of the recognized acceptance of the science of economics, the courts of this Commonwealth can no longer maintain their ostrich-like stance and deny the admissibility and relevancy of reliable economic data concerning the impact of productivity and inflation on lost future earnings. Indeed, to ignore economic realities and presume that there will be no changes in an individual's future earnings because of such factors is further removed from reality than any variance that may result from our efforts to predict these factors.

a. Inflation

It would be ludicrous for this Court to cling to the Haven Court's conclusion that the presence of inflation in our economy is a temporary and passing phenomenon, influenced by "war and other unusual circumstances."[11] Information gathered by the United States Bureau of Labor Statistics demonstrates that the American economy has been experiencing a steady increase in the cost of living over its history. Even though the rate of inflation has not been numerically the same for the past 40 years, the presence of inflation as a factor in our economy has been constant.[12] Purchasing Power of the Dollar: 1940-78, U.S. Bureau of the Census, Statistical Abstract of the United States: 1978 (99th Edit.).[13] Thus, while the rate of inflation may vary during any given period, its long term presence as a fact of life in our economic picture is certain.

b. Productivity

Moreover, the assertion that productivity factors are too speculative to consider in computing lost future earnings is also fallacious.[14] An individual's future earning capacity is capable of estimation based upon objective factors of age, maturity, education and skill.[15] Henderson, Consideration of Increased Productivity and

---

[11] From 1940 to 1972, the consumer price index, the government's measure of inflation, rose 185 percent. In terms of purchasing power, it took almost $3.00 in 1972 to purchase what $1.00 would have purchased in 1940. The compounded rate of advances over this period is approximately 3.5% annually. Purchasing Power of the Dollar: 1940-78, U.S. Bureau of the Census, Statistical Abstract of the United States: 1978 (99th Edit.) Washington, D.C.

[12] Since 1972, the Consumer Price Index (CPI) has not declined in any month. From 1967 through 1978 the CPI has risen 102%.

1972 - 3.4% 1976 - 4.8%
1973 - 8.8% 1977 - 6.8%
1974 - 12.2% 1978 - 9.0%
1975 - 7.0% 1979 - 13.3%

Bureau of Labor Statistics, U.S. Dept. of Labor, CPI Detailed Report 1 (Dec. 1972-1979). From June 1979 through June 1980 the CPI increased 14.3%.

[13] Judge Friendly noted in *McWeeney v. New York, New Haven and Hartford Railroad Co.,* 282 F.2d 34, 38 (2d Cir. 1960):

> "There are few who do not regard some degree of continuing inflation as here to stay and would be willing to translate their own earning power into a fixed annuity, and it is scarcely to be expected that the average personal injury plaintiff will have acumen to find investments that are proof against both inflation and depression-a task formidable for the most expert investor." (Footnote omitted.)

[14] From 1947 to 1973 there was a 5.6% compound rate of increase in the average compensation of all persons in the private non-farm sector, or an overall increase of approximately 4½ times. United States Dept. of Labor, Bureau of Labor Statistics, Handbook of Labor Statistics 175 (1973).

[15] Normally, in the beginning years of participation in the labor force, the aging process or the acquiring of knowledge is the most significant influence upon earnings. During the middle years, ages 35-44, productivity and growth dominate. In the last decade of one's work-life, inflation is largely responsible for most advances. Henderson, Income Over the Life Cycle, Some Problems of Estimation and Measurement, 25 *Fed.Ins.Coun.Q.* 15, 28-29 (1974).

Discounting of Future Earnings to Present Value, 20 *S.D.L.Rev.* 307, 312 (1976). A determination of an individual's future earning capacity based on objective criteria is far less speculative than most other estimates made by the trier of fact. See e.g., *Hamil v. Bashline,* 481 Pa. 256, 392 A.2d 1280 (1978) (what might have happened to the decedent had he received proper medical care); *Wallace v. Pa. R.R.,* 222 Pa. 556, 561, 71 A. 1086 (1909) (future pain and suffering is recoverable if it is likely or probable to ensue); *Yost v. West Penn Railways Co.,* 336 Pa. 407, 410, 9 A.2d 368 (1939) (future medical expense can be recovered if they can be estimated).[16] Admittedly, predicting lost future earnings entails some degree of speculation. However, that alone does not justify excluding reliable economic evidence since imprecision is inherent in any computation of lost future benefits. In view of our acceptance of the reliability of the science of economics, the victim's lost future earning capacity should be treated like any other question of fact[17] and should be submitted to the trier of fact after a proper foundation and expert testimony.

This Commonwealth now joins the growing number of jurisdictions which consider inflation and productivity as integral factors to be included in computing lost future earnings. See *Beaulieu v. Elliott,* 434 P.2d 665 (Alaska 1967); *Richmond Gas Corporation v. Reeves,* 302 N.E.2d 795 (Ind.App. 1973); *Resner v. Northern Pacific Railway,* 161 Mont. 177, 505 P.2d 86 (1973); *Plourd v. Southern Pacific Transportation Co.,* 266 Or. 666, 513 P.2d 1140 (1973); *Willmore v. Hertz Corp.,* 437 F.2d 357, 359-60 (6th Cir. 1974); *Schnebly v. Baker,* 217 N.W.2d 708 (Iowa 1974). See also *Bach v. Penn Central Transportation Co.,* 502 F.2d 1117 (6th Cir. 1974); *Weakley v. Fishbach & Moore, Inc.,* 515 F.2d 1260 (5th Cir. 1975) (interpreting Texas law); *United States v. English,* 521 F.2d 63 (9th Cir. 1975); *Tenore v. Nu Car Carriers, Inc.,* 67 N.J. 466, 341 A.2d 613 (1975); *Seaboard Coast Line R.R. Company v. Garrison,* Fla.App., 336 So. 2d 423 (1976); *Markham v. Cross Transportation, Inc.,* 376 A.2d 1359, 1364 (R.I. 1977); *Ossenfort v. Associated Milk Producers, Inc.,* 254 N.W.2d 672, 683-84 (Minn. 1977); *Lumber Terminals, Inc. v. Nowakowski,* 36 Md.App. 82, 373 A.2d 282, 290-91 (1977).

III. Formulas Suggested By Other Jurisdictions

There are three significant approaches, traditional, middle ground, and evidentiary which the judiciary has adopted in considering the impact of future inflation and productivity on lost future earning capacity. 63 *Va.L.Rev.* at 128 n.155. The traditional approach ignores altogether the effects of future productivity and future inflation as being "too speculative." This view was previously adhered to by this Commonwealth, but for reasons stated above, it is hereby rejected.

[16] "[R]egardless of the pattern of the increase in income over the life-cycle, the probability that one's money income will not rise, on an annual basis, approaches zero. There is little or no reason for disputing the fact that money earnings rise, the only problem is by how much, or at what rate, an issue which largely depends upon the segment of the labor market being investigated." 20 *S.D.L.Rev.* at 312.

[17] In this Commonwealth, we allow the use of tables of present worth calculations prepared by qualified experts in order to provide a precise analytical calculation which will enhance the possibility of correct and just results. We also accept the reliability of mortality tables to calculate the victim's life expectancy. *Brodie v. Philadelphia Transport Co.,* 415 Pa. 296, 203 A.2d 657 (1959).

The middle ground approach is anomalous in that it permits the factfinder to consider the effects of productivity and inflation on lost future earning capacity, but prohibits expert testimony on either of these issues. The proponents of this approach argue that expert testimony on future economic trends is "speculative," yet acknowledge that such facts are within the "common experience" of all jurors and, therefore, jurors should not be prohibited from applying their common knowledge in reaching a verdict. *Bach v. Penn Central Transportation Co.,* 502 F.2d 1117 (6th Cir. 1974), overruled by *Morvant v. Construction Aggregates Corp.,* 570 F.2d 626 (6th Cir. 1978); and, *Riha v. Jasper Blackburn Corp.,* 516 F.2d 840 (8th Cir. 1975). However, it has been consistently demonstrated that expert evidence is essential to accurate economic forecasting. Since it is apparent that the middle-ground approach contributes little to the accuracy or predictability of lost future earnings, and paradoxically allows a judge or jury to determine what an acknowledge expert cannot, we decline to adopt it.

The evidentiary approach in its several variants allows the factfinder to consider productivity and inflation in awarding damages. Since we believe that there is a reasonable basis in fact to consider the impact of inflation and productivity on lost future earnings, we conclude that the evidentiary concept is the most valid method to compute lost future earnings. However, courts employing the evidentiary method differ on the factors to be considered in assessing lost productivity on the one hand and the method to calculate the inflation component in the final lost future earning award on the other. Recognizing that there are myriad of ways to incorporate such economic data[18] we find that there are two versions appropriate for our consideration.

The first of these two variants of the evidentiary approach was developed by the court in *Feldman v. Allegheny Airlines,* 382 F. Supp. 1271 (D.Conn. 1974), aff'd, 524 F.2d 384 (1st Cir. 1975). In *Feldman*, a surviving husband brought a wrongful death action as the administrator of his wife's estate. The defendant airline stipulated as to its liability and the trial was confined to the issue of damages. The court assumed that recovery for lost future earnings included the victim's lost earning capacity. In order to demonstrate the bases for the court's conclusions relative to what course the deceased's life probably would have taken, the court extrapolated the evolving pattern of Mrs. Feldman's life. The court detailed the deceased's college grades, her employment history, the opinion of the deceased held by her fellow workers, the expressed employment goals of the deceased and the potential jobs for which the deceased was qualified. The court also examined the employment history of another individual who had remarkably similar credentials as the deceased. The defendant produced one witness who testified as to the decedent's employment prospects. Based upon the above factors, the court

[18] See e.g., *Turcotte v. Ford Motor Co.,* 494 F.2d 173 (1st Cir. 1974) (independent incorporation method); *Platis v. United States,* 288 F. Supp. 254, 277-78 (D. Utah), aff'd, 409 F.2d 1009 (10th Cir. 1969) (allowing a constant increase of $500 per year to account for future wage increases); *Brooks v. United States,* 273 F. Supp. 619, 635 (D.S.C. 1967) (increased decedents last annual salary by 15% and spread this constant salary over decedents work expectancy).

predicted the incremental salary (productivity) increases of the decedent over her work-life expectancy.[19]

The court was then faced with the inflation component and the task of discounting the award to its present value. The court developed a formula known as the "offset present value method" in which it subtracted the estimated inflation rate from the discount rate to calculate the inflation adjusted or "real" rate of interest. Each year's earnings were then discounted to present value by this "real" discount rate. The "real" discount rate employed by the court was 1.5%. The court rationalized its formula:

> … on the basis of the evidence adduced at trial, the evidence judicially noticed and collated at the Appendix, and judicial notice of the continuing erratically inflationary behavior of the American economy, that 1.5 per cent per year is an appropriate figure by which to discount an award of damages based on the destruction of future earning capacity when that award has itself been computed without consideration of inflation affecting that amount subsequent to the date of the injury upon which the award is premised. Id. at 1294-1295[20]

The second variant of the evidentiary method was adopted by the Alaska Supreme Court in *Beaulieu v. Elliott,* 434 P.2d 665 (1967), and refined in *State v. Guinn,* 555 P.2d 530 (1976). Pursuant to this formula, the Alaska courts first calculate lost future earning

---

[19] Based upon expert testimony that the decedent had an estimated 40 years remaining in her work-life and would probably retire at age 65, the court assigned dollar value to decedent's lost future earnings for each of the forty years. The court accomplished this task by utilizing the federal government GS pay scales, since this salary schedule was reflective of the potential earnings throughout the Washington metropolitan area.

"According to this valuation process, the value of the decedent's earning capacity for `fiscal 1972,' the fiscal year beginning July 1, 1971, is the 1971 salary for the first step in GS-12, $15,040. This increases over the next four years, so that for fiscal 1976 the decedent's earning capacity is $17,044, the 1971 salary for the fifth step in GS-12. The decedent's earning capacity then remains unchanged over the next nine years-eight years of child rearing and the decedent's first year of employment thereafter. In 1986 the decedent's earning capacity goes up to the sixth step in GS-12, $17,545, and continues to rise thereafter one step at a time, with each change of grade being from the tenth step in one grade to the fifth step in the next higher grade. In the fortieth year, fiscal 2111, the decedent is at the seventh step of GS-16, with a 1971 salary of $33,757. See generally Table I, infra, p. 1298.

382 F. Supp. at 1287.

[20] The appellate court summarized the district court's process as follows:

> "In calculating the discount rate, the appellee's expert, relied on by the district court, used an average earnings of 4.14% (from mutual savings bank investments) as representative of a prudent, non-sophisticated investment and subtracted 2.87% as the average yearly inflation rate revealed in the Department of Labor's Consumer Price Index over an 18-year period, yielding a 1.27% difference which was rounded up to 1.5%. Judge Blumenfeld corroborated this `inflation-adjusted discount rate' of 1.5% by calculating the real yields of investments since 1940 in federal government securities (with inflation factored out) from the 1974 Economic Report of the President, a source referred to by appellant Allegheny's expert."

Feldman v. Allegheny Airlines, Inc., 524 F.2d 384, 387 (2nd Cir. 1974).

capacity of the victim over his or her work-life expectancy. As to productivity, the Alaska court has stated: "Automatic step increases keyed to the length of service are by their very nature certain and predictable at the time of trial" and the court takes them into account when estimating the lost future earnings. *State v. Guinn,* 555 P.2d at 546. However, the court excluded as speculative evidence the "non-scheduled salary increases and bonuses that are granted as one progresses in his chosen occupation in terms of skill, experience and value to the employer." Id.

In order to account for the inflationary component's impact on lost future earnings and the effect of future interest rates on lump-sum payment, the Alaska court applied that "total offset method." Under the total offset method, a court does not discount the award to its present value but assumes that the effect of the future inflation rate will completely offset the interest rate, thereby eliminating any need to discount the award to its present value.

IV. Discussion

Mindful of our goal that a damage award formula should strive to be efficient, predictable as well as accurate, in computing lost future earning capacity this Commonwealth adopts the Feldman court's approach to calculating lost productivity and the Alaska court's total offset approach to inflation and discounting to present value.[21] We believe that this eclectic method best computes a damage award which will fairly compensate a victim to the full extent of his or her injuries and avoids unnecessary complexities likely to produce confusion although in reality contributing little to the degree of accuracy to be obtained. Although judges and juries are not fortune tellers equipped with crystal balls, the Feldman approach to determining productivity as a factor in awarding future lost earning best approximates the soothsayers by presenting the triers of fact with all relevant evidence. After laying a proper foundation, expert and lay witnesses are called upon to testify as to the victim's past and future employment possibilities. The defense may cross-examine the plaintiff's witnesses and present evidence on their own behalf. Upon a thorough evaluation of all the evidence presented, the factfinder makes an informed estimation of the victim's lost earning capacity.[22] Although this approach may be time consuming, and like all estimations of future events may be subject to a degree of speculation, it is exceedingly more accurate to assume that the future will not remain stagnant with the past.

We cannot embrace the Alaska court's restrictive method of computing productivity as a component of lost future earnings since the Alaska court limits its inquiry to those step

[21] This Commonwealth now requires that a damage award be discounted to its present value by using six percent simple interest figure. We do not wish to disturb this requirement in calculating future damages in other contexts. We refrain "from attempting to fashion broad general rules as a panacea. The obviously wiser course is to resolve disputes on a case-by-case basis until we develop, through experiences in [an] area, a sound basis for developing overall principles." *Pa.L.R.Bd. v. State College Area School District,* 461 Pa. 494, 500, 337 A.2d 262, 265 (1975).

[22] This tailor-made approach to lost earing capacity is accepted by many jurisdictions, even those jurisdictions which do not admit evidence of inflation on the grounds that it is speculative. See *Higginbotham v. Mobil Oil Corp.,* 545 F.2d 422 (5th Cir. 1977).

advances keyed to the length of service. The Alaska court's refusal to consider the possibility of merit based increases, unfairly discriminates against those victims whose salary is dependent on their skill, experience, and value to their employer. Moreover, it appears that the Alaska court's conception that merit based increases are "speculative" is a throwback to the previously rejected traditional approach.

In support of our adoption of the "total offset method" in allowing for the inflationary factor, we note that it is no longer legitimate to assume the availability of future interest rates by discounting to present value without also assuming the necessary concomitant of future inflation. We recognize that inflation has been and probably always will be an inherent part of our economy. Although the specific rate of inflation during any given period may vary, we accept the fact that inflation plays an integral part in effectuating increases in an employee's salary, and we choose to adopt a damage formula which will allow for that factor without actually requiring the factfinder to consider it as an independent element of the award.

Current economic theory demonstrates the accuracy of the total offset approach to inflation. As previously noted, the total offset method assumes that in the long run, future inflation and the discount rate will offset each other. "At first blush the rough and ready approach seems too obviously to invite the objection that it is far less precise than Judge Blumenfeld's (Feldman approach) and over-compensates the plaintiffs." Fleming, 26 *Am.J.Comp.L.* at 69. However, critics of the total offset approach fail to realize that future inflation rates and future interest rates do not exist in a vacuum, but co-vary significantly. Inflation: A Survey, 85 *Econ.J.* 741, 788 (1975). It can be stated with assurance that present interest rates depend at least in part upon expectations of future inflation. The mechanism for the adjustment was explained by economist W.E. Gibson:

> "When inflation becomes expected, lenders expect the real value of their principal and interest payments to be depreciated and borrowers expect to be able to repay loans with money for which less real value must be sacrificed than before expectations changed. Thus at any level of market interest rates the quantity of loans supplied decreases while the quantity demanded increases. Both forces increase nominal interest rates." Gibson, Interest Rates and Inflationary Expectations: New Evidence, 62 *Am.Econ.Rev.* 854, 855 (1972).

Modern interest theory commends the accuracy of the total-offset method:

> "[W]hen prices are rising, the rate of interest tends to be high but not so high as it should be to compensate for the rise; and when prices are falling, the rate of interest tends to be low, but not so low as it should be to compensate for the fall."

I. Fisher, The Theory of Interest 43 (1930).

Since over the long run interest rates, and, therefore, the discount rates, will rise and fall with inflation, we shall exploit this natural adjustment by offsetting the two factors in computing lost future earning capacity. Accord, *Freeport Sulphur Co. v. S.S. Hermosa,*

526 F.2d 300, 310 (5th Cir. 1976) (concurring opinion). We are satisfied that the total offset method provides at least as much, if not greater, accuracy than an attempt to assign a factor that would reflect the varying changes in the rate of inflation over the years. Our experiences with the use of the six percent discount rate suggest the difficulties inherent in such an approach. As to the concomitant goals of efficiency and predictability, the desirability of the total offset method is obvious. There is no method that can assure absolute accuracy. An additional feature of the total offset method is that where there is a variance, it will be in favor of the innocent victim and not the tortfeasor who caused the loss.

The superiority of the total offset approach becomes apparent upon comparison with the offset present value method. In Feldman, rather than forecasting the impact of inflation on future earnings, through the use of an inflation adjusted interest rate, Judge Blumenfeld discounted future earnings based upon 1971 dollars. However, from an analysis of the formula involved, it appears that predicting prospective interest rates is as difficult as forecasting future inflation. *Freeport Sulphur Co. v. S.S. Hermosa,* 526 F.2d 300, 310 (5th Cir. 1976) (concurring opinion). Notably, the merit of discounting to present value upon an inflation adjusted interest rate was questioned by the very court which originally proposed it.

"… [S]ince Connecticut law requires the discounting to present value of damages for the destruction of future earning capacity, and since such discounting demands assessment of the future earning power of money, the Court is compelled to engage in economic forecasting despite the inexactitude of the dismal science's soothsaying. It is not open to this Court to decide that the ascertainment of a discount rate has become too speculative to be fair, and that the statutory mandate of awarding `just damages' for wrongful death would be better served by dispensing with the discounting process altogether.

382 F. Supp. at 1293 n.30

Moreover, the complexities inherent in factoring the inflation out of the market rate of interest moved Judge Blumenfeld to observe that: "Nothing is more conclusively established by the instant memorandum of decision than the difficulty of ascertaining the amount of damages due in this case….." 382 F. Supp. at 1295.[23]

[23] One critic of the independent offset method explained that:

> "Feldman also is flawed from a practical standpoint. According to the court's own calculations, sudden changes in the price level have caused the real rate of interest to vary from -2.9 percent to +2.0 percent on short term Treasury bills, and from -8.9 percent to +3.7 percent on long term federal notes. Faced with these variations in the real rate of interest, the trial judge should have been wary of selecting an inflation adjusted discount rate. Instead, the judge simply assumed a stable rate of inflation, a condition historically associated with a real yield of two percent, and arbitrarily lowered the real rate of interest to one-and-a-half percent to allow for unforeseeable fluctuations. The Feldman approach clearly required strong assumptions about both future rates of inflation and future rates of real interest."

An additional virtue of the total offset method is its contribution to judicial efficiency. Litigators are freed from introducing and verifying complex economic data. Judge and juries are not burdened with complicated, time consuming economic testimony. Finally, by eliminating the variables of inflation and future interest rates from the damage calculation, the ultimate award is more predictable.

V. Conclusion

Henceforth, in this Commonwealth, damages will be awarded for lost future earnings that compensate the victim to the full extent of the injury sustained. Upon proper foundation, the court shall consider the victim's lost future productivity. Moreover, we find as a matter of law that future inflation shall be presumed equal to future interest rates with these factors offsetting. Thus, the courts of this Commonwealth are instructed to abandon the practice of discounting lost future earnings. By this method, we are able to reflect the impact of inflation in these cases without specifically submitting this question to the jury.

In view of the trial court's refusal to permit appellant to introduce evidence relating to a future productivity factor and our formulation of a new standard to be used for accommodating inflation in these cases, we reverse the judgment below and remand the cause for a new trial as to the damage question.

ROBERTS, J., filed a concurring opinion.

FLAHERTY, J., filed a concurring and dissenting opinion.

ROBERTS, Justice, concurring.

I agree with the majority that the practice of reducing to present value the lost future earnings component of personal injury awards should be abrogated and the "total offset" rule adopted in its stead. The practice of reducing to present value is unrealistic in its failure to take into account either future inflation or deflation. See generally Restatement (Second) of Torts § 913A Comment at p. 492 (1979). Though perhaps somewhat imprecise, the total offset rule will fairly accommodate parties in both inflationary and deflationary times. So too, the total offset rule "has administrative simplicity to recommend it, since it avoids rather complex calculations involved in reducing to present value." D. Dobbs, Remedies § 8.7 at p. 575 (1973). Indeed, any person who has heard a court's "present value" charge will attest to the wisdom of abrogating the practice. See *Brodie v. Philadelphia Transportation Co.,* 415 Pa. 296, 203 A.2d 657 (1964).

I also agree with the majority that a jury may consider evidence of a victim's lost future earning increases. It is my understanding, however, that Pennsylvania law has long permitted jury consideration both of earning decreases and of earning increases. For example, Proposed Jury Instruction 6.22 (Civil) on "Earnings Fluctuations" provides:

---

63 *Va.L.Rev.* at 105.

> "If you find that the plaintiff will suffer an impairment or loss of earning power as the result of this accident …, you may take into consideration possible fluctuations with respect to such losses. In other words, if you find that the plaintiff's … wages would have increased or decreased over the years, you will take that factor into consideration so that proper compensation can be made."

Pennsylvania Supreme Court Committee for Proposed Standard Jury Instructions Subcommittee Draft-October 14, 1973. See also e.g., *McCaffrey v. Schwartz,* 285 Pa. 561, 132 A. 810 (1926), overruled on other grounds, *Brodie v. Philadelphia Transportation Co.,* supra; Robert M. Bernstein, "Damages in Personal Injury and Death Cases in Pennsylvania," 23 *Pa. Bar Ass'n Q.* 9 (1951).

It should also be observed that today's result does not mandate jury verdicts reflecting only earning increases. Within accepted rules of evidence, both sides are free to offer competent and relevant proof to establish their respective positions as well as to challenge the evidence offered in opposition.

Finally, today's result does not represent the exclusive means of taking future economic factors into account in cases of larger damage awards covering losses over future years. For example, special findings of fact may be helpful in making certain that neither the tortfeasor not the injured is unduly prejudiced or benefited by future economic conditions. Also, at least thirteen states, including California, Delaware, Florida, and Maryland, have enacted laws allowing for some form of periodic payments in medical malpractice actions. See T. Elligett, "The Periodic Payment of Judgments," 46 *Ins. Counsel J.* 130, 134 n.49 (1979). Very recently the National Conference of Commissioners on Uniform State Laws adopted an approved draft of a "Uniform Periodic Payment of Judgments Act" which authorizes installment payment of awards in personal injury cases. See generally Roger C. Henderson, "Periodic Payments of Bodily Injury Awards," 66 *A.B.A.J.* 734 (1980). Installment payment provisions of the uniform act

> "eliminate[] the guesswork and speculation involved in the lump-sum system when the jury is asked to discount awards of future damages to present value and, in an increasing number of jurisdictions, predict future rates of inflation. Since damages will be paid as losses accrue, there is no need to discount to present value. With regard to inflation, the act provides for adjustments in the unpaid installments so that the damages award is not eroded by inflation."

Id. at 736. Appropriate common-law approaches, including special findings, installment payments, and the like, may, of course, be fashioned to assure that full and real effect is given to the adjudication of liability and damages. See e.g., *Ellenbogen v. County of Allegheny,* 479 Pa. 429, 438, 388 A.2d 730, 734-35 (1978); W. Schaefer, "Precedent and Policy," 34 *U.Chi.L.Rev.* 3 (1966).

FLAHERTY, Justice, concurring and dissenting.

While I fully concur in the view that *Havens v. Tonner,* 243 Pa.Super. 371, 365 A.2d 1271 (1976), should be unceremoniously eliminated from the law of this Commonwealth as unrealistic, I must dissent to the majority's adoption of what it calls the "total offset method", a "per se rule" of doubtful validity. True, such an approach is a simple one, but it does not achieve justice, and, has only been adopted in one jurisdiction, i.e., Alaska. We should simply permit expert testimony on the issues of inflation and productivity. Such testimony, on both sides of the issue, is, of course, subject to cross-examination and argument as to its validity and weight. Thus, the jury is free to weigh the evidence before it and render its verdict. This is also simple, and provides justice in accordance with our time honored principles.

113 T.C. No. 30

UNITED STATES TAX COURT

BAINE P. AND MILDRED C. KERR, DONORS, Petitioners v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 14449-98. Filed December 23, 1999.

In 1993, Ps and their children formed two family limited partnerships (KFLP and KILP). The KFLP and KILP partnership agreements contain identical restrictions on liquidation of the partnerships. In June 1994, Ps transferred limited partnership interests in KFLP and KILP to the University of Texas (the university).

On Dec. 28, 1994, Ps created separate grantor retained annuity trusts (GRAT's). Ps each transferred a 44.535-percent class B limited partnership interest in KFLP to their GRAT's. The GRAT's remainder interests were intended to benefit Ps grandchildren through generation-skipping trusts.

On Dec. 30, 1994, the university was admitted as a limited partner of KILP. On Dec. 31, 1994 and 1995, Ps transferred limited partnership interests in KILP to their children.

Ps filed Federal gift tax returns for 1994 and 1995. Ps computed the value of the limited partnership interests in KFLP that they transferred to the GRAT's by applying discounts for lack of liquidity and minority interest. Ps computed the value of the limited partnership interests in KILP that they transferred to their children by applying a discount for lack of liquidity. R determined that sec. 2704(b), I.R.C., bars Ps from applying a discount for lack of liquidity in computing the value of the partnership interests that Ps transferred to the GRAT's and to their children.

Ps filed a motion for partial summary judgment arguing that sec. 2704(b), I.R.C. is not applicable alternatively because: (1) The GRAT's trustees received only assignee interests, as opposed to limited partnership interests; (2) the disputed transfers must be valued as assignee interests under sec. 25.2512-1, Gift Tax Regs.; and (3) the restrictions on liquidation set forth in the partnership agreements do not constitute "applicable restrictions" within the meaning of sec. 2704(b), I.R.C.

Held: Ps transferred limited partnership interests to the GRAT's in both form and substance.

Held further: Pursuant to sec. 25.2512-1, Gift Tax Regs., the value of the limited partnership interests is equal to the price that a hypothetical willing buyer would pay to a willing seller for the limited partnership interests.

Held further: The restrictions on liquidation in dispute do not constitute "applicable restrictions" within the meaning of sec. 2704(b), I.R.C.

John W. Porter, for petitioners.

Lillian D. Brigman and John D. Maceachen, for respondent.

OPINION

JACOBS, Judge: This matter is before the Court on petitioners' motion for partial summary judgment, filed pursuant to Rule 121.[1] Petitioners contend that they are entitled to partial summary judgment that section 2704(b) is not applicable in valuing the limited partnership interests that they transferred to their grantor retained annuity trusts and to their children during 1994 and 1995.[2] For the reasons set forth below, we will grant petitioners' motion.

Background[3]

Baine P. Kerr and Mildred C. Kerr were married in 1942 and have four adult children, Baine P. Kerr, Jr., John Caldwell Kerr, James Robinson Kerr, and Mary Kerr Winters (the Kerr children). The

[1] All Rule references are to the Tax Court Rules of Practice and Procedure. Unless otherwise indicated, all section references are to the Internal Revenue Code, as amended.

[2] Petitioners also moved for partial summary judgment that their interests in the grantor retained annuity trusts were "qualified interests" within the meaning of sec. 2702(b). Respondent subsequently conceded the point, and we issued an order granting so much of petitioners' motion for partial summary judgment as pertained to that issue.

[3] The following summary of the relevant facts is based on the parties' stipulations with attached exhibits and other pertinent materials in the record. They are stated solely for the purpose of deciding the pending motion and are not findings of fact for this case. See Rule 1(a); Fed. R. Civ. P. 52(a).

Kerr children are financially independent. Petitioners have 13 grandchildren.

Petitioners both graduated from the University of Texas. Baine P. Kerr (petitioner) also graduated from the University of Texas Law School.

After serving in World War II, petitioner joined the law firm of Baker & Botts in Houston, Texas, subsequently was admitted as a partner, and ultimately managed the firm's corporate law department.

Petitioner left Baker & Botts to serve in various executive positions at Pennzoil Co. Between 1964 and 1994, petitioner served on Pennzoil's board of directors and as president. In 1989, he received a $10 million bonus for work that he had performed in a lawsuit that Pennzoil had filed against Texaco.

S. Stacey Eastland (Eastland), an attorney at Baker & Botts, advised petitioners on estate planning matters for many years. Eastland has written extensively on the use of family limited partnerships (and particularly transfers of assignee interests) as an estate planning tool.[4] In September 1993, Eastland proposed that petitioners create two limited partnerships. Eastland advised petitioners that the limited partnerships could be used as a source

[4] See Eastland, Family Limited Partnerships: Non-Transfer Tax Benefits, 10 Probate and Property (Mar./Apr. 1993); Eastland, "The Art of Making Uncle Sam Your Assignee Instead Of Your Senior Partner: The Use of Partnerships In Estate Planning", SD 63 ALI-ABA 1153 (May 1999).

for making gifts to their children. Eastland further advised petitioners that the partnerships should include a charity as a partner in light of the recent enactment of section 2704 and to "make sure that traditional valuation rules apply to the partnerships."[5]

Kerr Issue GST Trust

On December 29, 1993, petitioners, as grantors, and their children, as trustees, executed a document entitled "Agreement Creating the Kerr Issue GST Trusts". The agreement provided that each of the Kerr children would act as the trustee of a separate trust under which he or she would be the primary beneficiary. The agreement further provided that each trust would terminate upon the death of the primary beneficiary and that any remaining trust property would pass to the living issue of the primary beneficiary; i.e., the Kerr grandchildren. On December 29, 1993, petitioners executed separate wills, which included "pour over" provisions to the Kerr Issue GST Trusts in an amount equal to the available generation-skipping tax exemption.

[5] Sec. 2704(b), quoted infra pp. 20-21, generally provides that restrictions on the liquidation of a family partnership will not be considered in valuing a gift of a partnership interest from one family member to another if the family has control of the partnership before the transfer and the family can remove the restriction on liquidation after the transfer.

Kerr Family Limited Partnership

On December 31, 1993, petitioners and the Kerr children executed an agreement forming the Kerr Family Limited Partnership (KFLP) under the Texas Revised Limited Partnership Act (TRLPA), Tex. Rev. Civ. Stat. Ann. art. 6132a-1 (West Supp. 1993). Petitioners made all capital contributions to KFLP in the form of three life insurance policies on their lives with a face amount totaling approximately $7 million. The Kerr children did not make any capital contributions to KFLP.

At the time KFLP was formed, petitioners were the sole general partners. However, petitioners immediately assigned a portion of their general partnership interest to each of the Kerr children. In particular, each of the Kerr children received a .2325-percent KFLP general partnership interest. There is no evidence in the record that petitioners executed a written consent admitting the Kerr children as general partners of KFLP.

Following the transfers described above, petitioners retained the following partnership interests in KFLP: (1) A combined 100-percent class A limited partnership interest;[6] (2) a combined 2-

[6] Pursuant to sec. 5.01 of the KFLP partnership agreement, class A limited partners were entitled to an annual guaranteed payment.

percent general partnership interest; and (3) a combined 97.07-percent class B limited partnership interest.

Kerr Interests Limited Partnership

On December 31, 1993, petitioners, their children, and KFLP executed an agreement forming the Kerr Interests Limited Partnership (KILP) under TRLPA. Petitioners made all capital contributions to KILP in the form of stocks, bonds, and real estate with an aggregate fair market value of approximately $11 million. The Kerr children did not make any capital contributions to KILP.

At the time KILP was formed, petitioners were the sole general partners. However, petitioners immediately assigned all of their general partnership interest in KILP to KFLP and a portion of their class B limited partnership interest in KILP to KFLP and the Kerr children. In particular, KFLP received a 2-percent general partnership interest and an 18-percent class B limited partnership interest in KILP, while the Kerr children each received a .0785-percent class B limited partnership interest in KILP. There is no evidence in the record that petitioners executed a written consent admitting KFLP as a general partner of KILP.

Following the transfers described above, petitioners retained a combined 100-percent class A limited partnership interest in KILP[7] and a combined 76.686-percent class B limited partnership interest.

[7] Pursuant to sec. 5.01 of the KILP partnership agreement, class A limited partners were entitled to an annual guaranteed payment.

In 1995, petitioners transferred additional assets to KILP with an aggregate fair market value of approximately $9.9 million.

Partnership Agreements

The KFLP and KILP partnership agreements are identical in all material respects. They include a number of provisions pertinent to the pending motion.

Section 3.03 of the partnership agreements states that the general partners shall appoint petitioners to serve jointly as the managing partner, that if either petitioner fails or ceases to serve as managing partner, then the other shall continue to serve as managing partner, and, if both petitioners cease or fail to serve as managing partner, then Mary Kerr Winters shall serve as managing partner. Section 3.10(b) states the general rule that no limited partner shall have any control over the management of the partnerships. However, section 3.09(e) states that the partnership shall not take action with respect to certain enumerated "Major Decisions" without prior written consent of a majority of the limited partners. Section 3.10(e) identifies "Major Decisions" as extraordinary events such as the partnership's filing a petition in bankruptcy, any act that would make it impossible to carry on the partnership's business, and any act in contravention of the partnership agreement.

Section 3.06 states that no person shall be admitted as a general or limited partner without the consent of all general partners, except as provided in article VIII of the agreements.[8] Section 3.10(a) states that no other person may become a limited partner of the partnerships except by way of a transfer permitted under and effected in compliance with the partnership agreements.

Section 3.10(c) states that limited partners shall not be entitled to the withdrawal or return of their contributions to the partnerships except to the extent, if any, that distributions are made pursuant to the partnership agreements or upon termination of the partnerships.

Section 8.01 states the general rule that no limited partner or spouse of a limited partner shall make a "disposition" of an interest in the partnership owned or held by him except with the consent of the partnership and all other partners. The term "disposition" is defined in section 8.02 as any sale, assignment, gift, exchange, transfer, change in beneficial interest of any trust or estate, distribution from any trust or estate, change in ownership of a corporate or partnership partner, or any other disposition of a limited partnership interest, whether voluntary or involuntary, direct or indirect. However, section 8.02 states that

[8] The pertinent sections of article VIII of the partnership agreements are summarized infra pp. 9-10.

a "disposition" does not include a transfer to a "permitted assignee". The term "permitted assignee" is defined in section 8.03 to include, among others, each existing partner, any person who is a lineal descendant of both petitioners, a trustee of any trust that is more than 75 percent actuarially held for permitted assignees, any partnership owned exclusively by permitted assignees, or a charity.

Section 8.04 states that any limited partner desiring to make a disposition of all or any part of his or her limited partnership interest shall first submit a written offer to sell the limited partnership interest to the partnership and the remaining partners. Sections 8.11 and 8.12 set forth a formula for determining the amount that the partnership or partners will pay for such limited partnership interests.

Section 8.19 states that any disposition of a limited partnership interest shall be effective only to give the assignee the right to receive the share of profits to which his assignor would otherwise be entitled. Section 8.20 states, in pertinent part, that upon the transfer of a general partnership interest to a permitted assignee, the general partners shall admit the transferee into the partnership as a class B limited partner.

Section 8.21 states that no person not already a partner shall become a partner or acquire any rights to participate in the

management of the partnership except with the unanimous consent of the partners. However, the provision further states that the terms of article VIII shall apply to an assignee as if he were a substituted partner.

Section 9.02 states that no limited partner shall have the right to withdraw from the partnerships before the partnerships dissolve and liquidate. However, class B limited partners have a "put right"; i.e., the right to require the partnership to purchase part or all of a class B limited partnership interest at "fair market value" as defined in section 8.12. The latter section defines fair market value under the so-called willing buyer/willing seller standard, with the caveat that the hypothetical willing buyer of the limited partnership interest will have no withdrawal or put rights.

Section 10.01 sets forth the liquidation provisions at the center of the present controversy. Section 10.01 states that the partnerships will dissolve and liquidate on the earlier of (1) December 31, 2043, (2) by agreement of all the partners, or (3) on the occurrence of certain narrowly defined acts of dissolution.

Transfers to University of Texas

Petitioners donated approximately $750,000 to the university of Texas (the university) between 1975 and 1999. Between 1981 and 1983, petitioners donated $100,000 to the university to establish

the Mildred Caldwell and Baine Perkins Kerr Centennial Professorship in English History and Culture. In 1988, petitioners donated Pennzoil Co. stock valued at $433,687 to the university to enhance the aforementioned endowment and to redesignate the professorship as a chair--the Mildred Caldwell and Baine Perkins Kerr Centennial Chair in English History and Culture.

On June 24, 1994, petitioners and a representative of the university executed two documents entitled "Assignment of Partnership Interest", which state that petitioners were transferring to the university one value unit of a class A limited partnership interest in KFLP and nine value units of a class A limited partnership interest in KILP. The assignments state that petitioners desired to assign a portion of their interests in KFLP and KILP as more particularly described in schedule I thereto. Schedule I to the assignments states in pertinent part: "The Assigned Partnership Interest constituted a Class A Limited Partnership Interest in * * * [the partnerships] when owned by Assignors, and when owned by Assignee shall constitute a Class A Limited Partnership Interest in said partnership."

On December 30, 1994, the KILP partnership agreement was amended to state that the university would be admitted as a class A limited partner.

Transfers to Grantor Retained Annuity Trusts

On December 28, 1994, petitioner Baine P. Kerr created the Baine P. Kerr 1994 Retained Annuity Trust under which he served as

the sole initial trustee. On the same date, petitioner Mildred C. Kerr created the Mildred Caldwell Kerr 1994 Retained Annuity Trust under which she served as the sole initial trustee. (The above-described trusts will hereinafter be referred to as the GRAT's.) The GRAT's were structured to provide petitioners with two annuity payments--the first payment was due December 29, 1994, and the second payment was due December 30, 1995. The GRAT's were each set to terminate on the earlier of December 30, 1995, or the date of the grantor's death.

On December 28, 1994, petitioners each executed a document entitled "Assignment of Partnership Interest", stating that they were each transferring to the GRAT's trustees a 44.535-percent class B limited partnership interest in KFLP as more particularly described in Schedule I thereto. The parties agree that the GRAT's trustees were permitted assignees within the meaning of section 8.03 of the KFLP partnership agreement. Schedule I to the assignments states in pertinent part: "The Assigned Partnership Interest constituted a Class B Limited Partnership Interest in [KFLP] when owned by Assignor and, when owned by Assignee, shall constitute a Class B Limited Partnership Interest in said partnership."

On December 29, 1994, and December 30, 1995, petitioners each executed documents entitled "Assignment of Annuity" in which they sold the rights to their annual GRAT's annuity payments in exchange for promissory notes from the GRAT's. On December 29, 1994, and

December 30, 1995, the GRAT's transferred demand notes to petitioners as required under the assignments described above. The original principal amounts due on the December 30, 1995, GRAT's demand notes held by petitioners Baine P. Kerr and Mildred C. Kerr were $795,148.76 and $795,716.99, respectively.

On December 29, 1994, petitioners (in their individual capacities and as GRAT's trustees) executed documents entitled "Security Agreement-Assignment of Partnership Interest" under which the GRAT's assigned to petitioners, as security for the GRAT's demand notes, the GRAT's class B limited partnership interests in KFLP.

During 1995, petitioners received interest payments on the GRAT's demand notes totaling $18,792.47. The GRAT's were terminated on December 30, 1995, and the remaining assets and liabilities of the GRAT's were transferred to the Kerr Issue GST Trusts.

By separate agreements dated February 28, 1998, petitioners agreed that the remaining principal and interest payments due on the December 30, 1995, GRAT's demand notes--then the liabilities of the various Kerr Issue GST Trusts--would be forgiven subject to the condition that the trustees agree to pay any Federal and State gift, estate, inheritance, transfer, succession, and generation-skipping transfer tax associated with the transfer.

Additional Transfers to the Kerr Children

On December 31, 1994, petitioners each transferred a .085-percent class B limited partnership interest in KILP to each of the Kerr children. On December 31, 1995, petitioners each transferred a .09375-percent class B limited partnership interest in KILP to each of the Kerr children.

Petitioners' Federal Gift Tax Returns

Petitioners filed Federal gifts tax returns for 1994 in which they reported gift tax liabilities attributable to the transfers that they made to the GRAT's trustees and to their children. In an appraisal report (attached to the returns) prepared by Howard Frazier Barker Elliott, Inc., petitioners determined the fair market value of the KFLP class B limited partnership interests that they transferred to the GRAT's trustees by applying a 25-percent discount for lack of liquidity or marketability to the value of the KILP interests held by KFLP, and a 17.5-percent minority-interest discount and a 35-percent discount for lack of liquidity or marketability on the net asset value of KFLP's assets. Petitioners computed the fair market value of a 44.535-percent limited partnership interest in KFLP as follows:

Total net asset value (KFLP)		$3,196,366
Less class A capital account		10,000
		3,186,366
Limited partnership percentage	44.535%	
NAV of the interest		1,419,048
Minority-interest discount	17.5%	248,333
Marketable minority interest value		1,170,715
Discount for lack of marketability	35.0%	409,750
Fair market value		760,965

Petitioners further reported that 95 percent of the fair market value of the KFLP class B limited partnership interests that they transferred to the GRAT's trustees was attributable to their retained annuities, while the remaining 5 percent (or $38,050 (rounded)) represented the amount of their taxable gifts to the remainder beneficiaries of the GRAT's.

Petitioners computed the fair market value of the KILP class B limited partnership interests that they transferred to their children in 1994 and 1995 by applying a 25-percent discount for lack of liquidity or marketability.

Respondent's Determinations

Respondent issued a notice of deficiency to petitioner Baine P. Kerr determining deficiencies of $698,401 and $10,024 in his Federal gift taxes for 1994 and 1995, respectively. Respondent issued a notice of deficiency to petitioner Mildred C. Kerr determining deficiencies of $698,401 and $10,024 in her Federal gift taxes for 1994 and 1995, respectively. Respondent determined, among other things, that petitioners had understated the values of both the KFLP interests that they had transferred to the GRAT's trustees in 1994 and the values of the KILP interests that they had transferred to their children in 1994 and 1995, as follows:

Year	Partnership Interest	Reported Value	Respondent's Determination
1994	KFLP	$38,050	[1]$1,636,420
1994	KILP	12,411	16,547
1995	KILP	17,440	13,080

[1] A substantial portion of the difference between the value that petitioners reported for this item and the value that respondent determined is attributable to the sec. 2702(b) issue that respondent subsequently conceded.

Respondent determined in pertinent part that the restrictions on liquidation set forth in section 10.01 of the KFLP and KILP partnership agreements constitute "applicable restrictions" within the meaning of section 2704(b), and that these restrictions should have been disregarded in valuing the limited partnership interests.

Procedural History

After petitioners filed a timely joint petition for redetermination, and respondent filed an answer to the petition, petitioners filed the motion for partial summary judgment currently pending before the Court. Petitioners raise several alternative arguments in support of their position that respondent erred in applying section 2704(b) in this case. Petitioners' primary contention is that the interests that they transferred to the GRAT's trustees were merely assignee interests. In connection with this argument, petitioners maintain that section 2704(b) does not apply to the valuation of the transferred interests because the limited rights of assignees under the partnership agreements are no

more restrictive than the restrictions imposed on assignees under TRLPA. See sec. 2704(b)(3)(B).

Respondent filed an objection to petitioners' motion for partial summary judgment asserting in part that petitioners had not properly raised the assignment issue in their petition.

Petitioners filed a response to respondent's objection and a motion for leave to file an amendment to petition and lodged an amendment to petition with the Court raising the assignee issue. The Court granted petitioners' motion for leave and filed petitioners' amendment to petition.

Respondent subsequently filed an amended answer to the amendment to petition. Respondent also filed a supplemental objection to petitioners' motion asserting that facts remained in dispute regarding petitioners' intent in making the disputed transfers.

Initially, this matter was called for hearing in Washington, D.C. During the hearing, counsel for petitioners conceded that, because the Kerr children were already limited partners of KILP when petitioners transferred additional KILP interests to them in 1994 and 1995, the Kerr children received limited partnership interests, as opposed to assignee interests. However, petitioners argued that these property interests should be valued for Federal gift tax purposes as assignee interests under the willing buyer/willing seller standard set forth in section 25.2512-1, Gift

Tax Regs. While accepting petitioners' concession regarding the transfers to the Kerr children, counsel for respondent argued that additional discovery was needed to determine the nature of the property interests that petitioners transferred to the GRAT's trustees. In response to these developments, the Court informed the parties that it intended to define the property interests that petitioners had transferred to the GRAT's trustees, and decide the legal question of the applicability of section 2704(b) before conducting a trial on valuation issues. In this regard, the Court directed the parties to proceed with informal discovery, submit a stipulation of facts to the Court, and prepare for a partial trial, if necessary, on the issue of the nature of the property interests that petitioners had transferred to the GRAT's trustees.

This matter was subsequently called for a partial trial in Houston, Texas. The parties filed a stipulation of facts, and the Court received testimony from Eastland, petitioner, Mary Kerr Winters, and James Robinson Kerr. Following the aforementioned hearings, the parties filed additional memoranda.

Discussion

Summary judgment is intended to expedite litigation and avoid unnecessary and expensive trials. See Florida Peach Corp. v. Commissioner, 90 T.C. 678, 681 (1988). Summary judgment may be granted with respect to all or any part of the legal issues in controversy "if the pleadings, answers to interrogatories, depositions, admissions, and any other acceptable materials, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that a decision may be rendered as a matter of law." Rule 121(b). The party opposing the motion cannot rest upon the allegations or denials in the pleadings but must "set forth specific facts showing that there is a genuine issue for trial." Rule 121(d). The moving party, however, bears the burden of proving that there is no genuine issue of material fact, and factual inferences will be read in a manner most favorable to the party opposing summary judgment. See Marshall v. Commissioner, 85 T.C. 267, 271 (1985).

On the basis of the record presented, we are satisfied that there are no material facts in dispute with regard to the issues raised in petitioners' motion for partial summary judgment.

Section 2501 imposes a tax for each calendar year on the transfer of property by gift by any individual. Section 2512 provides that if a gift is made in property, "the value thereof at the date of the gift shall be considered the amount of the gift."

Pursuant to section 25.2512-1, Gift Tax Regs., the value of the gift is the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell, and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 551 (1973).

In the Omnibus Budget Reconciliation Act of 1990 (OBRA 1990), Pub. L. 101-508, sec. 11602(a), 104 Stat. 1388-491, Congress enacted a series of special valuation rules applicable to transfers of interests in corporations, partnerships, and trusts. One of these provisions, section 2704(b), provides:

SEC. 2704(b). Certain Restrictions on Liquidation Disregarded.--

(1) In general.--For purposes of this subtitle, if–

(A) there is a transfer of an interest in a corporation or partnership to (or for the benefit of) a member of the transferor's family, and

(B) the transferor and members of the transferor's family hold, immediately before the transfer, control of the entity,

any applicable restriction shall be disregarded in determining the value of the transferred interest.

(2) Applicable restriction.--For purposes of this subsection, the term “applicable restriction” means any restriction–-

(A) which effectively limits the ability of the corporation or partnership to liquidate; and

> (B) with respect to which either of the following applies:
>
> (i) The restriction lapses, in whole or in part, after the transfer referred to in paragraph (1).
>
> (ii) The transferor or any member of the transferor's family, either alone or collectively, has the right after such transfer to remove, in whole or in part, the restriction.
>
> (3) Exceptions.--The term "applicable restriction" shall not include--
>
> * * * * * * *
>
> (B) any restriction imposed, or required to be imposed, by any Federal or State law.

Section 25.2704-2(b), Gift Tax Regs., provides that an applicable restriction is a restriction on "the ability to liquidate the entity (in whole or in part) that is more restrictive than the limitations that would apply under the State law generally applicable to the entity in the absence of the restriction."

In sum, section 2704(b) generally provides that, where a transferor and his family control a corporation or partnership, a restriction on the right to liquidate the corporation or partnership shall be disregarded in determining the value of an interest that has been transferred from the transferor to a family member if, after the transfer, the restriction on liquidation either lapses or can be removed by the family.

Section 2704(b)(4) grants the Secretary the authority to promulgate regulations providing that restrictions other than restrictions on liquidation shall be disregarded in determining the value of the transfer of any interest in a corporation or partnership among family members if the restriction has the effect of reducing the value of the transferred interest for transfer tax purposes but does not ultimately reduce the value of the interest to the transferee. To date, the Secretary has promulgated regulations concerning only restrictions on the liquidation of partnerships.

As previously mentioned, respondent determined that section 10.01 of the KFLP and KILP partnership agreements, which states that the partnerships shall liquidate upon the earlier of December 31, 2043, or the consent of all the partners, contains restrictions on the liquidation of the partnerships that constitute "applicable restrictions" within the meaning of section 2704(b). Respondent maintains that these restrictions must be disregarded in valuing the interests petitioners transferred to the GRAT's trustees and to their children. Petitioners contend that section 2704(b) is not applicable on a number of alternative grounds.

I. Petitioners' Argument That Interests Transferred to GRAT's Trustees Were Assignee Interests

Petitioners contend that section 2704(b) does not apply to the KFLP interests that they transferred to the GRAT's trustees because

those interests were merely assignee interests under State law. TRLPA section 7.02(a)(2) provides that an assignment of a partnership interest does not dissolve a limited partnership or entitle the assignee to become or exercise the rights or powers of a partner. TRLPA section 7.02(a)(3) and (4) provides that an assignee is allocated the income, gain, loss, deduction, or credit to which the assignor was entitled, and, until the assignee becomes a partner, the assignor continues to be a partner and to have the power to exercise any rights or powers of a partner. TRLPA section 7.04(a) provides that an assignee of a partnership interest may become a limited partner if and to the extent that the partnership agreement provides for such a transition or on the consent of all partners. Relying on the definition of an applicable restriction contained in section 25.2704-2(b), Gift Tax Regs., petitioners maintain that an assignee's inability to force KFLP to liquidate under the KFLP partnership agreement imposes no greater restriction than those imposed upon assignees under TRLPA.

Petitioners' contention that the partnership interests they transferred to the GRAT's trustees were assignee interests as opposed to limited partnership interests is based on a strict construction of the KFLP partnership agreement. In particular, although petitioners made the transfers to themselves as GRAT's trustees, petitioners nonetheless maintain that their children, as KFLP general partners, had to consent to the admission of the

GRAT's trustees as limited partners pursuant to section 3.06 of the KFLP partnership agreement.

Taxpayers generally are free to structure a business transaction as they please, even if motivated by tax avoidance considerations. See Gregory v. Helvering, 293 U.S. 465, 469 (1935); Yosha v. Commissioner, 861 F.2d 494, 497 (7th Cir. 1988), affg. Glass v. Commissioner, 87 T.C. 1087 (1986); Johnson v. Commissioner 86 F.2d 710, 712 (2d Cir. 1936), affg. 33 B.T.A. 1003 (1936). However, the tax effects of a particular transaction are informed by the substance of the transaction rather than its form. In Frank Lyon Co. v. United States, 435 U.S. 561, 573 (1978), the Supreme Court has articulated the principle as follows:

> In applying this doctrine of substance over form, the Court has looked to the objective economic realities of a transaction rather than to the particular form the parties employed. The Court has never regarded "the simple expedient of drawing up papers," Commissioner v. Tower, 327 U.S. 280, 291 (1946), as controlling for tax purposes when the objective economic realities are to the contrary. "In the field of taxation, administrators of the laws, and the courts, are concerned with substance and realities, and formal written documents are not rigidly binding." Helvering v. Lazarus & Co., 308 U.S. [252, 255 (1939).] * * *

The doctrine that the substance of a transaction will prevail over its form has been applied in Federal estate and gift tax cases. See Heyen v. United States, 945 F.2d 359, 363 (10th Cir. 1991); Estate of Murphy v. Commissioner, T.C. Memo. 1990-472; see

also Schultz v. United States, 493 F.2d 1225 (4th Cir. 1974); Johnson v. Commissioner, supra.

On the basis of our review of the record, we are persuaded by a number of factors that petitioners, in substance, as in form, transferred limited partnership interests to the GRAT's trustees. As discussed below, the factors that we have relied upon in support of our holding on this point include petitioners' failure to respect the literal terms of the partnership agreement, the form of the transfers, and the economic realities and tax motivation underlying the transfers.

A. Failure To Comply With The Partnership Agreement

Petitioners failed to adhere strictly to the literal terms of the KFLP partnership agreement governing transfers of general partnership interests. Specifically, when KFLP was formed, petitioners transferred three life insurance policies on their lives to the partnership. The Kerr children did not contribute any assets to the partnership. Consistent with the terms of the partnership agreement, petitioners admit that they initially were the sole general partners of KFLP. Pursuant to section 4.01 of the partnership agreement, petitioners subsequently assigned a portion of their general partnership interests in KFLP to each of their children.

Significantly, under the plain language of section 8.20 of the KFLP partnership agreement, petitioners' inter vivos transfers of

general partnership interests to their children, who were permitted assignees within the meaning of section 8.03, should have resulted in the admission of the Kerr children as class B limited partners of KFLP. Petitioners were free, of course, to override section 8.20 of the partnership agreement and admit the Kerr children as general partners of KFLP. Nevertheless, considering the unambiguous terms of section 8.20, it would have been reasonable to expect that petitioners would clearly document the admission of the Kerr children as general partners of KFLP by way of written consents. Given the lack of formality surrounding the admission of the Kerr children as general partners of KFLP, we are left with the impression that petitioners either did not fully appreciate the terms of the KFLP partnership agreement or deemed formal consents to the admission of the Kerr children as general partners to be unnecessary. In either case, petitioners' failure to take any formal steps in regard to the admission of the Kerr children as general partners of KFLP belies petitioners' contention that the Kerr childrens' formal consent was necessary to admit the GRAT's trustees as limited partners of KFLP.

B. The Form of the Transfers

Petitioners transferred limited partnership interests to themselves as GRAT's trustees. Although it is agreed that the GRAT's trustees were permitted assignees under section 8.03 of the KFLP partnership agreement, petitioners contend that the GRAT's

trustees could not be admitted to the partnership as limited partners without the consent of all the KFLP general partners, including the Kerr children. Petitioner testified that he never considered whether he was transferring a limited partnership interest or an assignee interest to himself as a GRAT's trustee. Further, two of petitioners' children testified that they were never asked to consent to the admission of the GRAT's trustees as limited partners.

Although petitioners argue that the absence of formal consents by the Kerr children to the admission of the GRAT's trustees as limited partners suggests that petitioners technically transferred assignee interests to themselves as the GRAT's trustees, it is difficult to reconcile that position with the language petitioners used to document the transfers. As noted earlier, petitioners each signed a document entitled "Assignment of Partnership Interest" stating that "Assignor and Assignee desire that Assignor assign to Assignee a portion of the Partnership Interest of Assignor in [KFLP] * * * such assigned partnership interest being more particularly described in Schedule I hereto." In each case, the "Assignment of Partnership Interest" further stated that "all consents required to effect the conveyance of the Assigned Partnership Interest have been duly obtained." Further, Schedule I, which identified the transferred interests as a "44.535% Class B Limited Partnership Interest", stated that "The Assigned

Partnership Interest constituted a Class B Limited Partnership Interest in [KFLP] when owned by Assignor, and when owned by Assignee, shall constitute a Class B Limited Partnership Interest in said partnership."

Read as a whole, the language used in the "Assignment of Partnership Interest" establishes that petitioners transferred limited partnership interests to themselves as the GRAT's trustees. Although the documents refer to the GRAT's trustees as assignees, the description of the assigned interests contained in Schedule I clearly states that the assignees will hold class B limited partnership interests in KFLP. Equally important, the "Assignment of Partnership Interest" states that petitioners had obtained all necessary consents to effect the conveyance. Because the GRAT's trustees qualified as permitted assignees within the meaning of section 8.03 of the partnership agreement, and petitioners were not required to obtain any consents to transfer an assignee interest to a permitted assignee, the inclusion of the statement that all necessary consents had been obtained also indicates that petitioners were transferring limited partnership interests to the GRAT's trustees. Further, the statement that all necessary consents had been obtained contradicts the testimony of the Kerr children that petitioners never requested that they consent to the transfers to the GRAT's trustees.

C. Objective Economic Analysis

The objective economic realities underlying the transfers to the GRAT's trustees do not support petitioners' position that the transferred interests should be considered assignee interests. First, and perhaps most importantly, there were no significant differences under the KFLP partnership agreement between the rights of limited partners and assignees. Petitioners were vested with managerial responsibilities for KFLP; neither limited partners nor assignees had any managerial rights. In addition, limited partners and assignees enjoyed equivalent rights to information concerning the partnership's business affairs, and they shared the same interests in the partnership's distributable cash. Finally, while limited partners were permitted to put or sell their interests to the partnership under section 9.02 of the partnership agreement, assignees were given a substantially equivalent right to offer their interests to the partnership under sections 8.04 and 8.21 of the partnership agreement.

The only relevant difference between the rights of limited partners and assignees relates to a limited partner's right to vote on major decisions--a right not extended to assignees. However, given the rare and extraordinary nature of the matters qualifying as a major decision, such as the filing of a bankruptcy petition or approving an act in contravention of the partnership agreement, we

do not consider a limited partner's right to vote on such matters to be significant for purposes of deciding the question presented.

We further note that petitioners retained the right to vote the limited partnership interests and petitioners and the Kerr children had the ability to convert the purported assignee interests to full limited partnership interests or liquidate the partnership at will. To characterize the interests that petitioners transferred to the GRAT's trustees as assignee interests ignores the objective economic reality that there was no meaningful difference between the transfer of an assignee interest as opposed to a limited partnership interest.

D. Tax Motivation

The record shows that Eastland structured petitioners' transfers to the GRAT's trustees primarily to avoid the special valuation rules set forth in section 2704(b). Eastland's writings on the subject of family limited partnerships disclose his belief that the transfer of an assignee interest from one family member to another would serve to circumvent section 2704(b). Accepting petitioner's testimony that he did not consider whether he was transferring a limited partnership interest as opposed to an assignee interest to his GRAT's, it appears that Eastland made a conscious decision not to raise the subject with his clients.

Consistent with the foregoing, we conclude that petitioners transferred limited partnership interests to the GRAT's trustees in substance as in form.

II. Petitioners' Argument That the Disputed Transfers Must Be Valued as Assignee Interests Under Section 25.2512-1, Gift Tax Regs.

Petitioners contend, in the alternative, that the limited partnership interests in KFLP they transferred to the GRAT's trustees and the limited partnership interests in KILP they transferred to the Kerr children must be valued as assignee interests under the willing buyer/willing seller standard prescribed in section 25.2512-1, Gift Tax Regs. Specifically, petitioners contend that the hypothetical willing buyer is assumed to be an outsider who would approach the purchase of a KFLP or KILP limited partnership interest with the understanding that he could buy only an assignee interest and that there would be no guaranty of admission as a limited partner.

Petitioners' position is based on a misunderstanding of the proper application of the willing buyer/willing seller standard. The nature of the property interest to be valued for Federal gift tax purposes generally is determined under State law. See Morgan v. Commissioner, 309 U.S. 78, 80 (1940); Estate of Bright v. United States, 658 F.2d 999, 1001 (5th Cir. 1981). Once the Court has determined the nature or character of the property interest in

question, Federal law applies to determine how the property interest will be taxed. See United States v. Bess, 357 U.S. 51, 55 (1958).

The valuation standard under section 25.2512-1, Gift Tax Regs., is objective--the standard is based on a purely hypothetical willing buyer and willing seller, each of whom seeks to maximize his or her profit from any transaction involving the property. See Estate of Simplot v. Commissioner, 112 T.C. 130, 151-152 (1999), and cases cited thereat. The hypothetical willing buyer and willing seller are not specific individuals or entities, and their characteristics are not necessarily the same as the personal characteristics of the actual seller or a particular buyer. See Estate of Bright v. United States, supra at 1005-1006; Estate of Simplot v. Commissioner, supra at 152.

Petitioners attempt to expand section 25.2512-1, Gift Tax Regs., beyond its intended scope by using the provision to redefine the character of the property interests in question as assignee interests. See, e.g., Estate of Nowell v. Commissioner, T.C. Memo. 1999-15. However, as explained above, we have already determined that petitioners transferred limited partnership interests to the GRAT's trustees. Further, petitioners admit that they transferred limited partnership interests to their children. Accordingly, section 25.2512-1, Gift Tax Regs., is properly applied by determining the price that a hypothetical willing buyer would pay

a willing seller for limited partnership interests in KFLP and KILP.

III. Section 2704(b)--Applicable Restriction

Petitioners contend that section 2704(b) is not applicable in this case even if the Court concludes (as we have) that petitioners transferred limited partnership interests to the GRAT's and to their children. Petitioners argue that the provisions of section 10.01 of the partnership agreements do not constitute "applicable restrictions" because: (1) The provisions do not restrict liquidation of the partnerships within the meaning of section 2704(b)(2)(A); and (2) the university's interests in KFLP and KILP demonstrate that the Kerr family did not have the ability unilaterally to lift any restrictions on liquidation within the meaning of section 2704(b)(2)(B)(ii). In the alternative, petitioners assert that any restrictions on liquidation in the partnership agreements are excepted from the definition of an "applicable restriction" pursuant to section 2704(b)(3)(B) and section 25.2704-2(b), Gift Tax Regs. Because we agree with petitioners' contention that restrictions on liquidation in the partnership agreements are excepted from the definition of an "applicable restriction" pursuant to section 2704(b)(3)(B) and section 25.2704-2(b), Gift Tax Regs., we need not consider petitioners' remaining arguments.

Before proceeding with our analysis, we will briefly review the legislative history underlying section 2704. The special valuation rules, of which section 2704 is a part, were enacted in OBRA 1990 section 11602(a), in conjunction with the repeal of section 2036(c).[9] The latter provision, enacted as part of the Omnibus Budget Reconciliation Act of 1987, Pub. L. 100-203, sec. 10402(a), 101 Stat. 1330, 1330-431, represented Congress' attempt to discourage taxpayers' use of "estate freeze" transactions for the purpose of reducing or avoiding Federal transfer taxes. See H. Conf. Rept. 100-495, at 994 (1987), 1987-3 C.B. 193, 274. By 1990, Congress felt compelled to repeal section 2036(c) on the ground that "the statute's complexity, breadth, and vagueness posed an unreasonable impediment to the transfer of family businesses." Informal S. Rept. on S. 3209, 136 Cong. Rec. S15629, S15679-S15680 (daily ed. Oct. 18, 1990).

Although the special valuation rules were enacted as a more targeted substitute for section 2036(c), there is little in the way of direct legislative history relating to the enactment of section 2704. In particular, there was no provision for the special

[9] Sec. 2036(c) generally provided that if a person transferred property having a disproportionately large share of the potential appreciation in an enterprise while retaining an interest or right in the enterprise, then the transferred property would be included in the transferor's gross estate, or upon the disposition of either the transferred property or the retained interest, the transferor would be deemed to have made a gift.

valuation rules in H.R. 5835, 101st Cong., 2d Sess. (1990)--the House bill underlying OBRA 1990. Provisions for special valuation rules first appeared in S. 3209, 101st Cong., 2d Sess. (1990)--the text of which the Senate adopted in lieu of the language passed by the House in H.R. 5835. S. 3209, section 7210(a), included new section 2704, which provided in pertinent part as follows:

> Treatment of Certain Restrictions and Lapsing Rights.–-
>
> For purposes of this subtitle, the value of any property shall be determined–-
>
> (1) without regard to any restriction other than a restriction which by its terms will never lapse * * *

The broad language of the Senate version of section 2704 did not survive the ensuing conference between the House and Senate managers of the legislation. Unfortunately, there is no meaningful explanation of the detailed language or concepts that were made a part of section 2704 as finally enacted. H. Conf. Rept. 101-964, at 1137 (1990), 1991-2 C.B. 560, 606, states in pertinent part:

> Treatment of certain restrictions and lapsing rights
>
> In general
>
> The conference agreement modifies the provision in the Senate amendment regarding the effect of certain restrictions and lapsing rights upon the value of an interest in a partnership or corporation. These rules are intended to prevent results similar to that of Estate of Harrison v. Commissioner, 52 T.C.M. (CCH) 1306 (1987). These rules do not affect minority discounts or other discounts available under present law. The conferees intend that no inference be drawn regarding the transfer tax effect of restrictions and lapsing rights under present law.

* * * * * * *

Restrictions

Under the conference agreement, any restriction that effectively limits the ability of a corporation or partnership to liquidate is ignored in valuing a transfer among family members if (1) the transferor and family members control the corporation or partnership, and (2) the restriction either lapses after the transfer or can be removed by the transferor or members of his family, either alone or collectively.

Example 8.--Mother and Son are partners in a two-person partnership. The partnership agreement provides that the partnership cannot be terminated. Mother dies and leaves her partnership interest to Daughter. As the sole partners, Daughter and Son acting together could remove the restriction on partnership termination. Under the conference agreement, the value of Mother's partnership interest in her estate is determined without regard to the restriction. Such value would be adjusted to reflect any appropriate fragmentation discount.

This rule does not apply to a commercially reasonable restriction which arises as part of a financing with an unrelated party or a restriction required under State or Federal law. The provision also grants to the Treasury Secretary regulatory authority to disregard other restrictions which reduce the value of the transferred interest for transfer tax purposes but which do not ultimately reduce the value of the interest to the transferee.

With the foregoing as background, we return to our analysis.

Section 2704(b)(2)(A) broadly defines an applicable restriction as "any restriction which effectively limits the ability of the corporation or partnership to liquidate". However, section 2704(b)(3)(B) excepts from the definition of an applicable restriction "any restriction on liquidation imposed, or required to be imposed, by any Federal or State law".

In what we view as an expansion of the exception contained in section 2704(b)(3)(B), the Secretary promulgated section 25.2704-2(b), Gift Tax Regs., which states in pertinent part: "An applicable restriction is a limitation on the ability to liquidate the entity (in whole or in part) that is more restrictive than the limitations that would apply under the State law generally applicable to the entity in the absence of the restriction." Thus, the question arises whether the partnership agreements involved herein impose greater restrictions on the liquidation of KFLP and KILP than the limitations that generally would apply to the partnerships under State law.

Section 10.01 of the partnership agreements states in pertinent part that the partnerships shall dissolve and liquidate upon the earlier of December 31, 2043, or by agreement of all the partners. Petitioners direct our attention to TRLPA section 8.01, which provides that a Texas limited partnership shall be dissolved on the earlier of: (1) The occurrence of events specified in the partnership agreement to cause dissolution; (2) the written consent of all partners to dissolution; (3) the withdrawal of a general partner; or (4) entry of a decree of judicial dissolution. TRLPA section 8.04 provides that, following the dissolution of a limited partnership, the partnership's affairs shall be wound up (including the liquidation of partnership assets) as soon as reasonably practicable.

On the basis of a comparison of section 10.01 of the partnership agreements and TRLPA section 8.01, we conclude that section 10.01 of the partnership agreements does not contain restrictions on liquidation that constitute applicable restrictions within the meaning of section 2704(b). We reach this conclusion because Texas law provides for the dissolution and liquidation of a limited partnership pursuant to the occurrence of events specified in the partnership agreement or upon the written consent of all the partners, and the restrictions contained in section 10.01 of the partnership agreements are no more restrictive than the limitations that generally would apply to the partnerships under Texas law. Consequently, these provisions are excepted from the definition of an applicable restriction pursuant to section 2704(b)(3)(B) and section 25.2704-2(b), Gift Tax Regs.

Respondent counters that we should compare the restrictions contained in section 10.01 of the partnership agreements with TRLPA section 6.03, which provides:

> A limited partner may withdraw from a limited partnership at the time or on the occurrence of events specified in a written partnership agreement and in accordance with that written partnership agreement. If the partnership agreement does not specify such a time or event or a definite time for the dissolution and winding up of the limited partnership, a limited partner may withdraw on giving written notice not less than six months before the date of withdrawal to each general partner * * *.

Respondent's reliance on TRLPA section 6.03 is misplaced. TRLPA section 6.03 governs the withdrawal of a limited partner from the

partnership--not the liquidation of the partnership. TRLPA section 6.03 sets forth limitations on a limited partner's withdrawal from a partnership. However, a limited partner may withdraw from a partnership without requiring the dissolution and liquidation of the partnership. In this regard, we conclude that TRLPA section 6.03 is not a "limitation on the ability to liquidate the entity" within the meaning of section 25.2704-2(b), Gift Tax Regs.

Respondent's position herein is inconsistent with section 25.2704-2(d) (Example 1), Gift Tax Regs., which states in pertinent part:

> D owns a 76 percent interest and each of D's children, A and B, owns a 12 percent interest in General Partnership X. The partnership agreement requires the consent of all the partners to liquidate the partnership. Under the State law that would apply in the absence of the restriction in the partnership agreement, the consent of partners owning 70 percent of the total partnership interests would be required to liquidate X. * * * The requirement that all the partners consent to the liquidation is an applicable restriction. * * *

Significantly, the restriction on liquidation in the partnership agreement described in the example was not compared with a State law provision (such as TRLPA section 6.03) pertaining to withdrawal from a partnership. Rather, the terms of the partnership agreement are compared with a partnership liquidation provision similar to TRLPA section 8.01. With these points in mind, we reject respondent's argument regarding TRLPA section 6.03.

We are mindful that the Secretary has been vested with broad regulatory authority under section 2704(b)(4). However, the

regulations in place do not support a conclusion that the disputed provisions in the KFLP and KILP partnership agreements constitute applicable restrictions.

Conclusion

In sum, we hold that petitioners transferred limited partnership interests to the GRAT's trustees. However, consistent with the preceding discussion, we conclude that section 10.01 of the partnership agreements does not contain "an applicable restriction" within the meaning of section 2704(b). Accordingly, we will grant petitioners' motion for partial summary judgment as it pertains to this issue.

To reflect the foregoing,

An order granting petitioners' Motion for Partial Summary Judgment will be issued as it relates to the section 2704(b) issue.

244 F. Supp. 2d 700 (2003)

David A KIMBELL, Sr., Independent Executor under the Will of Ruth A. Kimbell, Deceased, Plaintiff,
v.
UNITED STATES OF AMERICA, Defendant.
No. Civ.A. 7:01-CV-0218-R.

United States District Court, N.D. Texas, Wichita Falls Division.
January 14, 2003.
As Amended April 16, 2003.

Michael Allen Denham, Robert Don Collier, William R. Cousins, Meadows Owens Collier Reed Cousins & Blau, Dallas, TX, for Plaintiff.

Louise P. Hytken, U.S. Department of Justice, Dallas, TX, for Defendant.

MEMORANDUM OPINION AND ORDER

BUCHMEYER, District Judge.

Now before this Court are DEFEDANT'S MOTION FOR PARTIAL SUMMARY JUDGMENT and PLAINTIFF'S CROSS MOTION FOR PARTIAL SUMMARY JUDGMENT (jointly filed October 15, 2002). Oral argument was held on November 6, 2002, and the parties submitted supplemental briefs on November 16 and 26, 2002. For the reasons discussed below, Defendant's Motion for Partial Summary Judgment is GRANTED, and Plaintiffs Cross Motion for Partial Summary Judgment is DENIED.

I. BACKGROUND

Ruth A. Kimbell (the "Decedent") died March 25, 1998 at the age of 96. The Plaintiff, David A. Kimbell, is the Decedent's son and executor of her estate.

At the time of Decedent's death, she held interests in three entities relevant to this case: 1) the R.A. Kimbell Living Trust (the "Trust"), 2) the R.A. Kimbell Management Co., LLC (the "LLC"), and 3) the R.A. Kimbell Property Co., Ltd. (the "Partnership"). The Trust is a living trust created by Decedent in 1991 and fully revocable by her prior to her death. Thus, it is not in dispute that the interests of the Trust and those of Decedent are to be treated as one for the purposes of analysis under the Internal Revenue Code (the "Code"). Decedent and Plaintiff were cotrustees of the Trust, and Plaintiff was paid a

monthly fee to manage the trust. The LLC is a Texas limited liability company which was established on January 7, 1998 and is owned 50% by the Trust, 25% by Plaintiff and 25% by Plaintiffs wife (Decedent's daughter-in-law). Plaintiff was the manager of the LLC. The Partnership is a Texas limited partnership created on January 29, 1998 (two months before Decedent's death) by the Trust and the LLC. The LLC contributed *1% of the capital* of the Partnership and was its *general partner,* while the Trust contributed *99% of the capital* yet was only a *limited partner.* The Partnership is for a term of 40 years (i.e. until Decedent would have been 136 years old). As Decedent had a 50% interest in LLC and a 99% interest in the Trust, Decedent's real interest in the Partnership was 99.5%.

After Decedent died, Plaintiff, as executor of Decedent's estate, filed estate tax returns with the IRS. The IRS audited the returns and found that the value of Decedent's 99% interest in the Partnership was $2,463 million not $1,257 million as stated in the return. Accordingly, the IRS increased the amount of estate tax due. Plaintiff paid the increased taxes and subsequently, on November 15, 2001, brought this action seeking a refund of $837,089 for the IRS's alleged overvaluation of the estate.

II. ANALYSIS

A. SUMMARY JUDGMENT STANDARD

Rule 56(c) of the Federal Rules of Civil Procedure allows summary judgment when there is no genuine issue as to any material fact and the moving party is entitled to judgment as a matter of law. FED. R. Civ. P. 56(c); *Celotex Corp. v. Catrett,* 477 U.S. 317, 322, 106 S. Ct. 2548, 91 L. Ed. 2d 265 (1986); *Melton v. Teachers his. & Annuity Ass'n of Am.,* 114 F.3d 557, 559 (5th Cir. 1997). The court must decide all reasonable doubts and inferences in the light most favorable to the party opposing the motion. *Lemelle v. Universal. Mfg. Corp.,* 18 F.3d 1268, 1272 (5th Cir.1994); *Walker v. Sears, Roebuck & Co.,*853 F.2d 355, 358 (5th Cir.1988). As long as there appears to be some support for the disputed allegations such that "reasonable minds could differ as to the import of the evidence," the motion must be denied. *Anderson v. Liberty Lobby, Inc.,* 477 U.S. 242, 250, 106 S. Ct. 2505, 91 L. Ed. 2d 202 (1986).

The party moving for summary judgment bears the initial burden of identifying those portions of the pleadings, depositions, answers to interrogatories, and admissions on file, together with affidavits, if any, which it believes demonstrate the absence of a genuine issue of material fact. *Celotex,* 477 U.S. at 323, 106 S. Ct. 2548; *Lynch Properties, Inc. v. Potomac Ins. Co.,* 140 F.3d 622, 625 (5th Cir.1998). Where the non-moving party bears the burden of proof on a claim upon which summary judgment is

sought, the moving party may discharge its summary judgment burden by showing that there is an absence of evidence to support the nonmoving party's ease. *Celotex,* 477 U.S. at 325, 106 S. Ct. 2548. Once the moving party has satisfied this burden, the nonmoving party must go beyond the pleadings and by its own affidavits or depositions, answers to interrogatories, and admissions on file set forth specific facts showing a genuine issue for trial. *Matsushita Elec, Indus. Co. v. Zenith Radio Corp.,* 475 U.S. 574, 587, 106 S. Ct. 1348, 89 L. Ed. 2d 538 (1986); *Edwards v. Your Credit, Inc.,* 148 F.3d 427, 431-32 (5th Cir.1998). Summary judgment will be granted "against a party who fails to make a showing sufficient to establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial." *Celotex,* 477 U.S. at 322, 106 S. Ct. 2548.

B. SECTION 2036(A) OF THE INTERNAL REVENUE CODE

The question before the Court in these cross-motions for partial summary judgment is how the transfer of assets made by Decedent into the Partnership should be treated under section 2036(a) of the Internal Revenue Code (the "Code").[1] Section 2036(a) seeks to prevent individuals from avoiding estate tax by transferring their assets to others prior to death. *Harper v. Commissioner of Internal Revenue,* 2002 WL 992347, T.C.M. (RIA) 2002-121, *15 (U.S.Tax Ct. 2002). (noting that "[t]he general purpose of this section is to `include in a decedent's gross estate transfers that are essentially testamentary' in nature.") (citations omitted). The provision states:

> The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in the case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death.
>
> (1) the possession or enjoyment of, or the right to the income from, the property, or
>
> (2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

26 U.S.C § 2036(a). Decedent died before the expiry of the Partnership. Thus, under the plain language of § 2036(a), "all property to the extent of any interest therein" which Decedent had "at any time" transferred is part of the estate unless the property interest

[1] The parties have also briefed the issue of whether the interest formerly held by Decedent in the Partnership is to be considered, for the purpose of valuation, as a limited partnership interest or an assignee interest. The parties agree that this is a subsidiary issue which does not affect the question of the applicability of 26 U.S.C. § 2036(a).

qualifies for an exception to the general rule of inclusion. The two exceptions provided by § 2036(a) are (1) transfers which are "bona fide salefs] for an adequate and full consideration" (the "Bona Fide Sale Exception"), and (2) transfers after which the decedent retains neither the "possession or enjoyment of, or the right to income from the property" nor "the right, either alone or in conjunction with any other person, to designate the persons who shall benefit or enjoy the property" (the "Retained Income or Rights Exception"). For the granting of partial summary judgment to be appropriate, Plaintiff must establish, as a matter of law, that Decedent's transfer of property to the Partnership qualifies for one of the exceptions. Conversely, Defendant must demonstrate, as a matter of law, that the transfers fail to qualify for both exceptions. Each exception will be considered in turn.

1. The Bona Fide Sale Exception

Plaintiff argues that Decedent's transfer of assets to the Partnership was a bona fide sale for an adequate and full consideration in money or money's worth.[2] The Tax Court has explained, and this Court agrees, that "applicability of the [bona fide sale] exception rests on two requirements: (1) [a] bona fide sale, meaning an arm's-length transaction, and (2) adequate and full consideration." *Harper,* 2002 WL 992347, T.C.M. (RIA) 2002-121, *21.

In the instant case, Decedent's transfer fails both requirements. Plaintiff has produced no credible evidence that the formation of the Partnership was the product of an arm's length transaction, i.e. a transaction "between two parties who are not related or not on close terms and who are presumed to have roughly equal bargaining power." *Black's Law Dictionary* 103 (7th ed.1999). Indeed, one cannot even find two parties, much less two parties conducting an arm's length negotiation leading to a "bona fide sale". *See Mollenberg's Estate v. Commissioner,* 173 F.2d 698, 701 (2d Cir.1949) (quoted in *Harper,* 2002 WL 992347, T.C.M. (RIA) 2002-121, *21) (defining a `sale' as "an exchange resulting from a bargain"). Ownership interests in the Partnership are held by two entities: 99% by the Trust which was wholly-owned by Decedent, and 1% by the LLC which was 50% owned by the Trust. Therefore, Decedent not only "stood on both sides of the transaction," but, for all intensive purposes, was both sides of the transaction. *Harper,* 2002 WL 992347, T.C.M. (RIA) 2002-121, *21 (noting that "it would be an oxymoron to say that one can engage in an arm's length transaction with oneself).

Moreover, even if one assumes the Partnership was the result of "a bona fide sale," Plaintiff has failed to establish that the Decedent received "adequate and full consideration" for the sale. While "adequate and full consideration" is not defined in the Code, *Wheeler v. U.S.,* 116 F.3d 749, 754-55 (5th Cir.1997), this Court agrees with the Tax Court that the meaning of "adequate and full consideration" does not include paper transactions such as the one at issue in the current case. The Decedent, through the

[2] See *Plaintiff's Brief in Support of Cross Motion for Partial Summary Judgment,* at 12-17.

Trust, contributed 99% of the capital for the Partnership and in return received a 99% interest in the partnership. Decedent received no consideration other than the interest in the Partnership. Plaintiff, before becoming the general partner of the Partnership, was already managing both the Trust, from where 99% of the assets of the Partnership came and the LLC from where the other 1% came (of which 0.5% were from the Trust). Nothing appears to have changed. In *Harper,* the Tax Court recently rejected a similar claim for applicability of the exceptions to § 2036(a) in a case in which the decedent had contributed 99% of the capital, by means of a trust, to a partnership. In words that are equally applicable to Decedent's transfers to the Partnership, the Tax Court stated:

> all decedent did was change the form in which he held his beneficial interest in the contributed property.... Essentially the value of the partnership interest the [t]rust received derived solely from the assets the [t]rust had just contributed. Without any change whatsoever in the underlying pool of assets or prospect for profit ... there exists nothing but a circuitious "recycling" of value. We are satisfied that such instances of pure recycling do not rise to the level of a payment of consideration. To hold otherwise would open section 2036 to a myriad of abuses engendered by unilateral paper transformations. *Harper,* 2002 WL 992347, T.C.M (RIA) 2002-121, *21-22. The same is true in this case; there has been "only a recycling of value and not a transfer of consideration." *Harper,* 2002 WL 992347, T.C.M (RIA) 2002-121, *23. The facts here stand in sharp contrast to *Wheeler* in which IRS actuarial tables were used to value the remainder interest transferred by decedent to his two sons. *Wheeler,* 116 F.3d at 752, 767, Decedent's transfer fails to qualify for the bona fide sale exception.

2. The Retained Income or Rights Exception

For the purposes of 2036(a), "[a] transferor retains the enjoyment of property," if:

> there is an express or implied agreement at the time of the transfer that the transferor will retain the present economic benefits of the property, even if the retained right is not legally enforceable.

Reichardt v. Commissioner of Internal Revenue, 114 T.C. 144, 151-52, 2000 WL 230358 (2000). In this case, there is no need to search for an implied agreement, as the Partnership Agreement (the "Agreement") itself qualifies. The Decedent (through the revocable Trust), although formally a limited partner, owned 99% of the Partnership, and an additional 0.5% of the Partnership through her 50% interest in the LLC. Section 2.4 of the Partnership Agreement (the "Agreement") provides that:

70 Percent in Interest of the Limited Partners will have the right to remove the General Partner.[3]

Therefore, Decedent, as a limited partner with a 99% interest in the partnership, could, at any time, remove the General Partner, and either appoint herself or someone else of her choosing to be the new General Partner. Similarly, section 9.34 of the Agreement provides that:

> If the General Partner ceases to serve for any reason, a Majority in Interest of Limited Partners shall ... elect one or more new General Partners from among the Limited Partners or any Persons not already Limited Partners.[4] The General Partner, in turn, has "sole discretion" to decide on distributions of income from the Partnership.[5] By retaining the power to designate the General Partner, Decedent retained the power to either personally benefit from the income of the partnership or to designate the persons who would benefit from the income of the partnership, and thus runs afoul of both §§ 2036(a) (1) and (2). *Cf W.W. Jones II v. Commissioner of Internal Revenue,* 116 T.C. 121, 134-35, 2001 WL 233964 (2001) (finding that the owner of an 83% partnership interest was "effectively give[n] ultimate decision-making authority").

Plaintiff contends that Decedent did not have the power to take over the partnership because she had fiduciary duties. Plaintiff makes much of a Supreme Court case, *U.S. v. Byrum,* 408 U.S. 125, 92 S. Ct. 2382, 33 L. Ed. 2d 238 (1972), in which the Court held that § 2036 did not apply to a decedent who retained voting interest in several corporations. However, *Byrum,* is not only distinguishable on its facts from our case, but was expressly overruled by Congressional enactment of § 2036(b) which states that "the retention of the right to vote (directly or indirectly) shares of stock of a controlled corporation shall be considered to be a retention of the enjoyment of the transferred property." Moreover, section 2.95 of the Partnership Agreement states: "The General Partner wall not owe a fiduciary duty to the Partnership or to any Partner."[6] If Decedent, at any time, could remove the general partner and herself become general partner, then, by the terms of the Agreement, she would not owe a fiduciary duty to the other Partners, who, in any case, own only a minuscule share of the Partnership. Assuming such fiduciary duties exist, to whom does a party which owns 99% of the Partnership owe them? The fiduciary argument falls flat.

Plaintiff argues that Decedent had "irrevocably" transferred her assets to the partnership. Such a statement flies in the face of the ability Decedent retained to select a new general partner who could then distribute the income, at her "sole discretion" back to Decedent. Plaintiff also relies on *Church v. U.S.,* 2000 WL 206374

---

[3] *Joint Appendix,* at 56.
[4] *Joint Appendix,* at 79.
[5] *Agreement* § 5.1, *Joint Appendix,* at 70. Section 5.5 places certain restrictions on distributions by the General Partner.
[6] *Joint Appendix,* at 60.

(W.D.Tex.2000) to argue that the Partnership was a legitimate business venture. Although the validity of the Partnership under Texas law can be presumed for the purposes of this Opinion, the facts of this case are clearly distinguishable from *Church.* In *Church* three family members pooled their interests *for the first time* into a 57% stake in a ranch, with the remaining 43% still being held by members of another family. Thus, "the character of the interests owning a majority of the Ranch changed dramatically as a result of the [partnership." *Church,* 2000 WL 206374, *4. In the instant case, the 99% interest transferred by Decedent from the Trust to the Partnership was already pooled in the Trust and was already being managed by Plaintiff as cotrustee. Plaintiff also was already the manager of the LLC which contributed the other 1% of the assets of the Partnership.

Finally Plaintiff argues that issues of material fact exist as to whether there was an express or implied agreement between Decedent and her son to make a testamentary transfer. This is a red herring. An award of partial summary judgment for Defendant need not be based on any facts other than those contained in the documents submitted to the Court documents which speak for themselves and whose validity is not in dispute.

Plaintiffs arguments are without merit and have been cogently addressed by Defendant. This Court finds that the transfer of assets to the Partnership is governed by the default provision of 26 U.S.C. § 2036(a), rather than by any exception thereto. The Court also holds that § 2036 is applicable to the Decedent's 50% interest in R.A. Kimball Management Co., LLC (the LLC), including Decedent's indirect 0.5% interest in the partnership assets resulting from the LLC's ownership of the 1% general interest in the partnership.

III. CONCLUSION

For the foregoing reasons, Defendant's Motion for Partial Summary Judgment is GRANTED, and Plaintiffs' Cross Motion for Partial Summary Judgment is DENIED.

It is so ORDERED.

United States Court of Appeals
Fifth Circuit

Charles R. Fulbruge III
Clerk

UNITED STATES COURT OF APPEALS
For the Fifth Circuit

No. 03-10529

DAVID A. KIMBELL,SR., INDEPENDENT EXECUTOR
UNDER THE WILL OF RUTH A. KIMBELL, DECEASED,
Plaintiff-Appellant,

versus

UNITED STATES OF AMERICA,
Defendant-Appellee.

Appeal from the United States District Court
for the Northern District of Texas

Before DAVIS, BARKSDALE and PRADO, Circuit Judges.

W. EUGENE DAVIS, Circuit Judge:

In this estate tax case, David A. Kimbell, the executor of the estate of his mother Ruth A. Kimbell, appeals the judgment of the district court denying his request for a refund of estate taxes and interest paid by the estate. The district court decided on cross-motions for partial summary judgment that the value of assets the decedent transferred to the R.A. Kimbell Property Co., Ltd (Partnership) was includible in her gross estate under I.R.C. § 2036 because the transfer was not a bona fide sale for full and adequate consideration. We conclude that the district court erred in finding as a matter of law that (1) family members can not enter into a bona fide transaction, and (2) a transfer of assets in return for a pro rata partnership interest is not a transfer for full and adequate consideration. The district court also erred in failing to consider uncontroverted record evidence to support the taxpayer's position that the transfer was a bona fide sale. We therefore

vacate and remand.

I.

Ruth A. Kimbell ("Mrs. Kimbell" or the "Decedent") died testate on March 25, 1998. She was 96 years old. The Plaintiff, David A. Kimbell, is the Decedent's son and the executor of her estate. In the years prior to her death, the Decedent transferred a large portion of her estate in a series of transactions to three entities. In 1991, Mrs. Kimbell created the R.A. Kimbell Living Trust (the "Trust"), which was a revocable living trust administered by Mrs. Kimbell and her son as co-trustees. In January 1998, the Trust, David Kimbell and his wife formed a limited liability company, the R.A. Kimbell Management Co., L.L.C. (the "LLC"). The Trust contributed $20,000 for a 50% interest. David Kimbell and his wife each contributed $10,000 for 25% interests each. David Kimbell was the sole manager of the LLC.

Later in January 1998, the Trust and the LLC formed the R.A. Kimbell Property Co., Ltd., a limited partnership under Texas law (the "Partnership"). The Trust contributed approximately $2.5 million in cash, oil and gas working interests and royalty interests, securities, notes and other assets for a 99% pro-rata limited partner interest. The oil and gas properties were a continuation of an oil and gas business that the Decedent's late husband had founded in the 1920's. The LLC contributed approximately $25,000 in cash for a 1% pro-rata general partner interest. At inception, approximately 15% of the assets of the Partnership were oil and gas working (11%) and royalty (4%) interests. As a result of these transfers, Mrs. Kimbell, through the Trust and the LLC, owned 99.5% of the Partnership. David Kimbell managed Mrs. Kimbell's business interest before and after the creation of the LLC and the Partnership. Not all of Mrs. Kimbell's assets were conveyed to the LLC and the Partnership. She retained over $450,000 in assets outside of

the LLC and the Partnership for her personal expenses. The primary focus of this appeal is on this transfer from the LLC and the Trust to the Partnership. Because of Mrs. Kimbell's control of the Trust assets, the transfer by the Trust is viewed as a transfer by Mrs. Kimbell.

Under the stated terms of the Partnership Agreement, the purposes of the Partnership were to "increase Family wealth; establish a method by which annual gifts can be made without fractionalizing Family Assets; continue the ownership and collective operation of Family Assets and restrict the right of non-Family members to acquire interests in Family Assets; provide protection to Family Assets from claims of future creditors against Family members; prevent transfer of a Family member's interest in the Partnership as a result of a failed marriage; provide flexibility and continuity in business planning for the Family not available through trusts, corporations or other business entities; facilitate the administration and reduce the cost associated with the disability or probate of the estate of Family members; promote the Family's knowledge of and communication about Family Assets; provide resolution of any disputes which may arise among the Family in order to preserve Family harmony and avoid the expense and problems of litigation; and consolidate fractional interests in Family Assets." (Paragraph numbers omitted.) These purposes were supported by the deposition testimony of David Kimbell and Micheal Elyea, Mrs. Kimbell's business advisor. The term of the Partnership was 40 years.

The LLC, as general partner, managed the Partnership and had exclusive authority to make distributions. The Partnership Agreement provided that the general partner owed no fiduciary duty to the Partnership or to any Partner but owed a duty of loyalty and a duty of care to the Partnership. The Trust, as limited partner, had no right to withdraw from the Partnership or receive a return of contributions until the Partnership was terminated, which could occur only by

unanimous consent of the partners. The Partnership Agreement provided that 70% in interest of the limited partners had the right to remove the general partner. A majority in interest of the limited partners had the right to elect a new general partner.

The estate filed its federal estate tax return in December 1998. At the time of Mrs. Kimbell's death, the value of the Partnership assets was approximately $2.4 million. On the return, the estate claimed a 49% discount on the value of Mrs. Kimbell's interest in the Partnership and her interest in the LLC for lack of control and lack of marketability of the partnership interest. It reported her 99% interest in the Partnership as having a fair market value of approximately $1.2 million and her 50% interest in the LLC as having a fair market value of approximately $17,000.

The IRS audited the estate. It found that the value of the assets transferred to the Partnership and the LLC, rather than Mrs. Kimbell's interest in these entities, was includible in the gross estate under § 2036(a) of the Internal Revenue Code and increased the tax due accordingly. The estate paid the additional tax and then filed for a refund, claiming that the IRS overvalued Mrs. Kimbell's interests in the Partnership and the LLC.

On cross-motions for summary judgment, the district court found that the government had demonstrated, as a matter of law, that Mrs. Kimbell's transfers of assets to the Partnership and the LLC were subject to I.R.C. § 2036(a), which recaptures certain assets transferred prior to death in the gross estate. Therefore, the district court found that the IRS correctly included the value of the assets Mrs. Kimbell transferred to the Partnership and the LLC in the estate and granted partial summary judgment to the government. The estate appeals.

II.

This court reviews a grant of summary judgment *de novo*. Browning v. Odessa, 990 F.2d 842, 844 (5th Cir. 1993).

III.

Whether the assets Mrs. Kimbell transferred to the Partnership must be recaptured into her estate for estate tax purposes depends on the application of Internal Revenue Code section 2036(a). Internal Revenue Code section 2036(a) provides:

> (a) General rule. The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death--
> (1) the possession or enjoyment of, or the right to the income from, the property, or
> (2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

26 U.S.C. § 2036(a).

The statute recognizes that some assets transferred prior to death must be recaptured into the estate. By recapturing these transfers into the estate, this section of the code prevents the circumvention of federal estate tax by the use of inter vivos transactions which do not remove the lifetime enjoyment of property purportedly transferred by a decedent. Estate of Wyly v. Commissioner, 610 F.2d 1282, 1290 (5th Cir. 1980). Regarding this provision, this court has stated:

> [Section 2036 is] part of a Congressional scheme to tax the value of property transferred at death, whether the defendant accomplishes the transfer by will, by intestacy, or by allowing his substantial control over the property to remain unexercised until death so that the shifting of its economic benefits to the beneficiary only then becomes complete.

Estate of Lumpkin v. Commissioner, 474 F.2d 1092, 1097 (5th Cir. 1973).

The statute provides two exceptions that will allow a transfer to escape the operation of § 2036(a). First, if the transfer is a bona fide sale for full and adequate consideration, then § 2036(a) does not apply. See Treas. Reg. §§ 20.2036-1(a), 20.2043-1(1)(as amended in 1960). If the transfer is not a bona fide sale for full and adequate consideration, then the transfer may still be excluded from the estate of the decedent under the second exception, if the decedent did not retain either the (1) possession, enjoyment or rights to the transferred property, or (2) the right to designate the persons who would possess or enjoy the transferred property. Estate of Stone v. Comm'r, 86 T.C.M. (CCH) 551, 578 (T.C. 2003); 26 U.S.C. § 2036(a).

IV.

Bona Fide Sale for Adequate and Full Consideration.

The first exception allows a transfer to escape the reach of § 2036(a) if it is a bona fide sale for adequate and full consideration for money or money's worth. 26 U.S.C. § 2036(a). The district court found that Mrs. Kimbell's transfer of assets to the Partnership did not qualify for this exception. Relying on Estate of Harper v. Comm'r, 83 T.C.M. (CCH) 1641 (T.C. 2002), the district court stated that the "applicability of the [bona fide sale] exception rests on two requirements: (1) [a] bona fide sale, meaning an arm's length transaction, and (2) adequate and full consideration." The court defined an arm's length transaction as one involving "two parties who are not related or not on close terms," citing BLACK'S LAW DICTIONARY 103 (7th ed. 1999). Because Mrs. Kimbell, or at least family members, were present on both sides of the transfer to the Partnership, the district court found that the transfer was not at arm's length and therefore not a "bona fide sale."

The district court also found that, even if one could assume that the transfer of assets to the Partnership was the result of a bona fide sale, the pro rata interest in the Partnership that Mrs. Kimbell received was not adequate consideration for the assets she transferred to the Partnership. The district court viewed the transaction as a paper transaction resulting in a mere "recycling of value." In coming to this determination, the district court again relied on Harper and distinguished this court's decision in Wheeler v. United States, 116 F.3d 749 (5th Cir. 1997).

The only case addressing the exception for a bona fide sale for full and adequate consideration in this circuit, and indeed the only appellate level case cited to us on this point, is Wheeler v. United States, 116 F.3d 749 (5th Cir. 1997). In Wheeler, the decedent sold a remainder interest in his ranch to his adopted sons. The sale was in return for a price based on the ranch's actuarial value from the tables established in Treasury Regulations for valuing future interests in property where the measuring life was that of a person of the seller's age. Id. at 752. Applying the bona fide sale exception of § 2036(a), the executor of the decedent's estate did not include the ranch in the gross estate. Id. at 752-53. The Internal Revenue Service disagreed and assessed a deficiency which the estate paid and then challenged. Id. at 753. The government's position in Wheeler was that the sale of the remainder interest in the ranch to the decedent's sons was part of a testamentary plan designed to reduce estate taxes. Id. It argued that, although the price paid for the remainder interest was equal to the then fair market value of the ranch multiplied by the present value factor from the Treasury Regulations for a person of the decedent's age, this price was not adequate and full consideration because it was less than the value of the full fee interest. Id.

Addressing the question of what constitutes "adequate and full consideration," the

Wheeler court noted the reason the term presents such persistent conceptual difficulty is the lack of a statutory definition for the term combined with the competing interests of tax litigants. Id. at 755. After synthesizing prior estate and gift tax cases, the court concluded that adequate and full consideration under § 2036(a) "requires only that the sale not deplete the gross estate." Id. at 759.

> The following rule emerges: unless a transfer that depletes the transferor's estate is joined with a transfer that augments the estate by a commensurate (monetary) amount, there is no "adequate and full consideration" for the purposes of either the estate or gift tax. We thus come full circle to the "equilibrium rule" set forth in United States v. Allen and cited in Gradow.

Id. at 762. In other words, the asset the estate receives must be roughly equivalent to the asset it gave up.

Wheeler also makes it clear that whether a transaction was made for adequate and full consideration is an objective inquiry. Addressing the government's argument that transactions between family members should be necessarily treated differently for estate tax purposes, this court stated:

> [t]he present transfer tax scheme eschews subjective intent determinations in favor of the objective requirements of the statute. Therefore, section 2036(a) permits the *conclusion* that a split-interest transfer was testamentary when, and if, the objective requirement that the transfer be for an adequate and full consideration is not met. Section 2036(a) does not, however, permit a perceived testamentary intent, *ipse dixit*, to determine what amount constitutes an adequate and full consideration.

Id. at 766. The court pointed out that before its amendment in 1976, the estate tax contained a provision recapturing into the gross estate transfers "intended to take effect in possession or enjoyment" at or after the decedent's death and those made "in contemplation of death." Id. at 765. After experience showed that this rule resulted in inordinate litigation by taxpayers

attempting to establish life motives for transfers, the rule was eventually changed to its present form to eliminate the requirement for difficult fact findings designed to determine subjective motive. Id. Thus, in this circuit, since Wheeler, a taxpayer's testamentary or tax saving motive for a transfer alone does not trigger § 2036(a) recapture if objective facts demonstrate that the transfer was made for a full and adequate consideration.

Wheeler also defines the requirements of a bona fide sale. After concluding that the actuarial value paid for the remainder interest was adequate and full consideration, the court stated that, once the appropriate value is paid for the property transferred, "the only possible grounds for challenging the legitimacy of the transaction are whether the transferor actually parted with the . . . interest and the transferee actually parted with the requisite adequate and full consideration." Id. at 764.

In Wheeler, the government argued that the requirement that a sale be "bona fide" takes on heightened significance in intrafamily transfers and this court agreed. Id. at 763. Based on this heightened scrutiny, we concluded that a court should inquire beyond the form of a transaction between family members to determine whether the substance justified the claimed tax treatment. Id. However, we made it clear that just because a transaction takes place between family members does not impose an additional requirement not set forth in the statute to establish that it is bona fide. Id. at 764. A transaction that is a bona fide sale between strangers must also be bona fide between members of the same family. In addition, the absence of negotiations between family members over price or terms is not a compelling factor in the determination as to whether a sale is bona fide, particularly when the exchange value is set by objective factors. Id. at 769. In summary, the Wheeler case directs us to examine whether "the sale . . . was, in fact a bona fide

sale or was instead a disguised gift or a sham transaction." Id. at 767.

This definition is consistent with the language of the statute and regulations. According to Treasury Regulations, a transaction is a bona fide sale if it is made in good faith. Treas. Reg. § § 20.2036-1(a), 20.2043-1(a). Black's Law Dictionary defines a "bona fide sale" as "A completed transaction in which seller makes sale in good faith, for a valuable consideration without notice of any reason against the sale." BLACK'S LAW DICTIONARY 161 (5th ed. 1979). "Bona fide" is defined as "in or with good faith; honestly, openly, and sincerely; without deceit or fraud" and "Real, actual, genuine, and not feigned." Id. at 160.

When examining a transaction to determine if it is "real, actual, genuine and not feigned," we are again constrained to objective factors. As stated previously, Congress eliminated the decedent's subjective intent from direct consideration under § 2036(a). A transaction motivated solely by tax planning with no business or corporate purpose is nothing more than a contrivance without substance that is rightly ignored for purposes of the tax computation. See Gregory v. Helvering, 293 U.S. 465, 469 (1935). However, tax planning motives do not prevent a sale from being "bona fide" if the transaction is otherwise real, actual or genuine. Wheeler, 116 F.3d at 769-70.

In Church v. United States, 85 A.F.T.R. 2d (RIA) 804 (W.D. Tex. 2000), aff'd without published opinion, 268 F.3d 1063 (5th Cir. 2001)(per curiam)(table), unpublished opinion available at 88 A.F.T.R. 2d 2001-5352 (5th Cir. 2001), a mother and her children formed a Texas limited partnership to consolidate their undivided interests in a family ranch. Id. at 805. The mother and the children were limited partners and a limited liability company was the general partner. Id. All parties contributed their undivided interests in the ranch to the partnership. Id.

The mother also contributed approximately $1 million in securities to finance ranch operations and the purchase of interests in the ranch owned by non-partners. Id. at 805-07. Each partner received a pro-rata interest in the partnership. Id. at 805-06. Under these circumstances, the court found that the character of the assets transferred to the partnership changed dramatically:

> Prior to its formation . . . [the several family members] owned undivided interests in the Ranch, with each interest carrying the right to use and enjoy the property, or force partition or possible sale. The Partnership eliminated these individual rights and placed ownership of a majority of the Ranch in a Partnership that was not controlled by any single person.

Id. at 2000-807. The court also found that the partnership was created for a genuine business purpose. "[P]reserving the family ranching business for themselves and their descendants" was a valid motivating reason to form the partnership. Id. at 2000-807. Preservation of their interests in the ranch was effectively accomplished by placing the property in the Partnership which allowed division of ownership to be recognized by ownership of partnership interests rather than by direct ownership of undivided interests in the ranch. This structure also permanently consolidated operating decisions and management of the property. The court held that the property transferred to the partnership was a bona fide sale to exclude it from application of § 2036.

Another case in which the transfer qualified as a bona fide sale is Estate of Stone v. Comm'r, 86 T.C. M. (CCH) at 578. In Stone, the assets transferred to the several family limited partnerships were going concern businesses operated for a profit. The partnerships were formed for two main reasons: as a means to currently transfer management of the parents' estates to the children, who as general managers of the partnerships, began to actively manage the partnerships; and to settle disputes among the children related to the operation of the businesses. The

decedents retained enough assets to maintain their standard of living. Id. at 580. The court concluded that these transfers were bona fide sales for adequate and full consideration.

Other cases relied on by the government, have as a common element the conclusion that "[w]hen a family partnership is only a vehicle for changing the form in which the decedent held his property – a mere 'recycling of value' -- the decedent's receipt of a partnership interest in exchange for his testamentary assets" does not qualify as a bona fide sale for adequate and full consideration because the transfer was only a paper transaction and without substance. Estate of Thompson v. Comm'r, 84 T.C.M. 374, 388 (2002). See also Estate of Harper, 83 T.C.M. (CCH) 1641 (T.C. 2002); Estate of Strangi v. Comm'r, 85 T.C.M. (CCH) 1331 (T.C. 2003). However, even these cases recognize that family partnerships can qualify for this exception if the transaction includes elements that indicate that the exchange was more than a sham or a disguised gift. See Harper, 83 T.C.M. at 1654 (This "transaction involves only the genre of value 'recycling' . . . and does not appear to be motivated primarily by legitimate business concerns."); Thompson, 84 T.C.M at 388-89 ("[N]one of the individual partners . . . was involved in the conduct of an active business. . . . None of the parties involved in the partnerships joined together with the intent to either form business enterprises or otherwise to conduct any trade or business. . . . [The activities of the partnership were] not for business purposes."); Strangi, 85 T.C.M. at 1344 (The partnership "patently fails to qualify as the sort of functioning business enterprise that could potentially inject intangibles that would lift the situation beyond mere recycling.").

In summary, what is required for the transfer by Mrs. Kimbell to the Partnership to qualify as a bona fide sale is that it be a sale in which the decedent/transferor actually parted with her interest in the assets transferred and the partnership/transferee actually parted with the partnership

interest issued in exchange. In order for the sale to be for adequate and full consideration, the exchange of assets for partnership interests must be roughly equivalent so the transfer does not deplete the estate. In addition, when the transaction is between family members, it is subject to heightened scrutiny to insure that the sale is not a sham transaction or disguised gift. The scrutiny is limited to the examination of objective facts that would confirm or deny the taxpayer's assertion that the transaction is bona fide or genuine. We now turn to the application of these principles to today's case.

A.

The district court found that the exchange of a limited partnership interest for the assets Mrs. Kimbell transferred to the Partnership was not a bona fide sale for adequate and full consideration. It did not separately analyze the two requirements. Rather it concluded that Mrs. Kimbell's contribution of more than 99% of the assets into the Partnership to be managed (as they were before the transfer) by her son was nothing more than a recycling of value and the interest in the Partnership Mrs. Kimbell received not a transfer of consideration. The government adopted that position and argues in addition that it is inconsistent for the estate to assert, on one hand, that the value of Mrs. Kimbell's interest in the Partnership is worth only 50% of the assets she transferred (as discounted for lack of control and marketability), and on the other hand claim that the Partnership interest Mrs. Kimbell received in exchange for the assets transferred was adequate and full consideration for the transfer.

The Tax Court has expressly rejected the argument that a discounted valuation of a pro rata partnership interest precludes a finding that the interest is adequate consideration for the assets transferred. In Estate of Stone v. Comm'r, 86 T.C.M. (CCH) 551, 578, the Tax Court held

that this argument:

> in effect reads out of section 2036(a) the exception for a "bona fide sale for an adequate and full consideration in money or money's worth" in any case where there is a bona fide, arm's length transfer of property to a business entity (e.g. a partnership or a corporation) for which the transferor receives an interest in such entity (e.g. a partnership interest or stock) that is proportionate to the fair market value of the property transferred to such entity and the determination of the value of such interest takes into account appropriate discounts.

Id.

We would only add to the Tax Court's rejection of the government's inconsistency argument that it is a classic mixing of apples and oranges: The government is attempting to equate the venerable "willing buyer-willing seller" test of fair market value (which applies when calculating gift or estate tax) with the proper test for adequate and full consideration under § 2036(a). This conflation misses the mark: The business decision to exchange cash or other assets for a transfer-restricted, non-managerial interest in a limited partnership involves financial considerations other than the purchaser's ability to turn right around and sell the newly acquired limited partnership interest for 100 cents on the dollar. Investors who acquire such interests do so with the expectation of realizing benefits such as management expertise, security and preservation of assets, capital appreciation and avoidance of personal liability. Thus there is nothing inconsistent in acknowledging, on the one hand, that the investor's dollars have acquired a limited partnership interest at arm's length for adequate and full consideration and, on the other hand, that the asset thus acquired has a present fair market value, i.e., immediate sale potential, of substantially less than the dollars just paid —— a classic informed trade-off.

As this principle applies to wholly unrelated buyers and sellers of interests in limited partnerships, it must be equally true of buyers and sellers of such interests who happen to be

related by blood or affinity, unless (1) the evidence demonstrates the absence of good faith, i.e., a sham transaction motivated solely by tax avoidance, or (2) Congress or the courts are ready to change long-held positions and establish a per se rule that related parties can never enter into arms-length transactions for adequate and full consideration — positions that none has shown any inclination to assume. Certainly, close scrutiny must be applied when the parties are related, but close scrutiny is not synonymous with automatic proscription or impossibility vel non.

The proper focus therefore on whether a transfer to a partnership is for adequate and full consideration is: (1) whether the interests credited to each of the partners was proportionate to the fair market value of the assets each partner contributed to the partnership, (2) whether the assets contributed by each partner to the partnership were properly credited to the respective capital accounts of the partners, and (3) whether on termination or dissolution of the partnership the partners were entitled to distributions from the partnership in amounts equal to their respective capital accounts. Id. at 580. The answer to each of these questions in this case is yes. Mrs. Kimbell received a partnership interest that was proportionate to the assets she contributed to the Partnership. There is no question raised as to whether her partnership account was properly credited with the assets she contributed. Also, on termination and liquidation of the Partnership, the Partnership Agreement requires distribution to the Partners according to their capital account balances.

Accordingly, we conclude that this transaction was for adequate and full consideration. The district court's concern that Mrs. Kimbell's transfer of assets to the partnership in exchange for a pro-rata partnership interest is a mere paper transaction resulting in "recycling of value" is better addressed under the "bona fide sale" prong of this exception.

B.

As stated previously, the district court found that the transfer by Mrs. Kimbell of assets to the Partnership in exchange for pro-rata partnership interest was not a bona fide sale. Ignoring circuit precedent established in Wheeler, the district court's conclusion was based on its erroneous assumption that an arm's length transaction, defined as one between persons who are not related, was a requirement of this exception. The district court also concluded that the transaction resulted only in a change in form, a recycling of value, which would also preclude a conclusion that this transaction was a bona fide sale. However, its analysis ignored record evidence in support of the estate's position that the transaction was entered into for substantial business and other non-tax reasons.

Our review of the record reveals that the taxpayer established the following objective facts (uncontroverted by the government) that would support their position that the transfer to the Partnership was a bona fide sale:

(1) Mrs. Kimbell retained sufficient assets outside the Partnership for her own support and there was no commingling of Partnership and her personal assets. See Estate of Strangi, 85 T.C.M. at 1338-39; Estate of Harper, 83 T.C.M. at 1650.

(2) Partnership formalities were satisfied and the assets contributed to the Partnership were actually assigned to the Partnership. Id.

(3) The assets contributed to the Partnership included working interests in oil and gas properties which do require active management. A working interest in an oil and gas lease is a cost-bearing operating interest in the property. Lowe, Oil and Gas Law in a Nutshell 40 (2003). The owners of the working interest have the

exclusive right to exploit the minerals on the land. Williams & Meyers, Manual of Oil and Gas Terms 1207, 11th edition (2000). Nonoperating working interest owners are called upon to pay their share of operating expenses and to make elections whether to participate in drilling operations or various phases thereof. Lowe at 387-92. A royalty interest, in contrast, is a passive right to receive a share of production, if and when there is production, free of costs. Manual of Oil & Gas Terms at 964. At formation, $438,000 of approximately $2.5 million in assets were oil and gas properties. Approximately 71% of the oil and gas interests were working interests. Strangi, 85 T.C.M. at 1344; Thompson, 84 T.C.M at 388.

(4) David Kimbell and Michael Elyea advanced several credible and unchallenged non-tax business reasons for the formation of the Partnership that could not be accomplished via Mrs. Kimbell's Trust. Harper, 83 T.C.M. at 1654; Thompson, 84 T.C.M. at 389.

Michael Elyea, Mrs. Kimbell's business advisor, testified as follows regarding the business strategy for forming the Partnership. He stated that he and Mrs. Kimbell first discussed placing the assets in a limited partnership around the same time the living trust was formed in the early 1990's. Although some business strategies were accomplished by the trust, others were not. Specifically, a living trust did not provide legal protection from creditors as a limited partnership would. That protection was viewed as essential by Mr. Elyea and Mrs. Kimbell because she was investing as a working interest owner in oil and gas properties and could be personally liable for any environmental issues that arose in the operation of those properties. Mr. Elyea also stated that Mrs. Kimbell wanted the oil and gas operations to continue beyond her lifetime and they felt

that by putting the assets in a limited partnership, they could keep the pool of capital together in one entity that would be enhanced over time rather than subdivided by distributions to subsequent generations. Keeping the assets in one pool, under one management would reduce administrative costs by keeping all accounting functions together. The partnership would also avoid costs of recording transfers of oil and gas properties as the property was passed from generation to generation. Mrs. Kimbell wanted to keep the asset in an entity that would preserve the property as separate property of her descendants. The family had faced that issue during the divorce of one of Mrs. Kimbell's grandsons. The partnership also served the purpose of setting up the management of the assets if something should happen to her son, which was a concern as he had experienced some heart problems and had undergone a serious surgery. The partnership agreement provided that all disputes be resolved through mediation or arbitration to avoid interfamily litigation if disputes should arise. This statement of reasons is supported by the recitation of purposes in the formation documents of the Partnership (which the government and the district court selectively excerpt) and the deposition testimony of Mrs. Kimbell's son. More to the point, the stated reasons for the formation of the Partnership are confirmed by objective facts, many of which relate to the rights and responsibilities associated with investments in oil and gas investments.

The government contends that one fact pointing toward a conclusion that Mrs. Kimbell's transfer to the Partnership was not a bona fide sale is the de minimis contribution to the partnership made by the other partners. Mrs. Kimbell's son and his wife contributed approximately $20,000 of the $2.4 million in assets in the Partnership. This argument amounts to a restatement of the government's recycling of value argument and does not justify treating the

transaction as a sham. In addition, we know of no principle of partnership law that would require the minority partner to own a minimum percentage interest in the partnership for the entity to be legitimate and its transfers bona fide. The government also points out that the management of the Partnership assets did not change as a result of the transaction. Prior to the formation of the Partnership, David Kimbell managed Mrs. Kimbell's assets in the Trust. He continued to manage the assets once they were transferred to the Partnership. However, the important fact is that David Kimbell contributed his management expertise to the Partnership after its formation. Given the business reasons established above for the change in business form, the fact that David Kimbell performed the same services for the assets in the Trust is irrelevant.

This case was decided on cross-motions for summary judgment. The burden of proof on this issue is on the taxpayer. Estate of Maxwell v. Commissioner, 3 F.3d 591, 594 (2d Cir. 1993). The government raised no issues of material fact in its motion for summary judgment and challenged none of the taxpayer's facts. The taxpayer argued that genuine issues of material fact precluded a grant of summary judgment in favor of the government. We conclude that the district court erred in granting the government's motion for summary judgment and denying the taxpayer's motion for summary judgment on the issue of whether Mrs. Kimbell's transfer to the Partnership was a bona fide sale for full and adequate consideration so as to remove the transaction from the application of § 2036. First, as stated previously, the pro rata Partnership interest Mrs. Kimbell received was adequate and full consideration for the assets she transferred to the Partnership. Second, there is no contention that the transfer did not actually take place. The assets were formally assigned to the Partnership and Mrs. Kimbell was actually credited with a pro rata partnership interest. There is no evidence that partnership formalities were ignored or

that Mrs. Kimbell used Partnership assets for personal expenses. Finally, applying the heightened scrutiny applicable to transactions between family members, we are satisfied that the taxpayer has established through objective evidence recited above that the transaction was not a disguised gift or sham transaction. The government raised no material issues of fact to counter the taxpayer's evidence that the Partnership was entered into for substantial business reasons. These reasons were strongly supported by the nature of the business assets (divided working interests in oil and gas properties) conveyed, and the deposition testimony of Michael Elyea and David Kimbell.

Accordingly, we vacate the district court's judgment granting the government's motion for summary judgment and denying the taxpayer's motion for summary judgment because we conclude on this summary judgment record that the transfer to the Partnership qualifies as a bona fide sale for adequate and full consideration so as to remove the assets transferred to the Partnership from the estate of Mrs. Kimbell.

V.

Retained Interest

As stated previously there are two exceptions from the application of § 2036. The second exception allows a transfer to escape the reach of § 2036(a) if the transferor did not retain an interest in the asset transferred. Under § 2036(a)(1) and (2), transfers are recaptured into the estate of a decedent who retained the possession, enjoyment or right to income from the transferred property or retained the right to designate who could possess, enjoy or receive income therefrom. 28 U.S.C. § 2036(a)(1)-(2). A transferor retains the right of enjoyment of property if, at the time of transfer, there was an express or implied agreement that the interest or right would later be conferred. Estate of Reichardt v. Commissioner, 114 T.C. 144, 151-52 (T.C. 2000). A

retained interest can be present in the form of control over the entity that is the recipient of the assets transferred. Estate of Strangi v. Comm'r, 85 T.C.M. (CCH) 1331 (T.C. 2003).

Because we conclude that the Partnership assets qualify for exclusion from Mrs. Kimbell's estate under the exception for bona fide sales, we need not address the second exception as to that transfer. However, the second exception must be examined in reference to Mrs. Kimbell's transfer to the LLC. In an order amending its memorandum opinion and order, the district court summarily concluded that § 2036(a) was applicable to Mrs. Kimbell's 50% interest in the LLC, including her indirect 0.5% interest in the Partnership assets resulting from the LLC's ownership of the 1% general partner interest in the Partnership.

The district court's application of § 2036(a) to the LLC transfer was erroneous. Even if the transfer did not constitute a bona fide sale for full and adequate consideration, Mrs. Kimbell did not retain sufficient control of the assets transferred to the LLC to make her transfer subject to § 2036(a). Mrs. Kimbell's interest in the LLC was only a 50% interest, and her son had sole management powers over the LLC. Thus, Mrs. Kimbell did not retain the right to enjoy or designate who would enjoy the LLC property. Accordingly, we vacate the ruling of the district court on this issue.

VI.

In the district court, the parties briefed the issue whether Mrs. Kimbell's interest in the Partnership was an assignee interest or a limited partner interest for purposes of placing a value on the decedent's partnership interest for estate tax purposes. The district court did not reach this issue because of its ruling that § 2036(a) applied to Mrs. Kimbell's transfer to the Partnership. The Estate now asks this Court to make a determination on this issue, even though it was never

addressed in the court below. We decline to do so, leaving that issue to be first decided by the district court.

VII.

In summary, we conclude that the district court erred in granting summary judgment to the government and denying summary judgment to the taxpayer on the issue of whether the Decedent's transfer to the Partnership was a bona fide sale for full and adequate consideration as a matter of law. We therefore vacate that judgement. We also vacate the district court' grant of partial summary judgment on the issue of whether the Decedent retained an interest in property transferred to the LLC and remand for determination of whether Mrs. Kimbell's interest in the Partnership was an assignee interest or limited partnership interest and for any other proceedings consistent with this opinion.

VACATED; REMANDED.

Estate of Kirkpatrick v. Commissioner

34 T.C.M. (CCH) 1490 (1975)
T.C. Memo. 1975-344.

Estate of Ernest E. Kirkpatrick, Deceased, L.R. French, Jr. and Rita Bettis, Executors
v.
Commissioner.

Docket No. 1976-73.

United States Tax Court.

Filed November 25, 1975.

1491 *1491 Brooks L. Harman, 112 W. 5th Odessa, Tex., for the petitioners. John W. Dierker, for the respondent.

Memorandum Findings of Fact and Opinion

FORRESTER, Judge:

Respondent has determined a deficiency of $117,286.40 in petitioner's **estate** tax. A concession having been made by petitioner, the two remaining issues presented for our decision concern the respective fair market values of closely-held stock owned by Ernest E. **Kirkpatrick** in French Tool & Supply Company, Inc., and French Oil Company on April 17, 1968, the date of his death.

Findings of Fact

Some of the facts have been stipulated and are so found.

Ernest E. **Kirkpatrick** (decedent) died April 17, 1968, and L.R. French, Jr., and Rita Bettis qualified as executors of his **estate**. The executors' address was the American Bank of Commerce Building, Odessa, Texas, at the time the petition herein was filed. The executors timely filed a Federal **estate** tax return with the District Director of Internal Revenue, Dallas, Texas.

On the date of his death, decedent owned 1,091 shares of stock in French Tool & Supply Company, Inc. (French Tool), which represented 43.43 percent of that company's 2,512 issued and outstanding shares. Rita Bettis, decedent's daughter, owned 545.5 shares (21.71 percent) and Lloyd French, Jr., Bettis' son, owned the remaining 875.5 shares (34.85 percent).

French Tool is a Texas corporation, chartered in 1947. From 1947 until 1954 the company operated an International truck dealership and an oilfield supply house. In 1950, it entered the oil business. In 1954, it ceased its oilfield supply operations but continued to operate the International truck dealership. The company began a ranching business in 1955 and, in 1956, started a Chrysler-Plymouth dealership.

On April 17, 1968, the date of decedent's death, French Tool operated an International truck dealership (and a related rig-up shop), a Chrysler-Plymouth dealership, and was engaged in the oil production and ranching business. The company sold products and services to the public in all phases of its business.

The company's oil business consisted of certain producing and nonproducing properties situated primarily in the Permian Basin area of West Texas and Southeastern New Mexico.

Its ranching operations consisted of a 50-percent, undivided ownership in two cattle and sheep ranches, the South Fork Ranch and Rancho Real, located, respectively, in Kerr County and Real County, Texas.

A comparative balance sheet statement of French Tool for fiscal years ending June 30, 1966 through 1968 is as follows:

1492 *1492

	1968	1967	1966

1494 *1494 L.R. French, Jr. (French) had been the company's president and chief executive officer since February 1952. The three directors of French Tool at decedent's death were decedent, French, and Ralph Hamilton. Decedent also served as the company vice president and Hamilton served as the secretary, treasurer, and general manager of the Automotive Division.

On the date of his death, decedent also owned 130 shares of stock in French Oil Company (French Oil), which represented 6.5 percent of that company's 2,000 issued and outstanding shares. French owned 1,805 shares (90.25 percent), and the remaining 65 shares (3.25 percent) were owned by Bettis.

French Oil is a Texas corporation, which was incorporated in 1935 as Rodman Supply Company (Rodman) to conduct an oilfield supply business in the Permian Basin area of West Texas and Southeastern New Mexico.

In September 1954, French and decedent purchased 87 percent and 13 percent, respectively, of Rodman's outstanding stock. In the year of the purchase, Rodman operated an oilfield supply business in the Permian Basin, an oil and gas development and production business, and a ranching business. From 1954 until the date of decedent's death, French served as the president and chief executive officer of French Oil.

In 1963, Rodman sold the oilfield supply store assets and the name of the corporation was changed to French Oil Company.

The new company, French Oil, retained certain accounts receivable, most of which had been charged off as bad debts. In the four succeeding years, it collected from those receivables the following amounts:

1964 ..... $319,413.50
1965 ..... 103,676.00
1966 .....   41,867.00
1967 ..... 154,447.00

After the sale of the oilfield supply store assets, the company continued in the oil, gas and ranching business and dealt some in the sale of tubular goods.

During fiscal years ending August 31, 1965 through 1967, French Oil sold some of its oil and gas leases at an aggregate profit of $220,000 net after applicable taxes. At the start of its 1967-1968 fiscal year, the company owned 22 producing leases in the Permian Basin area. All 22 producing leases continued to produce throughout the fiscal year except the so-called University 30 lease, which was sold on May 31, 1968 — about six weeks after the date of decedent's death.

University 30 had been the company's most productive lease and, for the nine-month period ending May 31, 1968, it produced approximately 66 percent of the total gross revenues from all 22 leases for that period. The idea to sell the University 30 lease came up after April 17, 1968, and a prospective purchaser of decedent's 6.5 shares of French Oil stock on that date would not have known that the University 30 lease would be sold six weeks later.

On the date of decedent's death, French Oil produced and sold oil in the Permian Basin area, owned a 50-percent, undivided interest in the South Fork Ranch and Rancho Real,[1] and sold oilfield tubular goods.

A comparative balance sheet statement of French Oil for fiscal years ending August 31, 1965 through 1967 is as follows:

========== ========= =========

1497 *1497 Neither French Oil nor French Tool had ever paid any dividends. There had never been any outside sale of their stock[2] nor had their stock been listed on any public exchanges.

On its return, petitioner valued decedent's 1,091 shares of French Tool stock at $353.63 per share. Respondent, in his deficiency notice, determined the fair market value of decedent's French tool stock to be its book value, or $600.34 per share. At trial, however, petitioner claimed the stock was worth $216 per share and respondent contended the stock to be worth no more than $500 per share.

On the return, petitioner valued decedent's 130 shares of French Oil stock at $287.36 per share. In his deficiency notice, respondent again valued the stock at its book value, or $882.73 per share. At trial, however, petitioner claimed the stock to be worth $171 per share and respondent argued that the stock was properly valued at $650 per share.

On the date of decedent's death, French Tool and French Oil each owned a 50-percent undivided interest in two cattle and sheep ranches; the South Fork Ranch and Rancho Real.[3]

At the date of decedent's death, the South Fork Ranch (Ranch) consisted of approximately 32,914 acres of land located in the southwest corner of Kerr County, Texas,[4] about 75 miles northwest of San Antonio, Texas, and 25 miles west of Kerrville, Texas.

The Ranch is situated in an area of Texas known as "The Hill Country." This area is characterized by high, rolling hills and an unusually abundant amount of surface water. These factors, combined with a relatively mild summer climate, make the area extremely popular for recreational purposes.

The Ranch contains a number of improvements such as frame dwellings, barns, storage sheds, etc. It has a good water supply with the wells and waterings spaced at about one for each of the 32 or 33 pastures.

The major portion of the Ranch (approximately 28,165 acres) was purchased by French in July 1963, for $70 per acre. In January 1965, French purchased approximately 3,065 additional acres for $75 per acre, and in March 1966, he bought the remaining 1,684 acres for $75 per acre.[5]

On November 13, 1968, approximately seven months after the date of decedent's death, a pipeline company, Lo-Vaca Gathering Company, acquired by condemnation a pipeline right-of-way easement through a portion of the Ranch. In a subsequent condemnation suit, heard November 3, 1969, a jury composed of six residents of Kerr County returned a verdict in the County Court of Kerr County, Texas, that the fair market value of the Ranch, as of the date of condemnation, was $150 per acre. At these proceedings, R. Floyd Price, Jr. (petitioner's expert witness in the instant case), testified that, in his opinion, the Ranch was worth $125 per acre on November 13, 1968.

As ultimate findings of fact, we find that:

1. The fair market value of the Ranch on April 17, 1968, was $94 per acre;

2. The fair market value of decedent's 1,091 shares of French Tool stock was $300 per share on April 17, 1968;

3. The fair market value of decedent's 130 shares of French Oil stock was $250 per share on April 17, 1968.

Opinion

For purposes of determining the value of decedent's gross **estate** under section 2031,[6] we must find the respective fair market values of the shares of stock decedent owned in French Tool and French Oil on the date of his death.

Determining the fair market value of closely-held stock is often a difficult task, and the instant case presents no exception. Among the factors courts have found relevant in making this determination are: (1) the value of the corporation's underlying assets; (2) the fact that less than a controlling interest is involved; (3) trends
1498 in the corporation's earnings; (4) the dividend paying capacity of the corporation; (5) the capitalized value of the corporation's *1498 past earnings; and (6) the corporation's management. *Richard R. Riss, Sr.* [Dec. 31,200], 56 T.C. 388, 430 (1971); ***Estate** of Harry Stoll Leyman* [Dec. 26,081], 40 T.C. 100, 119 (1963).

In applying these factors to the facts of a particular case, no single formula is universally applicable, *O'Malley v. Ames* [52-1 USTC ¶ 9361], 197 F. 2d 256, 258 (8th Cir. 1952), and the ultimate fair market value determination is basically a question of judgment rather than mathematics. *Hamm v. Commissioner* [64-1 USTC ¶ 12,206], 325 F. 2d 934, 940 (8th Cir. 1963).

As we have noted, in attempting to determine the fair market value of closely-held stock, the value of the company's underlying assets can be an important consideration. In the instant case, the sole dispute between the parties regarding the value of French Tool's and French Oil's underlying assets involves the fair market value of the South Fork Ranch, in which each corporation owned a 50-percent, undivided interest. Thus, we must first find the fair market value of the Ranch before we can proceed to determine the respective values of decedent's shares of French Tool and French Oil stock.

In making our fair market value determinations in the instant case, we are guided by section 20.2031-1(b), **Estate** Tax Regs., which defines "fair market value" as —

> the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of the relevant facts. * * *

Although we are of the opinion that petitioner has carried its burden of proof regarding the correctness of respondent's fair market value determinations, Rule 142, Tax Court Rules of Practice and Procedure, we cannot wholly accept petitioner's valuations of the Ranch and the stock. After examining all of the relevant facts

presented in the record before us, we find that, on April 17, 1968, the fair market value of the Ranch was $94 per acre and decedent's shares of French Tool and French Oil stock were worth $300 and $250 per share, respectively.

Petitioner contends that the fair market value of the Ranch on April 17, 1968, was $80 per acre and bases its position on an appraisal prepared by R. Floyd Price, Jr. (Price), a real **estate** appraiser and dealer in the Kerr County area.[7] Respondent, in determining that the Ranch was worth $140 per acre, relies on an appraisal prepared by Joe T. Gilbert (Gilbert), a valuation expert employed by the Internal Revenue Service.

Using the so-called comparable sale method of valuation, Price examined 18 different land sale transactions in the Kerr County area. He stated that, in estimating the Ranch's fair market value from these comparable sales, he gave primary consideration to four such sales because of their proximity to the valuation date and because the land involved bore a greater similarity to the Ranch with respect to size, location, and physical characteristics.

Gilbert examined nine comparable sales and also took into account his estimation as to the amount the Ranch had appreciated in value between the dates of purchase[8] and the valuation date. He stated that he relied primarily on three of the comparable sales and appreciated value of the Ranch in making his valuation.

Under the facts of the instant case, we think the most accurate estimation of the Ranch's fair market value on April 17, 1968, can be determined by finding, and giving equal weight to, (1) the estimated appreciated value of the Ranch land and (2) the Ranch's approximate value determined by the comparable sale method of valuation. Both such determinations, and especially the former, necessitate our having a fairly accurate estimate of the rate of land appreciation in the Kerr County area. On this point, however, Price and Gilbert were in sharp disagreement.

Petitioner's witness, Price, testified that, based on his 20 years of experience as a real **estate** appraiser and dealer in the Kerr County area, he was of the opinion that land in that area had appreciated at an annual rate of 5 percent from 1963 through 1966 and 15 percent from 1967 until 1974. On the other hand, Gilbert
1499 *1499 estimated that land in that area had appreciated at an annual rate of 25 percent from 1963 until 1974, and he presented three "land appreciation trend" graphs to support his position.

We were more persuaded by Price's personal and professional familiarity with land appreciation rates in the Kerr County area than we were by Gilbert's graphs. In these graphs, Gilbert relied, in large part, on fair market value estimations derived from offers to buy and sell land as well as from the 1969 condemnation award in which a jury found the Ranch to have been worth $150 per acre in November 1968. Our determination of the rate at which land appreciated in the Kerr County area bears quite heavily on our ultimate valuation of the Ranch and, in making this determination, we are extremely reluctant to place much reliance on such inaccurate benchmarks of fair market value as offers to buy and sell and jury condemnation awards. Thus, we found Price's determination as to the Kerr County area land appreciation rate to be the more realistic.

The extremely large size of the Ranch (almost three times the size of any comparable sale used by either Price or Gilbert) combined with the unique geographical and climactic conditions in the immediate Kerr County area makes valuation by the comparable sale method in the instant case most difficult. The only sale we found that sheds real light on the Ranch's valuation is the so-called Smith to Ault sale. This is also the only sale that both Price and Gilbert agreed should be given primary consideration in determining the Ranch's value.

The Smith to Ault sale involved a 10,526 acre piece of property located in Kerr County adjacent to the eastern boundary of the Ranch. The land was sold for $75 per acre on March 18, 1966, approximately two years prior to the date of decedent's death. The property appears to have been similar to the Ranch as regards location and physical characteristics. After adjusting for the two-year time differential between the date of sale and the valuation date and after allowing for the greater size of the Ranch, we found the Ranch to have been worth $90 per acre when analyzed in terms of the Smith to Ault sale.

In determining the Ranch's fair market value, however, we need not rely solely on the comparable sale method of valuation. We note that French purchased 28,165 of the Ranch's 32,914 acres in July 1963 for $70 per acre. He purchased 3,065 acres in January 1965 for $75 per acre and, in March 1966, he purchased the remaining 1,684 acres for $75 per acre. We also note that no significant improvements were made to the land between the dates of these purchases and the valuation date.

Using Price's annual land appreciation rate, i.e., 5 percent from 1963 through 1966 and 15 percent from 1967 until 1974, we find that, on April 17, 1968, the average appreciation of these three parcels of land resulted in the Ranch being worth approximately $98 per acre, when viewed strictly from an appreciation standpoint.[9]

Accordingly, after giving equal weight to the approximate values of the Ranch determined from these two methods of valuation, we find that the fair market value of the Ranch on April 17, 1968, was $94 per acre.

Having determined the value of the Ranch, we now turn to our primary task of determining the fair market value of decedent's shares of French Tool and French Oil stock.

Petitioner's expert witness, Robert E. Moroney (Moroney), in determining the fair market value of decedent's shares of French Tool stock, relied primarily on the capitalization of earnings method of valuation. He estimated that, based on numerous publicly-owned companies with financial prospects similar to French Tool's, decedent's stock, if it had been marketable, would have sold at eight times the company's earnings for the 12-month period ending March 31, 1968, or $432 per share. He then applied a 50-percent discount to this figure to reflect the nonmarketability of the stock, the lack of dividends, and the fact that a purchaser of decedent's interest would have no effective voice in the company's management. Thus, he concluded that, on April 17, 1968, decedent's 1,091 shares of French Tool stock had a fair market value of $216 per share.

1500 Respondent's expert witness, George S. Krug, a valuation expert employed by the Internal Revenue Service, gave primary *1500 consideration to the value of French Tool's underlying assets in determining that decedent's shares of stock were worth $500 per share. He adjusted the book value of the company's assets upward to reflect respondent's $140 per acre valuation of the Ranch and then applied a 50-percent discount to reflect the stock's lack of marketability and decedent's minority interest.

Of the two methods of valuation, we found Moroney's to be the more persuasive. On the date of decedent's death, French Tool was actively engaged in three separate lines of business. Although it owned interests in large amounts of real **estate**, its land holdings constituted an integral part of its ongoing ranching business. Thus, since French Tool was clearly an operating company actively engaged in selling products and services to the general public, we think that primary consideration should be given to its earnings and prospects for future profits as opposed to the value of its underlying assets. See *Levenson's **Estate** v. Commissioner* [60-2 USTC ¶ 969], 282 F. 2d 581, 586 (3d Cir. 1960); Rev. Rul. 59-60, sec. 5(b), 1959-1 C.B. 237.

From this perspective, we think that a prospective purchaser of decedent's French Tool stock, in examining the company's financial position on April 17, 1968, would discover a number of factors that would have had a depressing influence on the value of decedent's shares.

Such an examination would reveal that, for a number of years, French Tool's ratio of current assets to current liabilities had been about one-to-one. The company's net earnings had fluctuated widely for the past several years and, in fiscal year ending June 30, 1967, the company showed a net loss of approximately $3,000. It had a significant amount of long-term debt that approximately equaled stockholder's equity. The company had never paid any dividends and had not been in a financial position to do so. Finally, the stock was not marketable, and a purchaser of decedent's 43.43-percent interest in French Tool would probably have had little or no voice in the company's management due to the fact that the majority interest was held by decedent's daughter and grandson.

However, we think these negative factors would be offset somewhat by the fact that the company's fiscal year ending June 30, 1968, was quite profitable in relation to past years.[10] Also, although the company's net earnings had been quite low for the past several years, its cash flow position (net income plus depreciation) had been much more favorable. Finally, even though the chances on April 17, 1968, were minimal that French Tool would be liquidated in the foreseeable future, we think the rather high adjusted book value of the company's underlying assets would have been an attractive feature to a prospective purchaser of decedent's stock.

After taking all of these factors into consideration and after adjusting the value of the underlying assets to reflect the $94 per acre value of the Ranch,[11] we find decedent's 1,091 shares of French Tool stock to have been worth $300 per share on April 17, 1968.

Valuations prepared by Moroney and Krug also formed the basis for the parties' respective positions with regard to the fair market value of decedent's 130 shares of French Oil stock. Petitioner contends that such stock was worth $171 per share, while respondent argues that such shares should be valued at $650 per share.

Moroney, after noting that French Oil's peculiar financial position negated the more normal methods of valuation, utilized a rather unique approach in making his fair market value determination. He first calculated French Oil's liquidating value at $821 per share. Then, after taking into account the fact that such liquidating value would be of little benefit to a purchaser of decedent's 6.5-percent interest, he attempted to determine how much discount from the liquidating value of $821
1501 per share would be required to compensate a purchaser for the exceptional risks involved. He determined that a fair bargain to both buyer and seller would *1501
be reached if the selling price were such as to give a buyer a potential profit of four-to-one (before taxes) on the money he invested.

Thus, he valued decedent's shares of French Oil stock at $171 per share since, if a purchaser invested this amount, he would make about a four-to-one profit if the company were later liquidated at $821 per share.

In making his valuation of decedent's French Oil stock, Krug again gave primary consideration to the book value of the company's underlying assets. He adjusted such value upward to reflect respondent's $140 per acre valuation of the Ranch and then applied a 50-percent discount because of the stock's nonmarketability and decedent's minority interest.

In making our determination that decedent's 130 shares of French Oil stock were worth $250 per share on the date of his death, we did not feel comfortable with either expert's method of valuation. We found Moroney's hypothetical amount that a purchaser would "gamble" in order to obtain a certain return on his investment to be too speculative to warrant our total reliance. With respect to the method utilized by Krug, we think the facts presented clearly show that French Oil, like French Tool, was an operating company on the date of decedent's death. Thus, we think Krug gave excessive consideration to the value of the company's underlying assets in making his valuation.

We think that a prospective investor would view French Oil primarily from the standpoint of its history and prospects as a profit-making corporation.

An examination of its financial position as of April 17, 1968, reveals that the company was in rather poor shape. Its ratio of current assets to current liabilities had been about one-to-one for a number of years, and its long-term debt was quite high in relation to stockholder's equity. Its ranching business consistently operated at a loss and, although the company showed modest profits for its fiscal years ending August 31, 1965, 1966, and 1967,[12] had it not been for the items of extraordinary income (collection of bad debts and sale of certain oil leases), the company would have lost money in each of these years.

Surely a prospective purchaser would have taken into account the fact that, as of April 17, 1968, all of French Oil's bad debts had been collected and would have realized that the company could not continue to sell its oil and gas leases indefinitely.[13]

Moreover, French Oil had never paid any dividends in its 33 years of existence. Decedent's 130 shares were nonmarketable and represented a mere 6.5 percent of the company's issued and outstanding stock. A purchaser of decedent's interest would have had no voice in the company's management since the company was run by French who owned approximately 90 percent of its stock and served as its president and chief executive officer.

As we found with French Tool, however, French Oil's cash flow position was more favorable than its net earnings position. Also, notwithstanding the minimal chances that the company would be liquidated, we think a prospective purchaser would place some importance on the rather high adjusted book value of the underlying assets.

After taking all of these factors into account, we find that $250 per share would have been a fair price for decedent's 130 shares of French Oil stock.

Decision will be entered under Rule 155.

[1] French Oil also owned 100-percent interest in a 1,280 acre ranch in Dimmit County, Texas, southwest of San Antonio, which it occasionally used for grazing purposes.

[2] The only sale of either company's stock occurred in 1960 when, as part of a property settlement connected with a divorce, French bought 870 shares of French Oil stock from his former wife for approximately $287 per share.

[3] The parties have stipulated that the fair market value of Rancho Real was $80 per acre on April 17, 1968.

[4] A small portion of the Ranch extends across the western boundary of Kerr County into Real County.

[5] French purchased these three parcels of land in his own name but was apparently acting as an agent for French Tool and French Oil, who were undisclosed principals in the transactions.

[6] Unless otherwise specified, all statutory references are to the Internal Revenue Code of 1954.

[7] Respondent argues on brief that Price's testimony that the Ranch was worth $80 per acre on April 17, 1968, should have no probative value since, in the 1969 condemnation suit involving the same property, he testified that the Ranch was worth $125 per acre on November 13, 1968. We disagree with respondent and accept Price's explanation at trial that he only had one week to prepare an appraisal for the condemnation suit and was therefore limited as to the number of comparable sales he could analyze for purposes of that litigation.

[8] Acting as the corporations' agent, French purchased 28,165 acres in 1963, 3,065 acres in 1965, and 1,684 acres in 1966.

[9] Gilbert testified that, using Price's annual land appreciation rate, the Ranch would be valued at $108 per acre. He apparently made these calculations by using an appreciation rate of 15 percent for 1966 and misunderstood that Price was of the opinion that land in that area had appreciated at an annual rate of 5 percent from 1963 *through* 1966.

[10] Although French Tool's June 30, 1968, financial data would not have been available to a prospective purchaser of decedent's stock on April 17, 1968, the company maintained monthly balance sheets and earnings statements. The financial data for the nine-month period ending March 31, 1968, would have been available and clearly forecasted the profitability of the 1967-1968 fiscal year.

[11] We cannot accept Moroney's contention that the value of decedent's French Tool stock would not be increased if we found the Ranch to be worth more than $80 per acre. While we think that little weight should be given to the value of the company's underlying assets, to adopt Moroney's position is, in effect, to ignore their value altogether. This we cannot do. See *Est. of Lida R. Tompkins* [Dec. 25,182(M)], T.C. Memo. 1961-338.

[12] Unlike French Tool, French Oil did not keep its financial data on a monthly basis. Thus, the financial information for fiscal year ending August 31, 1967, would have been the most recent information available to a prospective purchaser of decedent's stock.

[13] However, a prospective purchaser would not have known or anticipated on April 17, 1968, that the company's most productive oil lease, Universal 30, would be sold some six weeks later.

115 T.C. No. 36

UNITED STATES TAX COURT

INA F. KNIGHT, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

HERBERT D. KNIGHT, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 11955-98, 12032-98.[1] Filed November 30, 2000.

On Dec. 28, 1994, Ps established a trust of which P-H was trustee (the management trust), a family limited partnership (the partnership) of which the management trust was the general partner, and trusts for the benefit of each of Ps' two adult children (the children's trusts). Ps transferred three parcels of real property used by Ps and their children and some financial assets to the partnership. Each P transferred a 22.3-percent interest in the partnership to each of their children's trusts.

The parties stipulated that the steps to create the partnership satisfied all requirements under Texas

[1] These cases were consolidated for trial, briefing, and opinion.

law, and that the partnership has been a limited partnership under Texas law since it was created.

Held: We recognize the partnership for Federal gift tax purposes.

Held, further, the value of each of Ps' gifts to their children's trusts in 1994 was $394,515; i.e., 22.3 percent of the value of the real property and financial assets Ps transferred to the partnership, reduced by minority and lack of marketability discounts totaling 15 percent.

Held, further, sec. 2704(b), I.R.C., does not apply to this transaction. See Kerr v. Commissioner, 113 T.C. 449 (1999).

William R. Cousins III, Robyn A. Frohlin, Todd Allen Kraft, Robert M. Bolton, Robert Don Collier, and John E. Banks, Jr., for petitioners.

Deborah H. Delgado, Gerald Brantley, and James G. MacDonald, for respondent.

COLVIN, Judge: In separate notices of deficiency sent to each petitioner, respondent determined that each petitioner has a gift tax deficiency of $120,866 for 1994.

Petitioners formed a family limited partnership called the Herbert D. Knight Limited Partnership (the partnership), and gave interests in it to trusts they established for their children. After concessions, the issues for decision are:

1. Whether, as respondent contends, the partnership is disregarded for Federal gift tax purposes. We hold that it is not.

2. Whether, as petitioners contend, the fair market value of petitioners' gifts is the value of the assets in the partnership reduced by portfolio, minority interest, and lack of marketability discounts totaling 44 percent. We hold that discounts totaling 15 percent apply.

3. Whether the fair market value of each of petitioners' gifts to each children's trust on December 28, 1994, is $263,165 as petitioners contend, $450,086 as respondent contends, or some other amount. We hold that it is $394,515.

4. Whether section 2704(b) applies. We hold that it does not.

Unless otherwise indicated, section references are to the Internal Revenue Code. Rule references are to the Tax Court Rules of Practice and Procedure. References to petitioner are to Herbert D. Knight. References to Mrs. Knight are to petitioner Ina F. Knight.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found.

A. Petitioners

1. Petitioners' Family

Petitioners were married and lived in San Antonio, Texas, when they filed their petitions and at the time of trial. They have two adult children, Mary Faye Knight (Mary Knight) and Douglas Dale Knight (Douglas Knight). Petitioners' children were

not married, and petitioners had no grandchildren at the time of trial. Petitioner worked for Luby's Cafeterias for 49 years and retired at age 65 on December 31, 1992, as a senior vice president. In 1992, Douglas Knight was 40, and Mary Knight was 33. By December 1994, petitioners owned assets worth about $10 million, most of which was Luby's Cafeterias stock. Petitioners were both in excellent health at the time of trial.

2. Petitioners' Real Property

In 1861, petitioner's great-grandfather bought a 290-acre ranch (the ranch) in Freestone County, Texas, about 120 acres of which is pasture. Knight family members are buried in a cemetery on the ranch. Petitioner was raised on the ranch. By 1959, parts of the ranch were owned by several members of petitioner's family. In 1959, petitioner began to buy parts of the ranch for sentimental reasons. Petitioner generally has 55 to 75 cattle on the ranch. The ranch has never been profitable while petitioner owned it.

Petitioners bought their family residence at 6219 Dilbeck in Dallas, Texas, on June 1, 1973. Petitioners moved to San Antonio in 1981. Douglas Knight lived at 6219 Dilbeck rent-free from 1984 to the date of trial. Petitioners bought a residence at 14827 Chancey in Addison, Texas, on May 12, 1993. Mary Knight has lived there rent-free from 1993 to the date of trial except from November 1995 to September 1997.

Petitioner managed the ranch and the houses before December 28, 1994. Petitioner paid the real estate taxes and insurance on those properties before December 28, 1994.

B. The Partnership

1. Initial Discussions

Robert Gilliam (Gilliam), a certified public accountant, met petitioner in the 1970's while Gilliam was auditing Luby's Cafeterias. Petitioners became Gilliam's tax clients in 1992 or 1993. Gilliam and petitioner discussed estate planning in 1993 and 1994.

Gilliam knew that petitioners had about $10 million in assets. Gilliam and petitioner discussed the fact that, if petitioners did no estate planning, Federal transfer taxes would equal 50 to 55 percent of their estate. Gilliam and petitioner discussed the tax benefits of estate planning. Gilliam told petitioners that they could claim discounts for transferred limited partnership interests if supported by a professional appraisal. Gilliam believed that petitioners could form a trust to help protect their assets from creditors and that a limited partnership would add another layer of protection for those assets.

Petitioner sought estate planning advice from John Banks, Jr. (Banks), in 1993 or 1994. Banks had been petitioners' attorney since 1981. Petitioners met with Gilliam or Banks

several times in November and December 1994. Late in 1994, Gilliam and Banks devised and helped to implement an estate plan for petitioners using a family limited partnership and related trusts.

2. Implementing the Plan

On December 6, 1994, petitioner opened an investment account at Broadway National Bank in the name of petitioners' family limited partnership, the Herbert D. Knight limited partnership (created on December 28, 1994, as described below), and transferred Treasury notes to it. On December 12, 1994, petitioners opened a checking account for their partnership at Broadway National Bank and transferred $10,000 to it from their personal account. On December 15, 1994, petitioners transferred $558,939.43 worth of a USAA municipal bond fund from their personal investment account to the partnership.

On December 28, 1994, the following occurred:

a. Petitioners signed documents which created the partnership, consisting of 100 units of ownership. The steps followed in the creation of the partnership satisfied all requirements under Texas law to create a limited partnership.

b. Petitioners conveyed the ranch and the real property at 6219 Dilbeck and 14827 Chancey to the partnership.

c. Petitioners created the Knight Management Trust (management trust). The steps followed in the creation of the

management trust satisfied all requirements under Texas law to create a trust. The management trust was the partnership's general partner.

d. Petitioners each transferred a one-half unit of the partnership to the management trust. That unit is the only asset held by the management trust. Petitioners each owned a 49.5-percent interest in the partnership as limited partners.

e. Petitioners created trusts for Mary Knight and Douglas Knight (the children's trusts). The documents petitioners executed were sufficient under Texas law to create the children's trusts. Douglas Knight and Mary Knight were each the beneficiary and trustee of the children's trust bearing their name.

f. Petitioners each signed codicils to their wills in which they changed the bequests to their children to bequests to the children's trusts.

g. Petitioners each transferred a 22.3-percent interest in the partnership to each of the children's trusts. After those transfers, petitioners each retained a 4.9-percent interest in the partnership as limited partners.

3. The Partnership Agreement

The partnership has been a limited partnership under Texas law since it was created. Article 9 of the partnership agreement prohibits any partner from withdrawing from the partnership or demanding the return of any of his or her capital contribution or

the balance in that partner's capital account. Article 14 provides that the partnership will continue for 50 years, unless all partners consent to a dissolution. Under the partnership agreement, petitioner, as trustee of the management trust, could sell any asset or part of any asset at any time.

The fair market values (before any discounts) of partnership assets on December 28, 1994, were as follows:

Freestone County Ranch (with mineral rights)	$182,251
Residential property (6219 Dilbeck)	166,880
Residential property (14827 Chancey)	145,070
USAA municipal bond fund	553,653
Dreyfus municipal bond fund	510,239
Treasury notes	461,345
Insurance policies	51,885
Cash	10,000
Total	2,081,323

Petitioners transferred the bond funds and Treasury notes to brokerage accounts in the name of the partnership. The partnership had no liabilities and no assets other than those listed above. All of these assets were petitioners' community property before being transferred to the partnership.

C. Operation of the Management Trust and Partnership

1. Operation of the Management Trust

Petitioner has been the only trustee of the management trust. Petitioner decides which assets to buy and sell, pays all partnership expenses, handles and keeps records of all partnership transactions, and explains the transactions to the partnership's accountants. The management trust has never had a

checking account. The partnership paid the management trust expenses, such as preparation of the trust tax returns.

2. Operation of the Partnership

Petitioner signed all of the checks drawn on the partnership checking account. The partnership kept no records, prepared no annual reports, and had no employees. The children and their trusts did not participate in managing the partnership. The partners or their representatives have not exchanged any correspondence, meeting notes, or e-mail about the partnership's operations. The partners never met and never discussed conducting any business activity. All assets and know-how came from petitioners.

The partnership has never borrowed or lent money, and never conducted any business activity. It has not bought, otherwise acquired, or sold any notes or obligations of any entity other than Government-backed securities. The partnership did not prepare annual financial statements or reports.

3. Partnership Assets

Petitioner did not trade the partnership's bond funds. He reinvested the partnership's Treasury notes when they matured. He managed these investments the same way before and after he transferred them to the trust. The partnership did not rent real property to third parties.

A substantial portion of the partnership assets (the two houses and the ranch) was used for personal purposes before and after petitioners formed the partnership. Petitioners' children did not sign a lease or pay rent to the partnership in exchange for living at 6219 Dilbeck and 14827 Chancey. Petitioners' children paid the utilities while they lived at 6219 Dilbeck and 14827 Chancey. The partnership paid the utilities at 14827 Chancey while Mary Knight was absent from November 1995 to September 1997. Petitioners paid real property taxes for 1994 for the ranch, 6219 Dilbeck, and 14827 Chancey, and the partnership paid them thereafter. Petitioners paid property insurance premiums for 1994 for 6219 Dilbeck and 14827 Chancey, and the partnership paid them thereafter. The expenses of 6219 Dilbeck and 14827 Chancey were more than 70 percent of the partnership's annual expenses.

Petitioner continued to operate the ranch after he contributed it to the partnership. He paid no rent to the partnership until December 1998, after the petitions in these cases were filed. The parties stipulated that, in December 1998, petitioner entered into an oral pasture lease on the ranch between himself as an individual and himself as trustee. On December 31, 1998, petitioner paid $1,500 to the partnership as rent under the oral pasture lease.

D. Federal Tax Returns

Petitioners filed Federal gift and generation-skipping transfer tax returns for 1994. Both petitioners reported that they had given a 22.3-percent interest in the partnership to each of the children's trusts.

The partnership filed Forms 1065, U.S. Partnership Return of Income, for 1995, 1996, and 1997. The management trust and each of the children's trusts filed Forms 1041, U.S. Income Tax Return for Estates and Trusts, for 1995, 1996, and 1997.

OPINION

A. Contentions of the Parties

The parties agree that the starting point for valuing petitioners' gifts to their children's trusts is the fair market value of the assets petitioners transferred to the partnership (i.e., $2,081,323), but they disagree about which discounts apply.

Respondent contends that petitioners' family limited partnership should be disregarded for gift tax valuation purposes. Thus, respondent contends that the fair market value of each of the gifts is $450,086; i.e., 22.3 percent of the fair market value of the real property and financial assets given by petitioners, discounted for selling expenses and built-in capital gains.

Petitioners contend that the partnership must be recognized for Federal gift tax purposes,[2] and that portfolio, minority, and lack of marketability discounts totaling 44 percent apply, reducing the value of each of the gifts to $263,165. Alternatively, petitioners contend that, if we do not recognize the partnership for Federal gift tax purposes, the value of each of the four gifts is between $429,781 and $435,291 after application of fractional interest and transactional costs discounts.

B. Whether To Disregard the Partnership for Gift Tax Purposes

Respondent contends that the partnership lacks economic substance and fails to qualify as a partnership under Federal law. See, e.g., Commissioner v. Culbertson, 337 U.S. 733, 740 (1949); Commissioner v. Tower, 327 U.S. 280, 286 (1946); Merryman v. Commissioner, 873 F.2d 879, 882-883 (5th Cir. 1989), affg. T.C. Memo. 1988-72.[3] Petitioners contend that their rights and legal relationships and those of their children changed significantly when petitioners formed the partnership,

[2] Petitioners contend that respondent bears the burden of proving that the partnership should be disregarded for lack of economic substance. We need not decide petitioners' contention because our findings and analysis on that issue do not depend on which party bears the burden of proof.

[3] Respondent does not contend that we should apply an indirect gift analysis. See Kincaid v. United States, 682 F.2d 1220 (5th Cir. 1982); Shepherd v. Commissioner, 115 T.C. ____ (2000); sec. 25.2511-1(h)(1), Gift Tax Regs. Thus, we do not consider that analysis here.

transferred assets to it, and transferred interests in the partnership to their children's trusts, and that we must recognize the partnership for Federal gift tax valuation purposes. We agree with petitioners.

State law determines the nature of property rights, and Federal law determines the appropriate tax treatment of those rights. See United States v. National Bank of Commerce, 472 U.S. 713, 722 (1985); United States v. Rodgers, 461 U.S. 677, 683 (1983); Aquilino v. United States, 363 U.S. 509, 513 (1960). The parties stipulated that the steps followed in the creation of the partnership satisfied all requirements under Texas law, and that the partnership has been a limited partnership under Texas law since it was created. Thus, the transferred interests are interests in a partnership under Texas law. Petitioners have burdened the partnership with restrictions that apparently are valid and enforceable under Texas law. The amount of tax for Federal estate and gift tax purposes is based on the fair market value of the property transferred. See secs. 2502, 2503. The fair market value of property is "the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." See sec. 20.2031-1(b), Estate Tax Regs.; sec. 25.2512-1, Gift Tax Regs. We apply the willing buyer, willing seller test to value the

interests in the partnership that petitioners transferred under Texas law. We do not disregard the partnership because we have no reason to conclude from this record that a hypothetical buyer or seller would disregard it.

Respondent relies on several income tax economic substance cases. See, e.g., Frank Lyon Co. v. United States, 435 U.S. 561, 583-584 (1978); Knetsch v. United States, 364 U.S. 361, 366 (1960); ASA Investerings Partnership v. Commissioner, 201 F.3d 505, 511-516 (D.C. Cir. 2000), affg. T.C. Memo. 1998-305; ACM Partnership v. Commissioner, 157 F.3d 231, 248 (3d Cir. 1998), affg. in part and revg. in part T.C. Memo. 1997-115; Merryman v. Commissioner, supra; Winn-Dixie Stores, Inc. v. Commissioner, 113 T.C. 254, 278 (1999). We disagree that those cases require that we disregard the partnership here because the issue here is what is the value of the gift. See secs. 2501, 2503; sec. 20.2031-1(b), Estate Tax Regs.; sec. 25.2512-1, Gift Tax Regs.

Respondent points out that in several transfer tax cases we and other courts have valued a transfer based on its substance instead of its form. See, e.g., Heyen v. United States, 945 F.2d 359, 363 (10th Cir. 1991); Schultz v. United States, 493 F.2d 1225 (4th Cir. 1974); Estate of Murphy v. Commissioner, T.C. Memo. 1990-472; Griffin v. United States, 42 F. Supp. 2d 700, 704 (W.D. Tex. 1998). Our holding is in accord with those cases because we believe the form of the transaction here (the creation

of the partnership) would be taken into account by a willing buyer; thus the substance and form of the transaction are not at odds for gift tax valuation purposes. Respondent agrees that petitioners created and operated a partnership as required under Texas law and gave interests in that partnership to their children's trusts. Those rights are apparently enforceable under Texas law.

C. Whether the Value of Petitioners' Four Gifts Is Limited to $300,000 Each

The transfer document through which petitioners made the gifts at issue states that each petitioner transferred to each of their children's trusts the number of limited partnership units which equals $300,000 in value.[4] Petitioners contend that this bars respondent from asserting that the value of each partnership interest exceeds $300,000.

Respondent contends that the transfer document makes a formula gift that is void as against public policy. Respondent relies on Commissioner v. Procter, 142 F.2d 824 (4th Cir. 1944), and Ward v. Commissioner, 87 T.C. 78, 109-116 (1986). In Procter, the transfer document provided that, if a court decided

[4] The transfer document identifies petitioners as transferors and states:

> Transferor irrevocably transfers and assigns to each Transferee above identified, as a gift, that number of limited partnership units in Herbert D. Knight Limited Partnership which is equal in value, on the effective date of this transfer, to $600,000.

a value that would cause a part of the transfer to be taxable, that part of the transfer would revert to the donor. The U.S. Court of Appeals for the Fourth Circuit described this provision as a condition subsequent, and held that it was void as against public policy. See Commissioner v. Procter, supra at 827.

We need not decide whether Procter and Ward control here because we disregard the stated $300,000 gift value for other reasons. First, petitioners reported on their gift tax returns that they each gave two 22.3-percent interests in the partnership. Contrary to the transfer document, they did not report that they had given partnership interests worth $300,000. We believe this shows their disregard for the transfer document, and that they intended to give 22.3-percent interests in the partnership.[5]

Second, even though petitioners contend that respondent is limited to the $300,000 amount, i.e., that the gifts were for $300,000 and thus cannot be worth more than $300,000, petitioners contend that the gifts are each worth less than $300,000. In fact, petitioners offered expert testimony to show that each gift was worth only $263,165. We find petitioners' contentions to be at best inconsistent. We treat petitioners' contention and offer

[5] Gifts of 22.3-percent partnership interests are at odds with the appraisal which valued a 22.22222-percent interest at the $300,000 amount specified in the transfer document. Petitioners do not explain this discrepancy between the transfer document and their returns.

of evidence that the gifts were worth less than $300,000 as opening the door to our consideration of respondent's argument that the gifts were worth more than $300,000.

D. Petitioners' Contention That a Portfolio Discount and Minority and Lack of Marketability Discounts Totaling 44 Percent Apply

Petitioners' expert, Robert K. Conklin (Conklin), estimated that, if we recognize the partnership for Federal tax purposes, a 10-percent portfolio discount and discounts of 10 percent for minority interest and 30 percent for lack of marketability apply, for an aggregate discount of 44 percent.[6]

1. Portfolio Discount

Conklin concluded that a 10-percent portfolio discount applies based on the assumption that it is unlikely that a buyer could be found who would want to buy all of the Knight family partnership's assets. He provided no evidence to support that assumption, see Rule 143(f)(1); Rose v. Commissioner, 88 T.C. 386, 401 (1987), affd. 868 F.2d 851 (6th Cir. 1989); Compaq Computer Corp. v. Commissioner, T.C. Memo. 1999-220.

To estimate the amount of the portfolio discount, Conklin relied on a report stating that conglomerate public companies tend to sell at a discount of about 10 to 15 percent from their

[6] Respondent's expert, Francis X. Burns, testified about the "fair value" but not the "fair market value" of the partnership interests at issue in these cases. We have not considered his testimony in deciding the fair market value of the gifts.

breakup value. However, the Knight family partnership is not a conglomerate public company.

Conklin cites Shannon Pratt's definition of a portfolio discount[7] in estimating the portfolio discount to apply to the assets of the partnership. A portfolio discount applies to a company that owns two or more operations or assets, the combination of which would not be particularly attractive to a buyer. See Estate of Piper v. Commissioner, 72 T.C. 1062, 1082 (1979). The partnership held real estate and marketable securities. Conklin gave no convincing reason why the partnership's mix of assets would be unattractive to a buyer. We apply no portfolio discount to the assets of the partnership.

2. Lack of Control and Marketability Discounts

Conklin concluded that a lack of control discount applies. He speculated that, because the partnership invested a large part

[7] Pratt et al., Valuing a Business, The Analysis and Appraisal of Closely Held Companies 325 (3d ed. 1996):

> The concept of a 'portfolio' discount is a discount for a company that owns anywhere from two to several dissimilar operations and/or assets that do not necessarily fit well together. Many private companies have accumulated such a package of disparate operations and/or assets over the years, the combination of which probably would not be particularly attractive to a buyer seeking a position in any one of the industries, necessitating a discount to sell the entire company as a package. Research indicates that conglomerate public companies tend to sell at a discount of about 10 to 15 percent from their breakup value, although the relationship is not consistent from company to company or necessarily over time.

of its assets in bonds, and investors in the bond fund could not influence investment policy, the partnership "could be similar to a closed-end bond fund".[8] He estimated that a lack of control discount of 10 percent applies by evaluating the difference between the trading value and the net asset values on October 21, 1994, of 10 publicly traded closed-end bond funds. The 10 funds that Conklin chose are not comparable to the Knight family partnership.[9] We find unconvincing his use of data from noncomparable entities to increase the discount. However, on

[8] A publicly traded closed-end bond fund owns a fixed number of bonds. The net asset value of those bonds held by a closed-end fund is published. The value of an interest in a closed-end fund may trade at a premium (i.e., above the net asset value per share) or at a discount (i.e., below the net asset value per share).

[9] Only the Nuveen Municipal Value Fund had assets that were comparable to the partnership. No hard and fast rule dictates the number of comparables required, but courts have rejected use of one comparable, see Estate of Hall v. Commissioner, 92 T.C. 312 (1989); Estate of Rodgers v. Commissioner, T.C. Memo. 1999-129; Klukwan, Inc. v. Commissioner, T.C. Memo. 1994-402; Crowley v. Commissioner, T.C. Memo. 1990-636, affd. on other grounds 962 F.2d 1077 (1st Cir. 1992); Higgins v. Commissioner, T.C. Memo. 1990-103; Dennis v. United States, 70 AFTR 2d 92-5946, 92-5949, 92-2 USTC par. 50,498 (E.D. Va. 1992), unless it is compelling, see also 885 Inv. Co. v. Commissioner, 95 T.C. 156, 167-168 (1990); Estate of Fawcett v. Commissioner, 64 T.C. 889, 899-900 (1975); Clark v. Commissioner, T.C. Memo. 1978-402. The comparability is not compelling here. First, the value of the partnership's interest in the two bond funds was about $1.1 million; the value of the assets in the Nuveen Municipal Value Fund was nearly $1.9 billion. Second, 51 percent of the partnership assets were invested in two tax-exempt municipal bond funds; the Nuveen Municipal Value Fund held no real property.

this record, we believe some discount is appropriate based on an analogy to a closed-end fund.

Conklin cited seven studies of sales of restricted stocks from 1969 to 1984 to support his estimate that a 30-percent discount for lack of marketability applies. He used a table summarizing initial public offerings of common stock from 1985 to 1993. However, he did not show that the companies in the studies or the table were comparable to the partnership, or explain how he used this data to estimate the discount for lack of marketability. See Tripp v. Commissioner, 337 F.2d 432, 434-435 (7th Cir. 1964), affg. T.C. Memo. 1963-244; Rose v. Commissioner, supra; Chiu v. Commissioner, 84 T.C. 722, 734-735 (1985). He also listed seven reasons why a discount for lack of marketability applies, but he did not explain how those reasons affect the amount of the discount for lack of marketability.

3. Conklin's Factual Assumptions

Conklin listed 19 purported business reasons for which he said the partnership was formed. Petitioners claimed to have had only 5 of those 19 reasons.[10] Conklin also said: "The

[10] Petitioners' five reasons are: (a) Centralize control of family investments; (b) avoid fragmentation of interests; (c) consolidate family interests into one entity; and protect the children's assets (d) from creditors and (e) in the event of a divorce.

The 14 reasons Conklin gave but petitioners did not are: (a) Obtain better rates of return; (b) reduce administrative costs; (c) provide for competent management in case of death or

(continued...)

compensation and reimbursement paid to the general partner reduce the income available to limited partners or assignees." His statement is inapplicable because the general partner received no compensation and incurred no expenses.

We have rejected expert opinion based on conclusions which are unexplained or contrary to the evidence. See Rose v. Commissioner, supra; Compaq Computer Corp. v. Commissioner, supra. An expert fails to assist the trier of fact if he or she assumes the position of advocate. See Estate of Halas v. Commissioner, 94 T.C. 570, 577 (1990); Laureys v. Commissioner, 92 T.C. 101, 122-129 (1989). Conklin's erroneous factual assumptions cast doubt on his objectivity.

4. Conclusion

The parties stipulated that the net asset value of the partnership was $2,081,323 on December 28, 1994. Each petitioner gave each trust a 22.3-percent interest in the partnership; 44.6 percent of $2,081,323 is $928,270.

---

[10](...continued)
disability; (d) avoid cumbersome and expensive guardianships; (e) avoid or minimize probate delay and expenses; (f) minimize franchise tax liability; (g) provide business flexibility because the agreement can be amended; (h) eliminate ancillary probate proceedings; (i) provide a convenient mechanism for making annual gifts; (j) provide a vehicle to educate descendants about family assets to increase their value; (k) provide a mechanism to resolve family disputes; (l) avoid adverse tax consequences that may occur by dissolving a corporation; (m) provide better income tax treatment than would apply to a corporation or trust; and (n) provide more flexibility in making investments than a trust because of the fiduciary standard.

We conclude that Conklin was acting as an advocate and that his testimony was not objective. However, despite the flaws in petitioners' expert's testimony, we believe that some discount is proper, in part to take into account material in the record relating to closed-end bond funds. We hold that the fair market value of an interest in the Knight family partnership is the pro rata net asset value of the partnership less a discount totaling 15 percent for minority interest and lack of marketability. Thus, on December 28, 1994, each petitioner made taxable gifts of $789,030 (44.6 percent of $2,081,323, reduced by 15 percent).

E. Whether Section 2704(b) Applies

Respondent contends that Article 14 (the 50-year term or dissolution by agreement of all partners) and Article 9 (the lack of withdrawal rights for limited partners) of the partnership agreement are applicable restrictions under section 2704(b) because sections 8.01 and 6.03 of Texas Revised Limited Partnership Act (TRLPA), Tex. Rev. Civ. Stat. Ann. art. 6132a-1 (West Supp. 1993), are less restrictive. We disagree. See Kerr v. Commissioner, 113 T.C. 449 (1999).

If a transferor conveys to a family member an interest in a partnership or a corporation which is subject to an "applicable restriction", and the transferor and transferor's family members control the entity immediately before the transfer, the restriction in valuing the interest shall be disregarded. See

sec. 2704(b)(1). An "applicable restriction" is a provision that limits the ability of the partnership or corporation to liquidate if (1) the restriction lapses after the transfer, or (2) the transferor or any member of the transferor's family, collectively or alone, can remove or reduce the restriction after the transfer. See sec. 2704(b)(2); sec. 25.2704-2(b), Gift Tax Regs. However, a restriction on liquidation is not an applicable restriction if it is not more restrictive than limitations on liquidation under Federal or State law. See sec. 2704(b)(3).

In Kerr, the Commissioner contended that the provisions in the partnership agreement (50-year term or dissolution by agreement of all partners and the lack of withdrawal rights for limited partners) were applicable restrictions under section 2704(b) because TRLPA sections 8.01 and 6.03 were less restrictive. We rejected those arguments in Kerr and noted that, under Texas law, a limited partner may withdraw from a partnership without requiring the dissolution and liquidation of the partnership. See id. at 473. We concluded that the partnership agreements in Kerr were not more restrictive than the limitations that generally would apply to the partnerships under Texas law. See id. at 472-474. Similarly, we conclude that section 2704(b) does not apply here.

To reflect the foregoing,

Decisions will be entered under Rule 155.

Reviewed by the Court.

CHABOT, COHEN, PARR, RUWE, WHALEN, HALPERN, CHIECHI, GALE, and THORNTON, JJ., agree with this majority opinion.

LARO and MARVEL, JJ., concur in result only.

FOLEY, J., concurring in result: Family limited partnerships are proliferating as an estate planning device, taxpayers are planning amid great uncertainty, and respondent is asserting numerous theories (i.e., economic substance, Chapter 14, section 2036, immediate gift upon formation, etc.) in an attempt to address these transactions. It is important that we clarify the law in this area with a careful statement of the applicable principles. While I agree with the majority that the partnership must be respected, I write separately to emphasize two points.

I. The "Willing Buyer, Willing Seller" Test Is Not a Relevant Consideration in Determining Whether a Partnership Is To Be Respected Under State Law

I disagree with some of the reasoning set forth in the majority opinion. Specifically, the rationale set forth for respecting the partnership is as follows:

> We do not disregard the partnership because we have no reason to conclude from this record that a hypothetical buyer or seller would disregard it.
>
> * * * * * * *
>
> * * * we believe the form of the transaction here (the creation of the partnership) would be taken into account by a willing buyer; thus the substance and form of the transaction are not at odds for gift tax valuation purposes. * * * [Majority op. pp. 14-15.]

The Knight family limited partnership is a valid legal entity under Texas law. Even if a hypothetical buyer and seller were to determine that the value of the partnership interest was

equal, or approximately equal, to the value of the corresponding underlying assets,[1] that would not be legal justification for applying the economic substance doctrine and disregarding the partnership. Whether "the form of the transaction here (the creation of the partnership) would be taken into account by a willing buyer" is not a relevant consideration in determining whether the entity must be respected for transfer tax purposes. Our assessment of the property rights transferred is a State law determination not affected by the "willing buyer, willing seller" valuation analysis. Sec. 20.2031-1(b), Estate Tax Regs. (stating that the fair market value of property is "the price at which the property would change hands between a willing buyer and a willing seller"). In essence, that analysis assists the Court in determining the value of partnership interest after the Court establishes whether the entity is recognized under State law.

The determination of whether or not the partnership should be respected is independent of the value of the partnership interest. The logical inference from the majority's statements, however, is that a partnership could be disregarded for lack of economic substance if a hypothetical willing buyer would not respect the partnership form. This language may mislead

[1] The value of the partnership interest and its corresponding underlying assets will not be equal because virtually any binding legal restriction will make such partnership interest less than the value of its corresponding underlying assets.

respondent and encourage him to proffer expert testimony in a fruitless attempt to establish that a partnership should be disregarded because the value of a partnership interest is equal, or approximately equal, to the value of the corresponding underlying assets. The "willing buyer, willing seller" analysis merely establishes the value of a partnership interest, not whether the economic substance doctrine is applicable.

II. The Economic Substance Doctrine Should Not Be Employed in the Transfer Tax Regime To Disregard Entities

A fundamental premise of transfer taxation is that State law defines and Federal tax law then determines the tax treatment of property rights and interests. See Drye v. United States, 528 U.S. 49 (1999); Morgan v. Commissioner, 309 U.S. 78 (1940). As a result, the courts have not employed the economic substance doctrine to disregard an entity (i.e., one recognized as bona fide under State law) for the purpose of disallowing a purported valuation discount.

The application of the economic substance doctrine in the transfer tax context generally has been limited to cases where a taxpayer attempts to disguise the transferor or transferees. The courts in these cases occasionally mention, but do not explicitly incorporate, a business purpose inquiry in their analysis. See Heyen v. United States, 945 F.2d 359 (10th Cir. 1991)(applying only substance over form analysis to a gift of stock to disregard

intermediate transferees); Schultz v. United States, 493 F.2d 1225 (4th Cir. 1974)(applying essentially a substance over form analysis to reciprocal gifts); Griffin v. United States, 42 F. Supp. 2d 700 (W.D. Tex. 1998)(discussing the lack of business purpose inherent in gifts, and then applying economic substance analysis to a gift of stock).

Generally, the economic substance doctrine, with its emphasis on business purpose, is not a good fit in a tax regime dealing with typically donative transfers. Business purpose will oftentimes be suspect in these transactions because estate planning usually focuses on tax minimization and involves the transfer of assets to family members. If taxpayers, however, are willing to burden their property with binding legal restrictions that, in fact, reduce the value of such property, we cannot disregard such restrictions. To do so would be to disregard economic reality.

WELLS, C.J., agrees with this concurring opinion.

BEGHE, J., dissenting: Using the estate depletion approach set forth in my dissenting opinion in Shepherd v. Commissioner, 115 T.C. ___ (2000) (slip opinion pp. 63-67), as supplemented by my dissenting opinion in Estate of Strangi v. Commissioner, 115 T.C. ___ (2000) (slip opinion pp. 39-48), I respectfully suggest that the valuation focus in this case should have been on the assets transferred by the donors, rather than on the partnership interests received by the donees. I would have valued the gifts at 100 percent of the values of the assets transferred to the partnership by Mr. and Mrs. Knight, reducing the values so arrived at by the values of the partnership interests Mr. and Mrs. Knight received and retained.

Kumho Tire Company v. Carmichael

Case name: Kumho Tire Co. v. Carmichael
Citation: 119 S. Ct. 1167,1999 U.S. LEXIS 2189
Date of decision: March 23, 1999
Country: US
State or Federal: Federal
Court: Supreme Court
Type of action: Evidence
Judge: Breyer
Experts: Dennis Carlson, Jr (for plaintiff)
SIC: 3011 Tires and Inner Tubes
NAICS: 326211 Tire Manufacturing (except Retreading)
993

Keywords: Expert testimony

COUNSEL:

Joseph H. Babington argued the cause for petitioners.

Jeffrey P. Minear argued the cause for the United States, as amicus curiae, by special leave of court.

Sidney W. Jackson argued the cause for respondents.

JUDGES:

BREYER, J., delivered the opinion of the Court, in which REHNQUIST, C. J., and O'CONNOR, SCALIA, KENNEDY, SOUTER, THOMAS, and GINSBURG, JJ., joined, and in which STEVENS, J., joined as to Parts I and II. SCALIA, J., filed a concurring opinion, in which O'CONNOR and THOMAS, JJ., joined. STEVENS, J., filed an opinion concurring in part and dissenting in part.

OPINIONBY:

BREYER

OPINION:

JUSTICE BREYER delivered the opinion of the Court.

In Daubert v. Merrell Dow Pharmaceuticals, Inc., 509 U.S. 579, 125 L. Ed. 2d 469, 113 S. Ct. 2786 (1993), this Court focused upon the admissibility of scientific expert testimony. It pointed out that such testimony is admissible only if it is both relevant and reliable. And it held that the Federal Rules of Evidence "assign to the trial judge the task of ensuring that an expert's testimony both rests on a reliable foundation and is relevant to the task at hand." Id. at 597. The Court also discussed certain more

specific factors, such as testing, peer review, error rates, and "acceptability" in the relevant scientific community, some or all of which might prove helpful in determining the reliability of a particular scientific "theory or technique." Id. at 593-594.

This case requires us to decide how Daubert applies to the testimony of engineers and other experts who are not scientists. We conclude that Daubert's general holding -- setting forth the trial judge's general "gatekeeping" obligation -- applies not only to testimony based on "scientific" knowledge, but also to testimony based on "technical" and "other specialized" knowledge. See Fed. Rule Evid. 702. We also conclude that a trial court may consider one or more of the more specific factors that Daubert mentioned when doing so will help determine that testimony's reliability. But, as the Court stated in Daubert, the test of reliability is "flexible," and Daubert's list of specific factors neither necessarily nor exclusively applies to all experts or in every case. Rather, the law grants a district court the same broad latitude when it decides how to determine reliability as it enjoys in respect to its ultimate reliability determination. See General Electric Co. v. Joiner, 522 U.S. 136, 143, 139 L. Ed. 2d 508, 118 S. Ct. 512 (1997) (courts of appeals are to apply "abuse of discretion" standard when reviewing district court's reliability determination). Applying these standards, we determine that the District Court's decision in this case -- not to admit certain expert testimony -- was within its discretion and therefore lawful.

I

On July 6, 1993, the right rear tire of a minivan driven by Patrick Carmichael blew out. In the accident that followed, one of the passengers died, and others were severely injured. In October 1993, the Carmichaels brought this diversity suit against the tire's maker and its distributor, whom we refer to collectively as Kumho Tire, claiming that the tire was defective. The plaintiffs rested their case in significant part upon deposition testimony provided by an expert in tire failure analysis, Dennis Carlson, Jr., who intended to testify in support of their conclusion.

Carlson's depositions relied upon certain features of tire technology that are not in dispute. A steel-belted radial tire like the Carmichaels' is made up of a "carcass" containing many layers of flexible cords, called "plies," along which (between the cords and the outer tread) are laid steel strips called "belts." Steel wire loops, called "beads," hold the cords together at the plies' bottom edges. An outer layer, called the "tread," encases the carcass, and the entire tire is bound together in rubber, through the application of heat and various chemicals. See generally, e.g., J. Dixon, Tires, Suspension and Handling 68-72 (2d ed. 1996). The bead of the tire sits upon a "bead seat," which is part of the wheel assembly. That assembly contains a "rim flange," which extends over the bead and rests against the side of the tire. See M. Mavrigian, Performance Wheels & Tires 81, 83 (1998) (illustrations).

[Graphic omitted; see printed opinion.]

A. Markovich, How To Buy and Care For Tires 4 (1994).

Carlson's testimony also accepted certain background facts about the tire in question. He assumed that before the blowout the tire had traveled far. (The tire was made in 1988 and had been installed some time before the Carmichaels bought the used minivan in March 1993; the Carmichaels had driven the van approximately 7,000 additional miles in the two months they had owned it.) Carlson noted that the tire's tread depth, which was 11/32 of an inch when new, App. 242, had been worn down to depths that

ranged from 3/32 of an inch along some parts of the tire, to nothing at all along others. Id. at 287. He conceded that the tire tread had at least two punctures which had been inadequately repaired. Id. at 258-261, 322.

Despite the tire's age and history, Carlson concluded that a defect in its manufacture or design caused the blow-out. He rested this conclusion in part upon three premises which, for present purposes, we must assume are not in dispute: First, a tire's carcass should stay bound to the inner side of the tread for a significant period of time after its tread depth has worn away. Id. at 208-209. Second, the tread of the tire at issue had separated from its inner steel-belted carcass prior to the accident. Id. at 336. Third, this "separation" caused the blowout. Ibid.

Carlson's conclusion that a defect caused the separation, however, rested upon certain other propositions, several of which the defendants strongly dispute. First, Carlson said that if a separation is not caused by a certain kind of tire misuse called "overdeflection" (which consists of underinflating the tire or causing it to carry too much weight, thereby generating heat that can undo the chemical tread/carcass bond), then, ordinarily, its cause is a tire defect. Id. at 193-195, 277-278. Second, he said that if a tire has been subject to sufficient overdeflection to cause a separation, it should reveal certain physical symptoms. These symptoms include (a) tread wear on the tire's shoulder that is greater than the tread wear along the tire's center, id. at 211; (b) signs of a "bead groove," where the beads have been pushed too hard against the bead seat on the inside of the tire's rim, id. at 196-197; (c) sidewalls of the tirewith physical signs of deterioration, such as discoloration, id. at 212; and/or (d) marks on the tire's rim flange, id. at 219-220. Third, Carlson said that where he does not find at least two of the four physical signs just mentioned (and presumably where there is no reason to suspect a less common cause of separation), he concludes that a manufacturing or design defect caused the separation. Id. at 223-224.

Carlson added that he had inspected the tire in question. He conceded that the tire to a limited degree showed greater wear on the shoulder than in the center, some signs of "bead groove," some discoloration, a few marks on the rim flange, and inadequately filled puncture holes (which can also cause heat that might lead to separation). Id. at 256-257, 258-261, 277, 303-304, 308. But, in each instance, he testified that the symptoms were not significant, and he explained why he believed that they did not reveal overdeflection. For example, the extra shoulder wear, he said, appeared primarily on one shoulder, whereas an overdeflected tire would reveal equally abnormal wear on both shoulders. Id. at 277. Carlson concluded that the tire did not bear at least two of the four overdeflection symptoms, nor was there any less obvious cause of separation; and since neither overdeflection nor the punctures caused the blowout, a defect must have done so.

Kumho Tire moved the District Court to exclude Carlson's testimony on the ground that his methodology failed Rule 702's reliability requirement. The court agreed with Kumho that it should act as a Daubert-type reliability "gatekeeper," even though one might consider Carlson's testimony as "technical," rather than "scientific." See Carmichael v. Samyang Tires, Inc., 923 F. Supp. 1514, 1521-1522 (SD Ala. 1996). The court then examined Carlson's methodology in light of the reliability-related factors that Daubert mentioned, such as a theory's testability, whether it "has been a subject of peer review or publication," the "known or potential rate of error," and the "degree of acceptance . . . within the relevant scientific

community." 923 F. Supp. at 1520 (citing Daubert, 509 U.S. 579 at 592-594). The District Court found that all those factors argued against the reliability of Carlson's methods, and it granted the motion to exclude the testimony (as well as the defendants' accompanying motion for summary judgment).

The plaintiffs, arguing that the court's application of the Daubert factors was too "inflexible," asked for reconsideration. And the Court granted that motion. Carmichael v. Samyang Tires, Inc., Civ. Action No. 93-0860-CB-S (SD Ala., June 5, 1996), App. to Pet. for Cert. 1c. After reconsidering the matter, the court agreed with the plaintiffs that Daubert should be applied flexibly, that its four factors were simply illustrative, and that other factors could argue in favor of admissibility. It conceded that there may be widespread acceptance of a "visual-inspection method" for some relevant purposes. But the court found insufficient indications of the reliability of

"the component of Carlson's tire failure analysis which most concerned the Court, namely, the methodology employed by the expert in analyzing the data obtained in the visual inspection, and the scientific basis, if any, for such an analysis." Id. at 6c.

It consequently affirmed its earlier order declaring Carlson's testimony inadmissable and granting the defendants' motion for summary judgment.

The EleventhCircuit reversed. See Carmichael v. Samyang Tire, Inc., 131 F.3d 1433 (1997). It "reviewed . . . de novo" the "district court's legal decision to apply Daubert." 131 F.3d at 1435. It noted that "the Supreme Court in Daubert explicitly limited its holding to cover only the 'scientific context,'" adding that "a Daubert analysis" applies only where an expert relies "on the application of scientific principles," rather than "on skill- or experience-based observation." Id. at 1435-1436. It concluded that Carlson's testimony, which it viewed as relying on experience, "falls outside the scope of Daubert," that "the district court erred as a matter of law by applying Daubert in this case," and that the case must be remanded for further (non-Daubert-type) consideration under Rule 702. Id. at 1436.

Kumho Tire petitioned for certiorari, asking us to determine whether a trial court "may" consider Daubert's specific "factors" when determining the "admissibility of an engineering expert's testimony." Pet. for Cert. i. We granted certiorari in light of uncertainty among the lower courts about whether, or how, Daubert applies to expert testimony that might be characterized as based not upon "scientific" knowledge, but rather upon "technical" or "other specialized" knowledge. Fed. Rule Evid. 702; compare, e.g., Watkins v. Telsmith, Inc., 121 F.3d 984, 990-991 (CA5 1997), with, e.g., Compton v. Subaru of America, Inc., 82 F.3d 1513, 1518-1519 (CA10), cert. denied, 519 U.S. 1042, 136 L. Ed. 2d 536, 117 S. Ct. 611 (1996).

II

A

In Daubert, this Court held that Federal Rule of Evidence 702 imposes a special obligation upon a trial judge to "ensure that any and all scientific testimony . . . is not only relevant, but reliable." 509 U.S. at 589. The initial question before us is whether this basic gatekeeping obligation applies only to "scientific" testimony or to all expert testimony. We, like the parties, believe that it applies to all expert testimony. See Brief for Petitioners 19; Brief for Respondents 17.

For one thing, Rule 702 itself says:

"If scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, a witness qualified as an expert by knowledge, skill, experience, training, or education, may testify thereto in the form of an opinion or otherwise."

This language makes no relevant distinction between "scientific" knowledge and "technical" or "other specialized" knowledge. It makes clear that any such knowledge might become the subject of expert testimony. In Daubert, the Court specified that it is the Rule's word "knowledge," not the words (like "scientific") that modify that word, that "establishes a standard of evidentiary reliability." 509 U.S. at 589-590. Hence, as a matter of language, the Rule applies its reliability standard to all "scientific," "technical," or "other specialized" matters within its scope. We concede that the Court in Daubert referred only to "scientific" knowledge. But as the Court there said, it referred to "scientific" testimony "because that was the nature of the expertise" at issue. Id. at 590, n. 8.

Neither is the evidentiary rationale that underlay the Court's basic Daubert "gatekeeping" determination limited to "scientific" knowledge. Daubert pointed out that Federal Rules 702 and 703 grant expert witnesses testimonial latitude unavailable to other witnesses on the "assumption that the expert's opinion will have a reliable basis in the knowledge and experience of his discipline." Id. at 592 (pointing out that experts may testify to opinions, including those that are not based on firsthand knowledge or observation). The Rules grant that latitude to all experts, not just to "scientific" ones.

Finally, it would prove difficult, if not impossible, for judges to administer evidentiary rules under which a gatekeeping obligation depended upon a distinction between "scientific" knowledge and "technical" or "other specialized" knowledge. There is no clear line that divides the one from the others. Disciplines such as engineering rest upon scientific knowledge. Pure scientific theory itself may depend for its development upon observation and properly engineered machinery. And conceptual efforts to distinguish the two are unlikely to produce clear legal lines capable of application in particular cases. Cf. Brief for National Academy of Engineering as Amicus Curiae 9 (scientist seeks to understand nature while the engineer seeks nature's modification); Brief for Rubber Manufacturers Association as Amicus Curiae 14-16 (engineering, as an "applied science," relies on "scientific reasoning and methodology"); Brief for John Allen et al. as Amici Curiae 6 (engineering relies upon "scientific knowledge and methods").

Neither is there a convincing need to make such distinctions. Experts of all kinds tie observations to conclusions through the use of what Judge Learned Hand called "general truths derived from . . . specialized experience." Hand, Historical and Practical Considerations Regarding Expert Testimony, 15 Harv. L. Rev. 40, 54 (1901). And whether the specific expert testimony focuses upon specialized observations, the specialized translation of those observations into theory, a specialized theory itself, or the application of such a theory in a particular case, the expert's testimony often will rest "upon an experience confessedly foreign in kind to [the jury's] own." Ibid. The trial judge's effort to assure that the specialized testimony is reliable and relevant can help the jury evaluate that foreign experience, whether the testimony reflects scientific, technical, or other specialized knowledge.

We conclude that Daubert's general principles apply to the expert matters described in Rule 702. The Rule, in respect to all such matters, "establishes a standard of evidentiary reliability." 509 U.S. at 590. It "requires a valid . . . connection to the pertinent inquiry as a precondition to admissibility." Id. at 592. And

where such testimony's factual basis, data, principles, methods, or their application are called sufficiently into question, see Part III, infra, the trial judge must determine whether the testimony has "a reliable basis in the knowledge and experience of [the relevant] discipline." 509 U.S. at 592.

B

The petitioners ask more specifically whether a trial judge determining the "admissibility of an engineering expert's testimony" may consider several more specific factors that Daubert said might "bear on" a judge's gate-keeping determination. These factors include:

-- Whether a "theory or technique . . . can be (and has been) tested";

-- Whether it "has been subjected to peer review and publication";

-- Whether, in respect to a particular technique, there is a high "known or potential rate of error" and whether there are "standards controlling the technique's operation"; and

-- Whether the theory or technique enjoys "general acceptance" within a "relevant scientific community." 509 U.S. at 592-594.

Emphasizing the word "may" in the question, we answer that question yes.

Engineering testimony rests upon scientific foundations, the reliability of which will be at issue in some cases. See, e.g., Brief for Stephen Bobo et al. as Amici Curiae 23 (stressing the scientific bases of engineering disciplines). In other cases, the relevant reliability concerns may focus upon personal knowledge or experience. As the Solicitor General points out, there are many different kinds of experts, and many different kinds of expertise. See Brief for United States as Amicus Curiae 18-19, and n. 5 (citing cases involving experts in drug terms, handwriting analysis, criminal modus operandi, land valuation, agricultural practices, railroad procedures, attorney's fee valuation, and others). Our emphasis on the word "may" thus reflects Daubert's description of the Rule 702 inquiry as "a flexible one." 509 U.S. at 594. Daubert makes clear that the factors it mentions do not constitute a "definitive checklist or test." Id. at 593. And Daubert adds that the gatekeeping inquiry must be "'tied to the facts'" of a particular "case." Id. at 591 (quoting United States v. Downing, 753 F.2d 1224, 1242 (CA3 1985)). We agree with the Solicitor General that "the factors identified in Daubert may or may not be pertinent in assessing reliability, depending on the nature of the issue, the expert's particular expertise, and the subject of his testimony." Brief for United States as Amicus Curiae 19. The conclusion, in our view, is that we can neither rule out, nor rule in, for all cases and for all time the applicability of the factors mentioned in Daubert, nor can we now do so for subsets of cases categorized by category of expert or by kind of evidence. Too much depends upon the particular circumstances of the particular case at issue.

Daubert itself is not to the contrary. It made clear that its list of factors was meant to be helpful, not definitive. Indeed, those factors do not all necessarily apply even in every instance in which the reliability of scientific testimony is challenged. It might not be surprising in a particular case, for example, that a claim made by a scientific witness has never been the subject of peer review, for the particular application at issue may never previously have interested any scientist. Nor, on the other hand, does the presence of Daubert's general acceptance factor help show that an expert's testimony is reliable where the discipline itself lacks reliability, as, for example, do theories grounded in any so-called generally accepted principles of astrology or necromancy.

At the same time, and contrary to the Court of Appeals' view, some of Daubert's questions can help to evaluate the reliability even of experience-based testimony. In certain cases, it will be appropriate for the trial judge to ask, for example, how often an engineering expert's experience-based methodology has produced erroneous results, or whether such a method is generally accepted in the relevant engineering community. Likewise, it will at times be useful to ask even of a witness whose expertise is based purely on experience, say, a perfume tester able to distinguish among 140 odors at a sniff, whether his preparation is of a kind that others in the field would recognize as acceptable.

We must therefore disagree with the Eleventh Circuit's holding that a trial judge may ask questions of the sort Daubert mentioned only where an expert "relies on the application of scientific principles," but not where an expert relies "on skill- or experience-based observation." 131 F.3d at 1435. We do not believe that Rule 702 creates a schematism that segregates expertise by type while mapping certain kinds of questions to certain kinds of experts. Life and the legal cases that it generates are too complex to warrant so definitive a match.

To say this is not to deny the importance of Daubert's gatekeeping requirement. The objective of that requirement is to ensure the reliability and relevancy of expert testimony. It is to make certain that an expert, whether basing testimony upon professional studies or personal experience, employs in the courtroom the same level of intellectual rigor that characterizes the practice of an expert in the relevant field. Nor do we deny that, as stated in Daubert, the particular questions that it mentioned will often be appropriate for use in determining the reliability of challenged expert testimony. Rather, we conclude that the trial judge must have considerable leeway in deciding in a particular case how to go about determining whether particular expert testimony is reliable. That is to say, a trial court should consider the specific factors identified in Daubert where they are reasonable measures of the reliability of expert testimony.

C

The trial court must have the same kind of latitude in deciding how to test an expert's reliability, and to decide whether or when special briefing or other proceedings are needed to investigate reliability, as it enjoys when it decides whether that expert's relevant testimony is reliable. Our opinion in Joiner makes clear that a court of appeals is to apply an abuse-of-discretion standard when it "reviews a trial court's decision to admit or exclude expert testimony." 522 U.S. at 138-139. That standard applies as much to the trial court's decisions about how to determine reliability as to its ultimate conclusion. Otherwise, the trial judge would lack the discretionary authority needed both to avoid unnecessary "reliability" proceedings in ordinary cases where the reliability of an expert's methods is properly taken for granted, and to require appropriate proceedings in the less usual or more complex cases where cause for questioning the expert's reliability arises. Indeed, the Rules seek to avoid "unjustifiable expense and delay" as part of their search for "truth" and the "just determination" of proceedings. Fed. Rule Evid. 102. Thus, whether Daubert's specific factors are, or are not, reasonable measures of reliability in a particular case is a matter that the law grants the trial judge broad latitude to determine. See Joiner, supra, at 143. And the Eleventh Circuit erred insofar as it held to the contrary.

III

We further explain the way in which a trial judge "may" consider Daubert's factors by applying these considerations to the case at hand, a matter that has been briefed exhaustively by the parties and their 19 amici. The District Court did not doubt Carlson's qualifications, which included a masters degree in mechanical engineering, 10 years' work at Michelin America, Inc., and testimony as a tire failure consultant in other tort cases. Rather, it excluded the testimony because, despite those qualifications, it initially doubted, and then found unreliable, "the methodology employed by the expert in analyzing the data obtained in the visual inspection, and the scientific basis, if any, for such an analysis." Civ. Action No. 93-0860-CB-S (SD Ala., June 5, 1996), App. to Pet. for Cert. 6c. After examining the transcript in "some detail," 923 F. Supp. at 1518-519, n. 4, and after considering respondents' defense of Carlson's methodology, the District Court determined that Carlson's testimony was not reliable. It fell outside the range where experts might reasonably differ, and where the jury must decide among the conflicting views of different experts, even though the evidence is "shaky." Daubert, 509 U.S. at 596. In our view, the doubts that triggered the District Court's initial inquiry here were reasonable, as was the court's ultimate conclusion.

For one thing, and contrary to respondents' suggestion, the specific issue before the court was not the reasonableness in general of a tire expert's use of a visual and tactile inspection to determine whether overdeflection had caused the tire's tread to separate from its steel-belted carcass. Rather, it was the reasonableness of using such an approach, along with Carlson's particular method of analyzing the data thereby obtained, to draw a conclusion regarding the particular matter to which the expert testimony was directly relevant. That matter concerned the likelihood that a defect in the tire at issue caused its tread to separate from its carcass. The tire in question, the expert conceded, had traveled far enough so that some of the tread had been worn bald; it should have been taken out of service; it had been repaired (inadequately) for punctures; and it bore some of the very marks that the expert said indicated, not a defect, but abuse through overdeflection. See supra, at 3-5; App. 293-294. The relevant issue was whether the expert could reliably determine the cause of this tire's separation. Nor was the basis for Carlson's conclusion simply the general theory that, in the absence of evidence of abuse, a defect will normally have caused a tire's separation. Rather, the expert employed a more specific theory to establish the existence (or absence) of such abuse. Carlson testified precisely that in the absence of at least two of four signs of abuse (proportionately greater tread wear on the shoulder; signs of grooves caused by the beads; discolored sidewalls; marks on the rim flange) he concludes that a defect caused the separation. And his analysis depended upon acceptance of a further implicit proposition, namely, that his visual and tactile inspection could determine that the tire before him had not been abused despite some evidence of the presence of the very signs for which he looked (and two punctures).

For another thing, the transcripts of Carlson's depositions support both the trial court's initial uncertainty and its final conclusion. Those transcripts cast considerable doubt upon the reliability of both the explicit theory (about the need for two signs of abuse) and the implicit proposition (about the significance of visual inspection in this case). Among other things, the expert could not say whether the tire had traveled more than 10, or 20, or 30, or 40, or 50 thousand miles, adding that 6,000 miles was "about how far" he could "say with any certainty." Id. at 265. The court could reasonably have wondered about the reliability of a method of visual and tactile inspection sufficiently precise to ascertain with some certainty the abuse-related significance of minute shoulder/center relative tread wear differences, but insufficiently precise to tell "with any certainty" from the tread wear whether a tire had traveled less than 10,000 or more than 50,000 miles. And these concerns might have been augmented by Carlson's

repeated reliance on the "subjectiveness" of his mode of analysis in response to questions seeking specific information regarding how he could differentiate between a tire that actually had been overdeflected and a tire that merely looked as though it had been. Id. at 222, 224-225, 285-286. They would have been further augmented by the fact that Carlson said he had inspected the tire itself for the first time the morning of his first deposition, and then only for a few hours. (His initial conclusions were based on photographs.) Id. at 180.

Moreover, prior to his first deposition, Carlson had issued a signed report in which he concluded that the tire had "not been . . . overloaded or underinflated," not because of the absence of "two of four" signs of abuse, but simply because "the rim flange impressions . . . were normal." Id. at 335-336. That report also said that the "tread depth remaining was 3/32 inch," id. at 336, though the opposing expert's (apparently undisputed) measurements indicate that the tread depth taken at various positions around the tire actually ranged from .5/32 of an inch to 4/32 of an inch, with the tire apparently showing greater wear along both shoulders than along the center, id. at 432-433.

Further, in respect to one sign of abuse, bead grooving, the expert seemed to deny the sufficiency of his own simple visual-inspection methodology. He testified that most tires have some bead groove pattern, that where there is reason to suspect an abnormal bead groove he would ideally "look at a lot of [similar] tires" to know the grooving's significance, and that he had not looked at many tires similar to the one at issue. Id. at 212-213, 214, 217.

Finally, the court, after looking for a defense of Carlson's methodology as applied in these circumstances, found no convincing defense. Rather, it found (1) that "none" of the Daubert factors, including that of "general acceptance" in the relevant expert community, indicated that Carlson's testimony was reliable, 923 F. Supp. at 1521; (2) that its own analysis "revealed no countervailing factors operating in favor of admissibility which could outweigh those identified in Daubert," App. to Pet. for Cert. 4c; and (3) that the "parties identified no such factors in their briefs," ibid. For these three reasons taken together, it concluded that Carlson's testimony was unreliable.

Respondents now argue to us, as they did to the District Court, that a method of tire failure analysis that employs a visual/tactile inspection is a reliable method, and they point both to its use by other experts and to Carlson's long experience working for Michelin as sufficient indication that that is so. But no one denies that an expert might draw a conclusion from a set of observations based on extensive and specialized experience. Nor does anyone deny that, as a general matter, tire abuse may often be identified by qualified experts through visual or tactile inspection of the tire. See Affidavit of H. R. Baumgardner 1-2, cited in Brief for National Academy of Forensic Engineers as Amici Curiae 16 (Tire engineers rely on visual examination and process of elimination to analyze experimental test tires). As we said before, supra, at 14, the question before the trial court was specific, not general. The trial court had to decide whether this particular expert had sufficient specialized knowledge to assist the jurors "in deciding the particular issues in the case." 4 J. McLaughlin, Weinstein's Federal Evidence P702.05[1], p. 702-33 (2d ed. 1998); see also Advisory Committee's Note on Proposed Fed. Rule Evid. 702, Preliminary Draft of Proposed Amendments to the Federal Rules of Civil Procedure and Evidence: Request for Comment 126 (1998) (stressing that district courts must "scrutinize" whether the "principles and methods" employed by an expert "have been properly applied to the facts of the case").

The particular issue in this case concerned the use of Carlson's two-factor test and his related use of visual/tactile inspection to draw conclusions on the basis of what seemed small observational differences. We have found no indication in the record that other experts in the industry use Carlson's two-factor test or that tire experts such as Carlson normally make the very fine distinctions about, say, the symmetry of comparatively greater shoulder tread wear that were necessary, on Carlson's own theory, to support his conclusions. Nor, despite the prevalence of tire testing, does anyone refer to any articles or papers that validate Carlson's approach. Compare Bobo, Tire Flaws and Separations, in Mechanics of Pneumatic Tires 636-637 (S. Clark ed. 1981); C. Schnuth et al., Compression Grooving and Rim Flange Abrasion as Indicators of Over-Deflected Operating Conditions in Tires, presented to Rubber Division of the American Chemical Society, Oct. 21-24, 1997; J. Walter & R. Kiminecz, Bead Contact Pressure Measurements at the Tire-Rim Interface, presented to Society of Automotive Engineers, Feb. 24-28, 1975. Indeed, no one has argued that Carlson himself, were he still working for Michelin, would have concluded in a report to his employer that a similar tire was similarly defective on grounds identical to those upon which he rested his conclusion here. Of course, Carlson himself claimed that his method was accurate, but, as we pointed out in Joiner, "nothing in either Daubert or the Federal Rules of Evidence requires a district court to admit opinion evidence that is connected to existing data only by the ipse dixit of the expert." 522 U.S. at 146.

Respondents additionally argue that the District Court too rigidly applied Daubert's criteria. They read its opinion to hold that a failure to satisfy any one of those criteria automatically renders expert testimony inadmissible. The District Court's initial opinion might have been vulnerable to a form of this argument. There, the court, after rejecting respondents' claim that Carlson's testimony was "exempted from Daubert-style scrutiny" because it was "technical analysis" rather than "scientific evidence," simply added that "none of the four admissibility criteria outlined by the Daubert court are satisfied." 923 F. Supp. at 1522. Subsequently, however, the court granted respondents' motion for reconsideration. It then explicitly recognized that the relevant reliability inquiry "should be 'flexible,'" that its "'overarching subject [should be] . . . validity' and reliability," and that "Daubert was intended neither to be exhaustive nor to apply in every case." App. to Pet. for Cert. 4c (quoting Daubert, 509 U.S. at 594-595). And the court ultimately based its decision upon Carlson's failure to satisfy either Daubert's factors or any other set of reasonable reliability criteria. In light of the record as developed by the parties, that conclusion was within the District Court's lawful discretion.

In sum, Rule 702 grants the district judge the discretionary authority, reviewable for its abuse, to determine reliability in light of the particular facts and circumstances of the particular case. The District Court did not abuse its discretionary authority in this case. Hence, the judgment of the Court of Appeals is

Reversed.

CONCURBY:

SCALIA

CONCUR:

JUSTICE SCALIA, with whom JUSTICE O'CONNOR and JUSTICE THOMAS join, concurring.

I join the opinion of the Court, which makes clear that the discretion it endorses- trial-court discretion in choosing the manner of testing expert reliability- is not discretion to abandon the gatekeeping function. I think it worth adding that it is not discretion to perform the function inadequately. Rather, it is discretion to choose among reasonable means of excluding expertise that is fausse and science that is junky. Though, as the Court makes clear today, the Daubert factors are not holy writ, in a particular case the failure to apply one or another of them may be unreasonable, and hence an abuse of discretion.

DISSENTBY:

STEVENS (In Part)

DISSENT:

JUSTICE STEVENS, concurring in part and dissenting in part.

The only question that we granted certiorari to decide is whether a trial judge "may . . . consider the four factors set out by this Court in Daubert v. Merrell Dow Pharmaceuticals, Inc., 509 U.S. 579, 125 L. Ed. 2d 469, 113 S. Ct. 2786 (1993), in a Rule 702 analysis of admissibility of an engineering expert's testimony." Pet. for Cert. i. That question is fully and correctly answered in Parts I and II of the Court's opinion, which I join.

Part III answers the quite different question whether the trial judge abused his discretion when he excluded the testimony of Dennis Carlson. Because a proper answer to that question requires a study of the record that can be performed more efficiently by the Court of Appeals than by the nine Members of this Court, I would remand the case to the Eleventh Circuit to perform that task. There are, of course, exceptions to most rules, but I firmly believe that it is neither fair to litigants nor good practice for this Court to reach out to decide questions not raised by the certiorari petition. See General Electric Co. v. Joiner, 522 U.S. 136, 150-151, 139 L. Ed. 2d 508, 118 S. Ct. 512 (1997) (STEVENS, J., concurring in part and dissenting in part).

Accordingly, while I do not feel qualified to disagree with the well-reasoned factual analysis in Part III of the Court's opinion, I do not join that Part, and I respectfully dissent from the Court's disposition of the case.

638 F.Supp.2d 1277 (2009)

William A. LINTON and Stacy A. Linton, Plaintiffs,
v.
UNITED STATES of America, Defendant.

No. C08-227Z.

United States District Court, W.D. Washington, at Seattle.

July 1, 2009.

Cory L. Johnson, Darrell D. Hallett, John Mark Colvin, Cori E. Flanders-Palmer, Chicoine & Hallett, Seattle, WA, for Plaintiffs.

Jennifer D. Auchterlonie, Michael P. Hatzimichalis, U.S. Department of Justice, Washington, DC, for Defendant.

ORDER

THOMAS S. ZILLY, District Judge.

THIS MATTER comes before the Court on cross-motions for summary judgment. Having reviewed all papers filed in support of and in opposition to each motion, and having heard the arguments of counsel, the Court GRANTS the Government's motion for summary judgment, docket no. 19, DENIES plaintiffs' cross-motion for partial summary judgment, docket no. 21, and DIRECTS the Clerk to enter judgment consistent with this Order.

Background

Plaintiffs William and Stacy Linton seek a partial refund of gift taxes paid for the year 2003. For that year, William Linton reported taxable gifts of $725,548, while Stacy Linton reported taxable gifts of $724,000. *See* Exh. I to Linton Decl. (docket no. 23-10). The Internal Revenue Service ("IRS") examined both gift tax returns and concluded that, during the year 2003, William and Stacy Linton actually made taxable gifts of $1,587,988 and $1,520,440, respectively. *See* Exhs. A & B to Complaint (docket no. 1-2 at 29 & docket no. 1-3 at 29). The Lintons timely paid the additional gift taxes computed by the IRS, in the aggregate amount of $518,331.41, including interest, and in this action, they seek a refund of this additional amount, together with costs and attorney fees.

The gift taxes at issue relate to interests in a limited liability company given by William and Stacy Linton to trusts established for the benefit of their children. In November 2002, William Linton formed WLFB Investments, LLC ("WLFB LLC"). Certification of Formation, Exh. A to Linton Decl. (docket no. 23-2 at 20); *see*Limited Liability Company Agreement dated Nov. 7, 2002 [hereinafter "LLC Agreement"] at 1, 18, Exh. A to Linton Decl. (docket

no. 23-2 at 2, 19). At the time of formation, WLFB LLC had only one member, namely William Linton. LLC Agreement at 18, Exh. A to Linton Decl. (docket no. 23-2 at 19).

On January 22, 2003, William Linton gave to his wife Stacy Linton 50% of his percentage interests in WLFB LLC. Gift of Percentage Interest in WLFB Investments, LLC (docket no. 42).[1] [1] Also on January 22, 2003, William and/or Stacy Linton executed and dated the following documents, which contributed property to WLFB LLC:

- A Quit Claim Deed signed by William Linton, conveying undeveloped real property in Snohomish County, which was his separate property, to WLFB LLC; *see* Exh. D to Linton Decl. (docket no. 23-5);
- Letters signed by William Linton, authorizing transfers of securities, including municipal bonds, and cash to WLFB LLC; *see* Exh. D to Auchterlonie Decl. (docket no. 20-5); Exh. E to Linton Decl. (docket no. 23-6); and
- An Assignment of Assets signed by William Linton as Assignor and by both William and Stacy Linton as Managers of Assignee WLFB LLC; *see* Exh. F to Linton Decl. (docket no. 23-7); *see also* LLC Agreement at ¶ 6 (identifying William and Stacy Linton as Managers of WLFB LLC).

In addition, on January 22, 2003, William and Stacy Linton, as well as James Linton, William Linton's brother, signed a number of other documents, which they left undated. These executed, but contemporaneously undated, documents consist of:

- Four separate Trust Agreements signed by both William and Stacy Linton as Grantors, and by James Linton as Trustee, one Trust Agreement for each of the Lintons' four children, who are identified by initials as J.M.L., J.R.L., S.J.L., and T.W.L.; *see* Exh. E to Auchterlonie Decl. (docket no. 20-6);
- Four separate documents titled "Gift of Percentage Interest in WLFB Investments, LLC" signed by William Linton as Assignor and James Linton, Trustee, on behalf of Assignee, one document for each of the four Trusts; *see* Exh. G to Linton Decl. (docket no. 23-8); and
- Four separate documents titled "Gift of Percentage interest in WLFB Investments, LLC" signed by Stacy Linton as Assignor and James Linton, Trustee, on behalf of Assignee, one document for each of the four Trusts; *see,* Exh. G to Linton Decl. (docket no. 23-8).

Each of the Trust Agreements indicates that the Trust is irrevocable and that the Trust Agreement is "entered into effective upon contribution of property to the Trust." Exh. E to Auchterlonie Decl. (docket no. 20-6). The Trust Agreements further state that "[a]t the time of signing of this Agreement, the Grantors have transferred percentage interests in the WLFB Investments, LLC … to the Trustee of the Trust for the benefit of the Grantor's [sic] child." *Id.* Finally, the Trust Agreements reflect that the Trustee, James Linton, "acknowledges receipt of such property and agrees to administer all contributed property pursuant to the terms" of the Agreements. *Id.*

[1] This gift had no gift tax implications. *See* 26 U.S.C. § 2523(a).

The documents titled "Gift of Percentage Interest in WLFB Investments, LLC" (the "Gift Documents") contain the following language: Assignor "hereby gifts to the … Trust, dated the same date hereof, (the "Assignee") a total of 11.25 of the percentage interests in WLFB Investments, LLC … standing in his respective name on the books of the Company." Exh. G to Linton Decl. (docket no. 23-8). Based on this language, each of the four Trusts received 11.25% from each parent, for a total of 22.5 of the percentage interests in WLFB LLC for each Trust.

According to Richard Hack, the attorney who prepared the various documents, a few months after the transactions at issue, when he was preparing the minute book for WLFB LLC, he filled in the missing dates on the Trust Agreements and Gift Documents. Hack Dep. at 13:12-17:1, Exh. B to Colvin Decl. (docket no. 22-3 at 4-8). He put the date of January 22, 2003, on these documents, but he now believes that he made a "mistake" in doing so and that the intended date for the creation of the Trusts and the transfers of percentage interests in WLFB LLC to the Trusts was January 31, 2003. Hack Dep. at 20:18-23:12, Exh. B to Colvin Decl. (docket no. 22-3 at 9-12).

Mr. Hack's deposition testimony is consistent with that of Caryl Thorp, who provided estate planning and tax compliance services for the Lintons. *See* Thorp Dep. at 18:23-19:5, Exh. C to Colvin Decl. (docket no. 22-4 at 6-7). According to Ms. Thorp, the intended order of the transactions was as follows: "To form the LLC, transfer the assets into the LLC, and then determine the amount of any gifts they wanted to make of LLC units for the benefit of their children and do those after that." Thorp Dep. at 20:6-9, Exh. C to Colvin Decl. (docket no. 22-4 at 8). Ms. Thorp explained that this sequence was required "[b]ecause you have to get the assets into the LLC first so it's the owner of the assets before you start making transfers of units in the LLC." Thorp Dep. at 20:12-14, Exh. C to Colvin Decl. (docket no. 22-4 at 8).

When asked in his deposition how he decided on the amount of assets he would transfer to WLFB LLC, William Linton testified as follows:

> Well, it started out Stacy and I were using our lifetime exemptions, and somewhere along the way, with my team of experts, they came up with this thing that people do in my situation and they discount it because as managers, we control it, and what a willing buyer will pay to a willing seller, who is going to buy a hundred percent of someone's share if they can't touch it or feel it or control it, so there's some proven way that they go out and they discount this stuff. Well, it was news to me…. They said somewhere between 40 and 49 percent discounting based on the blend of assets that you're proposing. So, based on that, I just did some back math to figure out how much money to put into the LLC.

Linton Dep. at 26:6-23, Exh. B to Auchterlonie Decl. (docket no. 20-3).

The tax return filed on behalf of WLFB LLC for the calendar year 2003 provided the following information about the capital accounts of the LLC members:

member	capital contributed	income	withdrawals	capital balance

1	$1,792,386	$ 5,793	$1,613,148	$185,031
2	$1,792,386	$ 5,793	$1,613,148	$185,031
3	$ 806,574	$26,070		$832,644
4	$ 806,574	$26,071		$832,645
5	$ 806,574	$26,067		$832,641
6	$ 806,574	$26,070		$832,644

See Schedule L to Form 1065 for 2003, Exh. J-1 to Linton Decl. (docket no. 23-11 at 15). Members 1 and 2 are William and Stacy Linton, while Members 3, 4, 5, and 6 are the Trusts for the Linton children. Schedule L reflects contributions of assets in the aggregate amount of $3,584,772, and transfers of capital in the aggregate amount of $3,226,296, divided evenly among the four Trusts, with each Trust receiving $806,574. The capital account balances shown in Schedule L appear consistent with the percentage interests held by each member after the gifts at issue, namely 5% for William Linton, 5% for Stacy Linton, and 22.5% for each of the Trusts.[2]

The LLC Agreement places certain restrictions on the transfer of percentage interests to persons who are not family members, and it limits the involvement of members in the day-to-day business of the LLC, reserving to the Managers (William and Stacy Linton) all "authority or power to act" for WLFB LLC. LLC Agreement at ¶¶ 6.5, 9.1, 9.2, 9.2.1., 9.2.2., & 9.2.3 (docket no. 23-2 at 4-5, 8-10). In light of these provisions, in computing their gift taxes for the year 2003, plaintiffs applied a discount of 47% based on the theory that the limitations on alienability and non-controlling status rendered the percentage interests in WLFB LLC unmarketable. *See* Exh. 5 to Moss Adams Advisory Services Appraisal Report for WLFB LLC, Exh. H to Linton Decl. (docket no. 23-9 at 39) [hereinafter "Moss Adams Report"]. The Government contends that any discounting is improper.

Discussion

A. *Standard for Summary Judgment*

The Court should grant summary judgment if no genuine issue of material fact exists and the moving party is entitled to judgment as a matter of law. Fed. R.Civ.P. 56(c). The moving

[2] The tax return for WLFB LLC indicates that the business started on January 31, 2003. *See* Exh. J-1 to Linton Decl. (docket no. 23-11). This date is inconsistent with the Certificate of Formation for WLFB LLC, which was filed by the Washington Secretary of State on November 7, 2002, *see* Exh. A to Linton Decl. (docket no. 23-2 at 21); *see also* RCW 25.15.070(2)(a) ("a limited liability company is formed when its certificate of formation is filed by the secretary of state"), as well as with the Assignment of Assets signed by William Linton and Stacy Linton as Managers of WLFB LLC, which is dated January 22, 2003, and thereby manifests the conducting of business before the date indicated on the tax return, *see* Exh. F to Linton Decl. (docket no. 23-7). The tax return itself, which was prepared by Moss Adams LLP, is dated March 29, 2004, and it does not constitute contemporaneously prepared evidence as to the sequence of the transactions resulting in the capital account balances disclosed in Schedule L.

party bears the initial burden of demonstrating the absence of a genuine issue of material fact. *Celotex Corp. v. Catrett,* 477 U.S. 317, 323, 106 S.Ct. 2548, 91 L.Ed.2d 265 (1986). A fact is material if it might affect the outcome of the suit under the governing law. *Anderson v. Liberty Lobby, Inc.,* 477 U.S. 242, 248, 106 S.Ct. 2505, 91 L.Ed.2d 202 (1986). When a properly supported motion for summary judgment has been presented, the adverse party "may not rely merely on allegations or denials in its own pleading." Fed.R.Civ.P. 56(e). Rather, the non-moving party must set forth "specific facts" demonstrating the existence of a genuine issue for trial. *Id.; Anderson,* 477 U.S. at 256, 106 S.Ct. 2505. All "justifiable inferences" are to be drawn in favor of the non-moving party. *Anderson,* 477 U.S. at 255, 106 S.Ct. 2505. When the record, however, taken as a whole, could not lead a rational trier of fact to find for the non-moving party, summary judgment is warranted. *See Miller v. Glenn Miller Prod. Inc.,* 454 F.3d 975, 988 (9th Cir. 2006).

B. *Federal Gift Tax Analysis*

A tax is imposed "for each calendar year on the transfer of property by gift during such calendar year by any individual." 26 U.S.C. § 2501(a)(1). If property is transferred for less than adequate and full consideration, then "the amount by which the value of the property exceeded the value of the consideration shall be deemed a gift." 26 U.S.C. § 2512(b). The value of gifted property is determined as of the date of the gift. 26 U.S.C. § 2512(a). A gift is measured "by the value of the property passing from the donor, rather than by the [value of the] property received by the donee," and the amount of a gift is generally an issue of fact. *Shepherd v. Comm'r,* 115 T.C. 376, 383, 2000 WL 1595698 (2000). A gift is complete when the donor "has so parted with dominion and control as to leave in him no power to change its disposition." 26 C.F.R. § 25.2511-2(b). Although federal revenue acts identify the property interests and rights that are taxed, state law governs the creation of those property interests and rights. *Morgan v. Comm'r,* 309 U.S. 78, 80, 60 S.Ct. 424, 84 L.Ed. 585, 1035 (1940).

The gift tax applies "whether the transfer is in trust or otherwise" and "whether the gift is direct or indirect." 26 U.S.C. § 2511(a). An example of an indirect gift is a transfer of property for less than adequate consideration to a corporation, which constitutes an indirect gift of the property to each shareholder of the corporation to the extent of his or her proportionate interest in the corporation. *Shepherd,* 115 T.C. at 388 (citing 26 C.F.R. § 25.2511-1(h)(1)). Because the corporate structure differs from a partnership relationship, the question whether a contribution of property to a partnership is an indirect gift to the partners requires further analysis. In situations in which property has been transferred for less than adequate consideration to a partnership, the distinguishing factor for gift tax purposes is whether the donating partner's contribution of property was apportioned among the other partners or was attributed only to the donor's own capital account. In the former circumstance, the contribution of property has been deemed an indirect gift to the other partners, *see Shepherd,* 115 T.C. at 388-89, while in the latter situation, the transfer has been held not to constitute an indirect gift, *see Estate of Jones v. Comm'r,* 116 T.C. 121, 2001 WL 233964 (2001) (citing *Estate of Strangi v. Comm'r,* 115 T.C. 478, 2000 WL 1755274 (2000)); *see also Gross v. Comm'r,* 96 T.C.M. (CCH) 187, 2008 WL 4388277 (2008).

1. *Indirect Gift to Partners (Shepherd)*

In *Shepherd,* the taxpayer and his wife executed deeds purporting to transfer certain leased land to a partnership, the partnership agreement for which the taxpayer signed on the same day. 115 T.C. at 379, 382. The following day, the taxpayer's two adult sons executed the partnership agreement. *Id.* at 379. The Tax Court concluded that, under the law of the state in which the partnership was created, the partnership came into existence on the second day, when the sons signed the partnership agreement. *Id.* at 384-85. As a result, the Tax Court held that the conveyance of land occurred on the second day, not on the first day. *Id.* at 385 (on the first day, "there was no completed gift, because there was no donee, and petitioner had not parted with dominion and control over the property"). On a subsequent day, the taxpayer contributed bank stock to the partnership. *Id.* at 381. The Tax Court ultimately held that the taxpayer's transfers of both land and bank stock represented indirect gifts to each of his sons to the extent of their respective percentage interests in the partnership. *Id.* at 389. The Tax Court reasoned that, because the contributions of property were allocated, pursuant to the partnership agreement, to the taxpayer's and his sons' capital accounts according to their respective partnership shares, and because each son would be entitled upon dissolution of the partnership to receive payment of the balance in his capital account, the taxpayer had made indirect gifts to the sons. *Id.*

2. *Contributions to Own Capital Account (Jones and Gross)*

In contrast, in both *Estate of Jones* and *Gross,* one partner's contributions were not treated as indirect gifts to the other partners. In *Estate of Jones,* the decedent formed two different partnerships under Texas law. 116 T.C. at 123-24. The first partnership, Jones Borregos Limited Partnership ("JBLP"), was with his son, and the second partnership, Alta Vista Limited Partnership ("AVLP"), was with his four daughters. *Id.* Both decedent and his son transferred certain property to JBLP, with the contributions reflected in their respective capital accounts. *Id.* at 123. Decedent and each of his daughters transferred certain property to AVLP, with the contributions reflected in their respective capital accounts. *Id.* at 124.

On the same day the partnerships were formed and property was contributed, decedent gave his son an 83.08% limited interest in JBLP, and he gave each of his daughters a 16.915% limited interest in AVLP. *Id.* at 123-25. Decedent filed a federal gift tax return in which he applied a 66% percent discount to the limited interests in JBLP and a 58% discount to the limited interests in AVLP, pursuant to a "minority interest, nonmarketable" theory. *Id.* at 127. The Tax Court concluded that, in making contributions to each of the partnerships, decedent had not made indirect gifts to his children because he had received continuing limited partnership interests in exchange for the property at issue, his contributions had been properly reflected in his respective capital accounts, and the value of the other partners' interests had not been enhanced by his contributions. *Id.* at 128.

In *Gross,* the Tax Court found that the contributions of property were "similar in form to the contributions in *Estate of Jones*" and were "distinguishable in form from the gifts in *Shepherd.*" 2008 WL 4388277 at *7. The Tax Court concluded that the taxpayer, who had

formed a partnership with her two daughters, "made a series of contributions of securities to Dimar [Holdings L.P.] and received increasing partnership interests in return. All of the contributions were reflected in her capital account, and the value of her daughters' capital accounts was not enhanced because of her contributions. After she contributed the ... securities to the partnership, she made gifts of [additional] interests in the partnership to her daughters.... [The taxpayer] made gifts of interests in Dimar to her daughters and did not make indirect gifts of portions of the ... securities that she had contributed to the partnership." *Id.*

3. *Uncertain Sequence of Events (Senda)*

Two important facts distinguish *Shepherd* from both *Estate of Jones* and *Gross.* First, in *Shepherd,* when property was contributed to the partnership, it was allocated among the partners according to their share of the partnership, whereas in *Estate of Jones* and *Gross,* the transferred property was attributed solely to the donor's capital account. Second, in *Shepherd,* no subsequent gift of partnership interests was involved, whereas in *Estate of Jones* and *Gross,* after the contributed property had been reflected in the donor's account, the donor gave interests in the partnership to the other partners. This sequence of activities, namely first creating the partnership, then contributing property to the partnership (and ascribing it to the taxpayer's own capital account), and finally making a gift of partnership interests, has been described as "critical" in evaluating the tax consequences of the transactions. *See* Senda v. Comm'r, 433 F.3d 1044, 1046 (8th Cir.2006).
In *Senda,* however, the taxpayers did not present "reliable evidence that they contributed the stock to the partnerships before they transferred the partnership interests to the children." *Id.* Absent adequate proof of the chronology of events, the transactions in *Senda* were deemed to mirror those in *Shepherd;* the taxpayers were treated as having gifted partnership interests to their children before transferring property to the partnership, and the contributed property was therefore held to have enhanced the children's partnership interests and constituted an indirect gift to each child. *See* Senda v. Comm'r, T.C.M. (RIA) 2004-160, 2004 WL 1551275, *aff'd,* 433 F.3d 1044 (8th Cir.2006).

4. *Oral Testimony Is Insufficient*

In this case, the Government relies heavily on *Senda* and contends that the sequence of events here was equally uncertain. The various documents, contributing property to WLFB LLC, creating Trusts for each child, and giving each Trust percentage interests in the LLC, were all signed on the same day, January 22, 2003. Although the Trust Agreements and Gift Documents were not dated when executed, they were eventually given the date of January 22, 2003. The Membership Interest Ledger for the LLC shows the transfers of percentage interests from William to Stacy Linton, and from William and Stacy Linton to each of the four Trusts; however, the Ledger does not indicate the dates of these transfers. *See* Exh. K to Linton Decl. (docket no. 23-13); *compare Senda,* 2004 WL 1551275 at *6 (noting that the taxpayers "did not maintain any books or records for the partnerships other than brokerage account statements and partnership tax returns"). In addition, although the

letters directing U.S. Bancorp Piper Jaffray[3] to transfer securities to WLFB LLC were signed and dated on January 22, 2003, they were not received by U.S. Bancorp Piper Jaffray until January 24, 2003, and the instructions were not followed until after the date of receipt. *See* Exh. D to Auchterlonie Decl. (docket no. 20-5); *see also* Exhs. M-Q to Auchterlonie Decl. (docket nos. 20-14, 20-15, 20-16, 20-17, & 20-18) (indicating that Mr. Linton's requested inter-account transfers did not occur until January 24, 2003, at the earliest, and as late as January 31, 2003). The Quit Claim Deed conveying real property in Snohomish County to WLFB LLC was dated and delivered to the Lintons' attorney on January 22, 2003, but it was not recorded until February 13, 2003. The parties, however, agree that this transfer was effective on the date the deed was executed and delivered, not on the date it was recorded. Plaintiffs' Response at 12 (docket no. 25); Government's Reply at 5 (docket no. 29).

In connection with their attempt to establish a chronology of transfers having favorable tax consequences, plaintiffs ask the Court to consider transcripts from the depositions of William Linton, Richard Hack, and Caryl Thorp. The Government contends that this oral testimony is either inadmissible or insufficient, citing an unpublished decision of the Ninth Circuit for the proposition that a taxpayer's claim for refund "must be substantiated by something other than tax returns, uncorroborated oral testimony, or self-serving statements." *Lovelace v. United States,* 1991 WL 275375 at *1 (9th Cir.) (quoting *Mays v. United States,*763 F.2d 1295, 1297 (11th Cir.1985)). The Government also references a tax regulation indicating that the applicability of the gift tax should be "based on the objective facts of the transfer and the circumstances under which it is made, rather than on the subjective motives of the donor." 26 C.F.R. § 25.2511-1(g)(1).

The Court is persuaded that plaintiffs may offer parol evidence concerning the Trust Agreements and Gift Documents, but concludes that such testimony does not aid plaintiffs in their efforts to obtain a tax refund. The Court is aware of no authority that would preclude the Lintons from testifying they did not place the dates on the Trust Agreements and Gift Documents, or that would bar their attorney from indicating he filled in those dates. Moreover, no evidentiary or tax rule has been cited that would prohibit plaintiffs from proffering evidence about their intent or "state of mind" in connection with these transactions. *See Trucks, Inc. v. United States,* 234 F.3d 1340, 1342 (11th Cir.2000) ("evidence about the state of mind of the [taxpayer] ... is considered direct evidence as to the reasonableness of her decisions, and will not be seen as merely self-serving statements"). Finally, because plaintiffs, as the non-moving party, are entitled to have all reasonable inferences drawn in their favor, for purposes of the Government's summary judgment motion, the Court will treat the deposition testimony at issue as admissible evidence. *See* Fed.R.Civ.P. 56(e)(1) (affidavits supporting or opposing a summary judgment motion must "set out facts that would be admissible in evidence").

Plaintiffs' parol evidence, however, does not prove the sequence of events that they assert in this litigation, and thus, whether or not the Court considers the parol evidence, the result is the same.[4] Each Trust Agreement indicates that it is effective upon contribution of

[3] In his declaration, William Linton describes letters also directing RBC Dain Rauscher to transfer certain assets to WLFB LLC, but the record contains no such documents. *See* Linton Decl. at ¶¶ 12 & 15 and Exh. E.

[4] To be clear, the various subsequently prepared documents in this case do not serve as reliable evidence of plaintiffs' intent. *See Senda,* 433 F.3d at 1047 (the tax returns and certificates of ownership

property to the Trust, and that, at the time of its signing, property consisting of interests in WLFB LLC had been transferred to the Trustee. *See* Exh. E to Auchterlonie Decl. (docket no. 20-6). In turn, in executing each Trust Agreement, the Trustee "acknowledge[d] receipt of such property." *Id.*In addition, the Gift Documents each recite that the respective Trusts are "dated the same date hereof." Exh. G to Linton Decl. (docket no. 23-8). Thus, the express language of these documents establishes that the Trusts were created and the gifts were made on January 22, 2003; on that date, when the Trust Agreements were signed, percentage interests in WLFB LLC had already been or were contemporaneously gifted to the Trusts, thereby making the Trusts effective.

Plaintiffs seek to reform the Trust Agreements and Gift Documents to reflect that both the creation of the Trusts and the gifting to the Trusts occurred on January 31, 2003. They cite to Washington cases describing the circumstances under which a written instrument may be reformed, including to correct a scrivener's error, due to mutual mistake, or as a result of unilateral mistake caused by fraud or other inequitable conduct. *See Wilhelm v. Beyersdorf,* 100 Wash.App. 836, 843-44, 999 P.2d 54 (2000); *Reynolds v. Farmers Ins. Co.,* 90 Wash.App. 880, 884-85, 960 P.2d 432 (1998); *Snyder v. Peterson,* 62 Wash.App. 522, 526-29, 814 P.2d 1204 (1991). Plaintiffs, however, fail to present any evidence to justify the reformation they desire. The proffered testimony proves only that the Lintons did not date the Trust Agreements or the Gift Documents and that the dates on those documents are in Mr. Hack's handwriting. At most, this evidence establishes only a scrivener's error with respect to the date; it does not demonstrate any scrivener's error[5] in the written terms of the documents. Those terms explicitly indicate that the gifting to the Trusts occurred before or with the signing of the Trust Agreements, which undisputedly took place on January 22, 2003. Plaintiffs cannot via parol evidence contradict or modify the express language of the Trust Agreements or the Gift Documents. *Hearst Commc'ns, Inc. v. Seattle Times Co.,*154 Wash.2d 493, 504, 115 P.3d 262 (2005) (Washington courts "do not interpret what was intended to be written but what was written" (clarifying the holding of *Berg v. Hudesman,* 115 Wash.2d 657, 801 P.2d 222 (1990))).

Moreover, plaintiffs have offered no theory under which the Trust Agreements and Gift Documents would have been rendered void or voidable had they never been dated. At oral argument, however, counsel for plaintiffs suggested that the Trusts could not have been

---

generated months or weeks later were "unreliable in deciding whether petitioners transferred the partnership interest to the children before or after they contributed the stock to the partnerships" (quoting *Senda,* 2004 WL 1551275 at *6)). For example, the Membership Interest Ledger for WLFB LLC, which was prepared a few months after the transactions at issue, contains no dates and offers no information concerning the sequence of events. *See* Exh. K to Linton Decl. (docket no. 23-13). Likewise, the Moss Adams Report provides no useful data, but rather makes assumptions about the transactions that occurred approximately six months before the report was generated. *See* Exh. H to Linton Decl. (docket no. 23-9). Finally, the tax return for WLFB LLC was filed over a year after events, *see* Exh. J-1 to Linton Decl. (docket no. 23-11), and it does not constitute contemporaneous evidence of plaintiffs' intent.

[5] Plaintiffs do not appear to challenge the Trust Agreements or Gift Documents on the basis of any unilateral mistake generated by fraudulent conduct. At oral argument, counsel for plaintiffs clarified that the mutual mistake doctrine is likewise not alleged as a ground for reformation because the documents at issue convey a gift. In response or perhaps as an addendum, the Government asserted that the failure to join Trustee James Linton as a party was fatal to plaintiffs' request for reformation and that the Court lacks subject matter jurisdiction to grant such relief because it would only flow from state law claims beyond the scope of the Government's waiver of sovereign immunity. In light of its ruling in this matter, the Court need not address either of these contentions.

effective on January 22, 2003, because no trust res existed on that date. This contention is flawed. Although a voluntary trust requires "subject matter" or res to be valid, *e.g., Laughlin v. March,* 19 Wash.2d 874, 878, 145 P.2d 549 (1944), any type of property may be held in trust, including undivided, reversionary, executory, or contingent future interests, remainders (whether contingent, vested, or vested subject to being divested), and choses in action, *see* Restatement (Third) of Trusts § 40 cmt. b (2003). In this case, the res consisted of percentage interests in WLFB LLC, which existed and were contributed to the Trusts at or before the signing of the Trust Agreements on January 22, 2003.

In addition, the percentage interests had value because, as of January 22, 2003, WLFB LLC had both real and personal property. The parties agree that the conveyance of undeveloped real estate in Snohomish County was effective on January 22, 2003, when Mr. Linton signed the Quit Claim Deed. Plaintiffs also contend that the transfer of securities was effective on January 22, 2003, when Mr. Linton executed the Assignment of Assets in favor of WLFB LLC. Although plaintiffs make this argument for another reason, namely in an effort to show that the contribution of securities to the LLC occurred prior to the gifts of LLC interests to the Trusts, having advanced this position, plaintiffs will not be heard to challenge whether WLFB LLC had assets, or whether percentage interests in WLFB LLC constituted adequate trust res, on January 22, 2003.

On their claim for tax refund, plaintiffs bear the burden of proof.[6] *See Helvering v. Taylor,* 293 U.S. 507, 515, 55 S.Ct. 287, 79 L.Ed. 623 (1935). They have not met this burden. They have not demonstrated the existence of any genuine issue for trial, and they have not refuted the appropriateness of treating the transactions in question as indirect gifts to the children's Trusts of the assets of WLFB LLC. The Court concludes, as a matter of law, that the Trusts were valid and irrevocable on January 22, 2003, regardless of what date, if any, was placed on the Trust Agreements. The Court also concludes that the gifts of percentage interests in WLFB LLC were made on January 22, 2003, regardless of what date, if any, was placed on the Gift Documents. In addition, the Court is satisfied that the percentage interests in WLFB LLC constituted sufficient trust res. Because the Trusts were created, and gifts of LLC interests were made to the Trusts, on January 22, 2003, either before or simultaneously with the contribution of property to WLFB LLC, the Court holds that this case is analogous to both *Shepherd* and *Senda,* and that the Lintons' transfers of real estate, cash, and securities enhanced the LLC interests held by the children's Trusts, thereby constituting indirect gifts to the Trusts of pro rata shares of the assets conveyed to the LLC.

[6] Plaintiffs incorrectly suggest that the burden of proof has shifted to the Government pursuant to 26 U.S.C. § 7491(a), which provides that, "[i]f ... a taxpayer introduces credible evidence with respect to any factual issue..., the Secretary shall have the burden of proof with respect to such issue" so long as the taxpayer has satisfied certain prerequisites, including cooperation with the IRS. Plaintiffs have not identified any factual issue on which the Government should bear the burden of proof. Indeed, at oral argument, counsel for plaintiffs conceded that the matter before the Court involves only questions of law. Thus, the burden-shifting provision of the tax code has no relevance to this case. *See Calvert v. Comm'r,* T.C. Summ.Op. 2007-7, 2007 WL 105129 at *1 n. 1 ("Since this case involves only a question of law, sec. 7491 is not applicable here."); *see also Ayres v. Comm'r,* T.C. Summ.Op. 2007-4, 2007 WL 54098 at *1 n. 1 ("The facts are not in dispute, and the issue is a question of law; therefore, with respect to the burden of proof, the Court need not address the applicability of sec. 7491." (citing *Higbee v. Comm'r,* 116 T.C. 438, 2001 WL 617230 (2001))).

5. *Step Transaction Doctrine*

The Court also finds persuasive the Government's alternative theory that, even if plaintiffs could establish the proper sequence of events, namely funding the LLC before gifting interests in it, they nevertheless made indirect gifts to their children's Trusts under the step transaction doctrine. The step transaction doctrine "treats a series of formally separate `steps' as a single transaction if such steps are in substance integrated, interdependent, and focused toward a particular result." *Penrod v. Comm'r,* 88 T.C. 1415, 1428, 1987 WL 49335 (1987). Taxation is concerned more with the substance of a transaction than with its mere form. *Cal-Maine Foods, Inc. v. Comm'r,* 93 T.C. 181, 197, 1989 WL 87697 (1989). Although a taxpayer has the right to minimize taxes as far as the law will allow, a taxpayer may not "through form alone achieve tax advantages which substantively are without the intent of the statute." *Id.; see also id.* at 197-98 ("A given result at the end of a straight path is not made a different result because reached by following a devious path." (quoting *Minn. Tea Co. v. Helvering,* 302 U.S. 609, 613, 58 S.Ct. 393, 82 L.Ed. 474 (1938))). Accordingly, when "a taxpayer has embarked on a series of transactions that are in substance a single, unitary, or indivisible transaction, the courts have disregarded the intermediary steps and have given credence only to the completed transaction." *Id.* at 198.

Whether a series of transactions should be "stepped" together and treated as a single transaction generally constitutes a question of fact. *Senda,* 433 F.3d at 1048; *Cal-Maine Foods,* 93 T.C. at 198. The proper characterization of a transaction for tax purposes, however, is an issue of law. *Senda,* 433 F.3d at 1048. No specific standard has been universally applied in assessing whether a number of separate steps or activities should be viewed as comprising one transaction; however, courts have generally used one of three alternative tests: (i) the "binding commitment" test; (ii) the "end result" test; and (iii) the "interdependence" test. *Holman v. Comm'r,* 130 T.C. 170, 187-88, 2008 WL 2189089 (2008); *see Cal-Maine Foods,* 93 T.C. at 198-99; *see also Santa Monica Pictures, LLC v. Comm'r,*89 T.C.M. (CCH) 1157, 2005 WL 1111792 at *80-*81 (2005).

The binding commitment test, which is the narrowest alternative, collapses a series of transactions into one "if, at the time the first step is entered into, there was a binding commitment to undertake the later step." *Penrod,* 88 T.C. at 1429. The end result test stands at the other extreme and is the most flexible standard, asking whether the "series of formally separate steps are really pre-arranged parts of a single transaction intended from the outset to reach the ultimate result." *Id.*The interdependence test inquires whether, "on a reasonable interpretation of objective facts," the steps were "so interdependent that the legal relations created by one transaction would have been fruitless without a completion of the series" of transactions. *Cal-Maine Foods,* 93 T.C. at 199; *Penrod,* 88 T.C. at 1430. The interdependence test focuses on the relationships between the steps, rather than on their end result. *Penrod,* 88 T.C. at 1430. The question is whether "any one step would have been undertaken except in contemplation of the other integrating acts." *Cal-Maine Foods,* 93 T.C. at 199.

Regardless of which of these three alternative tests is applied, plaintiffs made "stepped" indirect gifts to their children's Trusts of the assets they contributed to WLFB LLC. The binding commitment test is met because plaintiffs executed binding Trust Agreements and Gift Documents at the same time they took the first step of contributing property to the LLC;

as counsel for plaintiffs conceded during oral argument, these documents would have been valid after signing had they never been dated. The end result test is likewise satisfied because plaintiffs undisputedly had a subjective intent to convey as much property as possible to their children while minimizing their gift tax liability, pursuant to which they crafted, with the aid of an attorney and a tax advisor, a scheme consisting of "pre-arranged parts of a single transaction." *Penrod,* 88 T.C. at 1429. The pre-arrangement is most apparent in Mr. Linton's explanation for why he did not date the Gift Documents, namely in an effort to ensure, for tax purposes, that U.S. Bancorp Piper Jaffray completed the transfers of securities before the gifts became effective. *See,* Linton Dep. at 37:13-38:16, Exh. A to Colvin Decl. (docket no. 22-2). In addition, the interdependence test is met because the undisputed evidence demonstrates that plaintiffs would not have undertaken one or more of the steps at issue absent their "contemplation of the other integrating acts." *Cal-Maine Foods,*93 T.C. at 199. But for the anticipated 40% to 49% discount in calculating gift taxes, premised on the low market appeal of WLFB LLC's structure, plaintiffs would not have contributed assets to the LLC. Indeed, the quantum of property transferred to WLFB LLC was determined solely on the basis of maximizing the tax advantages of the transaction. *See* Linton Dep. at 26:6-23, Exh. B to Auchterlonie Decl. (docket no. 20-3). Because the events here satisfy all three of the step transaction tests, the Court need not choose among the different standards, and the Court holds as a matter of law that, under the step transaction doctrine, plaintiffs made gifts to their children's Trusts of pro rata shares of the assets they contributed to WLFB LLC. Although the applicability of the step transaction doctrine has been described as generally an issue of fact, in this case, no purpose would be served by deferring to trial the legal analysis of the undisputed evidence.

This case is distinguishable from two recent cases in which the Tax Court concluded that the step transaction doctrine did not apply. *See Holman v. Comm'r,*130 T.C. 170, 2008 WL 2189089 (2008); *see also Gross v. Comm'r,* 96 T.C.M. (CCH) 187, 2008 WL 4388277 (2008). In *Holman,* the taxpayers, husband and wife, on the sixth day after the formation and funding of a limited partnership, made gifts of limited partnership shares ("LP units") to a trust for the benefit of their children. 130 T.C. at 174-79. The partnership had been funded with stock in Dell Computer Corporation ("Dell"). *Id.* at 172, 175. The Tax Court, observing that "the passage of time may be indicative of a change in circumstances that gives independent significance to a partner's transfer of property to a partnership and the subsequent gift of an interest in that partnership to another," *id.* at 189, examined the historical prices of Dell stock and concluded that the value of an LP unit changed over time due to its correlation with the worth of Dell stock, which dropped 1.316% during the six days at issue. *Id.* at 189-91. The Tax Court found that, during the six days between funding the partnership and gifting the LP units, the taxpayers bore a "real economic risk" that the value of an LP unit could change, and thus, the Tax Court refused to disregard the passage of time or to treat the contributions to the partnership and the subsequent gifts as occurring simultaneously pursuant to the step transaction doctrine. *Id.*

The facts of *Gross* are similar to those of *Holman.* In *Gross,* the taxpayer and her daughters formed a limited partnership into which they each contributed a small amount of cash, which was reflected in their respective capital accounts. 2008 WL 4388277 at *1-*2. Over the course of three months following the formation of the partnership, the taxpayer transferred various securities to the partnership, each time receiving credit for the contributions on her capital account. *Id.* at *2, *7. The last of these transfers occurred eleven days before the

taxpayer gave each daughter, by way of a "Deed of Gift," a 22.25% limited interest in the partnership. *Id.* In *Gross,* the Tax Court cited to *Holman* as support for its decision that the step transaction doctrine did not apply, focusing on the passage of eleven days between the last transfer of securities and the gifts of partnership interests, as well as on the status of the securities at issue as "common shares of well-known companies." *Id.* at *7-*8. The Tax Court in *Gross* concluded that "[t]he form of the transactions ... accords with their substance." *Id.* at *8.

The case before this Court bears little resemblance to either *Holman* or *Gross.* In contrast to the taxpayers in *Holman* and *Gross,* plaintiffs here did not make affirmative decisions to delay the gifts for some period of time after funding. Rather, with the benefit of hindsight, knowing the date on which U.S. Bancorp Piper Jaffray completed the last transfer of assets to WLFB LLC, plaintiffs devised the passage of time between funding and gifting that would have favorable tax consequences. Moreover, unlike in *Holman,* in this case, plaintiffs have submitted no data concerning the fluctuations, if any, in the prices of the various securities at issue on a daily basis during the period in question. On this subject, the Government contends that, with regard to the bulk of the assets in question, consisting of real property worth approximately $650,000, cash in the amount of $843,724, and municipal bonds valued at roughly $1.54 million, plaintiffs cannot show the volatility necessary to establish a real economic risk associated with the passage of less than ten days. *See,* Exh. 1 to Moss Adams Report (docket no. 23-9 at 35); Exh. E to Linton Decl. (docket no. 23-6); Exh. M to Auchterlonie Decl. (docket no. 20-14). Given the nature of the assets and the dearth of evidence in the record to suggest any real economic risk during the alleged interim between funding the LLC and gifting interests in it, the Court is satisfied that neither *Holman* nor *Gross* raise any doubt concerning the applicability of the step transaction doctrine in this case.

Conclusion

Plaintiffs have raised no genuine issue of material fact concerning their subjective intent, the contemplated sequence of transactions, or the way in which events actually unfolded. On January 22, 2003, plaintiffs executed documents and transferred property in a manner that, as a matter of law, constituted indirect gifts to their children. *See Senda v. Comm'r,* 433 F.3d 1044 (8th Cir.2006). These actions also, as a matter of law, satisfy the step transaction doctrine. *See Penrod v. Comm'r,* 88 T.C. 1415, 1987 WL 49335 (1987). The Court therefore GRANTS summary judgment in favor of the Government and DISMISSES plaintiffs' complaint with prejudice.

IT IS SO ORDERED.

The Clerk is directed to enter judgment consistent with this Order and to send a copy of this Order to all counsel of record.

UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

WILLIAM A. LINTON; STACY A. LINTON, *Plaintiffs-Appellants,* v. UNITED STATES OF AMERICA, *Defendant-Appellee.*	No. 09-35681 D.C. No. 2:08-cv-00227-TSZ OPINION

Appeal from the United States District Court
for the Western District of Washington
Thomas S. Zilly, Senior District Judge, Presiding

Argued and Submitted
August 4, 2010—Seattle, Washington

Filed January 21, 2011

Before: John T. Noonan, David R. Thompson and
Marsha S. Berzon, Circuit Judges.

Per Curiam Opinion

COUNSEL

Cory L. Johnson, Seattle, Washington, for the appellants.

Jonathan S. Cohen, Department of Justice, Washington, D.C., for the appellee.

OPINION

PER CURIAM:

Taxpayers William A. Linton and Stacy A. Linton appeal the district court's grant of summary judgment in favor of the United States on their claim for a refund of 2003 federal gift taxes. The Lintons contend that they gifted interests in a limited liability company ("LLC"); the government contends that they gifted cash, securities, and real property. We have jurisdiction under 28 U.S.C. § 1291, and we reverse and remand for further proceedings.

The parties have assumed that in determining the character of the Lintons' gifts, the sequencing of two transactions is "critical," *Senda v. Comm'r*, 433 F.3d 1044, 1046 (8th Cir. 2006), and we do so too, without deciding whether that is always so in cases of this ilk. The transactions at issue are: (1) the contribution of cash, securities, and real property to the limited liability company, and (2) the transfer of LLC interests to the Lintons' children's trusts. If done in that order (and with some lapse of time between the transactions), as the Lintons contend occurred here, the gifts would ordinarily be characterized as gifts of LLC interests, and the value of those LLC interests might be discountable for tax purposes. If, however, the contributions to the LLC occurred *after* the transfer of LLC interests to the children's trusts, the gifts would ordinarily be characterized as indirect gifts of the particular contributed assets and would not be discountable. *See id.*

BACKGROUND

William A. Linton formed WLFB Investments, LLC ("WLFB"), a Washington limited liability company, in November 2002. On January 22, 2003, William and Stacy A. Linton met with attorney Richard Hack to sign a series of documents. At the meeting, William gifted half of the per-

centage interests in WLFB to Stacy. Also, William and/or Stacy signed *and dated* the following documents:

- **Quit Claim Deed**: signed by William and conveying a parcel of his separate property real estate to WLFB. The parties agree the quit claim deed was effective on January 22.

- **Assignment of Assets**: signed by William as assignor and by both William and Stacy as assignees on behalf of the LLC.

- **Letters**: signed by William and authorizing the transfer of securities and cash to WLFB. The parties disagree as to when the transfers of securities and cash were effected.[1]

At the same meeting with attorney Hack, William, Stacy, and William's brother James Linton, signed, *but left undated*, several other *documents:*

- **Trust Agreements** (four total—one for each child): signed by William and Stacy as grantors and by James as trustee; forming and apparently funding irrevocable trusts for the children.

- **Gift Documents** (eight total—one each from William or Stacy to each trust): signed by William or Stacy as assignor and by James as trustee,

[1]U.S. Bancorp Piper Jaffray, Inc., apparently received William's letter on January 24 and made the transfers between January 24 and 31. RBC Dain Rauscher, Inc., appears to have made the transfers between January 24 and 29. The parties dispute whether the transfers were legally completed on those dates or on January 22, when the general "Assignment of Assets" was signed. We need not resolve this dispute. As we conclude that neither party has established when the LLC interests were gifted, neither party is entitled to summary judgment on the present record. Whether the precise date of the funding matters will depend on the gifting date.

> gifting 11.25 percentage interests in WLFB to each respective trust.

Two or three months later, attorney Hack assembled these key documents. For all undated documents, he filled in the missing date as January 22, 2003. In his deposition, Hack stated this insertion was erroneous, and that these documents should have been dated January 31, 2003. William agrees that January 31 was the correct date. This testimony is consistent with that of Caryl Thorp, an accountant with Moss Adams LLP, who advised the Lintons on the ordering of the transactions.

Some of the subsequent reporting and documentation of the transactions also supports the Lintons' alleged sequence of events. *First*, WLFB's federal partnership income tax return for 2003, prepared by Moss Adams, shows the contributions as initially being credited equally to William's and Stacy's *individual* capital accounts in the limited liability company. The return then shows capital transferred from their individual accounts along with a commensurate increase in the capital accounts for the children's trusts. *Second*, William's and Stacy's individual federal gift tax returns for 2003, prepared by attorney Hack, describe the gifts as gifts of percentage interests in "WLBF [sic]" and show the date of the gifts as January 31, 2003. *Third*, WLFB's "Membership Interest Ledger," prepared by attorney Hack's office, shows, in the first row, that William owned 100% of WLFB upon contribution of the real estate and portfolio assets. The first row also shows William's transfer of 50% of his interest in the LLC to Stacy. Subsequent rows show their transfers of percentage interests in the LLC to the children's trusts. However, all dates for all Ledger rows are blank. *Fourth*, a share valuation report, prepared by Moss Adams, states that percentage interests in the LLC were transferred from the Lintons to the children's trusts on January 31.

In their gift tax returns for 2003, the Lintons characterized their gifts to the children's trusts solely as gifts of WLFB percentage interests. The Lintons determined the gifts were worth only 47% of the value of the underlying capital, due to the LLC's restrictions on ownership and control of the LLC interests. The Internal Revenue Service ("IRS") rejected the application of the 47% discount, arguing that: (1) the Lintons made indirect gifts of cash, securities, and real property to the children's trusts, or (2) the Lintons' gifts should be treated as gifts of cash, securities, and real property under the step transaction doctrine.[2] Prior to formal assessment by the IRS, William and Stacy each made an advance payment of the claimed tax deficiency and filed suit in the district court seeking a refund of gift taxes paid.

Upon cross-motions, the district court granted the government's motion for summary judgment and denied the Lintons' motion for partial summary judgment on the indirect gift issue. *Linton v. United States*, 638 F. Supp. 2d 1277 (W.D. Wash. 2009). The district court relied on express language in the Trust Agreements and Gift Documents to determine the children's trusts were created and the gifts of the LLC interests were made to those trusts on January 22, 2003. *Id.* at 1286-87. The court also determined the contributions of cash, securities and real property were made to the LLC either simultaneously with or after the gifts of the LLC interests to the children's trusts. *Id.* at 1287. Thus, the district court concluded, "the Lintons' transfers of real estate, cash, and securities enhanced the LLC interests held by the children's Trusts,

[2]The government also challenged the Lintons' valuation of the gifts. In discounting the value of the gifts by 47%, the Lintons relied on a valuation report prepared by Moss Adams. In that report, Moss Adams determined the LLC interests were less valuable than the corresponding capital accounts because the LLC agreement restricted the transfer of the interests outside the family and reserved all "authority or power to act" to the "Managers"—William and Stacy Linton. The valuation challenge is not at issue on this appeal.

thereby constituting indirect gifts to the Trusts of pro rata shares of the assets conveyed to the LLC." *Id.*

The district court also determined, in the alternative, that even if the Lintons established that the cash, securities and real property were contributed to the LLC before the gifts of the LLC interests to the children's trusts, the Lintons "nevertheless made indirect gifts to their children's Trusts under the step transaction doctrine." *Id.* In arriving at this conclusion, the court considered "three alternative tests: (i) the binding commitment test; (ii) the end result test; and (iii) the interdependence test," and determined that regardless of which test was used, the step transaction doctrine applied. *Id.* at 1288 (quotation marks omitted). The district court noted that the Lintons made no affirmative decision to delay the gifts, and no evidence suggested the trust res was exposed to real economic risk during the alleged interim between the contributions to the LLC and the gifts of the LLC interests to the children's trusts. *Id.* at 1290.

STANDARD OF REVIEW

We review a grant of summary judgment de novo. *Universal Health Servs., Inc. v. Thompson*, 363 F.3d 1013, 1019 (9th Cir. 2004). We view the evidence in the light most favorable to the nonmoving party, determining "whether there are any genuine issues of material fact and whether the district court correctly applied the relevant substantive law." *Id.*

DISCUSSION

I

[1] A gift tax is imposed on a donor for a "transfer of property by gift." 26 U.S.C. § 2501(a)(1). The tax applies "whether the gift is direct or indirect." 26 U.S.C. § 2511(a).

The parties call on us to determine when the Lintons donated the LLC interests to their children's trusts: Did they

do so before they funded the LLC (so the Lintons would potentially be liable for the full value of the assets conferred, as an indirect gift, to their children), or was it after they funded the LLC (so the Lintons would be entitled to marketability and minority discounts on the assets transferred)? The assets were transferred to the LLC at some date or dates between January 22 and January 31.

[2] A gift is complete for federal tax purposes when "the donor has so parted with dominion and control as to leave in him no power to change its disposition . . . ." 26 C.F.R. § 25.2511-2(b); *see also Smith v. Shaughnessy*, 318 U.S. 176, 181 (1943) ("The essence of a [taxable] gift by trust is the abandonment of control over the property put in trust."). The state law of gifts informs our analysis of whether and when the donor has parted with dominion and control in a manner adequate to give rise to federal tax liability. *See Jones v. Comm'r*, 129 T.C. 146, 150 (2007) ("In order to make a valid gift for Federal tax purposes, a transfer must at least effect a valid gift under the applicable State law."); *cf. United States v. Nat'l Bank of Commerce*, 472 U.S. 719, 722 (1985) ("[I]n the application of a federal revenue act, state law controls in determining the nature of the legal interest which the taxpayer had in the property." (quotation omitted)); *Aquilino v. United States*, 363 U.S. 509, 514 n.3 (1960); *Shepherd v. Comm'r*, 115 T.C. 376, 384 (2000), *aff'd* 283 F.3d 1258 (11th Cir. 2002) ("look[ing] to applicable State law . . . to determine what property rights are conveyed"). This conclusion follows from the general principle that federal tax law "creates no property rights but merely attaches consequences, federally defined, to rights created under state law." *Nat'l Bank of Commerce*, 472 U.S. at 722 (quotation omitted); *Morgan v. Comm'r*, 309 U.S. 78, 80 (1940) ("State law creates legal interests and rights. The federal revenue acts designate what interests or rights, so created, shall be taxed."); *cf. United States v. Mitchell*, 403 U.S. 190, 197 (1971) (explaining that

"federal income tax liability follows ownership. . . . In the determination of ownership, state law controls.").[3]

[3] Under Washington law, "the elements of a completed gift are (1) an intention of the donor to give; (2) a subject matter capable of delivery; (3) a delivery; and (4) acceptance by the donee." *In re Marriage of Zier*, 147 P.3d 624, 628 (Wash. Ct. App. 2006). The transfer of the LLC interests occurred when all four elements of a completed gift first existed simultaneously. We must determine when that was. We discuss each element individually, but we defer discussion of the first element, intention to give, until the end, as here it is both the decisive element and the most difficult to determine.

[3]The state law of gifts is not determinative of whether a transaction is taxable as a gift for purposes of the federal gift tax or of when a transaction becomes sufficiently complete to be so taxable, though it necessarily informs federal tax law's determination of those questions: State law provides the shape to the transaction which, depending on the transaction's contours, federal law then may characterize as giving rise to gift tax liability. *See Pahl v. Comm'r*, 150 F.3d 1124, 1128 (9th Cir. 1998) (holding that "we look to federal law to determine what interest creates tax liability. We look, however, to state law to determine whether the taxpayer has the requisite interest."); *cf. Morgan*, 309 U.S. at 81 ("If it is found in a given case that an interest or right created by local law was the object intended to be taxed, the federal law must prevail no matter what name is given to the interest or right by state law."). Thus, for instance, while donative intent may be relevant to the state law question of whether a transfer occurred by gift, by contract, or not at all, *cf. Buckerfield's Ltd. v. B.C. Goose & Duck Farm Ltd.*, 511 P.2d 1360, 1363 (Wash. Ct. App. 1973), if a transfer did occur, donative intent is irrelevant to whether the federal gift tax applies. *See* 26 C.F.R. § 25.2511-1(g)(1) (whether the gift tax applies depends "on the objective facts of the transfer and the circumstances under which [the gift] is made, rather than on the subjective motives of the donor."); *Dickman v. Comm'r*, 465 U.S. 330, 333 (1984) ("The statutory language of the federal gift tax provisions purports to reach *any* gratuitous transfer of any interest in property." (emphasis added)); *cf. Nat'l Bank of Commerce*, 472 U.S. at 722 ("Once it has been determined that state law creates sufficient interests in the taxpayer to satisfy the requirements of the statute, state law is inoperative, and the tax consequences thenceforth are dictated by federal law." (quotation omitted)).

a) *Subject matter capable of delivery*

[4] Subject matter capable of delivery (here, interests in the LLC) existed since the creation of the LLC in November 2002. This element, therefore, existed at all times relevant to the Lintons' January 2003 transactions.

b) *Delivery*

"[O]nly such delivery is required as the nature of the thing given and the circumstances under which it is given will permit, and so it is generally held the delivery may be manual, constructive or symbolic. . . . Whether what was done was sufficient to constitute a delivery depends on the nature of the property and the attendant circumstances." *Marriage of Zier*, 147 P.3d at 628.

[5] Unlike a precious gem or the keys to a vault, LLC interests do not lend themselves to manual delivery. Instead, they are delivered through the execution of papers. As a result, while one might distinguish the manual delivery of a gem from a prior or subsequent transfer of title to the gem, it is somewhat artificial to separate the "delivery" of an LLC interest from the intention to donate it. *Cf. id.* at 629 (delivery of corporation's stock effected, even where stock certificates were not manually delivered to donee); *Henderson v. Tagg*, 412 P.2d 112, 116 (Wash. 1966) (same). We suspect, therefore, that the Washington law of gifts would collapse its analysis of the delivery element of an alleged gift of LLC interests into its analysis of the intent to donate.

[6] In the alternative, the element of delivery was at least present no later than the intent to donate. On January 22, 2003, the taxpayers signed two kinds of documents: one, the gift documents stating that each taxpayer "hereby gifts to the [relevant] Trust . . . a total of 11.25 percentage interests in WLFB Investments, LLC," and another, the trust agreements, stating "at the time of signing this Agreement, the Grantors

have transferred percentage interests in the WLFB Investments, LLC . . . to the Trustee for the Trust." These documents were signed in the presence of the trustee, James Linton, the legal representative of the trust, to whom delivery to the trust would need to be made. On this alternative account, the element of delivery was present on January 22, 2003.

It is true that the gift documents and trust agreements were left undated on January 22, 2003. Washington law might consider the blank space left for the date as creating ambiguity as to whether a delivery occurred on January 22, 2003, especially if it determined the delivery of an LLC interest by looking for an objective manifestation of an intent to deliver. If that were so, then, the inquiries into the delivery and the intent to donate elements of a gift would, as intimated at the outset, be one and the same here. Donation and delivery of an abstract equity interest are hard to distinguish, and, as we later explain, Washington law would also look to an objective manifestation of the intent to donate to determine that element of a gift. In any case, on either interpretation of what Washington law requires for delivery, that element of a gift was present no later than the element of intent to donate.

c) Acceptance

[7] There is little Washington case law on what constitutes "acceptance" of a gift. This dearth of cases is, perhaps, unsurprising, given that the plaintiffs in most disputes over gifts are the alleged donees, so acceptance is not contested. In any case, "acceptance is presumed, subject to the donee's right to refuse or disclaim," RESTATEMENT (THIRD) OF PROP. (WILLS & DON. TRANSFERS) § 6.1(b) (2003), and neither party has directed the court to any evidence that the trustee disclaimed the LLC interests on January 22, 2003, or at any later date. Thus, whether a gift of LLC interests occurred on January 22, 2003 depends entirely on the presence or absence of the remaining element of a gift: the intent to donate.

d) *Intent to Donate*

The Lintons aver that they did not intend to donate the interests on January 22, 2003. But Washington law does not apply a subjective-intent standard in the interpretation of legal instruments. *See Hearst Commc'ns, Inc. v. Seattle Times Co.*, 115 P.3d 262, 267 (Wash. 2005) ("[W]hen interpreting contracts, the subjective intent of the parties is generally irrelevant if the intent can be determined from the actual words used."). In other words, Washington courts "do not interpret what was intended to be written but what was written." *Id.* Washington probate law similarly follows an "objective manifestation" method of interpretation in the exegesis of wills, donative documents that are close cousins of gift documents. *See In re Estate of Curry*, 988 P.2d 505, 508 (Wash. Ct. App. 1999) (explaining that "[e]xtrinsic evidence of surrounding facts and circumstances may be admitted to explain the language of a will when uncertainty arises as to the testator's true intention. But extrinsic evidence may not be considered for the purpose of proving intention as an independent fact, or of importing into the will an intention not expressed therein." (quotations omitted)).

In the absence of contrary authority, therefore, we presume that the Washington law of gifts applies an objective standard to the determination of donative intent generally, especially where a writing exists.[4] *Cf. Proctor v. Forsythe*, 480 P.2d 511,

[4]We acknowledge that the Restatement does make subjective intent the relevant standard for the interpretation of gift documents. *See* RESTATEMENT OF PROP. (THIRD): WILLS AND OTHER DONATIVE TRANSFERS § 10.1 (2003) ("The controlling consideration in determining the meaning of a donative document is the donor's intention. The donor's intention is given effect to the maximum extent allowed by law."); *id.* at § 10.2 ("In seeking to determine the donor's intention, all relevant evidence, whether direct or circumstantial, may be considered, including the text of the donative document and relevant extrinsic evidence."). But Washington courts have not adopted this rule. They disregard it in interpreting wills, *see Curry*, 988 P.2d at 507-08, even though the Restatement applies the rule to all donative documents, including wills. We see no reason to think Washington courts would follow the Restatement on this point with respect to some donative documents, but not others.

513 (Wash. Ct. App. 1971) (finding an intent to give based on the "*expressed* intent" of the donor) (emphasis added).

The gift documents, signed on January 22, 2003, provide that the Lintons "hereby gift" the LLC interests. The objective manifestation of the Lintons' intent to donate the LLC interests on January 22, 2003 might therefore seem plain. If that were so, then, under Washington law, all four elements of a gift would be present on January 22, 2003, and the gift of LLC interests would be complete on that date.

[8] But the story is more complex. First, the gift documents were not dated on January 22, 2003, which creates considerable objective ambiguity as to the Lintons' intent to make the donation effective on that date. More importantly, execution of a gift document, alone, is not a sufficient objective manifestation of an intent to donate. As the Restatement indicates, "[t]he mere preparation of a donative document does not effect a present transfer necessary to perfect a gift. Such a writing becomes effective when the donor manifests the intention that the document is to be operative to make a present transfer." *Id.* at § 6.2 cmt. u. In other words, a writing, on its own, is not a sufficient objective manifestation of intent to donate at the time of the writing, or at all. Circumstances surrounding the writing must show that the writing was meant to be effective.

[9] Most often, the writing will be effective "when the donor puts the document beyond retrieval" by delivering the document to the donee. *Id.*[5] We assume this rule applies in

[5]The Restatement provides:

> The delivery of the document by the donor to the donee is an act manifesting that the donor intends the document to be presently operative, unless there is evidence that the delivery was made for some other purpose. If, for example, the purpose of the delivery was to allow the donee or the donee's representative to inspect the document to see if any portion of it should be rephrased, the delivery would lack its normal significance.

Washington. So the execution of the gift documents on January 22, 2003 was alone not enough to make the gifts effective on that date. To know when the Lintons objectively manifested the intent to donate the LLC interests, we must know when they put the gift documents "beyond retrieval" or otherwise objectively manifested an intent to make them effective. As we explain, we do not see evidence of when they did so in the record before us, so we reverse and remand for such proceedings as the district court finds necessary to make that determination.

After the signing on January 22, 2009, the gift documents remained with the Lintons' attorney, Richard Hack. That Hack retained the documents might indicate there was no intent to donate on January 22, because Hack, the donors' agent, was to await instructions from his clients as to when to make the donation effective. And, indeed, the gift documents provide that the Lintons "appoint Richard Hack, as attorney to transfer the percentage interests on the books of the Company."[6] Moreover, Hack testified that he later came to believe

> Delivery of an inter vivos donative document occurs when the donor puts the document beyond retrieval. . . .
>
> A delivery of the document by the donor to someone other than the donee is a manifestation that the document is presently operative, unless the circumstances indicate otherwise. . . .
>
> A manifestation that the document is to be presently operative may be made without delivery of the document to anyone, if the outward and visible acts of the donor evidence an intent to make a present transfer.

Id.

[6]We note, but do not resolve, a possible ambiguity in the gift documents' appointment of Hack as agent. The gift documents may appoint Hack as an agent to effect the gifts at some later date, or the gift documents may effect the gifts themselves (after all, they do "hereby gift" the LLC interests) and appoint Hack only to do whatever subsequent paperwork is needed to reflect that the gifts were made. While the latter appears the more natural reading to us, we leave this issue open for the district court to resolve if it finds the need to do so.

that his client would have wanted the documents to be dated January 31, suggesting that the Lintons did not intend for the transfer to be effective until January 31 and that Hack, acting as the Lintons' agent, made them effective on that date.

But that conclusion is at odds with the facts before us. At their January 22 meeting, the Lintons did not give Hack instructions as to when to make the gifts effective. Hack testified "When [William Linton] was at my office [on January 22], he didn't know [when he wanted to make the gifts effective], and he wanted to work that out with [his accountant]." William Linton appears, in fact, never to have given Hack any instructions as to when to make the gifts effective. Instead, Hack reconstructed Linton's intent later, apparently in late March or early April, based on documents provided him by the Lintons' accountant. Hack testified: "I didn't circle back with Bill and grab him by the shoulders and say, 'Hey, Bill, is this the date and is this really what you want to do?' We left that open. No, I didn't do that at all. I used the accountant's data to prepare the gift tax return."

Thus, because the Lintons never instructed Hack to make the gifts effective on January 31, they cannot plausibly claim that they left the documents with Hack with instructions to make the gifts effective on January 31. More importantly, even if the Lintons had given Hack such instructions, Hack appears to have taken no action on January 31 that might have made the gifts effective. January 31 cannot, therefore, be the date on which the gifts became effective, at least not for purposes of summary judgment on the record currently before the Court.

If the Restatement represents Washington law in this regard, and we presume it does, the current record suggests two possibilities as to the date the gifts became effective: *Either* James Linton, the trustee (and, therefore, for legal purposes, the donee), left the meeting on January 22, 2003, with copies of the (undated) gift documents, and his doing so was

a sufficient *objective* manifestation that the gift documents were intended to be effective immediately. *Or* Bill and Stacy Linton appointed Hack to be their agent with the power to make the gift documents effective at some later date, that later date occurring whenever Hack finalized the gift documents (by dating them, albeit incorrectly) and made some objective manifestation that the gift was effective (such as by sending a copy of the documents to James Linton). On this second account, the gifts were likely effective, as a matter of Washington law, in March or April, around the time Hack put together the minute book.

[10] In sum, the determinative question as to when the gift of the LLC interests occurred is the first date at which objective circumstances existed that would suggest the gift documents were meant to be operative (and all three other elements of a gift existed under Washington law). The relevant objective circumstance could be, but is not necessarily, when the trustee James Linton was given a copy of the signed gift document, because on that date "the donor put[ ] the document beyond retrieval," RESTATEMENT, § 6.2 cmt. u, thereby objectively manifesting an intent to make the gift documents operative. Because the record is subject to contrary inferences as to when that, or some other event objectively manifesting the Lintons' intent to make the gift documents operative, first occurred, the government is not entitled to summary judgment on this pivotal point. We therefore remand to the district court for such proceedings as it deems necessary to resolve this question.[7]

[7]Of course, though necessarily informed by state law, federal law is not beholden to the technicalities of state law in assessing federal tax liability. *See, e.g.*, *Frank Lyon Co. v. United States*, 435 U.S. 561, 572-73 (1978); *Morgan*, 309 U.S. at 80-81. But we have not discussed the substance-over-form doctrine in our analysis of when the LLC interests were transferred because form is significantly aligned with substance when it comes to the timing of the transactions. Courts have explained, and we elaborate below, that the relative timing of the two transactions required for a gift via a lim-

We recognize the possibility that the district court might determine that there was no one event which independently constituted an objective manifestation of the Lintons' intent to make the gift documents operative, and instead decide that that intent was objectively manifested by the gradual accretion of events, including the signing of the undated gift documents, and various actions the Lintons took on the assumption that the LLC interests already had been transferred. But such a lack of one independently sufficient event should not matter, for present purposes, so as long as the district court can determine that the accumulation of objective circumstances was or was not sufficiently complete before the LLC was funded.

II

The Lintons contend that they are entitled to summary judgment because even if the government is right about timing, no gift would have occurred and so they would therefore have no gift tax liability. Their argument is that if the transactions occurred in the order the government contends (i.e., first, the LLC interests were transferred to the trusts, and then the assets were transferred to the LLC), then no gift to the trusts occurred at all. The Lintons rely on a provision of the

ited liability entity is of importance because of the risk of a change in valuation to which the funded entity interests are exposed before they are transferred to the children. *See Holman v. Comm'r*, 130 T.C. 170, 189 (2008), *aff'd* 601 F.3d 763 (8th Cir. 2010); *Gross v. Comm'r*, 96 T.C.M. (CCH) 187, 192 n.5 (2008). The degree of risk, if any, to which the funded entity interests is exposed is almost wholly dependent on the state law question of when the gifts occurred.

We also observe that the parties and the district court considered the possibility of reforming the gift documents. Reformation, even if possible, would be irrelevant. The question in a tax case such as this is when the LLC interests actually were donated, not when they should have been. When the LLC interests were transferred is an historical fact, which a court may ascertain but which it cannot travel through time to alter retroactively.

LLC agreement, providing that "A Member's Capital Account shall be increased by the Member's capital contributions to the Company . . . ." If the Lintons gifted assets to the company after they had gifted the percentage interests in the company to their children, the gifted assets would, by virtue of this provision, be credited to their own (i.e., the parents') capital accounts. If only the donors' capital accounts were enhanced by the transfer of assets to the LLC and there was no subsequent transfer from the donors' capital accounts to the children's capital accounts, then there was no gift for tax purposes. *See Shepherd v. Comm'r*, 115 T.C. at 389 ("Obviously, not every capital contribution to a partnership results in a gift to the other partners, particularly where the contributing partner's capital account is increased by the amount of his contribution, thus entitling him to recoup the same amount upon liquidation of the partnership."). By contrast, if the transactions had occurred in the order the Lintons intended, then by virtue of the IRC § 704 capital account rules incorporated in the LLC agreement, the transfer of the LLC interests would have effected a pro rata transfer of the donors' capital accounts to the donees' capital accounts. *See* 26 C.F.R. § 1.704-1(b)(2)(iv)(*l*).

The Lintons' "failed-gift" theory is clever; unfortunately for them, it is too clever. The membership ledger of the LLC shows that the capital accounts of the children's trusts were, in fact, increased, as does the LLC's informational return that its accountants prepared and filed with the IRS in March 2004. The Lintons contend that if we conclude the government is right about the timing of the transactions, these documents were prepared on a mistaken assumption (i.e., that the LLC interests were transferred after the assets, and, therefore, by virtue of the IRC § 704 capital account rules, included a pro rata transfer of the assets from the donors' capital accounts to the donees') and should be ignored. On their theory, the informational return and the ledger would only reflect what everyone believed to be the state of the capital accounts, not the actual state of the capital accounts.

[11] But tax law is concerned "with the realities of a situation and not with the formalities of title." *Estate of Fortunato*, 99 T.C.M. (CCH) 1427, 1433 (2010) (quotation omitted)*; cf. Frank Lyon Co.*, 435 U.S. at 572 ("[T]axation is not so much concerned with the refinements of title as it is with . . . the actual benefit for which the tax is paid."); *Pahl*, 150 F.3d at 1127-1129. The membership ledger and the LLC's informational return together reflect the substantive reality of the situation: All parties involved regarded the trusts' capital accounts as having been enhanced. In other words, all concerned parties acted as if William and Stacy Linton had "so parted with dominion and control [over the assets] as to leave in [them] no power to change [their] disposition." 26 C.F.R. § 25.2511-2(b).

[12] The Lintons' failed-gift argument, by contrast, relies on the formal technicalities of state law. (Even though it incorporates the IRC § 704 capital account rules, the LLC agreement is a contract, which, like the background interests in property that it regulates, is governed by state law.) The failed-gift argument is formal because it relies on the technicalities of title (i.e., whether a state court presented with the issue would hold that the capital accounts were legally enhanced by the gifting of the LLC interests), but ignores the substantive reality that all concerned treated the accounts as enhanced and so, for all effective purposes, they were so.

[13] In other words, the Lintons may be right that, if the government is correct about the timing of the transactions, the ledger and informational return may have technically been in error, because the transfer of the assets to the LLC would not have automatically enhanced the trusts' capital accounts, and there was no subsequent transfer from the parents' capital accounts to those of the trusts. But this nicety of state law is too fine to have federal tax consequences, especially given federal tax law's heightened suspicion of state law's formal technicalities when all the parties involved have a familial relationship. *See Brown v. United States*, 329 F.3d 664, 673

(9th Cir. 2003) (holding that where parties to a transaction have a familial relationship, "heightened scrutiny" of its substance is appropriate); *Kornfeld v. Comm'r*, 137 F.3d 1231, 1235 (10th Cir. 1998) (holding that where "parties to the transactions in question are related, the level of skepticism as to the form of the transaction is heightened"). Absent interest from the Internal Revenue Service, the only conceivable way that the substantive realities (i.e., that all concerned treated the capital accounts as enhanced) would be realigned with the short-term formal technicalities of state law (i.e., the absence of adequate paperwork making the transfer to the children's capital accounts) would be if one of the parties concerned became aware of the discrepancy and decided to pursue litigation. Given that all parties involved in the transactions were members of the same family and their interests in the transactions were aligned, *cf. Brown*, 329 F.3d at 673 (disregarding legal form in part because the donee was "unlikely to flout the taxpayer's intention"), that possibility is so remote as not to affect federal tax law's assessment of the transactions' substantive realities.[8] We therefore hold that the Lintons are not entitled to summary judgment on their failed gift theory.

III

The district court determined that, even if the sequence of events was as the Lintons contend, the gifts would still be characterized as gifts of cash, securities, and real property to the children's trusts under the step transaction doctrine. The step transaction doctrine "collapses 'formally distinct steps in an integrated transaction' in order to assess federal tax liability on the basis of a 'realistic view of the entire transaction.' "

[8]Moreover, over time, the formal niceties of state law (i.e., whether a state court would determine that the capital accounts were enhanced) could come to match the substantive reality (i.e., that all concerned regarded the children's capital accounts as enhanced) through the running of state law statutes of limitations, estoppel and other state law doctrines of property.

Brown, 329 F.3d at 671 (quoting *Comm'r v. Clark*, 489 U.S. 726, 738 (1989)).[9]

[9]We note at the outset our hesitation about the need to apply any of the traditional three tests that make up the step transaction doctrine once the issue of the timing of the transactions is resolved. As the government acknowledged at oral argument, the step transaction doctrine "really [is] what drives this kind of case," including the primary question of the order in which the transactions occurred.

The step transaction doctrine is one of the many "substance-over-form" doctrines in tax law. *See Brown*, 329 F.3d at 671; *see generally* Joseph Bankman, *The Economic Substance Doctrine*, 74 S. CAL. L. REV. 5 (2000) (discussing origins and difficulties of substance-over-form doctrines, including step transaction doctrine). It "combines a series of individually meaningless steps into a single transaction" for purposes of federal tax treatment. *Esmark, Inc. & Affiliated Cos. v. Comm'r*, 90 T.C. 171, 195 (1988).

Courts have insisted that family limited partnerships be funded before the partnership interests are distributed for the same reason that they apply the step transaction doctrine: to ensure that the two transactions are adequately distinct that the second transaction merits independent, and more favorable, tax treatment. *See, e.g.*, *Holman*, 130 T.C. at 189 ("[T]he passage of time may be indicative of a change in circumstances that gives independent significance to a partner's transfer of property to a partnership and the subsequent gift of an interest in that partnership to another."); *Gross*, 96 T.C.M. (CCH) at 192 n.5 (noting the importance of the "real economic risk" of a change in valuation of assets donated to a partnership during an eleven-day "hiatus" before which partnership interests were gifted).

To obtain favorable tax treatment, the Lintons needed to transfer assets to the LLC and then wait at least some amount of time before they gifted the LLC interests to their children. The waiting period would subject the gifted assets to some risk of changed valuation before they were transferred, through the LLC, to the children's trusts. That risk would make the two transactions distinct for tax purposes. (The government has not challenged that the nine days between January 22 and January 31 is a sufficiently long period to make the transactions distinct, notwithstanding that some of the value transferred to the LLC was cash. *Cf. Gross*, 96 T.C.M. at 192 n.5 (noting that the Tax Court "might view the impact of an 11-day hiatus differently in the case of another type of investment[,]" subject to less risk than "heavily traded, relatively volatile common stocks.")). Others have noted, in different contexts, the similarity between the step transaction doctrine and the requirement that two transactions be timed in a

Whether a court's application of the step transaction doctrine to undisputed facts "is an issue of fact or law is a question over which we have struggled." *Brown*, 329 F.3d at 670. As stated previously, we ordinarily review grants of summary judgment de novo. The government contends, however, that the application of the step transaction doctrine to undisputed facts is a question of fact to be reviewed under the clearly erroneous standard. We need not resolve this dispute, as we would reverse the district court under either standard of review.

[14] The step transaction doctrine treats multiple transactions as a single integrated transaction for tax purposes if all of the elements of at least one of three tests are satisfied: (1) the end result test, (2) the interdependence test, or (3) the binding commitment test. *True v. United States*, 190 F.3d 1165, 1174-75 (10th Cir. 1999). Although the doctrine considers the substance over the form of the transactions, " 'anyone may so arrange his affairs that his taxes shall be as low as possible; he is not bound to choose the pattern which will best pay the Treasury.' " *Brown*, 329 F.3d at 671 (quoting *Grove v. Comm'r*, 490 F.2d 241, 242 (2d Cir. 1973)).

---

certain manner. *See Weikel v. Comm'r*, 51 T.C.M. (CCH) 432, 438 (1986) ("Courts will often, in addition to the [familiar three step transaction doctrine] tests . . . examine the timing of the transaction at issue."); Yoram Keinan, *Rethinking the Role of the Judicial Step Transaction Principle and a Proposal for Codification*, 22 AKRON TAX J. 45, 74-77 (2007) (discussing relevance of the timing of two transactions to the step transaction doctrine).

In sum, we suspect that the timing requirements discussed above are, in essence, a working out of the step transaction doctrine in a particular set of circumstances, and, therefore, that, if the Lintons or the government prevails as to the issue of timing, there would be no need to apply the three traditional step transaction doctrine tests. But because neither party contests that the three step transaction doctrine tests apply, and because our application of them does not change the result we reach, we apply them.

[15] The step transaction doctrine has been described as "combin[ing] a series of individually meaningless steps into a single transaction." *Esmark, Inc. & Affiliated Cos. v. Comm'r*, 90 T.C. 171, 195 (1988). We note as a threshold matter that the government has pointed to no meaningless or unnecessary step that should be ignored. Nonetheless, examining the step transaction doctrine in light of the three applicable tests, we conclude that its application does not entitle the government to summary judgment.

[16] The end result test asks whether a series of steps was undertaken to reach a particular result, and, if so, treats the steps as one. *True*, 190 F.3d at 1175. Under this test, a taxpayer's subjective intent is "especially relevant," and we ask "whether the taxpayer intended to reach a particular result by structuring a series of transactions in a certain way." *Id.* The result sought by the Lintons is consistent with the tax treatment that they seek: The Lintons wanted to convey to their children LLC interests, without giving them management control over the LLC or ownership of the underlying assets. Ample evidence supports this intention. The end result sought and achieved was the gifting of LLC interests. If the transactions could somehow be merged, the Lintons would still prevail, because the end result would be that their gifts of LLC interests would be taxed as they contend.

[17] The interdependence test asks "whether on a reasonable interpretation of objective facts the steps were so interdependent that the legal relations created by one transaction would have been fruitless without a completion of the series." *Associated Wholesale Grocers, Inc. v. United States*, 927 F.2d 1517, 1523 (10th Cir. 1991) (quotation marks omitted). Under this test, it may be "useful to compare the transactions in question with those we might usually expect to occur in otherwise bona fide business settings." *True*, 190 F.3d at 1176.

[18] The placing of assets into a limited liability entity such as the LLC is an ordinary and objectively reasonable

business activity that makes sense with or without any subsequent gift. In *Holman v. Commissioner*, the Tax Court stated that the creation of a limited partnership was not necessarily "fruitless" even if done in anticipation of gifting partnership interests to the taxpayers' children. 130 T.C. 170, 188, 191 (2008) (holding the creation of the limited partnership and the subsequent transfer of partnership interests should not be treated as a single transaction). The Lintons' creation and funding of the LLC enabled them to specify the terms of the LLC and contribute the desired amount and type of capital to it—reasonable and ordinary business activities. These facts do not meet the requirements of the interdependence test.

[19] The binding commitment test asks whether, at the time the first step of a transaction was entered, there was a binding commitment to take the later steps. *Comm'r v. Gordon*, 391 U.S. 83, 96 (1968). The test only applies to transactions spanning several years. *True*, 190 F.3d at 1175 n.8; *Associated Wholesale Grocers*, 927 F.2d at 1522 n.6; *McDonald's Rests. of Illinois, Inc. v. Comm'r*, 688 F.2d 520, 525 (7th Cir. 1982) (rejecting application of the test for transactions spanning six months). Here, the Lintons' transactions took place over the course of no more than a few months, and arguably a few weeks. The binding commitment test is inapplicable.

[20] The government is therefore not entitled to summary judgment based on an application of the step transaction doctrine.

CONCLUSION

We reverse the district court's grant of summary judgment in favor of the government, determining that the Lintons' gifts to the children's trusts would be valued as though the gifts were indirect gifts of particular assets and not gifts of the LLC interests. Genuine issues of material fact exist as to the sequence of transactions by which the gifts were made. We

remand this question for the district court to determine, following further proceedings, when the four elements of a gift under Washington state law were simultaneously present, and, in particular, to determine when the Lintons first objectively manifested their intent to make the gifts effective. We also reverse the district court's grant of summary judgment in favor of the government as to the application of the step transaction doctrine. Finally, we affirm the district court's order denying summary judgment to the Lintons, holding that they are not entitled to summary judgment on their failed-gift theory.

The government shall bear the costs of this appeal.

AFFIRMED IN PART; REVERSED in PART and REMANDED.

In re Marriage of Lopez (1974)

[Civ. No. 13610. Court of Appeals of California, Third Appellate District. March 26, 1974.]
In re the Marriage of EDITH M. and LEE A. LOPEZ, SR. LEE A. LOPEZ, SR., Respondent, v. EDITH M. LOPEZ, Appellant

(Opinion by Carter, J., with Richardson, P. J., and Janes, J., concurring.)

COUNSEL

John N. Bach for Appellant.

Jack Halpin and Richard J. Asbill for Respondent.

OPINION

CARTER, J.

This is an appeal by the wife from an interlocutory judgment of dissolution of marriage. On appeal, wife urges the following procedural and substantive contentions:

1. The interest of the husband in his law firm as of the date of trial was all community property.

2. The trial court erred in failing to determine the value of husband's interest in the accounts receivable, goodwill and work in progress of his partnership law practice.

3. Wife's motion for inspection, audit and review of husband's partnership legal files should have been granted.

4. The trial court erred in granting husband's motion to defer the issue of wife's request for attorney's fees and costs until after the court's determination of the principal issues.

5. The trial court abused its discretion in its allowance of attorney's fees and costs to wife.

6. The trial court abused its discretion in determining the amount and duration of spousal support.

We conclude the trial court did err on several grounds and will accordingly reverse and award wife costs. **[38 Cal. App. 3d 100]**

Facts

Husband is an attorney, having received his law degree in 1952, passed the Bar Examination in October 1952 and was admitted to practice in California in January 1953. In June 1953 he received a master's degree in law from New York University and two months later commenced the practice of law in Redding, California, as an associate in a law office of an established lawyer, at a salary of $300 per month. On January 1, 1955, without a capital contribution, husband became a 25 percent partner with the lawyer engaging in general practice. On August 8, 1957, while thus engaged in the practice of law, husband and wife were married.

On September 25, 1957, the law partnership was dissolved, and on October 1, 1957, husband opened his own law office as a sole practitioner. He brought into his practice some accounts receivable and cases in progress from the former partnership. In addition he invested the sum of $5,000 in his law office, and purchased some furniture, office equipment and law books. At the time of his marriage, husband owned free of debt a 1956 Oldsmobile, a boat, motor and trailer—all assets which he depreciated in his law practice. Following his marriage and during the first three months as a sole practitioner, husband grossed a total of $6,478.98, with expenses of $5,895.97, for a net income of $583.01.

During the ensuing years husband's law practice and earnings flourished. In 1958 he grossed $40,476.91 and his net income before taxes was $22,793.95; in 1959 his gross and net income before taxes were $54,282.69 and $30,414.61 respectively; in 1960, $61,830.82 and $31,178.25 and in 1961, $77,305.68 and $49,738.38. On January 1, 1962, husband formed a partnership with Willis Haines. Haines contributed no capital to the business, but received 25 percent of the profits. In 1962 the new partnership produced $99,106.85 in gross receipts and husband's share of the net income before taxes was $48,433.58; for the year 1963 the figures were $109,463.16 and husband's share was $49,826.11. The Lopez-Haines partnership was dissolved in April 1964. For the year 1964 the total gross receipts of the partnership plus husband's after-dissolution gross income amounted to the sum of $129,072.30 which provided the husband with a total 1964 net income before taxes of $58,806.07. From 1965 through 1969, husband practiced as sole owner of his law business with associates. His respective gross receipts and net income before taxes during those years were as follows: 1965—$167,872.72, $72,729.03; 1966—$177,259.67, $64,410.88; 1967—$200,608.71, $67,909.67; 1968—$261,831.58, $102,403.67; 1969—$243,478.61, $79,028.03. **[38 Cal. App. 3d 101]**

On January 1, 1970, husband formed a law partnership with two of his associates, Donald R. Kennedy and Robert L. Srite, at which time Srite paid the sum of $53,500 cash for a 25 percent interest in husband's law practice. This cash was deposited in Accounts Nos. 12 and 4239 (4324), Bank of Redding, in husband's name. At the same time, Kennedy paid husband $13,500 in cash and executed an unsecured promissory note in the sum of $40,000 for the purchase of 25 percent of husband's law business. Documents entitled "Agreement for the Sale of an Interest in Fixtures, Equipment, Library and Goodwill of a Law Practice," dated January 1, 1970, were executed by husband and his new partners. Each agreement provided that husband sell an

undivided 25 percent interest in and to the fixtures, equipment and law library to each partner for the sum of $1,224.32, respectively. A 25 percent interest in the law practice goodwill which husband sold to each of his new partners was valued at $52,275.68 in both agreements.

Concurrently, husband and his partners executed a partnership agreement which specified that the beginning capital of the partnership was $214,000 of which $209,895.72 was designated as goodwill. This agreement provided for a schedule of payments to be made to a partner withdrawing voluntarily, with no payment on return of capital investment if voluntary withdrawal occurred the first year (1970). Repayment of capital was provided in varying increments upon voluntary withdrawal by a partner during the ensuing five years.

The Lopez-Kennedy-Srite partnership produced gross receipts of $266,916.66 in 1970 and husband's net income before taxes was $81,508 for that year. For 1971 through the month of September, the partnership gross was $204,775.29 and husband's net income before taxes was $61,145.41.

During the trial, husband testified: "Every year at the end of the year or during the year I withdrew every penny of my income from the practice and used it for the benefit of the community. If there was at the end of the year say ten or fifteen thousand dollars in the office account, I would take that out and put it into a savings account or something such as that, or acquire—make an investment with it for the community." Husband confirmed that there were no cash reserves in his law practice because of this conduct, and that the assets of his law practice consisted only of a library, office equipment and accounts receivable.

Wife left high school at the age of 16, did some office work prior to the marriage, but had no special job training. Before her marriage to husband, wife worked as a cocktail waitress in Redding. Her total wages for the tax year 1957 were $1,320 plus $168 in gratuities. At the time of the **[38 Cal. App. 3d 102]** marriage of the parties, wife was 25 years of age. She had a minor daughter, born of a former marriage, which child was adopted by husband shortly after his marriage to wife. A son, born to the parties in December 1958, was at the time of the trial living with wife and his half-sister.

Since the marriage, wife has not been gainfully employed. She testified that she suffered various health problems, including a quiescent ulcer and degenerative changes to her cervical spine and thoracic spine, which could perhaps limit the kind of activities she might pursue.

During their marriage, husband and wife enjoyed a substantial and comfortable life style, which included expensive cars, home and vacations. Wife spent considerable money on clothes, accessories, fur coats and jewels. At the outset of their marriage the parties established a household budget of $750 per month, which was later changed to $475 cash deposited monthly in wife's personal checking account for her personal use for family food, a housekeeper and ironing lady. In addition, wife charged any items she

felt necessary for herself, the children and husband. These charges, the house payments, taxes and insurance were paid by husband from another account. On this basis at the time of the separation of the parties, wife incurred expenses of about $1,000 per month.

During the course of the trial the parties stipulated to the market value of the community interest in various parcels of real property. The trial court among other things found the nature and net values of the community property of the parties to be as follows:

[Tabular material omitted.] **[38 Cal. App. 3d 103]**

[Tabular material omitted.]

The court awarded to the wife as her one-half share of the community property the following:

[Tabular Material Omitted]

"Alta Mesa residence **[38 Cal. App. 3d 104]** Bank of Redding Account # 6419

The trial court ordered all items of real and personal community property not specifically awarded to the wife to be retained by the husband as his one-half of the community property; the total net worth of this one-half the court found to be in the sum of $151,033.22. In addition, the court ordered the husband and wife to assume the balance due and owing on any property awarded to each and to hold the other party harmless from any liability thereon.

Custody of the minor son was awarded to husband; that award is not challenged. Wife was awarded the sum of $200 per month spousal support to terminate after 24 months. Husband was awarded as his separate property the bank accounts which contained the balance of the cash payments made by Kennedy and Srite, the unpaid balance of the Kennedy note, and a 50 percent interest in the law partnership of Lopez, Kennedy and Srite.

1. Husband's interest in his law partnership and the proceeds from the sale of a one-half interest therein were erroneously found to be all separate property.

For reasons hereafter set forth, we hold that the trial court erred in determining that the 50 percent interest of the husband in his law practice and the proceeds paid him by his two law partners were separate property (findings 20 and 21). Husband asserts in his brief as follows: "It is clear from the uncontradicted evidence, that the law practice of the respondent at the time he opened his office on October 1, 1957, was a continuance of his already existing practice, and it was the sole and separate property of the respondent, and remained the same throughout the marriage." Husband further argues that any community interest in his law practice was withdrawn each year and that he applied the income earned therefrom to community investments. The trial court

accepted this approach. However, such position ignores the law as stated in two earlier decisions of this court.

In *Brawman v. Brawman* (1962) 199 Cal. App. 2d 876 [19 Cal. Rptr. 106], we had occasion to comment on the proper classification of a law **[38 Cal. App. 3d 105]** practice commenced one year before a marriage which lasted 21 years. During his practice husband built up a substantial earning capacity. The divorce decree was silent as to ownership of the law practice; on appeal, wife contended that she was improperly denied alimony. This court therein stated at page 882: "The law business was a substantial part of the community, but was given no valuation by the judge who, in declaring the parties to have been 'marital partners' evidently did not feel that the partnership relationship covered the law business. Where, as here, respondent had commenced the practice of law just one year before his marriage and had built up a lucrative law business by his industry and professional ability, a practice producing $24,000 a year net, the business is community property and it has a substantial value. [Citation.] In considering this value, consideration must be given to the fact that, on divorce and dissolution of the community, a professional practice goes automatically to the spouse licensed to practice it. He is not selling out or liquidating, but continuing in business. Effectually, it is the case of a silent partner withdrawing from a going business. And, if such partner is to receive fair compensation for her share, on her enforced retirement, it should be so evaluated."

[1] *In Todd v. Todd* (1969) 272 Cal. App. 2d 786, 791 [78 Cal. Rptr. 131], we again held that "While the right to practice law is a property right which cannot be classed as community property, the value of the practice at the time of dissolution of the community is community property."

[2] It is generally settled that the efforts, time and skills of the husband are community assets. (*Somps v. Somps* (1967) 250 Cal. App. 2d 328, 332-333 [58 Cal. Rptr. 304].) [3a] Assuming that husband commenced his law practice with certain monies earned by him prior to his marriage which were his separate property, the primary value of his practice was derived from his own individual efforts after marriage, rather than from the negligible sum of money initially invested in his law business. The approach urged by husband on appeal gives the worth of his separate property used in his law practice an exaggerated importance. In the instant case, the value of the law practice was clearly one and the same as the husband's energy, skill, judgment, intelligence and personality as a practicing attorney. Even though, as argued at trial, the retirement and death of other attorneys in the Redding area may have contributed to the growth of husband's practice, these factors cannot be deemed the "other favorable business factors" which were determinative in Somps. In addition, the trial court found in Somps that husband's equity in the engineering partnership was a reasonable return on his separate property, and the various interests in real property were bought and paid for by the business partners as partnership investments, with partnership credit and not from community funds. **[38 Cal. App. 3d 106]**

In *Beam v. Bank of America* (1971) 6 Cal. 3d 12 [98 Cal. Rptr. 137, 490 P.2d 257], our Supreme Court recently discussed the two approaches used by California courts in apportioning earnings between separate and community income. The court stated (at p. 18): "One method of apportionment, first applied in *Pereira v. Pereira* (1909) 156 Cal. 1, 7 [103 P. 488], and commonly referred to as the *Pereira* approach, 'is to allocate a fair return on the [husband's separate property] investment [as separate income] and to allocate any excess to the community property as arising from the husband's efforts.' (*Estate of Neilson* (1962) 57 Cal. 2d 733, 740 [22 Cal. Rptr. 1, 371 P.2d 745].) The alternative apportionment approach, which traces its derivation to *Van Camp v. Van Camp* (1921) 53 Cal. App. 17, 27-28 [199 P. 885], is 'to determine the reasonable value of the husband's services ... , allocate that amount as community property, and treat the balance as separate property attributable to the normal earnings of the [separate estate].' (*Tassi v. Tassi* (1958) 160 Cal. App. 2d 680, 690 [325 P.2d 872].)" (Fns. omitted.)

Factual comparison of *Pereira, Van Camp* and *Beam* with the case at bench demonstrates striking differences. In each of the cited cases, the husband's separate property occupied a key role in the husband's business. In *Van Camp* and *Beam* the husband's efforts had a minor influence on the growth of the investment. In *Pereira*, the case perhaps most analogous to the matter before us, husband's efforts were deemed important but additionally the presence of his separate property capital was considered a requisite. [4] As stated in *Beam* (at p. 18): "'In making such apportionment between separate and community property our courts have developed no precise criterion or fixed standard, but have endeavored to adopt that yardstick which is most appropriate and equitable in a particular situation ... depending on whether the character of the capital investment in the separate property or the personal activity, ability, and capacity of the spouse is the chief contributing factor in the realization of income and profits [citations] ... [Par.] In applying this principle of apportionment the court is not bound either to adopt a predetermined percentage as a fair return on business capital which is separate property [the Pereira approach] nor need it limit the community interest only to [a] salary fixed as the reward for a spouse's service [the *Van Camp* method] but may select [whichever] formula will achieve substantial justice between the parties. [Citations.]' (*Logan v. Forster* (1952) 114 Cal. App. 2d 587, 599-600 [250 P.2d 730] ....)" (Italics added.)

Many past and present distinguished California lawyers of initial humble and impecunious beginnings will attest to the fact that it is not ordinarily capital investment by a sole legal practitioner which is the chief contributing **[38 Cal. App. 3d 107]** factor in the realization of income and profits. [3b] On retrial it will be for the trial court to determine which of the recognized approaches will most effectively achieve substantial justice between the parties. We make this observation with the reservation, however, that the trial court might well conclude that husband's initial investment in his law practice became so commingled with the community that all traces and vestiges of it as separate property have been lost. (See *Mueller v. Mueller* (1956) 144 Cal. App. 2d 245, 250 [301 P.2d 90].)

2. Existence and valuation of goodwill and assets of husband in his law practice.

Several serious questions have been raised as to the valuation of husband's interest in his law partnership. [5] Pursuant to section 4800 of the Civil Code (1970 Family Law Act), a trial court is now required to "divide the community property and the quasi-community property of the parties ... equally." In order to do this, the trial court must make specific findings of fact as to the nature and value of the specific property of the parties. (*May v. May* (1969) 275 Cal. App. 2d 264 [79 Cal. Rptr. 622]; *Hong v. Hong* (1965) 237 Cal. App. 2d 239, 241 [46 Cal. Rptr. 710]; *Cardew v. Cardew* (1961) 192 Cal. App. 2d 502 [13 Cal. Rptr. 620]; Cal. Rules of Court, tit. IV, div. I, ch. 2, rule 1242.)

It has been urged that there can be no "goodwill" in husband's professional law business upon dissolution. Neither *Lyon v. Lyon* (1966) 246 Cal. App. 2d 519, 524 [54 Cal. Rptr. 829], nor *Heywood v. Sooy* (1941) 45 Cal. App. 2d 423 [114 P.2d 361], are applicable to the case at bench, since both cases involved dissolutions of law partnerships between practicing attorneys. The case before us deals solely with a marital dissolution and not a law partnership dissolution. The court in *Golden v. Golden* (1969) 270 Cal. App. 2d 401, 405 [75 Cal. Rptr. 735], noted the crucial distinction: "Where, as in Lyon, the firm is being dissolved, it is understandable that a court cannot determine what, if any, of the good will of the firm will go to either partner. But, in a matrimonial matter, the practice of the sole practitioner husband will continue, with the same intangible value as it had during the marriage. Under principles of community property law, the wife, by virtue of her position of wife, made to that value the same contribution as does a wife to any of the husband's earnings and accumulations during marriage. She is as much entitled to be recompensed for that contribution as if it were represented by the increased value of stock in a family business."

[6] Consistent with this principle of community property law, if "goodwill" in a professional practice as a going business is found to exist **[38 Cal. App. 3d 108]** as an asset at the time of a marital dissolution, such asset is subject to the innumerable consequences of the Family Law Act of 1970. In such cases, professional goodwill may thus be separate property, community property, or varying degrees of both depending upon the particular circumstances. The fact that "professional goodwill" may be elusive, intangible, difficult to evaluate and will ordinarily require special disposition, is not reason to ignore its existence in a proper case.

It has been aptly stated: "Accountants, writers on accounting, economists, engineers, and courts, have all tried their hands at defining goodwill, at discussing its nature, and at proposing means of valuing it. The most striking characteristic of this immense amount of writing is the number and variety of disagreements reached." (Canning, The Economics of Accountancy (1929) p. 28.)

[7] Mindful of the nebulous area into which we venture, we believe that for purposes of a marital dissolution, the parties are primarily concerned with the existence, value and consequences of the "goodwill" of a professional business in an economic sense, as distinguished from legal or accounting concepts. As stated by Professor Norton M.

Bedford, University of Illinois: "It seems to be well established in the literature of economics that the economic value of any asset depends upon the future net receipts which the asset will produce. While these receipts to a consumer are receipts of satisfactions, to a business firm the receipts are cash or cash equivalent (more broadly, purchasing power equivalent). Since the future is unknown, different individuals and business entities will have different expectations as to what these future receipts will be. Thus, there is no certainty in any one valuation of an asset. To the contrary, a considerable amount of uncertainty attaches to any valuation. But subject to this variability, the conceptual view of the economic value of any asset is based on the future receipts which the asset will produce. Because individual assets are not used in isolation but as a part of an organized entity containing a variety of distinct assets, the economic concept of goodwill is introduced when the future receipts of the organization cannot be assigned as a contribution of a finite list of specific assets. That is, the search to assign a specific cause, in the form of a specific asset, for the expected future receipts requires the introduction of goodwill as an asset." (Bedford, Goodwill, in Handbook of Modern Accounting (Davidson ed. 1970) ch. 19, p. 19-5.) (Italics added.)

We think it follows that in marital cases the expectancy of future earnings **[38 Cal. App. 3d 109]** is not synonymous with, nor should it be the basis for, determining the value of "goodwill" of a professional practice, but is simply a factor to consider in deciding if such an asset exists. A community property interest can only be acquired during the marriage, and it would be inconsistent with that philosophy to assign value to the postmarital efforts of either spouse. (*In re Marriage of Fortier* (1973) 34 Cal. App. 3d 384, 387-388 [109 Cal. Rptr. 915].)

[8] We emphasize that no rigid or unvarying rule has been enunciated by our courts for determining the existence or value of the "goodwill" of a law practice or any other profession as a going business, and therefore each case must be determined upon its own facts. Whatever the result in a given case, we hold that where the issue is raised in a marital dissolution action, the trial court must make a specific finding as to the existence and value of the "goodwill" of a professional business as a going concern whether related to that of a sole practitioner, a professional partnership or a professional corporation. (*Golden v. Golden,* supra, 270 Cal. App. 2d 401 (sole medical practitioner); *Todd v. Todd,* supra, 272 Cal. App. 2d 786 (sole legal practitioner); *Brawman v. Brawman,* supra, 199 Cal. App. 2d 876 (sole legal practitioner).)

In so holding, we do not imply that every professional business as a going concern necessarily has a valuable goodwill, or that if found to exist the value thereof may be precisely fixed in terms of so many dollars. Instead, there are certain factors, assuredly not all inclusive, which may tend to provide the trial court with broad latitude in resolving these questions, with one objective being the determination of the fair economic value of all the community property for equal division purposes. (Civ. Code, § 4800.) In addition, if the trial court were to find in a proper case that the asset of professional goodwill is the separate property of the practitioner, where spousal or child support is an issue, a specific finding as to value is required, since it may directly affect the question

of ability to meet those obligations. (*In re Marriage of Cosgrove* (1972) 27 Cal. App. 3d 424, 433-434 [103 Cal. Rptr. 733].)

[9] Certain matters merit consideration which may be said reasonably to contribute to, diminish, or affect the intangible value of professional goodwill at the time of dissolution and the continuity and retention of the benefits thereof which the professional practitioner will continue to enjoy after the marital dissolution. In that context some such factors are the practitioner's age, health, past demonstrated earning power, professional reputation in the community as to his judgment, skill, knowledge, his comparative professional success, and the nature and duration of his **[38 Cal. App. 3d 110]** business as a sole practitioner or as a member of a partnership or professional corporation to which his professional efforts have made a proprietary contribution. In addition, consideration should be given to the value of the "fixed" and "other assets" of the professional business with which the "goodwill" is to continue its relationship.

[10] While "market value" and the value for marital dissolution purposes of "professional goodwill" may be synonymous, in our view such value should be determined with considerable care and caution, since it is a unique situation in which the continuing practitioner is judicially forced to buy an intangible asset at a judicially determined value and compelled to pay a former spouse her share in tangible assets. (Civ. Code, § 4800.) Asset values and liabilities should be determined as near to the date of trial as reasonably practicable (Randolph v. Randolph (1953) 118 Cal. App. 2d 584 [258 P.2d 547]), with the reservation, however, that since the enactment of Civil Code section 5118, effective March 4, 1972, any portion of the law practice assets including goodwill which are attributable to the earnings and accumulations of a spouse living separate and apart are the separate property of the spouse earning or accumulating the same. This could be significant where the earnings of a professional person are substantial and the time lapse from separation to trial is considerable.

[11] In determining the value of a law practice or interest therein, the trial court should determine the existence and value of the following: (a) fixed assets, which we deem to include cash, furniture, equipment, supplies and law library; (b) other assets, including properly aged accounts receivable, costs advanced with due regard for their collectability; work in progress partially completed but not billed as a receivable, and work completed but not billed; (c) goodwill of the practitioner in his law business as a going concern; and (d) liabilities of the practitioner related to his business.

In the case at bench, husband and his two law partners arrived at an agreed value of $209,895.72 for goodwill in husband's law business as of January 1, 1970, some 14 months prior to the husband's filing for a dissolution of the marriage. On remand, the trial court should give careful weight to that agreement, with the observation, however, that the agreement allocated the sum of $4,897.28 to the value of the furniture, equipment and law library. There is no mention in the agreement of the "other assets" of a law practice such as accounts receivable, costs advanced, work in progress not billed, or work completed and not billed. As properly urged by the wife, the value of these "other assets" should be determined, along with the question whether the partners

contemplated the **[38 Cal. App. 3d 111]** inclusion of their value in the $209,895.72 goodwill item. Finally, in light of such findings, the trial court should determine the value of the "goodwill," if any, in husband's law partnership business.

We note that at the time of trial husband's capital account in his law partnership was in excess of $120,000. Whatever its determined amount and ultimate nature, this item, along with the $40,000 Kennedy note and the $67,000 paid to husband by his partners must be considered in the determination of the extent of the community property of the parties.

3. Did the trial court err in denying wife's motion to inspect husband's confidential attorney-client files?

Wife's counsel made a motion to require husband to produce and permit inspection and audit of his legal files by wife's counsel and her certified public accountant. The basis of the motion was the claimed necessity to value accurately the law practice in which the wife asserted a community interest.

[12] After hearing the motion, the court held that the individual client files in husband's law office were confidential and not available for inspection. The court did hold, however, that contracts between clients and their attorney with reference to fees are not confidential; journals, cash receipts and cash receivables were relevant prior to the date of separation; and that the husband should make available to wife's attorney the fee arrangements with each individual client.

Upon dissolution of a marriage, while the nonlawyer spouse may be a silent community property partner withdrawing from a going business (*Todd*, supra), she is not entitled to invade the arena of confidence which exists between her lawyer husband and his clients. Nor is a court entitled under the guise or offer of judicial secrecy to compel a violation of such privilege. Matters which are privileged and confidential between an attorney and his clients are not subject to forceful invasion on the basis of marital economics or discovery convenience. We think the trial court properly disposed of the matter, with the following exception: Wife had the right to depose husband and his law partners concerning the value of all assets of the law practice, as heretofore noted, up to the time of trial in this case without invading privileged matter or information specifically declared to be confidential under Evidence Code section 952. An examination of the record and exhibits discloses there was full compliance with the court's discovery order and the order was broad enough to reach sufficient evidence to support findings as to the existence and value of the "fixed assets," "other assets," "goodwill" of the law practice and husband's income. **[38 Cal. App. 3d 112]**

4. Did the trial court err in deferring the issue of attorney fees and costs until after the decision on the principal issues?

Prior to trial, wife's counsel moved for $5,000 on account of attorney's fees for services which had not yet been rendered, on the representation that such sum was his firm's

minimum retainer. At the time of the hearing on the motion the trial court apprised both attorneys as follows: "I can't anticipate how much work is going to be necessary to resolve the issues here within the realm of any precision, and my attitude, perhaps, is wrong, but I believe it is within the law and practicality to [award] an adequate figure to permit counsel to proceed with whatever is necessary, and leave the ultimate [award] of attorney's fees and costs to the conclusion of the case. I feel that is the real fair way of doing it." [13] At the conclusion of the hearing the court ordered husband to pay wife's counsel the sum of $2,000 on account of attorney's fees to be reasonably incurred, and the further sum of $1,000 for costs. Wife cites *Pope v. Pope* (1951) 107 Cal. App. 2d 537 [237 P.2d 312], for the proposition that the trial court must give the wife sufficient attorney's fees and costs so that she has the means to hire counsel of adequate standing to equalize the contest and protect her rights.

Wife argues that deferral of the determination of an award for her attorney's fees and costs until after the trial court had resolved the other issues of the case was an abuse of judicial discretion which resulted in prejudicial error, urging that such ruling allowed the trial court to consider circumstances that, if offered at the time of the normal course of trial, would have been irrelevant, immaterial, privileged and/or inadmissible. Wife cites no authority for such a concept. The matter of wife's counsel fees and costs were proper issues before the trial court, and the continuation of such issues to the conclusion of the case was authorized by section 1048, subdivision (b), of the Code of Civil Procedure. (See also, 3 Witkin, Cal. Procedure (2d ed. 1971) § 266, p. 1936.) Not only was the wife able to retain counsel of her own choosing, but as evident from the trial record, an attorney of obvious competence. Finally, wife fails to point out what circumstances or matters were improperly considered by the trial court in the determination of fees and costs allowed. Her contention is without merit.

5. Was the award of attorney's fees and costs inadequate?

After trial of the main issues, wife's counsel moved for attorney's fees of $15,345.32, which figure included costs. The trial court concluded that the amount of time invested by wife's counsel was unreasonable and unnecessary. After summarizing its opinion of the way the case was conducted, **[38 Cal. App. 3d 113]** the trial court stated in its memorandum as follows: "The court is of the opinion that Mrs. Lopez could have been well and properly represented, by foresight—not hindsight, with a fee reasonably incurred in the sum of $5,000. The sum of $2,000 has been paid on account. Petitioner will pay counsel for Respondent the additional sum of $3,000. Petitioner will also pay the firm of Matson, Isum & Company [accountants] the sum of $1,500 for accounting services rendered on behalf of Respondent. The parties will otherwise each bear his or her own fees, expenses and costs of suit except as heretofore or herein ordered paid by Petitioner."

Wife contends that this award of attorney's fees and costs was inadequate. To sustain such a position, she carries a difficult burden.

[14] As summarized in *Smith v. Smith* (1969) 1 Cal. App. 3d 952, 958 [82 Cal.Rptr. 282]: "The question of the reasonableness of the order for attorney's fees is addressed to the sound discretion of the trial court [citations], and in the absence of a clear showing of abuse its determination will not be disturbed on appeal. [Citations.] "'Abuse of discretion is never presumed. It must be affirmatively established. A reviewing court is not authorized to revise the lower court's judgment even if it should be of the opinion that it would have made a different award had the matter been submitted to its judgment in the first instance, in the absence of a clear abuse of discretion.'" [Citation.] 'The discretion was the trial judge's, not ours; and we can only interfere if we find that under all the evidence, viewed most favorably in support of the trial court's action, no judge could reasonably have made the order that he did.' [Citations.]"

[15] It is well established that in determining a reasonable fee in dissolution cases the trial court is permitted to consider various factors: namely, the nature of the litigation, its complexity, the nature and extent of the contest, the amount involved, the financial circumstances of the parties, the skill required, the professional standing and reputation of the husband's attorneys and the attorneys selected by the wife. (*Pope v. Pope* (1951) 102 Cal. App. 2d 353 [227 P.2d 867]; *Palmquist v. Palmquist* (1963) 212 Cal. App. 2d 322, 338 [27 Cal. Rptr. 744].)

The exercise of sound discretion by the trial court in the matter of attorney's fees includes also judicial evaluation of whether counsel's skill and effort were wisely devoted to the expeditious disposition of the case. Certainly a desirable objective of domestic litigation is prompt and equitable resolution of marital difficulties rather than their bitter prolongation Conscientious and successful efforts by counsel to resolve as many areas of disagreement as possible without judicial intervention is entitled to serious consideration in awarding attorney's fees. Compensable professional legal skill is not limited to trial time or courtroom techniques alone. **[38 Cal. App. 3d 114]**

Although this court might disagree with the opinion of the trial judge as to the reasonableness or necessity of the time invested by wife's counsel in the representation of her interests, still we cannot say as a matter of law that the order as to fees and costs allowed was unreasonable. The burden is on wife to establish an abuse of discretion, which has been characterized as follows: "In a legal sense discretion is abused whenever in the exercise of its discretion the court exceeds the bounds of reason, all of the circumstances before it being considered. ..." (*Crevolin v. Crevolin* (1963) 217 Cal. App. 2d 565 at p. 572 [31 Cal. Rptr. 622].) No abuse of the trial court's discretion in the matter of counsel fees affirmatively appears of record.

In so holding, we are constrained to point out that our affirmance of the fees and costs awarded the wife is controlled by the application of an "abuse of discretion standard," and thus should not be taken by the trial court as tacit approval of adequacy, particularly with respect to any future request for counsel fees and costs on remand, considering the factors enumerated in *Pope* and *Palmquist*, supra.

6. Was the award of spousal support inadequate in amount and duration?

Wife was awarded the sum of $200 per month spousal support for a period of 24 months. [16a] For reasons hereinafter set forth, we hold that the determination by the trial court of the amount and duration of spousal support was an abuse of discretion. In so holding we are not unmindful of the fact that the scope of review by an appellate court of such a matter is circumscribed. A wide discretion is vested in the trial court (*Hall v. Hall* (1954) 42 Cal. 2d 435, 442 [267 P.2d 249]), and thus an appellate court must act with cautious judicial restraint, even though the particular award might appear on appeal to be modest or generous under the particular circumstances. This court in *Brawman v. Brawman,* supra, 199 Cal.App.2d at pages 879-880 said: "The discretion of the trial court 'is not arbitrary ... "it must be exercised along legal lines, taking into consideration the circumstances of the parties, their necessities and the financial ability of the husband. ... In a legal sense, discretion is abused whenever, in its exercise, a court exceeds the bounds of reason,—all the circumstances before it being considered.'"'

[17] We believe that an abuse of discretion occurs when, after calm and careful reflection upon the entire matter, it can be fairly said that no judge would reasonably make the same order under the same circumstances. Such is the case at bench. **[38 Cal. App. 3d 115]**

The basis for an order of spousal support to be paid to a party in a dissolution action is found in Civil Code section 4801, subdivision (a), which reads in part as follows: "In any judgment decreeing the dissolution of a marriage or a legal separation of the parties, the court may order a party to pay for the support of the other party any amount, and for such period of time, as the court may deem just and reasonable having regard for the circumstances of the respective parties, including the duration of the marriage, and the ability of the supported spouse to engage in gainful employment without interfering with the interests of the children of the parties in the custody of such spouse. ..."

In the case *of In re Marriage of Cosgrove,* supra, 27 Cal.App.3d at page 434, the court in upholding a decision denying spousal support said: "'... In determining the need for, the amount of and the duration of spousal support under The Family Law Act, the court is to ignore marital fault and is to base its determination solely on the circumstances of the parties, including the duration of their marriage and the ability of the supported spouse to engage in gainful employment (Civ. Code, § 4801, subd. (a).) "'Circumstances' includes 'practically everything which has a legitimate bearing upon the present and prospective matters relating to the lives of both parties.' [Citation omitted.] '[I]t refers to the needs of the parties and the abilities of the parties to meet such needs; and in measuring such circumstances, consideration should be given to property owned and obligations to be met as well as ability to earn and actual earnings.' [Citation omitted.]" ..."'

[18] The elimination of "fault" as a factor to be considered by the trial court in the allowance or denial of spousal support under The Family Law Act (Stats. 1969, ch. 1608, p. 3314, effective Jan. 1, 1970; *In re Marriage of Rosan* (1972) 24 Cal. App. 3d 885, 892 [101 Cal. Rptr. 295]; *In re Marriage of Cosgrove,* supra, at pages 433-434) did

not eliminate the requirement of a fair and reasonable consideration of "nonfault" factors which have long been judicially established.

The composition of the family unit in the case at bench appears to be typical in that the husband was the working provider of income, and the wife, who was not gainfully employed outside of the home during the course of the marriage, was committed to care for the home and two minor children. At the time of trial, husband's daughter by step-parent adoption was 15 years of age and her custody was awarded to the wife. Husband was ordered to pay $250 per month for child support. The natural son of the parties was age 12, and his custody was awarded to husband.

[19] While by no means all inclusive, the following are some of the **[38 Cal. App. 3d 116]** circumstances applicable to the case at bench which a trial court should consider in determining the allowance, amount and duration of spousal support:

1. A comparison of the financial position of each of the parties before and after the dissolution (*Huntington v. Huntington* (1953) 120 Cal. App. 2d 705 [262 P.2d 104]) with due consideration given as to property owned and obligations to be met (*Hall v. Hall,* supra, 42 Cal.2d 435).

2. The ability of the wife to work and her potential earnings considered in the context of her age, training, and likelihood of employment. (*Brawman v. Brawman,* supra, 199 Cal. App. 2d 876; *Arnold v. Arnold* (1946) 76 Cal. App. 2d 877 [174 P.2d 674]; *Newbauer v. Newbauer* (1949) 95 Cal. App. 2d 36 [212 P.2d 240]; *Haldeman v. Haldeman* (1962) 202 Cal. App. 2d 498 [21 Cal. Rptr. 75].)

3. The reasonable needs of the wife for sustenance, clothing, shelter and care due her in the station of life to which she is accustomed (*In re Marriage of Siegel* (1972) 26 Cal. App. 3d 88 [102 Cal.Rptr. 613]), within the ability of the husband to provide (*Pope v. Pope,* supra, 102 Cal. App. 2d 353; Civ. Code, § 4801, subd. (a)), and considering her age, mental and physical health.

4. The nature of the separate estate of the wife with its actual and reasonable income potential. (*Dallman v. Dallman* (1959) 170 Cal. App. 2d 729 [339 P.2d 636].)

5. Whether the wife has made adequate effort to find suitable work, consistent with her age, ability and health, and to conscientiously establish herself as genuinely endeavoring to be partially self-supporting, consistent with her maternal obligations. (*Webber v. Webber* (1948) 33 Cal. 2d 153 [199 P.2d 934]; *In re Marriage of Dennis* (1973) 35 Cal. App. 3d 279, 284 [110 Cal. Rptr. 619]; *In re Marriage of Rosan,* supra, 24 Cal. App. 3d 885.)

6. The nature and extent of the community property awarded to each of the parties, with its actual and reasonable potential for the production of net income after state and federal taxes. (*Stuckey v. Stuckey* (1964) 231 Cal. App. 2d 382, 386 [41 Cal. Rptr. 792].)

7. Income tax consequences of spousal support to both the paying and receiving spouse.

8. The needs of the husband, including necessities and reasonable living expenses. (*Hall v. Hall,* supra, 42 Cal. 2d 435; *Jones v. Jones* (1955) 135 Cal. App. 2d 52 [286 P.2d 908].) **[38 Cal. App. 3d 117]**

9. The ability of the spouse to pay, based on his financial condition, resources, ability to earn and actual earnings (*Hall v. Hall,* supra, 42 Cal. 2d 435, 442), with due consideration given to income tax and social security deductions, life and health insurance premiums, and retirement contributions, if any.

10. Other valid support obligations of the paying spouse to his lawful dependents.

11. The duration of the marriage. (Civ. Code, § 4801, subd. (a).)

[16b] A brief summary of the findings of the trial court, in light of the foregoing, establishes the lack of adequate consideration of the essential circumstances to be evaluated in determining the duration and amount of spousal support for the wife. As of the date of trial, the court found the parties possessed $302,699.45 in community property, with husband's net earnings before taxes averaging approximately $7,000 per month during the seven years preceding the dissolution. In addition, the trial court found and awarded husband as his separate property over $120,000 representing his capital account in his law partnership, plus $27,229.20 cash and the balance of the Kennedy note in the sum of $34,670. It is undisputed that husband's earnings from the date of filing for dissolution to time of trial (some nine months) continued at an annual rate of approximately $80,000 per year before taxes. Both husband and wife testified to average living expenses of $1,000 per month, with husband obligated to pay insurance, property taxes, club dues and payments averaging about $2,058 per month. Although not specifically mentioned in the findings, we note that husband receives the further sum of $1,075 per month rental income from the law office building awarded to him which offsets part of his foregoing monthly payments.

The wife was awarded the family residence on which there was a balance of $12,766.57 owing in monthly payments of $160 per month, plus $673 in annual property taxes. Wife is without any separate estate and made no effort to seek employment after separation, but rather maintained the family residence for her and the two minor children. There was no supportive medical evidence to verify wife's physical condition, and she had not sought medical care for her spinal condition during the four years preceding the trial. The trial record supports the finding that wife had the ability to engage in gainful employment, although her education, training, skill and age would appear to limit her earning potential to some degree. Husband is obligated to pay $250 per month for the support of his daughter and to support his son. The duration of the marriage was 14 years and 3 months. **[38 Cal. App. 3d 118]**

A cursory examination of the "community property" awarded wife indicates that 40 percent thereof (i.e., the equity in the family residence, furniture and Mark III Lincoln automobile at a total value of $57,366.48) are without income potential, unless converted to cash, or the family residence sold or rented. An additional 40 percent of the "community property" awarded wife is in the form of 817 shares of stock in the Bank of Redding and a secured note on the Westchester Building, the combined value of which produces a monthly taxable income of $322.92. The balance of the "community property" awarded the wife consisted of cash in the sum of $23,419.47 which if invested at 6 percent interest would produce an additional taxable income of $117.09 per month.

Husband seeks to justify the award of $200 per month spousal support for two years on the premise that the income to be earned from the "community property" awarded wife, plus the $250 per month child support awarded for the daughter will provide wife with a total of $890 per month to meet her needs. Such an assumption completely ignores several crucial factors: namely, husband's ability to pay; duration of the marriage; the tax consequences imposed upon the wife due to the "kind" of community assets awarded to her; and the substantial financial disparity of the parties after the dissolution due to the erroneous finding that husband's interest in his law practice and the proceeds from the sale of one-half thereof were his separate property.

Since oral argument, respective counsel have urged our consideration of two recent cases: *In re Marriage of Patrino* (1973) 36 Cal. App. 3d 186 [111 Cal. Rptr. 367], is clearly distinguishable from the case at bench, not only with respect to comparative ability to pay, but in Patrino the three minor children were awarded to the husband and the wife was able to seek employment free from parental responsibilities. (Civ. Code, § 4801, subd. (d).) Wife's reliance on *In re Marriage of Dennis,* supra, 35 Cal. App. 3d 279, is also without merit. The duration of the marriage in *Dennis* was 25 years, the wife was over 50 years of age with undisputed eyesight problems, which during the allowed four years of fixed terminable support could substantially impair her ability to perform her only skill, that of a seamstress.

Whatever the implications of *Dennis* (supra), we emphasize that in our view the abuse of discretion involved in the case at bench relates solely to the amount and duration of spousal support, and not to the fact that such support was ordered fixed and terminable by the trial court. [20] As noted in *Patrin*o, supra, section 4801, subdivision (d), of the Civil Code now provides for the absolute termination of spousal support unless the trial court in its original order retains jurisdiction to extend an order for **[38 Cal. App. 3d 119]** support. We think this evidences a legislative intent to diminish constant modification proceedings, to provide both parties some degree of post-dissolution economic stability by minimizing the inherent apprehension of the possible loss or extension of spousal support, and in proper cases to eliminate permanent burden or dependence, thus motivating both parties to seek a new life completely free from a former marital failure.

The judgment insofar as it awards the community property of the parties and fixes the amount and duration of spousal support is reversed. In all other respects the judgment is affirmed. Wife is to recover her costs.

Richardson, P. J., and Janes, J., concurred.

T.C. Memo. 2010-104

UNITED STATES TAX COURT

ANDREW K. LUDWICK, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

WORTH Z. LUDWICK, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 3281-08, 3282-08. Filed May 10, 2010.

Paul H. Roskoph, for petitioners.

Andrew R. Moore, for respondent.

MEMORANDUM OPINION

HALPERN, Judge: Respondent determined deficiencies in Federal gift tax for 2005 for Andrew K. Ludwick and Worth Z. Ludwick of $86,529 and $88,785, respectively. Petitioners owned a vacation home as tenants in common, and the only issue for

decision is the value of the interests therein that they separately transferred in trust to a so-called qualified personal residence trust.

Unless otherwise stated, all section references are to the Internal Revenue Code in effect for 2005, and all Rule references are to the Tax Court Rules of Practice and Procedure.

We round all dollar amounts to the nearest dollar.

Background

Some facts have been stipulated and are so found. The stipulation of facts and accompanying exhibits are incorporated herein by this reference.

Petitioners are husband and wife, and they resided in California when they filed the petition.

In 2000, petitioners purchased unimproved real property on a bluff on the north shore of Hawaii's Big Island. By the end of 2003, they had improved the property by constructing a vacation home. In 2004, they owned the improved property (the property) as tenants in common, each having an undivided one-half interest therein.

In December 2004, petitioners executed agreements establishing separate qualified personal residence trust arrangements. In February 2005, petitioners transferred their undivided interests in the property pursuant to those trust agreements. At the time of the transfers, the property had a

fair market value of $7.25 million and an annual operating cost of approximately $350,000.

On their separate 2005 Federal gift tax returns, petitioners each reported a gift resulting from the transfers in trust. They valued their separate one-half interests in the transferred property at a discount of 30 percent; viz, $2,537,500 (0.70 x 0.50 x $7,250,000). In determining the deficiencies in gift tax, respondent allowed a discount of only 15 percent, so that he computed $3,081,250 to be the value of each undivided one-half interest that petitioners transferred. On brief, respondent argues for a discount of no more than 11 percent, which results in a value for each transfer of $3,226,250.

Discussion

I. Introduction

As stated, we must determine the fair market value of each petitioner's undivided one-half interest in the property.

The standard for determining fair market value for purposes of the gift tax is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having knowledge of the relevant facts. Sec. 25.2512-1, Gift Tax Regs. Petitioners bear the burden of proof and do not argue otherwise.

See Rule 142(a).[1] We find that, at the time of the transfer, the fair market value of each undivided one-half interest in the property was $3,000,089, for a discount of approximately 17 percent. We will explain the process by which we reach that result.

II. Valuation of the Gifts

To support their respective valuations, the parties have in part relied on the testimony of experts. We have considered that testimony and have in part relied on it in reaching our conclusion.

A. Method of Valuation

1. The Expert Reports

Petitioners request that we value each undivided interest by discounting half the fair market value of the property ($3,625,000) by 30 percent to reflect the disadvantages of owning an undivided fractional interest in property. Respondent requests a broadly similar approach, although he reaches a different conclusion regarding the size of the proper discount.

Petitioners' expert, Carsten Hoffman, an expert in the valuation of fractional interests in property, relied on analyses of sales of undivided interests and partnership interests.

[1]Petitioners have not raised the issue of sec. 7491(a), which shifts the burden of proof to the Commissioner in certain situations. We conclude that sec. 7491(a) does not apply here because petitioners have not produced any evidence that they have satisfied the preconditions for its application.

Respondent's expert, Stephen Bethel, also an expert in the valuation of fractional interests in property, relied on analyses of sales of undivided interests, various surveys of brokers, a review of tender offers for majority interests in public companies, and lawyers' estimations of the cost of partition. We do not find the analysis of either expert convincing.

Mr. Hoffman, in his direct testimony, compared the discounts from 69 "undivided interest transactions" between 1961 and 2006. He calculated the mean and median discounts for the set of all the transactions and for three subsets: 16 income-producing properties, 26 parcels of raw land, and 22 transactions involving undivided 50-percent interests. He also provided the range of discounts for all the transactions and for each of those three subsets. He provided no way for us to evaluate his analysis, however. He failed not only to explain how the discounts were calculated (i.e., how did he calculate the underlying fair market value?) but also to provide any measure of the variability or dispersion of his data points (e.g., their standard deviations). Most importantly, he did not provide any of the data; we do not know the specifics of any of the "undivided interest transactions". We have no way to know how comparable those properties were to the one here in issue.

Mr. Hoffman also compared petitioners' property to 10 real property limited partnerships. Yet petitioners' property was

never intended to produce income; it was a private vacation home, not a source of revenue. The cashflow statements of the 10 limited partnerships (which held, for instance, apartment buildings and mobile homes) are not relevant.

Mr. Bethel, in his direct testimony, in part relied on four sales of undivided interests between 2002 and 2007. Yet all the sales involved commercial property in the eastern United States. We are not convinced that such data tells us much about the appropriate discount for a multimillion dollar vacation home in Hawaii.

Mr. Bethel also relied on three surveys of California brokers that his firm conducted in 1999, 2005, and 2008. The survey questions involved the discounts associated with fractional interests in property. About 10 brokers responded to each survey by providing a range of discounts and a brief explanation.[2] Yet we have no way of evaluating or of reconciling the brokers' responses because we have no information about the transactions on which the brokers based their opinions. Moreover, the brief explanations are often so cryptic as to

[2]We ignore some responses. For example, one broker opined that the discount associated with the sale of a fractional interest would be 15 percent (he did not give a range), yet the comment beside his estimate stated: "He has never sold a minority position in a tenancy in common, but in his opinion there must be a discount for the position."

reveal almost nothing about the reasons behind the discount ranges. The surveys provide little guidance.

Mr. Bethel also relied on two surveys with brokers regarding so-called pooled public tenancy-in-common investments, which are professionally managed investment properties with multiple owners. Fractional interests in those investments generally trade with almost no discount. In his report, Mr. Bethel conceded that there are "four critical differences" between those investments and petitioners' property,[3] yet he argued that those differences would only "slightly" increase the discount proper here. Mr. Bethel did not explain his conclusion, and, without any reasoning, we are not convinced.

Finally, Mr. Bethel relied on a professional review of tender offers for majority interests in public companies. Specifically, he relied on transactions involving the change of control of real estate companies. He calculated the discounts as follows: If the market price were $100 and a buyer tendered $125, then the premium would be 25 percent and the discount would be 20 percent. As Mr. Bethel noted, however, the size of a control premium depends on many factors (e.g., "the buyer's desire or need to acquire the company * * * to complement his

[3]Pooled public tenancy-in-common investments are professionally managed, and interests therein are readily marketable, represent ownership in a diverse set of properties, and have relatively steady income streams.

present operation") that do not seem relevant to the discount appropriate here. We find the tender offer analysis unhelpful.

2. Partition

At trial, we asked both experts why a buyer of an undivided interest in the property would consider the interest worth any less than a proportional share of the fair market value of the whole property reduced by the cost to the buyer of partition; i.e., the cost to end joint ownership involuntarily by a judicially mandated sale (as a single residential property, the property was unlikely to be divided into separate estates) and to distribute the proceeds appropriately. Both convinced us that a buyer would also take into account marketability or liquidity risk; i.e., "the risk of being unable to sell an asset quickly at its fair market value." Downes & Goodman, Dictionary of Finance and Investment Terms 391 (7th ed. 2006). They disagreed, however, as to the size of the appropriate discount and as to whether partition would even be necessary.

Although Mr. Hoffman insisted that a buyer would consider more than just the cost of partition and the marketability risk, he failed to convince us. Certainly a tenancy in common is not the ideal way for two strangers to own a vacation home. That does not mean, however, that a buyer would discount an undivided interest by any more than the cost of liquidating his investment

and an additional amount to reflect the risk occasioned by a less than immediate sale. Indeed, Mr. Hoffman testified:

> And if you have the right to * * * force a partition, you will certainly consider that. And if an investor were to come to me and say, well, I demand an 80 percent discount because it's an undivided interest, I would say, well, that doesn't make sense because you can partition it for significantly less than that, so why would you demand an 80 percent discount.

The logic of that statement is that a buyer who had a right to partition could not demand a discount greater than (1) the discount reflecting the cost and likelihood of partition and (2) the discount representing the marketability risk because, if he did, another (rational) buyer would be willing to bid more. That iterative process would drive the discount down to the discount reflecting the expected cost of partition and the marketability risk. Mr. Hoffman failed to convince us otherwise.

Petitioners concede that Hawaii law provides for partition of real property. See Haw. Rev. Stat. Ann. sec. 668-1 (Lexis Nexis 2007). A buyer would thus be willing to pay an amount equal to the present value of (1) the fair market value of 50 percent of the property upon sale less (2) his costs of maintaining the property and his costs of selling the property (perhaps including the cost of partition). Accordingly, to determine the price that a buyer would be willing to pay, we must figure (1) the length of the partition process, its costs (including the cost of selling the property), and the likelihood

partition would be necessary, (2) the rate of return the buyer would demand, and (3) the value of 50 percent of the property upon sale. See Estate of Barge v. Commissioner, T.C. Memo. 1997-188.

B. What a Buyer Would Pay

1. Partition

In partition suits, Hawaii courts may sell real property where partition in kind would be impracticable or greatly prejudicial to the interested parties. See Haw. Rev. Stat. Ann. sec. 668-7(6) (Lexis Nexis 2007). Petitioners do not dispute that partition would result in a sale of the property. Mr. Hoffman testified that a contested partition would take 2 to 3 years to resolve and that its costs would include $10,000 of appraisal costs and $70,000 of litigation expenses. Mr. Bethel testified that a contested partition could take up to 2 years to resolve, and he estimated that its costs would include $15,000 to $20,000 “to proceed with filings”, a brokerage fee of 4 to 6 percent, and a closing fee of 1 percent. Mr. Bethel concluded that the total cost of partition would range from 6 to 8 percent of the value of the property. Mr. Bethel testified that, if partition were not necessary, the property could be sold in less than a year.

We find that a contested partition would take 2 years to resolve (including 1 year to sell the property) and that the

costs made necessary by the litigation would be 1 percent of the value of the property (that is, $72,500). Petitioners, however, have failed to convince us that partition will always--indeed, will often--be necessary. In fact, when respondent's counsel suggested that partition was "relatively unlikely", Mr. Hoffman seemed to agree.[4] Nonetheless, neither party suggested the likelihood of partition. Bearing heavily on petitioners, who bear the burden of proof, we find that a buyer would expect partition to be necessary 10 percent of the time. We find that the cost of selling the property (which the sellers would bear in any case) would be 6 percent of the value of the property (that is, $435,000). Finally, the annual operating cost of the property was approximately $350,000. We assume that a buyer of a one-half undivided interest in the property would expect to bear only half the costs described above; the buyer would expect the remaining petitioner to bear the other half.

[4]Respondent's argument is as follows. Suppose petitioner husband had sold his interest. If the buyer then told petitioner wife that he wanted to sell the property, what are the odds that she would object? Not only would he have a right to partition but also a court would ultimately order the property sold (as opposed to divided). Petitioners have failed to explain what (in that hypothetical) petitioner wife would stand to gain by opposing partition. Cf. Estate of Barge v. Commissioner, T.C. Memo. 1997-188 (finding that, in a case in which the property would have been divided (not sold), the other owners might resist partition "to obtain an advantageous partition"). Respondent, however, concedes that such opposition is possible, and we accept that concession.

2. Rate of Return

Mr. Bethel testified that, to account for the marketability risk, a buyer would demand a return of 10 percent. Mr. Hoffman testified that a buyer would demand a return of 30 percent. Nonetheless, he presented no evidence to support that conclusion. Petitioners have failed to prove that a buyer would demand a return greater than 10 percent.

3. Value of Interest After Partition

The parties stipulated that in 2005 the property had a fair market value of $7.25 million. Mr. Hoffman testified that the "long-term sustainable growth [rate] of real estate" was 3 percent annually. Accordingly, at the end of 1 year (if partition were not necessary) or 2 years (if it were) the property would sell for $7,467,500 or $7,691,525, respectively.

III. Fair Market Value

Accordingly, to determine the value of an undivided one-half interest in the property, we use a 10-percent rate of return (discount rate), a partition period of 2 years (including a selling period of 1 year), annual operating costs of $175,000, (possible) partition costs of $36,250 allocated equally to both years, the cost of selling the property ($217,500), and a fair market value of $3,733,750 or $3,845,763 (after a sale in 1 year or 2 years, respectively). We find that the fair market value of

the gift that each petitioner made in 2005 was $3,000,089; our calculations are as follows.

If Partition Is Not Necessary

Year	Operating Costs	Selling Costs	Sale Proceeds	Total	Present Value
1	$175,000	$217,500	$3,733,750	$3,341,250	$3,037,500

If Partition Is Necessary

Year	Operating Costs	Partition and Selling Costs	Sale Proceeds	Total	Present Value
1	$175,000	$18,125	--	($193,125)	($175,568)
2	175,000	235,625	$3,845,763	3,435,138	2,838,957
Total					2,663,388

We have found that a buyer would expect partition to be necessary 10 percent of the time. Thus, the buyer of an undivided one-half interest in the property would have been willing to pay the weighted average of the two present values calculated above; that is, $3,000,089.

Decisions will be entered under Rule 155.

PARR

OPINIONBY:

PARR

OPINION:

MEMORANDUM FINDINGS OF FACT AND OPINION

PARR, Judge: Petitioner is the Estate of William F. Luton. Respondent determined a deficiency of $ 7,212,448 in petitioner's estate tax. Respondent also determined that petitioner was liable for an addition to tax for negligence under section 6653(a)(1)(A) in the amount of $ 360,622, plus 50 percent of the interest due on the deficiency under section 6653(a)(1)(B), and was liable for an addition to tax of $ 1,095,102 for a valuation understatement under section 6660. n1 By amendment to answer, respondent revised the deficiency to $ 7,707,179 and additions to tax for negligence and valuation understatement to $ 385,359 and $ 1,104,675, respectively.

n1 All section references are to the Internal Revenue Code in effect as of the date of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure, unless otherwise indicated.

After stipulations and concessions, the issues for decision are: (1) Whether the value of petitioner's 78-percent interest in the common stock of Rancho San Juan, Inc., on the alternate valuation date n2 was $ 5,336,000 as determined by respondent. We hold that the value was $ 4,492,800. (2) Whether the value of petitioner's one-third interest in the common stock of Dune Lakes, Ltd., on the alternate valuation date was $ 1,440,000 as determined by respondent. We hold that the value was $ 1,040,000. (3) Whether the value of petitioner's 41.9-percent interest in the Miramonte Liquidating Trust on the alternate valuation date was $ 3,250,000 as determined by respondent. We hold for respondent. (4) Whether petitioner is liable for an addition to tax for undervaluation pursuant to section 6660. We hold that petitioner is not liable for such addition.

n2 Petitioner made a valid election under sec. 2032 to value the assets of the estate on the alternate valuation date of Oct. 27, 1987.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. The stipulation of facts with attached exhibits and stipulation of partial agreement are incorporated herein by this reference. William F. Luton (hereinafter decedent) was a resident of the State of California at the time of his death on April 27, 1987. At the time of the filing of the petition, coexecutor Nancy L. Jackson (decedent's daughter) resided in the State of Idaho, and coexecutors Robert S. Herdman n3 and William F. Luton, Jr. (decedent's son), resided in the State of California.

n3 The record does not indicate the relationship of Mr. Herdman to decedent.

Rancho San Juan

In 1934, decedent acquired by gift a ranch in Santa Barbara County known as Rancho San Juan. In 1936, decedent and his wife, Nancy Luton, established their residence on Rancho San Juan, where they lived until the dates of their respective deaths. In 1941 and 1958, decedent and his wife acquired, as community property, two parcels of land in Santa Barbara County contiguous to Rancho San Juan. Hereafter, unless otherwise stated, the three parcels will be referred to collectively as Rancho San Juan. In 1968, decedent and his wife signed a contract with the County of Santa Barbara concerning limitations on the use and development of Rancho San Juan, pursuant to the California Land Conservation Act of 1965 (hereafter referred to as the Williamson Act). The agreement is effective for 10 years and is automatically extended for 1 year at the end of each year of the contract so that it will always have a term of 10 years, unless notice of termination is given. The quid pro quo for the landowners is favorable property tax treatment.

On August 13, 1982, Rancho San Juan was incorporated under the laws of California as a corporation wholly owned by decedent and his wife. Decedent received 44,760 shares as community property with his wife and 55,240 shares as separate property in exchange for the right, title, and interest in the real property comprising Rancho San Juan. The corporation (RSJ, Inc.) assumed all of the obligations, conditions, and restrictions set forth in the contracts with the county. Effective December 1, 1986, RSJ, Inc., made an election to be treated as an S corporation for Federal tax purposes. Stock in RSJ, Inc., is not publicly traded.

In years 1982-86, decedent transferred some shares of RSJ, Inc. stock (1) into trusts created for the benefit of his grandchildren and (2) into the name of each of his six children. At the time of his death, decedent still held 78-percent (78,000 shares) of the stock of RSJ, Inc., in his own name. n4 Decedent paid RSJ, Inc., rent for the right to live on Rancho San Juan.

n4 Decedent received all of the stock owned by Nancy L. Luton, who had predeceased him in September of 1983.

Dune Lakes, Ltd.

Dune Lakes, Ltd., was formed on June 24, 1931. The principal asset of Dune Lakes, Ltd., is real estate in San Luis Obispo County, California. Most of the corporation's acreage has been operated as a duck-hunting preserve. The remaining sections of the land are either leased for agricultural purposes, zoned for 5-acre lots, or subject to sensitive resource area restrictions. In 1973 and 1974, Dune Lakes, Ltd., entered into a contract with the County of San Luis Obispo concerning limitations on use and development of the property pursuant to the Williamson Act.

In 1983, decedent acquired 1 share of the 3 outstanding shares of Dune Lakes, Ltd., by inheritance from his wife. n5 Effective January 1, 1987, the corporation made an election to be treated as a S corporation for Federal tax purposes. Stock in Dune Lakes, Ltd., is not publicly traded.

n5 As of Apr. 27, 1987, the other shares of Dune Lakes, Ltd. were owned by Nancy Luton's brother, Mr. William Dickinson (1 share), Nancy Luton's niece, Martha May (one-half share), and decedent's son-in-law, Mr. Peter Jackson (one-half share).

Miramonte Trust

As of December 1984, the shareholders of Key Television, Inc., consisted of decedent and members of his family. On December 7, 1984, Key Television, Inc., sold substantially all of its assets to Shamrock Holdings, Inc. (hereafter Shamrock), for cash, plus an unsecured promissory note. Key Television, Inc., changed its name to Miramonte Drive Corp., and filed a certificate of election to wind up and dissolve pursuant to section 337. On or about September 30, 1985, the nondistributed assets of Miramonte Drive Corp., were contributed to the Miramonte Liquidating Trust (hereafter the Miramonte Trust). Decedent and William F. Luton, Jr., were the trustees of the Miramonte Trust. The principal asset of the Miramonte Trust is a note receivable dated December 7, 1984, from Shamrock in the amount of $ 7,700,000 with interest of 10 percent payable semiannually beginning December 31, 1984, through maturity. The principal is payable in 15 semiannual installments of $ 250,000 beginning December 31, 1988, and a final principal payment of $ 3,950,000 on June 30, 1996. The note is not listed on a public exchange. The trust agreement provides that a vote of two-thirds of the trust units could force the trustee to liquidate. The terms of the trust also provide a right of first refusal restriction upon the transfer of any unit. The right of first refusal exists for a 35-day period. At the time of his death, decedent owned 41.9 percent of the units of the Miramonte Trust.

Valuation

Decedent's estate is being administered under the laws of the State of California. The executors engaged an attorney, Mr. Howard M. Simon, to prepare the Federal estate tax return for petitioner. In this regard appraisers were sought to determine the fair market values of the assets included in the gross estate. Mr. Philip Moore, president of Seligman Valuations and an individual with academic and professional experience as an appraiser, was selected to appraise the value of petitioner's interests in the stock of RSJ, Inc., and of Dune Lakes, Ltd., and in the Miramonte Drive Liquidating Trust. Mr. Simon provided Mr. Moore with appraisals of the real estate owned by Dune Lakes, Ltd., and RSJ, Inc., that had previously been prepared by Mr. Harold Miossi and Mr. James Paddock, respectively. Mr. Miossi is a California probate referee for San Luis Obispo County, a position he has held since 1960. Mr. Paddock has over 50 years' experience in appraising real estate in the Santa Barbara area and throughout California. We recognize as experts Mr. Moore, Mr. Miossi, and Mr. Paddock.

In the stipulation of partial agreement, the parties agreed that the value of the underlying real estate would be equal to that amount determined by a Mr. Dunshee, an appraiser since 1952 and recognized as an expert appraiser of agricultural land and cattle ranches. He determined a value of $ 4,800,000 and $ 7,200,000 respectively, for the assets of Dune Lakes and Rancho San Juan, without consideration of any discounts. The amount of discounts is still in dispute.

At trial, petitioner presented testimony and submitted a written report from Dr. Shannon P. Pratt as to the value of the stock and the trust units. See Rule 143(f). Dr. Pratt is the managing director of a firm specializing in financial research and analysis, especially the valuation of businesses and business interests. Dr. Pratt holds a doctorate of finance, is a member of the American Society of Appraisers, and is a certified financial planner. Dr. Pratt is also the author of two reference works on business valuation.

Respondent countered with testimony and a written report from her own expert Ms. Margaret N. Singleton. Ms. Singleton is the president of an appraisal firm doing real estate and business appraisals. She has experience as an appraiser for various private companies and the Wisconsin Department of Revenue, where she valued rural properties and farms. Ms. Singleton is a member of professional valuation organizations; she teaches and has published articles relating to valuation. We recognize both Dr. Pratt and Ms. Singleton as experts.

Respondent issued a statutory notice of deficiency to petitioner, asserting deficiencies in and additions to petitioner's Federal estate tax. The greater part of that deficiency, and the only part here in issue, results from respondent's determination that the fair market value of certain shares of corporate stock and of units in a liquidating trust owned by decedent at the date of his death, and valued at the alternate valuation date, were undervalued on petitioner's estate tax return. Similarly the addition to tax in issue relates to the undervaluation as determined by respondent. The other numerous determinations which make up the determined deficiency relate to undervaluation of other property (including real estate, corporate stocks and bonds, mortgages, and notes owned by decedent at the date of his death and valued at the alternate valuation date); omission of a retained life estate; previously agreed adjustments; disallowance of administration expenses; disallowance of debts of the decedent; adjusted taxable gifts; and penalties for negligence or intentional disregard of rules and regulations. All of these other issues have been resolved in the stipulation of partial agreement.

OPINION

Valuation of Property

The general rule for valuing property to be included in a decedent's gross estate is provided in section 2031 and the regulations thereunder. Property includable in a decedent's gross estate is included at its fair market value as of the date of the decedent's death or the alternate valuation date as provided under section 2032. Secs. 2031(a) and 2032(a); sec. 20.2031-1(b), Estate Tax Regs. Fair market value is a question of fact, with the trier of fact having the duty to weigh all relevant evidence of value and to draw appropriate inferences. Commissioner v. Scottish American Inv. Co., 323 U.S. 119, 123-125 (1944); Helvering v. National Grocery Co., 304 U.S. 282, 294 (1938); Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. T.C. Memo. 1961-347; Skripak v. Commissioner, 84 T.C. 285, 320 (1985); Zmuda v. Commissioner, 79 T.C. 714, 726 (1982), affd. 731 F.2d 1417 (9th Cir. 1984). Fair market value represents the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. United States v. Cartwright, 411 U.S. 546, 551 (1973); Gillespie v. United States, 23 F.3d 36 (2d Cir. 1994); Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989); sec. 20.2031-1(b), Estate Tax Regs. All relevant facts and elements of value as of the applicable valuation date should be considered in every case. Estate of Johnson v. Commissioner, 77 T.C. 120, 124 (1981), revd. on other grounds 718 F.2d 1303 (5th Cir. 1983); sec. 20.2031-1(b), Estate Tax Regs. And any knowledge of future events not known or reasonably anticipated on the valuation date that might affect the value of the stock cannot be attributed to the willing seller or buyer. Estate of Bennett v. Commissioner, T.C. Memo. 1993-34; sec. 20.2031-1(b), Estate Tax Regs.

The willing buyer and seller are hypothetical persons, instead of specific individuals or entities. Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990). The fair market value of a particular item of property is not to be determined by a forced sale price. Sec. 20.2031-1(b), Estate Tax Regs. Nor is the fair market value of an item of property to be determined by the sale price of the item in a market other than that in which such item is most commonly sold to the public. Id.

Valuation of Closely Held Stock

In determining the value of stock that is not listed on an exchange, actual arm's-length sales of such stock in the normal course of business within a reasonable time before or after the valuation date are the best criteria of market value. Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982); Duncan Industries, Inc. v. Commissioner, 73 T.C. 266, 276 (1979). However, if the stock has never been publicly traded, and there is no evidence of any sales of stock in the corporation at any time near the date of a decedent's death, the value of the closely held stock must be determined indirectly, by weighing the corporation's net worth, prospective earning power, dividend-paying capacity, and other relevant factors. Estate of Andrews v. Commissioner, supra; Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963), affd. in part and remanded in part 344 F.2d 763 (6th Cir. 1965), vacated and remanded 383 U.S. 832 (1966); sec. 20.2031-2(f), Estate Tax Regs. These factors cannot be applied with mathematical precision. Estate of Andrews v. Commissioner, supra at 941. Rather, the weight to be given to each factor must be tailored to account for the particular facts of each case. Messing v. Commissioner, 48 T.C. 502, 512 (1967).

Similarly, section 2031(b) provides that the value of unlisted stock "shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange." n6

n6 In addition, we have recognized that Commissioner's Rev. Rul. 59-60, 1959-1 C.B. 237, which both parties' experts have relied upon, has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value of stock of closely held corporations for estate tax purposes. Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990). The revenue ruling recognizes that a determination of fair market value is a question of fact and will depend upon the circumstances of each case:

No formula can be devised that will be generally applicable to the multitude of different valuation issues arising in estate and gift tax cases. Often an appraiser will find wide differences of opinion as to the fair market value of a particular stock. In resolving such differences, * * * [the appraiser] should maintain a reasonable attitude in recognition of the fact that valuation is not an exact science. A sound valuation will be based upon all the relevant facts, but the elements of common sense, informed judgment and reasonableness must enter into the process of weighing those facts and determining their aggregate significance. [Rev. Rul. 59-60, 1959-1 C.B. at 238.]

This Court has recognized that the valuation of stock in a closely held family corporation is always a difficult question. Estate of Tompkins v. Commissioner, T.C. Memo. 1961-338. "[Fair market] value is a fact, the determination of which is, at least, generally difficult. The result is rarely satisfactory." Estate of McKitterick v. Commissioner, 42 B.T.A. 130, 136 (1940). The difficulty is compounded where a substantial part of the corporation's assets consists of unimproved land, which is itself difficult to value. Estate of Tompkins v. Commissioner, supra. Before we can place a value on the stock, we must first determine the fair market value, as of the valuation date, of the underlying assets. Id.

Expert Opinion

Both parties relied upon experts to consider and analyze the intrinsic factors of the underlying real estate in order to derive a valuation of the corporations' stock. However, due to fundamental differences in approach between the parties' experts, particularly with respect to the weight to be placed upon net-asset value as opposed to earnings capacity or liquidation analysis, the valuations determined by the experts were quite far apart.

Respondent's determination of the fair market value of petitioner's assets is presumed correct, and petitioner bears the burden of overcoming the presumption of correctness. Rule 142(a); Welch v. Helvering, 290 U.S. 111 (1933); Estate of Carli v. Commissioner, 84 T.C. 649 (1985); Hutchens v. Commissioner, T.C. Memo. 1993-600; Estate of Yeager v. Commissioner, T.C. Memo. 1986-448. Respondent bears the burden of proof with regard to any amount in excess of the valuation determined in the notice of deficiency. Rule 142(a).

At trial, we received testimony from expert witnesses, and we weigh that testimony in light of the experts' qualifications as well as all the other credible evidence. Estate of Newhouse v. Commissioner, supra; Estate of Gilford v. Commissioner, 88 T.C. 38, 56 (1987). Nonetheless, we are not bound by the opinion of any expert witness and will accept or reject expert testimony in the exercise of sound judgment. Helvering v. National Grocery Co., 304 U.S. at 295; Estate of Newhouse v. Commissioner, supra; Estate of Hall v. Commissioner, 92 T.C. at 338. We may adopt some portions and reject other portions of expert testimony as we weigh its persuasiveness and helpfulness. Chiu v. Commissioner, 84 T.C. 722, 734 (1985); Estate of Bennett v. Commissioner, T.C. Memo. 1993-34. Furthermore, we recognize, "'Valuation is * * * necessarily an approximation * * * It is not necessary that the value arrived at by the trial court be

a figure as to which there is specific testimony, if it is within the range of figures that may properly be deduced from the evidence.'" Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976) (quoting Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957)), affg. T.C. Memo. 1974-285; Estate of Bennett v. Commissioner, T.C. Memo. 1993-34.

Issue 1. Value of 78-Percent Stock Interest in Rancho San Juan

Value of Underlying Real Estate

The parties have agreed to the value of $ 7,200,000 for the underlying real estate of RSJ, Inc., However, based on Mr. Dunshee's analysis, petitioner argues that a $ 1 million discount is appropriate for the time it would take to sell Rancho San Juan if all three parcels of the land were placed on the market at the same time. Mr. Dunshee believes that a 13,000-acre parcel would be very difficult to sell, and the highest value for the property could be obtained by dividing the real property into three new parcels and selling them individually. Mr. Dunshee discounted the total anticipated sales proceeds at a discount rate of 12 percent over 2 years, taking into account the cost of money as of the valuation date and accounting for risk factors and some sales costs. Respondent counters that such a discount is inappropriate. The ranches were incorporated and the stock was given to decedent's heirs to ensure that the land would stay in the family. Therefore, the likelihood of sale was speculative. Respondent contends that the proper method of valuation for the underlying real estate is the net asset value approach.

We have repeatedly held that costs of sale or costs incurred in liquidation are not proper deductions in arriving at value for purposes of section 2031 wherein the sale or liquidation is only speculative. Estate of Piper v. Commissioner, 72 T.C. 1062, 1087 (1979); Estate of Cruikshank v. Commissioner, 9 T.C. 162, 165 (1947); Estate of Bennett v. Commissioner, supra; Estate of Munroe v. Commissioner, a Memorandum Opinion of this Court dated Mar. 6, 1946; see also Campbell's Estate v. Kavanagh, 114 F. Supp 780 (E.D. Mich. 1953). We have also held that a discount to asset values for the "lost use of money" is inappropriate. Estate of Andrews v. Commissioner, 79 T.C. at 950. "[D]iscounting for lost use of money is unrealistic because it fails to recognize that the underlying assets will themselves appreciate, most probably, at a rate similar to that applied as a discount." Id.

We find no evidence in the record to support a conclusion that Rancho San Juan would be sold. The ranches have been in the family for over 50 years and based on testimony by family members William Luton, Jr., and Brandy Branquinho and decedent's acts of giving the stock each year to his family members, we conclude that petitioner never intended to have the corporation offer the real estate for sale. The probability of a sale was therefore speculative at best. In addition, Mr. Dunshee acknowledged that the parcels were increasing in value due to the proximity of Rancho San Juan to the Santa Ynez Valley. Accordingly, we sustain respondent's position that no discount is appropriate.

Value of Stock Interest -- RSJ, Inc.

Petitioner valued decedent's interest in RSJ, Inc., on the estate tax return at $ 2,275,000. After concessions, as to the underlying real estate, petitioner asserts that the value of RSJ, Inc., is $ 2,900,000. Respondent determined the value to be $ 5,336,000.

Mr. Moore, petitioner's expert, used a liquidation analysis in valuing petitioner's 78-percent interest because in his opinion the highest value that could be realized for the 78-percent interest would be obtained by liquidating the corporate assets and then selling the underlying real estate. In Mr. Moore's opinion, any substantial development of the real property within the next 10 years was highly unlikely and would be very costly due to the restrictions placed on the real property by the Williamson Act and the prevailing attitude towards development in Santa Barbara County. Furthermore, Mr. Moore claims that the liquidation analysis should be used because the land was not suitable for other productive uses besides cattle ranching, and the corporation would have generated little or no current income other than from lease payments.

Mr. Moore started with an appraised value of the real estate of $ 5,700,000. n7 He then subtracted selling costs and State and Federal capital gains tax and applied a 40-percent lack of marketability discount in arriving at the fair market value of $ 2,281,032 that he assigns to decedent's stock interest in RSJ, Inc. Mr. Moore's approach of calculating value based upon the net proceeds realizable from the sale of the underlying real estate was based on his opinion that the hypothetical willing buyer would evaluate an investment in the stock based upon its potential return, after accounting for transactional costs.

n7 Mr. Moore testified that if he were to use the stipulated value of the real estate (i.e., $ 7,200,000), the value of RSJ Inc., would be $ 2,900,000. If he used $ 6,200,000 ($ 7,200,000 less $ 1 million discount), the value would be $ 2,500,000.

Petitioner asserts that if the Court determines that Mr. Moore's opinion is not persuasive, then, in the alternative, Dr. Pratt's, petitioner's expert's, opinion of the fair market value of the stock should be adopted. Dr. Pratt's analysis was based on comparisons to the stock prices of publicly traded real estate companies. Dr. Pratt's analysis led him to conclude that the valuation of decedent's stock should be based on the value of the publicly traded comparables and should reflect a discount for the lack of marketability of stock in a closely held corporation.

Respondent asserts that the valuation should be based on the net asset value of the corporation. Respondent contends that the corporation's operations are irrelevant since a purchaser/investor is purchasing the controlling interest in a corporation holding real estate that was free and clear of all liens. Accordingly, respondent asserts that the value of the underlying assets is the focus in valuing the real estate company. Furthermore, respondent, citing Rev. Rul. 59-60, argues that the underlying values of the real estate give due weight to the potential earnings and dividends resulting from the assets. Rev. Rul. 59-60, 1959-1 C.B. 237. Respondent would have us reject Dr. Pratt's analysis for lack of a comparable corporation.

Respondent asserts, based on her expert's opinion, that no more than a 5-percent discount for lack of marketability is appropriate. Respondent argues that the 78-percent block provides a holder with voting control in all matters. And pursuant to California law, a corporation may voluntarily liquidate if the shares representing 50 percent or more so vote. Cal. Corp. Code sec. 1900(a) (West Supp. 1994). In addition, California law provides that involuntary dissolution may only be petitioned by shareholders holding at least one-third of the outstanding shares. Cal. Corp. Code sec. 1800 (West Supp. 1994). Because California law provides a 78-percent holder with expansive control of the corporation and its assets, Ms.

Singleton applied a 5-percent marketability discount to decedent's interest in RSJ, Inc., merely to acknowledge the existence of relatively powerless minority shareholders. Respondent asserts that any potential capital gains tax would be avoidable because of RSJ, Inc.,'s status as an S corporation.

Reduction for Selling Costs and Capital Gains Taxes

As discussed above, regarding the discount applied to the underlying real estate, we find no merit to applying reductions for selling costs when the prospect of liquidation is remote. Consequently, we sustain respondent's disallowance of a reduction of fair market value for selling costs.

This Court has consistently held that a discount for potential capital gains tax at the corporate level is unwarranted where there is no evidence that (1) a liquidation of the corporation was planned, or (2) the liquidation could not have been accomplished without incurring a capital gains tax at the corporate level. Estate of Piper v. Commissioner, 72 T.C. at 1087; Estate of Cruikshank v. Commissioner, 9 T.C. at 165; Estate of McTighe v. Commissioner, T.C. Memo. 1977-410; Gallun v. Commissioner, T.C. Memo. 1974-284; Estate of Thalheimer v. Commissioner, T.C. Memo. 1974-203, affd. on this issue and remanded 532 F.2d 751 (4th Cir. 1976).

To the extent a capital gains tax at the corporate level would be relevant, it is mitigated by RSJ, Inc.,'s status as a subchapter S corporation. Prior to the Tax Reform Act of 1986, Pub. L. 99-514, 100 Stat. 2085, an S corporation was not subject to tax with respect to any built-in capital gains if the S corporation election had been in effect for the 3 taxable years immediately preceding the year in which the capital gains were reported. Subchapter S Revision Act of 1982, Pub. L. 97-354, sec. 2, 96 Stat. 1669, 1683. RSJ, Inc., elected S corporation status as of December 1, 1986, and it filed a short year S corporation tax return beginning December 1, 1986, and ending December 31, 1986, and calendar year returns thereafter. The 3-year period ended as of December 31, 1988. Accordingly, with the exception of the 14-month period from the valuation date until December 31, 1988, RSJ, Inc.,'s built-in capital gains could be recognized without a corporate level tax. Notwithstanding the potential elimination of any corporate level tax, we do recognize that some discount is in order. We believe such discount is appropriately considered in the discount for lack of marketability, discussed below. We sustain respondent's disallowance of a reduction of fair market value due to corporate capital gains tax.

Lack of Marketability Discount

"The lack of marketability discount * * * is designed to reflect the fact that there is no ready market for shares in a closely held corporation." Estate of Andrews v. Commissioner, 79 T.C. at 953; see also Central Trust Co. v. United States, 158 Ct. Cl. 504, 305 F.2d 393, 405 (1962). This principle has been applied to controlling as well as minority shares. Estate of Maxcy v. Commissioner, T.C. Memo. 1969-158, revd. on other grounds 441 F.2d 192 (5th Cir. 1971). But this Court has found that a discount for lack of marketability is not warranted where a decedent owned all of the stock of a company whose assets consisted solely of cash and marketable securities (liquid assets). Estate of Jephson v. Commissioner, 87 T.C. 297 (1986). And in a case involving an 80-percent stock interest in a corporation whose underlying asset was a ranch, we held that a lack of marketability discount was inapposite. Estate of O'Connell v. Commissioner, T.C. Memo. 1978-191, affd. in part and revd. in part on other grounds 640 F.2d 249 (9th Cir. 1981). We made our conclusion based on the fact that there were no

publicly traded ranch stocks from which to draw a comparison and no limiting use restriction on the property. We concluded that a discount was inappropriate and determined that the net asset value was the fair market value. Id.

Petitioner has presented a great deal of evidence in the form of testimony and written reports from Dr. Pratt with regard to the selling prices on exchanges of the stock of other corporations which could be classified as real estate holding corporations. In this regard, we have recognized the statutory mandate of section 2031(b) that --

In the case of stock and securities of a corporation the value of which, by reason of their not being listed on an exchange and by reason of the absence of sales thereof, cannot be determined with reference to bid and asked prices or with reference to sales prices, the value thereof shall be determined by taking into consideration, in addition to all other factors, the value of stock or securities of corporations engaged in the same or a similar line of business which are listed on an exchange. [Emphasis added.]

Estate of Newhouse v. Commissioner, 94 T.C. at 217; Estate of Tompkins v. Commissioner, T.C. Memo. 1961-338. However, this Court has rejected comparables if sufficient dissimilarities exist. Estate of Hall v. Commissioner, 92 T.C. 312 (1989); Northern Trust Co. v. Commissioner, 87 T.C. 349 (1986); Estate of O'Connell v. Commissioner, supra; Estate of Tompkins v. Commissioner, supra.

The comparables chosen by Dr. Pratt were both operating real estate companies. Neither of those corporations held real estate in the form of a ranch. And one of the corporations owned real estate in Orlando, Florida. Respondent questioned Dr. Pratt on cross-examination about why he did not use as a comparable Newhall Land and Farming (Newhall), a corporation which owns ranch land in Southern California, and Tejon Ranch Co. (Tejon), whose primary assets were 270,000 acres of ranch land in Southern California. Dr. Pratt dismissed the use of Tejon, because he claims that he could not obtain sufficient information on the publicly traded company, and Newhall because he claims that the share prices reflected the trades of minority shareholders. Few or no similarities between RSJ, Inc., and the so-called comparable companies were shown. We do not find persuasive petitioner's self-serving statement, on brief, that "Dr. Pratt's analysis would not be different if the comparables owned 'ranching' land rather than a mix of real estate that included undeveloped land." We find that no publicly traded companies are present in the record from which we can draw a comparison.

Notwithstanding the lack of a comparable company, a discount in the value of the closely held stock is appropriate for lack of marketability. The discount should reflect that restrictions are placed on the land as a result of the Williamson Act and that the assets of the corporation are not liquid. Respondent would have us believe that no discount is appropriate, citing Estate of O'Connell v. Commissioner, supra, wherein an 80-percent interest in a ranching corporation was valued at 80 percent of the net asset value. However, the ranch in that case was free of restrictions on use. In contrast, Rancho San Juan is subject to the Williamson Act, for at least 10 years.

Using the stipulated value of the real estate without any discount, using a net asset valuation approach, and applying a 20-percent discount for lack of marketability, the Court's valuation of the 78-percent interest in RSJ, Inc., as of the alternate valuation date is $ 4,492,800.

Issue 2. Value of One-Third Stock Interest in Dune Lakes, Ltd.

Petitioner valued decedent's interest in Dune Lakes, Ltd., on the estate tax return at $ 465,000. After concessions as to the underlying real estate, petitioner asserts that the value of decedent's one-third interest in Dune Lakes, Ltd., is $ 505,000. Respondent determined the value to be $ 1,440,000. Petitioner relies on the valuation used for its estate tax return as prepared by Mr. Moore and as supported by the valuation done for trial by Dr. Pratt.

Mr. Moore used a liquidation analysis in valuing petitioner's one-third interest, because in his opinion the highest value that could be realized for the one-third interest would be obtained by liquidating the corporate assets and selling the real property. Mr. Moore explained that a liquidation analysis was the appropriate valuation method because (1) the corporation had been operating at a loss for several years and required regular infusions of additional capital from its shareholders, and (2) no other significant assets existed on the balance sheet. Mr. Moore concluded that the hypothetical willing buyer would evaluate an investment in the stock based upon its potential return, after accounting for transactional costs. Mr. Moore determined that a 35-percent discount was appropriate in light of the inability of the potential investor to unilaterally cause the liquidation of the corporate assets. Mr. Moore started with an appraised value of the land of approximately $ 4.3 million. He then subtracted selling costs and commissions, a 25-percent lack of marketability, and Federal and California capital gains taxes and arrived at an after-tax selling price of approximately $ 2.1 million. Mr. Moore then divided the interest into thirds and applied a 35-percent minority interest discount in arriving at a fair market value of $ 463,653. n8

n8 At trial, Mr. Moore testified that if one assumed that the value of the real estate of Dune Lakes was $ 4,800,000 on the alternate valuation date (the value stipulated to in the partial agreement), then the fair market value of petitioner's one-third interest would be $ 505,000.

Petitioner asserts that if the Court determines that Mr. Moore's opinion is not persuasive, then, in the alternative, Dr. Pratt's opinion of the fair market value of the stock should be adopted. As he did with RSJ, Inc., Dr. Pratt utilized publicly traded companies in determining a fair market value of $ 641,481 for decedent's interest in Dune Lakes, Ltd.

In her argument respondent asserts that due to the uniqueness of the real estate (1,450 of the 1,700 acres comprises wetlands, also referred to as the duck preserve) the value of the land is in long-term investment. A purchaser would probably be interested in the intangible benefits associated with the scenic beauty and conservational aspects of the property. And respondent further argues that because of the unique nature of the underlying assets, no comparable exists.

Respondent's calculation of fair market value begins with the parties' stipulated amount of $ 4,800,000 for the real estate. Respondent then applies a minority interest discount of 10 percent which she claims is appropriate because California Corporation Law provides substantial protection for minority shareholders holding one-third or more of the stock in a corporation. Respondent argues against imposing a discount for lack of marketability since (1) the property's uniqueness makes it desirable, and (2) there are no corporate tax problems present due to the corporation's status as an S corporation. Accordingly, respondent would have us value petitioner's one-third interest in Dune Lakes, Ltd., at its net asset value adjusted for a 10-percent discount to account for the minority interest and whatever minimal marketability concerns exist.

Reduction for Selling Costs and Capital Gains

As discussed above, costs of sale or costs incurred in liquidation are not proper deductions in arriving at value for purposes of section 2031, wherein the sale or liquidation is only speculative. Estate of Piper v. Commissioner, 72 T.C. at 1087; Estate of Cruikshank v. Commissioner, 9 T.C. at 165; Estate of Bennett v. Commissioner, T.C. Memo. 1993-34.

The Dune Lakes property had been maintained as open space and wetlands for over 60 years and used only by the shareholders, who were all family members, and their guests. In addition, the experts are generally in agreement that the property is unique. In fact, Mr. Miossi stated that he did not believe there was another property like Dune Lakes in California. We conclude that petitioner did not take into account these factors in determining value. Accordingly, we sustain respondent's disallowance of a reduction in value for selling expenses.

With regard to corporate capital gains taxes, we sustain respondent's similar disallowance since we are of the opinion that a liquidation of the company was not planned, or in the alternative, it could be accomplished without incurring a capital gains tax at the corporate level as a result of Dune Lakes' status as an S corporation. n9

n9 Pursuant to the repeal of the "General Utilities doctrine" by the 1986 Act, certain transition rules were enacted that allowed certain corporations, including Dune Lakes, Ltd., to liquidate under the old law before Jan. 1, 1989. See Tax Reform Act of 1986, Pub. L. 99-514, sec. 633(d), 100 Stat. 2085, 2278. Again we note that a purchaser would have to wait 14 months to liquidate without incurring a corporate capital gains tax; however, we will consider this fact in the lack of marketability discount.

Lack of Marketability Discount

As we discussed in our analysis for RSJ, Inc., a lack of marketability discount is appropriate in recognition that there is no ready market for the shares in a closely held corporation. Estate of Andrews v. Commissioner, 79 T.C. at 953; see also Central Trust Co. v United States, 158 Ct. Cl. 504, 305 F.2d 393, 405 (1962). Similarly, we believe that a lack of marketability discount is appropriate due to the Williamson Act restrictions placed on the property.

Since we have already rejected Mr. Moore's liquidation analysis, we turn to Dr. Pratt's use of comparables. Petitioner admits that the Dune Lakes property is a unique piece of real estate in California. Petitioner also admits that the companies selected as comparables differed, but were the best available comparables. As we have previously discussed, we may reject the use of comparables if we find the companies selected to have material dissimilarities. And although the comparables used are the best available, we can still reject the market-comparable approach if we find insufficient similarities for us to rely on the purported comparables. Northern Trust Co. v. Commissioner, 87 T.C. at 377. We do not believe the companies used as comparables are sufficiently similar to Dune Lakes, Ltd. Accordingly, we are not persuaded by Dr. Pratt's analysis.

Respondent contends that lack of marketability has already been considered in determining the value of the underlying real estate, and therefore a lack of marketability discount is not appropriate. We are not persuaded by this contention; as we have already stated, we believe a marketability discount is

appropriate. Based on the evidence submitted and our analysis of the various expert reports, we hold that a lack of marketability discount of 15 percent from net asset value is appropriate.

In arriving at the amount of marketability discount we note that the discounts for minority interest and lack of marketability are conceptually distinct. Estate of Newhouse v. Commissioner, 94 T.C. at 249. Lack of marketability reflects that there is no ready market for the shares, while minority discount reflects the minority shareholders' inability to compel liquidation and inability to realize a pro rata share of the corporation's net asset value. Id. We now turn our analysis to minority discount.

Minority Interest Discount

Petitioner's main argument for upholding a minority discount is the fact that a potential investor could not unilaterally cause the liquidation of the corporate assets. Respondent, relying on California corporate law, argues that a shareholder with a one-third interest with sufficient cause could sue for dissolution and would receive a pro rata share of the corporate equity, whether from liquidation or a buyout.

We have held that a minority discount is appropriate if the block of stock does not enjoy the variety of rights associated with control. Estate of Chenoweth v. Commissioner, 88 T.C. 1577, 1582 (1987); Harwood v. Commissioner, 82 T.C. 239, 267 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); Estate of Andrews v. Commissioner, supra at 957. We have defined control to mean "that, because of the interest owned, the shareholder can unilaterally direct corporate action, select management, decide the amount of distribution, rearrange the corporation's capital structure, and decide whether to liquidate, merge, or sell assets." Estate of Newhouse v. Commissioner, supra at 251-252. Where indications of value are predicated upon control or complete ownership, a discount must be applied to provide indications of value for a minority or less-than-controlling interest. Estate of Jung v. Commissioner, 101 T.C. 412, 442 n. 11 (1993) (quoting Zukin & Mavredakis, Financial Valuation: Businesses and Business Interests, par. 6.9[2], at 6-39 (1990)). And while the appropriate amount of discount to apply is a question of fact, it is generally unreasonable to argue that no discount should be considered for a minority interest in a closely held corporation. Estate of Newhouse v. Commissioner, supra at 249.

In the instant case, a purchaser of petitioner's interest in Dune Lakes, Ltd., would be acquiring an interest insufficient to exercise control over the corporation. And although we find respondent's argument persuasive, in that a holder of a one-third interest in a California corporation is protected under California corporate law, the right to force a liquidation is not unfettered; grounds are required. Cal. Corp. Code sec. 2004 (West Supp. 1994). Thus, although we believe that a potential investor would apply some discount to a one-third interest in Dune Lakes, Ltd., for lack of control, we believe the safeguards afforded under California corporate law would mitigate the impact. Based on all the facts and circumstances in the record before us, we believe that a minority position discount of 20 percent would be appropriate.

Combining the lack of marketability discount of 15 percent and the minority discount of 20 percent to the stipulated value of the real estate of $ 1,600,000, we hold that the fair market value of petitioner's one-third interest in Dune Lakes, Ltd., on the valuation date was $ 1,040,000.

Issue 3. Value of 41.9-Percent Interest in Miramonte Liquidating Trust

Petitioner claims that the value of its interest in the Miramonte Liquidating Trust on the valuation date was $ 2,150,000. Respondent, after concessions, claims that the value was $ 3,250,000.

Both petitioner and respondent, as well as their experts, are in agreement that the value of the trust units depended on the value of the note held by the trust and issued by Shamrock. Petitioner's expert, Mr. Moore, analyzed the financial condition of Shamrock and the terms of the note, and concluded that the note should be rated at below "investment grade". He examined the current yields of bonds of similar grade and concluded that the note should yield 13.5 percent. He discounted the value of the underlying note by 10 percent to reflect that the note was held by a private liquidating trust and that the interest in the trust was subject to restrictions on transferability. The 10-percent discount also reflected the fact that petitioner's interest was a minority interest with no power to force the trustees to liquidate the note.

Petitioner also asserts that if the Court determines that Mr. Moore's opinion of fair market value is not accepted, then, in the alternative, Dr. Pratt's opinion should be accepted. Based on his review of Shamrock's financial position, the terms of the note, the potential liabilities of the trust, and bonds issued by publicly traded companies with key ratios similar to Shamrock's, Dr. Pratt rated the note at below investment grade. He concluded that the note would have to generate a yield to maturity of 15 percent to attract potential investors. In addition, based on his analysis of the comparables he determined that a 5-percent discount was in order as well as a 10-percent discount to reflect the lack of marketability associated with the trust units.

Respondent argues that based on Shamrock's financial position only a 10-percent discount was in order. Factors such as significant gains in 1987, Shamrock's history of payments on the note, and a $ 30 million line of credit at one-half of 1 percent above prime indicated that Shamrock had a good credit rating and was a good risk. Respondent argues against any discount for lack of marketability because (1) the 10-percent discount computed above is, in part, a marketability discount, (2) the trust units being valued represent a substantial interest in the trust, and (3) the trust has a limited life, and the rights and benefits of the unit holders are definite and ascertainable. Thus, there is less risk of illiquidity.

Similarly, respondent argues against the application of a minority discount, citing 2 Scott & Fratcher, The Law of Trusts, secs. 128.2, 129, 130 (4th ed. 1987):

[in contrast to a minority shareholder in a closely held corporation,] a trust beneficiary has both a proprietary interest in and equitable title to the trust property. The beneficiary has rights against third parties in relation to the trust interest; the nature and extent of the beneficiary's interest is definite and ascertainable upon the creation of the trust; and the economic benefits and rights of ownership cannot be affected under the trust instrument. Since the trustee's relationship to the beneficiary is that of a fiduciary, the trustee must adhere to the terms of the trust and act solely for the benefit of the beneficiary. Id.

Respondent argues that control and management of investment are not factors considered in the valuation of a beneficial interest in a trust. Respondent then subtracted the present value of $ 10,500 of annual trust expenses in arriving at the fair market value of the trust units.

For purposes of estate tax valuation, the fair market value of notes, secured or unsecured, is presumed to be the amount of unpaid principal, plus interest accrued to the date of death, unless the executor establishes that the value is lower or that the notes are worthless. Sec. 20.2031-4, Estate Tax Regs. The burden of proof is on the taxpayer to submit satisfactory evidence that the note is worth less than the

face value plus accrued interest (e.g., because of the interest rate, date of maturity, or other cause). Estate of Pittard v. Commissioner, 69 T.C. 391 (1977); Scher v. United States, 39 AFTR 2d 77-1580, 76-2 USTC par. 13163 (D.N.J. 1976); Sec. 20.2031-4, Estate Tax Regs.; see Estate of Berkman v. Commissioner, T.C. Memo. 1979-46 (taking into account low rate of interest, together with the lack of security and the considerable length of time until maturity, the Court concluded that the notes were includable in the decedent's gross estate at their fair market value and not at their face amount). In analyzing the fair market value of notes we have considered the ability of the debtor to repay the notes. Estate of Pittard v. Commissioner, supra; Estate of Burr v. Commissioner, a Memorandum Opinion of this Court dated Nov. 27, 1945; see also Whitlow v. Commissioner, 82 F.2d 569, 574 (8th Cir. 1936) ("the main factor in so determining the value of these notes would be the probability of their being paid when due"), affg. 30 B.T.A. 1465 (1934). Moreover, another court has held that notes should be valued at face value at date of death even though the maker may have been insolvent at that time. Scher v. United States, supra. In so holding, the court determined that at the time of valuation, from all that could be known in the market, there was every reasonable expectation that the notes would be paid when due. Id. Similar notes were being issued to ready lenders; interest on outstanding obligations was being paid; notes due at or about this time were honored when presented for payment, and the debtor was still considered sound by the financial community.

Fair Market Value of the Note

Based on Shamrock's never missing a payment on the note from its inception in 1984 until valuation date of October 27, 1987, Shamrock's net book value of approximately $ 83 million, n10 the reputation of its principal shareholder, Roy Disney, and its ability to obtain bank financing, respondent argues that Shamrock was a relatively good credit risk.

n10 Per Shamrock's financial statements for year ended Dec. 31, 1987, assets totaled $ 252,311 million and liabilities totaled $ 169,089 million.

Petitioner presents a number of arguments why we should view Shamrock as a credit risk. Petitioner contends that Shamrock's gains in 1987 were one-time sales of assets and not income from operating revenues and thereby distort the company's financial position. We find no merit to this argument. Shamrock's financial statements reflect approximately $ 62.8 million in net income for the year ended December 31, 1987. If we subtract out the "gain on sale of discontinued operations" of approximately $ 45.7 million, Shamrock would still have over $ 17 million net income for the year. In addition, the financial statements for the year ended December 31, 1986 reflect approximately $ 10.3 million net income.

Next, petitioner would have us believe that Shamrock was a credit risk because the note was not collateralized. While this is true, we believe that Shamrock's net assets, history of repayment, and overall financial condition (which was sufficient security for obtaining other unsecured borrowing, including bank advances in excess of $ 30 million at around prime rate) constituted evidence of Shamrock's creditworthiness. Finally, petitioner would have us discount the note based on the value of comparable publicly traded investments. Petitioner's expert used as a comparable a company involved in television broadcasting; however, the company had reported deficits of $ 131 million and $ 187 million in 1987 and 1986, respectively. As we have stated before, we will reject comparables if the

dissimilarities so warrant. Estate of Hall v. Commissioner, 92 T.C. 312 (1989); Northern Trust Co. v. Commissioner, 87 T.C. at 377. Accordingly, we sustain respondent's disallowance of discounting the note.

However, our analysis does not end because the note is privately held in a liquidating trust. Accordingly, we must analyze the applicability of discounts for lack of marketability and minority interest.

Lack of Marketability

As we have discussed above, the lack of marketability discount is designed to reflect the fact that there is no ready market for shares in a closely held corporation. Estate of Andrews v. Commissioner, 79 T.C. at 953. Assuming the principle applies to the trust units at issue, we hold that a discount is not appropriate. We have held that a discount is not warranted where the assets consist solely of liquid assets. Estate of Jephson v. Commissioner, 87 T.C. 297 (1986). In the instant case, the terms of the trust call for a distribution by the trustees within 60 days after receipt of payment on the note. The trust has a definite term, set to expire no later than January 31, 1997, a date 31 days after the last payment is due on the note. Furthermore, the trustees had no authority to conduct a trade or business, or to invest trust funds other than in interest-bearing accounts or short-term interest-bearing investments.

We also believe that the right of first refusal has no effect on the marketability of the trust units. We note that a commodity freely salable is obviously worth more on the market than a precisely similar commodity which cannot be freely sold. Worcester County Trust Co. v. Commissioner, 134 F.2d 578 (1st Cir. 1943), revg. and remanding Estate of Smith v. Commissioner, 46 B.T.A. 337 (1942); Estate of Johnson v. Commissioner, 77 T.C. 120 (1981), revd. on other grounds 718 F.2d 1303 (5th Cir. 1983); Estate of Reynolds v. Commissioner, 55 T.C. 172 (1970). However, we have held that a right of first refusal without a fixed price will have little, if any, effect on fair market value and clearly will have a less drastic effect than fixed-price restrictions. Estate of Cotchett v. Commissioner, T.C. Memo. 1974-31. Although the restriction in the instant case restricts the field of available purchasers in the first instance, it does not affect marketability because the price is not fixed.

Respondent has provided for a 10-percent discount to account for a lack of marketability. Petitioner has not persuaded us that any additional amount is appropriate. We sustain respondent's disallowance of petitioner's discount and uphold her 10-percent discount for lack of marketability.

Minority Interest Discount

Petitioner's sole contention is that a holder of the trust units has no power to force the trustees to liquidate the note. Respondent argues that since the trustee's relationship to the beneficiary is that of a fiduciary, the trustee must adhere to the terms of the trust and act solely for the benefit of the beneficiary. Pursuant to the trust agreement, and Cal. Prob. Code secs. 16008(a) and 16040 (Deering 1994), the trustees had a duty to dispose of any trust assets included at the time of creation of the trust that would not be a proper investment for the trustee to make. The trustees had to exercise their powers, including the power to sell the note, according to the "prudent man standard." And if the trustees breached their fiduciary duty to the beneficiaries by not selling the note, any beneficiary could sue to force the sale of the note. Cal. Prob. Code sec. 16420 (Deering 1994). We find respondent's argument persuasive and hold that a discount for minority interest was inappropriate.

We sustain respondent that the fair market value of petitioner's 41.9-percent interest in the Miramonte Trust was $ 3,250,000 on the valuation date.

Issue 4. Addition to Tax for Valuation Understatement

Respondent determined an addition to tax under section 6660. Respondent contends that petitioner did not have a reasonable basis for the valuation claimed on its tax return for Dune Lakes, Ltd., and RSJ, Inc. Petitioner contends that there should be no addition to tax because: (1) There was a reasonable basis for the estate tax return value; (2) petitioner claimed the value in good faith; and (3) respondent abused her discretion in failing to waive the addition.

Section 6660(a) provides that in the case of an underpayment of a tax imposed by subtitle B (relating to estate and gift taxes) which is attributable to a valuation understatement, there shall be added to the tax an amount equal to the applicable percentage of the underpayment so attributed. There is a valuation understatement if the value of any property claimed on any return is 66-2/3 percent or less of the amount determined to be the correct amount of such valuation. Sec. 6660(c). If the valuation claimed is (1) 50 percent or more, but not more than 66-2/3 percent, of the correct valuation, the applicable percentage is 10 percent; (2) 40 percent or more but less than 50 percent, the applicable percentage is 20 percent, and (3) less than 40 percent, the applicable percentage is 30 percent. Sec. 6660(b). The section does not apply if the underpayment is less than $ 1,000. Sec. 6660(d). The Secretary may waive all or any part of the addition to tax provided by section 6660 on a showing by the taxpayer that there was a reasonable basis for the valuation claimed on the return and that such claim was made in good faith. Sec. 6660(e).

In the instant case there is an underpayment of estate tax attributable to a valuation understatement, and the underpayment is at least $ 1,000 of the estate tax imposed. The value of the 78-percent stock interest in RSJ, Inc., claimed by petitioner on its estate tax return is approximately 50.6 percent of the correct valuation, as redetermined by this Court. Thus, the applicable percentage is 10 percent of the resulting underpayment. The value of the one-third stock interest in Dune Lakes, Ltd., claimed by petitioner on its estate tax return is approximately 44.7 percent of the correct valuation, as redetermined by this Court. Thus, the applicable percentage is 20 percent of the attributable underpayment. We must now consider whether the addition to tax should be waived.

The denial of a waiver by the Secretary is reviewable by this Court on an abuse-of-discretion basis. Mailman v. Commissioner, 91 T.C. 1079, 1082-1084 (1988). The burden of proof is on petitioner. Rule 142; Mailman v. Commissioner, supra.

We believe petitioner exercised good faith in determining the values reported in its estate tax return. The coexecutors sought professional advice and obtained the services of an experienced lawyer to prepare the estate tax return and experts to appraise the value of the stock and the underlying assets in the corporation.

Respondent challenges the reasonableness of petitioner in relying on these professionals and the values determined. As we have noted in the past, this is a more difficult question. Estate of Jung v. Commissioner, 101 T.C. at 450. Mr. Moore undervalued petitioner's stock interests, as reported on the tax return, by approximately 45-50 percent from what we determined to be the correct value. His valuations were undervalued by 57 percent and 68 percent respectively, when compared to respondent's valuation. Therefore, we did not place a great deal of weight on his valuations. However,

his analysis and conclusions were based on his extensive experience as an appraiser. His report, although not helpful for purposes of assisting the Court in determining the value of petitioner's interests, does give some explanation of his conclusion, analysis, and process. Furthermore, we have recognized that valuation is not a precise science. Messing v. Commissioner, 48 T.C. at 512.

We find that petitioner reasonably relied on professional advice and expert appraisals. Although we disagree with their conclusions, we believe petitioner's experts acted reasonably and in good faith in determining fair market value. Thus, we do not sustain respondent's determination of an addition to tax under section 6660.

To reflect the foregoing and concessions by the parties,

Decision will be entered under Rule 155.

T.C. Memo. 1995-153

United States Tax Court

MAD AUTO WRECKING, INC., Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Tax Ct. Dkt. No. 1959-94 Filed April 5, 1995

Mark C. Goldenberg, for petitioner.

Thomas C. Pliske, for respondent.

HELD: Compensation paid by P to its only two officers/shareholders is reasonable.

MEMORANDUM FINDINGS OF FACT AND OPINION

LARO, JUDGE: Mad Auto Wrecking, Inc. petitioned the Court to redetermine respondent's determination of deficiencies of $230,867, $138,718, and $166,530 in its 1989, 1990, and 1991 Federal income taxes, respectively. We must decide whether amounts paid by petitioner to its only officers/shareholders are reasonable compensation under section 162(a)(1); respondent determined that $1,503,322 of the $2,173,000 claimed by petitioner as officers' compensation for the years in issue was unreasonable.[1] We hold that all of the claimed officers' compensation is reasonable. Unless otherwise stated, section references are to the Internal Revenue Code in effect for the years in issue. Rule references are to the Tax Court Rules of Practice and Procedure. We separately refer to Richard Andrews and Melvin Waier, the officers/shareholders, as Andrews and Waier, respectively. We refer to them collectively as the Shareholders.

FINDINGS OF FACT

Most of the facts have been stipulated and are so found. The stipulations and attached exhibits are incorporated herein by this reference. Petitioner's principal office was in Florissant, Missouri, when it petitioned the Court. Petitioner filed a Federal income tax return for each year in issue based on the calendar year and using the cash receipts and disbursements method.

1. PETITIONER

Petitioner is a high-volume, wholesale scrap business that purchases wrecked automobiles and dismantles, sorts, and sells most of the automobiles' parts at wholesale. Petitioner crushes each automobile's remaining body and sells the crushed bodies as scrap metal. The fact that petitioner performs both of these functions is unique in the industry in petitioner's area; no competitor within 300 miles performs such an all-inclusive job. Although many of petitioner's competitors sell automobile parts or crush wrecked

automobiles in their entirety, petitioner practically stands alone in the industry because it strips each automobile of its parts before crushing the automobile, AND it sells the stripped parts. Petitioner is also virtually alone in the industry because it strips the automobiles using an innovative and efficient production-like technique designed to quickly remove the automobiles' sellable parts, such as engines, transmissions, radiators, starters, batteries, generators, air conditioners, carburetors, master cylinders, and power steering pumps. Petitioner uses a customized mobile car crusher to crush the automobile's remaining body.

Petitioner's business is mainly performed outdoors, and petitioner is open for business notwithstanding inclement weather such as snow, rain, or excessive heat. Petitioner does not own or rent a permanent place of business; it generally operates on the grounds of two salvage yards with the mutual understanding that petitioner will continually supply the yards with material for their operations.[2] Petitioner stores its disassembled parts at these salvage yards in truck beds that are located on the grounds.

2. PETITIONER'S OWNERS

Petitioner was formed by the Shareholders in the State of Missouri on June 5, 1979, with the Shareholders transferring $100 to it in exchange for separate 50-percent interests.[3] The Shareholders are the only members of petitioner's board of directors and are its sole officers. The Shareholders perform all of petitioner's executive and managerial functions.[4] The Shareholders perform or oversee all of petitioner's manual labor.

a. RICHARD ANDREWS

Andrews is petitioner's president. He graduated in 1973 from the University of Missouri-St. Louis with a bachelor of arts degree in psychology. Before petitioner was formed, Andrews worked in the construction industry and in the automobile salvage business on a part-time basis while in college. During the years in issue, Andrews worked for petitioner approximately 70 hours per week, 52 weeks a year. Andrews is a devoted workaholic who is totally dedicated and committed to petitioner's business and its success.

b. MELVIN WAIER

Waier is petitioner's secretary and treasurer. He studied mechanical engineering for 1 year before he was drafted into the military. After 2 years of military service, Waier returned to school and received an associate's degree in mechanical engineering. Certain courses that Waier completed in pursuing his degree helped him to develop and improve petitioner's business. The courses provided Waier with a background in mechanics and helped him direct the construction and repair of tools, trucks, and machinery, all of which benefit petitioner's business. During the years in issue, Waier worked for petitioner for approximately 65 hours per week. Like Andrews, but to a slightly lesser extent, Waier is a devoted employee who is totally dedicated and committed to petitioner's business and its success.

c. THE SHAREHOLDERS' RELATIONSHIP BEFORE PETITIONER'S FORMATION

The Shareholders informally worked together during the 5-year period before petitioner was formed, using their own equipment to tow and salvage wrecked automobiles. The Shareholders learned during this 5-year period that an automobile scrap business was a viable entity, primarily due to an abundant supply of wrecked automobiles, and updated equipment was essential to a scrap business' growth. With these ideas in mind,[5] the Shareholders agreed to pool their resources and form petitioner.

3. THE SHAREHOLDERS' COMPENSATION FROM PETITIONER

a. OVERVIEW

Petitioner has neither a written employment agreement with the Shareholders, nor a written policy concerning their compensation.

b. PRIOR TO THE YEARS IN ISSUE

Petitioner paid the following total compensation to each of the Shareholders for the years prior to the years in issue:

Year	Compensation
1980	$42,200
1981	93,600
1982	74,560
1983	111,840
1984	278,320
1985	304,000
1986	256,000
1987	656,000
1988	1,106,000

This compensation included annual bonuses that petitioner began paying to the Shareholders in 1984. The annual bonuses paid to both Shareholders prior to the years in issue ranged in the aggregate from $100,000 to $950,000.

c. DURING THE YEARS IN ISSUE

Petitioner paid the Shareholders a base salary of $1,500 per week, i.e., $78,000 per year, and it paid them bonuses during the second, third, and fourth quarters of each year. Each Shareholder generally received the same amounts as bonuses, except that Andrews received a larger bonus during each year to reflect the fact that he devoted more time than Waier to petitioner's business. The Shareholders' total compensation during the years in issue was:

Andrews	Waier

1989		
Salary	$78,000	$78,000
2d quarter bonus	50,000	50,000
3d quarter bonus	100,000	100,000
4th quarter bonus	150,000	50,000
4th quarter bonus	100,000	100,000
Total compensation	478,000	378,000
1990		
Salary	$78,000	$78,000
2d quarter bonus	75,000	75,000
3d quarter bonus	100,000	--
4th quarter bonus	100,000	100,000
Total compensation	353,000	253,000
1991		
Salary	$78,000	$78,000
2d quarter bonus	75,000	75,000
3d quarter bonus	40,000	40,000
4th quarter bonus	175,000	150,000
Total compensation	368,000	343,000

4. PETITIONER'S OPERATIONS

a. EARLY YEARS AND THE SHAREHOLDERS' WORK TO IMPROVE PETITIONER'S OPERATIONS

Petitioner did not operate efficiently immediately after its incorporation. The Shareholders undertook efforts to improve petitioner's operations and their effectiveness. The Shareholders designed innovative equipment that was tailored to petitioner's business, allowing petitioner to improve its efficiency and profitability. The Shareholders also sought and found companies that sold specialized equipment that would better accommodate petitioner's operations. The innovative and specialized equipment allowed petitioner to remove sellable parts from the automobiles quickly and with minimal labor. Petitioner's purchase of a mobile car crusher, for example, allowed it to bring in 15 to 20 automobiles at a time, rather than the 4 or 5 automobiles that it could bring in without the machine.

The Shareholders also changed petitioner's operation with respect to the sale of disassembled parts, allowing petitioner to improve its efficiency and increase its profitability. Prior to the change, petitioner sold its parts to middlemen who resold the parts to wholesalers at higher prices. Starting in or around 1989, the Shareholders eliminated the middlemen in most cases and sold the parts directly to the wholesalers at the higher price. Selling directly to the wholesalers increased petitioner's profit margin on its parts sales.

The Shareholders also developed relationships with salvage yards, enabling petitioner to eliminate the costs that it had previously incurred to transport its equipment between job locations and allowing it to minimize the cost of disassembling the automobiles. Prior to the time that the Shareholders developed these relationships, petitioner's work was performed at multiple locations, and petitioner had to move its operations from one location to another. After the Shareholders became primarily affiliated with two salvage yards, petitioner's operations were generally fixed at two yards. Petitioner was stationary during the years in issue, which increased its profits from its earlier years.

b. PETITIONER'S OPERATIONS DURING THE YEARS IN ISSUE

Petitioner's gross receipts (net of returns and allowances), gross income, book income (loss), taxable income (loss), officers' compensation, officers' compensation percentages, and shareholders' equity were (rounded off to the nearest dollar):

Year	Gross Receipts (Net)	Book Net Income (Loss)	Taxable Net Income (Loss)	Officers' Compensation	Gross Income
1989	$2,554,942	$57,257	$67,690	$856,000	$1,459,351
1990	2,169,125	23,951	56,974	606,000	1,186,978
1991	1,884,853	(32,647)	(22,199)	711,000	1,186,458

Compensation Percentages				Shareholders' Equity[1] as of Jan. 1	Shareholders' Equity[1] as of Dec. 31
1	2	3	4		
34	59	94	93	$360,250	$417,507
28	51	96	91	417,507	441,458
38	60	105	103	441,458	408,810

1 Officers' compensation divided by gross receipts.

2 Officers' compensation divided by gross income.

3 Officers' compensation divided by book net income (before deducting officers' compensation).

4 Officers' compensation divided by taxable net income (before

deducting officers' compensation).

FOOTNOTE TO TABLE

1. All but $100 of the Shareholders' equity is attributable to retained earnings.

Petitioner's sale of scrap metal to one entity accounted for approximately 63 percent, 63 percent, and 53 percent of its total sales during its 1989, 1990, and 1991 taxable years, respectively. Approximately 90 percent of petitioner's cost of goods sold (wrecked automobiles) was purchased from entities that were entirely or partially owned by the Shareholders (these entities are collectively referred to as the Sellers). Petitioner, through the Shareholders, devoted some of its time to (and performed services on behalf of) the operations of the Sellers. Neither petitioner nor the Shareholders were compensated by the Sellers for these services.

c. PETITIONER'S EMPLOYEES

Approximately four persons are needed to remove the sellable parts from an automobile, and the disassembling process takes approximately 10 minutes per automobile. During the years in issue, petitioner had seven full-time employees, not including the Shareholders, and it paid them on an hourly basis (hereinafter, these seven employees are referred to as the Other Employees). The Other Employees, who were generally neither specialized mechanics nor college educated, were hired and trained by the Shareholders. The Other Employees performed manual labor, such as disassembling the automobiles and sorting the relevant parts, and did not perform management, sales, or executive functions. The Other Employees typically worked a 40-hour week and received overtime for any additional hours. The Other Employees' were paid annual compensation (including bonuses of up to $3,460) ranging from $12,350 to $41,630. The Other Employees were covered by a group medical plan.

The Shareholders did not receive overtime and were not reimbursed for their out-of-pocket expenses incurred on behalf of petitioner. Although the Shareholders were covered by a group medical plan, they did not receive special fringe benefits such as pension plans, profit-sharing plans, company owned automobiles, or disability insurance. During each year in issue, petitioner paid a $10,382 premium on $1 million of life insurance in the names of each of the Shareholders and for which it was the beneficiary. The cash surrender value of these policies was:

Year	Andrews	Waier
12-31-88	$4,744	$4,855
12-31-89	9,023	9,158
12-31-90	13,567	13,729
12-31-91	18,277	18,432

d. PETITIONER'S RETAINED EARNINGS AND ITS DIVIDEND POLICY

Petitioner had retained earnings at the end of its 1980 through 1991 taxable years as follows:

Year	Retained Earnings	Year	Retained Earnings
1980	$76,869	1986	$343,136
1981	113,438	1987	345,882
1982	146,565	1988	360,150
1983	284,918	1989	417,407
1984	310,134	1990	441,358
1985	352,020	1991	408,711

Petitioner has never paid a dividend. During the years in issue, petitioner's board of directors discussed the possibility of paying dividends, but decided not to do so. The board decided that petitioner would retain its earnings to further petitioner's growth.

5. DETERMINATION OF THE SHAREHOLDERS' BONUSES

Petitioner measured its success for each year based on the amount of cash that remained in its bank accounts following the payment of its expenses and a set aside of cash to be used to finance improvements.[6] Petitioner paid most of this "net cash" to the Shareholders as bonuses. From 1984 through the years in issue, petitioner consistently used this criterion for paying bonuses to the Shareholders.

OPINION

This is another case pertaining to whether amounts paid by a closely held corporation to its shareholders/employees are deductible compensation under section 162(a)(1). Inherently, there is a natural tension between: (1) Shareholders/employees who feel that they are entitled to be paid from a corporation's profits, even to the exhaustion thereof, of an amount that reflects their skills and efforts, and (2) a provision in the tax law that conditions the deductibility of compensation on the concept of reasonableness. What is reasonable to the entrepreneur/employee often may not be to the tax collector. Accordingly, this and other courts are repeatedly asked to examine the relevant facts and circumstances of the business and the underlying employment relationship in order to render an opinion as to whether the compensation paid was reasonable. In so doing, we must be careful not to define the term "reasonable" too narrowly. The dynamic nature of business, the entrepreneurial spirit, and the dedication of purpose all play a role in the composition of reasonable compensation. We must not rigidly apply form over substance when we measure one's contribution to the success of his or her business. Of course, it may be argued that when an individual chooses to conduct business in the corporate form, he or she is obligated to observe all of the corporate formalities inherent in that form, including the standard that to be deductible, the compensation paid must be reasonable. The term "reasonable", however, must reflect the intrinsic value of employees in the broadest and most comprehensive sense.

Turning to the facts at hand, respondent disallowed $614,136, $377,193, and $511,993 of officers' compensation deducted by petitioner for its 1989 through 1991 taxable years, respectively.[7] According to respondent, these disallowed amounts are unreasonable. Petitioner disagrees. According to petitioner, all of the amounts paid to the Shareholders are reasonable compensation for the services that they rendered to it.

Section 162(a)(1) allows a corporation to deduct "a reasonable allowance for salaries or other compensation for personal services actually rendered" as an ordinary and necessary business expense. To be deductible under section 162(a)(1), compensation must be both: (1) Reasonable and, (2) paid purely for services rendered to the corporation. Charles Schneider & Co. v. Commissioner, 500 F.2d 148, 151 (8th Cir. 1974), affg. T.C. Memo. 1973-130; sec. 1.162-7(a), Income Tax Regs. Petitioner bears the burden of proving respondent's determination of deductible compensation incorrect. Rule 142(a); Welch v. Helvering, 290 U.S. 111, 115 (1933); RTS Inv. Corp. v. Commissioner, 877 F.2d 647, 650 (8th Cir. 1989), affg. per curiam T.C. Memo. 1987-98.

1. WAS THE COMPENSATION PAID BY PETITIONER REASONABLE

OVERVIEW

Reasonable compensation is determined by comparing the compensation paid to an employee with the value of the services that he or she performed in return. Such a determination is made with respect to employees individually, rather than with respect to the compensation paid to all employees collectively. Such a determination is a question of fact. RTS Inv. Corp. v. Commissioner, supra at 650; Charles Schneider & Co. v. Commissioner, supra at 151; Mayson Manufacturing Co. v. Commissioner, 178 F.2d 115, 119 (6th Cir. 1949), revg. and remanding a Memorandum Opinion of this Court; Estate of Wallace v. Commissioner, 95 T.C. 525, 553 (1990), affd. 965 F.2d 1038 (11th Cir. 1992).

The cases concerning reasonable compensation are numerous and list many factors to be considered in making this factual determination. The factors which may be considered, none of which is controlling in itself, include: (a) The employee's qualifications; (b) the nature, extent, and scope of the employee's work; (c) the size and complexities of the employer's business; (d) a comparison of salaries paid with the employer's gross and net income; (e) the prevailing general economic conditions; (f) a comparison of salaries with distributions to shareholders and retained earnings; (g) the prevailing rates of compensation for comparable positions in comparable concerns; (h) the salary policy of the employer as to all employees; (i) the amount of compensation paid to the particular employee in previous years; (j) the employer's financial condition; (k) whether the employer and employee dealt at arm's length; (l) whether the employee guaranteed the employer's debt; (m) whether the employer offered a pension plan or profit-sharing plan to its employees; and (n) whether the employee was reimbursed by the employer for business expenses that the employee paid personally. Rutter v. Commissioner, 853 F.2d 1267, 1274 (5th Cir. 1988), affg. T.C. Memo. 1986-407; Elliotts, Inc. v. Commissioner, 716 F.2d 1241, 1245-1248 (9th Cir. 1983), revg. and remanding T.C. Memo. 1980-282;

Kennedy v. Commissioner, 671 F.2d 167, 174 (6th Cir. 1982), revg. and remanding 72 T.C. 793 (1979); Charles Schneider & Co. v. Commissioner, supra at 151-152; Mayson Manufacturing Co. v. Commissioner, supra at 119; Estate of Wallace v. Commissioner, supra at 553; Home Interiors & Gifts, Inc. v. Commissioner, 73 T.C. 1142, 1155-1156 (1980); see also Acme Constr. Co. v. Commissioner, T.C. Memo. 1995-6; BOCA Constr. Inc. v. Commissioner, T.C. Memo. 1995-5. In analyzing these factors, the Court must carefully scrutinize the facts of a case in which the paying corporation is controlled by the employees to whom the compensation is paid. In such a situation, we must be convinced that the purported compensation was paid for services rendered by the employees/shareholders, as opposed to a distribution of earnings to them that the payor could not deduct. RTS Inv. Corp. v. Commissioner, supra at 650; Paul E. Kummer Realty Co. v. Commissioner, 511 F.2d 313, 315-316 (8th Cir. 1975), affg. T.C. Memo. 1974-44; Charles Schneider & Co. v. Commissioner, supra at 152- 153.

a. EMPLOYEE'S QUALIFICATIONS

The Shareholders are exceptionally qualified for petitioner's business, by virtue of their training, experience, and dedication, and understand and control every aspect of petitioner's operations. The Shareholders are also highly motivated and extremely productive employees, and are the primary reason for petitioner's success. We conclude that this factor favors petitioner. The Shareholder's outstanding qualifications justify high compensation. Petitioner's profitability rests upon its sales, and the Shareholders' ambition, inventiveness, and energy (as opposed to petitioner's investment in capital) are the primary reasons for petitioner's sales, growth, and success. See Home Interiors & Gifts, Inc. v. Commissioner, supra at 1158; Dave Fischbein Manufacturing Co. v. Commissioner, 59 T.C. 338, 352-353 (1972).

b. NATURE, EXTENT, AND SCOPE OF THE EMPLOYEE'S WORK

The nature, extent, and scope of petitioner's work performed by the Shareholders is fundamental, substantial, and all-encompassing. The Shareholders performed all of petitioner's executive and managerial functions, except accounting, and performed or oversaw all of its manual labor. The Shareholders also supervised petitioner's daily operations, including supervising and directing the Other Employees, and made petitioner's business decisions. Given the vital role played by the Shareholders in petitioner's operations and success, and the long hours that they each dedicated thereto, we view the Shareholders as indispensable to petitioner's business. Petitioner's growth and prosperity is due directly to their skills, dedication, and creativity. If petitioner were to lose either of the Shareholders, it would be in a rough situation until a suitable replacement (if any) could be found. We conclude that this factor favors petitioner. See Elliotts, Inc. v. Commissioner, supra at 1245- 1246; Kennedy v. Commissioner, supra at 176; Home Interiors & Gifts, Inc. v. Commissioner, supra at 1158; Dave Fischbein Manufacturing Co. v. Commissioner, supra at 352-353.

c. SIZE AND COMPLEXITIES OF THE EMPLOYER'S BUSINESS

Petitioner is a highly specialized company, and its operations demand expertise. Petitioner's business operations could be very complex, but for the simplification that the Shareholders have added to it. Petitioner's gross receipts during the years in issue totaled more than $6.4 million. We conclude that this factor favors petitioner. See Elliotts, Inc. v. Commissioner, supra at 1246.

d. COMPARISON OF SALARIES PAID TO NET AND GROSS INCOME

The percentage of officers' salaries to gross receipts for 1989, 1990, and 1991 was 34, 28, and 38, respectively. The percentage of officers' salaries to gross income for 1989, 1990, and 1991 was 59, 51, and 60, respectively. The percentage of officers' salaries to book net income (before deducting officers' compensation) for 1989, 1990, and 1991 was 94, 96, and 105, respectively. The percentage of officers' salaries to taxable net income (before deducting officers' compensation) for 1989, 1990, and 1991 was 93, 91, and 103, respectively.

These percentages are reasonable in light of the qualifications of the Shareholders and the nature, extent, and scope of their work. We also find relevant the fact that petitioner reported more than $55,000 in taxable income during each of 2 of the years in issue notwithstanding its payment of large compensation to the Shareholders. Given the additional fact, however, that petitioner's payment of the bonuses kept corporate taxes at a low level, we conclude that this factor favors neither party. See Paul E. Kummer Realty Co. v. Commissioner, supra at 315 (officers' compensation not reasonable where payment of bonuses kept corporate taxes at a low level). We consider this factor neutral.

e. GENERAL ECONOMIC CONDITIONS

The record does not indicate to what extent petitioner's performance during the years in issue reflected general economic conditions. General economic conditions may affect a business' performance and indicate the extent (if any) of the employee's effect on the company. Mayson Manufacturing Co. v. Commissioner, 178 F.2d 115, 119-120 (6th Cir. 1949), revg. and remanding a Memorandum Opinion of this Court. Adverse economic conditions, for example, tend to show that an employee's skill was important to a company that grew during the bad years. We conclude that this factor favors neither party. We consider it neutral.

f. COMPARISON OF SALARIES WITH DISTRIBUTIONS TO SHAREHOLDERS AND RETAINED EARNINGS

The absence of a dividend history is a significant factor that may suggest that some of the amounts paid as compensation to a shareholder/employee is really a dividend. Owensby & Kritikos, Inc. v. Commissioner, 819 F.2d 1315, 1322-1323 (5th Cir. 1987), affg. T.C. Memo. 1985-267. Such an absence may raise a "red flag" that invites special scrutiny of the Court, Edwin's, Inc. v. United States, 501 F.2d 675, 677 n.5 (7th Cir. 1974), and justifies an inference that some of the purported compensation was actually a distribution of profits, Charles Schneider & Co. v. Commissioner, 500 F.2d at 153. Such an absence

(and inference), however, does not automatically convert compensation that would otherwise be reasonable into a dividend. Corporations are not required to pay dividends. Instead, an individual shareholder may participate in the success of a corporation through the appreciation in the value of his or her stock brought on by retained earnings and the possibility of a future return. Thus, a corporate employer with little or no dividend history may be able to pay and deduct large amounts of compensation if the Court is convinced that a reasonable person would still have invested in the corporation. Courts sometimes apply a hypothetical investor test to determine whether a reasonable person would have invested in the corporation. Critical to this test is whether the shareholders of the corporation received a fair rate of return (without taking into account any compensation) from the total of their initial and subsequent investments. Owensby & Kritikos, Inc. v. Commissioner, supra at 1326-1327; Elliotts, Inc. v. Commissioner, 716 F.2d at 1244; Medina v. Commissioner, T.C. Memo. 1983-253; see also Rev. Rul. 79-8, 1979-1 C.B. 92 (compensation is not unreasonable merely because a corporation pays an insubstantial portion of its earnings as dividends).

Respondent determined that part of the compensation paid to the Shareholders was actually a dividend. Respondent argues in her brief that petitioner's failure to pay dividends during its existence indicates that the Shareholders' compensation was unreasonable. We disagree that the compensation was unreasonable. Although petitioner has never paid a dividend during its existence, its choice not to do so stemmed from its board's decision that petitioner needed to retain funds in order to grow. We refuse to second guess the board's wisdom under the facts of this case; we view its choice not to pay dividends as a reasonable business decision. As a point of fact, petitioner invested over $286,000 in fixed assets during the years in issue, and its equity grew from the Shareholders' initial contributions totaling $100, to $408,810 on December 31, 1991. Petitioner's retained earnings also steadily grew from its genesis to $408,711 on December 31, 1991.[8] See Comtec Sys., Inc. v. Commissioner, T.C. Memo. 1995- 4. In addition to the fact that the increase in petitioner's retained earnings most likely increased the value of its stock, we believe that a hypothetical investor would have considered $408,711 in retained earnings to have been a worthy return over the 12- to 13- year period on his or her investment of $100. We conclude that this factor favors petitioner.[9]

g. PREVAILING RATES OF COMPENSATION FOR COMPARABLE POSITIONS IN COMPARABLE COMPANIES

Both petitioner and respondent rely on expert testimony with respect to this factor. Expert testimony is appropriate to help the Court understand an area requiring specialized training, knowledge, or judgment. Fed. R. Evid. 702; Snyder v. Commissioner, 93 T.C. 529, 534 (1989). The Court, however, is not bound by an expert's opinion. We weigh an expert's testimony in light of his or her qualifications, and with respect to all credible evidence in the record. Depending on what we believe is appropriate under the facts and circumstances of the case, we may either reject an expert's opinion in its entirety, accept it in its entirety, or accept selective portions of it. Helvering v. National Grocery Co., 304 U.S. 282, 294-295 (1938); Seagate Technology v. Commissioner, 102 T.C. 149, 186 (1994); Parker v. Commissioner, 86 T.C. 547, 562 (1986).

Petitioner's expert is Lawrence J. LeGrand, a tax partner in the manufacturing, retailing, and distribution practice of KPMG Peat Marwick LLP. Mr. LeGrand's clients are mainly closely held businesses, and he specializes in executive compensation. Respondent's expert is E. James Brennan III, president of Brennan, Thomsen Associates, Inc., of Chesterfield, Missouri. Mr. Brennan is no stranger to this Court, having testified before us on no fewer than 10 prior occasions.[10]

We are not persuaded by either of the experts. Mr. LeGrand's testimony was unconvincing because it did not directly address the factor at hand; i.e., the prevailing rates of compensation for comparable positions in comparable concerns. Considering his testimony in its entirety, we find that Mr. LeGrand was retained by petitioner to advocate its position herein. See Laureys v. Commissioner, 92 T.C. 101, 129 (1989). We are no more convinced by Mr. Brennan. As has been true in a majority of the cases in which he has testified before this Court, his conclusions are not based on data from businesses that are akin to the business at hand, i.e., automobile salvage, automobile disassembling, and the wholesale of scrap metal. See, e.g., BOCA Constr. Inc. v. Commissioner, T.C. Memo. 1995-5; L & B Pipe & Supply Co. v. Commissioner, T.C. Memo. 1994-187; Thomas A. Curtis, M.D., Inc. v. Commissioner, T.C. Memo. 1994-15; Automotive Inv. Dev. Inc. v. Commissioner, T.C. Memo. 1993-298; Diverse Indus., Inc. v. Commissioner, T.C. Memo. 1986-84: Owensby & Kritikos, Inc. v. Commissioner, T.C. Memo. 1985-267, affd. 819 F.2d 1315 (5th Cir. 1987). To restate what we have previously stated with respect to Mr. Brennan's "expert" testimony: "We are not satisfied that a reasonable level of compensation for an executive like * * * [the Shareholders] can be accurately determined by reference to the industries Brennan surveyed because of the absence of significant information on other businesses similar to petitioner's." Thomas A. Curtis, M.D., Inc. v. Commissioner, supra; Diverse Indus., Inc. v. Commissioner, supra. Indeed, comparing compensation paid to officers of companies that differ markedly provides guidance of dubious value. See Diverse Indus., Inc. v. Commissioner, supra; Niagara Falls Coach Lines, Inc. v. Commissioner, T.C. Memo. 1977-269. We conclude that this factor favors neither party. We consider it neutral.

h. EMPLOYER'S SALARY POLICY AS TO ALL EMPLOYEES

The record is unclear as to petitioner's salary policy as to all of its employees. We look to this factor to determine whether the Shareholders were compensated differently than the Other Employees merely because of the Shareholders' status as shareholders. Owensby & Kritikos, Inc. v. Commissioner, supra at 1322-1323. A reasonable, longstanding, and consistently applied compensation plan, for example, is evidence that compensation is reasonable. Elliotts, Inc. v. Commissioner, 716 F.2d at 1247. We conclude that this factor favors neither party. We consider it neutral.

i. COMPENSATION PAID IN PRIOR YEARS

The compensation (including bonuses) paid by petitioner to the Shareholders prior to the years in issue ranged from $42,200 to $1,106,000. An employer may deduct

compensation paid to an employee in a year although the employee performed the services in a prior year. Lucas v. Ox Fibre Brush Co., 281 U.S. 115, 119 (1930); see also R. J. Nicoll Co. v. Commissioner, 59 T.C. 37, 50-51 (1972), and the cases cited therein. In order to do so, the employer must show: (1) That the employer intended to compensate the employee for past undercompensation, and (2) the amount of the undercompensation. Pacific Grains, Inc. v. Commissioner, 399 F.2d 603, 606 (9th Cir. 1968), affg. T.C. Memo. 1967-7; Estate of Wallace v. Commissioner, 95 T.C. 525, 553-554 (1990), affd. 965 F.2d 1038 (11th Cir. 1992).

Petitioner has not argued that, and we are unable to determine whether, any of the payments in issue were intended to compensate either of the Shareholders for his service provided to petitioner in earlier years. We conclude that this factor does not apply.

j. EMPLOYER'S PAST AND PRESENT FINANCIAL CONDITION

Petitioner grew and became very profitable. Its equity grew from the Shareholders' initial contributions totaling $100, to $408,810 on December 31, 1991. We conclude that this factor favors petitioner.

k. WHETHER EMPLOYER AND EMPLOYEE DEALT AT ARM'S LENGTH

The Shareholders were purportedly paid high compensation as petitioner's principal employees. Given their relationship to petitioner as its only shareholders, we must inquire whether an independent investor would have paid the Shareholders the amount of compensation that they received during the years in issue. See Owensby & Kritikos, Inc. v. Commissioner, supra at 1326-1327; see also Elliotts, Inc. v. Commissioner, supra at 1246-1247. We conclude that an independent investor would have done so in view of the nature and quality of the services that the Shareholders performed for petitioner, and the effect of their services on a hypothetical investor's return on his or her investment. We conclude that this factor favors petitioner. In so concluding, we downplay the lack of adherence to corporate formalities shown by petitioner in paying the bonuses to the Shareholders. As the Court observed in Levenson & Klein, Inc. v. Commissioner, 67 T.C. 694, 714 (1977) (quoting Reub Issacs & Co. v. Commissioner, 1 B.T.A. 45, 48 (1924)), "Closely held corporations, as is well known, often act informally, 'their decisions being made in conversations, and oftentimes recorded not in minutes, but by action.'" See also Levenson & Klein, Inc. v. Commissioner, supra at 713-714 (courts may give little or no weight to the lack of corporate formality in closely held corporations). We also find relevant the following testimony from Waier with respect to the pay differential:

> Dick [Andrews] is more like a workaholic. And anybody that works that hard has got to be compensated for the work that they do. If you don't do that, your business is going to suffer because the guy that is putting in more hours and not receiving any money -- he is definitely going to reject the idea, not work as hard.
> And if he doesn't work as hard, I don't receive my salary, too.

l. WHETHER EMPLOYEE GUARANTEED EMPLOYER'S DEBT

The record does not indicate whether the Shareholders personally guaranteed any of petitioner's debt. Courts have considered whether an employee personally guaranteed his or her employer's debt, in determining whether the employee's compensation was reasonable. In certain situations, an employee's personal guarantee of his or her employer's debt may entitle the employer to pay a greater salary to the employee than the employer would otherwise have paid. See Owensby & Kritikos, Inc. v. Commissioner, supra at 1325 n.33; R. J. Nicoll Co. v. Commissioner, supra at 51; see also Acme Constr. Co. v. Commissioner, T.C. Memo. 1995-6; BOCA Constr. Inc. v. Commissioner, T.C. Memo. 1995-5. We conclude that this factor favors neither party. We consider it neutral.

m. ABSENCE OF PENSION PLAN/PROFIT-SHARING PLAN

The Shareholders were not participants in any pension plan or profit-sharing plan offered by petitioner. Courts have considered the absence of a pension plan or a profit-sharing plan in determining reasonable compensation. Rutter v. Commissioner, 853 F.2d 1267, 1274 (5th Cir. 1988), affg. T.C. Memo. 1986-407; Kennedy v. Commissioner, 671 F.2d 167, 174-175 (6th Cir. 1982), revg. and remanding 72 T.C. 793 (1979). Such an absence may allow the employer to pay the employee more compensation than the employer would have paid had the employer offered the employee a pension plan or a profit-sharing plan. Rutter v. Commissioner, supra at 1274. We conclude that this factor favors petitioner.

n. LACK OF REIMBURSEMENT OF BUSINESS EXPENSES

The Shareholders were not reimbursed for their out-of-pocket expenses incurred on behalf of petitioner. Courts have considered the lack of reimbursement of business expenses in determining reasonable compensation. An employer may pay greater compensation to an employee to reflect the fact that the employee is not being reimbursed for expenses that he or she paid on behalf of the employer. Id. at 1274.

We consider this factor neutral, and we give it no weight. The record is insufficient for us to determine the amount of the business expenses paid by the Shareholders during the years in issue for which they were not reimbursed. We also find that the lack of reimbursement was the personal choice of the Shareholders, rather than the policy of petitioner.

o. CONCLUSION ON REASONABLENESS

Most of the factors described above favor petitioner. None favor respondent. We conclude that the $478,000, $353,000, and $368,000 paid to Andrews in 1989, 1990, and 1991, respectively, was reasonable compensation for those years. We conclude likewise with respect to the $378,000, $253,000, and $343,000 paid to Waier in 1989, 1990, and 1991, respectively.

2. WAS COMPENSATION PAID FOR SERVICES RENDERED TO PETITIONER

According to respondent, petitioner is not entitled to deduct all of the compensation paid to the Shareholders because it paid part of this compensation for services that they performed on account of other, related companies (e.g., the Sellers). We disagree. Although the Shareholders provided some services to other related entities, we are unable to find that these services were performed on behalf of anyone other than petitioner. We hold that petitioner paid the Shareholders the compensation in issue for services that they rendered to it.

3. CONCLUSION

The $478,000, $353,000, and $368,000 paid to Andrews in 1989, 1990, and 1991, respectively, is deductible for those years under section 162(a)(1). The $378,000, $253,000, and $343,000 paid to Waier in 1989, 1990, and 1991, respectively, is also deductible for those years under section 162(a)(1).

We have considered all arguments made by respondent and, to the extent not discussed above, find them to be without merit. To reflect the foregoing,
Decision will be entered for petitioner.

FOOTNOTES

1. Respondent also determined: (1) Petitioner did not have a net operating loss in 1991, that could be carried back to earlier years, (2) petitioner had a $954 general business credit for 1988, that it could apply in 1989, and (3) petitioner was not entitled to report an additional $3,000 and a $344 credit in its 1989 and 1990 taxable years, respectively. Our resolution of the reasonable compensation issue automatically disposes of these other determinations.

2. The fact that petitioner did not operate out of its own building is also unique in the industry. By operating on other people's property, petitioner was able to minimize its expenses (as compared to its competitors) by practically eliminating its general administrative expenses such as rent, real estate taxes, and utilities.

3. The Shareholders have always owned petitioner equally.

4. In connection therewith, petitioner retains an accounting firm to report its payroll, review its financial operations, and prepare its tax returns.

5. The Shareholders learned after the formation of petitioner that purchasers of shredded automobiles would pay a progressive pay scale to volume haulers.

6. During the years in issue, petitioner purchased fixed assets worth more than $286,000.

7. More specifically, respondent disallowed $339,792, $222,253, and $254,282 paid to Andrews for 1989, 1990, and 1991, respectively, and $274,344, $154,940, and $257,711 paid to Waier.

8. We recognize that petitioner's retained earnings at the end of its 1991 taxable year were $32,647 less than at the beginning of that year. Petitioner's gross receipts for 1991, however, were also $284,272 less than the prior year.

9. In so concluding, we also find relevant the fact that the total bonuses paid to the Shareholders during each year did not bear a relationship to the percentage of stock held by each of them. See Paul E. Kummer Realty Co. v. Commissioner, 511 F.2d 313, 316 (8th Cir. 1975), affg. T.C. Memo. 1974-44; see also Kennedy v. Commissioner, 671 F.2d 167, 174-175 (6th Cir. 1982), revg. and remanding 72 T.C. 793 (1979).

10. See BOCA Constr. Inc. v. Commissioner, T.C. Memo. 1995-5; L & B Pipe & Supply Co. v. Commissioner, T.C. Memo. 1994-187; Mortex Manufacturing Co. v. Commissioner, T.C. Memo. 1994-110; Thomas A. Curtis, M.D., Inc. v. Commissioner, T.C. Memo. 1994-15; Automotive Inv. Dev. Inc. v. Commissioner, T.C. Memo. 1993-298; RTS Inv. Corp. v. Commissioner, T.C. Memo. 1987-98, affd. 877 F.2d 647 (8th Cir. 1989); Rutter v. Commissioner, T.C. Memo. 1986-407, affd. 853 F.2d 1267 (5th Cir. 1988); Diverse Indus., Inc. v. Commissioner, T.C. Memo. 1986-84: Owensby & Kritikos, Inc. v. Commissioner, T.C. Memo. 1985-267, affd. 819 F.2d 1315 (5th Cir. 1987); Lefkowitz v. Commissioner, T.C. Memo. 1983-356.

Mandelbaum v. Commissioner

Case name: Mandelbaum v. Commissioner
Citation: T.C. Memo 1995-255
Date of decision: June 12, 1995
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Laro
Experts: Paul R. Mallarkey (for respondent) Roger J. Grabowski (for petitioner)
SIC: 5621 Women's Clothing Stores (except dress shops and bridal shops)
NAICS: 448120 Women's Clothing Stores
7

Keywords: Gift tax , Initial public offering (IPO), Restricted stock studies

Counsel for petitioners: Henry M. Matri, David M. Kohane, and Thomas J. LaConte

Counsel for respondent: Clare W. Darcy.

Judge: Laro

The subject cases were consolidated for trial, briefing, and opinion. Bernard Mandelbaum (Bernard), Leon Mandelbaum (Leon), Beverly Mandelbaum (Beverly), Max Mandelbaum (Max), and Pearl Mandelbaum (Pearl) petitioned the Court to redetermine respondent's determinations with respect to their 1986 through 1990 taxable years. n2 Respondent initially determined (and reflected in her notices of deficiency) the following deficiencies in Federal gift tax and additions to tax under section 6660: n3

			Additions to Tax
Taxpayer	Year	Deficiency	Sec. 6660
Bernard	1987	$ 9,057	--
Leon	1987	38,761	--
Max	1987	37,772	--
Pearl	1987	36,911	--
Beverly	1987	38,761	--
Bernard	1988	47,033	$ 9,406
Leon	1988	49,410	9,882
Max	1988	43,308	8,662

Pearl	1988	43,308	8,662
Beverly	1988	49,410	9,882
Bernard	1989	25,833	7,750
Leon	1989	39,235	11,771
Max	1989	27,398	8,219
Pearl	1989	27,398	8,219
Beverly	1989	39,235	11,771
Bernard	1990	472,370	94,474
Leon	1990	752,715	150,543
Max	1990	10,451	2,090
Pearl	1990	486,023	97,205
Beverly	1990	11,292	2,258

n2 Respondent audited petitioners' 1986 Federal gift tax returns and increased the amounts of their taxable gifts that were exempted from gift tax by application of the unified credit for that year. The increase, in turn, decreased the unified credits available to petitioners with respect to taxable gifts made in years after 1986. Petitioners' 1986 taxable year is before the Court solely to determine their unified credits.

n3 Unless otherwise indicated, section references are to the Internal Revenue Code in effect for the years in issue. Rule references are to the Tax Court Rules of Practice and Procedure.

In her answers (including amendments thereto) for 1987, respondent asserted that the deficiencies in Federal gift tax and additions under section 6660 are as follows:

		Additions to Tax
Taxpayer	Deficiency	Sec. 6660
Bernard	$ 66,134	$ 19,840
Leon	122,401	36,720
Max	115,577	34,673
Pearl	114,579	34,374
Beverly	122,401	36,720

In her answers (including amendments thereto) for 1989 and 1990, respondent asserted that she had erroneously referenced section 6660 in the related notices of deficiency, instead of section 6662(a) and (g), and that the additions to the tax for those years are as follows:

		Additions to Tax
Taxpayer	Year	Sec. 6662(a) and (g)
Bernard	1989	$ 5,167
Leon	1989	7,847

Max	1989	5,480
Pearl	1989	5,480
Beverly	1989	7,847
Bernard	1990	122,284
Leon	1990	198,860
Max	1990	2,090
Pearl	1990	64,232
Beverly	1990	2,258

Following concessions, n4 we must decide:

n4 Petitioners alleged in their petitions that respondent mailed her notices of deficiency to them after the statutory period of limitations for assessment and collection of gift tax. Respondent's pleadings contain denials of this allegation, and set forth affirmative facts to support her denials. Because petitioners did not raise this issue at trial or in their briefs, we hold that their silence amounts to a concession of this issue. Burbage v. Commissioner, 82 T.C. 546, 547 n.2 (1984), affd. 774 F.2d 644 (4th Cir. 1985). We note, however, that the record indicates that respondent issued the subject notices of deficiency to petitioners before the expiration of the period of limitations.

1. What discount for lack of marketability should be applied to determine the fair market value of certain shares of stock owned by some or all of petitioners on the following valuation dates: December 31, 1986, December 16, 1987, December 23, 1988, December 15, 1989, February 1, 1990, and December 30, 1990. We hold the marketability discount is 30 percent on all of these dates.

2. Whether petitioners are liable for additions to their 1987 and 1988 Federal gift taxes for valuation understatements under section 6660. We hold they are not.

3. Whether petitioners are liable for additions to their 1989 and 1990 Federal gift taxes for substantial gift tax valuation understatements under section 6662(a) and (g). We hold they are not.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. The stipulations and attached exhibits are incorporated herein by this reference. Each petitioner was a resident of New Jersey when he or she petitioned the Court. They each filed Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, for the 1986 through 1990 taxable years. Each reported on Form 709 that he or she had made a gift of the stock of Big M, Inc. (Big M), during the corresponding year.

1. The Mandelbaum Family

Leon, Max, and Bernard are brothers. Leon is married to Beverly, and they have four children: Kenneth, Beth, Joan, and Michael. Max is married to Pearl, and they have three children: Laurence, Alan, and Susan. Bernard is divorced and has three children: Ken, Lee, and Gini.

We hereinafter collectively refer to these 15 people as the Mandelbaum family.

2. Big M

a. Background

Big M is a privately held, family-owned corporation that was incorporated as a C corporation under the laws of the State of New Jersey. Big M operated as a C corporation until it elected to be an S corporation effective with its taxable year beginning on July 26, 1987. Big M uses a fiscal year to report its income and expenses for Federal income tax purposes. Big M's fiscal year originally ended on the last Saturday in July. Big M changed its taxable year in July 1988 to a fiscal year ending on the last Saturday in January.

b. Capital Structure

Big M was originally founded by Leon, Max, and Bernard. These three men, who initially were equal shareholders, were Big M's sole shareholders until 1976. In 1976, Leon and Max began transferring some of their Big M shares to their children. Bernard began transferring some of his Big M shares to his children in 1978. Big M stock has always been owned within the three branches of the Mandelbaum family formed by the brothers and their children. The Mandelbaum family does not plan to make Big M public, sell it, or seek nonfamily equity investors.

Big M had one class of common stock outstanding in its 1986 and 1987 taxable years. This stock, totaling 9,643 shares, was owned by all members of the Mandelbaum family except for Pearl and Beverly. Big M restructured its corporate form during its taxable year ended July 30, 1988. Big M recapitalized, exchanging 9,643 shares of its common stock for 6 shares of its newly issued class A voting common stock and 9,637 shares of its newly issued class B nonvoting common stock. One share of class A voting stock each was issued to Leon, Bernard, Laurence, Kenneth, Ken, and Alan. n5 Shares of class B nonvoting stock were issued to each member of the Mandelbaum family in the same ownership percentages that they each had held before the recapitalization. All members of the Mandelbaum family, except for Pearl and Beverly (who were not shareholders at that time), agreed that a share of class A stock would become a share of class B stock if it was transferred. These members also agreed that Big M's board of directors (the Board) could restore the voting rights to the transferred share if the transferee was a member of the Board.

n5 Accordingly, each branch of the family had two voting shares.

c. Type of Business

Big M operates predominantly in a single industry segment; i.e., women's apparel retail stores, in the States of New York, New Jersey, Pennsylvania, Delaware, Maryland, and Virginia. Bernard, Max, Leon, and their mother opened Big M's first store in 1950. All three brothers were actively involved in the business then, and they and their children continue to operate the business today. A number of the children are currently active in the management of the business on a full-time basis. The oldest of these children is Max's son, Laurence, who is currently Big M's chief executive officer and president. Several of the grandchildren of Leon, Max, and Bernard also work in the business.

Big M has two retail divisions: Mandee Shops and Annie Sez. n6 Mandee Shops offers popular-priced contemporary junior fashions. Its average store size is 8,000 square feet. Annie Sez offers off-price, designer, and brand name women's clothing. Its average store size is 15,000 square feet. Each store employs approximately 15 people. Big M employs between 3,500 and 4,000 people, depending on the season, including 250 at its Totowa, New Jersey, headquarters.

n6 Mandee Shops does business in certain States under the name "Karin Morgan".

Big M's stores are primarily situated in downtown locations of densely populated cities and "strip center" locations on major highways. Big M had the following number of stores as of the end of the years indicated:

Year	Number of Stores
1983	48
1984	60
1985	71
1986	105
1987	110
1988	107
1989	115
1990	122

Retail sales of women's apparel is highly competitive. Competition relates to price, style, selection, quality, display, customer service, and store location. Mandee Shops and Annie Sez have different competitors. Their competitors include specialty stores, department stores, factory outlet malls, and mills projects.

Big M purchases practically all of its merchandise on the open market from various suppliers. Big M maintains sufficient inventory in its stores throughout the year, and it promotes its goods to the public through different methods of advertisement, such as radio, television, and newspapers. Big M accepts national credit cards and offers layaway plans.

d. Management

On November 4, 1982, Big M and its then shareholders (i.e., all members of the Mandelbaum family except Beverly, Pearl, Lee, and Gini) executed an agreement (First Agreement). The First Agreement required that Laurence be elected as Big M's president; that Leon be elected as vice president and chairman of the Board; and that Bernard be elected as secretary and vice chairman of the Board.

The First Agreement was revoked by a second agreement (Second Agreement) dated June 13, 1988. The Second Agreement was executed by Big M and its then shareholders; i.e., all members of the Mandelbaum family except Beverly and Pearl. The Second Agreement required that Laurence be elected as Big M's president; that Leon be elected as vice-president and chairman of the Board; that Bernard be elected as secretary, treasurer and vice chairman of the Board; that Kenneth be elected as vice president of real estate; that Ken be elected as vice president of retail operations; and that Alan be elected as vice president of merchandising.

3. Freely Traded Values of Big M Stock n7

The freely traded values of 1 share of the 9,643 shares of Big M common stock outstanding on December 31, 1986, and December 31, 1987, were $ 7,505 and $ 6,631, respectively. The freely traded values of 1 share of the 9,637 shares of Big M class B common stock outstanding on December 23,

1988, December 15, 1989, February 1, 1990, and December 30, 1990, were $ 7,376, $ 8,675, $ 7,325, and $ 4,397, respectively.

n7 The parties have stipulated these freely traded values. These values take into account any minority interest discount that is applicable.

4. Shareholders' Agreements

The First Agreement and the Second Agreement (collectively referred to as the Shareholders' Agreements) were executed with respect to Big M's stock. The Shareholders' Agreements were prepared by Big M's outside counsel, Arne Siegel (Siegel), n8 and Big M's outside accountant, Robert Kaye (Kaye). Both Siegel and Kaye are longtime advisers to Big M.

n8 Siegel is also a certified public accountant.

Siegel and Kaye initially met with Leon to discuss the advantages and disadvantages of the Shareholders' Agreements. Leon later met with Big M's other shareholders to discuss the agreements with them. None of the shareholders were personally represented by counsel during any discussion of the Shareholders' Agreements. The Shareholders' Agreements were approved by Big M's shareholders without meaningful negotiations. The shareholders merely adopted the recommendations of Siegel and Kaye, making no significant changes to the terms of either agreement.

The First Agreement provided that Big M and its shareholders "believe it is in their best interest to provide for continuity in the management and policies of * * * [Big M]." The First Agreement required the shareholders to elect the following individuals to the Board: Leon, Bernard, Laurence, Kenneth, Ken, and Alan. n9 The First Agreement required that vacancies in the Board be filed by the remaining board members, and that any new director must be an "issue" of a current shareholder or a spouse of a current shareholder. The First Agreement did not provide a price or a formula for determining the fair market value of transferred shares of Big M stock. The First Agreement, however, provided the following rules with respect to such a transfer: (1) The representative of an estate of a deceased shareholder could sell the decedent's stock to Big M, and Big M had to purchase the stock in accordance with the laws of the State of New Jersey pertaining to the purchase by a corporation of its own shares of stock. Big M was given the sole discretion to pay for the stock over any length of time (with interest at 10 percent) that Big M desired; (2) a shareholder could freely transfer Big M stock to his or her immediate family; and (3) except as provided elsewhere in the First Agreement, a shareholder wanting to transfer Big M stock had to first offer the stock to Big M on the same terms and conditions as the proposed transfer. Big M had 90 days to decide whether it would purchase the stock. Big M had the sole discretion to pay for the stock over any length of time (with interest at 10 percent) that Big M desired.

n9 Or, in other words, two persons from each branch of the Mandelbaum family.

The Second Agreement provides that Big M's shareholders "desire to maintain ownership and control of * * * [Big M] among themselves and to provide for continuity in the management and ownership of * * * [Big M]", and "It is the desire of all of the parties to maintain, if at all possible, the same proportionate interest of each [family] Group in * * * [Big M]." Like the First Agreement, the Second Agreement requires the shareholders to elect the following individuals to the Board: Leon, Bernard, Laurence, Kenneth, Ken, and Alan. n10 The Second Agreement requires that vacancies on the Board be filled by the remaining board members, and any new director must be a child of a current shareholder or a

spouse of a current shareholder. The Second Agreement, which may be changed at any time by unanimous consent of Big M's shareholders, provides the following rules with respect to a transfer of Big M stock: (1) Each shareholder may freely transfer Big M stock to members of his or her family group; (2) if a shareholder wants to transfer Big M stock outside of his or her family group, the shareholder must first offer the stock to the members of his or her family group on the same terms and conditions on which the stock is offered to others. The members of the shareholder's family group have 90 days to exercise a right of first refusal. If the family members do not exercise such a right, Big M has 30 days to exercise the right of first refusal. Big M has the sole discretion to pay for the stock over any length of time (with interest at the prime rate) that Big M desires. If Big M does not exercise its right of first refusal, the shareholder may transfer the stock to an outsider. The shareholder must transfer all of his or her stock, and the transferee must agree to be bound by the Second Agreement; and (3) upon the death of a shareholder, the representative of the estate may sell the decedent's stock to Big M, and it must purchase the stock in accordance with the laws of the State of New Jersey that pertain to the purchase by a corporation of its own stock. Big M has the sole discretion to pay for the stock over any length of time (with interest at the prime rate) that Big M desires. The price at which Big M will purchase the stock is determined solely by the holders of the voting stock.

n10 Or, in other words, two persons from each branch of the Mandelbaum family.

5. Big M's Financial History

Relevant data from the consolidated financial statements of Big M and its subsidiaries are as follows:

Taxable year ended	7/27/85	7/26/86
Current assets	$ 25,493,497	$ 30,530,663
Other assets	22,701,570	31,934,578

n/a -- Data not available

For its fiscal years that ended before 1983, Big M generally paid annual dividends of $ 3.50 per share. Big M paid dividends of $ 28,350, $ 32,400, $ 36,450, $ 48,215, and $ 48,000 during its fiscal years ended in 1983, 1984, 1985, 1986, and 1987, respectively.

In 1988 and 1989, Big M made distributions sufficient to cover its shareholders' tax liabilities. In 1990, Big M made distributions sufficient to cover its shareholders' tax liabilities, and it distributed approximately $ 52 per share to all of its shareholders in connection with the establishment of three grantor trusts. n11

n11 The three trusts -- the Bernard Mandelbaum Retained Interest Trust, the Leon Mandelbaum Retained Interest Trust, and the Pearl Mandelbaum Retained Interest Trust -- were each established on Feb. 1, 1990, and were irrevocable. Under their terms, each grantor could receive all of the income from the transferred property for a set period of time (e.g., 10 years), and the remainder interest would pass to his or her children equally.

6. Federal Gift Tax Returns

a. Overview

In 1976, Siegel and Kaye advised Leon, Max, and Bernard that they should establish a program under which they would give stock to their children. Each year thereafter, Siegel and Kaye advised Leon, Max, and Bernard as to the number of shares to give to their children. The following tables show the gifts of Leon, Max, and Bernard on each valuation date and list each shareholder's holding immediately after the gifts. n12

n12 We note that the percentages of the shareholders' holdings contain rounding errors of .01.

	December 31, 1986	
	Gifts	Holdings
	Shares	
	of Stock	Class A

SHAREHOLDERS OF RECORDS:	Received by Gift	%	Common	%

b. Filing of Gift Tax Returns

Beginning in 1976 and for most years thereafter (including each of the years in issue), Bernard, Leon, and Max filed Federal gift tax returns and reported the transfer of Big M stock to their children and/or the grantor trusts. For the 1986 through 1989 calendar years, Beverly and Pearl each agreed to split the gifts with their husbands, see sec. 2513, and filed Federal gift tax returns.

c. Preparation of Gift Tax Returns

Petitioners' 1976 through 1989 Federal gift tax returns were prepared by Siegel. Siegel and Kaye valued the shares of Big M for reporting on these returns. In valuing the shares, Siegel and Kaye first determined the total value of Big M stock by subtracting the net asset value of Big M's leasehold improvements from Big M's shareholders' equity. Siegel and Kaye then determined the per-share value of Big M by multiplying Big M's total value (as determined by them) by 50 percent (to reflect a minority and marketability discount) and dividing the product by Big M's outstanding shares (9,643). Siegel and Kaye determined that each share of Big M stock was worth $ 1,469, $ 2,335, and $ 2,473 on the 1987, 1988, and 1989 valuation dates, respectively.

Petitioners' 1990 Federal gift tax returns were prepared by the firm of Cole, Schotz, Bernstein, Meisel & Forman, P.A. (Cole, Schotz). Cole, Schotz valued the subject shares of Big M based on Big M's average income for the current and prior 4 years. Cole, Schotz first computed Big M's average income for these years, and then reduced the average amount by 50 percent in order to reflect a discount for minority interest and lack of marketability. Cole, Schotz determined that each share of Big M stock was worth $ 1,560 on both valuation dates in 1990. Cole, Schotz determined that the values of the gifts in trust made by Pearl, Leon, and Bernard were $ 504,638, $ 746,972, and $ 498,390, respectively.

d. Respondent's Audits of Gift Tax Returns

Respondent conducted two separate audits with respect to petitioners' gifts of Big M stock. Siegel and Kaye represented petitioners during each audit. Respondent conducted the first audit on the 1976, 1977, and 1978 Federal gift tax returns of Max, Pearl, Leon, and Beverly. Respondent conducted the second audit on the 1981 and 1982 Federal gift tax returns of Max, Pearl, Leon, Beverly, and Bernard. Leon, Max, Pearl, and Bernard consented to an additional gift tax assessment in connection with respondent's audit of 1982.

7. The Notices of Deficiency and Amendments to Answers

In her notices of deficiency, respondent determined that the values shown on petitioners' gift tax returns were incorrect. Respondent determined that the per-share values of Big M stock on the relevant valuation dates in 1987, 1988, and 1989 were $ 2,789, $ 5,129, and $ 8,020, respectively. Respondent determined that the per-share value of Big M stock on December 30, 1990, was $ 3,377, n13 and that the February 1, 1990, values of the gifts in trust by Pearl, Leon, and Bernard were $ 1,092,412, $ 1,617,006, and $ 1,078,887, respectively. Respondent also determined (and reflected in her notices of deficiency) additions to tax under section 6660 for valuation understatements for 1988, 1989, and 1990.

n13 Contrary to her determination with respect to Leon, Pearl, Beverly, and Bernard, respondent determined the value of Max's gift on Dec. 30, 1990, by reference to a per-share value of $ 3,777. The record does not support a different value for Max, as opposed to the other four petitioners, and we

assume that respondent's reference to the higher per-share value in Max's notice of deficiency was an error.

In her answers for the 1989 and 1990 years, respondent clarified that the additions to tax for valuation understatements for those years were asserted under section 6662(a) and (g). In October 1994, respondent amended her answers for the 1987 year to increase the deficiencies asserted against petitioners n14 and to assert that petitioners were liable for additions to tax under section 6660 for valuation understatements for that year.

n14 Respondent asserted in her amendments that the per-share value on the 1987 valuation date was $ 4,784.

In March 1995, following the trial of these cases, respondent moved the Court for leave to amend her answers to the 1990 petitions of Pearl, Leon, and Bernard, to conform her pleadings to the proof. We granted respondent's motion shortly thereafter. Respondent currently alleges that the per-share values of Big M stock were $ 5,127 and $ 3,077 on February 1, 1990, and December 30, 1990, respectively; i.e., the freely traded values of Big M stock, as stipulated to by the parties, less a 30-percent marketability discount. Respondent also currently alleges that Pearl, Leon, and Bernard are liable for additions to their 1990 gift taxes under section 6662(a) and (g).

OPINION

Issue 1. Marketability Discount

a. Overview

The parties have stipulated the fair market values of the subject shares of Big M stock on the relevant valuation dates, but their stipulated values do not include any discount for lack of marketability. After a trial during which each side introduced expert testimony on the subject of a proper discount, we are asked to determine the correct allowance for the subject shares' lack of marketability. The record is replete with charts, graphs, factual data, testimony, and expert opinion. We must evaluate all of the evidence and render a judgment. We are not bound by precise appraisal formulas. As the Court has previously observed, the valuation of property is an inexact science, and, if not settled by the parties, must be resolved by the judiciary by way of "Solomon-like" pronouncements. Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980); Messing v. Commissioner, 48 T.C. 502, 512 (1967).

As typically occurs in a case of valuation, the parties primarily rely on their experts' testimony and reports to support the parties' contrary positions on the valuation issue. Expert testimony sometimes aids the Court in determining valuation. Other times, it does not. n15 The Court is not bound by an opinion of an expert. We weigh an expert's testimony in light of his or her qualifications, as well as with regard to all other credible evidence in the record. Depending on what we believe is appropriate under the facts and circumstances of the case, we may reject an expert's opinion in its entirety, accept it in its entirety, or accept only selective portions of it. Helvering v. National Grocery Co., 304 U.S. 282, 294-295 (1938); Seagate Tech., Inc., & Consol. Subs. v. Commissioner, 102 T.C. 149, 186 (1994); Parker v. Commissioner, 86 T.C. 547, 562 (1986); see also Estate of Levenson v. Commissioner, 282 F.2d 581, 582 (3d Cir. 1960), remanding T.C. Memo. 1959-120.

n15 For example, expert testimony is not useful to the Court when the expert is merely an advocate for the position argued by the party. Laureys v. Commissioner, 92 T.C. 101, 129 (1989).

Petitioners must prove that respondent's determinations of value set forth in her notices of deficiency are incorrect. Rule 142(a); Welch v. Helvering, 290 U.S. 111, 115 (1933); Estate of Gilford v. Commissioner, 88 T.C. 38, 51 (1987). Respondent bears the burden of proving the increases in the deficiency (including additions thereto) asserted in her amended answers. n16 Rule 142(a); Estate of Bowers v. Commissioner, 94 T.C. 582, 595 (1990). Valuation is a question of fact, and the trier of fact must weigh all relevant evidence to draw the appropriate inferences. Commissioner v. Scottish Am. Inv. Co., 323 U.S. 119, 123-125 (1944); Helvering v. National Grocery Co., supra at 294; Publicker v. Commissioner, 206 F.2d 250, 252 (3d Cir. 1953), affg. a Memorandum Opinion of this Court; Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); Skripak v. Commissioner, 84 T.C. 285, 320 (1985); see also Rev. Rul. 59-60, 1959-1 C.B. 237.

n16 Petitioners allege in their brief that respondent has the burden of proof with respect to the additions to their 1989 and 1990 gift taxes under sec. 6662(a) and (g). Petitioners contend that respondent bears this burden because she stated in her notices of deficiency that she determined the additions under sec. 6660, and restated in her answers that the determinations were made under sec. 6662(a) and (g). We disagree with petitioners that respondent bears the burden of proof on this issue. Although we agree with petitioners that respondent must prove any new matter pleaded in her answers, Rule 142(a), we do not agree with them that respondent's correction of her reference to former sec. 6662(a) and (g) is a new matter. Given the fact that respondent's notices clearly state that she determined valuation understatement penalties for 1989 and 1990, the mere fact that she mistakenly referred to the predecessor section (which mistake she quickly corrected in her answers) does not raise a new matter or otherwise shift the burden of proof. Estate of Jayne v. Commissioner, 61 T.C. 744, 748-749 (1974); McSpadden v. Commissioner, 50 T.C. 478, 492-493 (1968).

For Federal gift tax purposes, the fair market value of the subject property is determined as of the date of each gift, and, ordinarily, no consideration is given to any unforeseeable future event that may have affected the value of the property. Sec. 2512(a); sec. 20.2031-1(b), Estate Tax Regs.; see also First Natl. Bank v. United States, 763 F.2d 891, 893-894 (7th Cir. 1985); Estate of Newhouse v. Commissioner, supra at 218; Estate of Gilford v. Commissioner, supra at 52-53. Fair market value is defined for both estate tax and gift tax purposes to mean the price that a willing buyer would pay a willing seller, both persons having reasonable knowledge of all the relevant facts and neither person being under a compulsion to buy or to sell. Sec. 20.2031-1(b), Estate Tax Regs.; see also United States v. Cartwright, 411 U.S. 546, 551 (1973); Dorn v. United States, 828 F.2d 177, 180 (3d Cir. 1987); Snyder v. Commissioner, 93 T.C. 529, 539 (1989); Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989). The willing buyer and the willing seller are hypothetical persons, rather than specific individuals or entities, and the individual characteristics of these hypothetical persons are not necessarily the same as the individual characteristics of the actual seller or the actual buyer. First Natl. Bank v. United States, supra at 893-894; Estate of Curry v. United States, 706 F.2d 1424, 1428-1429, 1431 (7th Cir. 1983); Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981); Estate of Newhouse v. Commissioner, supra at 218.

Special rules govern the valuation of corporate stock. When stock is listed on an established securities market, the stock's value usually equals its listed market price. When stock is not listed on such a market, the stock's value may be based on the unlisted stock's recent arm's-length sales. Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982); Duncan Indus., Inc. v. Commissioner, 73 T.C. 266, 276 (1979). In the absence of recent sales, the value of unlisted stock is determined by taking into consideration the value of the corporation's listed stock, or, if the corporation has no listed stock, the listed stock of corporations engaged in the same or a similar line of business. Sec. 2031(b); Estate of Hall v. Commissioner, supra at 336. Unlisted stock must also be valued indirectly by reference to the subject corporation's net worth, its prospective earning power, its dividend-earning capacity, its goodwill, its management, its position in the industry, the economic outlook for its industry, the degree of control represented by the block of its stock to be valued, and the amount and type of its nonoperating assets if not considered elsewhere. See Estate of Hall v. Commissioner, supra at 336; Estate of Andrews v. Commissioner, supra at 940; sec. 20.2031-2(f), Estate Tax Regs.

When determining the value of unlisted stock by reference to listed stock, a discount from the listed price is typically warranted in order to reflect the unlisted stock's lack of marketability. Such a discount, commonly known as a "lack of marketability discount" (or, more succinctly, a "marketability discount"), reflects the absence of a recognized market for closely held stock and accounts for the fact that closely held stock is generally not readily transferable. A marketability discount also reflects the fact that a buyer may have to incur a subsequent expense to register the unlisted stock for public sale. See Estate of Trenchard v. Commissioner, T.C. Memo. 1995-121; Rev. Rul. 77-287, 1977-2 C.B. 319, 320-321.

The parties have stipulated the "freely traded" values of Big M's class B common stock on the pertinent valuations dates. These stipulated values take into account any applicable minority discount. The stipulated values must be discounted to reflect the fact that Big M's stock is unlisted and is not easily marketable. Ascertaining the appropriate discount for limited marketability is a factual determination. Critical to this determination is an appreciation of the fundamental elements of value that are used by an investor in making his or her investment decision. A nonexclusive list of these factors includes: (1) The value of the subject corporation's privately traded securities vis-a-vis its publicly traded securities (or, if the subject corporation does not have stock that is traded both publicly and privately, the cost of a similar corporation's public and private stock); (2) an analysis of the subject corporation's financial statements; (3) the corporation's dividend-paying capacity, its history of paying dividends, and the amount of its prior dividends; (4) the nature of the corporation, its history, its position in the industry, and its economic outlook; (5) the corporation's management; (6) the degree of control transferred with the block of stock to be valued; (7) any restriction on the transferability of the corporation's stock; (8) the period of time for which an investor must hold the subject stock to realize a sufficient profit; (9) the corporation's redemption policy; and (10) the cost of effectuating a public offering of the stock to be valued, e.g., legal, accounting, and underwriting fees. See Estate of Gilford v. Commissioner, 88 T.C. 38, 60 (1987); Northern Trust Co. v. Commissioner, 87 T.C. 349, 383-389 (1986); see also Rev. Rul. 77-287, 1977-2 C.B. 319 (valuation of restricted securities).

b. Respondent's Determination and Her Expert

Respondent determined that the freely traded value of Big M stock must be discounted by 30 percent to reflect its lack of marketability on the six valuation dates. Respondent supports her determination with the testimony of her expert, Paul R. Mallarkey (Mallarkey). Mallarkey is the Northeast regional valuation

director for Valuation and Appraisal Services at BDO, Seidman, a major international accounting firm. Mallarkey is also a senior member and accredited senior appraiser in business valuation with the American Society of Appraisers, and a chartered financial analyst with the Institute of Chartered Financial Analysts.

Mallarkey used three studies on the sale of "restricted stock" n17 to ascertain the marketability discount for the subject shares. n18 The first study, Securities and Exchange Commn., Institutional Investor Study Report, H.R. Doc. 92-64 (Vol. 5), 92d Cong., 1st Sess. (1971), is based on more than 300 private transactions of the restricted stock of corporations that had shares of the same class of stock which were publicly traded. The study finds that the median discount for restricted stock of over-the-counter nonreporting companies is between 30.1 and 40 percent. n19 The second study, Moroney, "Most Courts Overvalue Closely Held Stocks", 51 Taxes 144 (1973), is based on 10 registered investment companies that held a total of 146 blocks of restricted equity securities. The study finds that the companies' original cash-purchase discounts averaged 36 percent, in comparison to the prices of securities of the same issuers which were not restricted. The third study, Maher, "Discounts for Lack of Marketability for Closely Held Business Interests", 54 Taxes 562 (1976), is based on reports filed with the Securities and Exchange Commission by four mutual companies for their 1969 through 1973 years, with respect to restricted common stock purchased by them. The study finds that the stocks' mean discount are 34.73 percent. Discounts in the third study were derived by comparing the funds' costs for the stock to market values of unrestricted securities of the same classes of stock in the same companies on the same acquisition days.

n17 Restricted stock is stock acquired from an issuer in a transaction exempt from the registration requirements of the Federal securities law. Transfers of restricted stock are generally restricted within the first 2 years after issuance.

n18 See generally Pratt, Valuing a Business 238-247 (2d ed. 1989), for a discussion of studies on restricted stock transactions.

n19 For this purpose, a nonreporting company is not required to file certain documents, such as quarterly disclosure reports, although it has stock which is publicly traded over the counter.

Given the fact that these three restricted stock studies find that restricted stock generally sells at a 30- to 35-percent discount from unrestricted stock, Mallarkey concluded that a 30-percent discount is appropriate for all six valuation dates. Mallarkey found that the risk associated with holding Big M stock is neutralized by its size and stable gross profits, which have allowed Big M to remain profitable. Mallarkey also found that the Shareholders' Agreements do not seriously affect the marketability of Big M stock.

c. Petitioners' Position and Their Expert

Petitioners contend that a 75-percent marketability discount applies to 1986 through 1989, and a 70-percent discount applies for 1990. Petitioners support their 70- and 75-percent rates with the testimony of their expert, Roger J. Grabowski (Grabowski). Grabowski is a principal and the national director of Valuation Services Group at Price Waterhouse, LLP. Grabowski valued the subject shares and calculated the following range of marketability discounts for the shares:

Date	Discount Range

1986	66-94%
1987	63-93
1988	69-95
1989	73-96
Feb. 1990	68-83
Dec. 1990	64-78

Grabowski opined that a 75-percent discount applies for 1986 through 1989 and a 70-percent discount applies for 1990.

In reaching his opinion, Grabowski concluded that Big M stock is "virtually illiquid" and assumed that an investor in Big M would have to wait 10 to 20 years for his or her investment to become liquid. Grabowski based his conclusions primarily on the fact that Big M's shareholders executed the Shareholders' Agreements. n20 Grabowski also based his conclusions on the facts that: (1) Members of the Mandelbaum family have always owned Big M, (2) the family has no plans to make Big M public or to seek outside investors, (3) Big M's senior management is relatively young and approximately 20 years from normal retirement age; and (4) none of the gifts in issue significantly changed the voting power of Big M. Grabowski further based his conclusions on his allegations that Big M had an erratic dividend history, and that any investor in Big M would be uncertain as to whether he or she would receive regular dividends.

n20 According to Grabowski, the Shareholders' Agreements "severely restrict" the marketability of Big M shares because the agreements contain a waiting period (with a right of first refusal) with respect to all sales of Big M stock to prospective buyers who are outside of the Mandelbaum family, and contain numerous provisions that minimize the possibility that such a buyer could ever vote on corporate matters or serve on the Board. Grabowski also concluded that an investor in Big M stock would demand a higher rate of return on his or her investment, as compared to an investment in a freely traded comparable company, because of the transferability restrictions embodied in the Shareholders' Agreements.

Grabowski analyzed the same three restricted stock studies analyzed by Mallarkey. Grabowski also analyzed four other restricted stock studies and three studies on initial public offerings (IPO). The four other restricted stock studies were: Gelman, An Economist-Financial Analysts Approach 353 (1972) (average discount on restricted stock purchased by four closed-end investment companies that specialized in restricted stock); Trout, "Estimation of the Discount Associated with the Transfer of Restricted Securities", 55 Taxes 381 (1977) (average discount on restricted stock purchased by mutual funds from 1968 to 1972); Pittock & Stryker, "Revenue Ruling 77-287 Revisited", SRC Quarterly Reports 1 (Spring 1983); and Willamette Management Associates Study, as described in Pratt, Valuing a Business 247 (2d ed. 1989) (median discount for 33 arm's-length private placements of restricted stock, as compared to their freely traded counterparts, from January 1, 1981, through May 31, 1984). These four studies, taken together with the other three studies, generally find a 35-percent marketability discount for transfers of restricted stock.

Grabowski also analyzed IPO studies. n21 IPO studies report the differences between the sale prices of stocks in IPO's and the sale prices of the same stocks in private sales occurring shortly before the public transactions. The three IPO studies analyzed by Grabowski were: Emory, "The Value of Marketability as

Illustrated in Initial Public Offerings of Common Stock -- January 1980 through June 1981", Business Valuation News 21 (Sept. 1985); Emory, "The Value of Marketability as Illustrated in Initial Public Offerings of Common Stock -- January 1985 through June 1986", Business Valuation Reviews 12 (Dec. 1986); and Willamette Management Associates Studies, as described in Pratt, supra at 250. These IPO studies find average marketability discounts of 45 percent.

n21 See generally Pratt, supra, for a discussion of studies on IPO's.

Grabowski concluded that the marketability discount for the subject shares is higher than the discounts in the restricted stock and IPO studies because Big M stock is illiquid. Grabowski interviewed a number of investment firms to ascertain the rate of return that they would require from an investment in a company similar to Big M stock. These investors generally reported returns ranging from 25 to 40 percent. Grabowski concluded that an investor's required rate of return for an investment in Big M would be 35 to 40 percent. Grabowski assumed that such an investor would have to hold his or her stock for 10 to 20 years. Grabowski calculated his range of discounts based on his assumed holding period of 10 to 20 years and his ascertained required rate of return of 35 to 40 percent. Grabowski's calculations for 1990 reflect the fact that Big M made larger distributions during that year than in prior years.

d. Court's View on Experts

We are unpersuaded by Mallarkey's analysis and conclusions. Given the fact that the record adequately shows that the Mandelbaum family plans to keep Big M family controlled and privately held, we do not believe that Mallarkey gave enough weight to the fact that a person outside of the Mandelbaum family would acquire no meaningful powers in Big M if he or she invested in the company. We also find that Mallarkey did not give enough weight to the transferability restrictions embodied in the Shareholders' Agreements. Although we conclude below that these restrictions are not determinative with respect to the valuation issue, we believe that the Shareholders' Agreements create a chilling effect on prospective investors, and, accordingly, that some consideration must be given to the agreements' effect on the issue of marketability. Spitzer v. Commissioner, 153 F.2d 967 (8th Cir. 1946), affg. a Memorandum Opinion of this Court; Estate of Hall v. Commissioner, 92 T.C. 312, 325 (1989); Harwood v. Commissioner, 82 T.C. 239, 260, 263-264 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986).

We are further troubled by the fact that Mallarkey relied primarily (if not entirely) on the restricted stock studies to support his conclusion of a 30-percent discount rate. Because the restricted stock studies analyzed only "restricted stock", the holding period of the securities studied was approximately 2 years. Mallarkey has not supported such a short holding period for Big M stock, and we find no persuasive evidence in the record to otherwise support it. n22 In addition, the restricted stock studies analyzed only the restricted stock of publicly traded corporations. Big M is not a publicly traded corporation.

n22 As mentioned infra at 49, the period of time for which an investor must hold stock may affect the value of that stock.

We are no more persuaded by Grabowski's analysis or conclusions. First, Grabowski's determination of fair market value focuses only on a hypothetical willing buyer and does not reflect the view of a hypothetical willing seller. Although the record indicates that petitioners adamantly desire to keep the ownership of Big M within their family, the test of fair market value rests on the concept of a hypothetical willing buyer and a hypothetical willing seller. Ignoring the views of a willing seller is contrary to this well-

established test. In this regard, Grabowski failed to consider any person who could be considered a hypothetical willing seller of Big M stock. He also did not consider whether such a seller would sell his or her Big M stock for at least 70 percent less than its freely traded value. We find incredible the proposition that any shareholder of Big M would be willing to sell his or her stock at such a large discount.

Second, we give the Shareholders' Agreements less weight than Grabowski. According to Grabowski, the right of first refusal contained in the Shareholders' Agreements "severely restricts" marketability of Big M stock. Grabowski, however, has not persuaded us that his assertion is true, let alone that the right results are 70- and 75-percent marketability discounts. We find Grabowski's heavy reliance on the Shareholders' Agreements especially troublesome, given the fact that the agreements specify no price or formula (such as book value per share) at which the shares must be offered to Big M or to its other shareholders. In most cases, especially where an operating company is concerned, a right of first refusal without a fixed price has little, if any, effect on fair market value (which inherently includes any marketability discount), see, e.g., Couzens v. Commissioner, 11 B.T.A. 1040, 1164 (1928), and such an absence of a fixed price clearly has a less dramatic effect than fixed-price restrictions, see e.g., Worcester County Trust Co. v. Commissioner, 134 F.2d 578, 581-582 (1st Cir. 1943), revg. Estate of Smith v. Commissioner, 46 B.T.A. 337 (1942); Estate of Reynolds v. Commissioner, 55 T.C. 172, 188-190 (1970). Indeed, a right of first refusal without a fixed price does not limit the buyers to whom a seller could sell his or her stock, or the price for that stock, but merely governs the order in which prospective buyers must stand in line to buy the stock. Couzens v. Commissioner, supra at 1163-1164. Given the fact that the right actually protects and benefits the other shareholders, who are given the first right to purchase the shares that a fellow shareholder desires to sell, the depressant effect (if any) on the value of privately held stock subject to a right of first refusal is not necessarily substantial.

Third, we are troubled by the fact that Grabowski failed to consider hypothetical willing buyers who are genuine representatives of prospective investors in Big M. Although Grabowski conducted interviews with nine investors, Grabowski's interviewees included only leveraged buyout groups, merchant bankers, and venture capitalists. Such a group of investors may (and did) require a higher rate of return than other investors. Grabowski should have included in his test a more representative sample of willing buyers of Big M stock, e.g., competitors of Big M or independent investors. Grabowski did not do so. We find that Grabowski's failure to do so weakens his testimony. n23 See Estate of Salsbury v. Commissioner, T.C. Memo. 1975-333.

n23 We are also troubled by the fact that Grabowski failed to give these interviewees relevant information about the subject stock. See Commissioner v. Estate of Stewart, 153 F.2d 17 (3d Cir. 1946) (willing buyer and seller presumed to know all essential facts), affg. a Memorandum Opinion of the Court. Although Grabowski gave each of the interviewees selective information on the subject shares, Grabowski did not give the interviewees vital information that is extremely probative on the shares' value. This omitted information includes the names of Big M and its retail stores.

Fourth, we have problems with many of the assumptions that Grabowski relied on to determine the marketability discount. Grabowski relied on his interviews for the proposition that a willing buyer of Big M stock must receive a 35- to 40-percent annual rate of return for his or her investment. As mentioned above, we find this reliance misplaced. Grabowski also relied on his assumption that a buyer would have to hold Big M stock for 10 to 20 years in order to make his or her investment worthwhile. We find

this reliance equally misplaced. Although Grabowski mentioned retirement for the current generation in the same breath as his 10-to 20-year assumption, Grabowski fails to explain how the current generation's retirement will add to the marketability of Big M stock. Grabowski also mentioned petitioners' intent to keep the stock family owned. The record, however, does not support Grabowski's assumption that petitioners will surrender family control in 10 to 20 years.

e. Court's Determination of Marketability Discount

Having found limited refuge in the opinions of either expert, we proceed to determine the value of the marketability discount. We do so by analyzing the above mentioned factors as of the following valuation dates: December 31, 1986, December 16, 1987, December 23, 1988, December 15, 1989, February 1, 1990, and December 30, 1990. n24

n24 Because the parties used Big M's yearend statements to determine its freely traded values on these valuation dates, we do the same with respect to the marketability discount.

1. Private Versus Public Sales of the Stock

To determine a marketability discount for unlisted stock, sales of similar interests in like companies are frequently considered. Numerous studies have been made with respect to this factor. We find that the 10 studies analyzed by Grabowski are more encompassing than the three studies analyzed by Mallarkey. Because Grabowski's studies found that the average marketability discount for a public corporation's transfer of restricted stock is 35 percent, and that the average discount for IPO's is 45 percent, we use these figures as benchmarks of the marketability discount for the shares at hand.

2. Financial Statement Analysis

Investors normally regard the analysis of a company's financial statements as a significant factor for determining the worth of the company's stock. Financial statements include the annual results of a company's operations (an income statement) and the company's status at its yearend (a balance sheet). Financial statements also include relevant footnotes relating to the statements, and the opinion of the preparer, e.g., an independent certified public accountant (C.P.A.), as to the condition of the company and the presentation of its financial statements. A nonexclusive list of relevant inquiries to make when analyzing financial statements includes the type of opinion rendered by the preparer; the soundness of the company's capitalization; the ratio of the company's assets to liabilities; the company's net worth and future earning power; the quality of the company's revenue and earnings; and the company's goodwill.

Turning to the facts at hand, we find that Big M engaged independent C.P.A.'s to perform certified audits on, and gave unqualified opinions with respect to, Big M's financial position on (and for the taxable years ended) January 26, 1991; January 27, 1990; January 28, 1989; July 30, 1988; and July 25, 1987. Big M's independent C.P.A.'s also performed certified audits on, and gave unqualified opinions with respect to, Big M and its subsidiaries' financial position on (and for the taxable years ended) July 26, 1986, and July 27, 1985.

Big M had strong capitalization on the six valuation dates. It also had solid current ratios of assets to liabilities. Accordingly, Big M was able to finance its operations to the extent necessary.

Big M's net worth, revenue, and earnings also were substantial for the subject years: For example, the net sales of Big M and its subsidiaries increased approximately 16 percent from their taxable year that ended in 1985 to their taxable year that ended in 1986; Big M's net sales continually increased for each of its taxable years ended in 1987 to 1991; Big M's net sales increased by 35.5 percent from its taxable year that ended in 1987 to its taxable year that ended in 1991; the net income for Big M and its subsidiaries exceeded $ 4.6 million for their taxable years ending in 1985 and 1986; Big M's net income exceeded $ 6.1 million for all of its taxable years that ended in 1987 through 1990; and Big M's net income exceeded $ 1.4 million for its taxable year that ended in 1991. We also find relevant the fact that Big M paid $ 5,719,000 in cash to purchase 30 retail stores of a competitor in 1986. The presence of cash is important in an apparel business, and Big M had sufficient cash during each of the subject years. Given the additional fact that Big M's stores are widely recognized in the industry, we conclude that these factors favor a below-average marketability discount for stock in Big M on each of the six valuation dates.

3. Company's Dividend Policy

Investors regard a company's dividend policy as a factor to consider in determining the worth of that company's stock. Critical to this factor is whether an investor will receive a fair rate of return on his or her investment. The fact that a company pays small or no dividends will not always negatively affect the company's marketability. Northern Trust Co. v. Commissioner, 87 T.C. 349, 388-389 (1986).

Even if a corporation seldom pays dividends, an investor may aim to participate in the corporation's success mainly through the appreciation in the value of his or her stock brought on by retained earnings and the possibility of a future return.

Turning to the facts at hand, Big M has paid small dividends in comparison to its net income. We do not find this fact determinative. Big M's net income exceeded $ 6.1 million for each of its years ended in 1987 through 1990, and its net income exceeded $ 1.4 million for its year ended in 1991. Big M also had sufficient cash during each of those years. Accordingly, the Big M stock might attract an investor more interested in long-term growth than in current return.

This factor favors a below-average marketability discount.

4. Nature of the Company, Its History, Its Position in the Industry, and Its Economic Outlook

Investors generally regard the nature of a company, its history, its position in the industry, and its economic outlook as relevant factors for determining the worth of the company's stock.

In the instant case, Big M was not the leader in its industry. Its operations, however, were diversified and very profitable as of all six valuation dates. The future of Big M looked bright on each of these dates.

This factor favors a below-average marketability discount.

5. Company's Management

Investors regard the strength of a company's management as a factor to consider when determining the worth of that company's stock. Id. at 388-389. In the instant case, Big M has a proven and experienced management team that is well known in the industry. Based on its track record, an investor would have

reason for confidence in Big M's management team. Big M's policy decisions have furthered the business of the company as a whole, rather than promoting the interests of only the shareholders belonging to a particular branch of the family.

This factor favors a below-average marketability discount.

6. Amount of Control in Transferred Shares

Investors regard the control inherent in transferred shares as a relevant factor for determining the worth of the stock. Control reflects a shareholder's ability to direct a corporation through his or her dictation of its policies, procedures, or operations. Control of a closely held corporation represents an element of value that justifies a higher value for a controlling block of stock. An investor will pay more for a block of stock that represents control than for a block of stock that is merely a minority interest in the company. Estate of Chenoweth v. Commissioner, 88 T.C. 1577, 1588-1589 (1987).

None of the blocks of stock that are at issue herein represent control of Big M. This factor favors an average marketability discount.

7. Restrictions on Transferability of Stock

Investors consider transferability restrictions as a factor to consider in determining the worth of that company's stock. Harwood v. Commissioner, 82 T.C. 239, 260, 263-264 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986). In the instant case, we do not regard the Shareholder Agreements as a major factor because they specify no price (or formula to determine a price) for the right of first refusal. We are mindful that the agreements are enforceable legal documents. All the same, the Shareholders' Agreements, on their face, serve the legitimate business purpose of preserving family ownership and control of Big M. Nevertheless, we are not persuaded that the restrictions embodied therein result in severe restrictability on the transfer of Big M's shares or in a large marketability discount.

This factor favors an above-average to average marketability discount.

8. Holding Period for Stock

The length of time that an investor must hold his or her investment is a factor to consider in determining the worth of a corporation's stock. An interest is less marketable if an investor must hold it for an extended period of time in order to reap a sufficient profit. Market risk tends to increase (and marketability tends to decrease) as the holding period gets longer.

Grabowski assumed that an investor in Big M stock must hold his or her stock for 10 to 20 years. Mallarkey assumed a shorter period of 2 years. We are unpersuaded by either assumption.

We consider this factor to be neutral.

9. Company's Redemption Policy

A company's redemption policy is a factor to consider in determining the worth of the company's stock. Turning to the facts at hand, the record does not disclose whether Big M has a set redemption policy. We know, however, that Big M redeemed its shares on at least one occasion. In or about 1974, Big M redeemed 900 of its shares from Bernard for $ 400,000 in cash. Big M did so because Bernard needed

the money to settle a divorce from his former spouse. We also know that the Shareholders' Agreements give Big M the right to purchase its shares before a buyer outside of the Mandelbaum family may do so and do not set a price for these shares.

Given that Big M has previously redeemed shares for the sole benefit of one of its shareholders, we find nothing that would prevent it from later redeeming the shares of a seller at their freely traded value (or greater) in order for Big M to remain family owned. We believe that a hypothetical buyer or seller would consider Big M's prior redemption in a favorable light when viewing the price that he or she would assign to the shares.

This factor favors a below-average marketability discount.

10. Costs Associated With Making a Public Offering

Investors consider the costs associated with making a public offering in determining the value of unlisted stock. An above-average to average discount is warranted if the buyer completely bears the cost of registering the purchased stock. The discount is lessened, however, to the extent that the buyer has the ability to minimize his or her registration costs. Registration costs may be minimal to the buyer, for example, if he or she has the right to compel the corporation to register (or otherwise "piggyback") the unlisted shares at its expense.

This factor favors an above-average to average marketability discount.

11. Conclusion

Based on the record as a whole, and on our evaluation of the above-mentioned factors, we conclude that the marketability discount for the subject shares on each of the valuation dates is no greater than the 30 percent allowed by respondent.

We hold that a 30-percent marketability discount is to be applied to determine the fair market values of Big M shares on the relevant dates.

Issue 2. Valuation Understatement Penalties

a. Overview

Respondent determined that petitioners are liable for additions to their 1987 through 1990 Federal gift taxes for valuation understatements. Petitioners alternatively argue that they are not liable for these additions because: (1) The subject stock either was not undervalued or was not undervalued by the statutory thresholds; (2) they used acceptable valuation methods; or (3) they justifiably relied upon professionals to value the subject shares.

b. Section 6660

With respect to petitioners' 1987 and 1988 taxable years, section 6660(a) imposes additions to gift tax in the case of an underpayment of gift tax that is attributable to a valuation understatement. A valuation understatement occurs if the value of any property claimed on the taxpayer's Federal gift tax return is 66-2/3 percent or less of the amount determined to be the correct value. Sec. 6660(c). The additions range from 10 to 30 percent, depending on the amount of the understatement. Sec. 6660(b). Respondent may waive all or part of the addition if the taxpayer shows that: (1) He or she had a reasonable basis for the valuation reported on the return and (2) the value was reported in good faith.

Sec. 6660(e). Respondent's refusal to grant such a waiver is reviewable by the Court under an abuse of discretion standard. Estate of Jung v. Commissioner, 101 T.C. 412, 449 (1993); Mailman v. Commissioner, 91 T.C. 1079, 1082-1084 (1988).

Petitioners must prove that they are not liable for the additions to their 1988 Federal gift taxes or that respondent abused her discretion in not waiving these additions. Respondent must prove that petitioners are liable for the additions to their 1987 taxes; she raised these additions in her amendments to her answers. Respondent may prove that petitioners: (1) Did not have a reasonable basis for the valuations claimed on their returns or (2) did not report the valuations in good faith. Failing that, respondent must prove that her refusal to waive these additions: (1) Was not arbitrary; (2) was not capricious, and (3) had a sound basis in fact. Estate of Jung v. Commissioner, supra at 450; Mailman v. Commissioner, supra at 1084.

Based on the record as a whole, we find that petitioners had a reasonable basis for the values claimed on their 1987 and 1988 gift tax returns and that they reported the value in good faith. We also find that respondent abused her discretion with respect to these years. n25 Respondent primarily argues in her brief that the additions are appropriate because petitioners unreasonably relied on the valuations of Siegel and Kaye. Respondent states that petitioners should have known that their professionals' valuations were unreasonable based on the prior audits and the results thereof. To this proposition, we cannot agree. The mere fact that respondent challenged petitioners' valuation method in prior years does not mean that the method was unreasonable. Indeed, the written agreements signed by petitioners in connection with respondent's audits neither bound the parties thereto in future years nor constituted an acknowledgment that respondent was correct. See Consolidated Freightways, Inc. v. United States, 223 Ct. Cl. 443, 620 F.2d 862, 867-868 (1980). Accordingly, we find that respondent's failure to waive the additions for 1987 and 1988 was an abuse of her discretion. In so doing, we stress the fact that petitioners reasonably relied on the apparent expertise of Siegel, as displayed to them by his manner, education, and legal experience, and petitioners reasonably reported Siegel's valuation to respondent in good faith.

n25 Accordingly, we do not pass on the other arguments made by petitioners with respect to the 1987 and 1988 additions to tax.

c. Section 6662(a) and (g)

For gift tax returns due after December 31, 1989, e.g., petitioners' 1989 and 1990 returns, a penalty under section 6662(a) and (g) applies to any underpayment of gift tax that is attributable to a valuation understatement. A valuation understatement occurs if the value of property claimed on the return is 50 percent or less of the amount determined to be its correct value, and the portion of the underpayment attributable to the substantial gift tax understatement exceeds $ 1,000. Sec. 6662(g). The penalty equals 20 percent of the portion of the underpayment attributable to the understatement. Sec. 6662(a). The penalty does not apply to any portion of the underpayment for which the taxpayer shows that he or she: (1) Had reasonable cause and (2) acted in good faith with respect thereto. Sec. 6664(c); see also United States v. Boyle, 469 U.S. 241, 242 (1985).

Whether a taxpayer had reasonable cause and acted with good faith is a factual determination. Sec. 1.6664-4(b), Income Tax Regs. Critical to this test is whether the taxpayer used ordinary business care and prudence in attempting to assess his or her proper tax liability. Ordinary business care and

prudence may be present if the taxpayer had an honest misunderstanding of fact or law that is reasonable in light of his or her experience, knowledge, and education. Ordinary business care and prudence may also be present if the taxpayer reasonably relied on competent professional advice. Such is the case, even if the professional's advice proved to be erroneous. Sec. 1.6664-4(b)(1), Income Tax Regs.; see also United States v. Boyle, supra at 242, 251.

The record shows that petitioners made a reasonable attempt to assess their proper tax liability with respect to the gifts at issue. Because petitioners lacked sophistication in valuation and tax matters, they retained Siegel and Kaye to value the subject shares. Petitioners reasonably relied on the judgment and advice of their two longtime, professional advisers. Under the facts herein, petitioners were not required to second-guess their professionals' advice.

Respondent mainly argues that petitioners' reliance was unreasonable because her prior audits put them on notice that she disagreed with their valuation method. For the same reasons as mentioned above, we disagree. We hold for petitioners on this issue.

We have considered all arguments made by the parties and, to the extent not discussed above, find them to be without merit.

To reflect the foregoing,

Decisions will be entered under Rule 155.

110 T.C. No. 18

United States Tax Court

MARTIN ICE CREAM COMPANY, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 1477-93 Filed March 17, 1998

Frank Agostino, Alan G. Merkin, Mary Ann Perrone, and Susan M. Flynn, for petitioner.

Patricia Y. Taylor and Clare W. Darcy, for respondent.

A and his son M were shareholders of MIC, an S corporation that distributed ice cream products to supermarket chains, independent grocery stores, and food service accounts. MIC's supermarket business was largely attributable to the close personal relationships that A had developed and maintained for decades, beginning before the creation of MIC in 1971, with the owners and managers of the supermarket chains. Since 1974, MIC had distributed the ice cream products of HD, pursuant to an oral agreement entered into between A and the founder of HD. In 1987 and 1988, following the acquisition of HD by a public company, HD initiated negotiations with MIC to acquire MIC's rights to distribute HD ice cream products to MIC's customers. After some but not all terms of the acquisition had been negotiated in the 1988 negotiations, A and M caused SIC, a wholly owned subsidiary of MIC, to be created, and HD was notified that SIC would be the seller of the assets that HD wished to acquire. MIC then transferred to SIC all of MIC's rights to distribute HD ice cream products to the supermarket chains and food service accounts, and business records relating thereto, in exchange for all the stock of SIC, and immediately distributed the SIC stock to A in exchange for all of A's stock in MIC. Following further negotiations, A and SIC, 3 weeks thereafter, entered into a contract to sell HD all their intangible assets relating to distribution of HD ice cream products. Two weeks thereafter, following the determination of a purchase price adjustment provided for in the final version of the contract, the sale closed and SIC received the proceeds of sale, which it distributed to A.

1. HELD: The benefits of the personal relationships developed by A with the supermarket chains and A's oral agreement with the founder of HD were not assets of MIC that were transferred by MIC to SIC and thereafter sold by SIC to HD; A was the owner and seller of those assets.

2. HELD, FURTHER, respondent's attempt to apply Commissioner v. Court Holding Co., 324 U.S. 331 (1945), to regard MIC as the seller of assets to HD is rejected because the final sale to HD was on terms that were negotiated with HD by A and SIC that were significantly different from the terms of the earlier proposed transaction under negotiation between MIC and HD.

3. HELD, FURTHER, MIC's distribution of SIC stock to A was not entitled to nonrecognition of gain under sec. 355, I.R.C., because SIC was not engaged in the active conduct of a trade or business after the distribution of SIC stock to A.

4. HELD, FURTHER, although MIC's transfer of intangible assets to SIC in exchange for SIC stock was entitled to nonrecognition of gain under sec. 351, I.R.C., the immediate distribution of SIC stock in redemption of A's stock in MIC was a distribution of appreciated property under secs. 311(b) and 317(b), I.R.C., on which recognized gain in the amount of $141,000 is taxable to MIC under sec. 1374, I.R.C.

5. HELD, FURTHER, MIC is not liable for a negligence addition to tax under sec. 6653(a), I.R.C., but is liable for a substantial understatement addition under sec. 6661, I.R.C.

BEGHE, JUDGE: Respondent determined the following deficiency and additions to tax:

		Additions to Tax	
Year	Deficiency	Sec. 6653(a)(1)	Sec. 6661
1988	$477,816	$23,891	$119,454

In so doing, respondent determined that Martin Ice Cream Co. (MIC or petitioner) recognized taxable gain of $1,430,340 on the distribution of stock of its newly created subsidiary, Strassberg Ice Cream Distributors, Inc. (SIC), to one of petitioner's two shareholders, Arnold Strassberg (Arnold), in redemption of his 51-percent stock interest in petitioner. Shortly before trial, we granted respondent's motion for leave to amend answer to allege that a subsequent sale of assets to the Haagen-Dazs Co., Inc. (Haagen-Dazs), by Arnold and SIC should be attributed to petitioner under Commissioner v. Court Holding Co., 324 U.S. 331 (1945).

We reject respondent's attempt to apply Court Holding, although we uphold respondent's original determination that petitioner recognized gain on the redemption of Arnold's stock in petitioner. We find that petitioner's gain is substantially less than the gain determined by respondent. We reject respondent's imposition of an addition to tax under section 6653(a)(1) but uphold the addition to tax for substantial understatement under section 6661.[1]

FINDINGS OF FACT

Some of the facts are stipulated and are so found. MIC is a New Jersey corporation whose principal place of business was Bloomfield, New Jersey, when it filed its petition.

MIC was incorporated in 1971 as a wholesale ice cream distributor, with Martin Strassberg (Martin) as its sole shareholder. MIC was a C corporation from 1971 through 1986. On December 30, 1986, MIC filed with the Internal Revenue Service a Form 2553, Election by a Small Business Corporation, which took effect on November 1, 1987. As a result of the election, the accounting period of MIC was changed, commencing January 1, 1988, from an October 31 fiscal year to the calendar year.

Soon after World War II, Arnold, Martin's father, a high school mathematics teacher, began a part-time business after school hours, selling ice cream products wholesale to stores in Newark, New Jersey. During summer vacations, Arnold expanded his coverage to small stores and ice cream parlors on the Jersey Shore. By 1960, Arnold had incorporated his own company, Arnold's Ice Cream, and was engaging full time in the wholesale distribution of ice cream. In the 1960's, Arnold began to develop relationships with the owners and managers of several supermarket chains when he conceived an innovative packaging and sales campaign that used bright colors and catchy slogans to market ice cream products to supermarkets for resale to consumers. Ice cream had hitherto been sold by supermarkets to consumers as an undifferentiated product in large containers and multiserving packages with plain brown wrappers. Arnold subsequently developed other packaging ideas for ice cream products that helped supermarkets sell ice cream products under their private labels. Even with different kinds of packaging, supermarkets marketed ice cream to consumers mainly on the basis of price. In the late 1960's, Arnold had a falling-out with his major supplier, Eastern Ice Cream, which forced Arnold's Ice Cream into bankruptcy.

In 1971, Martin and Arnold organized MIC as a part-time business, with one delivery truck, distributing ice cream to small grocery stores and food service accounts (restaurants, hotels, and clubs) in northern New Jersey. Martin joined the business after having completed virtually all requirements for a Ph.D. in statistics and after spending several years doing operations research and statistical analysis as an employee of large corporations. In 1975, Martin began working in the ice cream distribution business full time. During most of the 1970's, Arnold owned no stock in MIC because he wished to avoid the claims of creditors of Arnold's Ice Cream. In 1979, Arnold became a 51-percent shareholder in MIC, and Martin's interest was reduced to 49 percent. At no time did Arnold or Martin have an employment agreement with MIC.

In 1974, Ruben Mattus (Mr. Mattus), the founder of Haagen-Dazs, asked Arnold to use his ice cream marketing expertise and relationships with supermarket owners and managers to introduce Haagen-Dazs ice cream products into supermarkets. Haagen-Dazs manufactured an entirely new range of "super-premium" ice cream products that were differentiated from the competition by both higher quality and higher price. Haagen-Dazs had initially marketed its products to small stores and restaurants for single-serving on- premises consumption. Haagen-Dazs had made only minimal inroads into the supermarkets, and now Mr. Mattus wanted to intensify his marketing efforts in that sector. Mr. Mattus asked for Arnold's help because he had been unable to convince the supermarkets to carry his products; they saw super-premium ice cream as too expensive for a retail setting designed for off-premises consumption.

Arnold, as the first distributor of Haagen-Dazs ice cream to supermarkets, sparked a revolution in the retail sale of ice cream. Arnold and Haagen-Dazs tapped a hitherto hidden demand for a super-premium ice cream in supermarkets by consumers who were willing to pay higher prices for higher quality. By the late 1970's, MIC was distributing ice cream products, including Haagen-Dazs ice cream, to four major supermarket chains, Pathmark, Shop Rite, Foodtown, and Acme in New York, New Jersey, Connecticut, and Pennsylvania (the supermarkets) and to smaller grocery stores. However, neither Arnold nor MIC ever entered into a written distribution agreement with Haagen-Dazs or Mr. Mattus.

Arnold was so successful that in the late 1970's or early 1980's Mr. Mattus invited Arnold to become his partner in a planned expansion of Haagen-Dazs' supermarket sales to the West Coast. Arnold declined the offer and continued to use MIC as his corporate vehicle to distribute Haagen-Dazs products in New Jersey and adjacent areas.

Martin did not support or participate in Arnold's efforts to expand ice cream distribution to the supermarkets. Martin disliked the social activities necessary to developing and sustaining personal relationships with supermarket owners and managers -- activities that Arnold thrived on. Martin preferred to manage day-to-day operations at the MIC warehouse, arriving at work as early as 3 to 4 a.m. to supervise the loading of MIC's delivery trucks for delivery to the supermarkets and the small stores.[2] Martin employed route salesmen to expand and maintain wholesale distribution of ice cream, primarily Haagen-Dazs, to small independent grocery stores and food service accounts in New Jersey and New York. Martin did little or no solicitation himself. Arnold did not participate in Martin's development of the business of wholesale ice cream distribution to small grocery stores and food service accounts, focusing instead on the supermarkets.

In 1985, the Borden Co. (Borden) retained Arnold to use his contacts with the supermarkets to put Borden's ice cream products into supermarket freezers. Arnold worked as a broker for Borden, personally earning commissions on Borden's sales of ice cream products to supermarkets, rather than as a distributor buying from the manufacturer and reselling to retailers. MIC did not participate in Arnold's work for Borden. Arnold had the ability to -- and did -- put Borden's ice cream products into supermarket freezers at a time when many of his original contacts from the 1960's and earlier had passed from the scene. By 1988, Arnold no longer had a business relationship with Borden.

At some time in the early to mid-1980's, Ben and Jerry's, a competitor of Haagen-Dazs in the manufacture and marketing of super-premium ice cream, asked Arnold to help obtain supermarket freezer space for its products. Haagen-Dazs had not objected to Arnold's work for Borden but told him that he could not continue to distribute Haagen-Dazs ice cream products if he were to distribute Ben and Jerry's ice cream products. Arnold thereupon terminated further contact with Ben and Jerry's.

In 1983, the Pillsbury Co. (Pillsbury) purchased Haagen-Dazs from Mr. Mattus. Pillsbury promptly initiated a business plan to consolidate the distribution of Haagen-Dazs ice cream products into its own distribution centers, with the goal of delivering directly to retail stores, especially large supermarket chains. Pillsbury believed it could deliver a uniformly higher quality product to supermarkets at lower cost than independent distributors whose refrigeration equipment was not as reliable. Pillsbury believed that ensuring high quality was vital to its basic corporate strategy of continuing to differentiate Haagen-Dazs products from those of its competitors.

Another important component of the Haagen-Dazs corporate strategy was to enter into written distribution contracts, explicitly terminable at will by Haagen-Dazs on short notice, with distributors that it was not ready to buy out. Since 1974, MIC, like other regional distributors, had distributed Haagen-Dazs products on the basis of Arnold's original oral agreement with Mr. Mattus. After its acquisition by Pillsbury, Haagen-Dazs always maintained that distributors such as MIC did not have enforceable rights to continue to distribute Haagen-Dazs ice cream. In June 1988, the U.S. District Court, Northern District of California, MDL docket No. 682, ordered summary judgment in distributed ice cream products for a direct competitor.[3] The grounds were that the termination did not violate antitrust laws and that the oral agreement with the distributor did not prevent termination at will.[4]

In late 1985 or early 1986, representatives of Haagen-Dazs first approached the Strassbergs about acquiring direct access to Arnold's relationships with the supermarkets and removing him as a middleman in the chain of distribution. Haagen-Dazs also wanted to forestall competitors, such as Ben and Jerry's, from using Arnold's contacts and knowledge to gain access to the supermarkets. Haagen-Dazs also did not want to leave distributors like Arnold, who had been with Haagen-Dazs since the early days of Mr. Mattus, without adequate reward for the role they had played in bringing Haagen-Dazs to prominence. Also, because Arnold was a high-profile, well- respected ice cream distributor, Haagen-Dazs did not wish to alienate Arnold and risk having him stir up the other independent distributors before Haagen-Dazs was ready to take similar steps against them. Haagen-Dazs believed that these various relationships, personal to Arnold, had value for which it was willing to pay. At the same time, Haagen-Dazs wished to terminate any residual rights to distribute Haagen-Dazs ice cream that its distributors might have acquired over the years, even as it maintained that neither Arnold nor MIC, or later, SIC, had any enforceable "distribution rights" as such. Haagen-Dazs was not interested in acquiring MIC as an ongoing distributor to either the supermarkets or the small grocery stores and food service accounts or in acquiring its physical assets.

During the early to mid-1980's, Arnold and Martin had increasingly vocal disagreements over the future direction of MIC. Arnold wished to expand the supermarket business, and Martin wished to expand the small store business. They were unable to agree on which course to take or otherwise to agree on coordinating their different business objectives.

Martin was concerned about MIC's overdependence on a small number of large supermarket accounts. He felt that a diversified customer base of small independent stores with higher gross profits carried less risk. Martin was concerned about the smaller profit margins of the supermarket business and also felt that the small stores had a better record of paying MIC's invoices in full and on time.

Arnold attributed Martin's disparagement of the supermarket business to his dislike of the process of developing and maintaining the personal relationships with the managers and owners of the supermarkets that was needed to maintain access to supermarket freezer space. Arnold believed that the small volume of sales generated by each of the independent stores did not justify the effort to acquire and service their accounts.

Arnold and Martin each blamed the other's approach to management of his own line of the business for MIC's not being more profitable during the mid-1980's.

From 1985 through 1988, Arnold's and Martin's disagreements intensified, especially in the aftermath of Arnold's promotion of MIC's failed investment in a warehouse facility in central Newark that would have substantially expanded MIC's capability to distribute ice cream to the supermarkets, just as Haagen-Dazs was building its own large distribution facility in the Bronx. MIC's share of the total cost of the Newark facility would have been about $2.5 million. In 1987 or early 1988, Arnold and Martin ultimately abandoned the project after MIC had invested approximately $100,000.

By 1988, Martin no longer wanted to work with Arnold, and Arnold felt that Martin was pushing him to retire. They were looking for a way to end their constant strife over the future direction of petitioner. Their disagreement had made them both receptive to the first overture from Haagen-Dazs in May 1986. At that time, Arnold and Martin began consulting with their attorney, Russell L. Hewit (Mr. Hewit), concerning the negotiations with Haagen-Dazs.[5] Arnold was the primary negotiator in the talks with Haagen-Dazs. To that end, Arnold executed a series of confidentiality agreements. In March 1987, the initial talks broke down because the parties could not agree on the price for the business with the supermarkets.

To memorialize the termination of discussions, Mr. Hewit sent Haagen-Dazs a letter dated April 7, 1987, stating that he understood Haagen-Dazs to have made an initial offer of $3 million for "the Haagen-Dazs portion of the business". In a letter dated April 16, 1987, Haagen-Dazs replied that it had not offered $3 million, and that the distribution rights under discussion were worth approximately $1 million. Despite the breakdown in formal negotiations, the parties remained in contact. On January 8, 1988, Arnold signed a new confidentiality agreement.

On May 4, 1988, the MIC board of directors, consisting of Martin, Arnold, and Mr. Hewit, and Arnold and Martin as MIC's shareholders, adopted and approved resolutions to form a subsidiary of MIC, to be called SIC. Later that month, negotiations resumed between Haagen-

Dazs and Arnold and Martin regarding the possible sale of Arnold's supermarket distribution rights.

As with the earlier negotiations, Arnold took the lead in the negotiations with Haagen-Dazs. Between May 13 and May 23, 1988, Arnold and Martin met at least three times with Haagen-Dazs representatives. On May 16, 1988, Hewit wrote a letter to Charles McGill, vice president -- acquisitions, for Pillsbury, stating that, on May 13, proposals for Haagen-Dazs to buy MIC's "supermarket and food service business only" for up to $2.5 million had been rejected and that one of the obstacles was the possible sale of the remaining business to another distributor acceptable to Haagen-Dazs. However, neither Martin nor MIC thereafter pursued the possibility of such a sale, and the subject was never raised in subsequent negotiations with Haagen-Dazs.

On May 19, 1988, the parties discussed the outlines of an agreement to sell the supermarket and food service distribution business to Haagen-Dazs. On May 23, 1988, Mr. Hewit wrote another letter to Mr. McGill detailing the terms discussed in the meetings, including an overall price of $1.5 million for that business, $350,000 in additional contingent payments payable over 3 years, and annual payments of $150,000 to Arnold for 3 years, and of $50,000 to Martin for 5 years in return for consulting services and covenants not to compete in the retail super-premium ice cream distribution business, except as MIC and Martin would continue to distribute ice cream to stores other than the supermarket chains. Mr. Hewit's letter did not refer to any allocation of the total price between distribution rights as such and the business records related to those rights, or even refer to any such records. Haagen-Dazs had derived the total price it was willing to pay from a formula based upon MIC's annual sales of Haagen-Dazs products to the supermarkets.

On May 31, 1988, SIC's certificate of incorporation was filed with the New Jersey secretary of state, and SIC was organized as a wholly owned subsidiary of MIC. On June 2, 1988, Stan Oleson of Pillsbury sent Mr. Hewit a draft "Agreement for Purchase and Sale of Assets" and other associated draft documents. The Agreement documents listed Arnold, Martin, MIC, and SIC collectively as "Sellers" and provided for the purchase of any and all of Sellers' distribution rights, "including but not limited to supermarket and food service distribution rights, if any" and their cancellation by the "Buyer". On June 6, 1988, Mr. Hewit replied to Mr. Oleson with a letter containing a number of modifications to the proposed agreements, chief among which was elimination of all references to Martin and MIC as parties to the proposed sale so as not "to increase the risk that the 355 Exchange will be collapsed". During the negotiations that culminated in the signing on July 8 of a sale agreement between Arnold and SIC as sellers and Haagen-Dazs as buyer, Mr. Hewit did not draft his own version of the sale agreement; he made mark-ups of his suggested changes and sent copies of the marked-up drafts back to Haagen-Dazs.

On June 14, 1988, Beth L. Bronner, vice president for strategic and business development for Haagen-Dazs, replied to Mr. Hewit's letter of June 6, stating that Haagen-Dazs had

"incorporated, where possible, the suggested changes in your redraft and letter of June 6. However, many of the points in your letter reflected a transaction materially different from the one we believed we had negotiated with your clients". Ms. Bronner's letter stated that Haagen-Dazs had incorporated "your proposed exclusion of Martin Strassberg and * * * [MIC] from the Purchase Agreement," although it created "an important issue with which we must deal" in light of Haagen-Dazs' main objective of obtaining "ANY AND ALL distribution rights" of both Arnold and Martin and their respective companies. Ms. Bronner proposed to resolve this issue through a separate "side agreement" in which Martin and MIC "would clearly acknowledge" that all rights to distribute "Haagen-Dazs products have been transferred to * * * [SIC] and that he * * * [Martin] claims no rights to distribute Haagen-Dazs."[6]

Mr. Hewit sought advice from two tax attorneys, Charles E. Falk, an attorney C.P.A. with an LL.M. in taxation from New York University School of Law, and Martin's brother-in-law, Jan Neiman, an attorney practicing tax law in Miami Beach, Florida, on the tax structuring of the transactions creating SIC and distributing its stock to Arnold.[7] Mr. Hewit sought their advice to ensure that he properly drafted all documents necessary to effect the separation of Martin and MIC from Arnold and SIC. There is no evidence in the record that Mr. Hewit considered trying to obtain a private letter ruling from the Internal Revenue Service, or that he rendered a written opinion to petitioner or Martin or Arnold regarding the tax consequences of the transactions at issue, or that Mr. Hewit or any of the parties in interest received a written tax opinion from Mr. Neiman or Mr. Falk.

On June 15, 1988, Arnold, Martin, and Mr. Hewit executed documents providing for the transfer of MIC's interests in the supermarket business and associated customer and pricing lists from MIC to SIC and the exchange of Arnold's stock in MIC for the stock of SIC (the split-off). The first of these documents, entitled "Agreement", provided for the transfer of

> All of the Corporation's [MIC's] rights to distribute Haagen-Dazs Ice Cream products to supermarket chains (Pathmark, Shop Rite, Foodtown and Acme) and food service accounts (restaurants, hotels and clubs), and the business records of said distributorship, including but not limited to customer lists and pricing lists, to the Subsidiary * * * for the purpose of transferring to Arnold all of the outstanding shares of the Subsidiary in exchange for the surrender by Arnold of all of his shares of the Corporation, in a transaction intended to qualify as a tax-free split-off under Internal Revenue Code Section 355, as amended * * *

A second document, dated June 15, 1988, also entitled "Agreement", stated that Martin and Arnold were operating separate businesses that were formerly jointly operated by MIC, and that both Arnold and Martin "wish to assure a smooth transition so that neither party loses customers or employees as a result of * * * misunderstanding". The document further stated that

> Following the Exchange, * * * [MIC] shall cooperate with * * * [SIC] and provide such assistance that is reasonably necessary for * * * [SIC] to conduct its business, provided that the rendering of such services does not unduly interfere with the conduct

> of * * * [MIC]'s business. * * * [SIC] shall pay to and reimburse * * * [MIC] for all costs incurred by * * * [MIC] in providing such services.

This agreement provided, among other things, that MIC would continue to deliver ice cream from its warehouse to SIC's supermarket accounts after the June 15 transactions separating MIC and SIC. MIC did continue to do so until the closing of Arnold's and SIC's sale of assets to Haagen-Dazs on July 22.

On June 15, 1988, the MIC board of directors, consisting of Arnold, Martin, and Mr. Hewit, adopted a resolution, which was approved by Arnold and Martin as shareholders, declaring that MIC was in two separate businesses of equal fair market value, one distributing ice cream to supermarket chains and food service accounts and another distributing ice cream to small independent grocery stores. The resolutions stated that MIC undertook the transaction to split into two corporations in order to resolve the dispute between Arnold and Martin over the future direction of MIC and whether it would focus on distribution to supermarkets or to food service accounts and small stores and that Martin wished to operate the business of distribution of Haagen-Dazs ice cream products to nonsupermarket stores. Martin and Arnold each submitted his written resignation as a director, officer, and employee of the other company, Martin from SIC, and Arnold from MIC. Each of these documents bore the typed date "June 3, 1988", which was crossed out and amended by hand to read "June 15, 1988". None of the resolutions, agreements, or resignations contain any guaranty or indemnification from SIC or Arnold that would protect MIC or Martin from any tax liabilities arising from the split-off or the contemplated sale to Haagen-Dazs.

On June 20, 1988, Arnold and Mr. Hewit signed a directors' resolution of SIC, submitting to Arnold, as sole shareholder of SIC, an offer by Haagen-Dazs to "purchase all of the rights of the Corporation [SIC] to distribute Haagen-Dazs ice cream products". Arnold then signed a shareholder's resolution to authorize SIC to enter into negotiations with Haagen-Dazs. In an undated memorandum, Arnold disclosed his customer list to Haagen-Dazs, most likely in response to a June 30 letter from Ms. Bronner.

In a letter to Mr. Hewit, dated July 1, 1988, Richard Wegener, a Pillsbury attorney, summarized changes made "to the various distributor agreements" pursuant to negotiations that had taken place the previous week. Mr. Wegener stated that, in the wake of those negotiations, Haagen-Dazs "clearly * * * [had its] work cut out concerning the financial issues raised by Section 4.5 of the proposed agreement." Mr. Wegener exhorted Arnold "to get out * * * on the table" all relevant information required to complete that section, which was a warranty and representation by Arnold and SIC concerning sales of Haagen-Dazs ice cream products to supermarkets by MIC and SIC for the period of June 1, 1987, to May 31, 1988. On July 5, 1988, Mr. Hewit sent Ms. Bronner documentation of the sales to supermarkets for the 12-month period ending May 31, 1988. On July 7, 1988, Mr. Oleson wrote Mr. Hewit a letter asking whether Haagen-Dazs' refusal to agree to deposit money in escrow on signing the

purchase agreement would be a "deal breaker" that would require cancellation of this planned July 8 meeting to sign the agreement. He also expressed optimism that the deal would be signed. [34] On July 8, 1988, Arnold, individually, and as president of SIC, and Ms. Bronner, on behalf of Haagen-Dazs, signed an "Agreement For Purchase and Sale of Assets" by Arnold and SIC, as "Sellers", in which the parties agreed to the terms of the sale and related documents. Notwithstanding that the documents effectuating the split- off provided only for the transfer of supermarket and food service distribution rights and records to SIC, the Arnold-SIC-Haagen-Dazs agreement recited that SIC "owns all of the rights to distribute Haagen-Dazs product which were or may have been owned by Martin Strassberg and [MIC]," and purported to provide, consistent with the Haagen-Dazs first draft, for the purchase of all distribution rights including but not limited to supermarket rights.[8] This agreement specifically stated that "Buyer is not purchasing assets relating to the 'non-banner' business of * * * [MIC], the former parent of [SIC],"[9] and allocated the stated $1.5 million price to be paid at the closing, $300,000 to "Records" and $1,200,000 to "Sellers' Rights". There is no evidence in the record of any negotiation over this allocation or of any of the considerations that led Haagen-Dazs to allocate the purchase price in this fashion.

Unlike prior drafts of the purchase agreement in the record, the agreement as executed on July 8, 1988, between Haagen- Dazs and SIC and Arnold contains an Article 2.4 that makes the closing contingent on an audit by a '"Big-8' auditing firm" of the documentation of the sales to supermarket chains, independent supermarkets, and food service accounts for the 12-month period ending May 31, 1988. The audit was required to ascertain the actual sales figures in order to set the purchase price under Article 2.4 in accordance with a purchase price reduction clause that applied to both the payment to be made at the closing and the contingent annual payments to be made over the following 3 years.[10] Article 2.4 also provided that Haagen-Dazs would have no obligation to close if the audited sales were less than $4 million for the period under audit.

On July 20, 1988, Touche Ross & Co. submitted an audit report to Haagen-Dazs, stating that the audited sales were less than represented by Arnold and SIC. As late as July 21, Mr. Hewit was still negotiating with Haagen-Dazs on behalf of petitioner concerning the list of accounts that MIC would continue to service after the sale.

On July 22, 1988, Arnold and representatives of Haagen- Dazs closed the sale to Haagen-Dazs. The employees of MIC who had reported to Arnold before June 15 continued to do so until that date. Arnold thereupon notified MIC in writing that SIC no longer required the services of MIC in delivering ice cream products to the supermarkets or in otherwise servicing their accounts.[11] SIC then paid MIC for services rendered. MIC's customers had not been notified of any changes in its business until they were notified of the sale of the supermarket distribution business to Haagen-Dazs.

The closing documents contained an amendment to the purchase agreement -- signed July 22 after receipt of the Touche Ross & Co. audit of the supermarket sales figures -- stating that

during the 12-month period ending May 31, 1988, the sales of Haagen-Dazs products to the four supermarket chains, food service accounts, and independent supermarkets had totaled $4,528,000. Pursuant to the purchase price reduction clause of the Agreement, that sales figure resulted in a downward price adjustment of $86,000, of which $69,660 reduced the purchase price paid by Haagen-Dazs at the closing, and $16,340 of which reduced the amount of contingent additional payments payable to Arnold over 3 years. Consequently, the first closing document, entitled "Closing Statement", reduced the agreed sale price of $1.5 million to $1,430,340, and reduced the maximum amount of contingent annual payments of $350,000 to $333,660.

The bill of sale, signed by Arnold individually and as president of SIC, listed the items acquired from SIC as all existing customer lists, price lists, historical sales records, promotional allowance and rebate records, "and other business records as requested by Buyer, and the goodwill associated therewith".

Arnold also signed an "Assignment of Rights", which referenced -- and transferred to Haagen-Dazs -- the rights described supra, in two capacities: first, as president of SIC, and second, as an individual; there was no allocation of the consideration paid for the rights as between Arnold and SIC.[12] Ms. Bronner also signed the Assignment of Rights on behalf of Haagen-Dazs. Arnold signed a "Consulting and Non-Competition Agreement" with Haagen-Dazs, for which he was to be paid $150,000 annually for a period of 3 years. Martin also signed a "Consulting and Non-Competition Agreement" with Haagen-Dazs, for which he was to be paid $50,000 annually for a period of 5 years. Finally, Haagen-Dazs entered into three nonexclusive distribution agreements with petitioner for its continued distribution of Haagen-Dazs ice cream products to specified small independent stores and food service accounts in a limited geographical area.

On March 3, 1989, petitioner filed a Form 1120S for 1988, reporting gross sales of $6,021,394 and an ordinary loss of $278. Rudolph Bergwerk signed the return as preparer. MIC's 1988 Form 1120S contained no reference to the creation of SIC, the transfer to it of assets, or their basis, or the distribution of SIC stock to Arnold in redemption of his stock in MIC. Nor did the return refer to SIC's and Arnold's subsequent sale of assets to Haagen-Dazs, contain any of the other information required by the regulations under sections 351, 355, or 368, or allocate earnings and profits between petitioner and SIC as required by section 312(h) and associated regulations with respect to a transaction governed by sections 355 and 368(a)(1)(D).

On April 10, 1989, SIC filed Form 1120S for its tax year 1988, which included a statement disclosing the sale of assets by SIC, including records and goodwill for $286,068 and the "right to distribute the product of buyer for $1,144,272".[13] The statement also disclosed that Arnold, as sole stockholder distributee, would report the gain on his personal income tax return for taxable year 1988. On July 14, 1989, Arnold caused SIC to be dissolved under New Jersey law.

For each tax year thereafter through 1995, MIC reported the following losses and gross sales as compared with 1988 and earlier years:

Year	Gross Sales	Taxable Income	Retained Earnings
1986 [1]	$8,488,491	$68,728	$551,383
1987 [2]	1,137,298	284	551,676
1988[3]	6,021,394	(278)	551,398
1989	4,718,087	(316,793)	238,541
1990	5,532,675	(58,153)	180,388
1991	5,882,632	(122,534)	59,654
1992	5,518,248	(75,726)	(16,072)
1993	6,032,463	(69,622)	(85,694)
1994	5,619,756	(201,778)	(287,472)
1995	5,472,912	(49,396)	(336,868)

FOOTNOTES TO TABLE

1. Tax year Nov. 1, 1986-Oct. 31, 1987.

2. Tax year Nov. 1, 1987-Dec. 31, 1987.

3. Supermarket distribution rights and records sold to Haagen- Dazs July 22, 1988.

ULTIMATE FINDINGS OF FACT

1. The intangible assets embodied in Arnold's oral agreement with Mr. Mattus and personal relationships with the supermarket owners and managers were never corporate assets of petitioner. Until the sale to Haagen-Dazs on July 22, 1988, Arnold was the sole owner of those assets, whose use he had hitherto made available to petitioner. Accordingly, neither any transfer of rights in those assets to SIC nor their sale or other disposition to Haagen-Dazs is attributed to petitioner.

2. The fair market value of the SIC stock distributed by petitioner to Arnold in redemption of his stock in petitioner was $141,000.

3. Immediately after the distribution of the stock of SIC to Arnold, and thereafter, SIC did not engage in the active conduct of a trade or business.

OPINION

1. ASSETS TRANSFERRED BY MIC

Respondent advances two alternative grounds in support of the original determination that the $1,430,340 consideration received by Arnold and SIC measures the gain realized and recognized by petitioner: First, Arnold negotiated the sale of assets on behalf of MIC, and MIC should therefore be regarded as the true seller of the assets under the principle of Commissioner v. Court Holding Co., 324 U.S. 331 (1945); alternatively, the amount paid by Haagen-Dazs to SIC and Arnold measures the gain realized and recognized by petitioner on the redemption of Arnold's stock in petitioner, a split-off that fails to qualify for nonrecognition of corporate gain under section 355.

We disagree with respondent's overall position, insofar as it is predicated on the assumption or conclusion that petitioner owned assets with a value of $1,430,340 that were sold to Haagen-Dazs. Petitioner never owned all the assets sold to Haagen-Dazs. The record shows, and we have found as facts, that Arnold, acting on his own behalf and as agent for SIC, of which he was the sole shareholder, entered into a contract to sell Haagen-Dazs two distinctly different types of assets: The first, and much more valuable, was the intangible assets of Arnold's rights under his oral agreement with Mr. Mattus and his relationships with the owners and managers of the supermarkets, which formed the basis of his ability to direct the wholesale distribution of super-premium ice cream to the supermarkets; the second, and much less valuable, was the business records that had been created by petitioner during Arnold's development of the supermarket business, and transferred by petitioner to SIC.

Arnold built the business of wholesale distribution of super-premium ice cream to supermarkets on the twin foundations of his personal relationships with the supermarket owners, the development of which preceded the creation of petitioner by some years, and his personal, handshake understanding with Mr. Mattus, which continued with Haagen-Dazs after its sale to Pillsbury. In developing his supermarket distribution business, Arnold changed the way ice cream was marketed to customers in supermarkets. The success of the venture depended entirely upon Arnold. Mr. Mattus' offer to go into business with Arnold distributing Haagen-Dazs ice cream products on the West Coast attests to the value that Mr. Mattus, Haagen-Dazs, and later, Pillsbury, placed on Arnold's position in the market, which retained considerable value as late as June 1988, when petitioner distributed the SIC stock to Arnold in redemption of his stock in petitioner.

Ownership of these intangible assets cannot be attributed to petitioner because Arnold never entered into a covenant not to compete with petitioner or any other agreement -- not even an employment agreement -- by which any of Arnold's distribution agreements with Mr. Mattus, Arnold's relationships with the supermarkets, and Arnold's ice cream distribution expertise became the property of petitioner. This Court has long recognized that personal relationships of a shareholder-employee are not corporate assets when the employee has no employment contract with the corporation. Those personal assets are entirely distinct from the intangible corporate asset of corporate goodwill. See, e.g., Estate of Taracido v. Commissioner, 72 T.C. 1014, 1023 (1979) (where sole shareholder was sine qua non of corporation's success,

corporation's goodwill did not include the personal qualities of its sole shareholder); Cullen v. Commissioner, 14 T.C. 368, 372 (1950) (personal ability, personality, and reputation of sole active shareholder not a corporate intangible asset where there is no contractual obligation to continue shareholder's services); MacDonald v. Commissioner, 3 T.C. 720, 727 (1944) ("We find no authority which holds that an individual's personal ability is part of the assets of a corporation by which he is employed where * * * the corporation does not have a right by contract or otherwise to the future services of that individual."); Providence Mill Supply Co. v. Commissioner, 2 B.T.A. 791, 793 (1925).

In the case at hand, as in MacDonald v. Commissioner, supra, petitioner never obtained exclusive rights to either Arnold's future services or a continuing call on the business generated by Arnold's personal relationships with the supermarket owners and the rights under his agreement with Mr. Mattus; petitioner never had an agreement with Arnold that would have caused those relationships and rights to become petitioner's property. Even if there had been such an agreement, and the record shows that there was none, the value of these relationships and rights would not have become petitioner's property in toto. In 1974, Mr. Mattus sought Arnold as his agent to create a substantial presence for Haagen-Dazs ice cream in supermarkets after Mr. Mattus had been able to achieve only minimal market penetration through his own efforts. Mr. Mattus wanted what Arnold had already created in the 1960's when he operated Arnold's Ice Cream -- the critical relationships with key supermarket owners and managers and the marketing know-how necessary to put ice cream products in supermarket freezers. See, e.g., Coskey's Television & Radio Sales & Serv., Inc. v. Foti, 602 A.2d 789, 795 (N.J. Super. Ct. App. Div. 1992) ("What * * * [the employee] brought to his employer, he should be able to take away."). The record shows that, at most, petitioner had only the benefit of the use of these assets while Arnold was associated with petitioner -- which contributed heavily to the profitability of petitioner during the years before the split-off.

Our conclusion that the rights under the oral agreement with Mr. Mattus, the personal relationships with supermarket owners and managers and the ice cream distribution expertise, belonged to Arnold rather than petitioner is confirmed by the disparity between the sales price paid by Haagen-Dazs to Arnold and SIC and the value of petitioner as an ongoing business just before the split-off. The sales figures from petitioner's tax returns show that the supermarket business generated slightly more than one-half of the pre-split-off sales. Were petitioner to have been the owner of the rights sold to Haagen-Dazs, then the $1,430,340 paid to Arnold and SIC would have been approximately half the value of petitioner, and petitioner would presumably have had an overall fair market value approaching $3 million, a conclusion that would logically follow from respondent's arguments. For reasons discussed infra, $3 million far exceeds any possible fair market value that petitioner, as a corporation with less than $8.5 million in gross sales and $70,000 net income in its best year, fiscal 1987, might have had immediately before the transactions in issue.

Our conclusion is not impaired by the fact that the corporate documents created by Mr. Hewit to accomplish the transfer of some of petitioner's assets to SIC and the distribution of SIC stock

to Arnold purported to transfer supermarket distribution rights owned by petitioner.[14] We have already found that petitioner never owned the rights under Arnold's oral agreement with Mr. Mattus, nor his personal relationships with the supermarkets or his ice cream distribution expertise; petitioner merely had the benefits of the use of those assets during the years up to the split-off. What petitioner did not own, petitioner could not transfer; these documents transferred only that which belonged to MIC -- the business records generated by the supermarket business that were subsequently transferred by petitioner to SIC in exchange for its stock.[15] Accordingly, we find that the sale to Haagen-Dazs of Arnold's supermarket relationships and distribution rights cannot be attributed to petitioner. All that is at stake in this case is the value of Arnold's remaining stock interest in petitioner, shorn of his supermarket relationships and distribution rights under his agreement with Mr. Mattus.

2. MIC IS NOT THE DEEMED SELLER OF ASSETS TO HAAGEN-DAZS UNDER COURT HOLDING

Respondent argues that Arnold began and completed the negotiations with Haagen-Dazs for the sale of distribution rights on behalf of petitioner. Respondent would have us believe that all essential terms fixed by the negotiations had been settled before Mr. Hewit informed Haagen-Dazs that SIC and Arnold would be the named sellers of the assets in the purchase agreement and instructed Haagen-Dazs to omit all references to Martin and petitioner from the purchase agreements. Respondent urges the Court to apply the principle of Commissioner v. Court Holding Co., 324 U.S. 331 (1945),[16] to find that petitioner is the true seller of the assets, and that SIC is a mere conduit whose existence and participation in the sale to Haagen-Dazs should be ignored for Federal income tax purposes. Respondent's argument implies that petitioner constructively received the proceeds from the sale of assets to Haagen-Dazs, and then constructively distributed those proceeds to Arnold in redemption of his stock in petitioner.[17]

In Commissioner v. Court Holding Co., supra, a corporation with two shareholders, husband and wife, owned an apartment building as its only asset. Negotiating on behalf of the corporation, the husband entered into an oral agreement with the lessee that fixed all the terms and conditions for the sale of the apartment building and received a payment on account from the purchaser. After the negotiations had been completed, the husband was informed of the adverse tax consequences of a sale by the corporation. He thereupon caused shareholder resolutions to be adopted under which the corporation declared and distributed the apartment building to the shareholders as a "liquidating dividend". The shareholders then sold the apartment building on the same conditions and terms previously agreed upon to the same purchaser, and the prior payment received by the corporation was applied in part payment of the purchase price. The Supreme Court affirmed the finding of the Tax Court that the transaction, in substance, was a sale by the corporation, and that the shareholders were mere conduits whose formal participation in the closing with the buyer was to be ignored for Federal income tax purposes. The corporation was therefore liable for a corporate level tax on the gain recognized on the sale of the apartment building.

Any analysis of Court Holding would be incomplete without an examination of United States v. Cumberland Pub. Serv. Co., 338 U.S. 451, 455 (1950). In Cumberland Pub. Serv., corporate assets were distributed in liquidation and thereafter sold by the corporation's shareholders. Unlike Court Holding, the corporation at no time entered into negotiations to make the sale itself. Instead the shareholders first offered to sell the buyer their stock; after the buyer rejected their offer, they conducted on their own behalf all the negotiations to sell the assets to the buyer. The Supreme Court concluded that the shareholders were the sellers of the assets and refused to find that, in substance, the corporation was the actual seller.

Court Holding and Cumberland Pub. Serv. together support a narrow rule or holding on the genuineness of corporate liquidations. In Court Holding, the Supreme Court upheld this Court's factual finding that the liquidation of the corporation was not genuine and never occurred for Federal income tax purposes. Therefore, the corporation continued to own the apartment building for tax purposes, and the shareholders were mere conduits used to pass title. In contrast, the Supreme Court in Cumberland Pub. Serv. upheld the factual finding of the Court of Claims that a genuine liquidation had occurred, and therefore the subsequent sale of assets by the shareholders was respected.

Court Holding and Cumberland Pub. Serv. also provide a broader principle that helps to explain why a corporate liquidation is respected in one setting and disregarded in another.[18] The substance of a transaction can be found in the negotiations leading up to the closing. Where the negotiations have culminated in an understanding that is inconsistent with the form of the final transaction, that form is said to be inconsistent with the substance, and the substance must prevail. Such is the case when a corporation negotiates all the terms and conditions of a sale of its assets, and then, at the last minute, distributes assets to its shareholders and the shareholders' names are conveniently inserted as sellers; the substance of the negotiations will prevail, and the corporation will be regarded as the seller for Federal income tax purposes.

This Court and others have acknowledged this broader principle of what Court Holding and Cumberland Pub. Serv. stand for.[19] Where shareholders are found to have negotiated the sale of corporate assets independently, on their own behalf, the form of the transaction is respected, and the corporation is not recast as the seller, notwithstanding that some negotiations were carried on by the shareholders before the liquidation. See, e.g., Bolker v. Commissioner, 81 T.C. 782 (1983), affd. 760 F.2d 1039 (9th Cir. 1985); Doyle Hosiery Corp. v. Commissioner, 17 T.C. 641 (1951); Amos L. Beaty & Co. v. Commissioner, 14 T.C. 52 (1950).[20] Where a corporation is found to have negotiated a transaction, and at the last minute, the shareholders are substituted for the corporation as sellers, Court Holding has been applied to regard the corporation as the seller for Federal income tax purposes. See, e.g., Waltham Netoco Theatres, Inc. v. Commissioner, 401 F.2d 333 (1st Cir. 1968), affg. 49 T.C. 399, 405 (1968); Kaufmann v. Commissioner, 175 F.2d 28 (3d Cir. 1949), affg. 11 T.C. 483 (1948).[21]

Arnold, on behalf of himself as well as petitioner, began negotiations with Haagen-Dazs with respect to the sale of distribution rights in January 1988. On May 4, 1988, MIC adopted

corporate resolutions authorizing the creation of a wholly owned subsidiary to be called SIC. Over the following weeks, Arnold, Mr. Hewit, and representatives of Haagen-Dazs continued to negotiate the price and terms of a sale of distribution rights by MIC to Haagen-Dazs. On May 31, 1988, SIC was organized as a wholly owned subsidiary of MIC. On June 6, 1988, in response to the Haagen-Dazs first draft of purchase agreement, which provided for the sale of all distribution rights, Mr. Hewit informed Haagen-Dazs that Martin and MIC would not be parties to the sale transaction. In a letter sent to Mr. Hewit dated June 14, 1988, Ms. Bronner stated that Haagen-Dazs, as requested by Mr. Hewit, would eliminate references to Martin and MIC from the purchase agreement, but she insisted that Haagen-Dazs had to acquire "any and all" of the distribution rights owned by Martin, Arnold, and their respective companies. On June 15, 1988, MIC executed documents providing for the transfer of supermarket chain and food service distribution rights, and business records related thereto, from MIC to SIC. Thereafter, Arnold continued to negotiate with Haagen-Dazs on behalf of himself and SIC until the purchase agreement was signed on July 8. The purchase agreement, as finally negotiated and amended at the closing on July 22, provided that Haagen-Dazs could walk away from the deal if an audit by a "Big-8" accounting firm disclosed ice cream sales by petitioner of less than $4 million for the 12-month period ended May 31, 1988, and for a reduction in both the fixed and deferred contingent portions of the purchase price if such sales amounted to less than $4.7 million. On July 22, following the Touche-Ross sales audit and the parties' agreement that ice cream sales amounted to $4,528,000, the sales price paid at the closing was reduced to $1,430,340 and the maximum deferred contingent payments were reduced to $333,660.

The facts of this case are distinguishable from those of Court Holding. In Court Holding and other cases applying its holding, such as Waltham Netoco Theaters, Inc. v. Commissioner, supra, the change in the identity of the sellers took place at the last minute. In such cases, the only difference in whether the corporation or all its shareholders are regarded as the seller(s) lies in whether the proceeds of the sale to which the shareholders become entitled will be decreased by the amount of the corporate level tax imposed. In the present case, the change in the identity of the sellers, namely the removal of Martin and MIC, resulted in a significant economic change that was independent of any change in tax consequences. Once SIC, wholly owned by Arnold, was designated as the seller, along with Arnold, a situation was created in which all proceeds of the sale would come under the control of Arnold, to the exclusion of Martin and MIC.[22]

The change in the identity of the sellers was not a "last minute" change in a deal that had already been consummated, or whose terms had been completely negotiated. Rather, it signaled the birth of a new deal significantly different from its predecessor, both in terms of what would be sold and who would receive the proceeds. Stated differently, having Arnold and SIC, rather than petitioner, sell assets to Haagen-Dazs was not a mechanism to give effect to a transaction that had already been negotiated by, or on behalf of, petitioner. See Kaufmann v. Commissioner, 11 T.C. at 490-491 (Kern, J., concurring).

Not only are the facts of this case distinguishable from those of Court Holding, but they also fall under the rubric of Cumberland Pub. Serv., where the taxpayer corporation did not negotiate a

sale of assets. As in Cumberland Pub. Serv., we focus on the "negotiation substance" of the transaction to determine whether it is consistent with its form. This requires us to first identify the transaction, whose negotiations we examine. Where, as here, a change in the identity of a seller occurs during the negotiation process, and that change has business purposes and economic effects that are independent of any tax consequences, then the transaction is transformed and a new transaction arises. In then determining whether the form of the new transaction is consistent with its substance, the only negotiations that are relevant are those that occur after the identity of the seller has changed.

After SIC became a party to the sale transaction, replacing petitioner, the transaction was transformed. In determining whether the form of the transaction is consistent with its substance, we focus on the negotiations that occurred once SIC became the named seller in the proposed new transaction. Petitioner took no part in these subsequent negotiations for the sale of distribution rights, and therefore the final form of the transaction is consistent with its substance. We accordingly deny respondent's attempt to apply Court Holding to treat petitioner as a seller of assets to Haagen-Dazs.

3. SPLIT-OFF DID NOT QUALIFY UNDER SECTION 355

Section 355 generally allows a corporation to make a tax- free distribution of an amount of stock constituting control of a corporation (control being defined in section 355(a)(1)(D)(ii) for purposes of section 355 by reference to section 368(c))[23] to its shareholders, provided the active business requirement of section 355(b) is satisfied, and the transaction is not deemed a "device" to make a tax-free distribution of earnings and profits, which otherwise would be taxable as a dividend. The section 355 regulations impose other requirements, which we need not address.

Respondent determined that petitioner failed to satisfy several of the requirements for nonrecognition of gain under section 355 when it distributed SIC stock to Arnold in redemption of Arnold's stock in petitioner. We need consider only whether SIC was actively engaged in a trade or business immediately after the split-off within the meaning of section 355(a)(1)(C) and (b)(1)(A), which requires that the distributing corporation and the subsidiary corporation both be "engaged immediately after the distribution in the active conduct of a trade or business". Sec. 355(b)(1)(A).

The determination of whether a trade or business is actively engaged in is a factual question requiring an examination of all the facts and circumstances. Under section 1.355-(1)(c), Income Tax Regs., a corporation is treated as engaged in a trade or business immediately after the distribution if it

> consists of a specific existing group of activities being carried on for the purpose of earning income or profit from only such group of activities, and the activities included in such group must include every operation which forms part of, or a step in, the process of earning income or profit from such group. * * *

By requiring that a trade or business be actively conducted, section 355 envisions a corporation with substantial management and operational activities directly carried on by the corporation itself. See sec. 1.355-3(b)(2)(iii), Proposed Income Tax Regs., 42 Fed. Reg. 3870 (Jan. 21, 1977);[24] see also Rev. Rul. 73- 236, 1973-1 C.B. 183.

Petitioner's distribution of SIC stock does not qualify for nonrecognition of gain under section 355(c) because SIC was not engaged in the active conduct of a trade or business immediately after the distribution. SIC received no operating assets from petitioner on the transfer of intangible assets by petitioner to SIC in exchange for SIC stock. During the 6-week period from the time of the split-off until the sale of all of the assets of SIC to Haagen-Dazs, SIC did not directly carry on any operational activities. SIC had neither the assets nor the employees required to engage in the active conduct of an ice cream distributorship.

SIC used petitioner's employees in all of its operational activities. Petitioner was retained as an independent contractor by SIC. Petitioner and Martin's agreement with SIC and Arnold stated that MIC would provide all services "reasonably necessary" for SIC to carry on during an interim period while it made alternative arrangements. Pursuant to that agreement, drivers employed by MIC made all the deliveries to SIC's supermarket accounts during the interim 6-week period. Other than perhaps Arnold, its sole shareholder, SIC had no employees.

SIC used petitioner's tangible assets in all of its operational activities. After the distribution, petitioner continued to own all the refrigerated trucks and storage facilities required to operate both the small store and supermarket businesses. During the period between the split-off and the sale to Haagen-Dazs, trucks owned by MIC made all the deliveries to the supermarkets, and the MIC warehouse and refrigeration facilities were used to store the Haagen-Dazs ice cream products until they could be delivered to the supermarkets. The supermarket customers themselves were largely unaware until the closing of the transactions with Haagen-Dazs on July 22 that Martin and MIC had parted company from Arnold and SIC.

4. PETITIONER'S GAIN RECOGNIZED ON DISTRIBUTION OF SIC STOCK

Because petitioner's transfer of assets to SIC and distribution of SIC stock to Arnold do not qualify for nonrecognition of gain under section 355, we must determine the Federal income tax consequences of these transactions under other provisions of the Code.

Respondent acknowledges that petitioner was entitled to nonrecognition of gain under section 351 upon the transfer of assets to SIC in exchange for its stock[25] but argues that petitioner recognized gain under section 311(b) on the immediately following distribution of the SIC stock to Arnold in redemption of his stock in petitioner. We agree with respondent.

a. MIC'S TRANSFER OF ASSETS TO SIC

Under section 351(a), a transfer of property to a corporation solely in exchange for its stock does not trigger a recognition event, provided that immediately after the transfer the transferor or transferors "are in control (as defined in section 368(c))" of the transferee. Section 351(c) modifies the controlling interest requirement, providing that, in determining control for this purpose, the fact that a corporate transferor distributes to its shareholders all or part of the stock of the transferee "shall not be taken into account."

The June 15, 1988, transfer of assets by MIC to SIC, solely in exchange for the stock of SIC, is a nonrecognition event under section 351(a). Immediately after the transfer, MIC received all the stock of SIC, which it thereupon distributed to one of its shareholders, Arnold. By reason of section 351(c), the distribution of SIC stock to Arnold does not adversely affect the conclusion that MIC had a controlling interest in SIC immediately after the transfer.

In Rev. Rul. 68-298, 1968-1 C.B. 139, a corporation transferred property to a newly created subsidiary in exchange for all the stock of the subsidiary, whereupon the transferor distributed 25 percent of the transferee corporation's stock to a shareholder in complete redemption of the shareholder's stock in the transferor. The Commissioner ruled that the transferor had maintained its controlling interest under section 351(a) and (c), notwithstanding that the transferor's remaining interest in the transferee was less than 80-percent control as defined in section 368(c).

We agree with the conclusion of Rev. Rul. 68-298, supra, which is consistent with the statutory language of section 351. Section 351(c) provides that a transferor corporation's subsequent distribution of transferee stock to its shareholders "shall not be taken into account"; this means that the transferor will not be deemed to have relinquished control immediately after the transfer by reason of having distributed to one or more of its shareholders all or part of the stock of the transferee, even though the distribution effects a termination of the shareholder's interest in the transferor.

b. DISTRIBUTION OF SIC STOCK TO ARNOLD IN REDEMPTION OF HIS STOCK IN PETITIONER

While the transfer of assets by MIC to SIC was a nonrecognition event for Federal income tax purposes, the subsequent distribution of SIC stock to Arnold by MIC was not. The rules of subchapter C determine whether and to what extent an S corporation recognizes gain on the distribution of property in redemption of its stock. S. Rept. 100-445, at 66 (1988); see also Eustice & Kuntz, Federal Income Taxation of S Corporations, par. 8.02[1][a], at 8-24, par. 13.06[2], at 13-40 (3d ed. 1993).

The distribution of SIC stock to Arnold in exchange for his stock in petitioner was a distribution of property under section 317(a), amounting to a redemption by petitioner of its stock held by Arnold.[26] Sec. 317(b). [27] Section 311(a), as enacted by the 1954 Code, codified the rule of General Utils. & Operating Co. v. Helvering, 296 U.S. 200 (1935), by providing that a

distributing corporation generally recognizes no gain or loss on distributions of property with respect to its stock. However, section 631(c) of the Tax Reform Act of 1986 (TRA), Pub. L. 99-514, 100 Stat. 2272, amended section 311(b) so as to effectively repeal the rule of General Utilities where there is a gain on distributions of property with respect to stock. Section 311(b) now provides that a corporation recognizes gain to the extent that the fair market value of the distributed property exceeds its adjusted basis in the hands of the distributing corporation. Petitioner therefore recognized the gain that it realized on the distribution of SIC stock in redemption of Arnold's stock in petitioner, measured by the excess of fair market value over the basis of the SIC stock distributed.

Petitioner presented no evidence to establish the adjusted basis of assets transferred to SIC in the section 351 exchange. Inasmuch as petitioner has the burden of proof with respect to this issue and presented no evidence, we accept respondent's determination of the adjusted basis of the SIC stock, which is zero, the same as the adjusted basis of the assets that petitioner transferred to SIC in the section 351 exchange. Sec. 358(a)(1).

c. AMOUNT REALIZED ON DISTRIBUTION OF SIC STOCK

We next determine the fair market value of the appreciated property that petitioner distributed to Arnold -- the SIC stock. To ascertain the fair market value of property, whether for income tax purposes or for estate tax purposes, Champion v. Commissioner, 303 F.2d 887, 892-893 (5th Cir. 1962), revg. and remanding on other grounds T.C. Memo. 1960-51, we must determine "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." United States v. Cartwright, 411 U.S. 546, 551 (1973); sec. 20.2031-1(b), Estate Tax Regs. This determination presents a question of fact, Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982), based on all the evidence in the record, Helvering v. Safe Deposit & Trust Co., 316 U.S. 56, 66-67 (1942); Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285.

Our task is made all the more difficult by the lack of any direct evidence in the record of the market value of the SIC stock. However, we may approximate the value of the SIC stock by determining the fair market value of Arnold's previously held stock in MIC, inasmuch as the taxable event at issue is the distribution by MIC of SIC stock in redemption of Arnold's stock in MIC. See United States v. Davis, 370 U.S. 65, 72 (1962); Philadelphia Park Amusement Co. v. United States, 130 Ct. Cl. 166, 126 F. Supp. 184, 189 (1954); Spruance v. Commissioner, 60 T.C. 141, 157 (1973), affd. without published opinion 505 F.2d 731 (3d Cir. 1974); Williams v. Commissioner, T.C. Memo. 1997-326.

Respondent did not submit an expert's report valuing the SIC stock, arguing that this is not a valuation case. In respondent's view, the intervening transfer of property by MIC to SIC and exchange of SIC stock for Arnold's MIC stock are to be disregarded, and petitioner held, under the Court Holding theory, to be the constructive seller of all property sold to Haagen-

Dazs, having a fair market value of $1,430,340, as established by the price paid by Haagen-Dazs for assets purchased less than 6 weeks later. Similarly, respondent argues, even if respondent loses on the Court Holding theory, that the price paid in the Haagen-Dazs sale is the best evidence of the value of the assets transferred from MIC to SIC and of the value of Arnold's MIC stock that was redeemed. For reasons previously discussed, we have rejected respondent's overall position equating petitioner's gain with the total amount of the consideration paid by Haagen-Dazs in the purchase and sale transaction.

Petitioner submitted an expert witness report that valued Arnold's share of MIC as an ongoing business prior to the June 15 transfer at $141,000. Rudolph Bergwerk, a certified public accountant, prepared the report for petitioner. Expert opinions can aid the Court in understanding an area of specialized training, knowledge, or judgment, such as valuation. Perdue v. Commissioner, T.C. Memo. 1991-478. While we may accept an expert's opinion in its entirety, Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), we are not bound to do so, Silverman v. Commissioner, supra, and may selectively use any portion of the report and testimony in determining fair market value of property, IT&S of Iowa, Inc. v. Commissioner, 97 T.C. 496, 508 (1991); Parker v. Commissioner, 86 T.C. 547, 562 (1986).

Respondent urges the Court to reject Mr. Bergwerk's report in its entirety on the ground that he was a "hired gun". Cf. Estate of Mueller v. Commissioner, T.C. Memo. 1992-284. Experts are not supposed to be "hired guns"; they lose their usefulness and credibility to the extent to which they become mere advocates for the side that hired them. Estate of Halas v. Commissioner, 94 T.C. 570, 577 (1990); Buffalo Tool & Die Manufacturing Co. v. Commissioner, supra at 452.

Mr. Bergwerk is a certified public accountant who had an ongoing professional relationship with petitioner as petitioner's tax return preparer from 1982 through 1985. Mr. Bergwerk prepared personal income tax returns for Martin and Arnold during this same period. He also represented petitioner before the IRS in the audit that preceded the issuance of the deficiency notice at issue in this case. Respondent argues that these prior relationships so infect Mr. Bergwerk's report with bias that we should completely disregard it. The mere existence of the relationships does not automatically disqualify Mr. Bergwerk as petitioner's expert. See, e.g., Estate of Bennett v. Commissioner, T.C. Memo. 1993-34 (appraiser was a longtime family adviser and was a coexecutor of the estate). Nor is Mr. Bergwerk automatically disqualified by his lack of formal qualifications as an appraiser. Id. (citing Fed. R. Evid. 702; Grain Dealers Mut. Ins. Co. v. Farmers Union Coop. Elevator & Shipping Association, 377 F.2d 672, 679 (10th Cir. 1967)).

In Estate of Halas v. Commissioner, supra at 578, we stated that an "appraiser's duty closely corresponds to the public duty of an auditor or certified public accountant." On the basis of the nature of the report, which we discuss infra, Mr. Bergwerk's professional qualifications as a certified public accountant, and the testimony of Mr. Bergwerk, we are satisfied that Mr. Bergwerk was not acting as a mere advocate for petitioner, but as an appraiser with a duty to the Court. Id. at 577. However, we do not ignore or disregard this prior and continuing

relationship between Mr. Bergwerk and petitioner, Arnold, and Martin and weigh it in the balance of whether -- and the degree to which -- to accept Mr. Bergwerk's expert opinion.

Mr. Bergwerk stated that he had based his report on the methodology set forth in Rev. Rul. 59-60, 1959-1 C.B. 237, modified by Rev. Rul. 65-193, 1965-2 C.B. 370, and Rev. Rul. 68-609, 1968-2 C.B. 327, and amplified by Rev. Rul. 77-287, 1977-2 C.B. 319, Rev. Rul. 80-213, 1980-2 C.B. 101, and Rev. Rul. 83-120, 1983-2 C.B. 170. We follow the principles set forth in Rev. Rul. 59-60, supra, which we recognize as having been "widely accepted as setting forth the appropriate criteria to consider in determining fair market value", Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990), to the extent they represent a correct approach to the valuation of closely held corporations, see Stark v. Commissioner, 86 T.C. 243, 250-251 (1986).

Mr. Bergwerk's report characterized petitioner as an undiversified company engaged in a single line of business, the wholesale distribution of ice cream products, which was highly dependent on weather and time of year. Petitioner also had "an unhealthy concentration" of its business in Haagen-Dazs products. Despite such drawbacks, the company had expanded its gross sales substantially in the 5 years before the distribution of SIC stock. Mr. Bergwerk opined that the potential for further growth was limited because of the ability of supermarkets and ice cream manufacturers to eliminate independent wholesale distributors from business.[28]

Mr. Bergwerk expressly considered each of the factors set forth in Rev. Rul. 59-60, 1959-1 C.B. at 238-239, as a basis for valuation of closely held corporations. In arriving at his valuation of MIC as an ongoing business, Mr. Bergwerk assigned relative weights to the three valuation factors that he found persuasive -- 50 percent to capitalized earnings, 30 percent to petitioner's dividend-paying capacity, and 20 percent to petitioner's book value -- and then averaged the factors in accordance with those relative weights. In so doing, he appropriately gave primary consideration to petitioner's earnings history, as recommended by Rev. Rul. 59-60, sec. 5, 1959-1 C.B. at 242, and estimated petitioner's fair market value as an ongoing business prior to the separation of the business lines to be $276,509, and Arnold's 51-percent share, which was redeemed upon distribution of SIC stock, to be $141,000.

Mr. Bergwerk used the same three factors and approach used in Bader v. United States, 172 F. Supp. 833 (S.D. Ill. 1959), a case decided prior to the issuance of Rev. Rul. 59-60, supra, which also averaged the results of the factors. Mr. Bergwerk did not discount his valuation on account of lack of marketability, as did the court in Bader, nor did he provide an explanation of why he used the particular weights he used, or of why he had disregarded the admonishment of Rev. Rul. 59-60, 1959-1 C.B. at 243, that "no useful purpose is served by taking an average of several factors * * * and basing the valuation on the result."

Despite the problems we have with Mr. Bergwerk's report, we find that Mr. Bergwerk's estimate of the fair market value of petitioner just prior to the transactions in issue provides a

reasonable upper limit on the value of petitioner as of June 1988; we adopt Mr. Bergwerk's figure, in the absence of countervailing expert opinion and testimony from respondent.

Of the three valuation factors used by Mr. Bergwerk, the highest amount was book value as of October 31, 1987, $552,061.[29] In calculating the capitalized earnings of petitioner at $331,394, Mr. Bergwerk estimated the earning capacity of petitioner as $53,023 per year after taxes, based on a weighted average of the 5 years of operations ending on October 31, 1987,[30] and a price-earnings ratio of 6.25:1, the same as used by this Court in Estate of Little v. Commissioner, T.C. Memo. 1982-26, to determine the value of a closely held, diversified corporation engaged in light manufacturing. Mr. Bergwerk discounted the price-earnings ratio because of the corporate shortcomings noted above, the dependence of the business on Arnold's personal relationships with the supermarkets, and the lack of a second tier of management.

Mr. Bergwerk opined that the corporation had no goodwill because the rate of return on tangible assets did not exceed 10 percent, a rate of return on tangible assets suggested by Rev. Rul. 68-609, 1968-2 C.B. 327. Under the approach of Rev. Rul. 68-609, supra, any return in excess of 10 percent would be attributable to goodwill or other intangibles for tax purposes. See also Financial Valuation: Businesses and Business Interests, par. 16.4[7], at 16-10 (Zukin ed. 1990). However, petitioner did have some intangibles in the form of customer lists and pricing lists. Petitioner transferred those business records pertaining to the supermarket distribution business to SIC in the initial tax-free exchange for SIC stock. Petitioner retained other proprietary information pertaining to the independent grocery store business that Martin continued to conduct in the years subsequent to the transactions at issue.

Mr. Bergwerk determined that petitioner had no dividend- paying capacity, using the methodology that this Court used in Bardahl Manufacturing Corp. v. Commissioner, T.C. Memo. 1965-200, to determine reasonable business needs for retained earnings. He therefore assigned a fair market value of zero to MIC as an ongoing business on the basis of this lack of dividend-paying capacity. In so doing, Mr. Bergwerk disregarded an explicit instruction in Rev. Rul. 59-60, 1959-1 C.B. at 241, which points out that, where

> an actual or effective controlling interest in a corporation is to be valued, the dividend factor is not a material element, since the payment of such dividends is discretionary with the controlling stockholders. The individual or group in control can substitute salaries and bonuses for dividends, thus reducing net income and understating the dividend-paying capacity of the company. It follows, therefore, that dividends are less reliable criteria of fair market value than other applicable factors.

Even though a valuation derived from dividend-paying capacity is an inappropriate factor in this case, the relative lack of dividend-paying capacity cannot be entirely ignored in that it shows the extent to which petitioner was undercapitalized in those years -- a factor that negatively affects petitioner's fair market value.[31]

Under the circumstances of this case, use of book value would tend to overvalue petitioner, especially in light of the effect of the relatively low -- and dropping -- ratio of net income to sales during the mid-1980's on the value of petitioner and the relative lack of dividend-paying capacity, which shows the precarious nature of petitioner's financial health. Capitalized earnings at a 6.25:1 price/earnings ratio, $331,394, also over-values petitioner to the extent that it does not sufficiently take into account a number of other factors not fully considered by Mr. Bergwerk.

Although Mr. Bergwerk discussed petitioner's overreliance on Haagen-Dazs as its major supplier, he did not expressly take into account the negative effect on marketability -- and hence fair market value -- of Haagen-Dazs' effective veto over any sale to an unrelated third party. Because of the tenuous nature of petitioner's distribution rights -- if any -- to Haagen-Dazs products, Haagen-Dazs could effectively stop a sale of petitioner, if it did not approve of the buyer, by threatening to stop supplying petitioner with its product. The withdrawal of Haagen-Dazs as a supplier would leave petitioner as little more than a collection of physical assets and a distribution network with nothing to distribute. Haagen-Dazs' cold shoulder to Mr. Hewit's overture in his May 16, 1988, letter concerning the possible sale of the nonbanner business to an unrelated third party, and the abandonment of any further effort to sell by Martin, is probative, not only of the effect of Haagen-Dazs' veto on petitioner's marketability -- and its market value -- but also of the likelihood that Haagen-Dazs would have used such a veto.

Another factor having a depressing effect on fair market value is the lack of value that Haagen-Dazs attached to petitioner as an ongoing business concern. This is demonstrated by the refusal of Haagen-Dazs to consider buying any of petitioner's assets beyond a few business records that documented the sales to the supermarkets. Despite petitioner's investment in refrigerated trucks and warehouse facilities during the mid-1980's -- which contributed to the anemic position of its net current assets and its inability to pay dividends -- Haagen-Dazs still considered petitioner's physical plant and equipment to be substandard for purposes of distributing Haagen-Dazs ice cream.

We must also consider the effect of petitioner's being a small, family-owned business on the sale by either Arnold or Martin of his interest in petitioner without the sale of the other interest. While we do not assign a precise value to this discount factor, the closely held nature of petitioner and the reluctance of a third party to buy into a family-owned business, especially one with the handicaps we have just recited, could serve only to decrease the market value of the interest for sale.

Also important is that the conditions under which petitioner had operated during the 1970's had changed in the 1980's, when Pillsbury acquired Haagen-Dazs, with the avowed goal of distributing ice cream to supermarkets itself rather than relying on independent distributors such as petitioner -- a fact well known at the time of the redemption of Arnold's stock in MIC. These changed conditions render suspect any fair market value based on past earnings.

Most importantly, petitioner's earnings in the years preceding the split-off were substantially attributable to Arnold's oral agreement with Mr. Mattus and his relationship with the supermarkets. As we have found, the supermarket distribution rights were personal to Arnold and did not belong to petitioner. The assumption underlying a capitalization of earnings approach is that, barring adverse developments, the historical earnings will continue. Therefore, in valuing petitioner as of the time of the split-off, which marks the parting of the ways between petitioner and Arnold, an adverse development indeed, it makes no sense to assume that petitioner's earnings would continue at the same level in the future, or even that there would be no more than a pro rata reduction of such earnings by reason of Arnold's departure.

Under the circumstances of this case, where there was a heavy investment in physical assets during a period when the corporation had been unable to pay dividends, an absence of a second tier of management, a lack of diversification in business, an overdependence on one supplier, Haagen-Dazs, and on one primary "rainmaker", Arnold, who was leaving, the risk of petitioner's being completely eliminated from business as an independent wholesale distributor, the effective veto Haagen-Dazs had over any sale to a third party, the fact that petitioner is a closely held, family-owned business, and the declining ratio of net income to sales, we find that a value of $276,509 is the upper limit to a fair estimate of the value of petitioner immediately prior to the transactions at issue.

Respondent's determination of the value of assets sold to Haagen-Dazs by SIC, and the corresponding value of SIC stock distributed to Arnold, is presumptively correct, and the burden of proving a lower value rests on petitioner. Rule 142(a); Frazee v. Commissioner, 98 T.C. 554, 562 (1992); Pessin v. Commissioner, 59 T.C. 473, 480 (1972). In the present case, respondent did not present the testimony or report of an expert upon which to consider an alternative valuation. Petitioner, on the other hand, did present the report and testimony of Mr. Bergwerk, and has thereby effectively rebutted respondent's original determination. Although Mr. Bergwerk's methodology was flawed, his conclusion is only erroneous insofar as his $276,509 value for petitioner results in an overstatement of the fair market value of the SIC stock distributed to Arnold. Petitioner has carried its burden of reducing respondent's determination of $1,430,340 to $141,000 (51 percent of the value of petitioner) but has not carried the burden of reducing the value any further. See Hess v. Commissioner, 24 B.T.A. 475, 478 (1931) (Court adopted taxpayer's asserted value where the Commissioner introduced no evidence to rebut taxpayer's expert testimony, citing Baldwin v. Commissioner, 10 B.T.A. 1198 (1928)); cf. Anselmo v. Commissioner, 80 T.C. 872, 886 (1983), affd. 757 F.2d 1208 (11th Cir. 1985); Estate of Trompeter v. Commissioner, T.C. Memo. 1998-35. Taking into account Mr. Bergwerk's valuation conclusion, we find that the fair market value of Arnold's 51-percent interest in petitioner, which petitioner redeemed for all of SIC's stock, was $141,000.[32]

d. PETITIONER'S TAX LIABILITY UNDER SECTION 1374

Section 1363(a) provides that, generally, S corporations are not subject to income tax. However, when a former C corporation such as MIC elects S corporation status and then

distributes or sells appreciated property, it may be liable for tax under section 1374 if the S corporation election was made prior to January 1, 1987. TRA sec. 633(b), 100 Stat. 2277; H. Conf. Rept. 99-841 (Vol. II), at II- 203 (1986), 1986-3 C.B. (Vol. 4) 1, 203. Petitioner is a former C corporation that elected S status prior to January 1, 1987.

Section 1374, as applicable to petitioner for the year in issue, reads in pertinent part:

> SEC. 1374(a). General Rule. -- If for a taxable year of an S corporation --
>
> > (1) the net capital gain of such corporation exceeds $25,000, and exceeds 50 percent of its taxable income for such year, and
> >
> > (2) the taxable income of such corporation for such year exceeds $25,000, There is hereby imposed a tax (computed under subsection (b)) on the income of such corporation.
> >
> > * * * * * * *
> >
> > > (d) Determination of Taxable Income. -- For purposes of this section, taxable income of the corporation shall be determined under section 63(a) without regard to --
> >
> > (1) the deduction allowed by section 172 (relating to net operating loss deduction), and
> > (2) the deductions allowed by part VIII of subchapter B (other than the deduction allowed by section 248, relating to organization expenditures)

In order for section 1374 to apply, petitioner must have recognized "net capital gain", which means the excess of net long- term capital gain over net short-term capital loss, as defined in section 1222. Given that petitioner reported no capital gains or losses on its 1988 income tax return, in order for section 1374 to apply, petitioner's distribution of SIC stock to Arnold must have resulted in a long-term capital gain, exceeding $25,000. This, in turn, requires that SIC stock be a capital asset in the hands of petitioner and that petitioner be deemed to have held the SIC stock longer than 1 year. See sec. 1222(3), as amended by sec. 1402(a), Tax Reform Act of 1976, Pub. L. 94-455, 90 Stat. 1520, 1731.

The SIC stock was a capital asset in the hands of petitioner. Arkansas Best Corp. v. Commissioner, 485 U.S. 212, 222-223 (1988). Petitioner relies on section 1221(3) to argue that the business records of MIC, which were subsequently transferred to SIC, are not capital assets, and that the SIC stock received in exchange is consequently also not a capital asset. Section 1221(3) provides that the term "capital asset" does not include "a copyright, a literary, musical, or artistic composition, a letter or memorandum, or similar property, held by -- (A) a taxpayer whose personal efforts created such property". Section 1253(c) extends the exception

to property whose basis is determined by reference to the basis of such property in the hands of a taxpayer as described in subparagraph (A) of section 1221(3). We do not agree with petitioner. The legislative history of section 117(a)(1)(C) of the 1939 Internal Revenue Code, the predecessor to section 1221(3), states that the exception was intended to deal with the writing of books and other artistic works in a very narrow sense. See S. Rept. 2375, 81st Cong., 2d Sess. 43-44 (1950), 1950-2 C.B. 483, 543-544; S. Rept. 91-552, at 198-199 (1969), 1969-3 C.B. 423, 549-550 (discussing the addition of "letters, memorandums, papers, etc." to section 1221(3) under the Tax Reform Act of 1969, Pub. L. 91-172, sec. 514(a), 83 Stat. 643); see also Commissioner v. Ferrer, 304 F.2d 125, 132 (2d Cir. 1962), revg. in part and remanding 35 T.C. 617 (1961). MIC's business records do not fall under the narrow category of assets described in section 1221(3).

Second, petitioner is deemed to have held the SIC stock for more than 1 year. Respondent acknowledged that petitioner's transfer of assets in exchange for the stock of SIC qualified for nonrecognition under section 351. See supra p. 45. Under sections 1223 and 358, where a taxpayer has transferred property in a transaction that qualifies for nonrecognition under section 351, the taxpayer's holding period in the stock received in the transaction includes the period for which the taxpayer has held the property transferred in the transaction. Petitioner's holding period in SIC stock therefore includes the period it held the assets transferred to SIC. Petitioner presented no evidence to establish that its holding period of the assets, or any part of the assets, transferred to SIC was less than 1 year. Inasmuch as petitioner has the burden of proof on this issue and has presented no evidence, we accept respondent's determination that the gain realized by petitioner was a long-term capital gain.

Petitioner's long-term capital gain of $141,000, resulting from petitioner's distribution of SIC stock in redemption of Arnold's stock in petitioner, is petitioner's only capital gain in 1988. Accordingly, petitioner had "net capital gain" (as defined in section 1222) for purposes of section 1374. When the $141,000 of capital gain is included, petitioner's net capital gain exceeds $25,000 and also exceeds 50 percent of petitioner's taxable income for 1988, as defined in section 1374(d).[33] Accordingly, petitioner satisfies the requirements of section 1374(a) and is liable for tax imposed by section 1374(b) on its recognized gain of $141,000.

5. ADDITIONS TO TAX

a. NEGLIGENCE

For taxable year 1988, section 6653(a)(1) adds to tax an amount equal to 5 percent of an underpayment of tax required to be shown on the return that is due to negligence or disregard of rules or regulations. Sections 6653(c)(1) and 6212 essentially define an underpayment for purposes of this section as the equivalent of a deficiency.

Section 6653(a)(3) provides that negligence includes "any failure to make a reasonable attempt to comply with the provisions of this title, and the term 'disregard' includes any careless, reckless, or intentional disregard." Courts have defined negligence as the lack of due care or

failure to do what an ordinarily prudent person would do under the circumstances. Bassett v. Commissioner, 67 F.3d 29, 31 (2d Cir. 1995), affg. 100 T.C. 650 (1993); Marcello v. Commissioner, 380 F.2d 499, 506 (5th Cir. 1967), affg. in part and remanding in part 43 T.C. 168 (1964). Petitioner bears the burden of showing that it was not negligent. Rule 142(a); Goldman v. Commissioner, 39 F.3d 402, 407 (2d Cir. 1994), affg. T.C. Memo. 1993-480.

In United States v. Boyle, 469 U.S. 241, 251 (1985), the Supreme Court held that "When an accountant or attorney ADVISES a taxpayer on a matter of tax law, such as whether a liability exists, it is reasonable for the taxpayer to rely on that advice." Ordinary business prudence or due care does not demand that a taxpayer seek a second opinion, id., so long as such advice is reasonable under the circumstances and is based on full disclosure by the taxpayer, see, e.g., Sim-Air, USA, Ltd. v. Commissioner, 98 T.C. 187, 201 (1992) (reliance on tax professional's advice was reasonable when a corporate subsidiary failed to qualify as a DISC when the advice turned out to be erroneous, especially in light of the complexity of section 992 and associated regulations).

In this case, Martin, as president of petitioner, and Arnold both relied on legal advice from Mr. Hewit throughout the protracted negotiations with Haagen-Dazs. Even though Mr. Hewit never gave a written tax opinion to petitioner or Arnold or Martin, Martin and petitioner were entitled to rely and proceed on the assumption that the transactions at issue were nontaxable to petitioner because of the way Mr. Hewit had structured the transactions and drafted the documents effecting the transactions that separated the two business lines. Mr. Hewit, in turn, sought advice from third-party tax professionals on how to structure a tax-efficient solution to resolve the growing dispute between Martin and Arnold over the future direction of petitioner as an ice cream distributor. Like the advice sought by the taxpayer in Sim-Air, USA, Ltd. v. Commissioner, supra at 201, the advice that petitioner sought from Mr. Hewit, who in turn also sought expert advice, was subject to section 355, a complex section of the Code.[34] We find that Martin and petitioner acted as ordinarily prudent business persons would under the circumstances and that petitioner is not liable for an addition to tax under section 6653(a)(1).

b. SUBSTANTIAL UNDERSTATEMENT

For tax year 1988, section 6661(a) provides for an addition to tax of "25 percent of the amount of any underpayment attributable" to "a substantial understatement of income tax for any taxable year", for penalties assessed after October 21, 1986. Section 6661(b)(1) defines a substantial understatement as any understatement that exceeds the greater of $10,000 in the case of corporations, sec. 6661(b)(1)(B), or 10 percent of the tax required to be shown on the return for the taxable year, sec. 6661(b)(1)(A)(i). An understatement of income tax occurs when the tax actually shown on the return is less than the amount required to be shown on the return. Sec. 6662(b)(2); Woods v. Commissioner, 91 T.C. 88, 95 (1988). Petitioner bears the burden of proving that respondent's determination of the deficiency, the understatement with respect to the deficiency, and the addition to tax based on the understatement are erroneous. Rule 142(a);

Conti v. Commissioner, 39 F.3d 658, 664 (6th Cir. 1994), affg. on this issue and remanding 99 T.C. 370 (1992).

Section 6661(b)(2)(B) provides a means to reduce the amount of the addition to tax, stating that

> The amount of the understatement * * * shall be reduced by that portion of the understatement which is attributable to --
>
> > (i) the tax treatment of any item by the taxpayer if there is or was substantial authority * * *, or
> >
> > (ii) any item with respect to which the relevant facts affecting the item's tax treatment are adequately disclosed in the return or in a statement attached to the return.

Petitioner failed to disclose on its 1988 return or in a statement attached to the return, as required by section 1.6661-4, Income Tax Regs., the existence of its transfer of assets to SIC and its distribution of SIC stock to Arnold in redemption of his stock in petitioner. We note that sections 1.368-3(a), 1.355-5(a), and 1.351- 3(a), Income Tax Regs., also require disclosure of all plans of reorganization, distributions of stock of a controlled subsidiary, and transfers to controlled corporations, respectively. Because petitioner failed to disclose the transactions at issue on its 1988 income tax return, the understatement may not be reduced on the ground of adequate disclosure. Sec. 6661(b)(2)(B)(ii); sec. 1.6661-4, Income Tax Regs.

Substantial authority is defined in section 1.6661- 3(a)(2), Income Tax Regs., as

> less stringent than a "more likely than not" standard (that is, a greater than 50-percent likelihood of being upheld in litigation), but stricter than a reasonable basis standard (the standard which, in general, will prevent imposition of the penalty under section 6653(a), relating to negligence or intentional disregard of rules and regulations). Thus, a position with respect to the tax treatment of an item that is arguable but fairly unlikely to prevail in court would satisfy a reasonable basis standard, but not the substantial authority standard.

With respect to the issue of whether Commissioner v. Court Holding Co., 324 U.S. 331 (1945), controls the transactions in question, petitioner has prevailed and thus had substantial authority for its position with respect to the form of the transactions. Sec. 1.6661-3(a)(2), Income Tax Regs.

Petitioner has not prevailed on the issue of whether section 355 confers nonrecognition of gain realized in the split-off. Petitioner must therefore demonstrate that substantial authority supports the positions taken on the income tax return with respect to those transactions. Gallade v. Commissioner, 106 T.C. 355, 367 (1996); sec. 1.6661-3(b)(1), Income Tax Regs. Petitioner

cited no case law or regulations in support of its position. Petitioner has cited as substantial authority only the advice given by its hired professionals. Advice of hired professionals, even when reasonable under the circumstances -- and regardless of the form in which it is rendered -- does not constitute substantial authority. Gallade v. Commissioner, supra at 367; sec. 1.6661-3(b)(2), Income Tax Regs. Indeed, in light of the facts in this case, the weight of authority directly supported respondent on the issue of "active conduct of a trade or business". Sec. 355(a)(1)(C) and (b). Petitioner did not have substantial authority for taking a position that the split-off qualified for nonrecognition of gain under section 355.

Section 6661(c) authorizes the Commissioner to waive "all or any part of the addition to tax * * * on a showing by the taxpayer that there was reasonable cause for the understatement (or part thereof) and that the taxpayer acted in good faith." While the authority to waive the section 6661(a) addition to tax rests with the Commissioner and not with this Court, we review a denial of waiver by the Commissioner under the abuse of discretion standard. Gallade v. Commissioner, supra at 367-368; Mailman v. Commissioner, 91 T.C. 1079, 1084 (1988).

We find no evidence in the record that petitioner ever requested a waiver. Accordingly, as we noted in Alondra Indus., Ltd. v. Commissioner, T.C. Memo. 1996-32, and Brown v. Commissioner, T.C. Memo. 1992-15, "we cannot find that respondent abused his discretion when the petitioner never requested respondent to exercise it." See also McCoy Enters., Inc. & Subs. v. Commissioner, 58 F.3d 557, 563 (10th Cir. 1995), affg. T.C. Memo. 1992-693; Estate of Reinke v. Commissioner, 46 F.3d 760, 765-766 (8th Cir. 1995), affg. T.C. Memo. 1993-197; Mailman v. Commissioner, supra at 1082-1084; Dugow v. Commissioner, T.C. Memo. 1993-401, affd. without published opinion 64 F.3d 666 (9th Cir. 1995); Klieger v. Commissioner, T.C. Memo. 1992-734; sec. 1.6661-6, Income Tax Regs.; cf. Gallade v. Commissioner, supra at 369 (citing Estate of Reinke v. Commissioner, supra at 765, for the proposition that, while the existence of "a taxpayer's request for a waiver can establish the Commissioner's degree of fault for failing to waive, it [Estate of Reinke] does not hold that a request is a requirement or prerequisite for a waiver.").[35]

Even if petitioner had requested a waiver, we would hold that petitioner has not established that respondent would have committed an abuse of discretion in refusing the request. In this case, petitioner would have been required to show that reliance on the professional advice of Mr. Hewit was reasonable and that petitioner acted in good faith under the circumstances. Sec. 1.6661- 6(b), Income Tax Regs. While we have held that petitioner has established, by the preponderance of the evidence, that it was not negligent for purposes of section 6653(a), the evidence before us on that issue was not completely uncontroverted, especially in light of petitioner's failure to disclose the split-off on its 1988 income tax return. We therefore cannot say that reasonable cause and good faith were so clear that any refusal by respondent to waive the addition to tax would have amounted to an abuse of discretion as being without sound basis in fact. See, e.g., Vandeyacht v. Commissioner, T.C. Memo. 1994-148; Klavan v. Commissioner, T.C. Memo. 1993-299.

Accordingly, we sustain respondent's determination that petitioner is liable for the section 6661(a) addition to tax on the underpayment.

To reflect the foregoing,

Decision will be entered under Rule 155.

FOOTNOTES

1. All section references are to the Internal Revenue Code in effect for the year in issue, and all Rule references are to the Tax Court Rules of Practice and Procedure, unless otherwise indicated.

2. Haagen-Dazs delivered its products to the MIC warehouse, where they were transferred to MIC trucks for delivery to both the supermarkets and the small grocery stores and food service accounts.

3. In re Super Premium Ice Cream Distribution Antitrust Litig., 691 F. Supp. 1262 (N.D. Cal. 1988), affd. without published opinion sub nom. Haagen-Dazs Co. v. Double Rainbow Gourmet Ice Creams, Inc., 895 F.2d 1417 (9th Cir. 1990).

4. During the negotiations with Arnold, attorneys for Pillsbury sent Russell L. Hewit (Mr. Hewit), attorney for Arnold, Martin, and MIC, a copy of applicable sections of two treatises on franchising, Rosenfield, The Law of Franchising, and Brown, Franchising Realities and Remedies (1982 rev.), in support of its contention that MIC, SIC, Arnold, and Martin had no enforceable rights to distribute Haagen- Dazs ice cream products that could not be terminated at will.

5. There is no evidence in the record that it ever occurred to Mr. Hewit, Martin, or Arnold that Martin and MIC should obtain separate legal representation, independent from Arnold, in negotiating and effectuating the split-off and the transactions with Haagen-Dazs.

6. The record includes an "Agreement", signed by Martin and Ms. Bronner on behalf of MIC and Haagen-Dazs, respectively, on July 8, 1988, that appears to be the contemplated "side agreement" referred to by Ms. Bronner in her June 14 letter. This agreement states that Haagen-Dazs and MIC would enter into three distribution agreements upon the closing of the Haagen-Dazs agreement with Arnold and SIC. The three distribution agreements, which were signed July 22, 1988, provide MIC with various rights to distribute certain Haagen-Dazs ice cream products in specified convenience stores, delis, places where ice cream is consumed on the premises, and other small independent grocery stores in New Jersey and parts of New York.

7. Martin also consulted with Mr. Neiman, who told him that "this is the way you should do it", referring to a distribution of stock under sec. 355 as a means of dissociating Arnold from MIC.

It is unclear from the record whether Mr. Falk and Mr. Neiman were aware of the ongoing negotiations with Haagen-Dazs.

8. The Agreement enumerated the "Sellers' Rights" as

> Any and all of Seller's rights and the rights of any corporations or entities owned or controlled by Sellers obtained from Buyer, its predecessors, its customers or others to distribute the products of Buyer within the states of New York, New Jersey, Pennsylvania, Massachusetts, Delaware, Connecticut and elsewhere including but not limited to supermarket and food service distribution rights, if any (the "Sellers' Rights") * * *. Upon Closing of the transactions contemplated herein, any and all of such Sellers' Rights obtained by Sellers from Buyer or its predecessors shall be cancelled.

9. "Non-banner" business was defined by the Agreement as "independent convenience stores and delis that have no more than two cash registers * * * 'independent' shall mean a firm which operates from one to ten stores".

10. The Agreement provided that if the audited supermarket sales were greater than $4 million but less than $4,700,000, then there would be a downward adjustment to the purchase price equal to:
[1 - (audited sales figures/$4,700,000)] x $2,350,000.
The Agreement allocated 81 percent of the downward adjustment to the purchase price to be paid at closing and 19 percent to the contingent annual payments payable to Arnold over the following 3 years.

11. Martin testified that MIC and SIC delayed changing how product was delivered to the supermarket customers in order to get through the busy summer season.

12. Subsequent to trial, respondent submitted to the Court a facsimile of the face of a Haagen-Dazs check to SIC in the amount of $1,430,340, accompanied by an affidavit that Haagen-Dazs issued the check to SIC as payment due at the closing of the sale of assets purportedly sold by SIC to Haagen-Dazs. We do not admit the facsimile and affidavit into evidence; there is sufficient evidence in the record to support a finding that SIC received the entire payment from Haagen-Dazs. However, because we decide this case as we do, initial receipt of payment by SIC instead of Arnold does not determine the Federal tax treatment to petitioner of the transactions at issue.

13. This statement attached to the SIC Form 1120S indicates that the downward adjustment of $69,660 to the purchase price paid by Haagen-Dazs at closing was allocated between the distribution rights and business records of SIC in the same proportions as the relative amounts of the preadjustment allocation of the purchase price to be paid at the closing -- 80 percent, or $55,728, to the distribution rights, and 20 percent, or $13,932, to the business records. The closing documents do not set forth or otherwise contain any reference to the allocation between distribution rights and business records of the reduction in the price paid at closing.

14. We note that the record contains no documents that actually transfer assets from MIC to SIC in exchange for SIC stock. The record contains only the MIC corporate resolutions stating the intention to make such transfer. However, we are satisfied by those corporate resolutions and testimony by Arnold, Martin, and Mr. Hewit that such a transfer did occur, in the sense that petitioner transferred to SIC the records of the supermarket business and whatever rights petitioner had in that business.

15. Petitioner may have had some residual rights to distribute Haagen-Dazs ice cream, but they were independent of Arnold's supermarket relationships and his value as a middleman. To the extent that they existed at all, they were in relationship to Haagen-Dazs' ability to terminate petitioner as a distributor. Haagen-Dazs was certainly interested in acquiring those rights as it rationalized and consolidated its wholesale distribution network as one of the assets it was buying from Arnold and SIC. However, in light of the summary judgment by the District Court, Northern District of California, in favor of Haagen-Dazs against a similarly situated distributor, the value of those rights in the event of termination by Haagen-Dazs was highly speculative at best.

16. Shortly after issuance of Rev. Rul. 96-30, 1996-1 C.B. 36, respondent first raised this theory with petitioner in a stipulation conference held on June 19, 1996, and was given leave to incorporate it in an amended answer filed less than 3 weeks before trial. Generally, when the Commissioner makes allegations in an amended answer requiring the presentation of different evidence, then the Commissioner "has introduced a new matter" or a new issue that requires the shifting of the burden of proof to the Commissioner as to the new matter or issue. Achiro v. Commissioner, 77 T.C. 881, 890 (1981); see also Seagate Tech. Inc. & Consol. Subs. v. Commissioner, 102 T.C. 149, 169 (1994).

Because the determination of the applicability of Commissioner v. Court Holding Co., 324 U.S. 331 (1945), required respondent to present evidence of the events leading up to the sale of assets which is different from the evidence showing that the requirements of sec. 355 were not met, we issued an order shifting the burden of proof to respondent on the Court Holding issue. However, we decide the issue on a preponderance of the evidence; therefore, the allocation of the burden of proof does not determine the outcome. See Kean v. Commissioner, 91 T.C. 575, 601 n.40 (1988) (citing Deskins v. Commissioner, 87 T.C. 305, 323 n.17 (1986)).

17. Implicit in respondent's Court Holding argument is the view that SIC's ownership of the assets transferred to it by MIC, and Arnold's ownership of SIC stock were too transitory to be recognized for tax purposes. However, we need not grapple with the transitory nature of SIC and the tax consequences of such a designation on the transactions in the case at hand. Respondent acknowledges that if we decide that Court Holding does not apply to attribute the sale to petitioner, then the transaction should be regarded as a sec. 351 transfer from MIC to SIC, followed by a taxable redemption of Arnold's shares in petitioner, thereby acknowledging

the existence of SIC for Federal income tax purposes under respondent's alternative argument. See infra pp. 45-48.

18. See Isenbergh, "Musings on Form and Substance in Taxation", 49 U. Chi. L. Rev. 859, 871-874 (1982), for a discussion of the narrow and broad interpretations.

19. The Supreme Court noted in Central Tablet Manufacturing Co. v. United States, 417 U.S. 673, 680 (1974), that its earlier decisions in Court Holding and United States v. Cumberland Pub. Serv. Co., 338 U.S. 451, 455 (1950), "created a situation where the tax consequences were dependent upon the resolution of often indistinct facts as to whether the negotiations leading to the sale had been conducted by the corporation or by the shareholders." See also Bolker v. Commissioner, 81 T.C. 782, 799 (1983), affd. 760 F.2d 1039 (9th Cir. 1985).

20. There is some discussion in the above-cited cases concerning whether shareholders who are corporate officers or directors can negotiate a sale of assets in corporate solution on their own behalf, rather than on the corporation's behalf, especially when the negotiations take place before the corporation resolves to liquidate the assets that are to be sold.

21. Although Commissioner v. Court Holding Co., supra, deals with corporations that distribute assets to their shareholders in complete liquidation, the Commissioner has recently applied its conduit theory to sec. 355 distributions. In Rev. Rul. 96-30, 1996-1 C.B. 36, D, a publicly traded corporation, distributes the stock of C, its wholly owned subsidiary, to its shareholders in a spin-off. C then enters into negotiations with Y, an unrelated corporation, and is merged into Y, after a vote to do so by C's shareholders, under a plan that meets all the requirements of sec. 368(a)(1)(A). Rev. Rul. 96-30, supra, specifically cites the complete lack of negotiations regarding the acquisition of C by Y before the spin-off as the determining factor in respecting the form of the transactions under Commissioner v. Court Holding Co., supra, in addition to the shareholder vote cited in Rev. Rul. 75-406, 1975-2 C.B. 125. Although respondent did not cite Rev. Rul. 96-30, supra, on brief, see supra note 16.

While Rev. Rul. 96-30, supra, indicates that a complete lack of negotiations before the spin-off will prevent the recasting of transactions under Court Holding, situations where there have been some, or even substantial, negotiations are not addressed. Nor does Rev. Rul. 96-30, supra, deal with a non pro rata distribution such as a split-off, as in the case at hand.

22. Compare the ownership position of the single shareholder, which remained unchanged, in Idol v. Commissioner, 38 T.C. 444 (1962), affd. 319 F.2d 647 (8th Cir. 1963), with Standard Linen Serv., Inc. v. Commissioner, 33 T.C. 1 (1959), and Esmark, Inc. & Affiliated Cos. v. Commissioner, 90 T.C. 171 (1988), affd. without published opinion 886 F.2d 1318 (7th Cir. 1989), where redemptions accomplished a substantial change in the ownership of the stock of the taxpayer corporation. Similar to Standard Linen and Esmark, MIC's redemption of Arnold's stock substantially changed the proportionate ownership of MIC by eliminating one of the two

shareholders and assured that Arnold would receive the entire consideration paid by Haagen-Dazs for acquisition of the distribution rights.

23. The corporation must also be in control of the corporation whose stock is being distributed immediately before the distribution. Sec. 355(a).

24. The proposed regulations were finalized by T.D. 8238, 1989- 1 C.B. 92. The final regulations, however, are effective for transactions occurring after Feb. 6, 1989. In response to several comments received by practitioners requesting guidance, the final regulations also state that in determining whether a corporation is actively conducting a trade or business, activities performed by independent contractors will generally not be taken into account. See sec. 1.355-3(b)(2)(iii), Income Tax Regs.

25. The record is not clear whether petitioner received the stock of SIC on May 31, 1988, the date of its incorporation, or June 15, 1988, the effective date of the transfer of assets from petitioner to SIC. Because respondent acknowledges on brief that petitioner's basis in SIC stock is determined under secs. 351 and 358, we treat the operative events as having occurred simultaneously.

26. Stock redemptions by S corporations are governed by the provisions of subch. C. Sec. 1371(a)(1); S. Rept. 100-445, at 66 (1988); see also Eustice & Kuntz, Federal Income Taxation of S Corporations, par. 8.02[1][a], at 8-24, par. 13.06[2], at 13-40 (3d ed. 1993).

27. Sec. 317(b) provides:

> For purposes of this part, stock shall be treated as redeemed by a corporation if the corporation acquires its stock from a shareholder in exchange for property, whether or not the stock so acquired is cancelled, retired, or held as treasury stock.

28. The evidence in the record strongly supports Mr. Bergwerk's opinion concerning petitioner's market position and relative vulnerability to outside forces.

29. Mr. Bergwerk estimated the book value as $554,061 in the text of his report and $552,061 in the exhibit. The exhibit corresponded to the book net worth shown in the tax balance sheet in petitioner's 1987 tax return.

30. Petitioner's net income rose from $40,873, or 0.0081 percent of gross sales, in 1983, to $55,914, or 0.0066 percent of gross sales, in 1987.

31. Using the formula used in Bardahl Manufacturing Corp. v. Commissioner, T.C. Memo. 1965-200, which calculates the amount available for dividends as the working capital at year's end less necessary working capital and capital expenditures actually made in the following year, petitioner was insufficiently capitalized in the years immediately preceding the separation of the business lines. Necessary working capital was determined as a function of working capital

requirements for the year and the length of petitioner's operating cycle, which is determined by inventory and accounts receivable turnover and the credit period extended by suppliers -- primarily Haagen-Dazs.

32. Respondent argues that petitioner, under the rule of Commissioner v. Danielson, 378 F.2d 771 (3d Cir. 1967), vacating and remanding 44 T.C. 549 (1965), cannot unilaterally vary the terms of a contract for tax purposes and must therefore abide by the terms of the sale to Haagen-Dazs in determining the value of assets distributed to SIC and, in turn, the value of SIC stock distributed to Arnold.

As we stated in Hospital Corp. of Am. v. Commissioner, T.C. Memo. 1996-559:

> As we understand the Danielson rule, it is not applicable where the parties have not established the fair market value of the property at the time agreement is adopted because, under those circumstances, there is no agreement to which a party may be held. See Campbell v. United States, 228 Ct. Cl. [661,] 675-677 (1981); * * * see also Commissioner v. Danielson, 378 F.2d 771, 778 [(3d Cir. 1967)] ("it would be unfair to assess taxes on the basis of an agreement the taxpayer did not make"). Furthermore, the Danielson rule is not applicable if the contract is ambiguous. See North American Rayon Corp. v. Commissioner, 12 F.3d [583,] 589 [(6th Cir. 1993), affg. T.C. Memo. 1992-610] ("the Danielson rule does not apply if there is no contract between the parties or if the contract is ambiguous"). * * *

The allocation by the sale agreement of the $1,430,340 sales price paid by Haagen-Dazs to SIC and Arnold between "Sellers' Rights", $1,144,272, and the records, $286,068, is not an agreement made by petitioner as to the value of SIC stock. At best it is an ambiguous indication. Furthermore, because petitioner was not a party to the transaction with Haagen-Dazs, the Danielson rule does not apply.

MIC cannot be held to an allocation that it did not bargain for with a party with opposing interests in an arm's-length negotiation. Neither MIC, SIC, nor Arnold actively negotiated the allocation with Haagen-Dazs. It remained unchanged from the June 2 draft agreement through the closing of the sale on July 22. See Particelli v. Commissioner, 212 F.2d 498, 501 (9th Cir. 1954), affg. a Memorandum Opinion of this Court dated Feb. 20, 1952; Berry Petroleum Co. & Subs. v. Commissioner, 104 T.C. 584, 615 (1995).

33. Petitioner reported an ordinary loss of $278 on its Form 1120S filed for the 1988 taxable year. Petitioner's 1988 taxable income did not include any net operating loss deductions pursuant to sec. 172, nor any deduction for organization expenditures allowed by sec. 248.

34. We note the recent debate over the amendment to sec. 355 enacted in sec. 1012, Taxpayer Relief Act of 1997, Pub. L. 105-34, 111 Stat. 788, 914.

35. Under sec. 6664(c) of the current law, the Omnibus Budget Reconciliation Act of 1989, Pub. L. 101-239, sec. 7721(a), 103 Stat. 2398, effective for returns with a due date after Dec. 31, 1989, the Commissioner no longer has this discretion, and no penalty may be imposed for understatements if the taxpayer can show that it had reasonable cause for the understatement and that it acted in good faith.

120 T.C. No. 13

UNITED STATES TAX COURT

CHARLES T. MCCORD, JR., AND MARY S. MCCORD, DONORS, Petitioners
v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 7048-00. Filed May 14, 2003.

Ps, their children, and their children's partnership formed a family limited partnership (PT). In 1996, Ps assigned interests in PT to several assignees pursuant to an agreement that contains a formula clause. The formula clause provides that (1) Ps' children, trusts for their benefit, and S, a charitable organization, are to receive interests having an aggregate fair market value of a set dollar amount, and (2) C, another charitable organization, is to receive any remaining portion of the assigned interests. Ps' children agreed to pay all transfer taxes resulting from the transaction, including the estate tax liability under then sec. 2035(c), I.R.C. 1986, that would arise if one or both Ps were to die within 3 years of the date of the assignments.

Pursuant to a second agreement, the assignees allocated the assigned interests among themselves in

accordance with the formula clause, based on an agreed aggregate value of $7,369,277.60 for the assigned interests. Less than 6 months after the date of the assignment, PT redeemed the interests of S and C pursuant to a call option contained in PT's partnership agreement.

1. Held: Ps assigned only economic rights with respect to PT; such assignments did not confer partner status on the assignees.

2. Held, further, the aggregate fair market value of the interests assigned by Ps on the date of the gifts was $9,883,832.

3. Held, further, the amount of Ps' aggregate charitable contribution deduction under sec. 2522, I.R.C. 1986, resulting from the transfer to C is determined on the basis of the fair market value of the interest actually allocated to C under the second agreement, rather than the interest that would have been allocated to C under the second agreement had the donees determined a fair market value for the assigned interests equal to the fair market value determined by the Court.

4. Held, further, Ps' respective taxable gifts for 1996 are determined without reference to the contingent estate tax liability that their children assumed under the first agreement.

John W. Porter and Stephanie Loomis-Price, for petitioners.

Lillian D. Brigman and Wanda M. Cohen, for respondent.

HALPERN, Judge: By separate notices of deficiency dated April 13, 2000 (the notices), respondent determined deficiencies in Federal gift tax for calendar year 1996 with respect to petitioner Charles McCord, Jr. (Mr. McCord) and petitioner Mary McCord (Mrs. McCord) in the amounts of $2,053,525 and $2,047,903, respectively. The dispute centers around the gift tax consequence of petitioners' assignments to several charitable and noncharitable donees of interests in a family limited partnership.

Unless otherwise noted, all section references are to the Internal Revenue Code in effect on the date of the assignments, and all Rule references are to the Tax Court Rules of Practice and Procedure. All dollar amounts have been rounded to the nearest dollar.

FINDINGS OF FACT

Some facts are stipulated and are so found. The stipulation of facts, with accompanying exhibits, is incorporated herein by this reference.

Petitioners

Petitioners are husband and wife. They have four sons, all adults (the children): Charles III, Michael, Frederick, and Stephen. In response to the notices, petitioners filed a single petition. At the time they filed the petition, petitioners resided in Shreveport, Louisiana.

Formation of McCord Interests, Ltd., L.L.P.

McCord Interests, Ltd., L.L.P. (MIL or the partnership), is a Texas limited partnership formed on June 30, 1995, among petitioners, as class A limited partners; petitioners, the children, and another partnership formed by the children (McCord Brothers Partnership), as class B limited partners; and the children as general partners (all such partners being hereafter referred to as the initial MIL partners).

On formation, as well as on the date of the assignments in question, the principal assets of MIL were stocks, bonds, real estate, oil and gas investments, and other closely held business interests. On the date of the assignments, approximately 65 percent and 30 percent of the partnership's assets consisted of marketable securities and interests in real estate limited partnerships, respectively. The remaining approximately 5 percent of the partnership's assets consisted of direct real estate holdings, interests in oil and gas partnerships, and other oil and gas interests.

In mid-October 1995, the MIL partnership agreement was amended and restated, effective as of November 1, 1995 (such amended and restated partnership agreement being referred to hereafter as, simply, the partnership agreement). Attached to the partnership agreement is a schedule setting forth the capital

contributions and ownership interests of the initial MIL partners, as follows:[1]

Class and Contributor	Contribution	Percentage Interest
Class A limited partners:		
Mr. McCord	$10,000	--
Mrs. McCord	10,000	--
General partners:		
Charles III	40,000	0.26787417
Michael	40,000	0.26787417
Frederick	40,000	0.26787417
Stephen	40,000	0.26787417
Class B limited partners:		
Mr. McCord	6,147,192	41.16684918
Mrs. McCord	6,147,192	41.16684918
McCord Brothers	2,478,000	16.59480496
Total	14,952,384	100.0

Relevant Provisions of the Partnership Agreement

Among other things, the partnership agreement provides as follows:

MIL will continue in existence until December 31, 2025 (the termination date), unless sooner terminated in accordance with the terms of the partnership agreement.

Any class B limited partner may withdraw from MIL prior to the termination date and receive a payment equal to the fair market value (as determined under the partnership agreement) of

[1]Under the terms of the partnership agreement, a class A limited partnership interest does not carry with it a "Percentage Interest" (as that term is defined in the partnership agreement) in MIL.

such partner's class B limited partnership interest (the put right).

Partners may freely assign their partnership interests to or for the benefit of certain family members and charitable organizations (permitted assignees).

A partner desiring to assign his partnership interest to someone other than a permitted assignee must first offer that interest to MIL and the other partners and assignees, who have the right to purchase such interest at fair market value (as determined under the partnership agreement).

The term "partnership interest" means the interest in the partnership representing any partner's right to receive distributions from the partnership and to receive allocations of partnership profit and loss.

Regardless of the identity of the assignee, no assignee of a partnership interest can attain the legal status of a partner in MIL without the unanimous consent of all MIL partners.

MIL may purchase the interest of any "charity assignee" (i.e., a permitted assignee of a partnership interest that is a charitable organization that has not been admitted as a partner of MIL) at any time for fair market value, as determined under the partnership agreement (the call right).

For purposes of the partnership agreement, (1) a class B limited partner's put right is disregarded for purposes of

determining the fair market value of such partner's class B limited partnership interest, and (2) any dispute with respect to the fair market value of any interest in MIL is to be resolved by arbitration as provided in Exhibit G attached to the partnership agreement.

Limited partners generally do not participate in the management of the partnership's affairs. However, limited partners do have veto power with respect to certain "major decisions", most notably relating to voluntary bankruptcy filings. In addition, if any two of the children are not serving as managing partners, class B limited partners have voting rights with respect to certain "large dollar" managerial decisions. Limited partners also have access to certain partnership financial information.

Southfield School Foundation

On November 20, 1995, petitioners assigned their respective class A limited partnership interests in MIL to the Hazel Kytle Endowment Fund of The Southfield School Foundation (the foundation) pursuant to an Assignment of Partnership Interest and Addendum Agreement (the Southfield agreement). The recitals to the Southfield agreement provide that "all of the partners of the Partnership desire that Assignee become a Class A Limited Partner of the Partnership upon execution of this Assignment of Partnership Interest" and "all consents required to effect the

conveyance of the Assigned Partnership Interest and the admission of Assignee as a Class A Limited Partner of the Partnership have been duly obtained and are evidenced by the signatures hereto". All of the initial MIL partners executed the Southfield agreement.

Further Assignments

On January 12, 1996 (the valuation date), petitioners, as assignors, entered into an assignment agreement (the assignment agreement) with respect to their class B limited partnership interests in MIL. The other parties to the assignment agreement (the assignees) were the children, four trusts for the benefit of the children (the trusts), and two charitable organizations-- Communities Foundation of Texas, Inc. (CFT) and Shreveport Symphony, Inc. (the symphony). By the assignment agreement, petitioners relinquished all dominion and control over the assigned partnership interests and assigned to the assignees all of their rights with respect to those interests. The assignment agreement does not contain language similar to that quoted above from the Southfield agreement regarding the admission of the assignees as partners of the partnership, and two of the partners of the partnership, McCord Brothers Partnership and the foundation, did not execute the assignment agreement in any capacity. The interests that petitioners assigned to the

assignees by way of the assignment agreement (collectively, the gifted interest) are the subject of this dispute.

Under the terms of a "formula clause" contained in the assignment agreement (the formula clause), the children and the trusts were to receive portions of the gifted interest having an aggregate fair market value of $6,910,933; if the fair market value of the gifted interest exceeded $6,910,933, then the symphony was to receive a portion of the gifted interest having a fair market value equal to such excess, up to $134,000; and, if any portion of the gifted interest remained after the allocations to the children, trusts, and symphony, then CFT was to receive that portion (i.e., the portion representing any residual value in excess of $7,044,933). The children (individually and as trustees of the trusts) agreed to be liable for all transfer taxes (i.e., Federal gift, estate, and generation-skipping transfer taxes, and any resulting State taxes) imposed on petitioners as a result of the conveyance of the gifted interest.

The assignment agreement leaves to the assignees the task of allocating the gifted interest among themselves; in other words, in accordance with the formula clause, the assignees were to allocate among themselves the approximately 82-percent partnership interest assigned to them by petitioners. In that regard, the assignment agreement contains the following instruction concerning valuation (the valuation instruction):

> For purposes of this paragraph, the fair market value of the Assigned Partnership Interest as of the date of this Assignment Agreement shall be the price at which the Assigned Partnership Interest would change hands as of the date of this Assignment Agreement between a hypothetical willing buyer and a hypothetical willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts. Any dispute with respect to the allocation of the Assigned Partnership Interests among Assignees shall be resolved by arbitration as provided in the Partnership Agreement.

The Confirmation Agreement

In March 1996, the assignees executed a Confirmation Agreement (the confirmation agreement) allocating the gifted interest among themselves as follows:

Assignee	Assigned Partnership Interest
Charles T. McCord, III, GST Trust	8.24977954%
Michael S. McCord GST Trust	8.24977954
Frederick R. McCord GST Trust	8.24977954
Stephen L. McCord GST Trust	8.24977954
Charles III	11.05342285
Michael	11.05342285
Frederick	11.05342285
Stephen	11.05342285
CFT	3.62376573
Symphony	1.49712307
Total	82.33369836%

The assignees based that determination on an appraisal report, dated February 28, 1996, prepared at the behest of the children's

counsel[2] by Howard Frazier Barker Elliott, Inc. (HFBE). That report (the 1996 HFBE appraisal report) concludes that, taking into account discounts for lack of control and lack of marketability, the fair market value of a 1-percent "assignee's interest in the Class B Limited Partnership Interests" on the valuation date was $89,505.

Representatives of CFT and the symphony, respectively (including their respective outside counsel), reviewed the 1996 HFBE appraisal report and determined that it was not necessary to obtain their own appraisals. Furthermore, under the terms of the confirmation agreement, CFT and the symphony (as well as the other assignees) agreed not to seek any judicial alteration of the allocation in the confirmation agreement and waived their arbitration rights granted under the assignment agreement.

MIL's Exercise of the Call Right

On June 26, 1996, MIL exercised the call right with respect to the interests held by the symphony and CFT. It did so pursuant to a document styled "Agreement--Exercise of Call Option By McCord Interests, Ltd., L.L.P." (the exercise agreement). The purchase price for the redeemed interests was based on a two-page letter from HFBE (the HFBE letter) previewing an updated appraisal report to be prepared by HFBE. The HFBE letter

[2] The children's counsel had also represented petitioners in connection with the transaction. However, petitioners were not involved in the allocation of the gifted interest among the assignees pursuant to the confirmation agreement.

concludes that the fair market value of a 1-percent "assignee's interest in the Class B Limited Partnership Interests" as of June 25, 1996 was $93,540. CFT and the symphony raised no objections to the value found in the HFBE letter and accepted $338,967 and $140,041, respectively, in redemption of their interests.

The Gift Tax Returns

Petitioners timely filed Forms 709, United States Gift (and Generation Skipping Transfer) Tax Return, for 1996 (the Forms 709). In schedules attached to the Form 709, petitioners reported a gross value of $3,684,639 for their respective shares of the gifted interest. Each petitioner reduced that amount by the amount of Federal and State (Louisiana) gift tax generated by the transfer that the children agreed to pay as a condition of the gift. Each petitioner further reduced that amount by a computation of the actuarial value, as of the valuation date, of the contingent obligation of the children to pay (again, as a condition of the gift) the additional estate tax that would result from the transaction if that petitioner were to die within 3 years of the valuation date. Based on those adjustments, Mr. and Mrs. McCord reported total gifts of $2,475,896 and $2,482,605, respectively.[3] Mr. and Mrs. McCord each claimed an annual exclusion amount of $60,000 and a charitable contribution

[3] Those figures also reflect cash gifts of $10 by each petitioner to nominally fund the trusts.

deduction of $209,173, yielding taxable gifts of $2,206,724 and $2,213,432, respectively.

The Notices

By the notices, respondent determined deficiencies in gift tax with respect to Mr. and Mrs. McCord in the amounts of $2,053,525 and $2,047,903, respectively, based on increases in 1996 taxable gifts in the amounts of $3,740,904 and $3,730,439, respectively. Respondent determined that each petitioner (1) understated the gross value of his or her share of the gifted interest, and (2) improperly reduced such gross value by the actuarial value of the children's obligation to pay additional estate taxes potentially attributable to the transaction.

OPINION

I. Introduction

MIL is a Texas limited partnership formed on June 30, 1995. In exchange for their class B limited partnership interests in MIL, petitioners contributed to MIL closely held business interests, oil and gas interests, real estate, stocks, bonds, and other securities. The parties have stipulated that the value of petitioners' contributions in exchange for their class B limited partnership interests was $12,294,384 ($6,147,192 apiece). On January 12, 1996, petitioners assigned (as gifts) their partnership interests in MIL (the gifted interest). On that date, approximately 65 percent of the partnership's assets

consisted of marketable securities and approximately 30 percent consisted of interests in real estate limited partnerships. The assignees were petitioners' children, trusts for the benefit of the children, and two charitable organizations (Communities Foundation of Texas, Inc. (CFT) and Shreveport Symphony, Inc. (the symphony)). In calculations submitted with their Federal gift tax returns, petitioners reported the gross value of the gifted interest as $7,369,278 ($3,684,639 apiece). Respondent's adjustments reflect his determination that the gross fair market value of the gifted interest was $12,426,086 ($6,213,043 apiece). Principally, we must determine the fair market value of the gifted interest and whether each petitioner may reduce his or her one-half share thereof to account for the children's contingent obligation (as a condition of the gift) to pay the additional estate tax that would result from the transaction if that petitioner were to die within 3 years of the date of the gift. Preliminarily, we must determine whether petitioners transferred all of their rights as class B limited partners or only their economic rights with respect to MIL. We must also determine the amount of the gift to CFT.

II. Relevant Statutory Provisions

Section 2501(a) imposes a tax on the transfer of property by gift. Section 2512(a) provides that, if a gift is made in

property, the value of the property on the date of the gift is considered the amount of the gift. In determining the amount of "taxable gifts" for any particular year, a donor is entitled to deduct the amount of gifts made during the year that qualify for the charitable contribution deduction provided for in section 2522. Sec. 2503(a).

Section 2502(c) provides that the donor is the person liable for the payment of the gift tax. If a donor makes a gift subject to the condition that the donee pay the resulting gift tax, the amount of the gift is reduced by the amount of such gift tax. Rev. Rul. 75-72, 1975-1 C.B. 310. Such a gift is commonly referred to as a "net gift" (net gift).

Under section 2035(c) (current section 2035(b)), a decedent's gross estate is increased by the amount of any gift tax paid by the decedent or his estate on any gift made by the decedent during the 3-year period preceding the decedent's death. For purposes of this "gross-up" provision, gift tax "paid by the decedent or his estate" on gifts made during the relevant 3-year period is deemed to include gift tax attributable to net gifts made by the decedent during such period (i.e., even though the donees are responsible for paying the gift tax in such situation). Estate of Sachs v. Commissioner, 88 T.C. 769, 777-778 (1987), affd. in part and revd. in part on another ground 856 F.2d 1158, 1164 (8th Cir. 1988).

III. Arguments of the Parties

Petitioners contend that they correctly valued the gifted interest in determining their respective taxable gifts. Petitioners contend in the alternative that, if we determine an increased value for the gifted interest, then, by operation of the formula clause in the assignment agreement, they are entitled to an identical increase in the amount of their aggregate charitable contribution deduction under section 2522, resulting in no additional gift tax due.[4] Petitioners also contend that, under net gift principles enunciated in Rev. Rul. 75-72, supra, and Estate of Sachs v. Commissioner, supra, they properly reduced their respective taxable gifts by the actuarial value of the children's contingent obligation, under the terms of the assignment agreement, to pay additional estate tax under section 2035(c).

Respondent contends that petitioners undervalued the gifted interest by mischaracterizing the assignment and applying excessive discounts. Respondent also contends that the formula clause in the assignment agreement, designed to neutralize the tax effect of any upward adjustment to the valuation of the gifted interest, is ineffectual. Finally, respondent contends that petitioners improperly reduced the amount of their taxable

[4] Consistent with that argument, petitioners have preserved their right to claim an increased charitable contribution deduction under sec. 170 on an amended income tax return for 1996. Petitioners' 1996 income tax liability is not before us.

gifts to account for the possibility that the children would be obligated to pay additional estate tax under section 2035(c) by reason of the transaction.

The parties have stipulated that respondent bears the burden of proof, and we accept that stipulation.[5]

IV. Extent of the Rights Assigned

The divergence of the parties' valuations of the gifted interest is attributable in part to their disagreement regarding the extent of the rights assigned by petitioners. Petitioners contend that they assigned to the assignees certain rights with respect to their class B limited partnership interests in MIL but did not (and could not) admit the assignees as class B limited partners. The assignment, they argue, did not entitle the assignees to exercise certain rights that petitioners possessed (as partners) under the partnership agreement. Thus, they argue, the value of the gifted interest is something less than the value of all of their rights as class B limited partners. Respondent, on the other hand, argues that the gifted interest consists of the sum and total of petitioners' rights as class B limited partners (i.e., that, as a result of the assignment, the

[5] The parties have not informed us of their basis for stipulating that respondent bears the burden of proof. The burden of proof is normally on petitioner. See Rule 142(a)(1). Under certain circumstances, the burden of proof can be shifted to the Commissioner. See sec. 7491; Rule 142(a)(2). We assume (without deciding) that the conditions necessary to shift the burden to respondent have been satisfied.

assignees became class B limited partners). The parties' experts agree that, if the gifted interest does not include all of petitioners' rights as class B limited partners, the fair market value of the gifted interest is lower than it would be if the gifted interest did include all such rights.

Whenever the concept of "property" is relevant for Federal tax purposes, it is State law that defines the property interest to which Federal tax consequences attach. E.g., United States v. Craft, 535 U.S. 274, 278-279 (2002) (Federal tax lien attaches to property held, under State law, as tenants by the entireties). Thus, in order to determine the Federal gift tax consequences that attach to petitioners' assignment of the gifted interest, we look to applicable State law to determine the extent of the rights transferred. Because petitioners transferred interests in a Texas limited partnership, Texas law governs our determination in that regard. Specifically, we look to the Texas Revised Limited Partnership Act (the Act), Tex. Rev. Civ. Stat. Ann. art. 6132a-1, as in effect on the date of the gift.

Under the Act, a partnership interest is personal property. Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 7.01 (Vernon 2001). A partnership interest is assignable in whole or in part unless the partnership agreement provides otherwise. Id. sec. 7.02(a)(1). However, an assignee of a partnership interest attains the legal status of a limited partner only if the

partnership agreement so provides or all of the partners consent. Id. sec. 7.04(a). Section 8.01 of the partnership agreement governs the admission of new partners to MIL. That section provides that, notwithstanding the occurrence of a valid assignment of a partnership interest in MIL in compliance with the terms of the partnership agreement, no person shall become a partner without the unanimous consent of the existing partners.

There is no evidence indicating that all of the MIL partners explicitly consented to the admission of the assignees as partners in MIL. Our inquiry does not end there, however. In Kerr v. Commissioner, 113 T.C. 449 (1999), affd. on another issue 292 F.3d 490 (5th Cir. 2002), we demonstrated our willingness to look beyond the formalities of intrafamily partnership transfers to determine what, in substance, was transferred. In that case, also involving Texas partnership law, the taxpayers argued that the interests they transferred to two grantor retained annuity trusts (GRATs) were "assignee interests"[6] because the other general partners of the partnership (the taxpayers' adult children, whose trusts were the remainder beneficiaries of the GRATs) did not consent to the admission of the GRATs as additional partners. Id. at 464. We found that such lack of formal consent did not preclude a finding that the taxpayers

[6] For purposes of this report, we use the term "assignee interest" (assignee interest) to signify the interest held by an assignee of a partnership interest who has not been admitted as a partner in the partnership.

effected a transfer of all their rights as partners. Id. In essence, we inferred the necessary consent of the other general partners to admit the GRATs as partners based on all of the facts and circumstances. Id. at 464-468.

Our decision in Kerr was influenced by a number of factors that are not present in this case. For instance, the taxpayers in Kerr asked us to construe strictly the consent provision in their partnership agreement in the context of their transfers to the GRATs, notwithstanding the fact that they had disregarded that provision in other situations. Id. at 464-465. In addition, we found it difficult to reconcile the taxpayers' characterization of the transfers with the language of their assignment documents, each of which contained the following statement: "The Assigned Partnership Interest constituted a Class B Limited Partnership interest in * * * [the partnership at issue] when owned by Assignor and, when owned by Assignee, shall constitute a Class B Limited Partnership Interest in said partnership." Id. at 466. Finally, from an economic reality standpoint, we found it significant that the taxpayers and their children, being all of the general partners of the partnership, could have formally admitted the assignee GRATs as partners at any time without having to obtain the consent of any other person. Id. at 468.

In the instant case, there is no evidence that petitioners and the other partners of MIL ever disregarded section 8.01 of the partnership agreement, the provision on which they now rely. Indeed, when petitioners assigned their class A limited partnership interests to the foundation in 1995, all of the initial MIL partners consented in writing to the admission of the foundation as a class A limited partner, as required by said section 8.01. Furthermore, the assignment agreement with respect to the gifted interest does not contain language of the type quoted above from the Kerr assignment documents, nor does it contain any of the language in the Southfield agreement relating to the admission of the assignee as a partner in MIL. Finally, petitioners and their children could not unilaterally admit the assignees as partners in MIL; any such admission required the consent of the foundation, an unrelated third party.

Respondent makes note of the fact that the assignment agreement provides that "Assignors hereby relinquish all dominion and control over the Assigned Partnership Interest and assign to Assignees all of Assignors' rights with respect to the Assigned Partnership Interest". However, the issue in this case is not whether petitioners transferred partnership interests; under the terms of the Act, the partnership agreement, and the assignment agreement, they undoubtedly could and did. That having been said, both the Act and the partnership agreement define the term

"partnership interest" in terms of economic rights (and do not equate the term with membership in the partnership).[7] Thus, it is entirely consistent to say that petitioners assigned all of their rights with respect to their partnership interests, yet did not assign all of their rights as class B limited partners (i.e., did not cause the assignees to be admitted as substitute class B limited partners).

In sum, we conclude that the facts in this case do not permit us to infer, as we did in Kerr, that petitioners intended to transfer all of their rights as partners and that all of the other partners effectively consented to the admission of the assignees as partners. Rather, petitioners assigned only economic rights with respect to MIL, and we shall proceed to value the gifted interest on that basis.[8]

[7] The partnership agreement provides that the term "partnership interest" means the interest in the partnership representing any partner's right to receive distributions from the partnership and to receive allocations of partnership profit and loss. The statutory definition is similarly worded. See Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 1.02(11) (Vernon 2001) (the Act) and accompanying bar committee comment; see also id. sec. 7.02(a)(1), (3), and (4) (assignment of partnership interest entitles the assignee to distributions and allocations, but the assignor continues to be a partner and to have the power to exercise any rights or powers of a partner, until the assignee becomes a partner).

[8] To use the terminology favored by the parties, we shall value the gifted interest as an assignee interest.

V. Fair Market Value of the Gifted Interest

A. Introduction

1. General Principles

Section 25.2512-1, Gift Tax Regs., provides that the value of property for gift tax purposes is "the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell, and both having reasonable knowledge of relevant facts."[9] The willing buyer and willing seller are hypothetical persons, rather than specific individuals or entities, and their characteristics are not necessarily the same as those of the donor and the donee. Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990) (citing Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981)).[10] The hypothetical willing buyer and willing

[9] Relying on Morrissey v. Commissioner, 243 F.3d 1145, 1148 (9th Cir. 2001), revg. Estate of Kaufman v. Commissioner, T.C. Memo. 1999-119, and Estate of Smith v. Commissioner, T.C. Memo. 1999-368, petitioners contend that the confirmation agreement is conclusive proof of the value of the gifted interest because such agreement was an arm's-length transaction that was the "functional equivalent of an actual sale." We disagree. Suffice it to say that, in the long run, it is against the economic interest of a charitable organization to look a gift horse in the mouth.

[10] Although the cited cases involved the estate tax, it is well settled that the estate tax and the gift tax, being in pari materia, should be construed together. See, e.g., Shepherd v. Commissioner, 283 F.3d 1258, 1262 n.7 (11th Cir. 2002) (citing Harris v. Commissioner, 340 U.S. 106, 107 (1950)), affg. 115 T.C. 376 (2000).

seller are presumed to be dedicated to achieving the maximum economic advantage. Id. at 218.

2. Expert Opinions

a. In General

In deciding valuation cases, courts often look to the opinions of expert witnesses. Nonetheless, we are not bound by the opinion of any expert witness, and we may accept or reject expert testimony in the exercise of our sound judgment. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Estate of Newhouse v. Commissioner, supra at 217. Although we may largely accept the opinion of one party's expert over that of the other party's expert, see Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), we may be selective in determining what portions of each expert's opinion, if any, to accept, Parker v. Commissioner, 86 T.C. 547, 562 (1986). Finally, because valuation necessarily involves an approximation, the figure at which we arrive need not be directly traceable to specific testimony if it is within the range of values that may be properly derived from consideration of all the evidence. Estate of True v. Commissioner, T.C. Memo. 2001-167 (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285).

b. Petitioners' Expert

Petitioners offered William H. Frazier (Mr. Frazier) as an expert witness to testify concerning the valuation of the gifted interest. Mr. Frazier is a principal of Howard Frazier Barker Elliott, Inc. (HFBE), a Houston-based valuation and consulting firm. He is a senior member of the American Society of Appraisers and has been involved in valuation and general investment banking activities since 1975. The Court accepted Mr. Frazier as an expert in the valuation of closely held entities and received written reports of HFBE into evidence as Mr. Frazier's direct and rebuttal testimony, respectively.

In his direct testimony, Mr. Frazier concludes that, based on a 22-percent minority interest discount and a 35-percent marketability discount, the fair market value of a 1-percent assignee interest in MIL on the valuation date was $89,505. Based on that figure, Mr. Frazier further concludes that the fair market value of each petitioner's one-half share of the gifted interest on the valuation date was $3,684,634 (a figure that, due to rounding, is slightly lower than the value reported on the Forms 709).[11]

[11] Mr. Frazier asserts that a 41.167-percent assignee interest in MIL (i.e., one-half of the gifted interest) has no more proportionate value than a 1-percent assignee interest therein, and respondent's expert does not dispute that assertion.

c. Respondent's Expert

Respondent offered Mukesh Bajaj, Ph.D. (Dr. Bajaj), as an expert witness to testify concerning the valuation of closely held entities. Dr. Bajaj is the managing director of the finance and damages practice of LEC, LLC. He also has experience as a university professor of finance and business economics. Dr. Bajaj has lectured extensively on valuation issues, and he has testified as an expert in several valuation cases. The Court accepted Dr. Bajaj as an expert in the valuation of closely held entities and received his written reports into evidence as his direct and rebuttal testimony, respectively.

In his direct testimony, Dr. Bajaj concludes that, based on an 8.34-percent minority interest discount and a 7-percent marketability discount, the fair market value of a 1-percent assignee interest in MIL on the valuation date was $150,665.64. Based on that figure, Dr. Bajaj further concludes that the fair market value of each petitioner's one-half share of the gifted interest on the valuation date was $6,202,429.67.

B. Value of Underlying Assets

The parties agree that, on the valuation date, MIL's net asset value (NAV) was $17,673,760, broken down by asset class as follows:

Asset Type	Value
Equities portfolio	$3,641,956
Bond portfolio	8,040,220
Real estate partnerships	5,194,933

Real estate	581,553
Oil and gas interests	215,098
Total	17,673,760

In determining the value of the gifted interest, Mr. Frazier first (i.e., before applying any discounts) subtracts $20,000 from MIL's NAV to reflect the class A limited partner's $20,000 priority claim against MIL's assets under the terms of the partnership agreement.[12] Dr. Bajaj makes no such preliminary adjustment. We concur with Mr. Frazier's approach in that regard, and, therefore, we conclude that the appropriate base amount for determining the value of the gifted interest is $17,653,760.[13]

C. Minority Interest (Lack of Control) Discount

1. Introduction

A hypothetical buyer of the gifted interest would have virtually no control over his investment. For instance, such

[12] We note that the class A limited partner's sole economic interest in MIL consists of a guaranteed payment for the use of such partner's (nominal) capital. This case does not require us to determine whether the class A limited partner is a partner of MIL for Federal tax purposes.

[13] For purposes of determining MIL's NAV, Mr. Frazier does not apply discounts to the real estate limited partnership interests that McCord Brothers Partnership contributed to MIL upon formation. Mr. Frazier did, however, discount the value of those real estate limited partnership interests by 57.75 percent for purposes of valuing McCord Brothers Partnership's capital contribution to MIL and determining the MIL partners' percentage interests in MIL. This case does not require us to address the gift tax consequences, if any, of the initial capital contributions to, and allocation of percentage interests in, MIL.

holder (1) would have no say in MIL's investment strategy, and (2) could not unilaterally recoup his investment by forcing MIL either to redeem his interest or to undergo a complete liquidation. Mr. Frazier and Dr. Bajaj agree that the hypothetical "willing buyer" of the gifted interest would account for such lack of control by demanding a reduced sales price; i.e., a price that is less than the gifted interest's pro rata share of MIL's NAV. They further agree that, in the case of an investment company such as MIL, the minority interest discount should equal the weighted average of minority interest discount factors determined for each type of investment held by MIL: equities, municipal bonds, real estate interests, and oil and gas interests.

2. Discount Factors by Asset Class

a. Equity Portfolio

Mr. Frazier and Dr. Bajaj both determine the minority interest discount factor for MIL's equity portfolio by reference to publicly traded, closed end equity investment funds. Specifically, they both derive a range of discounts by determining for a sample of closed end equity funds the discount at which a share of each sample fund trades relative to its pro rata share of the NAV of the fund.[14] They differ in their

[14] Unlike a shareholder of an open-end fund, a shareholder of a closed end fund cannot, at will, by tendering his shares to the fund for repurchase, obtain the liquidation value of his
(continued...)

selection of measurement dates, sample funds, and representative discounts within the range of the sample fund discounts.

(1) Measurement Date

Mr. Frazier calculates discounts for his sample of closed end equity funds on the basis of January 11, 1996, trading prices and December 22, 1995, NAV information. Dr. Bajaj, on the other hand, utilizes trading prices and NAV data as of the valuation date; i.e., January 12, 1996. We agree with Dr. Bajaj that, to the extent possible, data from January 12, 1996, should be utilized to determine discounts with respect to the sample funds.

(2) Sample of Funds

Mr. Frazier derives his sample of closed end equity funds from the list of "domestic equity funds" set forth in Morningstar's Mutual Funds Guide. From that list, he purports to exclude from consideration "special purpose" funds (i.e., those primarily invested in a specific industry), funds with a stated maturity, and funds "that had provisions regarding votes to open-

[14](...continued)
investment (i.e., his pro rata share of the fund's NAV). For that reason, a share of a closed end fund typically trades at a discount relative to its pro rata share of the fund's NAV. Since, according to the expert witnesses, that discount has no marketability element, it is, to some extent, considered reflective of a minority interest discount.

end the fund."[15] That screening process produced a sample of 14 funds.

Dr. Bajaj derives his sample of closed end equity funds from the list of "general equity" funds set forth in the January 12, 1996 edition of the Wall Street Journal. For reasons not entirely clear, Dr. Bajaj excludes two of those funds from consideration, leaving a sample of 20 funds.[16]

Dr. Bajaj's sample contains nine funds that Mr. Frazier excludes from his sample. With regard to the first two of Mr. Frazier's three screening criteria, Dr. Bajaj states in his rebuttal testimony that none of those nine funds was a special purpose fund and that none had a stated maturity date. With regard to Mr. Frazier's third screening criterion, Dr. Bajaj states that the fact that a fund's shareholders can vote to open-end the fund does not mean that such a conversion is imminent. Dr. Bajaj also states that the summary descriptions (contained in Mr. Frazier's direct testimony) of five of the funds included by

[15] As noted earlier, a shareholder of an open-end fund generally can obtain the liquidation value of his investment (i.e., his pro rata share of the fund's NAV) by tendering his shares to the fund for repurchase. It stands to reason that, to the extent the conversion of a closed end fund to open-end status is imminent, the share price of such fund will tend to approach the fund's NAV per share.

[16] In his direct testimony, Dr. Bajaj states that the two excluded funds "could not be identified in Morningstar Principia dataset as of December 31, 1996". Since Mr. Frazier excludes those funds from his sample as well, we similarly exclude them from consideration.

Mr. Frazier in his sample of funds mention open-ending votes or procedures, which, according to Mr. Frazier's criteria, should have required their exclusion.

In his rebuttal testimony, Mr. Frazier does not directly challenge Dr. Bajaj's inclusion of any specific fund in his sample; rather, he simply asserts that "some of these funds could have announced their intent to convert to an open-end fund" and that "other funds may be non-diversified". In the absence of more specific objections to Dr. Bajaj's additional sample funds, we are persuaded to include such funds in our own analysis.

Mr. Frazier's sample contains three funds that Dr. Bajaj excludes from his sample: Gemini II, Quest for Value, and Liberty All Star Growth Fund. Gemini II and Quest for Value were "dual purpose" funds, which were scheduled for either liquidation or open-ending in January 1997.[17] Given the effect that the impending liquidation or conversion may have had on share prices of those funds, we exclude them from our analysis. Since Dr. Bajaj's rebuttal testimony raises no specific objection to the inclusion of Liberty All Star Growth Fund in the sample, we include that fund in our analysis.[18]

---

[17] A dual purpose fund has both income shares and capital shares. At a set expiration date, the fund redeems all income shares, and the capital shareholders then vote either to liquidate the fund or convert it to open-end status.

[18] Dr. Bajaj may have excluded Liberty All Star Growth Fund from his sample due to the lack of NAV information with respect

(continued...)

(3) Representative Discount Within the Range of Sample Fund Discounts

Mr. Frazier concludes that, because an interest in MIL's equity portfolio would not compare favorably to an interest in an institutional fund, the minority interest discount factor for MIL's equity portfolio should derive from the higher end of the sample's range of discounts. Dr. Bajaj, on the other hand, concludes that such discount factor should derive from the lower end of the range of discounts. For the reasons discussed below, we find neither expert's arguments convincing on that point.

Mr. Frazier concludes that a higher than average minority interest discount factor for MIL's equity portfolio is warranted in part because of the relative anonymity of MIL's investment managers, the relatively small size of MIL's equity portfolio, and MIL's policy of not making distributions (other than distributions to satisfy tax obligations). However, Mr. Frazier elsewhere testifies that, based on his regression analysis, there is no clear correlation between the discounts observed in his sample of closed end funds and any of the variables he analyzed, including Morningstar rating (largely indicative of management reputation), the size of the fund, and distributions as a percentage of NAV. We are similarly unpersuaded by Mr. Frazier's

[18](...continued)
to such fund as of the valuation date. For purposes of our analysis, we utilize the fund's NAV and price data as of Jan. 5, 1996, which is in the record.

assertion (unsupported by empirical evidence) that fewer administrative and regulatory controls on MIL's investment activity (as compared to that of institutional funds) should result in a higher discount factor as a matter of course.[19]

Dr. Bajaj's argument that the minority interest discount factor for MIL's equity portfolio should derive from the lower end of the range of observed discounts is based primarily on the premise that, on the valuation date, MIL was akin to a new investment fund. Dr. Bajaj's research, along with that of others cited in his direct testimony, indicates that new investment funds tend to trade at lower discounts than seasoned funds. However, Dr. Bajaj's analysis fails to recognize that, while MIL was a relatively new entity on the valuation date, its equity portfolio had been in place (in the hands of the contributing partners) for years. Furthermore, of the four factors that Dr. Bajaj specifically identifies as possible determinants of lower initial fund discounts, only one--lack of unrealized capital gains--perhaps would have informed the pricing decision of a hypothetical buyer of an interest in MIL.[20] The other factors

[19] For instance, less regulation implies lower compliance costs, which seemingly would offset, at least to some extent, any pricing effect of relatively lax investor protections.

[20] Although MIL inherited any unrealized gain with respect to assets contributed by the initial MIL partners, see sec. 723, the portion of such precontribution gain otherwise allocable to a subsequent purchaser of an interest in MIL, see sec. 1.704-3(a)(7), Income Tax Regs., generally would be eliminated if the

(continued...)

cited by Dr. Bajaj (the initial diminution of fund NAV relative to issue proceeds due to flotation and other startup costs, the prevalence of new funds in "hot" investment sectors, and the initial lack of management inefficiencies) simply do not readily translate from the public capital markets to the hypothetical private sale of an interest in MIL.

Because we are unpersuaded by the respective arguments of Mr. Frazier and Dr. Bajaj for a higher than average or lower than average minority interest discount factor for MIL's equity portfolio, we utilize the average discount of the sample funds under consideration.[21]

(4) Summary

In determining the appropriate minority interest discount factor for MIL's equity portfolio, we utilize (1) Dr. Bajaj's price and NAV data as of January 12, 1996 (with the exception of Liberty All Star Growth Fund, for which we utilize NAV data from January 5, 1996, contained in the record); (2) Dr. Bajaj's sample of funds, with the addition of Liberty All Star Growth Fund; and

[20](...continued)
general partners of MIL were to agree to make a timely sec. 754 election with respect to MIL. See secs. 754, 743(b); sec. 1.755-1(b)(1)(ii), Income Tax Regs. The same would be true with respect to any postcontribution unrealized appreciation with respect to MIL's assets.

[21] In their reports, Mr. Frazier and Dr. Bajaj determine the average, but not the weighted average, of the discounts with respect to the equity funds in their respective samples. We follow the same approach here.

(3) the average discount of the sample funds. The resulting discount factor is 9.96 percent, which we round up to 10 percent.

b. Municipal Bond Portfolio

Both Mr. Frazier and Dr. Bajaj determine the minority interest discount factor for MIL's municipal bond portfolio by reference to publicly traded, closed end municipal bond investment funds. Once again, they disagree on measurement dates, sample funds, and representative discounts within the range of the sample fund discounts.

(1) Measurement Date

Mr. Frazier calculates discounts for his sample closed end municipal bond funds on the basis of January 11, 1996, trading prices and December 25, 1995, NAV data. Dr. Bajaj utilizes trading prices and NAV information as of the valuation date; i.e., January 12, 1996. We agree with Dr. Bajaj that, to the extent possible, data from January 12, 1996, should be utilized in determining discounts with respect to the sample funds.

(2) Sample of Funds

Mr. Frazier derives his sample of closed end municipal bond funds from the list of municipal bond funds set forth in Morningstar's Mutual Funds Guide. In his direct testimony, Mr. Frazier indicates that he excluded from consideration funds that were "heavily weighted toward a specific sector" and funds with scheduled liquidation dates. With regard to the first screening

factor, it appears that Mr. Frazier was referring to single-State funds. Mr. Frazier's screening process produced a sample of eight funds.

Dr. Bajaj derives his sample from the list of 140 closed end municipal bond funds set forth in the January 15, 1996 edition of the Wall Street Journal. For reasons not entirely clear, Dr. Bajaj excludes six of the funds from consideration, leaving a sample of 134 funds.[22] That sample includes numerous single-State funds and funds with scheduled liquidation dates.

We agree with Mr. Frazier that funds with scheduled liquidation dates should not be included in the sample. However, given the fact that Louisiana-based obligations accounted for approximately 75 percent of the value of MIL's bond portfolio, we are somewhat puzzled by Mr. Frazier's exclusion of single-State funds from his sample. Indeed, we believe that the sample should consist entirely of single-State funds. We therefore utilize a sample consisting of the 62 single-State funds in Dr. Bajaj's sample that do not have scheduled liquidation dates.

(3) Representative Discount Within the Range of Sample Fund Discounts

As is the case with MIL's equity portfolio, Mr. Frazier concludes that the minority interest discount factor for MIL's bond portfolio should derive from the higher end of the sample's

[22] In his direct testimony, Dr. Bajaj states that the six excluded funds "could not be identified in Morningstar Principia dataset as of December 31, 1996".

range of discounts, while Dr. Bajaj concludes that such discount factor should derive from the lower end of the range of discounts. Once again, we find neither expert's arguments convincing on this point.

Mr. Frazier states that, according to his regression analysis, the three factors that are the most determinative of discounts with respect to the closed end funds in his sample are (1) distributions as a percentage of NAV, (2) built-in gain as a percentage of NAV, and (3) 3-year average annual return. We see no error in Mr. Frazier's calculation of his first factor, although he seems to take the same factor into account as an aspect of the discount for lack of marketability. With regard to the second two factors, Mr. Frazier provides no data with respect to MIL's bond portfolio that can be compared to the data from his sample funds. Mr. Frazier also repeats factors that he deemed relevant in the context of MIL's equity portfolio, notwithstanding the fact that his own regression analysis indicates little, if any, correlation between those factors (management quality and the size of the fund) and the level of discounts in his bond fund sample.[23]

[23] Mr. Frazier's regression analysis produced R-squared calculations of 0.29 for the Morningstar rating (management quality) variable and 0.01 for the fund size variable. Elsewhere in his direct testimony, Mr. Frazier indicates that an R-squared calculation of 0.34 is "relatively low", leading to the conclusion of "no clear correlation" between the variable in question and the level of sample fund discounts.

Dr. Bajaj applies his "new fund" analysis, discussed above in the context of MIL's equity portfolio, to MIL's bond portfolio as well. Again, Dr. Bajaj's analysis fails to recognize that, while MIL was a relatively new entity on the valuation date, its bond portfolio had been in place (in the hands of the contributing partners) for years. For that reason and the other reasons discussed supra in section V.C.2.a.(3), we reject this portion of Dr. Bajaj's analysis.

Because we are unpersuaded by the respective arguments of Mr. Frazier and Dr. Bajaj for a higher than average or lower than average minority interest discount factor for MIL's bond portfolio, we utilize the average discount of the sample funds under consideration.[24]

(4) Summary

In determining the appropriate minority interest discount factor for MIL's bond portfolio, we utilize (1) Dr. Bajaj's price and NAV data as of January 12, 1996, (2) a sample of funds consisting of the 62 single-State funds in Dr. Bajaj's sample that do not have scheduled liquidation dates, and (3) the average discount of the sample funds. The resulting discount factor is 9.76 percent, which we round up to 10 percent.

[24] In their reports, Mr. Frazier and Dr. Bajaj determine the average, but not the weighted average, of the discounts with respect to the bond funds in their respective samples. We follow the same approach here.

c. Real Estate Partnerships[25]

(1) The Appropriate Comparables

In contrast to their opinions regarding MIL's equity and bond portfolios, Dr. Bajaj and Mr. Frazier sharply disagree on the general type of publicly traded entity from which to extrapolate the minority interest discount factor for MIL's real estate partnership interests. Dr. Bajaj argues that the discount factor should be based on data pertaining to real estate investment trusts (REITs).[26] Mr. Frazier, on the other hand, excludes REITs from consideration "since they are primarily priced on a current yield basis because REITs are required by law to annually pay out a large portion of earnings to shareholders." That justification overlooks the fact that the investment funds Mr. Frazier analyzes in determining the minority interest discount factors for MIL's equity and bond portfolios are also required to distribute substantially all of their income each year in order to maintain their tax-favored status as regulated investment companies (RICs). Compare sec. 852(a)(1) (income distribution requirement for RICs) with sec. 857(a)(1) (income distribution requirement for REITs). In the absence of any

[25] Dr. Bajaj limits his real estate analysis to MIL's real estate partnership interests. We address the minority interest discount factor for MIL's direct real estate holdings infra in sec. V.C.2.d.

[26] A real estate investment trust is a tax-favored vehicle through which numerous investors can pool their resources to invest in real estate. See secs. 856-859.

explanation as to why the current distribution requirement should disqualify REITs (but not RICs) from consideration in our analysis, we are persuaded to evaluate the REIT data.

We are further persuaded to utilize the REIT data in light of the alternative offered by Mr. Frazier. Mr. Frazier's search for "comparable" publicly traded real estate companies yielded a sample of five companies, and he derives his range of discounts from only three of those companies. While we have utilized small samples in other valuation contexts, we have also recognized the basic premise that "[a]s similarity to the company to be valued decreases, the number of required comparables increases". Estate of Heck v. Commissioner, T.C. Memo. 2002-34. One of Mr. Frazier's three sample companies developed planned communities, conducted farming operations, and owned royalty interests in more than 200 oil and gas wells. Another owned and managed shopping centers and malls and developed the master-planned community of Columbia, Maryland. The assets and activities of those companies are not sufficiently similar to those of MIL's real estate partnerships to justify the use of such a small sample.[27]

In contrast, Dr. Bajaj's REIT sample consists of 62 companies. In recognition of the fact that two of the real estate limited partnerships in which MIL was a partner owned

[27] Cf. Estate of Desmond v. Commissioner, T.C. Memo. 1999-76 (approving the use of the market approach for valuing an operating business based on two guideline companies in the same --as opposed to similar--line of business).

unimproved land that could be used for a variety of purposes, Dr. Bajaj's sample includes REITs specializing in a broad array of real estate investments, including office, residential, and retail properties. Given the size of the sample, we believe that any dissimilarities in the assets and activities of particular REITs in the sample as compared to those of MIL's real estate partnerships are tolerable.[28]

(2) Determining the Discount Factor

Because REITs offer investors the opportunity to invest in an illiquid asset (i.e., the underlying real estate) in liquid form (i.e., the REIT shares), investors in REITs are willing to pay a liquidity premium (relative to NAV) to invest in REIT shares. According to Dr. Bajaj, that does not imply that a minority discount is nonexistent; it only means that the difference between price and NAV for a REIT may have two components, one positive (the liquidity premium) and one negative (the minority discount). From his sample data, Dr. Bajaj calculated a median price-to-NAV premium of 3.7 percent. To be conservative and to reflect MIL's distribution policy, Dr. Bajaj looked below the median, to the 25th percentile, and began with a price-to-NAV discount of 1.3 percent (an adjustment to NAV of minus (-) 1.3 percent). Since Dr. Bajaj believes that that

[28] We note that, while Mr. Frazier questions the composition of Dr. Bajaj's sample of REITs, he offers no specific suggestions for modifying the sample.

adjustment reflects both a minority discount and a (smaller) liquidity premium, he then proceeded to identify (and eliminate the effect of) the liquidity premium in order to determine the minority discount. Based on his opinion that, as of the valuation date, the prevailing "illiquidity" discount for privately placed restricted stock was approximately 7 percent, he calculated a 7.53-percent liquidity premium.[29] Based on that liquidity premium of 7.53 percent and his selected price-to-NAV discount of 1.3 percent from his REIT sample, Dr. Bajaj added the two percentages to calculate a minority discount of 8.83 percent (i.e., he increased the price-to-NAV discount to reflect the elimination of the effect of the liquidity premium), which he rounded to 9 percent.

Using the same procedure as Dr. Bajaj, but substituting an illiquidity discount of 18 percent for his 7-percent figure, we arrive at a liquidity premium of 22 percent and therefore conclude that the minority discount imbedded in the 1.3-percent price-to-NAV discount selected from the REIT sample is 23.3 percent, which we shall apply to MIL's real estate partnership interests. We have substituted 18 percent for 7 percent because, as discussed infra in section V.D.5.a., Dr. Bajaj has not been clear in distinguishing between the apparently different (but

[29] As Dr. Bajaj explains his calculation: "If an illiquid security trades at a discount of 7% relative to a liquid asset, this suggests that the liquid asset is trading at a premium of about 7.53% relative to the illiquid asset (1/[1-7%])."

overlapping) concepts of "marketability" and "liquidity". Our substitute percentage derives from a published study referenced in his direct testimony (the Wruck study)[30] which reported that, on average, discounts observed in private placements of unregistered shares exceeded those observed in private placements of registered shares (freely tradable in the public market) by 17.6 percentage points, which we round up to 18 percent. The theory, discussed in more detail infra in section V.D.4., is that such additional discount represents, to some degree, pure illiquidity concerns, since a ready, public market is available to owners of registered shares and unavailable to owners of restricted shares.

d. Direct Real Estate Holdings

Respondent has instructed Dr. Bajaj to base his value conclusion regarding MIL's direct real estate holdings on the 40-percent minority interest discount factor for those assets appearing in the 1996 HFBE appraisal report. On that basis, we find that the minority interest discount factor for MIL's direct real estate holdings is 40 percent.

e. Oil and Gas Interests

Mr. Frazier assigns a 33.5-percent minority interest discount factor to MIL's oil and gas interests. Respondent has

[30] Wruck, "Equity Ownership Concentration and Firm Value: Evidence from Private Equity Financings," 23 J. Fin. Econ. 3 (1989).

instructed Dr. Bajaj to base his value conclusion regarding the oil and gas component of MIL's portfolio on the 33.5-percent minority interest discount factor for those assets appearing in the 1996 HFBE appraisal report. On that basis, we find that the minority interest discount factor for MIL's oil and gas investments is 33.5 percent.

3. Determination of the Minority Interest Discount

The minority interest discount factors determined above yield a weighted average discount of 15.18 percent, determined as follows:[31]

Asset Class	Percent of NAV	Percent Disc. Factor	Percent Weighted Average
Equities	20.6	10.0	2.06
Bonds	45.5	10.0	4.55
R.E. pships.	29.4	23.3	6.85
Real estate	3.3	40.0	1.32
Oil and gas	1.2	33.5	0.40
discount			15.18

Rounding to the nearest percentage point, we conclude that the appropriate minority interest discount with respect to the gifted interest is 15 percent.

D. Marketability Discount

1. Introduction

The parties agree that, to reflect the lack of a ready market for assignee interests in MIL, an additional discount (after applying the minority interest discount) should be applied

[31] Mr. Frazier and Dr. Bajaj agree on the percentages of NAV assigned to each asset class.

to the net asset value of MIL's assets to determine the fair market value of the gifted interest. Such a discount is commonly referred to as a "marketability discount". The marketability discount analyses of Mr. Frazier and Dr. Bajaj differ from their minority interest discount analyses in that they seek to identify a single, "entity-wide" discount rather than a weighted average of discount factors specific to each category of assets held by MIL. The parties disagree as to the amount of that discount.

2. Traditional Approaches to Measuring the Discount

a. In General

Mr. Frazier and Dr. Bajaj agree that empirical studies of the marketability discount fall into two major categories. The first major category, the IPO approach, consists of studies that compare the private-market price of shares sold before a company goes public with the public-market price obtained in the initial public offering (IPO) of the shares or shortly thereafter. The second major category, the restricted stock approach, consists of studies that compare the private-market price of restricted shares of public companies (i.e., shares that, because they have not been registered with the Securities and Exchange Commission, generally cannot be sold in the public market for a 2-year period)[32] with their coeval public-market price. Mr. Frazier

[32] See 17 C.F.R. sec. 230.144(d)(1) (1996). The required holding period was shortened to 1 year in 1997. See 62 Fed. Reg. 9242 (Feb. 28, 1997).

relies primarily on data from the restricted stock approach to support a marketability discount of 35 percent, although he also contends that data from the IPO approach strongly support that level of discount. Dr. Bajaj relies on a variant of the restricted stock approach, which we shall refer to as the private placement approach, to support a marketability discount of 7 percent.

b. Rejection of IPO Approach

Dr. Bajaj argues that the IPO approach is flawed both in concept and in application. His principal criticism is that the IPO premium (over the pre-IPO private market price) may reflect more than just the availability of a ready market. He believes that buyers of shares prior to the IPO are likely to be insiders who provide services to the firm and who are compensated, at least in part, by a bargain price. More importantly, he believes that a pre-IPO purchaser demands compensation (in the form of a lower price) for bearing the risk that the IPO will not occur or will occur at a lower price than expected. His opinion is: "[T]he IPO approach probably generates inflated estimates of the marketability discount. Consequently, it is of limited use in estimating the value of closely held firms."

In his rebuttal testimony, Mr. Frazier fails to offer any rebuttal of Dr. Bajaj's criticism of the IPO approach. Mr. Frazier's support for the IPO approach consists only of his

reference to a series of studies undertaken by Shannon Pratt, Chairman of Willamette Management Associates, Inc., a national business valuation firm (the Willamette studies). Without explaining the basis of his testimony, Mr. Frazier's opinion is: "[T]he evidence from the Willamette study was quite compelling and offered strong support for the hypothesis that the fair market values of minority interests in privately held companies were and should be greatly discounted from their publicly-traded counterparts."

By contrast, in his rebuttal testimony, Dr. Bajaj offers a compelling criticism of both the Willamette studies and another series of studies undertaken by John D. Emory, vice president of appraisal services at Robert W. Baird and Co., a regional investment banking firm.[33] He concludes that the latest study conducted by Mr. Emory is biased because it does not adequately take into account the highest sale prices in pre-IPO transactions, and he criticizes the Willamette studies for not disclosing enough data to reveal whether they suffer from a similar bias. Dr. Bajaj has convinced us to reject as unreliable Mr. Frazier's opinion to the extent it is based on the IPO approach. We shall proceed to consider Mr. Frazier's restricted stock analysis and Dr. Bajaj's private placement analysis.

[33] Mr. Frazier relied on Mr. Emory's studies in the 1996 HFBE appraisal report but makes no mention of those studies in either his direct testimony or his rebuttal testimony.

3. Mr. Frazier's Restricted Stock Analysis

Mr. Frazier reviews four studies under the restricted stock approach[34] and then attempts to infer an appropriate marketability discount by "placing" MIL within the range of observed discounts in those studies and the Willamette studies, on the basis of certain characteristics of MIL (revenue, income, and NAV) and the gifted interest (size of the interest, expressed both as a percentage of MIL and as a dollar amount). The results of that attempt are set forth in Table 31 of the report constituting Mr. Frazier's direct testimony (Table 31). Based on data from the five studies, Mr. Frazier identifies 10 hypothetical discount levels for the gifted interest (some expressed as a specific percentage, e.g., "33.6%", and some expressed as being greater or less than a specific percentage, e.g., ">35%"). Six of the hypothetical discounts were greater than 35 percent and four were less than 35 percent. He states:

---

[34] Mr. Frazier reviews the following studies (the restricted stock studies):

1. Securities and Exchange Commission, Discounts Involved in Purchases of Common Stock (1966-1969), H.R. Doc. No. 64, Part 5, at 2444-2456 (1971).

2. Silber, "Discounts on Restricted Stock: The Impact of Illiquidity on Stock Prices," Financial Analysts Journal, July-August 1991, at 60.

3. A study only described as "The Standard Research Consultants (SRC) Study".

4. Hertzel & Smith, "Market Discounts and Shareholder Gains for Placing Equity Privately," 48 J. Fin. 459 (1993).

"Based on these studies alone, we concluded that the discount applicable to the Partnership's block should approximate 35 percent."

We find several flaws in Mr. Frazier's analysis. For example, Table 31 indicates that MIL's projected revenue of $681,000 is consistent with a discount of 51.9 percent based on data from the Willamette studies. The Willamette studies are IPO studies rather than restricted stock studies, and they do not, so far as we can tell from Mr. Frazier's testimony, analyze firm revenues.[35] Table 31 also indicates that one can infer a discount from the "Hertzel and Smith" study based on the proportional size of the offering, although Mr. Frazier gives no indication that that study drew any correlations between that variable and the level of discount. Furthermore, under the heading "Size of Block as % Total Outstanding" in Table 31, the entry corresponding to MIL is "1.0%", when in fact each half of the gifted interest represents a greater than 40-percent interest with respect to MIL. Similarly, although there is no entry in Table 31 for the dollar size of the gifted interest, it is evident that the ">35%" discount inferred from that variable in Table 31 is based on the same mischaracterization of each half of

[35] Indeed, under the heading "Revenues" in Table 31 of Mr. Frazier's direct report, the entry corresponding to "Willamette" is "NA".

the gifted interest as a 1-percent interest in MIL.[36] In light of those numerous defects, we give little weight to Mr. Frazier's restricted stock analysis.

4. Dr. Bajaj's Private Placement Analysis

a. Comparison of Registered and Unregistered Private Placements

Dr. Bajaj believes that the discounts observed in restricted stock studies are attributable in part to factors other than impaired marketability.[37] In support of his position, Dr. Bajaj analyzes data from studies (including his own unpublished study)[38] involving both registered private placements and unregistered private placements (the private placement studies). He observes that, if discounts found in unregistered (restricted) private placements are attributable solely to impaired marketability, then there should be no discounts associated with

[36] Specifically, one restricted stock study, the Silber study, found that the average dollar size of private placements with discounts in excess of 35 percent was $2.7 million, while the average dollar size of private placements with discounts less than 35 percent was $5.8 million. Even taking into account Mr. Frazier's suggested minority interest discount of 22 percent, the "dollar size" of each half of the gifted interest was approximately $5.7 million. That would indicate that, based on the Silber study, a discount of less than 35 percent would be appropriate for each half of the gifted interest.

[37] We note that such other factors should not include the purchaser's minority ownership position, if applicable; presumably, a minority interest discount is already reflected in the market price of a share of the issuer.

[38] Other than his own study, he refers to the Wruck study, supra note 30, and the Hertzel & Smith study, supra note 34.

registered private placements (i.e., because such shares can be sold in the public market). However, the results of the private placement studies indicate that even registered private placement shares are issued at a discount, although such discounts tend to be lower than those observed in unregistered private placements. Dr. Bajaj explains that phenomenon by positing that privately placed shares, whether registered or unregistered, tend to be issued to purchasers of large blocks of stock who demand discounts to compensate them for assessment costs and anticipated monitoring costs. He states: "The discount offered to buyers is a compensation for the cost of assessing the quality of the firm and for the anticipated costs of monitoring the future decisions of its managers."

b. Refinement of Registered/Unregistered Discount Differential

Dr. Bajaj further contends that the additional discount typical of unregistered private placements (as compared to registered private placements) is not entirely attributable to the fact that unregistered shares, unlike registered shares, generally cannot be sold in the public market. Rather, he contends that such differential is attributable in part to higher assessment and monitoring costs incurred in unregistered private placements as compared to registered private placements. In support of his theory, Dr. Bajaj suggests four factors that might have a correlative relationship to assessment and monitoring

costs and, by extension, to private placement discounts: (1) the size of the private placement relative to the issuer's total shares outstanding, (2) the volatility of the issuer's recent economic performance, (3) the overall financial health of the issuer, and (4) the size of the private placement in terms of total proceeds. Dr. Bajaj posits that the additional discount observed in unregistered issues could be attributable solely to impaired marketability only if those four additional factors were present in equal measure among both registered and unregistered private placements.

Dr. Bajaj analyzes the effects of the four additional factors listed above and concludes that the first three (but not the fourth) of those factors are systematically related to the level of private placement discounts. Specifically, he concludes that, relatively speaking, a high ratio of privately placed shares to total shares of the issuer, high issuer volatility, and weak financial health of the issuer tend to be indicative of higher discounts. Dr. Bajaj then demonstrates that, as compared to registered private placements, unregistered private placements tend to involve a higher percentage of the issuer's total shares, higher issuer volatility, and financially weaker issuers. That being the case, Dr. Bajaj concludes that the registered-unregistered private placement discount differential must be attributable in part to those three factors rather than just

impaired marketability. In other words, the additional discount typical of unregistered private placements as compared to registered private placements does not represent solely compensation for impaired marketability but represents in part compensation for the relatively higher assessment and anticipated monitoring costs normally associated with unregistered issues.

Having concluded that factors unrelated to impaired marketability play a variable role in the total discounts observed in private placement transactions, Dr. Bajaj then attempts to isolate the effect that impaired marketability has on such total discounts. To that end, he adds a variable for stock registration to variables representing the three additional correlative factors and uses the statistical technique of multivariate regression to determine the effect of each such variable on the discounts observed in his sample of private placements. He concludes from that analysis that, over the 1990 to 1995 period of his study, a private issue that was registered (thereby allowing purchasers to immediately resell in the public market) would have required a discount that was 7.23 percentage points less than an otherwise identical issue (in terms of the three additional correlative factors) that was unregistered.

c. Further Adjustments

Dr. Bajaj considers and rejects any additional adjustment (discount) on account of the long-term impaired marketability of

an assignee interest in MIL[39] as compared to the limited impaired marketability of restricted shares of stock. His rejection is based primarily on his opinion, supported by the economic analysis of others,[40] that the level of discount does not continue to increase with the time period of impaired marketability, because investors with long-term horizons would provide a natural clientele for holding illiquid assets and would compete to purchase all or a portion of the gifted interest.

d. Application to MIL

Dr. Bajaj concludes:

> Considering the available data, the Partnership's holdings and history, and the marketability discount of 7.23% suggested by my regression analysis involving a broad range of economic sectors, I conclude that a marketability discount of 7% [rounded from 7.23 percent] is appropriate for all the assets held by MIL when valuing the subject interest. * * *

5. Determination of the Marketability Discount

a. Discussion

Mr. Frazier, in his testimony in rebuttal to Dr. Bajaj, criticizes Dr. Bajaj for focusing narrowly on "liquidity" at the expense of other factors that contribute to a lack of marketability. Mr. Frazier states that "[t]he impediments to value associated with inability to easily sell an interest in a

[39] Both experts operate under the assumption that there will not be a ready market for assignee interests in family limited partnerships during the remainder of MIL's 30-year term.

[40] Amihud & Mendelson, "Asset Pricing and Bid-Ask Spread," 17 J. Fin. Econ. 223 (1986).

closely-held entity go well beyond the narrowly defined 'liquidity costs' Dr. Bajaj has isolated in his analysis" and that "the [marketability] discount is caused not by just 'liquidity' but the other negative characteristics that attend securities issued by small closely-held entities."

Dr. Bajaj has indeed been helpful in focusing our attention (and Mr. Frazier's attention) on the distinction between illiquidity and other factors (e.g., assessment and monitoring costs) that contribute to private placement discounts. However, his apparent confusion regarding the nature of the discount for lack of marketability (i.e., whether such discount can be explained purely in terms of illiquidity or whether other factors may be involved) is troubling. In his direct testimony, Dr. Bajaj is fairly clear that assessment and monitoring costs associated with private placements are outside the realm of the marketability discount. In his rebuttal testimony, however, he indicates that such costs may contribute to the marketability discount for a closely held entity. That leads us to question whether other "negative characteristics" (in the words of Mr. Frazier) associated with closely held entities may contribute to the appropriate marketability discount for an assignee interest in MIL. Therefore, while we are impressed by portions of Dr. Bajaj's analysis, he has not convinced us that the

appropriate marketability discount in this case can be inferred from the illiquidity cost associated with private placements.

Although we reject Dr. Bajaj's quantification of the appropriate marketability discount in this case, we look to the data from his private placement study for two reasons. First, we believe that, given MIL's status as an investment company,[41] what Dr. Bajaj refers to in the context of private placements as assessment and monitoring costs would be relatively low in the case of a sale of an interest in MIL. That belief, coupled with Dr. Bajaj's persuasive argument that such costs are relatively high in unregistered private placements, leads us to conclude that a sample consisting entirely of unregistered private placements would be inappropriately skewed. Second, only Dr. Bajaj's study (and not the other private placement studies on which he relies) covers the period (1990-1995) immediately preceding the valuation date.

In Table 10 of the report constituting his direct testimony, Dr. Bajaj separates the 88 private placements in his sample into three groups according to the level of discounts (i.e., the 29 lowest discounts, the middle 29 discounts, and the 30 highest discounts). Presumably, the "low" category is dominated by

[41] On the valuation date, 65 percent of MIL's assets consisted of marketable securities and an additional 30 percent consisted of real estate limited partnership interests, subject to well-known and relatively routine appraisal techniques (such as cashflow analysis or market multiple methods).

registered private placements which, unlike an assignee interest in MIL, did not suffer from impaired marketability. Similarly, it is likely that the "high" category is dominated by unregistered private placements which, unlike the sale of an interest in an investment company, entailed relatively high assessment and monitoring costs. Accordingly, we look to the "middle" group of private placements in Dr. Bajaj's sample in determining the appropriate marketability discount for an assignee interest in MIL. The average discount of that group of private placements was 20.36 percent.[42] We are not persuaded that we can refine that figure any more to incorporate characteristics specific to MIL.

b. Conclusion

We find that a discount for lack of marketability of 20 percent (rounded from 20.36 percent) is appropriate in determining the fair market value of each half of the gifted interest.

E. Conclusion

We conclude that the fair market value of each half of the gifted interest is $4,941,916, determined as follows:[43]

[42] That discount is consistent with the average discount (20.14 percent) observed in the Hertzel & Smith private placement study, supra note 34, the study (other than his own) primarily relied upon by Dr. Bajaj.

[43] For ease of computation, we determine the fair market value of a 1-percent interest.

Total NAV	$17,673,760
Less: Class A preference	(20,000)
"Net" NAV	17,653,760
1 percent of net NAV	176,538
Less: 15-percent minority interest discount	(26,481)
Marketable value	150,057
Less: 20-percent marketability discount	(30,011)
FMV of 1-percent interest	120,046
FMV of 41.16684918-percent interest	4,941,916

VI. Charitable Contribution Deduction for Transfer to CFT

A. Introduction

The gift tax is imposed on the value of what the donor transfers, not what the donee receives. Shepherd v. Commissioner, 115 T.C. 376, 385 (2000) (citing, inter alia, Robinette v. Helvering, 318 U.S. 184, 186 (1943)), affd. 283 F.3d 1258 (11th Cir. 2002). In essence, petitioners contend that because (1) they transferred to CFT a portion of the gifted interest corresponding to the excess of the fair market value of that interest over $7,044,933, and (2) we have determined the fair market value of the gifted interest to be $9,883,832, it follows from the maxim beginning this paragraph that they are entitled to a charitable contribution deduction in the amount of $2,838,899 for their gift to CFT. Because the assignment agreement does not equate the term "fair market value" with the term "fair market value as finally determined for Federal gift tax purposes," petitioners' argument must fail.

B. The Assignment Agreement

By way of the assignment agreement, petitioners transferred to CFT the right to a portion of the gifted interest. That portion was not expressed as a specific fraction of the gifted interest (e.g., one-twentieth), nor did petitioners transfer to CFT a specific assignee interest in MIL (e.g., a 3-percent assignee interest). Rather, CFT was to receive a fraction of the gifted interest to be determined pursuant to the formula clause contained in the assignment agreement. The formula clause provides that CFT is to receive that portion of the gifted interest having a fair market value equal to the excess of (1) the total fair market value of the gifted interest, over (2) $7,044,933. The formula clause is not self-effectuating, and the assignment agreement leaves to the assignees the task of (1) determining the fair market value of the gifted interest and (2) plugging that value into the formula clause to determine the fraction of the gifted interest passing to CFT.

Petitioners argue that, because the assignment agreement defines fair market value in a manner that closely tracks the definition of fair market value for Federal gift tax purposes, see sec. 25.2512-1, Gift Tax Regs., the assignment agreement effects a transfer to CFT of a portion of the gifted interest determinable only by reference to the fair market value of that interest as finally determined for Federal gift tax purposes. We

do not believe that the language of the assignment agreement supports petitioners' argument. The assignment agreement provides a formula to determine not only CFT's fraction of the gifted interest but also the symphony's and the children's (including their trusts') fractions.[44] Each of the assignees had the right to a fraction of the gifted interest based on the value of that interest as determined under Federal gift tax valuation principles. If the assignees did not agree on that value, then such value would be determined (again based on Federal gift tax valuation principles) by an arbitrator pursuant to the binding arbitration procedure set forth in the partnership agreement. There is simply no provision in the assignment agreement that contemplates the allocation of the gifted interest among the assignees based on some fixed value that might not be determined

[44] If *f* equals the fair market value of the gifted interest (determined by the assignees (or an arbitrator) based on Federal gift tax valuation principles), and the gifted interest is shown as the 82.33369836 percent class B assignee interest in MIL transferred by petitioners, then, assuming *f* is equal to or greater than $7,044,933, the products of the following formulas show the percentage assignee interests apportioned to the children (including the trusts), the symphony, and CFT, expressed as x_1, x_2, and x_3, respectively:

$$\frac{\$6{,}910{,}933}{f} \times 82.33369836\% = x_1$$

$$\frac{\$7{,}044{,}933 - 6{,}910{,}933}{f} \times 82.33369836\% = x_2$$

$$\frac{f - \$7{,}044{,}933}{f} \times 82.33369836\% = x_3$$

for several years. Rather, the assignment agreement contemplates the allocation of the gifted interest based on the assignees' best estimation of that value. Moreover, each of the assignees' percentage interests was determined exactly as contemplated in the assignment agreement (without recourse to arbitration), and none can complain that they got any less or more than petitioners intended them to get.[45] Had petitioners provided that each donee had an enforceable right to a fraction of the gifted interest determined with reference to the fair market value of the gifted interest as finally determined for Federal gift tax purposes,[46] we might have reached a different result. However, that is not what the assignment agreement provides.

---

[45] We suppose that, at least in theory, there might be a difference between (1) petitioners' and the assignees' expectation on Jan. 12, 1996 (the valuation date), regarding the value of the portion of the gifted interest passing to CFT and (2) the value of that portion as subsequently determined by the assignees. However, no one has suggested how to value the first quantity or that, on the facts before us, the difference would be significant.

[46] See, e.g., sec. 1.664-2(a)(1)(iii), Income Tax Regs. (providing that a sum certain may be expressed as a fraction or percentage of the value of property "as finally determined for Federal tax purposes", but requiring that actual adjusting payments be made if such finally determined fair market value differs from the initially determined value); sec. 20.2055-2(e)(2)(vi)(a), Estate Tax Regs. (similar); sec. 25.2702-3(b)(1)(ii)(B), Gift Tax Regs. (similar); Rev. Proc. 64-19, 1964-1 C.B. 682 (discussing conditions under which the Federal estate tax marital deduction may be allowed where, under the terms of a will or trust, an executor or trustee is empowered to satisfy a pecuniary bequest or transfer in trust to a decedent's surviving spouse with assets at their value as finally determined for Federal estate tax purposes).

Of course, the assignees' determination of the fair market value of the gifted interest, while binding among themselves for purposes of determining their respective assignee interests, has no bearing on our determination of the Federal gift tax value of the assignee interests so allocated. Since we find that the fair market value of a 1-percent assignee interest in MIL on the valuation date was $120,046, the following table expresses the fair market values of the percentage assignee interests passing to the various assignees:

Assignee	Percentage Assignee Interest	Fair Market Value
Children and trusts	77.21280956	$9,269,089
Symphony	1.49712307	179,724
CFT	3.62376573	435,019
		9,883,832

C. Conclusion

We find that the fair market value of the property right transferred by petitioners to CFT was $435,019.[47] Taking into

[47] The rule is well established that we may approve a deficiency on the basis of reasons other than those relied on by the Commissioner. See Wilkes-Barre Carriage Co. v. Commissioner, 39 T.C. 839, 845 (1963) (and cases cited therein), affd. 332 F.2d 421 (2d Cir. 1964). Because our conclusion that the valuation clause of the assignment agreement does not achieve the claimed "tax neutralization" effect is based on the language of the assignment agreement, we need not address respondent's arguments that (1) the formula clause is against public policy, and (2) the transaction should be recast as transfers of cash by petitioners to CFT and the symphony under an integrated transaction theory. We note that the application of respondent's integrated transaction theory would result in an initial increase in the amount of petitioners' aggregate taxable gift of only $90,011 (less than 1 percent), which would be partially offset by the resulting increase in the gift tax liability that the noncharitable donees assumed under the assignment agreement.

account annual exclusions, see sections 2503(b) and 2524, each petitioner is entitled to a charitable contribution deduction under section 2522 of $207,510 resulting from the transfer to CFT.[48]

VII. Effect of Children's Agreement To Pay Estate Tax Liability

A. Introduction

Recently, in Ripley v. Commissioner, 105 T.C. 358, 369 (1995), revd. on another issue 103 F.3d 332 (4th Cir. 1996), we described the nature of a net gift as follows:

> Where a "net gift" is made, the donor and donee agree that the donee will bear the burden of the gift tax. The value of the property transferred is reduced by the amount of the gift tax paid by the donee, resulting in the net amount transferred by gift, or the "net gift". The IRS has provided an algebraic formula for determining the amount of gift tax owed on a "net gift" in Rev. Rul. 75-72, 1975-1 C.B. 310. It is important to keep in mind that once the "net gift" is calculated, the full amount of the gift tax is paid on the "net gift".
>
> When a "net gift" is made, a portion of the property is transferred by gift and the remaining portion is transferred by sale. * * *

The net gift rationale flows from the basic premise that the gift tax applies to transfers of property only to the extent that the value of the property transferred exceeds the value in money or

[48] We note that, under our analysis, the assignee interest received by the symphony is worth more than $134,000. Nevertheless, we do not believe that petitioners have claimed any increased charitable contribution deduction under sec. 2522 on account of the transfer to the symphony. If we are mistaken on that point, petitioners can bring that to our attention (or perhaps petitioners and respondent can deal with it in the Rule 155 computation).

money's worth of any consideration received in exchange therefor. See sec. 2512(b); sec. 25.2512-8, Gift Tax Regs.

Petitioners each reported his or her transfer of one-half of the gifted interest as a net gift. Each treated as sales proceeds (consideration received) (1) the amount of Federal and State gift taxes that he or she calculated were to be paid by the children (the gift tax amount) and (2) an amount described on brief as the "mortality-adjusted present value" (mortality-adjusted present value) of the children's contingent obligation to pay the additional estate tax that would have been incurred on account of section 2035(c) (the 2035 tax) if that petitioner had died within 3 years of the date of the gift. Petitioners describe their computation of the mortality-adjusted present value as follows:

> Petitioners * * * estimated the amount of estate tax that would be owed under I.R.C. § 2035(b) based on an expected 55% marginal estate tax rate. Then Petitioners adjusted that amount to present value at the applicable discount rate under I.R.C. § 7520 for January 1996, with further adjustment for the possibility that they would survive each year of the three-year period with no estate tax actually being owed. The probability of death in each of the ensuing three years was calculated, and then the probability-weighted tax amounts were discounted to present value at the required interest rate. All calculations were made, as required under I.R.C. § 7520, by reference to Petitioners' ages as of their nearest birthdays, the applicable interest rate under I.R.C. § 7520 for January, 1996, and mortality factors provided by Table 80CNSMT (as found in Respondent's Pub. 1457, "Actuarial Values, Alpha Volume").

Petitioners computed the mortality-adjusted present values of the above described obligations as being $149,813 and $139,348 with respect to Mr. and Mrs. McCord, respectively.

Respondent does not take issue with petitioners' treatment of the gift tax amounts as sale proceeds. However, he disputes petitioners' treatment of the mortality-adjusted present values as sale proceeds, primarily on the grounds that those amounts are too speculative to be taken into account. Respondent cites Armstrong Trust v. United States, 132 F. Supp. 2d 421 (W.D. Va. 2001), affd. sub nom. Estate of Armstrong v. United States, 277 F.3d 490 (4th Cir. 2002). In Armstrong Trust, supra, a gift was made and, because of (current) section 2035(b), the donees were subject to a potential liability, as transferees, for estate taxes. See sec. 6324(a)(2). Plaintiffs argued that liens or encumbrances were created on the gift by reason of the potential estate tax liability assumed by the donees, thereby reducing the value of the gift. Id., 132 F. Supp. 2d at 430. The District Court found that the possibility of future estate tax liability was too speculative to reduce the value of the gift.

Relying on an opinion of the United States Court of Claims, Murray v. United States, 231 Ct. Cl. 481, 687 F.2d 386 (1982), the Court of Appeals for the Fourth Circuit affirmed the District Court's decision in Armstrong Trust, also on the basis that the donees' potential liability for the donor's estate tax was too

speculative to reduce the value of the gifts. Estate of Armstrong v. United States, supra at 498. It was of no moment to the Court of Appeals that the donor had in fact died within 3 years of the gift, thus causing a 2035 tax to be due, or that the plaintiffs apparently had produced expert calculations of an amount similar to the mortality-adjusted present value at issue in this case. The Court of Appeals said:

> The litigation attempts of the Estate and the Trust to quantify through expert calculations the value of potential estate taxes at the time of the transfers is irrelevant. What is relevant is that the children's obligation to pay any estate taxes was then "highly conjectural," Murray, 687 F.2d at 394, and so provides no ground for applying net gift principles. [Id.]

In Murray v. United States, supra, the donor had made gifts in trust pursuant to an instrument that obligated the trustees to pay, among other debts, the donor's estate and death taxes liabilities. The plaintiffs (executors of the donor's estate) argued that the obligation to pay the donor's estate and death taxes rendered the gifts without value when made. The Court of Claims disagreed, finding that the obligation to pay estate and death taxes "was not * * * susceptible to valuation at the date of the gifts because the economic burden of paying these taxes was then unknown." Id., 687 F.2d at 394. The Court questioned whether it was even possible to approximate the value of the trustee's obligation to pay the donor's estate and death tax liabilities:

> the amount of estate and death taxes payable from the * * * [trusts] was highly conjectural. If Oliver lived until May 1971, the value of the 1968 Family Trust would no longer have been included in his estate as a gift in contemplation of death under section 2035, significantly reducing his estate tax liability. Moreover, had he lived for several more years, the size of his estate would have continued to diminish, leaving the 1970 Family Trusts with an ever-decreasing estate tax obligation. * * *

Id. at 394-395. The Court of Claims concluded: "Thus, plaintiffs' inability to reasonably estimate the amount of tax, if any, to be paid from the * * * [trusts] made it proper to compute the gift tax on the basis of the full value of the trust assets. Robinette v. Helvering, 318 U.S. 184, 188-89 (1943)." Id. at 395.[49]

B. Discussion

The specific question before us is whether to treat as part of the sale proceeds (consideration) received by each petitioner on the transfer of the gifted interest any amount on account of the children's obligation pursuant to the assignment agreement to pay the 2035 tax that would be occasioned by the death of that petitioner within 3 years of the valuation date. We have not faced that specific question before.[50] Neither Armstrong Trust

[49] In Robinette v. Helvering, 318 U.S. 184, 188-189 (1943), the Supreme Court held that, in computing the value of a gift of a remainder interest in property, the value (as an offset) of the donor's contingent reversionary remainder interest was to be disregarded because there was no recognized method of determining its value.

[50] Nevertheless, in Estate of Armstrong v. Commissioner, (continued...)

v. United States, supra, nor Murray v. United States, supra, is binding on us, and, indeed, the facts of both cases are somewhat different from the facts before us today. Armstrong Trust did not involve a specific assumption of the potential 2035 tax as a condition of the underlying gift (as is the case here); rather, the donees were statutorily liable for any 2035 tax under section 6324(a)(2). In Murray, unlike the instant case, the obligation was not limited to the "gross-up" tax of (original) section 2035(c), with its preordained inclusion amount and accompanying 3-year window of inclusion (indeed, that provision and the unified gift and estate tax system had yet to be enacted). Nevertheless, we agree with what we believe to be the basis of those two opinions, i.e., that, in advance of the death of a person, no recognized method exists for approximating the burden of the estate tax with a sufficient degree of certitude to be effective for Federal gift tax purposes. See also Estate of Armstrong v. Commissioner, 119 T.C. 220, 230 (2002).

Petitioners' computation of the mortality-adjusted present value of the children's obligation to pay the 2035 tax does

[50](...continued)
119 T.C. 220, 230 (2002) (addressing certain Federal estate tax questions with respect to the same gifts in question in Armstrong Trust v. United States, 132 F. Supp. 2d 421 (W.D. Va. 2001), affd. sub nom. Estate of Armstrong v. United States, 277 F.3d 490 (4th Cir. 2001)), we said: "The donee children's mere conditional promise to pay certain additional gift taxes that decedent might be determined to owe does not reduce the amount of decedent's gift taxes included in the gross estate under section 2035(c)."

nothing more than demonstrate that, if one assumes a fixed dollar amount to be paid, contingent on a person of an assumed age not surviving a 3-year period, one can use mortality tables and interest assumptions to calculate the amount that (without any loading charge) an insurance company might demand to bear the risk that the assumed amount has to be paid. However, the dollar amount of a potential liability to pay the 2035 tax is by no means fixed; rather, such amount depends on factors that are subject to change, including estate tax rates and exemption amounts (not to mention the continued existence of the estate tax itself[51]). For that reason alone, we conclude that petitioners are not entitled to treat the mortality-adjusted present values as sale proceeds (consideration received) for purposes of determining the amounts of their respective gifts at issue.[52] See Robinette v. Helvering, 318 U.S. 184, 188-189 (1943) (donor's reversionary interest, contingent not only on donor outliving

[51] See Economic Growth and Tax Relief Reconciliation Act of 2001, Pub. L. 107-16, secs. 501(a), 901(a), 115 Stat. 38, 69, 150 (repealing the estate tax with respect to decedents dying after Dec. 31, 2009, and reinstating same with respect to decedents dying after Dec. 31, 2010).

[52] We recognize that, in Harrison v. Commissioner, 17 T.C. 1350, 1354-1355 (1952), we reduced the amount of a gift of a trust remainder by the present value of the trustee's obligation, under the terms of the trust agreement, to pay the settlor-life beneficiary's income tax liability attributable to the trust's income for the remainder of her life: "Federal income taxes have become a permanent and growing part of our economy, and there is no likelihood that such taxes will not continue to be imposed throughout the life expectancy of petitioner." We do not have occasion today to reconsider that opinion.

30-year old daughter, but also on the failure of any issue of the daughter to attain the age of 21 years, is disregarded as an offset in determining the value of the gift; actuarial science cannot establish the probability of whether the daughter would marry and have children).

Our conclusion is further buttressed by broader considerations of Federal gift tax law. Under the "estate depletion" theory of the gift tax, it is the benefit to the donor in money or money's worth, rather than the detriment to the donee, that determines the existence and amount of any consideration offset (sale proceeds) in the context of an otherwise gratuitous transfer. See Commissioner v. Wemyss, 324 U.S. 303, 307-308 (1945); 2 Paul, Federal Estate and Gift Taxation 1114-1115 (1942). When a donee agrees to pay the gift tax liability resulting from a gift, the benefit to the donor in money or money's worth is readily apparent and ascertainable, since the donor is relieved of an immediate and definite liability to pay such tax. If that donee further agrees to pay the potential 2035 tax that may result from the gift, then any benefit in money or money's worth from the arrangement arguably would accrue to the benefit of the donor's estate (and the beneficiaries thereof) rather than the donor. The donor in that situation might receive peace of mind, but that is not the type of tangible benefit required to invoke net gift principles.

C. Conclusion

Because petitioners have failed to show that their computation of the value of the children's obligation to pay any 2035 tax is reliable, we do not accept it as establishing any proceeds received by petitioners and reducing the value of the net gifts made by them.

VIII. Conclusion

The fair market value of the gifted interest on the date of the gift was $9,883,832 ($4,941,916 for each half thereof). Petitioners are entitled to an aggregate charitable contribution deduction under section 2522 for the transfer to CFT in the amount of $415,019 ($207,510 apiece).

To reflect the foregoing,

Decision will be entered under Rule 155.

Reviewed by the Court.

WELLS, COHEN, SWIFT, GERBER, COLVIN, GALE, and THORNTON, JJ., agree with this majority opinion.

SWIFT, J., concurring: The majority opinion adopts an interpretation of the "fair market value" language of the formula clause that recognizes the sophistication of the tax planning before us and that gives significance to the failure of that formula clause to use commonly recognized language in the estate planning profession under which--had it been intended--a fair market value determination (and an allocation between the donees of the gifted interest based thereon) "as finally determined for Federal gift tax purposes" would have been made explicit. In my opinion, the failure of the formula clause to reflect such well-recognized language belies petitioners' claim that such language, interpretation, and result were intended and now should be inferred.

Under the majority's interpretation of the formula clause, the abuse potential inherent therein is essentially negated.

If, however, petitioners' interpretation of the formula clause were adopted, under which petitioners claim an increasd charitable deduction equal to all excess value of the gifted interest over $7,044,093, as finally determined for Federal gift tax purposes, without property representing such excess value actually passing to charity, the long-standing "reasonable probability" and "public policy" doctrines applicable generally to gifts would become applicable. See, e.g., Hamm v. Commissioner, T.C. Memo. 1961-347, affd. 325 F.2d 934 (8th Cir. 1963), applying the reasonable probability standard to the

question of whether a charitable donee will ever receive gifted property; Commissioner v. Procter, 142 F.2d 824 (4th Cir. 1944), applying public policy principles to the question of whether abusive valuation or adjustment clauses are to be respected.

With regard to Judge Foley's criticism of these doctrines, see dissenting op. pp. 94-95, 107-108, I would suggest that the reasonable probability and public policy doctrines should not be confined to stale factual situations involved in old cases. To the contrary, these doctrines live and breathe and have a life that should be broad and flexible enough to apply to contemporary and overly aggressive gift and estate tax planning (such as that involved herein)--particularly where charity is involved.

With regard further to the nature or extent of the gift to charity involved herein, I would emphasize that not "all" of petitioners' MIL partnership interest was transferred. Respondent argues that "all" of petitioners' MIL partnership interest was transferred, but petitioners contend otherwise, and the majority opinion concludes that something less than all of petitioners' interest in the MIL partnership was transferred (namely, only an "assignee" interest was transferred). See majority op. pp. 19-24. In light of the majority's conclusion in that regard, had respondent argued in the alternative that the "partial interest" gift rules of section 2522(c)(2) and section 25.2522(c)-3(c), Gift Tax Regs., were applicable to petitioners'

gift to charity, it would appear that petitioners' claimed charitable deduction herein would have been completely disallowable. See the analysis below relating to the deductibility of gifts to charity of partial interests.

The Gift

Petitioners formed MIL as a Texas family limited partnership and made gifts of a portion of their interests therein by way of an assignment agreement and a formula clause which, according to petitioners and the majority opinion, transferred only assignee interests in MIL to four levels of donees, generally as follows:

> First and Second Level (Noncharitable) Donees: Trusts for the benefit of the donors' four children (first level donees) to receive portions of the gifted interest and outright gifts to the donors' four children (second level donees) with an aggregate fair market value on the valuation date up to $6,910,933;
>
> Third Level Donee: If the fair market value of the gifted interest exceeds $6,910,933, Symphony, a charitable donee, to receive such excess up to a maximum value of $134,000;
>
> Fourth Level Donee: If the fair market value of the gifted interest exceeds $7,044,933 ($6,910,933 plus $134,000), CFT, also a charitable donee, to receive such excess without limit.

Focusing on the gift to the fourth level charitable donee (the gift to CFT), petitioners themselves allege (in order to beef up the valuation discounts they seek) and the majority opinion finds, majority op. pp. 19-24, that the gifted MIL partnership interest transferred to CFT included only certain

"economic rights" with regard to the gifted interest and did not consist of all of the donors' rights as limited partners in that particular limited partnership interest. Upon petitioners' transfer and upon CFT's receipt of the gifted interest in the MIL partnership, petitioners retained, and CFT never received, the following rights associated with petitioners' interest in MIL (references are to the MIL amended partnership agreement):

> (1) The right to vote on MIL partnership matters (section 3.10);
>
> (2) The right to redeem the MIL partnership interest (section 9.02(b));
>
> (3) The right to inspect financial and other pertinent information relating to MIL (section 3.09(d)(i)-(v));
>
> (4) The right to access any properties or assets owned by MIL (section 3.09(d)(vi)); and
>
> (5) The right to veto early liquidation of MIL, unless such liquidation is required by State law (section 10.01).

Under section 7.02 of the Texas Revised Limited Partnership Act, a partnership agreement may, but is not required to, limit the partnership rights that may be transferred when a partner transfers or assigns an interest in a partnership. In this case, petitioners made their retention of the above rights (and the nonreceipt thereof by CFT) explicit by the terms of the MIL partnership agreement that they adopted. Section 8.03 of the MIL partnership agreement, discussing the transfer of a limited

partnership interest to an assignee, is set forth, in part, below:

> [A]n Assignee shall be entitled only to allocations of Profits and Losses * * * and distributions * * * which are attributable to the Assigned Partnership Interests held by the Assignee and shall not be entitled to exercise any Powers of Management nor otherwise participate in the management of the Partnership nor the control of its business and affairs. * * *

As explained, the above limitations on the charitable gift transferred by petitioners to CFT are the basis for petitioners' claimed characterization and valuation of the gift to CFT as an assignee interest in MIL, as distinguished from an MIL partnership interest, and (as petitioners themselves contend) they would appear to constitute substantive and significant limitations.

Deductibility of Gifts to Charity of Partial Interests

Generally, and apart from certain specified statutory exceptions noted below, where less than donors' entire interests in property are transferred to charity, the charitable contributions--for Federal gift tax purposes, as well as for Federal income and estate tax purposes--are to be treated as partial interests and any claimed gift, income, and estate tax charitable deductions relating thereto are to be disallowed. See secs. 2522(c)(2) (gift tax disallowance), 170(f)(3) (income tax disallowance), 2055(e)(2) (estate tax disallowance).

Set forth below, in part, is the statutory language of section 2522(c)(2) that, for Federal gift tax purposes, generally disallows charitable deductions for gifts to charity of partial interests:

SEC. 2522(c). Disallowance of Deductions in Certain Cases.--

* * * * * * *

(2) Where a donor transfers an interest in property (other than an interest described in section 170(f)(3)(B)) to a person, or for a use, described in subsection (a) or (b) [qualified charities] and an interest in the same property is retained by the donor, or is transferred or has been transferred (for less than an adequate and full consideration in money or money's worth) from the donor to a person, or for a use, not described in subsection (a) or (b), no deduction shall be allowed under this section for the interest which is, or has been transferred to the person, or for the use, described in subsection (a) or (b) * * *

Treasury regulations applicable to the above statutory provisions provide examples of charitable gifts of partial interests subject to the above disallowance rule. Section 1.170A-7(d), Example (1), Income Tax Regs., treats as a partial interest a gift to charity of the rent-free use of one floor of an office building where the donor owns the entire office building.

Section 20.2055-2(e)(2)(i), Estate Tax Regs., classifies as a partial interest a gift to charity of a reversionary interest in an office building where the decedent transfers to his wife a

life estate in the office building and where the decedent's wife is still living when the reversionary interest passes to charity.

Section 25.2522(c)-3(c)(1)(i), Example (3), Gift Tax Regs., treats as a partial interest a gift to charity of the right to rental income from real property where the remaining interest in the property is transferred to a noncharitable donee.

Other authorities recognize and discuss the above general rule under which charitable deductions are disallowed for gifts to charity of partial interests.

In Stark v. Commissioner, 86 T.C. 243 (1986), we held that a gift to the U.S. Forest Service of real property constituted a partial interest where the donor retained a mineral interest in the real property. The gift to charity, however, of the partial interest was deductible because the particular restricted mineral interest retained by the taxpayer was not regarded as substantial. In interpreting section 170(f)(3) for income tax purposes, we stated that the partial interest rule "applies to contributions [to charity] of less than the taxpayer's entire interest in property, including, but not limited to, contributions of the right to use property." Id. at 250.

In Rev. Rul. 81-282, 1981-2 C.B. 78, it was held that a gift to charity of corporate stock constituted a disallowed partial interest where the donor retains the right to vote the gifted stock (a gift not dissimilar from the gift to CFT of the

nonvoting, assignee interest in the MIL partnership). See also Stewart et al., Charitable Giving and Solicitation, par. 9004 at 9002 (1999), which states that "A donor can run afoul of the partial interest rules by retaining a property interest or right while transferring the primary incidents of ownership to charity."[1]

As indicated previously, for Federal gift, income, and estate tax purposes, certain limited statutory exceptions to the above rule applicable to partial interests are available under which specified types of partial interests transferred to charity will qualify for charitable deductions (namely, certain fixed income transfers to charity and certain remainder interests gifted to charitable annuity trusts, to unitrusts, and to pooled income funds). See secs. 2522(c)(2)(A) and (B) (gift tax), 170(f)(2)(A) and (B) (income tax), 2055(e)(2)(A) and (B) (estate tax). These statutorily qualified forms of deductible partial

[1] Treatises discussing charitable contributions interpret the relevant Code provisions as outlined above, and I have not discerned how the situation involved in the instant case would not be covered by the above Code provisions disallowing a tax deduction for gifts to charity of partial interests. See, e.g., 8 Mertens, Law of Federal Income Taxation, secs. 31:97 to 31:112 (1999 rev.); Beckwith, 839 Tax Mgmt. (BNA), "Estate and Gift Tax Charitable Deductions", secs. V, XI at A-50 (2001); Kirschten & Freitag, 521-2d Tax Mgmt. (BNA), "Charitable Contributions: Income Tax Aspects", sec. II-F (2002); Samansky, Charitable Contributions and Federal Taxes, ch. 8 (1993); Stephens et al., Federal Estate and Gift Taxation, secs. 5.05, 11.02 (8th ed. 2002); Stewart et al., Charitable Giving and Solicitation, pars. 9001-9012, 10,022, 11,012 (1999).

interest charitable gifts are subject to strict guidelines which provide assurance that the charitable deductions to be allowed reflect the approximate amount to be received by charity. See sec. 25.2522(c)-3(d)(2)(iv), Gift Tax Regs.

In addition to the above statutorily qualified forms of deductible partial interests transferred to charity, section 170(f)(3)(B) sets forth a number of other types of partial interest gifts with respect to which charitable deductions are allowable. Under section 170(f)(3)(B), charitable deductions are allowed for gifts not in trust of remainder interests in a personal residence or farm (sec. 170(f)(3)(B)(i)), gifts to charity not in trust of an "undivided portion" of a transferor's entire interest in property (sec. 170(f)(3)(B)(ii)), and qualified conservation contributions (sec. 170(f)(3)(B)(iii)). With regard to charitable gifts of an undivided portion of a transferor's entire interest in property, section 25.2522(c)-3(c)(2)(i), Gift Tax Regs., provides, in part, as follows:

> An undivided portion of a donor's entire interest in property must consist of a fraction or percentage of each and every substantial interest or right owned by the donor in such property * * *.[2] * * *

[2] Parallel provisions for income and estate tax purposes with regard to deductions relating to charitable gifts of an undivided portion of a taxpayer's entire interest in property are set forth in sec. 1.170A-7(b)(1)(i), Income Tax Regs., and sec. 20.2055-2(e)(2)(i), Estate Tax Regs.

In Stark v. Commissioner, supra at 252-253, we explained as follows:

> Where the interest retained by the taxpayer is so insubstantial that he has, in substance, transferred his entire interest in the property, the tax treatment should so reflect. * * *
>
> * * * A charitable contribution deduction should be allowed only where the retained interest has a de minimis value. Moreover, the insubstantial retained interest must not potentially interfere in any manner with the donee's interest. * * * [Citation omitted.]

In Rev. Rul. 81-282, 1981-2 C.B. 78, it was concluded that a taxpayer's retention of a right to vote shares of stock contributed to charity constitutes a substantial right because a right to vote gives the holder a voice in the management of the company and is crucial to protecting a stockholder's financial interest.

In Miami Natl. Bank v. Commissioner, 67 T.C. 793, 800 (1977), (involving the transfer of stock into a subordinated securities account), we concluded that retained voting rights, among others, constitute substantial rights.

Application to McCord

As stated, the retained rights involved in Rev. Rul. 81-282, 1981-2 C.B. 78, appear to be analogous to the rights retained by petitioners herein. By providing in the MIL partnership agreement limitations on transfers of MIL partnership interests and by transferring to CFT only an assignee interest in MIL,

petitioners retained the voting and the other rights in the MIL limited partnership associated with the assignee interest transferred to charity. Because the rights retained by petitioners with regard to their MIL limited partnership interest would be treated as substantial, under section 170(f)(3)(B)(ii) the portion thereof transferred to CFT would appear not to qualify as an undivided portion of petitioners' entire MIL limited partnership interest.

I would reiterate that it is the perceived substantial significance of petitioners' retained rights on which petitioners themselves, petitioners' valuation experts, and the majority opinion rely to justify assignee status and increased valuation discounts for the gifted interest.

It would appear that for the above analysis not to apply to the gift involved in the instant case, petitioners' MIL limited partnership interest would have to be interpreted as consisting of two separate and distinct interests (an economic interest and a noneconomic interest) with petitioners transferring to CFT an undivided portion of the separate economic interest.

I submit that the correct interpretation would be to treat petitioners' MIL limited partnership interest as one interest consisting of both economic and noneconomic rights, with petitioners having transferred to CFT only their economic rights therein. Under this interpretation, it would appear that

petitioners should be regarded as having made a charitable gift to CFT of a partial interest in their MIL limited partnership interest, which charitable gift would be subject to the gift tax disallowance provision of section 2522(c)(2).[3]

[3] I recognize that under the disallowance rule of sec. 2522(c)(2), as suggested herein, petitioners' claimed charitable deduction for their gift to Symphony also would be disallowed as a gift of a partial interest.

CHIECHI, J., concurring in part and dissenting in part: I concur in result with respect to the portions of the majority opinion under the headings "IV. Extent of the Rights Assigned" and "VII. Effect of Children's Agreement To Pay Estate Tax Liability".

I cannot responsibly cast an affirmative vote with respect to the portion of the majority opinion under the heading "V. Fair Market Value of the Gifted Interest". The determination of fair market value is a factual determination and is necessarily a matter of judgment and approximation. See, e.g., Estate of Davis v. Commissioner, 110 T.C. 530, 537 (1998). I am not in a position to state that I agree with every judgment and every approximation made by the majority opinion in determining the fair market value of the gifted interest. Moreover, because valuation is a factual matter and necessarily an approximation and a matter of judgment, I do not believe that the Court is bound in other cases by the judgments and approximations in the majority opinion.

I dissent from the portion of the majority opinion under the heading "VI. Charitable Contribution Deduction for Transfer to CFT" and from the ultimate holding of the majority opinion under the heading "VIII. Conclusion". Although I join Judge Foley's dissent, I write separately to express additional reasons for my

dissent and to emphasize certain of the reasons for Judge Foley's dissent.

I disagree with the following characterization by the majority opinion of what petitioners transferred to CFT under the assignment agreement: "By way of the assignment agreement, petitioners transferred to CFT the right to a portion of the gifted interest." Majority op. p. 61 (emphasis added). Under the assignment agreement, petitioners did not transfer to CFT merely "the right to" a specified portion of the gifted interest. On January 12, 1996, petitioners transferred to CFT the portion of the gifted interest described in that agreement. In other words, on that date, petitioners transferred to CFT that portion, if any, of the 82.33369836-percent assignee interest in MIL remaining after the respective transfers under the assignment agreement to petitioners' children, the trusts, and the Symphony; i.e., that portion of such assignee interest having a fair market value as of the date of that agreement in excess of $7,044,933.

I also disagree with the position of the majority opinion, see majority op. pp. 61-65, that under the assignment agreement petitioners transferred to CFT a 3.62376573-percent assignee interest in MIL. The 3.62376573-percent assignee interest was set forth in the confirmation agreement that was executed in March 1996. The majority opinion does not mention the confirmation agreement but nevertheless requires that agreement

to control for purposes of determining the assignee percentage interest that petitioners transferred under the assignment agreement to CFT (as well as the respective assignee percentage interests that petitioners transferred under the assignment agreement to petitioners' children, the trusts, and the Symphony). The confirmation agreement on which the majority opinion relies was not executed until March 1996, 2 months after the assignment agreement was effective, and is not the controlling donative instrument.

Instead of referring to the confirmation agreement in support of the position that petitioners transferred to CFT a 3.62376573-percent assignee interest in MIL, the majority opinion maintains that there is in effect a valuation instruction in the assignment agreement which mandates that result. According to the majority opinion, pursuant to that purported valuation instruction, the fair market value agreed upon by the donees to determine the assignee percentage interest transferred to CFT (as well as to determine the respective assignee percentage interests transferred to petitioners' children, the trusts, and the Symphony) is fixed and may never change for purposes of determining such interest, even if such value agreed upon by the donees is ultimately determined not to be the fair market value of such interest. The majority opinion concludes that therefore the resulting assignee percentage interest transferred to CFT (as

well as the respective assignee percentage interests transferred to petitioners' children, the trusts, and the Symphony), as set forth in the confirmation agreement, is fixed and may never change.

The assignment agreement does not contain a valuation instruction that requires what the majority opinion indicates that agreement requires. According to the majority opinion, that valuation instruction appears in the following paragraph in the assignment agreement:

> For purposes of this paragraph [the paragraph transferring to petitioners' children, the trusts, the Symphony, and CFT certain portions of the 82.33369836-percent assignee interest in MIL that petitioners transferred under the assignment agreement], the fair market value of the Assigned Partnership Interest [the gifted interest consisting of the 82.33369836-percent assignee interest in MIL] as of the date of this Assignment Agreement shall be the price at which the Assigned Partnership Interest would change hands as of the date of this Assignment Agreement between a hypothetical willing buyer and a hypothetical willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts. Any dispute with respect to the allocation of the Assigned Partnership Interests among Assignees shall be resolved by arbitration as provided in the Partnership Agreement.

As can be seen from reading the foregoing paragraph, the purported valuation instruction consists of a paragraph in the assignment agreement which defines the term "fair market value". Petitioners required the donees to use that definition when they allocated among themselves the respective portions of the gifted interest which petitioners transferred to them under the

assignment agreement. The definition of the term "fair market value" for that purpose is the same definition used for Federal gift tax purposes. See sec. 25.2512-1, Gift Tax Regs. The last sentence of the above-quoted paragraph merely requires that any dispute with respect to the allocation of the gifted interest among the donees be resolved by arbitration as provided in the partnership agreement. Nothing in that paragraph mandates that if the fair market value of the gifted interest to which the various donees agreed is ultimately determined not to be the fair market value of that interest, no adjustment may be made to the respective assignee percentage interests allocated to CFT and the other donees, as set forth in the confirmation agreement. I believe that the majority opinion's construction of the above-quoted paragraph is strained, unreasonable, and improper and leads to illogical results.

In essence, the majority opinion concludes that the donees of the gifted interest made a mistake in determining the fair market value of that interest and that petitioners are stuck with that mistaken value solely for purposes of determining the respective assignee percentage interests transferred to the donees under that agreement.

The majority opinion states that

> the assignment agreement contemplates the allocation of the gifted interest based on the assignees' best estimation of that value. Moreover, each of the assignees' percentage interests was determined

> exactly as contemplated in the assignment agreement (without recourse to arbitration), and none can complain that they got any less or more than petitioners intended them to get. * * * [Majority op. p. 63.]

The assignment agreement does not "contemplate", as the majority opinion states, that the allocation of the gifted interest be "based on the assignees' best estimation of that [fair market] value." Id. Under the assignment agreement, petitioners transferred to the donees specified portions of the gifted interest determined by reference to the fair market value of such portions, as defined in that agreement, and not upon some "best estimation of that value."

The assignment agreement required that the allocation be based upon fair market value as defined in that agreement, which the majority opinion acknowledges is the same definition of that term for Federal gift tax purposes. The majority opinion has found that the donees did not make the allocation on the basis of that definition. The donees thus failed to implement the donors' (i.e., petitioners') mandate in the assignment agreement when they arrived at amounts which they believed to be the respective fair market values of the specified portions of the gifted interest that petitioners transferred to them but which the majority opinion has found are not the fair market values of such portions.

The majority opinion, using the definition of fair market value in the Federal gift tax regulations and the assignment agreement, determines that the fair market value of the gifted interest used by the donees is not the fair market value of such interest. It follows that the assignee percentage interest allocated to CFT in the confirmation agreement in March 1996 (as well as the respective assignee percentage interests allocated in that confirmation agreement to petitioners' children, the trusts, and the Symphony) is not the assignee percentage interest that petitioners transferred in the assignment agreement to that donee on January 12, 1996.

The position of the majority opinion conflicts with the provisions of the assignment agreement as to the respective portions of the gifted interest that petitioners transferred under that agreement to petitioners' children, the trusts, the Symphony, and CFT. Consequently, that position leads to results that are in violation of what petitioners transferred to the donees under that agreement. According to the majority opinion, the aggregate fair market value of the aggregate 77.21280956-percent assignee interests allocated to petitioners' children and the trusts is $9,269,089. Majority op. p. 64. However, under the assignment agreement, petitioners transferred to their children and the trusts portions of the gifted interest having an aggregate fair market value equal to $6,910,933, determined

according to the definition of the term "fair market value" in the assignment agreement, which is the same definition in the Federal gift tax regulations.[1] Thus, the aggregate fair market value of the aggregate assignee percentage interests transferred to petitioners' children and the trusts, as determined by the majority opinion (i.e., $9,269,089), exceeds the aggregate fair market value of such interests that petitioners transferred to those donees in the assignment agreement (i.e., $6,910,933). Such a result is rejected by and violates that agreement.[2]

FOLEY, J., agrees with this concurring in part and dissenting in part opinion.

[1]According to the majority opinion, the fair market value of the 1.49712307-percent assignee interest allocated to the Symphony is $179,724. Majority op. p. 64. However, under the assignment agreement, petitioners transferred to the Symphony a portion of the gifted interest having an aggregate fair market value of at most $134,000, determined according to the definition of the term "fair market value" in the assignment agreement, which is the same definition in the Federal gift tax regulations.

[2]The same is true of the result with respect to the Symphony under the majority opinion's analysis.

FOLEY, J., concurring in part[1] and dissenting in part: Undaunted by the facts, well-established legal precedent, and respondent's failure to present sufficient evidence to establish his determinations, the majority allow their olfaction to displace sound legal reasoning and adherence to the rule of law. The gift closed on January 12, 1996, and on that date petitioners transferred to CFT all of petitioners' assigned partnership interests exceeding $7,044,933 (i.e., the amount exceeding the $6,910,933 transferred to the sons and the trusts plus the $134,000 transferred to the Symphony).

As the trial judge, I concluded that, on January 12, 1996, petitioners transferred a $2,838,899 assignee interest to CFT. On that date, the interest was accepted and received by CFT, and not subject to a condition precedent or subsequent. Sec. 25.2522(c)-3(b)(1), Gift Tax Regs.; see also Commissioner v. Sternberger's Estate, 348 U.S. 187 (1955); Hamm v. Commissioner, T.C. Memo. 1961-347, affd. 325 F.2d 934 (8th Cir. 1963). Furthermore, I concluded that respondent fell woefully short of meeting his burden[2] regarding the applicability of the substance over form, violation of public policy, and reasonable probability

[1] I concur only in result with respect to secs. IV, V(E), and VII(C) of the majority opinion.

[2] The parties agree that respondent, pursuant to sec. 7491, had the burden of proof.

of receipt doctrines.[3] Inexplicably, the majority ignore respondent's primary contentions (i.e., that the substance over form and violation of public policy doctrines are applicable) and base their holding on an interpretation of the assignment agreement that respondent never raised. In section I, I address the majority's holding. In sections II and III, respectively, I address respondent's contentions relating to the substance over form and violation of public policy doctrines.

I. The Majority's Analysis of the Assignment Agreement Is Faulty

The majority begin by stating correctly that the "gift tax is imposed on the value of what the donor transfers, not what the donee receives." Majority op. p. 60. Yet, they then proceed to rely on a tortured analysis of the assignment agreement that is, ostensibly, justification for shifting the determination of transfer tax consequences from the date of the transfer (i.e., January 12, 1996, the date of the assignment setting forth what petitioners transferred) to March 1996 (i.e., the date of the confirmation agreement). The majority's analysis of the assignment agreement requires that petitioners use the Court's valuation to determine the value of the transferred interests, but the donees' appraiser's valuation to determine the percentage

[3] The reasonable probability of receipt doctrine was not one of respondent's primary contentions, but it was referenced in his opening brief.

interests transferred to the charitable organizations. There is no factual, legal, or logical basis for this conclusion.

A. The Gift Was Complete on January 12, 1996

The value of the transferred property and the amount of the transferor's charitable deduction are determined as of the date the gift became complete. Sec. 2512(a). Pursuant to Texas law, the transfer became complete on January 12, 1996, the date petitioners and the donees executed the assignment agreement. In fact, respondent states:

> It is undisputed that the January 12, 1996 Assignment Agreement was executed by competent donors, evidenced the donors' present intent to irrevocably divest themselves of ownership of the partnership interests, delivered to the partnership, and signed and accepted by donees competent to receive such a transfer. Accordingly, the Assignment Agreement effected the present transfer under Texas law of beneficial and legal title to the partnership interests to the donees. (Emphasis added.)

The Court, like petitioners and respondent, is bound by section 2512(a), which requires us to value the property "at the date of the gift" (emphasis added). The charitable donees and the amount allocated to them were specifically identified, and thus ascertainable, upon the execution of the assignment agreement. Respondent readily acknowledges, and petitioners undoubtedly agree, that the January 12, 1996, assignment agreement was "signed and accepted by donees competent to receive such a transfer." Yet, in determining the charitable deduction, the majority rely on the confirmation agreement without regard to

the fact that petitioners were not parties to this agreement, and that this agreement was executed by the donees more than 2 months after the transfer.[4]

The majority state that the property transferred to CFT "was not expressed as a specific fraction of the gifted interest (e.g., one-twentieth), nor did petitioners transfer to CFT a specific assignee interest in MIL (e.g., a 3-percent assignee interest)." Majority op. p. 61. The majority appear to assert, without any authority, that petitioners' charitable deduction cannot be determined unless the gifted interest is expressed in terms of a percentage or fractional share.[5] The assignment agreement specifically identified the transferees and the transferred property. Regardless of how the transferred interest was described, it had an ascertainable value.

---

[4] Subsequent events typically do not affect the value of transferred property. See Ithaca Trust Co. v. United States, 279 U.S. 151 (1929); Estate of McMorris v. Commissioner, 243 F.3d 1254 (10th Cir. 2001), revg. T.C. Memo. 1999-82; Estate of Smith v. Commissioner, 198 F.3d 515 (5th Cir. 1999), revg. 108 T.C. 412 (1997); Propstra v. United States, 680 F.2d 1248 (9th Cir. 1982).

[5] This position is reminiscent of previous attempts by respondent to impose a fractional, or percentile, share rule in the marital deduction context--a position that was consistently rejected by the courts and not implemented until Congress amended sec. 2056 to conform with respondent's position. See sec. 2056(b)(5), (7) and (10); Northeastern Pa. Natl. Bank & Trust Co. v. United States, 387 U.S. 213 (1967); James v. United States, 366 U.S. 213 (1961); Estate of Alexander v. Commissioner, 82 T.C. 34 (1984), affd. without published opinion 760 F.2d 264 (4th Cir. 1985).

Accordingly, pursuant to section 2501, the entire $9,883,832 transfer is subject to gift tax, and a charitable deduction is allowed for the $2,972,899 (i.e., $9,883,832 - $6,910,933) transferred to or for the use of the Symphony and CFT. Sec. 2522. CFT's retention of a much smaller interest (i.e., 3.62376573 percent) than what petitioners transferred to it has no effect on the value of the transferred property on the date the gift became complete.[6]

B. Determination by the Donees Does Not Bind This Court

The majority conclude that petitioners may deduct the $2,838,899 (i.e., $9,883,832 - $7,044,933) transferred to CFT on January 12, 1996, only if the agreement gave each donee "an enforceable right to a fraction of the gifted interest determined with reference to the fair market value of the gifted interest as finally determined for Federal gift tax purposes". Majority op. p. 63 (emphasis added). Simply put, the majority are wrong.

First, a $2,838,899 MIL interest was transferred to or for the use of CFT. In their fervor to reject this transaction, the

[6] CFT's subsequent transfer of MIL interests may have conferred an impermissible private benefit on petitioners' sons. See Am. Campaign Acad. v. Commissioner, 92 T.C. 1053 (1989)(holding that conferral of a benefit on an unrelated person may constitute an impermissible private benefit). The deduction pursuant to sec. 2522 is not allowed for a transfer to an organization unless such organization is operated exclusively for one or more of its charitable purposes. Sec. 25.2522(a)-1(b), Gift Tax Regs. Respondent, however, did not raise, or present any evidence relating to, this issue.

majority assert a line of analysis that is contrary to both the established facts and respondent's litigating position. Pursuant to the assignment agreement, the gift closed, and beneficial and legal title to the assigned interest was transferred to CFT on January 12, 1996. Respondent contends that, irrespective of when the gift closed, the Court must ignore all intermediate steps and focus on the end result (i.e., the cash received in redemption). The majority sidestep the assignment agreement and redemption, and focus on the allocation in the confirmation agreement.

Second, the majority cite regulations that are inapplicable to petitioners' transfer. See sec. 1.664-2(a)(1)(iii), Income Tax Regs. (relating to charitable remainder annuity trusts); sec. 20.2055-2(e)(2)(v) and (vi)(a), Estate Tax Regs. (relating to guaranteed annuity interests), and 25.2702-3(b)(1)(ii)(B) and (b)(2), Gift Tax Regs. (relating to qualified annuity interests). Majority op. pp. 63-64 note 46. The deductibility of all transfers to charities is not governed by these requirements.

Third, as the majority acknowledge, petitioners transferred to the donees "a fraction of the gifted interest based on the value of that interest as determined under Federal gift tax valuation principles." Majority op. p. 62. There is no material difference between fair market value "as determined under Federal gift tax valuation principles" and fair market value "as finally determined for Federal gift tax purposes". Once this Court's

jurisdiction is properly invoked, the fair market value of any property is what this Court determines it is, and a determination relating to a charitable deduction pursuant to section 2522 requires use of the Court's fair market value of the transferred property. Our determination of fair market value is both fair market value under gift tax principles and as finally determined for Federal gift tax purposes. Moreover, had petitioners' assignment agreement included the magical words "as finally determined for Federal gift tax purposes", the majority assert only that they "might have reached a different result." Majority op. p. 63.

Fourth, the majority state:

> There is simply no provision in the assignment agreement that contemplates the allocation of the gifted interest among the assignees based on some fixed value that might not be determined for several years. Rather, the assignment agreement contemplates the allocation of the gifted interest based on the assignees' best estimation of that value. [Majority op. pp. 62-63.]

The fact is, the assignment agreement effected the transfer of an assignee interest. Petitioners' assignment agreement could not, and does not, limit the Court's ability to correctly determine the fair market value of such interest. Nor could the assignment agreement mandate that the donees' determination of fair market value is conclusive and final for gift tax purposes.

Finally, unlike respondent, who contends that the charitable deduction is limited to the $338,967 CFT received in the

redemption, the majority seek to restrict petitioners' charitable deduction to the $435,019 interest (i.e., 3.62376573 percent) CFT retained pursuant to the confirmation agreement. In essence, the reasoning set forth by the majority borrows from both the integrated transaction and violation of public policy doctrines. The majority's disregard of the transfer of property interests pursuant to the assignment agreement, and focus on the allocation of interests pursuant to the confirmation agreement, implicates the integrated transaction doctrine. Similarly, the majority's refusal to adhere to the explicit terms of the assignment agreement implicates the violation of public policy doctrine.

II. Respondent Did Not Establish Applicability of the Substance Over Form Doctrine

Respondent contended that formation of the limited partnership, assignment of partnership interests, confirmation of the assignment, and redemption of the charities' partnership interests were all part of an integrated transaction where petitioners intended to transfer all of their assets to their sons and the trusts. Respondent simply failed to meet his burden.

Courts have employed the substance over form doctrine where a taxpayer, intending to avoid the gift tax, transfers property to an intermediary who then transfers such property to the intended beneficiary.[7] In some instances the intermediary was

[7] The Court of Appeals for the Fifth Circuit and other (continued...)

used to disguise the transferor. See Schultz v. United States, 493 F.2d 1225, 1226 (4th Cir. 1974) (finding that brothers planned to avoid gift taxes through repeated reciprocal gifts to each others' children); Griffin v. United States, 42 F. Supp.2d 700, 707 (W.D. Tex. 1998) (finding that husband and wife engaged in a scheme where the wife "was merely the intermediary through which the stock passed on its way to the ultimate beneficiary"); Estate of Murphy v. Commissioner, T.C. Memo. 1990-472 (disregarding an intrafamily stock transfer where the Court found an informal family agreement to control the stock collectively). In Heyen v. United States, 945 F.2d 359 (10th Cir. 1991) (disregarding as shams 27 transfers of stock to intermediate beneficiaries who then transferred the stock to the original transferor's family), however, the intermediary was used in an attempt to disguise the transferee. Respondent, relying on Heyen, asserts that the Symphony and CFT were merely intermediaries in petitioners' plan to transfer their MIL interests to their sons and the trusts.

In Heyen, a taxpayer, seeking to avoid the gift tax by taking advantage of the annual gift tax exclusion, transferred stock to 29 intermediate recipients, all but two of whom made

[7](...continued)
courts have been reluctant to use substance over form in certain cases involving completed gifts to charity. E.g., Carrington v. Commissioner, 476 F.2d 704 (5th Cir. 1973) (holding, in an income tax case, that where respondent seeks to use the step transaction doctrine to disregard a donation of appreciated property to a charitable organization, the central inquiry is whether the donor parted with all dominion and control), affg. T.C. Memo. 1971-222.

blank endorsements of the stock, which the issuing bank subsequently reissued to the intended beneficiaries. The court stated:

> The [intermediate] recipients either did not know they were receiving a gift of stock and believed they were merely participating in stock transfers or had agreed before receiving the stock that they would endorse the stock certificates in order that the stock could be reissued to decedent's family. [Id. at 361.]

The court further stated:

> The evidence at trial indicated decedent intended to transfer the stock to her family rather than to the intermediate recipients. The intermediary recipients only received the stock certificates and signed them in blank so that the stock could be reissued to a member of decedent's family. Decedent merely used those recipients to create gift tax exclusions to avoid paying gift tax on indirect gifts to the actual family member beneficiaries. [Id. at 363.]

In order for us to ignore petitioners' allocation in the assignment agreement, respondent must establish that petitioners coordinated, and the charities colluded in or acquiesced to, a plan to avoid petitioners' gift taxes by undervaluing the transferred interests and intended to divert CFT's interest to their sons and the trusts. See Heyen v. United States, supra; Schultz v. United States, supra; Griffin v. United States, supra; Estate of Murphy v. Commissioner, supra. Respondent did not present the requisite evidence for us to invoke the substance over form doctrine.

Respondent stated on brief that, after execution of the assignment agreement, petitioners "washed their hands" of the

transaction, and the donees took over. Petitioners' sons' involvement in the subsequent allocation of the transferred interests does not affect the petitioners' gift tax liability, particularly in the absence of a showing that petitioners retained some control over the subsequent allocation. See sec. 25.2511-2(a), Gift Tax Regs. (stating that the gift tax is measured by the value of the property passing from the donor). Petitioners' sons and the estate planner made all the arrangements relating to the valuation. This Court, however, will not impute to petitioners an intent to avoid the gift tax merely from the appraiser's valuation of the transferred partnership interests, the sons' involvement in the planning process, or the hiring of an estate planner charged with tax minimization. See Estate of Strangi v. Commissioner, 115 T.C. 478, 484-485 (2000) ("Mere suspicion and speculation about a decedent's estate planning and testamentary objectives are not sufficient to disregard an agreement in the absence of persuasive evidence"), revd. on other grounds 293 F.3d 279 (5th Cir. 2002); Hall v. Commissioner, 92 T.C. 312 (1989).

Respondent failed to establish that the Symphony or CFT participated, knowingly or otherwise, in a plan to facilitate petitioners' purported avoidance of gift tax. Indeed, the testimony and evidence established that the Symphony and CFT acted independently. CFT did not hire its own appraiser because it had confidence in the appraiser hired by petitioners' sons. While in hindsight (i.e., after this Court's valuation) it was

imprudent for the charitable organizations to forgo an independent appraisal,[8] these organizations were not sham intermediaries. Prior to signing the confirmation agreement, the Symphony and CFT could have independently valued MIL, forced arbitration, and thwarted any purported plan to avoid the gift tax. Cf. Compaq v. Commissioner, 277 F.3d 778, 784 (5th Cir. 2001) (declining, in an income tax case, to disregard a transaction that involved even a minimal amount of risk and was conducted by entities separate and apart from the taxpayer), revg. 113 T.C. 214 (1999).

There is no evidence of an implicit or explicit agreement, between petitioners and either the Symphony or CFT, that the Symphony or CFT would accept less than that which petitioners transferred to each organization. In fact, respondent stipulated that "Before the call right was exercised, there was no agreement among Mr. or Mrs. McCord, the McCord brothers, the Symphony or CFT as to when such a buyout would occur or to the price at which the buyout would occur."

In sum, respondent failed to establish that the undervaluation of MIL, reallocation of MIL interests, and

[8] Ms. Willhoite, president of the Symphony, and Mr. Fjordback, president of CFT, each had an obligation to ensure receipt of the property interests petitioners transferred to the Symphony and CFT, respectively. See Tex. Socy. DAR, Inc. v. Ft. Bend Chapter, 590 S.W.2d 156, 164 (Tex. Civ. App. 1979), (citing Intl. Bankers Life Ins. Co. v. Holloway, 368 S.W.2d 567 (Tex. Sup. Ct. 1963)); see also Texas Non-Profit Corporation Act, Tex. Rev. Civ. Stat. art. 1396-2.22 (2002).

subsequent transfer of a portion of CFT's MIL interest to the sons and the trusts, were parts of a plan by petitioners to avoid the gift tax. CFT's retention of a much smaller interest (i.e., 3.62376573 percent) than petitioners transferred, pursuant to the assignment agreement, has no effect on the value of the transferred property on January 12, 1996, the date the gift became complete.

III. Formula Clause Does Not Violate Public Policy

Relying primarily on Commissioner v. Procter, 142 F.2d 824 (4th Cir. 1944), respondent contended that petitioners' formula clause was against public policy, and therefore void, because such clause "is a 'poison pill' created to discourage audit of the gifts and to fabricate phantom charitable gift and income tax deductions."

In Commissioner v. Procter, supra, the court considered a clause causing a gift to revert to the donor if a court determined that the gift was taxable. The court held that such a clause "is clearly a condition subsequent and void because contrary to public policy." Id. at 827. The court reasoned that the clause would discourage the collection of tax because attempted collection would defeat the gift, the clause would "obstruct the administration of justice by requiring the courts to pass upon a moot case", and the clause, if allowed to stand, would defeat the judgment of a court. Id. Likewise, in Ward v. Commissioner, 87 T.C. 78 (1986), a clause allowed the taxpayer to

revoke a gift of stock if it was determined that, for gift tax purposes, the fair market value of such stock exceeded $2,000 per share. The Court similarly concluded that such a clause was a condition subsequent and void because it was against public policy.

Contrary to the valuation clauses in Commissioner v. Procter, supra, and Ward v. Commissioner, supra, which adjusted the amount transferred based upon a condition subsequent, petitioners' valuation clause defined the amount of property transferred. Simply put, petitioners' gift does not fail upon a judicial redetermination of the transferred property's value. Petitioners made a legally enforceable transfer of assignee interests to CFT, with no provision for the gift to revert to petitioners or pass to any other party on the occurrence of adverse tax consequences. CFT merely failed to protect its interest adequately. Procter and Ward are distinguishable. Petitioners' formula clause was not against public policy.

IV. Conclusion

The majority seek to restrict petitioners' charitable deduction to that which CFT accepted in the confirmation agreement. The parties agree that the gift closed upon the execution of the assignment agreement. At that moment, petitioners transferred and CFT had a $2,838,899 MIL interest. CFT waived its arbitration rights, and petitioners did not participate in the subsequent allocation. Whether CFT failed to

adequately protect its interest or was swindled by petitioners' sons does not affect the value of what petitioners transferred to CFT.

The majority prudently avoid using the substance over form, violation of public policy, or realistic possibility of receipt doctrines as support for their holding. The majority, however, disregard the assignment agreement, other established facts, and applicable case law in order to support a line of analysis and conclusion that even respondent did not advocate. We are not responsible for protecting the fisc. Rather, our role and duty are to interpret and adhere to the rule of law–-even if uncomfortable with the result.

CHIECHI, J., agrees with this concurring in part and dissenting in part opinion.

LARO, J., dissenting: A thin majority holds today that "each petitioner is entitled to a charitable contribution deduction under section 2522 of $207,510 resulting from the transfer to CFT [Communities Foundations of Texas, Inc.]." Majority op. at 65. Each petitioner reported for that transfer a charitable deduction of $162,172.60, and CFT is not entitled to enjoy any funds in excess of that amount. In that the majority respects the subject transaction and allows each petitioner to deduct a charitable contribution of approximately $45,000 for value that a charity will never enjoy, I dissent.

1. Majority Applies Its Own Approach

To reach the result that the majority desires, the majority decides this case on the basis of a novel approach neither advanced nor briefed by either party and concludes that the Court need not address respondent's arguments as to public policy and integrated transaction. Majority op. p. 64 note 47. Specifically, under the majority's approach (majority's approach), the term "fair market value" as used in the assignment agreement denotes simply the value ascertained by the parties to that agreement (or, in certain cases by an arbitrator) and not the actual amount determined under the firmly established hypothetical willing buyer/hypothetical willing seller test that has been a fundamental part of our Federal tax system for decades on end. Majority op. p. 64 note 47; see also United States v. Cartwright, 411 U.S. 546, 550-551 (1973) ("The willing buyer-

willing seller test of fair market value is nearly as old as the federal income, estate, and gifts taxes themselves"). Whereas the majority ostensibly recognizes that firmly established test in its determination of the fair market value of the subject property, majority op. p. 64 note 46, the majority essentially holds that the parties to the assignment agreement are not bound by that test when they themselves ascertain the fair market value of that property, id. at 61-64.

As I understand the majority's rationale, the parties to the assignment agreement are not bound by that test because the assignment agreement only uses the phrase "fair market value" and not the phrase "fair market value as finally determined for Federal gift tax purposes". To my mind, the subject property's fair market value is its fair market value, notwithstanding whether fair market value is ascertained by the parties or "finally determined for Federal gift tax purposes". I know of nothing in the tax law (nor has the majority mentioned anything) that provides that property such as the subject property may on the same valuation date have one "fair market value" when "finally determined" and a totally different "fair market value" if ascertained beforehand.[1] The majority's interpretation of the

[1] The three regulatory provisions relied upon by the majority (majority op. p. 64 note 46) in support of its position do not adequately support that position. Sec. 1.664-2(a)(1)(iii), Income Tax Regs., for example, uses the phrase

(continued...)

assignment agreement is at odds with the interpretation given that agreement by not only the trial Judge, but by both parties as well.

The majority allows petitioners an increased charitable contribution that would be disallowed under either the public policy or integrated transaction doctrine. In that both of these doctrines are fundamental to a proper disposition of this case, it is incumbent upon the Court to address one or both of them. The majority inappropriately avoids discussion of these doctrines by relying on the principle that the Court "may approve a deficiency on the basis of reasons other than those relied upon by the Commissioner". Majority op. p. 64 note 47. The majority, however, fails to recognize that the majority is not approving respondent's deficiency in full but is rejecting a portion of it. In fact, the majority even acknowledges that "the application of respondent's integrated transaction theory would result in an initial increase in the amount of petitioners' aggregate taxable gift by only $90,011". Id. Whereas the majority attempts to downsize the significance of a $90,011 adjustment by recharacterizing it as "only" and "less than 1 percent", id., the fact of the matter is that the dollar magnitude of a $90,011

---

[1](...continued)
"fair market value * * * incorrectly determined by the fiduciary" to refer to an earlier determination of fair market value that is inconsistent with the fair market value "finally determined for Federal tax purposes".

increase is significant to the fisc (as well as to most people in general) notwithstanding that it may constitute a small percentage of the aggregate taxable gift as found by the majority.[2] I know of no principle of tax law (nor has the majority cited one) that provides that an adjustment otherwise required by the tax law is inappropriate when it is a small percentage of a base figure such as aggregate taxable gifts.

2. Increased Charitable Deduction Is Against Public Policy

Allowing petitioners to deduct as a charitable contribution the increase in value determined by the Court is against public policy and is plainly wrong. No one disputes that CFT will never benefit from the approximately $45,000 that each petitioner is entitled to deduct as a charitable contribution pursuant to the majority opinion. Nor does anyone dispute that the only persons benefiting from the increased value are petitioners and that the only one suffering any detriment from the increased value is the fisc. I do not believe that Congress intended that individuals such as petitioners be entitled to deduct charitable contributions for amounts not actually retained by a charity. See Hamm v. Commissioner, T.C. Memo. 1961-347 (charitable contribution under sec. 2522 requires "a reasonable probability

[2] The majority does not state what the $90,011 is less than 1 percent of. I believe the majority is referring to the relationship of the $90,011 to the aggregate taxable gift as found by the majority.

that the charity actually will receive the use and benefit of the gift, for which the deduction is claimed"), affd. 325 F.2d 934 (8th Cir. 1963).

I would deny a charitable deduction for the increased value by applying to this case a public policy doctrine that is similar to the doctrine applied by the Courts in Commissioner v. Procter, 142 F.2d 824, 827 (4th Cir. 1944), revg. on other grounds a Memorandum Opinion of this Court, and Ward v. Commissioner, 87 T.C. 78 (1986). In Commissioner v. Procter, supra, the taxpayer transferred certain property interests to a trust benefiting his children. The trust instrument provided that, if a competent Federal court of last resort should find any part of the transfer to be subject to gift tax, then that portion of the property subject to such tax would not be considered to have been transferred to the trust. The Court of Appeals for the Fourth Circuit declined to respect this adjustment provision. The court stated:

> We do not think that the gift tax can be avoided by any such device as this. Taxpayer has made a present gift of a future interest in property. He attempts to provide that, if a federal court of last resort shall hold the gift subject to gift tax, it shall be void as to such part of the property given as is subject to the tax. This is clearly a condition subsequent and void because contrary to public policy. A contrary holding would mean that upon a decision that the gift was subject to tax, the court making such decision must hold it not a gift and therefore not subject to tax. Such holding, however, being made in a tax suit to which the donees of the property are not parties, would not be binding upon them and they might later enforce

> the gift notwithstanding the decision of the Tax Court. It is manifest that a condition which involves this sort of trifling with the judicial process cannot be sustained. [Id. at 827. * * *]

The court also noted that the adjustment clause was contrary to public policy because: (1) Public officials would be discouraged from attempting to collect the tax since the only effect would be to defeat the gift; (2) the adjustment provision would tend to obstruct the administration of justice by requiring the court to address a moot case; and (3) the provisions should not be permitted to defeat a judgment rendered by the court. Id.

We followed Procter in Ward v. Commissioner, supra. In Ward, the taxpayers, husband and wife, each transferred 25 shares of stock to each of their three sons. At the time of the gifts, the taxpayers and their sons executed a "gift adjustment agreement" that was intended to ensure that the taxpayers' gift tax liability for the stock transfers would not exceed the unified credit against gift tax that the taxpayers were entitled to at that time. Id. at 87-88. The agreement stated that, if it should be finally determined for Federal gift tax purposes that the fair market value of the transferred stock either was less than or greater than $2,000 per share, an adjustment would be made to the number of shares conveyed so that each donor would have transferred $50,000 worth of stock to each donee. Id. We concluded that the fair market value of the stock exceeded $2,000 per share for each of the relevant years. Id. at 109.

More importantly, we declined to give effect to the gift adjustment agreement. We noted that honoring the adjustment agreement would run counter to the policy concerns articulated in Commissioner v. Procter, supra. Ward v. Commissioner, supra at 113. We also concluded that upholding the adjustment agreement would result in unwarranted interference with the judicial process, stating:

> Furthermore, a condition that causes a part of a gift to lapse if it is determined for Federal gift tax purposes that the value of the gift exceeds a given amount, so as to avoid a gift tax deficiency, involves the same sort of "trifling with the judicial process" condemned in Procter. If valid, such condition would compel us to issue, in effect, a declaratory judgment as to the stock's value, while rendering the case moot as a consequence. Yet, there is no assurance that the petitioners will actually reclaim a portion of the stock previously conveyed to their sons, and our decision on the question of valuation in a gift tax suit is not binding upon the sons, who are not parties to this action. The sons may yet enforce the gifts. [Id. at 114.]

Here, CFT receives no benefit from the Court-determined increase in the value of the subject property, but petitioners benefit in that they are entitled to an additional charitable deduction. As was true in Commissioner v. Procter, supra, the possibility of an increased charitable deduction serves to discourage respondent from collecting tax on the transaction because any attempt to enforce the tax due on the transaction is of no advantage to the fisc.

3. Each Step of the Transaction Is Part of an Integrated Transaction

All of the steps which were taken to effect the transfer of petitioners' partnership interests to their sons (inclusive of the trusts) were part of a single integrated transaction. The purpose of that transaction was to transfer the interests with an avoidance of Federal gift taxes, while, at the same time, discouraging audit of the transfer and manufacturing phantom charitable gift and income tax deductions in the event that the value of the transfer was later increased. I reach my conclusion in light of the following facts which were found by the trial judge or are reasonable inferences therefrom: (1) Petitioners were seeking expert advice on the transfer of their wealth with minimal tax consequences, (2) the transaction contemplated that the charities would be out of the picture shortly after the gift was made, (3) the transfers of the partnership interests to the charities were subject to a call provision that could be exercised at any time, (4) the call provisions were exercised almost contemporaneously with the transfers to the charities, (5) the call price was significantly below fair market value, (6) the charities never obtained a separate and independent appraisal of their interests (including whether the call price was actually the fair market value of those interests), (7) neither charity ever had any managerial control over the partnership, (8) the charities agreed to waive their arbitration

rights as to the allocation of the partnership interests, and (9) petitioners' sons were at all times in control of the transaction. I also query as to this case why a charity would ever want to receive a minority limited partnership interest, but for an understanding that this interest would be redeemed quickly for cash, and find relevant that the interest was subject to the call provision that could be exercised at any time.

4. Conclusion

The majority has placed its stamp of approval on a transaction that not only is a prime example of clear taxpayer abuse but has as its predominant (if not sole) purpose the avoidance of Federal taxes. The majority has done so either because it does not recognize the abuse or, more likely, that it feels impotent to stop the abuse. The majority has gone as far as to condone taxpayer-abusive behavior by allowing petitioners to deduct a charitable contribution for amounts which will never benefit a charity. For these and the other reasons stated herein, I dissent.

VASQUEZ, J., agrees with this dissenting opinion.

COUNSEL:

Jerome K. Frost, P. C., Troy (Joel R. Brandes and Jerome K. Frost of counsel), for appellant. I. As a consequence of defendant's limited notice of appeal and his presentation of evidence of the value of his law license at trial, the court below lacked jurisdiction to determine defendant's cross appeal from that part of the judgment that valued his law license in the amount requested by him and distribute its value to him. (Hecht v City of New York, 60 NY2d 57, 467 N.Y.S.2d 187, 454 N.E.2d 527; Royal v Brooklyn Union Gas Co., 122 AD2d 132, 504 N.Y.S.2d 519; Christian v Christian, 55 AD2d 613, 389 N.Y.S.2d 136; Nemia v Nemia, 124 AD2d 407, 507 N.Y.S.2d 768.) II. The Court should overrule the holding of O'Brien v O'Brien 66 NY2d 576, 498 N.Y.S.2d 743, 489 N.E.2d 712 [1985]) that a professional license earned during a marriage constitutes marital property to be evaluated for equitable distribution. (Elkus v Elkus, 169 AD2d 134, 572 N.Y.S.2d 901; Golub v Golub, 139 Misc 2d 440, 527 N.Y.S.2d 946; Martin v Martin, 200 AD2d 304, 614 N.Y.S.2d 775.) III. If the Court does not overrule O'Brien, it should limit its application to the working spouse/student spouse scenario, and not apply it to this case. (Perri v Perri, 97 AD2d 399, 467 N.Y.S.2d 226.) IV. Defendant failed to establish the value of plaintiff's medical license. V. Either defendant's license or his career is a marital asset subject to equitable distribution. (Marcus v Marcus, 137 AD2d 131; Finocchio v Finocchio, 162 AD2d 1044, 556 N.Y.S.2d 1007; DiCaprio v DiCaprio, 162 AD2d 944, 556 N.Y.S.2d 1011; Elkus v Elkus, 169 AD2d 134, 572 N.Y.S.2d 901; Phelps v Phelps, 199 AD2d 608, 604 N.Y.S.2d 339; Martin v Martin, 200 AD2d 304, 614 N.Y.S.2d 775; Maher v Maher, 196 AD2d 530, 601 N.Y.S.2d 165.) VI. Under the totality of circumstances of this case, defendant should not be awarded any interest in plaintiff's medical license. (Morrongiello v Paulsen, 195 AD2d 594, 601 N.Y.S.2d 121; Musumeci v Musumeci, 133 Misc 2d 139, 506 N.Y.S.2d 629; Duspiva v Duspiva, 181 AD2d 810, 581 N.Y.S.2d 376; McAlpine v McAlpine, 176 AD2d 285, 574 N.Y.S.2d 385; Savasta v Savasta, 146 Misc 2d 101.) VII. The predominating and pervasive factor governing equitable distribution in this case is the fact that gifts from plaintiff's parents, particularly plaintiff's mother, constitute the

source of the vast bulk of the marital estate. Given with the intent primarily to benefit plaintiff, the number and magnitude of these gifts dictate that the bulk of marital property be awarded plaintiff. (Ackley v Ackley, 100 AD2d 153, 472 N.Y.S.2d 804; Arvantides v Arvantides, 64 NY2d 1033, 489 N.Y.S.2d 58, 478 N.E.2d 199; Guarnier v Guarnier, 155 AD2d 744, 547 N.Y.S.2d 455; Zacharek v Zacharek, 116 AD2d 1004, 498 N.Y.S.2d 625; Palmer v Palmer, 156 AD2d 651, 549 N.Y.S.2d 148; Kobylack v Kobylack, 111 AD2d 221, 489 N.Y.S.2d 257; Barnes v Barnes, 106 AD2d 535, 483 N.Y.S.2d 358; Michalek v Michalek, 114 AD2d 655, 494 N.Y.S.2d 487; Kawasaki v Kasting, 124 AD2d 1034, 508 N.Y.S.2d 762; Vogel v Vogel, 156 AD2d 671, 549 N.Y.S.2d 438.) VIII. The trial court erred in terminating defendant's obligation to pay spousal maintenance. (Miklowitz v Miklowitz, 79 AD2d 795, 435 N.Y.S.2d 116; Matter of Kronenberg v Kronenberg, 101 AD2d 951, 475 N.Y.S.2d 638; Matter of Doscher v Doscher, 80 A.D.2d 945, 54 N.Y.2d 655; People v De Leo, 185 AD2d 374, 585 N.Y.S.2d 629; Blinderman v Blinderman, 80 AD2d 907, 437 N.Y.S.2d 404; Matter of Knights v Knights, 71 NY2d 865, 527 N.Y.S.2d 748, 522 N.E.2d 1045; Romanous v Romanous, 181 AD2d 872, 581 N.Y.S.2d 410; Hickland v Hickland, 39 NY2d 1, 382 N.Y.S.2d 475, 346 N.E.2d 243; Alfano v Alfano, 151 AD2d 530, 542 N.Y.S.2d 313; Matter of Moore v Moore, 115 AD2d 894, 496 N.Y.S.2d 583.) IX. The court below erred in awarding plaintiff, as part of her equitable distribution, her mother's bonds. (Hull v Littauer, 162 NY 569, 57 N.E. 102; Jarrett v Madifari, 67 AD2d 396, 415 N.Y.S.2d 644.)

Friedman and Manning, P. C., Delmar (Michael P. Friedman and Stephen L. Molinsek of counsel), for respondent. I. Defendant's license to practice law has merged into his career as a public servant and his career has no value for purposes of equitable distribution. (O'Brien v O'Brien, 66 NY2d 576, 498 N.Y.S.2d 743, 489 N.E.2d 712; Maher v Maher, 196 AD2d 530, 601 N.Y.S.2d 165; Marcus v Marcus, 137 AD2d 131; Parlow v Parlow, 145 Misc 2d 850, 548 N.Y.S.2d 373; Burns v Burns, 84 NY2d 369, 618 N.Y.S.2d 761, 643 N.E.2d 80; Elkus v Elkus, 169 AD2d 134, 572 N.Y.S.2d 901.) II. Defendant established his entitlement to a share of plaintiff's medical license. III. Defendant has established the value of plaintiff's medical license and degree. (Maloney v Maloney, 137 AD2d 666, 524 N.Y.S.2d 758; Bugliari v Bugliari, 169 AD2d 697, 564 N.Y.S.2d 186.) IV. The court below properly terminated defendant's maintenance obligation to plaintiff. (Dowdle v Dowdle, 114 AD2d 699, 494 N.Y.S.2d 548; Schnoor v Schnoor, 189 AD2d 809, 592 N.Y.S.2d 460; Anglin v Anglin, 148 AD2d 833, 538 N.Y.S.2d 668.) V. The trial court correctly held that bearer bonds in the parties' safety deposit box were marital property. (Sarafian v Sarafian, 140 AD2d 801, 528 N.Y.S.2d 192; Lischynsky v Lischynsky, 120 AD2d 824, 501 N.Y.S.2d 938; Di Nardo v Di Nardo, 144 AD2d 906, 534 N.Y.S.2d 25; Brown v Brown, 148 AD2d 377, 538 N.Y.S.2d 945.) VI. The court below properly determined that gifts received from plaintiff's mother were marital assets subject to equitable distribution. (Carney v Carney, 202 AD2d 907, 609 N.Y.S.2d 425; Graham v Graham, 175 AD2d 540, 572 N.Y.S.2d 800.) VII. The Court has jurisdiction to review the disposition of defendant's law license.

OPINIONBY:

TITONE

OPINION:

Titone, J.

In O'Brien v O'Brien (66 N.Y.2d 576, 498 N.Y.S.2d 743, 489 N.E.2d 712), this Court held that a professional license acquired two months before the commencement of the matrimonial action was marital property subject to equitable distribution under Domestic Relations Law § 236 (B). Since that decision, the courts of this State have struggled with the problems involved in distributing the value of older professional licenses that have been utilized in the development of their holders' careers. The primary question presented by this appeal is whether a license that has been exploited by the licensee to establish and maintain a career may be deemed to have "merged" with the career and thereby lost its character as a separate distributable asset. D1I

The parties were married in 1969. At the time of their marriage, both parties had undergraduate college degrees and neither possessed any appreciable assets. Defendant husband attended law school during the first three years of the marriage, gaining admission to the Bar in 1973. He thereafter practiced law and was earning an annual salary of $ 97,000 as a Deputy First Assistant Attorney-General when the parties separated in mid-1989.

Plaintiff wife acquired a master's degree in psychology during the early years of her marriage. Over the next 12 to 13 years, she worked as a school psychologist, taking time off occasionally to care for the couple's children or to attend graduate school. In 1984, plaintiff began attending medical school. She graduated in 1988 and, after completing a one-year internship, she received a license to practice medicine in July of 1989. Plaintiff commenced this matrimonial action on September 1, 1989, four months before the completion of her second internship.

By a judgment of divorce dated October 1, 1991, the Supreme Court awarded each party custody of one of the couple's two children. Defendant was ordered to pay child support and weekly maintenance and the marital property was divided equally between the parties. In determining the total value of the marital estate, the court included the value of each party's professional license as measured by the increased earning capacity it represented: $ 529,363 for defendant's law license and $ 903,406 for plaintiff's medical license. The marital estate was then divided so that each party retained the value of his or her license and pension interest. The marital residence was to be sold and the proceeds distributed equally. The other marital assets, including vehicles, investments and vacation property were also distributed. Both parties then appealed from the portions of the judgment that they deemed objectionable.

The Appellate Division modified in several important respects. On defendant's appeal, the Court held that defendant's law license should not have been treated as separate marital property available for equitable distribution because it had "long since merged into [defendant's] professional career" and was not " 'an asset ... possess[ing] an independent identity for the purpose of computing appreciation' " (190 A.D.2d 74, 81, quoting Kalisch v Kalisch, 184 A.D.2d 751, 752, 585 N.Y.S.2d 476). Several of plaintiff's arguments regarding the distribution of marital property were rejected, but the Court agreed with her contention that her medical license had been overvalued. Based on these and other perceived problems in the divorce judgment, the Appellate Division reversed and remitted to the Supreme Court for a redistribution of the marital assets as well as for a modification of the conditions imposed in connection with defendant's visitation rights.

On the remand, Supreme Court redistributed the marital property in accordance with the Appellate Division's decision. The court also granted a defense motion to eliminate defendant's prospective maintenance because of his recent job loss. Defendant had applied for relief from his maintenance obligation during the pendency of the appeal to the Appellate Division after plaintiff had appeared at a press conference and accused him of engaging in criminal activity. The acknowledged purpose of this press conference was to embarrass defendant's employer, the then-State Attorney-General, who was campaigning for a different office. As a result of these accusations, defendant was forced to resign from his position and had been unable to find new employment. The court found that defendant's job loss was not a self-imposed hardship and that, in view of plaintiff's current annual income, defendant should not be obliged to continue paying her maintenance. Plaintiff then took a second appeal.

On that appeal, the Appellate Division affirmed, rejecting plaintiff's contentions regarding the elimination of her maintenance and the purported one-sidedness of the redistribution of marital property. The Court also declined either to exclude plaintiff's medical license from the marital estate or to reconsider its earlier conclusion that defendant's law license was improperly included. Plaintiff took the present appeal by permission of this Court.

II.

Initially, we reject plaintiff's arguments regarding the inclusion of her own medical license as an item of marital property available for equitable distribution. Contrary to plaintiff's contentions, nothing that has occurred in the 10 years since O'Brien was decided suggests a reason to overrule it. The "chaos" and "confusion" that plaintiff perceives are really nothing more than reflections of how difficult it is to achieve true fairness in the division of a married couple's tangible and intangible assets. Far from undermining O'Brien's pragmatic and theoretical worth, the decade of case law history that plaintiff cites is an example of the kind of experimentation and creative problem solving that the Domestic Relations Law and equity itself demand.

Equally unpersuasive is plaintiff's contention that O'Brien should be limited to cases in which one spouse worked and supported the family financially while the other went to school and earned a professional license. Plaintiff's emphasis on the nontitled spouse's financial subsidy to the exclusion of all other forms of contribution represents an unacceptably narrow view of the economic partnership that characterizes the institution of marriage. Here, for example, although defendant apparently did not finance plaintiff's medical education, he was the primary provider of economic support to the family while plaintiff was in school. Additionally, he prepared family meals and tended to the children's needs so that plaintiff could devote her time to her studies and work. Thus, the evidence supports the affirmed finding below that defendant "contributed to the functioning of the household while plaintiff attended medical school." Under these circumstances, inclusion of plaintiff's license as an item of distributable marital property is appropriate to fulfill the core purpose of the O'Brien rule: to assure the nontitled spouse an equitable share of the license to which that spouse's efforts contributed. Accordingly, there is no sound basis for withholding O'Brien's application here. We note that, contrary to plaintiff's contentions, there is also record support for the Appellate Division's valuation of her medical license. Consequently, the lower courts' distribution of plaintiff's professional license will not be disturbed. *

* Plaintiff has also argued that the bulk of the marital estate should have been awarded to her because a considerable portion of it was derived from gifts from plaintiff's parents. However, the courts below both found that the gifts in question were given with an intent to benefit the parties equally and were therefore

properly included as marital property. This conclusion, as well as the Supreme Court's affirmed rulings with respect to defendant's maintenance obligation and the distribution of certain bonds, were supported by the record and thus there is no basis for this Court to intervene.

III.

We reach a different conclusion, however, with respect to the Appellate Division's disposition of defendant's professional license to practice law. As a threshold matter, we reject plaintiff's contention that the Appellate Division lacked the power to modify Supreme Court's decision to distribute the license's value because defendant did not specifically mention that aspect of the judgment in his notice of appeal. Contrary to plaintiff's contentions, the scope of the Appellate Division's review power was not limited by the recitations in defendant's notice of appeal. Notably, there is no indication on this record that plaintiff was prejudiced by any ambiguity or omission in the notice. Accordingly, there is no basis for this Court to interfere with the Appellate Division's discretionary choice to construe defendant's notice of appeal liberally or even to reach beyond the issues it cited.

Turning to the substantive question, we find considerable merit in plaintiff's contention that the Appellate Division erred in treating defendant's law license as having "merged" with defendant's career. The "merger" principle on which the Court's decision was based is derived from the Second Department's ruling in Marcus v Marcus 137 A.D.2d 131), in which it was held that a professional license should not be assigned an independent value where the licensee has maintained a professional practice for a substantial period. In that situation, the Marcus Court stated, the license "should be deemed to have merged with and been subsumed by the practice itself" (id., at 139). The underlying rationale is that "the equitable considerations that ... motivated the O'Brien court are fundamentally different" where the license has been utilized for a substantial period to establish a career or professional practice and to generate tangible assets for the family (Parlow v Parlow, 145 Misc. 2d 850, 856, 548 N.Y.S.2d 373; see, Maher v Maher, 196 A.D.2d 530, 531, 601 N.Y.S.2d 165).

In the years since the merger theory was first articulated, the lower courts of this State have applied it with varying results. While the theory has repeatedly been reaffirmed (see, e.g., Duffey v Duffey, 198 A.D.2d 581, 603 N.Y.S.2d 234; Maher v Maher, supra, at 531; Kalisch v Kalisch, supra; McGowan v McGowan, 142 A.D.2d 355, 359, 535 N.Y.S.2d 990, n; Madori v Madori, 151 Misc. 2d 737, 573 N.Y.S.2d 553, affd 201 AD2d 859, 608 N.Y.S.2d 331; Vanasco v Vanasco, 132 Misc. 2d 227, 503 N.Y.S.2d 480; but see, Holihan v Holihan, 159 A.D.2d 685, 553 N.Y.S.2d 434), the courts have also found it necessary to make significant modifications to address the myriad of situations in which the problem of matured professional licenses has arisen. In Shoenfeld v Shoenfeld (168 A.D.2d 674, 563 N.Y.S.2d 500), for example, the Second Department upheld the lower court's holding that a two-year-old practice was too new to have subsumed the underlying professional license. Similarly, in Phelps v Phelps (199 A.D.2d 608, 609, 604 N.Y.S.2d 339), the Third Department held that it was not error to assign separate distributable value to a medical license that had been in use for seven years because the licensee had made several changes in the form of his practice and his earnings had not yet "stabilized sufficiently to permit a valuation of his practice which would truly reflect the increased earning capacity [attributable to his] license." In Aborn v Aborn (196 A.D.2d 561, 601 N.Y.S.2d 339), the Second Department declined to apply the merger rule to a spouse's professional license where the licensee had dissolved what had once been a profitable professional partnership and had relocated his practice several times.

In yet another approach to the problems created by professional mobility, the lower courts have held that a license which has previously "merged" with a professional career or practice may "reemerge" as a significant and separately distributable asset if the licensed spouse experiences a significant career change. This principle was applied where the licensed spouse sold a long-standing medical practice and opened a new one in another State (Behrens v Behrens, 143 A.D.2d 617, 532 N.Y.S.2d 893; cf., Marano v Marano, 200 A.D.2d 718, 607 N.Y.S.2d 359) and where a spouse with a law license terminated his career as a United States Congressman shortly after the matrimonial action was commenced (Martin v Martin, 200 A.D.2d 304, 614 N.Y.S.2d 775). It was also applied, in combination with the Shoenfeld-Phelps-Aborn exception, where a licensed attorney who had worked as a law assistant for 10 years switched to private practice and the four-year history of that practice did not "warrant the finding" that the practice had subsumed the license (Wells v Wells, 177 A.D.2d 779, 780, 576 N.Y.S.2d 390).

Yet another variant of the merger rule was applied by the Fourth Department in Finocchio v Finocchio (162 A.D.2d 1044, 556 N.Y.S.2d 1007) and DiCaprio v DiCaprio (162 A.D.2d 944, 556 N.Y.S.2d 1011). The Courts in those cases acknowledged the applicability of the merger principle but treated the enhanced earning power associated with a spouse's professional license as a marital asset anyway. Over a vigorous dissent, the Finocchio majority reasoned that the merger principle should not be applied "in a way which would deprive the nonlicensee spouse of ... any interest [in] the marital asset beyond commencement of the matrimonial action" (162 A.D.2d at 1045). Accordingly, while the spouse's professional license had "merged" into his career, that conclusion meant only that the method for valuing the license "must include a projection of the licensee's future earnings 'based on actual past earnings produced by actual practice' " (id., at 1046, quoting McGowan v McGowan, supra, at 359, n; accord, DiCaprio v DiCaprio, supra, at 945). In other words, under Finocchio "the only effect of the merger is that the court uses the owner's actual earnings to compute the [license's] value instead of using the projected earnings of the average professional" (Turner, Equitable Distribution of Property § 6.19A, at 227 [1993 Cum Supp]).

Although the Finocchio approach has much merit, it is ultimately flawed because of its continued reference to the concept of "merger." As is evident from the case law, the use of that term injects an artificial and unnecessarily confusing element into an already difficult assessment process.

One objection to the concept of "merger" is that it rests on the notion that an unrevoked professional license can somehow lose its character as a component of marital property solely because of its use in advancing its holder's career. If, as we held in O'Brien, a currently valid professional license is a distributable item of economic value, it should logically retain that quality throughout its existence. It would be anomalous to suggest that a marital asset may "merge" or disappear and perhaps even "reemerge" or reappear depending on the vicissitudes of the licensee's professional career (cf., Oldham, Divorce, Separation and Distribution of Property § 9.02 [1], at 9-11 ["(i)t would be Alice-in-Wonderlandish to say that education is property only sometimes"]).

A second objection to the "merger" theory is that it is difficult to apply. Even the doctrine's simplest application is problematic, since there can be no clear yardstick for measuring when the licensee's practice or career has matured to the point where it has "subsumed" the license (see, Scheinkman, Supplementary Practice Commentaries, McKinney's Cons Laws of NY, Book 14, Domestic Relations Law § 236, C236B:6, at 40 [1995 Cum Ann Pocket Part]). The doctrine's proper use becomes even

more confusing when it is applied to the many situations in which the licensee has experienced career reversals, has opted to change professional direction or has simply selected a career that does not "square up exactly" with the scope of the license (id., at 40-41).

Finally and most fundamentally, the merger doctrine is flawed because its practical effect is to limit the O'Brien rule's application to recently acquired licenses (see, DiCaprio v DiCaprio, supra, at 946-948 [Lawton, J., dissenting]; Marcus v Marcus, supra, at 139). Such a narrow approach is inconsistent with the equitable goal of assuring both spouses a fair share of all of the assets that were produced by the marital partnership. Application of the merger doctrine is particularly inimical to the statutory purposes because it generally favors the nonlicensed spouse in a shorter marriage over the nonlicensed spouse who is faced with rebuilding his or her economic life after the breakup of a long-term marriage (see, Scheinkman, op. cit., C236B:6, at 40 [1995 Cum Ann Pocket Part]).

In view of these logical and practical difficulties, we conclude that the letter and spirit of our holding in O'Brien is best served by eliminating the concept of "merger" from the inquiry. The merger doctrine should be discarded in favor of a commonsense approach that recognizes the ongoing independent vitality that a professional license may have and focuses solely on the problem of valuing that asset in a way that avoids duplicative awards. O'Brien permits the court to include in the marital estate the present value of any increased earning capacity attributable to a professional license earned during the marriage. That increased earning capacity continues to exist, to a greater or lesser degree, throughout the life of the license. Even after the licensee has had the time and opportunity to exploit the license and to realize a portion of the enhanced earning potential it affords, the license itself retains some residual economic value, although in particular cases it may be nominal (see, Turner, op. cit., at 227-228). That value can be measured and distributed just as a newly acquired license is valued through various actuarial techniques that are well known to valuation experts.

To be sure, the valuation inquiry is made more complicated by the passage of time and the licensee's harvesting of some portion of the enhanced earning capacity that accompanies the license. The value of a newly earned license may be measured by simply comparing the average lifetime income of a college graduate and the average lifetime earnings of a person holding such a license and reducing the difference to its present value (see, O'Brien v O'Brien, supra, at 582; 2 McCahey, Valuation & Distribution of Marital Property § 30.03 [3], at 30-19--30-21). In contrast, where the licensee has already embarked on his or her career and has acquired a history of actual earnings, the foregoing theoretical valuation method must be discarded in favor of a more pragmatic and individualized analysis based on the particular licensee's remaining professional earning potential (see, Finocchio v Finocchio, supra, at 1045-1046; Scheinkman, op. cit., C236B:6, at 48 [1995 Cum Ann Pocket Part]). Moreover, care must be taken to ensure that the monetary value assigned to the license does not overlap with the value assigned to other marital assets that are derived from the license such as the licensed spouse's professional practice. The courts must also be meticulous in guarding against duplication in the form of maintenance awards that are premised on earnings derived from professional licenses.

The existence of these complications, however, is not a sound reason to introduce nettlesome legal fictions or to excise an asset to which the nontitled spouse has contributed from the marital estate. As we stated in O'Brien, the complexity of calculating the present value of a partially exploited professional license is no more difficult than the problem of computing wrongful death damages or the loss of earning potential that is occasioned by a particular injury (66 N.Y.2d at 588). Nor does it lead to significantly

more speculation than is involved in the now-routine task of valuing a professional practice for the purpose of making a distributive award (see, id., citing Arvantides v Arvantides, 64 N.Y.2d 1033, 489 N.Y.S.2d 58, 478 N.E.2d 199; Litman v Litman, 93 A.D.2d 695, 463 N.Y.S.2d 24, affd 61 N.Y.2d 918, 474 N.Y.S.2d 718, 463 N.E.2d 34;see also, Burns v Burns, 84 N.Y.2d 369, 376-377, 618 N.Y.S.2d 761, 643 N.E.2d 80).

IV.

In this case, no distributive award representing the value of defendant's law license was made because of the Appellate Division's prior ruling that the license had merged with defendant's legal career. This ruling was error, since the license had a residual economic value independent of defendant's career. Accordingly, the matter must be remitted to the Supreme Court so that a new distribution of the marital assets taking into account the value of defendant's law license, can be made. Notably, the question of valuation will probably have to be tried de novo, since it appears that the experts' assessments and the Supreme Court's initial valuation determination were made without compensating for the portion of the enhanced earning capacity attributable to the license that has already been realized through defendant's legal career (see, Turner, op. cit., at 227-228). However, a full de novo inquiry into the other distributive issues is not necessary, since those issues have already been resolved in prior proceedings and, as noted elsewhere in this opinion, we find no basis to disturb their disposition in the courts below.

Inasmuch as there must be a new trial on this narrow point, we turn briefly to the question of whether the trial court may consider the postcommencement events that may have affected the value of defendant's license. Of course, the most significant of these is defendant's 1992 job loss, which was caused in part by what the Appellate Division characterized as plaintiff's " 'acrimonious and vindictive conduct' " (208 AD2d, at 837).

Domestic Relations Law § 236 (B) (1) (c) provides that the classification of property as "marital" or "separate" is governed by the date on which the matrimonial action was commenced or the parties' separation agreement executed. However, the equitable distribution statute does not specify the date that is to be used as the touchstone for measuring the value of the marital property (see, Scheinkman, op. cit., C236B:26, at 287). Thus, the appropriate date for measuring the value of marital property has been left to the sound discretion of the trial courts, which should make their determinations with due regard for all of the relevant facts and circumstances (see, Domestic Relations Law § 236 [B] [4] [b]).

In attempting to select a suitable valuation date, some courts have drawn a distinction between "active" assets (i.e., those whose value depends on the labor of a spouse) and "passive assets" (i.e., those whose value depends only on market conditions). These courts have concluded that "active" assets should be valued only as of the date of the commencement of the action, while the valuation date for "passive" assets may be determined more flexibly (see, Smerling v Smerling, 177 A.D.2d 429, 576 N.Y.S.2d 271; Heine v Heine, 176 A.D.2d 77, 580 N.Y.S.2d 231; Zelnik v Zelnik, 169 A.D.2d 317, 573 N.Y.S.2d 261; Kallins v Kallins, 170 A.D.2d 436, 565 N.Y.S.2d 227; Greenwald v Greenwald, 164 A.D.2d 706, 565 N.Y.S.2d 494). Such formulations, however, may prove too rigid to be useful in particular cases. Thus, they should be regarded only as helpful guideposts and not as immutable rules of law (see generally, Scheinkman, op. cit., C236B:26, at 79-80 [1995 Cum Ann Pocket Part]).

Here, for example, defendant's law license would probably be classified as an "active" asset in the lower courts' taxonomy. Yet, one of the apparent goals of using the date of the action's commencement for measuring the assets' worth, i.e., preventing the licensed spouse from unilaterally manipulating the asset's value, may not be relevant in this case, where the actions of the nonlicensed spouse may have undermined the license's residual economic value.

In the final analysis, whether the unusual postcommencement events that led to defendant's job loss should be considered in assessing the residual value of his law license is a question that lies squarely within the trial court's discretion. We hold only that the timing of these events should not by itself be a legal impediment to such consideration.

Accordingly, the order of the Appellate Division should be modified, with costs to appellant, and the case remitted to Supreme Court for further proceedings in accordance with this opinion and, as so modified, affirmed.

Chief Judge Kaye and Judges Simons, Bellacosa, Smith and Ciparick concur; Judge Levine taking no part.

Order modified, etc.

552 F.2d 1239 (1977)

Elmer E. MILLS and Louis Susman, Plaintiffs-Appellants, Cross-Appellees, v. The ELECTRIC AUTO-LITE COMPANY et al., Defendants-Appellees, Cross-Appellants.

Nos. 75-1558, 75-1559.

United States Court of Appeals, Seventh Circuit.

Argued April 6, 1976.
Decided April 7, 1977.
Rehearing and Rehearing Denied June 3, 1977.

Barnabas F. Sears, Arnold I. Shure, Alex Elson, Harry B. Reese, Aaron S. Wolff, Thomas L. Brejcha, Jr., Willard J. Lassers, Chicago, Ill., for plaintiff-appellants.

Jerold S. Solovy, Joan M. Hall, Alan L. Metz, Michael J. Rovell, Michael J. Place, and Jenner & Block, of counsel, Chicago, Ill., for appellees.

Before SWYGERT and CUMMINGS, Circuit Judges, and JAMESON, Senior District Judge.[1]

Rehearing and Rehearing En Banc Denied June 3, 1977.

SWYGERT, Circuit Judge.

The principal issue in this appeal is whether the terms of a merger between Mergenthaler Linotype Company ("Mergenthaler") and the Electric Auto-Lite Company ("Auto-Lite") were fair to Auto-Lite's minority shareholders. We hold that the merger terms were fair and reverse the judgment of the district court.

I

This is the second time that this case has come before us. In order to place this appeal in its proper perspective, we will briefly review the case's history.

Prior to 1960 Auto-Lite primarily manufactured automotive parts and equipment. Because of changes in the automobile industry in the late 1950's, the continuation of its traditional business was threatened and it began a program of diversification into other industries. Nonetheless, in 1963 a substantial percentage of its sales remained tied to the automobile industry.

[1] The Honorable Willian J. Jameson, United States Senior District Judge for the District of Montana, is sitting by designation.

Mergenthaler produced and distributed typesetting equipment. It began to purchase Auto-Lite stock in 1957 and by March 1962 had acquired 54.2 percent of Auto-Lite. At that point Auto-Lite became a subsidiary of Mergenthaler and Mergenthaler obtained control of the Auto-Lite Board of Directors.

In early 1963 Mergenthaler decided to attempt a merger of itself and Auto-Lite into a new company to be called "Eltra Corporation." The Auto-Lite Board voted to accept the proposed merger on May 28, 1963 and on May 29 a request for proxies was sent to shareholders accompanied by a statement in which the Board endorsed the merger. The holders of approximately thirteen percent of the minority shares had to approve the merger in order to secure the two-thirds vote necessary for ratification. The merger was approved at a shareholders' meeting on June 27, 1963 and became effective on June 28, 1963.

Plaintiffs, who were Auto-Lite shareholders representing themselves and all other minority Auto-Lite shareholders, filed suit on June 26, 1963 in the district court for the Northern District of Illinois. They sought to set aside the merger on the ground that the proxy statement was deceptive because it endorsed the merger without clearly disclosing that the Auto-Lite Board was controlled by Mergenthaler. The district court agreed with plaintiffs' theory and held that the proxy statement violated section 14(a) of the Securities Exchange Act of 1934. It also held that the plaintiffs had shown a causal relationship between the proxy statement and the consummation of the merger. 281 F.Supp. 826 (N.D.Ill.1967).

This court affirmed the district court's holding that the proxy statement was illegally deceptive but reversed on the causality issue, holding that no relief could be appropriate if the defendants could show "by a preponderance of probabilities" that the merger would have been approved even if the proxy statement had not been deceptive. 403 F.2d 429, 436 (7th Cir. 1968).

The Supreme Court reversed and reinstated the judgment of the district court. It held that "[w]here there has been a finding of materiality, a shareholder has made a sufficient showing of causal relationship between the violation and the injury for which he seeks redress if, as here, he proves that the proxy solicitation itself, rather than the particular defect in the solicitation materials, was an essential link in the accomplishment of the transaction." 396 U.S. 375, 385, 90 S.Ct. 616, 622, 24 L.Ed.2d 593 (1970).

The Court went on to consider the relief to which plaintiffs were entitled. It noted that the merger did not need to be set aside because of the deception in the proxy statement, though a court could order such action if it were warranted by equitable considerations. It then discussed the possibility of monetary relief and stated:

[W]here, as here, the misleading aspect of the solicitation did not relate to terms of the merger, monetary relief might be afforded to the shareholders only if the merger resulted in a reduction of the earnings or earnings potential of their holdings. In short, damages should be recoverable only to the extent that they can be shown. If commingling of the assets and operations of the merged companies makes it impossible to establish direct injury from the merger, relief might be predicated on a determination of the fairness of the terms of the merger at the time it was approved. These questions, of course, are for decision in the first

instance by the District Court on remand, and our singling out of some of the possibilities is not intended to exclude others. 396 U.S. at 388-89, 90 S.Ct. at 624.

Finally, the Court held that the plaintiffs were entitled to be reimbursed by the corporation for litigation expenses and reasonable attorneys' fees.

The case then moved back to the district court for a determination of the appropriate relief. The court first held that the merger should not be rescinded. It then determined that the merger terms were unfair to plaintiffs and awarded the class they represent $1,233,918.35, as well as approximately $740,000 in prejudgment interest. It further held that plaintiffs' attorneys should be compensated out of this award.

Both parties now appeal from the district court's judgment. Plaintiffs contend that the amount of damages was too low and that their attorneys' fees should be assessed against defendants rather than against the damages awarded. Defendants assert that no damages should have been awarded because the terms of the merger were fair.

II

The district court considered two possible theories of damages in attempting to follow the Supreme Court's mandate: (1) to compensate plaintiffs for the reduction of the earnings potential of their holdings in Auto-Lite as a result of the merger; or (2) an award based on a determination of the fairness of the terms of the merger at the time it was approved. It rejected the use of the first theory under the circumstances of this case and adopted the second. We shall evaluate both whether the district court was erroneous in its choice of remedies and whether it correctly applied the second theory.

In order to perform this evaluation, it is first necessary to describe the merger terms. They called for the minority Auto-Lite shareholders to receive 1.88 preferred shares of Eltra for each share of Auto-Lite common that they held and the Mergenthaler shareholders to receive one common share of Eltra for each share of Mergenthaler common that they held. Eltra preferred shares were convertible into common shares on a one-to-one basis for the first two years following the merger and on a slightly decreasing basis for the next three years.[2] At the time of the merger Mergenthaler common paid a dividend of $1 per share and Auto-Lite common paid a dividend of $2.40 per share. Under the merger terms Eltra common was to pay a dividend of $1 per share and Eltra preferred a dividend of $1.40 per share. The dividend received by the Auto-Lite minority shareholders was therefore increased as a result of the merger by twenty-three cents for each share of Auto-Lite that they had held, because 1.88 × $1.40 = $2.63.

The preferred Eltra stock was clearly worth more than Eltra common because it paid a higher dividend and represented a more secure investment if the new corporation encountered financial difficulties, yet was convertible into common stock. During the month following the merger, the average market value of Eltra preferred was $31.06 per share. Consequently the Auto-Lite minority shareholders received stock worth $58.39 on the

[2] In the third, fourth, and fifth years following the merger, one share of Eltra preferred was convertible into .955, .910, and .865 shares respectively of Eltra common.

market for each share of Auto-Lite that they had previously held, because 1.88 × $31.06 = $58.39. The average market value of Eltra common for this month was $25.25 per share. Since the Mergenthaler shareholders received one share of Eltra common for each share of Mergenthaler common, the Auto-Lite shareholders received stock for each share of Auto-Lite that they held worth $58.39/$25.25 = 2.31 times as much on the market as the stock that the Mergenthaler shareholders received for each share of Mergenthaler that they held. We therefore hold that the exchange ratio for the merger was effectively 2.31 to 1.[3]

III

A theory of damages based on the "reduction of the earnings or earnings potential" of the Auto-Lite minority shareholders caused by the merger is an attempt to discern, by looking at the postmerger performance and activities of the Auto-Lite subsidiary in comparison to the other components of Eltra, whether the value placed on the Auto-Lite shares at the time the merger took place was fair to those shareholders. Plaintiffs contend that the postmerger record of Eltra demonstrates the unfairness of the merger in two significant ways: first, by showing that Eltra appropriated for use in its other divisions liquid assets held by Auto-Lite prior to the merger; and second, by showing that Eltra continually siphoned off Auto-Lite's postmerger earnings.

Even if plaintiffs' assertions are true, they cannot form the basis for an award of damages. Plaintiffs assume that it would be unfair to the former minority Auto-Lite shareholders if, after the merger, the Eltra management "weakened" the Auto-Lite divisions by shifting liquid assets or earnings to other divisions. This assumption is incorrect. After the merger the former Auto-Lite shareholders had become Eltra shareholders and had no more interest in the Auto-Lite divisions than any other Eltra shareholder. Therefore, they could not be injured by intra-corporate transfers of assets designed to strengthen the corporation as a whole. The interests of the former Auto-Lite shareholders and former Mergenthaler shareholders coincided after the merger, and the Eltra management could not possibly take actions that benefitted "its" shareholders at the expense of the Auto-Lite shareholders.

Plaintiffs rely heavily on *Affiliated Ute Citizens v. United States,* 406 U.S. 128, 92 S.Ct. 1456, 31 L.Ed.2d 741 (1975); *Gerstle v. Gamble-Skogmo, Inc.,* 478 F.2d 1281 (2d Cir. 1973); and *Janigan v. Taylor,* 344 F.2d 781 (1st Cir.), *cert. denied,* 382 U.S. 879, 86 S.Ct. 163, 15 L.Ed.2d 120 (1965), to support their theory of postmerger damages. They contend that under these decisions the defendants must be compelled to disgorge any "profits" realized as a consequence of the deceptive proxy statement and that those profits should be measured by the sum of assets which moved from Auto-Lite to the other divisions of Eltra following the merger. However, plaintiffs misconceive the holdings of these cases. The cases all involved situations where defendants had realized demonstrable profits, at the expense of plaintiffs, through misrepresentation. Under such circumstances all three courts permitted a postmerger valuation of property which plaintiffs had been fraudulently induced to sell. But whether the exchange of Auto-Lite stock for Eltra stock profited Mergenthaler at the expense of the Auto-Lite minority shareholders is precisely the issue we are trying to

[3] The district court, after considering the factors we have just reviewed, found the effective exchange ratio to be 2.25 to 1. Although the court never explained precisely how it arrived at this figure, the difference of .06 between the two ratios will not prove to be significant in subsequent calculations.

resolve. Damages must be based on evidence that the Auto-Lite minority shareholders were not paid a fair price and the fact that Eltra shifted assets away from Auto-Lite following the merger is not satisfactory evidence of unfairness at the time the merger was consummated.

Plaintiffs ignored the only theory on which relief based on the postmerger performance of Eltra might be granted. If the ratio of the postmerger earnings of the Auto-Lite subsidiary of Eltra to the postmerger earnings of the Mergenthaler subsidiary were unusually high given the terms of the merger, it would be evidence that those terms were unfair to the Auto-Lite minority shareholders. This is true not because the former Auto-Lite minority shareholders are entitled to any percentage of the earnings of the Auto-Lite subsidiary after the merger, but because a high ratio would indicate that in retrospect the merger terms underestimated Auto-Lite's value as an enterprise.

Eltra's financial records show that for the ten year period beginning in 1963 and ending in 1972 the Auto-Lite divisions earned $122,501,632 while the Mergenthaler divisions earned $58,827,595. Before the merger Auto-Lite had 1,159,265 shares outstanding while Mergenthaler had 2,698,822 shares outstanding. Arguably, therefore, Auto-Lite would have had average yearly earnings per share of $10.57 between 1963 and 1972 if there had been no merger because its average yearly earnings would be $122,501,632/10 = $12,250,163 and $12,250,163/1,159,265 = $10.57. By the same reasoning, Mergenthaler's average yearly earnings per share for the same period would be $2.18 because $58,827,595/10 = $5,882,759 and $5,882,759/2,698,822 = $2.18. The ratio of $10.57 to $2.18 is 4.85, indicating that the actual effective exchange ratio of 2.31 underestimated the value of Auto-Lite in comparison to Mergenthaler.

An award of damages based on the comparative postmerger earnings of Auto-Lite and Mergenthaler, however, depends upon the assumption that the two subsidiaries continued to function independently after the merger was consummated. If the assets or operations of the two subsidiaries were commingled, it would be improper to utilize the postmerger performance of either one as evidence that at the time of the merger Auto-Lite was a stronger company than the merger terms indicated, because Auto-Lite's increase in earnings following the merger might have been the result of input from Mergenthaler that it would not have received without the merger.

The district court held that there was substantial commingling of the assets and operations of Auto-Lite and Mergenthaler during the period following the merger. It found that the plaintiffs' statistics failed to measure the change in the quality of management that flowed to the Auto-Lite divisions of Eltra as a consequence of the merger or the economies of scale that the merger produced. It also found the statistics to be misleading because the postmerger Eltra statements underestimated the expenses of the Auto-Lite divisions, making the earnings of those divisions appear higher than they really were. These findings are supported by substantial evidence and we affirm them.

Given the fact that significant commingling occurred, the postmerger earnings of Auto-Lite and Mergenthaler cannot supply a reliable guide to whether the merger terms were fair to the Auto-Lite minority shareholders. Even in the absence of commingling, postmerger evidence can only create a rebuttable inference of unfairness because it is impossible to

know with certainty whether the increase in earnings of one partner to a merger should have been predictable at the time the merger took place. In this case the ratio of the earnings per share of the two companies for the four years prior to and including 1963 were all at or below the effective exchange ratio of 2.31 to 1.[4] Plaintiffs have not shown that the management of Mergenthaler should have known in 1963 that Auto-Lite's earnings were going to increase faster than Mergenthaler's during the next decade. The more plausible inference is that, insofar as Auto-Lite's business became more productive because of factors unrelated to commingling, they were unforeseeable at the time the merger was consummated. Accordingly, we hold that the district court did not abuse its discretion in refusing to award damages based on postmerger data.

IV

A.

The district court based its award of damages on an assessment of the fairness of the merger terms at the time the merger took place. It evaluated five criteria in making this assessment: (1) the market value of each corporation's stock; (2) each corporation's earnings; (3) the book value of each corporation's assets; (4) the dividends that each corporation paid on its stock; and (5) other "qualitative factors" indicating the strength of each corporation. The court found market value to be an unreliable criterion and discounted the importance of dividends. It found that the comparative earnings and book values of each corporation were significant and demonstrated that the merger terms were unfair to the Auto-Lite minority. The court did not indicate what significance it was attributing to "qualitative factors."

Based on these findings the court held that the merger would have been fair if the Auto-Lite minority shareholders had received the equivalent of 2.35 shares of Eltra common for each share of Auto-Lite that they held and Mergenthaler shareholders had received one share of Eltra common for each share of Mergenthaler that they held. It also found that the effective exchange ratio for the actual merger, where the Auto-Lite minority shareholders received 1.88 shares of Eltra preferred for each share of Auto-Lite common that they held, was 2.25 to 1 in terms of Eltra common.[5] It then awarded damages of $1,233,918.35 to plaintiffs based on the differential of .10 between the effective exchange ratio of 2.25 to 1 and the fair exchange ratio of 2.35 to 1.[6]

---

[4] Plaintiffs assert that the ratio of Auto-Lite's earnings per share to Mergenthaler's earnings per share was 2.2 in 1960, 1.0 in 1961, 1.5 in 1962, and 2.33 in 1963. Defendants assert that the ratio was 1.0 in 1961, 1.27 in 1962, 1.79 in the fiscal year 1963, and 1.90 in the calendar year 1963. They do not provide figures for 1960.

[5] *See* note 3 *supra.*

[6] The district court used the following method of reaching the figure of $1,233,918.35:

(1) Since each share of Auto-Lite was exchanged for the equivalent of 2.25 shares of Eltra common while each share of Mergenthaler was exchanged for one share of Eltra common, the holder of one share of Auto-Lite received 67.38 percent of the interest in Eltra distributed for one share of Auto-Lite and one share of Mergenthaler, because 2.25/(2.25 + 1) = .6738.

B.

The district court discounted the significance of the comparative market values of Auto-Lite and Mergenthaler stock during the five year period preceding the merger because it found that purchases of Auto-Lite stock by Auto-Lite itself and by Mergenthaler, and of Mergenthaler stock by the American Manufacturing Company,[7] made market value an unreliable indicator during that period of the true worth of the two parties to the merger. Defendants challenge the district court's assessment while plaintiffs contend that it was correct, at least for the period after 1960. We agree with defendants.

---

(2) If a fair exchange ratio of 2.35 had been employed, the holder of one share of Auto-Lite would have received 70.15 percent of the interest in Eltra distributed for one share of Auto-Lite and one share of Mergenthaler, because 2.35/(2.35 + 1) = .7015.

(3) Since 70.15-67.38 = 2.77, the Auto-Lite minority shareholders were unfairly deprived of 2.77 percent of the combined value of an Auto-Lite share and a Mergenthaler share for each share of Auto-Lite that they held.

(4) In July 1963, the month following the merger, the average market value of the Eltra stock that was distributed for one share of Mergenthaler was $25.25 and the average market value of the Eltra stock that was distributed for one share of Auto-Lite was $58.39. Accordingly, the combined value of one share of Mergenthaler and one share of Auto-Lite was $25.25 + $58.39 = $83.64.

(5) 2.77 percent of $83.64 is $2.317. Since there were 532,500 minority shares of Auto-Lite, the total damages were 532,500 X $2.317 = $1,233,918.35.

The district court's method of calculation was mathematically unsound. First, there was an arithmetic error in step one because 2.25/(2.25 + 1) is .6923 rather than .6738. The more fundamental error, however, lies in the court's premise in steps 3, 4, and 5 that the 2.77 percent figure could be multiplied by the combined market value of one share of Auto-Lite and one share of Mergenthaler to calculate the per share dollar loss which the Auto-Lite shareholders had suffered. It is circular reasoning to use the market value generated by the actual merger. If a different exchange ratio had been employed, the market value of Eltra stock undoubtedly would have been different. Moreover, the mathematical significance of the 2.77 percent figure is questionable.

What the court should have done, if its differential of .10 were correct, was simply multiply the differential by the number of minority Auto-Lite shares to calculate the number of additional Eltra common shares that should have been distributed to plaintiffs to make the merger terms fair.

[7] Auto-Lite purchased 579,883 of its own shares in 1960-61, 31,500 shares in 1962, and 4,900 shares in 1963 before May 24. Mergenthaler purchased 212,600 shares of Auto-Lite between February 1957 and the end of 1958, and an additional 167,350 shares in 1959. It owned 408,950 shares by May 24, 1960. After Auto-Lite purchased some of its own shares in August 1961, Mergenthaler's holdings constituted approximately thirty-four percent of Auto-Lite. In March 1962 Mergenthaler purchased an additional 219,065 shares of Auto-Lite, increasing its holdings to approximately fifty-four percent of Auto-Lite's stock.

American had 43,100 shares of Mergenthaler prior to 1958. By December 1960 it had increased its holdings to 190,834 shares, which became 763,336 shares after a 4 for 1 stock split in March 1961. It purchased an additional 108,073 shares in 1962 and 12,700 shares in 1963 before May 24. Its holdings in Mergenthaler at the time of the merger constituted approximately thirty-three percent of Mergenthaler's stock. American also purchased an additional 2,800 shares of Mergenthaler between May 27 and June 14, 1963. However, these purchases are irrelevant because the final comparison of the market value of Auto-Lite and Mergenthaler stock used in setting the merger terms was made on May 24, 1963.

The district court's holding depends upon the validity of two premises: first, that the inter- and intra-company purchases substantially affected the market value of either corporation's stock immediately prior to the merger and second, that any effect which these purchases did have caused the price of Auto-Lite stock to fall relative to the price of Mergenthaler stock.[8] We find neither premise to be supported by the evidence. The great portion of the inter- and intra-company purchases took place before the six month period immediately preceding the merger, and the effect of those purchases during that period was negligible.[9] There was no manipulation of stock prices immediately before the merger by any of the companies involved in an effort to secure more favorable merger terms. Moreover, the price ratio of the two stocks was the same during 1961 and 1962, when there were substantial purchases by Auto-Lite, Mergenthaler, and American, and the first half of 1963, when there were not.[10] This is a strong indication that the price of both corporations' stock was responding to factors other than these transactions.

Even if we assume that the purchases had an effect, it is difficult to see how it could be detrimental to the price of Auto-Lite relative to the price of Mergenthaler. Since all of the transactions at issue were purchases, they would have tended to raise rather than lower the price of the stock that was traded. But there was a greater volume of Auto-Lite stock purchases by Auto-Lite itself and by Mergenthaler than of Mergenthaler purchases by American.[11] Second, during the eighteen months prior to the merger the ratio of the inter- and intra-company purchases of Auto-Lite to the total amount of Auto-Lite stock traded was greater than the ratio of American's purchases of Mergenthaler to the total amount of Mergenthaler stock traded.[12] Finally, a greater proportion of the Auto-Lite purchases took

[8] Since defendants contend that market value should be used to measure the fairness of the merger terms, we need not be concerned with whether the purchases in question adversely affected the price of Mergenthaler stock relative to Auto-Lite stock.

[9] *See* note 7 *supra.* Auto-Lite's purchases of 4,900 shares of its own stock in 1963 up to May 24 constituted 8.2 percent of the 59,900 shares of Auto-Lite traded on the New York Stock Exchange during that period, and .42 percent of the 1,160,565 shares of Auto-Lite outstanding. American's purchases of 12,700 shares of Mergenthaler stock in 1963 up to May 24 constituted 6.3 percent of the 201,200 shares of Mergenthaler traded on the New York Stock Exchange during that period and .47 percent of the 2,698,822 shares of Mergenthaler outstanding. Mergenthaler acquired no Auto-Lite stock between March 1962 and the time of the merger.

[10] The ratio of the average price of Auto-Lite stock to the average price of Mergenthaler stock was 2.0 in 1961, 2.1 in 1962, and 2.1 in 1963 up to May 24, the last date on which the prices were compared for purposes of the merger

[11] The best evidence of this is the simple statistic that at the time of the merger Mergenthaler held approximately fifty-four percent of Auto-Lite's stock while American held approximately thirty-three percent of Mergenthaler's stock. Mergenthaler purchased all of its Auto-Lite shares after February 1957 while American purchased all but 2,000 of its Mergenthaler shares after June 1956. Therefore, Mergenthaler acquired its interest in Auto-Lite during roughly the same period that American acquired its interest in Mergenthaler, indicating that during this period the inter- and intra-company purchases of Auto-Lite stock constituted a greater percentage of the total amount of trading in that stock than did the inter-company purchases of Mergenthaler stock.

[12] In 1962 Mergenthaler acquired 219,065 shares of Auto-Lite through a tender offer to Auto-Lite shareholders and Auto-Lite itself purchased 31,500 shares out of the 171,300 shares traded on the New York Stock Exchange. In 1963 up to May 24 Auto-Lite purchased 4,900 of its shares out of the 59,900 shares traded on the New York Stock Exchange. Therefore, the inter- and intra-company transactions in Auto-Lite represented 56.7 percent of the total transactions in Auto-Lite during this period.

place in the period between 1961 and 1963, when they were likely to have a more substantial effect on price than earlier purchases.[13] The combination of these three factors indicates that the inter- and intra-company purchases pushed the price of Auto-Lite stock upward relative to Mergenthaler stock rather than producing the opposite effect.

We therefore hold that the inter- and intra-company transactions did not unfairly distort the relative market prices of Auto-Lite and Mergenthaler for purposes of determining the fairness of the merger. We must now decide what period of time should be used in calculating a price ratio between each corporation's stock. Since prices from the period immediately preceding the merger are the most likely to reflect the actual value of each corporation at the time the merger was consummated, we begin with a presumption that a short period is appropriate. Accordingly, we hold that the average market value for approximately the six month period preceding the merger should be used unless there are special factors indicating that this period is unreliable. Six months is long enough so that very short term price fluctuations will not play an unfairly important role and short enough so that the calculated ratio does not reflect business conditions that have substantially changed as of the time of the merger.

In this case the ratio between the average price of Auto-Lite and the average price of Mergenthaler during 1963 prior to the formulation of the merger terms in late May was 2.1. Our confidence that this figure accurately reflects the relative worth of the two corporations is bolstered by the fact that the ratio for 1962 was also 2.1 and was 2.0 for 1961. The similarity of these numbers is evidence that the ratio immediately preceding the merger was not the result of a short term anomaly caused either by the merger itself or by other factors.

Plaintiffs argue, however, that market prices were an unreliable indicator of the true worth of Auto-Lite and Mergenthaler between 1961 and 1963 but did provide a valid measure of each corporation's value between 1958 and 1960. We find these arguments to be unpersuasive. Plaintiffs first assert that Mergenthaler used its control over Auto-Lite in 1961-63 to compel it to pay unusually high dividends, with the effect of depressing the price of Auto-Lite stock by draining Auto-Lite of capital and raising the price of Mergenthaler stock by giving Mergenthaler funds with which to pay higher dividends. This reasoning is inconsistent. If the payment of higher dividends by Mergenthaler increased the value of Mergenthaler stock, it would follow that the payment of high dividends by Auto-Lite increased the attractiveness of Auto-Lite stock on the market. There is no reason to believe that a reduction in the Auto-Lite dividend would have resulted in raising the price of Auto-Lite stock. It is more likely that such a dividend reduction would have decreased the value of

---

In 1962 American purchased 103,073 shares of Mergenthaler out of the 522,900 shares traded on the New York Stock Exchange. In 1963 American purchased 12,700 shares of Mergenthaler out of 201,200 shares traded on the New York Stock Exchange. Therefore, American purchased 16.0 percent of the Mergenthaler stock sold during this period.

[13] Auto-Lite purchased 270,355 of its own shares in 1958-60 and 345,793 of its own shares in 1961-63. Mergenthaler purchased 282,550 shares of Auto-Lite in 1958-60 and 219,065 additional shares in 1961-63. Thus, the distribution of inter- and intra-company transactions in Auto-Lite between these two periods was roughly equal.

American purchased 147,734 shares of Mergenthaler in 1958-60 which became 590,936 shares after a 4 for 1 stock split. It purchased 139,766 shares of Mergenthaler in 1961-63. Thus, the great proportion of the inter-company trading in Mergenthaler was prior to 1961.

each corporation's stock. Accordingly, we hold that Auto-Lite's high dividends between 1961 and 1963 did not unfairly distort the relative market values of Auto-Lite and Mergenthaler.

Plaintiffs also urge that market prices between 1958 and 1960 provided a more accurate picture of each corporation's actual value than prices during the later period because a substantial change in the nature of Auto-Lite's business following 1960 temporarily depressed the price of its stock. We find this to be an argument for using the later prices rather than the earlier ones. The fact that Auto-Lite's traditional business was eroding by 1961 renders unreliable market values based on that business. In 1961 the market began to reflect the uncertainty in Auto-Lite's future which most observers perceived. That uncertainty remained at the time of the merger and should properly have been a factor in determining the merger terms.[14]

C.

After finding that market value provided an inaccurate measure of the true worth of Auto-Lite and Mergenthaler, the district court determined whether the merger terms were fair on the basis of comparative earnings and book value. Given our conclusion that market prices were an accurate gauge of actual value, we must decide whether the other criteria on which the district court relied should properly be considered in evaluating whether the merger was fair.

We hold that when market value is available and reliable, other factors should not be utilized in determining whether the terms of a merger were fair. Although criteria such as earnings and book value are an indication of actual worth, they are only secondary indicia. In a market economy, market value will always be the primary gauge of an enterprise's worth. In this case thousands of shares of Auto-Lite and Mergenthaler were traded on the New York Stock Exchange during the first part of 1963 by outside investors[15] who had access to the full gamut of financial information about both corporations, including earnings and book value. If we were to independently assess criteria other than market value in our effort to determine whether the merger terms were fair, we would be substituting our abstract judgment for that of the market. Aside from the problems that would arise in deciding how much weight to give each criterion, such a method would be economically unsound.

D.

We turn now to a determination of whether the merger terms were fair, based on the comparative market price of each corporation's stock during the first part of 1963. The simplest method of resolving this issue would be to compare the price ratio, in this case 2.1, to the effective exchange ratio, which we have previously established as 2.31. Under this framework the merger would be fair since the effective exchange ratio gave the Auto-Lite

[14] Another reason why we cannot accept plaintiffs' assertion that the 1958-60 prices were reliable while the 1961-63 prices were not is that there were more inter- and intra-company transactions during the earlier period than during the latter.

[15] *See* note 9 *supra.*

minority shareholders more Eltra stock than they were entitled to in the judgment of the market.

This method of calculation, however, assumes that the new corporation that results from a merger is worth exactly as much as the sum of what its two component parts were worth before the merger. As Professors Brudney and Chirelstein have cogently pointed out, this assumption is usually false because a merger produces a synergistic effect resulting in the merged corporation being worth more than the sum of the two old corporations. Brudney & Chirelstein, *Fair Shares in Corporate Mergers and Takeovers,* 88 Harv.L.Rev. 297, 308-09 (1974). They demonstrate that fairness requires that minority shareholders be compensated not only for the market value of their shares in the old corporation but also for the share of the synergism generated by the merger that is proportionate to the interest that those shares represented in the combined premerger value of the two old corporations. *Id.* at 313-25.

We adopt the approach formulated by Professors Brudney and Chirelstein and will attempt to apply it to this case. At the time of the merger there were 532,550 minority shares of Auto-Lite and 2,698,822 shares of Mergenthaler outstanding. During the first part of 1963 the average market price of Auto-Lite was $52.25 per share and the average market price of Mergenthaler was $24.875 per share. Thus, the premerger value of the minority holdings in Auto-Lite was 532,550 × $52.25 = $27,825,737 and the premerger value of Mergenthaler was 2,698,822 × $24.875 = $67,133,197. The combined premerger value of the two corporations was $27,825,737 + $67,133,197 = $94,958,934.[16]

In the month following the merger, Eltra common stock had an average market value of $25.25 per share. Eltra preferred stock had an average market value of $58.39 per 1.88 shares, the amount of stock which Auto-Lite shareholders had received for each share of Auto-Lite that they had held. The postmerger value of Eltra was therefore (2,698,822 × $25.25) + (532,550 X $58.39) = $68,145,255 + $31,095,594 = $99,240,849. The difference between the combined premerger value of Auto-Lite and Mergenthaler and the postmerger value of Eltra, which was $99,240,849 - $94,958,934 = $4,281,915, can be attributed to the synergism generated by the merger.

According to the fairness formula devised by Professors Brudney and Chirelstein, the minority shareholders of Auto-Lite should have received Eltra stock worth at least as much as the premerger market value of their holdings in Auto-Lite and a share of the synergism produced by the merger proportionate to the percentage of the combined premerger value of Auto-Lite and Mergenthaler which their holdings represented. The premerger value of the Auto-Lite minority shares was $27,825,737, which represented 29.3 percent of $94,958,934, the combined premerger value of Auto-Lite and Mergenthaler. Thus, to satisfy the constraints of fairness, the Auto-Lite minority shareholders should have received stock worth at least $27,825,737 + (.293 × $4,281,915) = $29,080,338. This would be equivalent to 1,151,696.5 shares of Eltra common at $25.25 per share. Had this many shares been

[16] Although Mergenthaler owned more than half of the Auto-Lite stock, this holding should not be independently counted as part of the combined value of the two corporations because it was already reflected in the value of Mergenthaler stock.

distributed to the Auto-Lite minority shareholders, the exchange ratio would have been 1,151,696.5/532,550 = 2.16 to 1.[17]

The Auto-Lite minority shareholders actually received preferred stock worth $58.39 on the market for each share of Auto-Lite that they had held. As a group, their Eltra holdings were worth 532,550 × $58.39 = $31,095,594. This was $31,095,594 - $29,080,338 = $2,015,256 more than fairness required. This result can be expressed in terms of Eltra common shares. Since the effective exchange ratio of the merger was 2.31 to 1, the property given the Auto-Lite minority was worth 2.31 - 2.16 = .15 shares of Eltra common per share of Auto-Lite more than what a fair amount would have been.

We therefore hold that the terms of the merger were fair and that plaintiffs should recover no damages. A numerical example may help to show the justice of this result. In early 1963, an Auto-Lite shareholder with one hundred shares and a Mergenthaler shareholder with 210 shares each owned stock worth approximately $5225. After the merger, the former Auto-Lite shareholder had 188 shares of Eltra preferred worth approximately $5839 while the former Mergenthaler shareholder had 210 shares of Eltra common worth approximately $5302. Both individuals benefitted from the merger, but the former Auto-Lite minority shareholder benefitted more.

V

The district court held that plaintiffs should recover their attorneys' fees and other litigation expenses out of the damages which the court awarded them. Since we have found that plaintiffs were treated fairly in the merger and are not entitled to damages, we must face the question of whether and how much they nonetheless should be compensated by Eltra for their fees and expenses.

When this case was before the Supreme Court, the Court held "that petitioners, who have established a violation of the securities laws by their corporation and its officials, should be reimbursed by the corporation or its survivor for the costs of establishing the violation." 396 U.S. at 389, 90 S.Ct. at 624 (footnote omitted). The Court later stated that "[w]hether petitioners are successful in showing a need for significant relief may be a factor in determining whether a further award should later be made. But regardless of the relief granted, private stockholders' actions of this sort `involve corporate therapeutics,' and furnish a benefit to all shareholders by providing an important means of enforcement of the proxy statute." *Id.* at 396, 90 S.Ct. at 627 (footnotes omitted).

We interpret this language to mean that plaintiffs should recover from Eltra all fees and expenses related to the establishment of a violation of the federal securities laws. This would encompass the litigation through the decision in the Supreme Court. The Court has

[17] We note that the price of Eltra common depended in part on the exchange ratio actually used. For example, if we assume that Eltra stock was distributed at an effective exchange ratio of 2.16 to 1, there would have been the equivalent of 2,698,822 + (2.16 × 532,550) = 3,849,130 Eltra common shares outstanding. Since the total postmerger value of Eltra was $99,240,849, the price of one share of Eltra common would rise to $99,240,849/3,849,130 = $25.78. However, the figures in the text give a good approximation of the number of Eltra common shares or their equivalent that the Auto-Lite minority shareholders should have received.

indicated that the award is not contingent upon the existence of a fund created from any damages eventually awarded the plaintiffs.[18]

The Court left open the question of whether plaintiffs should also be compensated for fees and expenses incurred in a trial and subsequent appeals on the issue of damages, implying that whether or not plaintiffs obtained damages should be a factor in resolving that question. We hold that plaintiffs are not entitled to be compensated for fees and expenses they have incurred since the Supreme Court's decision in this case. In *Alyeska Pipeline Co. v. Wilderness Society,* 421 U.S. 240, 95 S.Ct. 1612, 44 L.Ed.2d 141 (1975), the Supreme Court held that, absent statutory authority, the only exceptions to the general American rule that a litigant must pay his own fees and expenses are in situations where the litigant confers a common benefit on the class that he represents or where a losing party acts in bad faith. Since the Securities Exchange Act provides no authorization for fee-shifting in this type of case and the bad faith exception is inapposite here, plaintiffs cannot recover fees and expenses unless they demonstrate that their work on the issue of damages produced a common benefit for the former Auto-Lite minority shareholders. Plaintiffs cannot meet this burden. They have conferred no benefit upon the class they represent beyond the "corporate therapeutics" produced by their showing that the proxy statute was violated, and they must pay their own fees and expenses for their unsuccessful attempt to obtain damages for that violation.

The judgment of the district court is reversed and the cause is remanded for further proceedings consistent with this opinion.

[18] In its most recent decision dealing with the issue of fee-shifting, the Court by implication approved its earlier reasoning in *Mills, See Alyeska Pipeline Co. v. Wilderness Society,* 421 U.S. 240, 257-58, 95 S.Ct. 1612, 44 L.Ed.2d 141 (1975).

Full Text of Court Cases

Estate of Mitchell v. Commissioner (I)

Case name: Estate of Mitchell v. Commissioner (I)
Citation: T.C. Memo. 1997-461, 1997 Tax Ct. Memo LEXIS 546
Date of decision: October 9, 1997
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Jacobs
Experts: George B. Weiksner (for estate)
Kenneth W. McGraw (for estate)
Martin D. Hanan (for IRS)
E. James Brennan (for IRS)
SIC: 2844 Perfumes, Cosmetics, and Other Toilet Preparations (toothpaste, gel, and dentifrice powders)
NAICS: 325620 Toilet Preparation Manufacturing
323

Keywords: Estate tax

COUNSEL:

David W. K. Wong, B. John Williams, Jr., Miriam Louise Fisher, Karen L. Hirsh, and Melvin E. Lefkowitz, for petitioner.

Henry E. O'Neill, Alan Summers, and Paul G. Robeck, for respondent.

JUDGES:

JACOBS, JUDGE.

OPINIONBY:

JACOBS

OPINION:

MEMORANDUM FINDINGS OF FACT AND OPINION

JACOBS, JUDGE: Respondent determined a $45,117,089 Federal estate tax deficiency, an $8,396,020 penalty under section 6662(g), and a $147,623 penalty under section 6662(h). After concessions, the issues remaining for decision are: (1) The moment-of-death value of 1,226 shares of John Paul Mitchell Systems common stock; and (2) whether petitioner is liable for the section 6662(g) penalty. n1

All section references are to the Internal Revenue Code as amended and in effect at decedent's date of death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are found accordingly. The stipulations of facts, stipulations of settled issues, and attached exhibits are incorporated herein by this reference.

A. BACKGROUND

Paul Mitchell (Mr. Mitchell or decedent) was a resident of Hawaii when he died on April 21, 1989. Patrick T. Fujieki is the executor of the Estate of Paul Mitchell. Mr. Fujieki resided in Honolulu, Hawaii, at the time the petition in this case was filed.

Among the assets included in Mr. Mitchell's taxable estate were 1,226 shares of John Paul Mitchell Systems common stock held by the Paul Mitchell Trust (the Trust), a revocable trust established by Mr. Mitchell. It is the value of these shares at the moment of Mr. Mitchell's death that we must determine. n2

B. PAUL MITCHELL

Paul Mitchell was born Cyril Thomson Mitchell in Scotland on January 27, 1936. His mother was a hairdresser. At the age of 16, he enrolled in beauty school, and after a 5-year apprenticeship, he became a "qualified hairdresser". Thereafter, Mr. Mitchell worked in four salons and won several competitive hair contests in England.

In the early 1960's, Mr. Mitchell pursued fashion hair styling working with Vidal Sassoon and became one of London's best known hair stylists. When Mr. Sassoon opened his first U.S. salon, he chose Mr. Mitchell to train the staff. While employed with Vidal Sassoon, Mr. Mitchell brought to the United States the "blow dry" look.

In 1966, Mr. Mitchell left Mr. Sassoon and became director of Bendel's Beauty Floor at Henri Bendel's in New York City. While he was at Bendel's, his work was featured on the covers and pages of major fashion magazines. He became known as the "haircutter's haircutter".

In 1967, Mr. Mitchell and other investors opened Crimpers Salon, a successful high-fashion cutting salon, in New York City. Other Crimpers Salons subsequently opened in Boston, Chicago, Dallas, and Philadelphia. In 1971, Mr. Mitchell sold his share in Crimpers and spent a year away from the hair styling industry.

In 1972, Mr. Mitchell returned to the hair styling industry, opening the Superhair Salon in New York City, a high- fashion salon and cutting school. Several years later, he moved to Hawaii. His reputation as a master stylist continued, and he was invited to perform as a guest platform artist at professional beauty shows throughout the United States.

While demonstrating his techniques at professional beauty shows, Mr. Mitchell developed the "sculpted look" of hair styling. This new look started with an excellent cut. A product was introduced by Mr. Mitchell that gave the cut greater versatility, permitting the setting of hair without rollers or a curling iron. Mr. Mitchell's product, called "liquid styling tool", was a gel-like liquid that set hair in the shape into which it was combed. Mr. Mitchell's product line was marketed in orange and white bottles and sold only at the hair shows where Mr. Mitchell demonstrated his hair styling techniques. Mr. Mitchell's initial efforts to market his product line proved unsuccessful.

C. THE HAIR CARE INDUSTRY

The hair care products industry is segmented by distribution channels. "Mass market" products are sold directly to consumers through major retail outlets, such as supermarkets, drugstores, and discount stores. Products sold through this distribution channel are heavily dependent upon extensive and expensive mass-media advertising to generate an awareness of the product and consumer demands. "Over-the-counter" products are sold through beauty supply stores, which sell products that are not "salon-only" products (and are generally not available in the mass market). "Salon-only" (or "professional-only") products (such as the Paul Mitchell line described hereinafter) are available to the public only through professional hair salons. Throughout the 1980's, the greatest growth in sales of hair care products was in the salon-only market.

Salon-only products do not require a high level of advertising expenditures, but they are heavily dependent upon the recommendation of a brand, product, or system, by the hair stylist to the consumer in the salon. Because of the hair stylist's ability to influence the consumer, companies that sell their products through salons emphasize marketing to hair stylists and salon owners. Furthermore, these companies place importance on educating hair stylists and salon owners about their products in order to ensure correct recommendations to consumers, which in turn increase the possibility of repeat sales.

The professional hair care industry is trendy and fashion oriented and sells the public on changes in looks. Hair stylists learn the latest trends and fashions through trade magazines (such as Modern Salon, Salon Today, American Salon, and Salon News). Growth in sales for a professional hair care company depends upon maintaining a forward edge in fashion and trends. n3

There are three categories of liquid hair products: "Hair care" (shampoos, conditioners, and rinses); "styling products" (hair sprays, fixatives, mousses, sculpture lotions, etc.); and "chemical reactive products" (hair color, perms, and bleaches).

Professional-only hair care products are marketed on an implied promise to the hair stylists that such products will not be mass marketed or sold through drugstores, supermarkets, or discount stores. Professional hair stylists will not sell or use mass-marketed products in their salons. Mass marketing a product closes the salon or professional market to that product. n4

Education is an important aspect of marketing hair care products to hair stylists. This education includes hair shows, product knowledge classes, and styling classes (featuring new ways to cut hair and new products to achieve the latest looks). During hair shows, platform artists demonstrate new styles and techniques, using the promoted products. Hair shows occur at the international, national, regional, and local levels.

Hair care industry market revenues grew to $4.2 billion in 1988. During that year, shampoo sales rose by 4 percent, conditioner sales rose by 9 percent, and styling products sales rose by 30.7 percent. Hair sprays and hair styling products were growing at double-digit rates.

D. THE CREATION OF JOHN PAUL MITCHELL SYSTEMS

John Paul "Jones" DeJoria grew up in Los Angeles. Following his graduation from high school, he enlisted in the Navy. Upon his discharge therefrom, he had a variety of sales jobs, selling products such as encyclopedias, photocopiers, insurance, and magazines. In the early 1970's, Mr. DeJoria began working in the beauty products industry for Redken. He held several positions including field sales

representative, district manager (Texas), and national chain and salon manager. While employed at Redken, Mr. DeJoria gained extensive experience in the sale, marketing, promotion, and distribution of beauty products. He possessed exceptional organizational, managerial, and marketing skills.

Messrs. Mitchell and DeJoria first met in the early 1970's. They eventually developed a close friendship. In 1979, they joined forces to market Mr. Mitchell's hair care products (particularly the sculpting lotion) through professional-only hair salons. Mr. DeJoria believed he could successfully market the line. Initially, Messrs. Mitchell and DeJoria were unable to find anyone willing to provide financial assistance; thus, they pooled their resources of $700 to purchase an answering machine, bottles, and caps and hire an artist to design a logo for their labels. Mr. DeJoria persuaded a cosmetics laboratory to manufacture the first batch of products on credit. Instead of the orange and white bottles Mr. Mitchell had previously used, these products were packaged in white bottles with Paul Mitchell's name displayed in black lettering down the side.

At all relevant times, Paul Mitchell products were sold to the public only through professional hair salons.

1. STRUCTURE AND OWNERSHIP

On March 31, 1980, Messrs. Mitchell and DeJoria formed Paul Mitchell Systems, Inc. On May 9, 1985, the corporation changed its name to John Paul Mitchell Systems (JPMS). Messrs. Mitchell and DeJoria granted JPMS all proprietary and distribution rights to the hair and skin products that Mr. Mitchell developed (or had developed under his direction), including the products' trademark, service mark, or other intellectual property rights.

JPMS' articles of incorporation authorized the issuance of 10,000 shares of common stock. Between March 31, 1980, and April 21, 1989 (the date of Mr. Mitchell's death), JPMS had 2,500 shares issued and outstanding. Article VII of JPMS' bylaws provided that any transfer of JPMS stock was subject to a right of first refusal, exercisable first by the corporation, then by each nontransferring shareholder.

Initially, Mr. DeJoria owned 1,250 shares of JPMS common stock and Paul Mitchell Associates, Ltd. (PMA), owned 1,250 shares. Mr. Mitchell owned all of PMA. On February 20, 1982, PMA assigned its JPMS shares to Mr. Mitchell. On November 20, 1984, Mr. Mitchell assigned his JPMS shares to the Trust. On August 1, 1987, Mr. Mitchell, acting as trustee of the Trust, assigned 16 shares of JPMS common stock to Jeanne Braa, his long-time stage partner in hair shows, and 8 shares of JPMS common stock to Angus Mitchell, his son. Mr. DeJoria and JPMS executed written waivers of the right of first refusal with respect to all of these transfers.

As of April 21, 1989, the common stock of JPMS was owned as follows:

	Number of Shares	Percent
Mr. DeJoria	1,250	50.00
The Trust	1,226	49.04
Ms. Braa	16	0.64
Angus Mitchell	8	0.32

Total	2,500	100.00

JPMS' bylaws provided for a board of directors (the Board) consisting of four directors. However, from 1984 until April 15, 1989, Mr. Mitchell, Mr. DeJoria, and Peter Langenberg were the only Board members. On April 15, 1989, Mr. Langenberg resigned and Ms. Braa was elected to replace him.

From 1984 until April 1989 Mr. Mitchell served as president of JPMS; Mr. DeJoria served as chairman of the Board, chief executive officer, chief financial officer, and secretary.

As of April 21, 1989, the stock in JPMS had not been registered under any securities law; moreover, neither Mr. DeJoria nor Mr. Mitchell had ever contemplated such a registration or a public offering of JPMS' common stock.

2. PRODUCTS

JPMS debuted its products at the West Coast Beauty Supply Spring Style show in 1980, with Mr. Mitchell demonstrating the product line. JPMS sold the entire first batch of its products at the show, generating revenue of approximately $10,000.

That same year, JPMS began selling Paul Mitchell products through distributors. At the time, the product line consisted of "Shampoo One", "Shampoo Two", "The Conditioner", and "Hair Sculpting Lotion". The new hair sculpting lotion and sculpted look were well received in the market. Messrs. Mitchell and DeJoria began promoting JPMS products as a "system" of products to be used in conjunction with each other to achieve "the look".

At the time of Mr. Mitchell's death, JPMS sold the following products, which were formulated by independent chemists:

Shampoo products	Shampoo One; Shampoo Two; Awapuhi Shampoo; Tea Tree Special Shampoo
Hair conditioning products	The Conditioner; Super-Charged Conditioner; Hair Repair Treatment
Hair setting and styling products	Hair Sculpting Lotion; The Spray; Fast Drying Sculpting Spray; Freeze and Shine Super Spray; Super Clean Gel; Sculpting Foam; Super Clean Spray
Permanent wave products	The Solution; Special Perm Neutralizer; Awapuhi Conditioning (Box) Perm

3. MARKETING AND DISTRIBUTION

JPMS' marketing effort primarily targeted, and the distribution network was primarily oriented toward, hair stylists and salon owners who sold hair care products to their customers, rather than direct marketing to the consumers themselves. Mr. Mitchell's popularity and reputation with hair stylists were used to introduce JPMS' products, and the hair shows were used to increase the visibility of JPMS and its products.

JPMS' marketing strategy included the use of distributors to promote its products. As of April 21, 1989, JPMS had 38 distributors in the United States and 13 distributors in 12 other countries. Nearly all of the distributors had an exclusive geographic territory. The distribution network was generally composed of

friends of Messrs. Mitchell and DeJoria who believed that Mr. Mitchell's reputation as an avant-garde hair stylist, and Mr. DeJoria's business background, would sell the JPMS products. As of April 21, 1989, JPMS had no written agreements with its U.S. distributors.

Mr. DeJoria's organizational and marketing skills, combined with Mr. Mitchell's artistic creativity and expertise, allowed JPMS to create a successful and effective product line. The JPMS products were marketed only to salons and emphasized education as a selling technique.

E. MR. MITCHELL'S ROLE IN JPMS

In 1980, Mr. Mitchell promised hair stylists that his products, marketed through JPMS (then Paul Mitchell Systems, Inc.), would be sold only through professional salons. Mr. Mitchell's promise carried credibility due to his stature in the professional beauty industry. The promise to remain "professional-only" was important to the successful marketing of the Paul Mitchell products.

Mr. Mitchell was the heart of JPMS' connection to hair stylists, who were the foundation for JPMS' marketing strategy of promoting and selling products that Mr. Mitchell developed. Mr. Mitchell was JPMS' creative trendsetter, and his hair sculpting technique revolutionized hair styling.

In order to further promote its products, JPMS developed the "Associates Program" to train hair stylists in the Paul Mitchell system. This program became an integral part of JPMS' marketing effort. JPMS associates underwent special training in both hair styling and JPMS products. Once trained, the associates went to salons to teach the proper techniques to promote the products.

By April 21, 1989, JPMS had 700 associates. The associates were paid by the distributors, and they were involved with JPMS because they sought professional advancement and financial rewards. The associates program played a large part in JPMS' success.

Mr. Mitchell was a popular "draw" at industry hair shows, performing on a regular basis from 1980 until July 1988. During the show season, Mr. Mitchell, along with his stage partner, Jeanne Braa, would travel to as many as four cities a week for approximately 3 months at a time. This included shows for each distributor as well as demonstrations through in-salon classes. Mr. Mitchell traveled with distributors' salesmen who assisted in the introduction and sale of JPMS products.

Mr. Mitchell was the focal point of JPMS' advertising campaign. In 1986, JPMS came up with the "Creative" concept campaign, putting Mr. Mitchell literally behind the product, using photographs of him taken by Irving Penn, a noted fashion photographer. This campaign, which ran through 1987, was bifurcated into a consumer version for Vogue, Mademoiselle, and Glamour magazines with the caption "Can you say 'Paul Mitchell does my hair?'", as well as a trade version for Modern Salon and American Salon magazines with the caption "Paul Mitchell works for me". A similar 1988 advertising campaign also featured Mr. Mitchell.

F. MR. MITCHELL'S ILLNESS AND DEATH

Mr. Mitchell's health had been good until approximately May 1988, when he returned from a series of hair shows in Japan and began to experience loss of appetite, weight loss, and the onset of jaundice. on July 18, 1988, he was admitted to Cedars Sinai Hospital in Los Angeles and was diagnosed as having pancreatic cancer. Four days later his pancreas, spleen, gall bladder, and a portion of his stomach were surgically removed. He remained in the hospital until September 30, 1988, undergoing additional

surgeries and medical procedures, including radiation therapy. Upon release, he returned to his home in Hawaii, where he had full-time private duty nursing. Throughout this period, Mr. Mitchell continued his roles as the JPMS creative force, company spokesman, and executive.

Following his hospitalization, Mr. Mitchell was required to take insulin to control diabetes. In October and November 1988, he consulted with and received treatment from doctors in Hawaii, Los Angeles, and New York. Although he continued experiencing bouts of nausea, his medical condition improved, and he gained weight. Mr. Mitchell began receiving acupuncture treatments, keeping his medication intake at a minimum. Although follow-up tests revealed no evidence of metastasis, a November 1988 blood test raised a possibility of a recurrence of cancer but was inconclusive.

Mr. Mitchell's medical condition prevented him from working or performing at hair shows until approximately January 1989, when he performed at a hair styling show in New York City and participated in the JPMS distributors meeting in Vail, Colorado. During this time, he also continued his role in product development, meeting with an independent chemist regarding his ideas for future products. In February 1989, tests revealed a recurrence of cancer. Physicians in Hawaii encouraged Mr. Mitchell to begin chemotherapy, but he refused.

Mr. DeJoria avoided disclosing the severity of Mr. Mitchell's illness to quell any fears about the uncertainty of JPMS' future without Mr. Mitchell. Upon Mr. DeJoria's instruction, Mr. Mitchell's illness was portrayed as bacterial food poisoning. Rumors circulated that Mr. Mitchell was suffering from AIDS or cancer.

To a degree, the 1989 advertising campaign (which was shot in November or December 1988) still focused on Mr. Mitchell. However, Mr. DeJoria and JPMS began shifting emphasis away from Mr. Mitchell as an individual and towards the products themselves. In fact, one campaign attempted to focus on Mr. DeJoria, featuring him and his daughter in an advertising campaign for "Baby Don't Cry" shampoo.

After performing at the West Coast Beauty show in San Francisco in March 1989, Mr. Mitchell returned to Honolulu, where he visited physicians. Later that month he traveled to Mexico to begin receiving laetrile treatments. He remained in Mexico until his return to Cedars Sinai Hospital, where he died on April 21, 1989, at the age of 53. The cause of death was listed as liver failure due to liver and pancreatic cancer. As of the time of his death, the public at large was generally unaware of who Paul Mitchell was or that he had died.

Following Mr. Mitchell's death, the hair care industry widely perceived that JPMS had lost its creative and artistic leader. Rumors about JPMS becoming a mass marketer resurfaced, and there was uncertainty whether JPMS would become just another company. Distributors (both exclusively JPMS and multiline) feared that the loss of Paul Mitchell's creative force would at least slow product sales. However, they did not consider dropping the JPMS product line, primarily because of its profitability.

G. JPMS' OPERATIONS AND MANAGEMENT

As of April 21, 1989, JPMS had some 50 employees, approximately 21 of whom worked in a 90,000-square-foot warehouse space, with an additional 10,000 square feet of office space, in Santa Clarita, California, owned by Mr. DeJoria and the Trust as tenants in common and leased by JPMS. As of April

21, 1989, the warehouse space was not in compliance with the local fire code and had no environmental controls for drainage of waste or runoff water in the event of fire or disposal of poor-quality product. (Some materials used to make hair care products are categorized as hazardous waste.)

JPMS had no useful inventory controls. By April 21, 1989, the warehouse was in disarray, and there was a several-months' supply of products stacked up in JPMS' parking lot. In fact, JPMS tracked its sales by manually recording them on a blackboard. None of the JPMS staff knew how to use computers.

As of April 21, 1989, JPMS' products were formulated by independent chemists and manufactured at independent laboratories. n5 JPMS did not have the formulas for many of its products. Relying on unrelated contract manufacturers to supply the products prior to Mr. Mitchell's death, JPMS generally had no confidentiality agreements with the contract manufacturers covering the proprietary nature of the formulas.

Prior to Mr. Mitchell's death, JPMS was managed as a partnership wherein each partner had a unique role. Mr. Mitchell's strength was his artistry, creativity, and relationship with hair stylists, and JPMS relied on his foresight and artistry to develop products. Mr. DeJoria's strength was in sales, distribution, and promotion.

Mr. DeJoria ran the daily operations at JPMS, making all management decisions and having all managers reporting directly to him (because JPMS had no middle management). Mr. Mitchell, however, was the "senior partner", having the last word on all policy matters. Following Mr. Mitchell's death, Mr. DeJoria became critical to JPMS' future.

H. JPMS' POSITION IN THE INDUSTRY

JPMS was known for its styling products. Over the years, JPMS developed into a major force in the hair care industry, with brand recognition by the consuming public, a sophisticated distribution network, and hundreds of hair stylists trained in the use of the company's products. From 1982 through April 21, 1989, JPMS' share of the salon-only market, in comparison with those of its chief competitors, improved every year. In April 1989, JPMS was among the top five companies in the salon-only market. The success of the salon-only product companies attracted the attention of the large, well-capitalized mass-market companies, which competed in the premium-price market with products that attempted to capture the salon-only aura but were in reality mass marketed.

I. COMPENSATION

From JPMS' inception until Paul Mitchell's death, neither Mr. Mitchell nor Mr. DeJoria had any formal contract with JPMS regarding compensation. Instead, they set sales and profitability goals for JPMS at the beginning of each fiscal year. Thereafter, in September or October of each year, they divided equally the company's available income.

For fiscal years ended July 31, 1984 through 1988, Messrs. Mitchell and Dejoria each received the following payments from JPMS:

For Year Ended	Salary	Management Fees	Total

7/31/84	---	---	1,086,500	n1 7/31/85	---	---	2,305,000	
n1 7/31/86	---	---	4,162,525					
n1 7/31/87	$185,125	$8,565,000	8,750,125	7/31/88	1,308,000	10,500,000	11,808,000	

FOOTNOTE TO TABLE

n1 Payments to Messrs. Mitchell and DeJoria for this year were not broken down into salary or management fees.

END OF FOOTNOTE TO TABLE

JPMS characterized these payments as compensation for services rendered.

Between August 1, 1988, and April 21, 1989, JPMS paid Mr. Mitchell $10,758,046 (which JPMS characterized as compensation for services rendered). For fiscal year 1989, Messrs. Mitchell and Dejoria agreed that each of them would receive a $2 million annual salary and a $15 million management fee. The JPMS Board approved these compensation amounts on October 21, 1988.

From the inception of JPMS until the moment of Mr. Mitchell's death, the only dividend declared by JPMS was for its fiscal year ended July 31, 1988. The dividend was originally set at $1.4 million but was subsequently raised to $2.5 million.

During the latter part of Mr. Mitchell's illness, Messrs. DeJoria and Mitchell discussed Mr. DeJoria's future compensation. Mr. DeJoria promised Mr. Mitchell that in the event of Mr. Mitchell's death, he would reduce his management fee from $15 million to $10 million for JPMS' fiscal year ending July 31, 1990. Mr. DeJoria's $2 million salary for that year was to remain intact.

J. DISCUSSIONS AND AGREEMENT WITH GILLETTE

In 1987, the Gillette Co. (Gillette) was interested in entering the salon-only (or professional-only) products segment of the hair care market. JPMS was one of the primary candidates that Gillette considered purchasing.

In the fall of 1987, Gillette and Messrs. DeJoria and Mitchell discussed a potential joint venture between Gillette and JPMS to distribute a Gillette permanent wave product through the JPMS distribution system. Gillette also sought an option to purchase JPMS, but Messrs. DeJoria and Mitchell would agree only to grant Gillette a right of first refusal.

Accordingly, on December 18, 1987, Aapri Cosmetics, Inc., a wholly owned subsidiary of Gillette, and JPMS entered a joint venture, which began on January 1, 1988, and was to last for an initial 2-year period. The joint venture agreement provided Gillette with a right of first refusal to purchase JPMS at a formula price of 10 times JPMS' prior 12 months' operating income, after deducting the maximum Federal and State corporate income taxes (assumed to be 50 percent of income), and excluding from JPMS' operating income officers' salaries and car expenses. Until July 1988, the price payable pursuant to the right of first refusal was capped at $150 million. Gillette's ultimate goal in entering into the joint venture was to acquire JPMS; Gillette had no interest in a minority shareholder position.

Gillette neither exercised nor waived its right to exercise its right of first refusal contained in the joint venture agreement. During the pendency of the joint venture, Gillette received no notification concerning any offers by third parties to purchase the stock or assets of JPMS.

Only Gillette's board of directors could approve an acquisition the size of JPMS. No formal proposal was ever made to Gillette's board of directors to approve the acquisition of JPMS. n6

The permanent wave product marketed through the joint venture agreement was not well received in the salon market. The joint venture lost $1 million in the first 2 years and was unsuccessful. Accordingly, the joint venture agreement was terminated in December 1989.

K. SALE DISCUSSIONS WITH MINNETONKA

Another suitor of JPMS was Minnetonka Corp. (Minnetonka), a publicly traded company. Robert Taylor was Minnetonka's president and chief executive officer. Mr. Taylor co-founded Minnetonka in 1961 and took the company public in 1968.

Minnetonka was involved in consumer product brands, primarily those that were sold through the department store, gift, or beauty trade. Minnetonka was the licensee for Calvin Klein and created Obsession and Eternity women's fragrances. In addition, Minnetonka created Foltene, a treatment used in the beauty salon business for fine and thinning hair, a product line for home fragrance, and a gift soap product line for department stores.

In 1990, Mr. Taylor started a salon-only hair products company, Graham Webb International, which grew to $25 million in sales in 5 years. From 1992 or 1993 to approximately 1995, Mr. Taylor was on the board of directors of Banker's Trust Venture Capital Fund in New York (Bankers Trust), which specializes in providing funds for small businesses or recapitalization funds. n7

As chairman, Mr. Taylor was responsible for Minnetonka's strategic acquisitions. n8 In 1985, when JPMS' sales approximated $10 million, a financial adviser to JPMS solicited Mr. Taylor's interest in acquiring JPMS. However, Minnetonka determined that JPMS was too small and that the Paul Mitchell brand name was not strong enough to stand on its own; accordingly, Mr. Taylor declined to enter discussions at that time.

Two years later, Minnetonka targeted the salon industry for acquisition candidates, and Mr. Taylor contacted Redken, Sebastian, and JPMS. During this time, the annual sales of these companies were approximately $120 million, $60 million, and $50 million, respectively. Although Minnetonka agreed to acquire Sebastian for $100 million in late 1987, the sale was not consummated.

Mr. Taylor initiated discussions with Mr. DeJoria in the fall of 1987 (JPMS' 1988 fiscal year) when JPMS' sales were approximately $50 million. Mr. Taylor informed Mr. DeJoria that Minnetonka was willing to pay $100 million to acquire all of the JPMS stock, assuming officers' salaries were revised. n9 Mr. DeJoria insisted on a $125 million acquisition price. Mr. Taylor refused to raise Minnetonka's bid, and the negotiations were terminated.

In the fall of 1988, Mr. Taylor again approached Messrs. DeJoria and Mitchell. (At the time, JPMS' sales were in the $65 million range.) Mr. Taylor offered $125 million n10 to acquire all of the JPMS stock. (At this time, Mr. Taylor was unaware that Mr. Mitchell was seriously ill.) The proposed acquisition price assumed that: (1) Mr. DeJoria would continue managing JPMS; (2) Mr. Mitchell would continue promoting the products for at least 18 months to 2 years as a transition period; and (3) both Messrs. Mitchell and DeJoria would be compensated in salary and stock at a level paid to officers of other Minnetonka subsidiaries, such as Calvin Klein.

Mr. DeJoria did not accept Minnetonka's $125 million offer; he believed that Minnetonka was "just a little short every time". (Mr. DeJoria represented to Mr. Taylor that he had received from Gillette a $150 million offer plus a royalty of 2 percent of sales for lifetime. Mr. Taylor informed Mr. DeJoria that he could not match Gillette's offer.) Sales discussions with Minnetonka thus ended.

L. FINANCIAL INFORMATION AVAILABLE AT DATE OF DEATH

JPMS adopted a fiscal year ending July 31. Beginning with the fiscal year ended July 31, 1984, the shareholders elected subchapter S status for Federal income tax purposes. JPMS remained a subchapter C corporation for State of California income tax purposes until the 1988 fiscal year, when the shareholders elected subchapter S status for California.

KPMG Peat Marwick (KPMG) (or one of its predecessors) certified JPMS' audited financial statements. JPMS' net sales and net income after taxes for fiscal years ended July 31, 1982 through 1988, inclusive, were as follows:

Fiscal Year Ended 7/31	Net Sales	Net Income After Taxes
1982	$1,369,316	$142,375
1983	3,590,641	159,947
1984	5,349,152	4,004
1985	11,266,610	n1 207,777
1986	24,131,739	2,265,875
1987	41,371,318	281,777
1988	60,693,857	2,569,297

FOOTNOTE TO TABLE

n1 The audited financial statements for the years ended July 31, 1986 and 1985, state this amount as $10,918,252.

END OF FOOTNOTE TO TABLE

At Mr. Mitchell's death, the most recent available certified financial statements were for JPMS' fiscal year ended July 31, 1988. The most recent interim financial statements available were for the 6 months ended January 31, 1989. (In addition to the annual audited financial statements, KPMG also prepared unaudited financial statements on a quarterly basis.)

Except for motivational sales goals announced at semiannual distributors meetings as of April 21, 1989, JPMS did not project future revenues, expenses, costs of maintaining the Paul Mitchell brand name, or income. Between December 1989 and January 1990 KPMG prepared projections of JPMS' revenues and expenses for fiscal years 1990-94.

M. POST-DEATH EVENTS

1. MR. FUJIEKI'S REQUEST FOR JPMS DOCUMENTS

On June 29, 1989, Patrick Fujieki, trustee of the Trust, and Michaeline Re n11 were elected to the JPMS Board. (The Board was thus comprised of Mr. DeJoria, Ms. Braa, Mr. Fujieki, and Ms. Re.) At this time, the Trust was the shareholder of record of 49.04 percent of the outstanding common shares of JPMS, of

which 1 percent was to be transferred to Mr. DeJoria in accordance with the terms of Mr. Mitchell's Will and Trust.

Mr. Fujieki (in his capacities as director of JPMS, trustee for the Trust, and executor of Paul Mitchell's estate) asked to inspect the JPMS corporate records and financial information at the June 29, 1989, JPMS Board meeting and in later correspondence with Ms. Re, Mr. DeJoria, and other JPMS employees. Through December 19, 1989, Mr. Fujieki was not provided with financial statements for the JPMS fiscal year ended July 31, 1989. On April 10, 1992, representatives of Mr. Fujieki were permitted to review JPMS' financial records but were not allowed to make copies. Before permitting Mr. Fujieki's representatives to review its financial records, JPMS required Mr. Fujieki and his representatives to execute confidentiality agreements.

Mr. Fujieki continually questioned the actions of the JPMS Board at its meetings and the accuracy of the corporate minutes. Beginning July 30, 1992, through at least April 20, 1993, James Ukropina, Esq., outside legal counsel for JPMS, attended the JPMS Board meetings.

2. PURCHASE OFFER FROM MR. DEJORIA

On April 21, 1989, JPMS faced losing its subchapter S status when the Trust ceased to qualify as a subchapter S shareholder. Maintaining JPMS' subchapter S status would have been beneficial to its shareholders because no corporate-level tax would be imposed on JPMS' income. One option would have been for Mr. DeJoria to purchase the Trust's shares of JPMS; however, Mr. DeJoria refused to consider this option because it would have gone against Mr. Mitchell's wishes of providing for his son Angus, for which reason the Trust had been created. Gregg Ritchie, an accountant with KPMG who oversaw the preparation of JPMS' annual audited financial statements, began to explore various scenarios for maintaining JPMS' subchapter S status.

On April 4, 1991, Mr. DeJoria offered, through Mr. Ritchie, to purchase the Trust's share of JPMS common stock for $47 million. Mr. DeJoria's offer included $4.7 million in cash on April 15, 1991, with the balance in 10 annual installments of $4.23 million commencing April 15, 1992 (the unpaid principal balance would bear interest at 8 percent per year, payable quarterly). On April 10, 1991, Mr. Fujieki rejected the offer. Mr. Fujieki invited Mr. DeJoria to make a higher bid; Mr. DeJoria refused, indicating that his next offer would be $37 million ($10 million less than his April 4, 1991, offer).

3. COMPENSATION DISPUTE

Mr. DeJoria assumed many of Mr. Mitchell's corporate responsibilities following Mr. Mitchell's death. Between April 22 and July 31, 1989, JPMS paid Mr. DeJoria $4,901,537 as compensation for services rendered to JPMS. For JPMS' fiscal year ended July 31, 1990, Mr. DeJoria agreed to reduce his management fee from $15 million to $10 million, as promised to Mr. Mitchell. Mr. DeJoria also received $2 million in salary for that year. In summary, JPMS paid Mr. DeJoria the following amounts for fiscal years ended July 31, 1990 through 1994:

For Year Ended	Amount
7/31/90	$12,000,000
7/31/91	17,025,000

7/31/92	17,025,568
7/31/93	17,000,000
7/31/94	17,000,000

JPMS characterized these payments as compensation for services rendered.

From August 1, 1989 through 1992, Mr. Fujieki repeatedly requested in letters and at Board meetings that the Board retain an independent compensation consultant to consider the reasonableness of Mr. DeJoria's compensation. The Board rejected Mr. Fujieki's requests. At this time, tension began to mount among members of the Board.

In late 1990, Mr. Fujieki retained Coopers & Lybrand to determine a reasonable level of compensation for Mr. DeJoria. On January 11, 1991, Coopers & Lybrand preliminarily determined that a reasonable level of compensation was within the range of $600,000 to $1 million, with a possible $2 million ceiling. At the January 10, 1992, Board meeting, the Board approved Mr. DeJoria's compensation at 13 percent of JPMS' gross sales, not to exceed $17 million per year, for JPMS' fiscal years ended July 31, 1992 through 1996. Mr. Fujieki objected to this approval by the Board.

Mr. Fujieki proposed to have the compensation dispute resolved by arbitration, but Mr. DeJoria refused. Accordingly, in June 1993, Mr. Fujieki brought suit against Mr. DeJoria, Ms. Re, and JPMS on the Trust's behalf, alleging that Mr. DeJoria's compensation was excessive. The suit was filed in both the Superior Court for the State of California and the U.S. District Court for the Central District of California.

In response to Mr. Fujieki's allegations of shareholder derivative claims, JPMS formed a Special Litigation Committee (SLC) comprising JPMS' outside directors: Kenin Spivak, Paul Rupert, and David Tisdale. Among other things, the SLC was to evaluate Mr. Fujieki's allegations to decide whether to pursue the derivative claims on JPMS' behalf. The SLC hired Towers Perrin as executive compensation consultants to assist the SLC.

In April 1995, the litigation between the Trust and JPMS was settled; the SLC determined that the settlement agreement was in JPMS' best interests. The JPMS Board and shareholders, as well as the court, approved the settlement agreement. Neither the SLC, the JPMS Board, nor the court determined that Mr. DeJoria's compensation was unreasonable.

N. THE ESTATE TAX RETURN, NOTICE OF DEFICIENCY, AND PETITION

On its estate tax return, petitioner valued the Trust's interest in the 1,226 shares of JPMS common stock at the moment of decedent's death at $28.5 million. This figure was based upon a KPMG valuation analysis prepared at Mr. Fujieki's request. (KPMG utilized both the comparable companies and discounted cash-flow analyses.)

In the notice of deficiency, respondent determined, in pertinent part, that petitioner had undervalued the JPMS common stock. Respondent determined that the fair market value of the Trust's interest in the 1,226 shares of JPMS common stock at the moment of death was $105 million. Accordingly, respondent determined that the value of the gross estate should be increased by $76.5 million. The notice also determined section 6662(g) and (h) penalties.

Petitioner filed a petition in this Court challenging respondent's moment-of-death valuation for the Trust's 1,226 shares of JPMS common stock, essentially restating the position taken on the estate tax return. In the original answer to petitioner's petition, respondent restated the position taken in the notice of deficiency. Following the trial in this case, petitioner filed an amended petition alleging that the value of the 1,226 shares of JPMS common stock as of April 21, 1989, was $23,062,000, rather than the $28.5 million reflected on both the estate tax return and the original petition. In the answer to the amended petition, respondent denied the allegations contained in petitioner's amended petition.

ULTIMATE FINDING OF FACT

The moment-of-death value of the 1,226 shares of JPMS common stock held by the Trust and includable in decedent's gross estate was $41,532,600.

OPINION

ISSUE 1. MOMENT-OF-DEATH VALUE OF JPMS STOCK

The primary issue for decision is the moment-of-death value of 1,226 shares of JPMS common stock held by the Trust. Petitioner now contends that the stock was worth between $23,062,000 and $29 million. Respondent now asserts the value to be $81 million, or $24 million less than that determined in the notice of deficiency.

Section 2031(a) requires a decedent's "gross estate" to be determined for Federal estate tax purposes "by including * * * the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated." Value is determined at the moment of death. n12 Ahmanson Found. v. United States, 674 F.2d 761, 767 (9th Cir. 1981); Estate of McClatchy v. Commissioner, 106 T.C. 206, 210 (1996). The standard for valuation is fair market value, defined as "'the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts.'" United States v. Cartwright, 411 U.S. 546, 551 (1973) (quoting section 20.3031-1(b), Estate Tax Regs.); Collins v. Commissioner, 3 F.3d 625, 633 (2d Cir. 1993), affg. T.C. Memo. 1992-478. This objective test requires property to be valued from the viewpoint of a hypothetical buyer and seller, each of whom would seek to maximize his or her profit from any transaction involving the property. See Estate of Watts v. Commissioner, 823 F.2d 483, 486 (11th Cir. 1987), affg. T.C. Memo. 1985-595; Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981). The value of property is a question of fact, and we consider all relevant facts and circumstances. E.g., Ahmanson Found. v. United States, supra at 769; Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. T.C. Memo. 1961-347; Estate of Jung v. Commissioner, 101 T.C. 412, 423-424 (1993); Messing v. Commissioner, 48 T.C. 502, 512 (1967); sec. 20.2031-1(b), Estate Tax Regs. Fair market value may be affected by future events that were reasonably foreseeable at the valuation date. Estate of Gilford v. Commissioner, 88 T.C. 38, 52 (1987); Gray v. Commissioner, 2 B.T.A. 672, 682 (1925); Estate of Livermore v. Commissioner, T.C. Memo. 1988-503.

Determining the fair market value of a closely held corporation's capital stock is difficult because it involves property that has no public market. The best method for valuing closely held stock is by reference to an actual arm's-length sale of the stock in the normal course of business within a reasonable time before or after the valuation date. See Estate of Andrews v. Commissioner, 79 T.C. 938,

940 (1982); Estate of Campbell v. Commissioner, T.C. Memo. 1991-615; sec. 20.2031-2(b), Estate Tax Regs. In the absence of an arm's-length sale, the fair market value of closely held stock must be determined indirectly by considering, inter alia:

(a) The nature of the business and the history of the enterprise from its inception.

(b) The economic outlook in general and the condition and outlook of the specific industry in particular.

(c) The book value of the stock and the financial condition of the business.

(d) The earning capacity of the company.

(e) The dividend paying capacity of the company.

(f) Whether or not the enterprise has goodwill or other intangible value.

(g) * * * the size of the block of stock to be valued.

(h) The market price of stocks of corporations engaged in the same line or similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter.

Rev. Rul. 59-60, sec. 4.01, 1959-1 C.B. 237, 238-239; see also sec. 20.2031-2(f), Estate Tax Regs. These factors cannot be applied with mathematical precision. See Rev. Rul. 59-60, supra, 1959-1 C.B. at 238. Rather, the weight accorded each factor must be tailored to account for the particular facts under consideration. See Messing v. Commissioner, supra.

Both parties relied upon expert valuations. At times, expert testimony aids the Court in determining valuation; in other instances, it does not. See Laureys v. Commissioner, 92 T.C. 101, 129 (1989). We are not bound by an expert's formulae and opinions, especially when they run contrary to our judgment. Chiu v. Commissioner, 84 T.C. 722, 734 (1985). Instead, we may reach a decision as to the value of the property based on our own analysis of all the evidence in the record, Hamm v. Commissioner, supra at 941, using all of one party's expert opinion, Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), or selectively using any portion of such an opinion, see Parker v. Commissioner, 86 T.C. 547, 562 (1986).

In sum, we will consider expert opinion testimony to the extent it assists our fair market value determination. Valuation is an approximation, and the figure we reach need not be one as to which there is specific testimony. Our role is to approximate fair market value as closely as possible, within the range of figures that may properly be deduced from the evidence. Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285.

A. VALUATIONS OF PETITIONER'S EXPERTS

1. THE WEIKSNER REPORT

Petitioner's first expert, George B. Weiksner, is a managing director and senior adviser of CS First Boston, an investment banking firm. Mr. Weiksner has 25 years of investment banking experience.

Mr. Weiksner's report valued the Trust's 49.04 percent interest in JPMS common stock (1,226 shares) at $20,634,000 to $25,489,000, with a midpoint value of $23,062,000. Mr. Weiksner's report began with a comparable companies analysis n13 that (1) selected five standard multiples (net sales, operating cash-flow -- EBITDA, operating income -- EBIT, net income, and cash flow), (2) determined the ranges of

applicable multiples from the comparable companies data, and (3) applied the multiple ranges to JPMS' "normalized" financial data (making adjustments to the financial data generated in the earnings model). n14 From the value ranges thus derived, Mr. Weiksner determined a comparable companies value range for JPMS of $85 million to $105 million. He then determined JPMS' public value n15 of $76.5 million to $94.5 million by subtracting from JPMS' comparable companies value a 10-percent extraordinary risk discount. This discount accounted for: (1) The approximate cost of replacing Mr. Mitchell's services that was estimated in the projections of JPMS' operating expenses; (2) operational difficulties; (3) dependence on Mr. Dejoria; and (4) difficulty in maintaining future growth. Mr. Weiksner believed that these risks were unique to JPMS at the valuation date and warranted the discount of the stock.

Mr. Weiksner subsequently calculated the proportionate public value of the shares and adjusted that value by a 45-percent discount to reflect minority interest and lack of marketability, n16 to arrive at a $20,634,000 to $25,489,000 private value n17 for the 1,226 JPMS shares. At trial, Mr. Weiksner suggested a 30- to 50- percent range for these discounts.

In addition to the comparable companies analysis, Mr. Weiksner utilized the comparable acquisitions and discounted cash- flow analyses as confirming methodologies. Mr. Weiksner valued JPMS through the comparable acquisitions analysis by reference to private market sales of similar businesses, thereby generating control values. n18 Mr. Weiksner identified appropriate comparable transactions and measured the enterprise and equity values of target companies as multiples of financial benchmarks. Then he applied those multiples to the corresponding actual and projected financial benchmarks of JPMS. Accordingly, Mr. Weiksner applied his comparable acquisitions multiples to the normalized data for JPMS that he created from his earnings model to determine a range of control values for JPMS. The $110 million to $135 million control value that he determined exceeded JPMS' comparable companies value by approximately 29 percent and exceeded JPMS' public value by approximately 43 percent, within his expectations of an appropriate control premium.

In his discounted cash-flow analysis, Mr. Weiksner valued JPMS as the sum of its projected cash-flows before financing costs over several years plus an estimated value of the company at the end of the forecast period, all discounted to present value. He determined a range of terminal values through his comparable companies analysis and a range of appropriate discount rates through an adjusted weighted average cost of capital analysis. The $115 million to $140 million control value that Mr. Weiksner determined for JPMS through this analysis exceeded JPMS' comparable companies value by approximately 34 percent and JPMS' public value by approximately 49 percent, within his expectation of an appropriate premium.

We note that at trial, Mr. Weiksner suggested a $110 million to $135 million range of control values for JPMS on April 21, 1989.

2. THE McGRAW REPORT

Petitioner's second expert, Kenneth W. McGraw, is managing director of Patricof & Co. Capital Corp., an investment banking firm. He has approximately 36 years of experience in finance markets and investment banking.

Utilizing a comparative companies analysis, Mr. McGraw valued the 1,226 shares of JPMS common stock at approximately $29 million. (In this analysis, he used virtually the same group of comparable public companies as Mr. Weiksner.) Mr. McGraw adjusted JPMS' financial data in deriving an earnings model to which he applied his comparable companies analysis. To represent the amount JPMS would have to spend to replace the benefits of Mr. Mitchell's services, Mr. McGraw estimated that additional expenditures for advertising and administrative expenses would increase JPMS' advertising and promotional expenses to 16 percent of total revenues. He also removed Mr. Mitchell's compensation expense from the financial data. n19

Mr. McGraw reduced his approximate $109 million theoretical publicly traded value for JPMS by an extraordinary risk discount, through a 15-percent reduction to his average EBIT and average EBITDA. Mr. McGraw then applied a 45-percent marketability discount n20 to the value he determined through the comparative companies analysis, resulting in a $29.5 million value for the 1,226 shares of JPMS common stock.

In addition to his comparative companies analysis, Mr. McGraw utilized a discounted cash-flow analysis, determining a pro rata equity value of $49.5 million. In this analysis, he also applied a 45-percent discount for lack of marketability, yielding a $27.2 million value for the 1,226 shares of JPMS common stock.

Mr. McGraw weighed his comparative companies analysis more heavily than his discounted cash-flow analysis; in his opinion, the comparative companies analysis was the "more reliable indicator of value". Accordingly, relying on this analysis, Mr. McGraw concluded that the fair market value of the 1,226 shares of JPMS common stock was approximately $29 million.

B. VALUATIONS OF RESPONDENT'S EXPERTS

1. THE HANAN REPORT

Respondent offered Martin D. Hanan, president of Business Valuation Services, Inc. (BVS), as an expert witness. He has worked as an appraiser for many years. Mr. Hanan valued the 1,226 shares of JPMS common stock at $81 million, relying on both the comparable companies n21 and discounted cash-flow analyses.

In his comparable companies analysis, Mr. Hanan utilized practically the same group of comparable public companies used by Mr. Weiksner. Mr. Hanan began with normalizing JPMS' financial results. For instance, Mr. Hanan concluded that the combined compensation paid to Messrs. Mitchell and DeJoria would not have exceeded $2.5 million if they were paid under arm's-length conditions; Mr. Hanan thus adjusted the historical financial performance to reflect arm's-length rates. He believed that a shareholder of the 49-percent block would likely reach an accommodation with Mr. DeJoria regarding his compensation before agreeing to a price for those shares. For purposes of this analysis, Mr. Hanan accordingly assumed Mr. DeJoria's compensation would be set at $5 million per year after the valuation date.

Mr. Hanan's comparable companies analysis indicated a $272 million value for JPMS on a publicly traded, minority interest basis. He subsequently applied a 30-percent discount for lack of marketability (concluding that JPMS' size, profitability, shareholder rights, dividend paying capacity and policy, as well as transfer restrictions, all favored a below-average marketability discount, while Mr. DeJoria's

anticipated intention to continue drawing excessive compensation favored an above-average marketability discount). By applying the 30-percent discount to his $272 million value for JPMS, Mr. Hanan determined an $81 million fair market value for the 1,226 shares of JPMS common stock as of April 21, 1989.

In his discounted cash-flow analysis, Mr. Hanan projected JPMS' anticipated cash-flows for 5 years after 1989, and discounted the cash-flows to a present value at the valuation date. For purposes of this analysis, Mr. Hanan again assumed executive compensation would be set at $5 million. Accordingly, Mr. Hanan determined that as of April 21, 1989, the discounted cash-flow control value of JPMS was $295 million, while the discounted cash-flow value of JPMS' equity was $218 million on a publicly traded, minority-interest basis.

Finally, although Mr. Hanan proposed an $81 million fair market value for the 1,226 shares of JPMS common stock, he concedes that "because of a likely disagreement between the buyer/seller and Mr. DeJoria over Mr. DeJoria's compensation and the possibility of litigation, the value of the subject stock could be as high as $165.3 million and as low as $57.7 million." n22

2. THE BRENNAN REPORT

Respondent also offered the expert report of E. James Brennan III, n23 president of Brennan, Thomsen Associates, Inc. Mr. Brennan regularly testifies as an expert witness regarding personnel management and pay practices, particularly in the area of executive compensation.

Mr. Brennan's report evaluated the reasonable level of compensation for services provided by Messrs. Mitchell and DeJoria prior to Mr. Mitchell's death and made an estimate of the reasonable level of compensation for Mr. DeJoria for the 5 fiscal years following Mr. Mitchell's death. Mr. Brennan opined that the amounts Messrs. Mitchell and DeJoria paid themselves for the 1984-89 fiscal years were far in excess of the maximum amounts paid to comparable top executives at equivalent enterprises for employee services. Mr. Brennan concluded that the maximum level of reasonable compensation for Mr. DeJoria for 1990-94 would range between $820,300 and $1,159,420, based on projections of an increase in sales revenue for those years.

C. CRITIQUE OF EXPERTS

Not unexpectedly, each party criticized the opposing experts' analyses. The following points highlight these disparate perspectives.

1. RESPONDENT'S ARGUMENTS

Respondent criticizes Messrs. Weiksner's and McGraw's valuations as based on the mistaken assumption that JPMS was a fragile, disorganized, mismanaged, problem-ridden company on the verge of collapse as of April 21, 1989. Moreover, respondent criticizes three aspects of petitioner's comparable companies analyses: (1) The kinds of multiples selected, the time periods to which the multiples relate, and their weighting; (2) the adjustments made to JPMS' financial data; and (3) the adjustments for risk and illiquidity. Respondent argues that petitioner's experts' analyses were essentially based upon subjective judgment. In fact, respondent believes that petitioners' experts failed to offer a credible basis for their extraordinary risk or illiquidity discounts.

Respondent further argues that Mr. Weiksner's "normalized" earnings model, which he applies over a 3-year period, is inaccurate and misleading because 2 of the 3 years ended after the valuation date; thus, the figures for those years are essentially a projection rather than an analysis of actual results.

With regard to Messrs. Weiksner's and McGraw's discounted cash-flow analyses, respondent first argues that these analyses fail to confirm the comparative companies method values these experts determined. Respondent posits that Mr. Weiksner's discounted cash- flow analysis assumes that Mr. DeJoria's future compensation will conform to Mr. DeJoria's expectation of $12 million in fiscal year 1990 and $17 million per year thereafter. However, according to respondent, Mr. Weiksner's discounted cash-flow analysis actually presumes no control over Mr. DeJoria's compensation or any other element of JPMS' cash-flows. Thus, respondent argues that Mr. Weiksner's result is a minority interest value rather than a control value.

2. PETITIONER'S ARGUMENTS

Petitioner counters that Mr. Hanan's valuation has four erroneous bases: (1) Nonexistent "projections" of Mr. DeJoria; (2) an unreasonable assumption that Mr. DeJoria would unilaterally reduce his compensation to $5 million as of the valuation date; (3) a nonexistent "transition plan"; and (4) financial information not available as of Mr. Mitchell's date of death. (In fact, petitioner asserts that both Mr. Hanan's discounted cash-flow and comparable companies analyses improperly rely on KPMG's projections of JPMS' operating results following Mr. Mitchell's death.)

More specifically, petitioner first argues that the "DeJoria projections" referred to by respondent are the projections developed by KPMG with the benefit of 8 months of hindsight and yearend audited financial data not available on April 21, 1989. Petitioner contends that the projections did not exist at the valuation date and would not have been knowable to a hypothetical buyer or seller.

Second, petitioner contends that it would be unreasonable and unrealistic to assume, as Mr. Hanan did, that Mr. DeJoria's compensation could be reduced by any means short of litigation. Petitioner contends that most buyers are litigation averse. Therefore, petitioner posits, the only reasonable assumption is that Mr. DeJoria would receive compensation in the amounts of $12 million for JPMS' 1990 fiscal year and $17 million per year thereafter.

Third, according to petitioner, respondent refers to a "transition plan" Mr. DeJoria developed when he learned of Mr. Mitchell's illness. Petitioner suggests that no concrete plan ever existed.

Fourth, petitioner argues that Mr. Hanan relied on post- April 21, 1989, information in developing his discounted cash-flow model. He used data from fiscal year ended July 31, 1989 (taken from JPMS' annual certified financial statements) in deriving his April 21, 1989, base year. However, this information was not available until the late fall of 1989. Thus, petitioner argues, Mr. Hanan premised his base year data on JPMS' actual financial results that, by definition, could not have been available at the valuation date. Furthermore, petitioner contends that Mr. Hanan mechanically used the KPMG projections (which he referred to as the "DeJoria projections") to compute his discounted cash-flow.

In short, petitioner contends that while Mr. Hanan's discounted cash-flow purports to be a minority interest discounted cash-flow, in reality it is a control discounted cash-flow. According to petitioner, Mr. Hanan improperly changed the capital structure of JPMS, adding long-term debt on the assumption that a minority shareholder could influence capital structure.

Finally, petitioner opines that Mr. Hanan's exorbitant control value is irreconcilable with Minnetonka's $125 million offer for all of the JPMS stock. Petitioner urges the Court to dismiss Mr. Hanan's conclusions as unrealistic.

D. COURT'S ANALYSIS AND CONCLUSION

We have considered all of the testimony before us, as well as the expert witness reports, and have weighed all other relevant factors. As articulated by the parties, each expert witness report is susceptible to criticism. We are unable to accept the moment-of-death valuations given to the 1,226 shares of JPMS common stock by any of the expert witnesses. Instead, we rely on our own analysis, based on all the evidence in the record.

We begin our analysis by placing a $150 million value on JPMS at the moment immediately prior to Mr. Mitchell's death. In determining this value, we considered all the evidence but gave the greatest consideration to Minnetonka's "real world" $125 million offer in the fall of 1988 (which Mr. DeJoria found "a little short") and Mr. DeJoria's representation to Mr. Taylor that he had received from Gillette a $150 million offer PLUS a royalty of 2 percent of sales for a lifetime (which Mr. Taylor found to be an offer he could not match).

We next consider the impact of Mr. Mitchell's death on JPMS. Mr. Mitchell embodied JPMS to distributors, hair stylists, and salon owners. He was vitally important to its product development, marketing, and training. Moreover, he possessed a unique vision that enabled him to foresee fashion trends in the hair styling industry. It is clear that the loss of Mr. Mitchell, along with the structural inadequacies of JPMS, created uncertainties as to the future of JPMS at the moment of death.

In particular, a hypothetical buyer or seller would have to consider the following factors in valuing the 1,226 shares of JPMS common stock at the moment of Mr. Mitchell's death: (1) Whether it would be necessary to increase JPMS' advertising and marketing expenses; n24 (2) whether litigation concerning Mr. DeJoria's compensation would ensue; (3) whether the lack of a ready or available market for the stock would affect its fair market value; (4) whether and how JPMS would continue its history of successful product development and styling leadership; (5) whether rumors concerning JPMS "going retail" would adversely affect its relationships with salons; (6) whether JPMS' history of unreliable suppliers would continue; (7) whether JPMS would solve its inventory control and financial information reporting problems; and (8) whether JPMS' thin management and total reliance on Mr. DeJoria would hinder its performance.

Nonetheless, Mr. DeJoria stepped in to single-handedly run JPMS upon Mr. Mitchell's death. Mr. DeJoria had always overseen JPMS' marketing. Indeed, despite his reputation for creativity, Mr. Mitchell had not succeeded in marketing his product line in the late 1970's. Although there is no doubt that Mr. Mitchell's fame was an important component in launching JPMS in the early 1980's, Mr. DeJoria's salesmanship, marketing savvy, and construction of the distribution network were also vitally important.

In addition, Mr. Taylor, whom we found extremely credible, testified that Mr. Mitchell was not as essential to Minnetonka's interest in JPMS as Mr. DeJoria. Mr. Taylor also observed that the deaths of fashion designers Perry Ellis and Anne Klein did not affect their ongoing businesses to any significant degree "because the consumer somehow is so far removed from the actual * * * involvement of that designer * * * they're still buying the product."

In our opinion, the $150 million value for JPMS at the moment immediately prior to Mr. Mitchell's death should be discounted by 10 percent to reflect the loss of Mr. Mitchell to JPMS. Thus, we believe that at the moment of Mr. Mitchell's death, JPMS had a value of $135 million.

We further believe: (1) A total 35-percent discount is appropriate, reflecting combined discounts for lack of marketability and minority interest; and (2) a $1.5 million discount, reflecting the possibility of a lawsuit over Mr. DeJoria's compensation, should be applied. Taking these factors into consideration, we find, and thus hold, that the value of decedent's interest was $41,532,600 n25 as of the moment of his death.

ISSUE 2. SECTION 6662(g) PENALTY

The final issue is whether petitioner is liable for the section 6662(g) penalty. A substantial estate tax valuation understatement occurs if the value of property claimed on a return is 50 percent or less of the amount determined to be its correct value, and the portion of the underpayment attributable to the understatement exceeds $5,000. Sec. 6662(g). The penalty equals 20 percent of the portion of the underpayment attributable to the understatement. Sec. 6662(a). The penalty does not apply to any portion of the underpayment for which the taxpayer shows that he or she: (1) Had reasonable cause, and (2) acted in good faith with respect thereto. Sec. 6664(c); see also United States v. Boyle, 469 U.S. 241, 242 (1985). Whether a taxpayer had reasonable cause and acted with good faith is a factual determination. Sec. 1.6664-4(b), Income Tax Regs.

The parties agree that the section 6662(g) penalty is inapplicable unless the Court decides that the moment-of-death value of the 1,226 shares of JPMS common stock was $57 million or more. n26 On the basis of our determination that the fair market value of the 1,226 shares of JPMS stock as of April 21, 1989, was $41,532,600, the section 6662(g) penalty does not apply.

In light of the foregoing, and to reflect concessions and settled issues,

Decision will be entered under Rule 155.

FOOTNOTES

n1 On June 11, 1996, petitioner filed a Motion to Shift the Burden of Persuasion. By Order dated July 8, 1996, we denied petitioner's motion. On brief, petitioner again raised this issue. We reaffirm our conclusions as stated in our July 8, 1996, Order. But even assuming arguendo we would have granted petitioner's motion, our valuation of the stock at issue would not be altered.

n2 We believe the moment-of-death valuation is appropriate in this case due to the importance of Mr. Mitchell to, and the impact of his death on, John Paul Mitchell Systems.

n3 For instance, Redken was a professional hair care company that dominated the salon-only market through the 1970's. In the early 1980's, Mr. Mitchell began to convince hair stylists that the new trend in styling was the "sculpted look". Redken's sales growth flattened when it did not keep abreast of this trend.

n4 During the 1960's and 1970's, companies such as Wella Balsam, Aqua Net, Vidal Sassoon, and Jhirmack broke the implied promise and changed their distribution from salon-only to the mass market. The products of each of these companies were closed out of the professional market shortly after being mass marketed.

n5 From September 1983 through August 1988, Star Laboratories of California (Star), an independent contract manufacturer, produced most of JPMS' products. In August 1988, JPMS' relationship with Star ended, and JPMS' manufacturing was switched to Sun Laboratories (Sun). JPMS' relationship with Sun was terminated in April 1989; thereafter, JPMS' manufacturer became Bocchi Laboratories, a corporation in which Mr. DeJoria was a 50-percent owner.

n6 According to Mr. DeJoria, a Gillette representative orally proposed the acquisition of JPMS for $150 million and a 1-percent royalty payment to each of Messrs. Mitchell and DeJoria. Mr. DeJoria responded that he thought JPMS was worth more. However, Roland L. Loper, Gillette's vice president and controller of the personal care division from 1987 through 1988, and vice president for finance and strategic planning of the personal care group in 1989, insisted that no such offer was made.

n7 Bankers Trust had $200 million to invest in recapitalizations or buyouts that it used primarily for companies in the $5 million to $100 million range. During his tenure with Bankers Trust, Mr. Taylor reviewed approximately 100 proposals for the use of this money.

n8 Mr. Taylor was involved in the August 1987 sale of Minnetonka's liquid soap business to Colgate-Palmolive Co. for $60 million, the November 1988 acquisition of the Vitabath business from Quintessence for $38 million, and the July 1989 sale of Minnetonka to Unilever for $376 million at approximately two times sales. When the Unilever acquisition was announced the price of Minnetonka stock was at $14 per share, and the transaction was consummated at $22.50 a share, a 60-percent premium over the freely traded value.

Mr. Taylor used two "rules of thumb" with regard to the valuation of a company under consideration for acquisition: two times sales and/or five times operating income. Mr. Taylor measured these rules against other standards, such as potential for future growth, quality of management, capital requirements, and strength of brand name.

n9 Minnetonka would not have been interested in purchasing a 49-percent interest in JPMS.

Mr. Taylor regarded the level of compensation for Messrs. Mitchell and DeJoria as too high; he considered a more appropriate level of compensation to be in the $500,000 to $1 million range, including performance bonuses.

n10 In determining the value of JPMS, Mr. Taylor considered the company's growth potential. In the fall of 1988, he thought that JPMS could perhaps double or triple in size within 5 years.

n11 Ms. Re, an attorney, joined JPMS on Jan. 1, 1989, as vice president and general counsel, to oversee the correction of certain operational problems. On Mar. 1, 1989, she became JPMS' chief operating officer.

n12 The following statements made by the Court of Appeals for the Fifth Circuit in United States v. Land, 303 F.2d 170, 172 (5th Cir. 1962), are, in our opinion, pertinent to our determination that the valuation of the 1,226 shares of JPMS common stock held by the Trust must be pinpointed to the moment of Mr. Mitchell's death:

Brief as is the instant of death, the court must pinpoint its valuation at this instant -- the moment of truth, when the ownership of the decedent ends and the ownership of the successors begins. It is a fallacy, therefore, to argue value before -- or -- after death on the notion that valuation must be determined by

the value either of the interest that ceases or of the interest that begins. Instead, the valuation is determined by THE INTEREST THAT PASSES, and the value of the interest before or after death is pertinent only as it serves to indicate the value AT death. In the usual case death brings no change in the value of property. It is only in the few cases where death alters value, as well as ownership, that it is necessary to determine whether the value at the time of death reflects the change caused by death, for example, loss of services of a valuable partner to a small business.

n13 Comparable companies analysis is a public market valuation tool that values a company by reference to publicly traded companies with similar operating and financial characteristics. The first step involves identifying appropriate comparable companies and measuring their enterprise and equity values as multiples of financial benchmarks. Mr. Weiksner considered seven comparable companies.

The second step in the comparable companies analysis involves applying the derived multiples to the corresponding actual and projected financial benchmarks of the company subject to valuation. In order to create that set of financial benchmarks, Mr. Weiksner developed an earnings model for JPMS, which forecast the company's results for a 5-year period and "normalized" the actual and projected financial results to reflect JPMS' profile going forward.

n14 Mr. Weiksner used the earnings model to portray how a hypothetical buyer or seller of the JPMS stock would perceive JPMS as of the moment of decedent's death, given the information available at that date. Among other things, Mr. Weiksner's adjustments to JPMS' historical financial data included: (1) The removal of Mr. Mitchell's compensation as an expense; (2) adding an amount equal to 8 percent of net sales as additional sales, general, and administrative expenses in lieu of Mr. Mitchell's compensation; and (3) the adjustment of Mr. DeJoria's compensation to $16 million to reflect his average anticipated compensation.

n15 Public value refers to the estimated value of liquid, freely trading shares of JPMS as if it had been a public company.

n16 A minority shareholder discount reflects the decreased value of shares that do not convey control of a closely held corporation. A lack of marketability discount reflects the fact that there is no ready market for shares in a closely held corporation.

n17 Private value refers to the value of a minority interest in stock for which no liquid public trading market exists.

n18 Control value is the value of a company in a transaction in which the acquirer acquires the controlling stock.

n19 Mr. McGraw did not believe that a reduction in Mr. DeJoria's compensation was a circumstance upon which a prospective purchaser of the shares could reasonably depend. Thus, he did not adjust Mr. DeJoria's historical compensation for purposes of this analysis.

n20 On the basis of Mr. McGraw's methodology, no discount for minority interest was taken.

n21 Mr. Hanan refers to this approach as the "guideline company" approach.

n22 Mr. Hanan reached the $57.7 million figure by assuming that Mr. DeJoria's compensation would be set at $12 million for fiscal year 1990 and $17 million per year thereafter.

n23 Respondent chose not to put E. James Brennan III on the stand.

n24 William E. Peplow, vice president of salon relations for Redken, wrote a report and testified on petitioner's behalf. He foresaw that JPMS would have to increase its advertising budget to sustain sales after Mr. Mitchell's death.

n25 This amount is calculated as follows:

Value of JPMS at the moment immediately		
prior to Mr. Mitchell's death	$150,000,000	
Less: Discount to reflect the loss of		
Mr. Mitchell to JPMS	(15,000,000)	
Value of JPMS at the moment of Mr.		
Mitchell's death	135,000,000	
Percent of Trust's interest in JPMS	x	49.04
Value of Trust's interest in JPMS prior		
to discounts	66,204,000	
Discount for lack of marketability and		
minority interest (35%)	(23,171,400)	
	43,032, 600	
Discount for possibility of lawsuit	(1,500,000)	
Value of Trust's interest in JPMS after		
discounts	41,532,600	

n26 The Federal estate tax return valued the stock at $28.5 million. For sec. 6662(g) to apply, the value reported on the return must not be more than 50 percent of the correct value.

In re the Marriage of Monaghan

Case name: In re the Marriage of Monaghan
Citation: 78 Wn. App. 918, 899 P.2d 841
Date of decision: August 9, 1995
Country: US
State or Federal: State
State/Jurisdiction: Washington
Court: Court of Appeals
Type of action: Marital Dissolution
Judge: Houghton
SIC: 8021 Offices and Clinics of Dentists
NAICS: 621210 Offices of Dentists
9

Keywords: Marital dissolution

COUNSEL:

For Appellant: Michael Joseph Turner, Attorney at Law, Tacoma, WA.

For Respondent: Patrick Karl Daly, Daly and Macfie, Tacoma, WA.

JUDGES:

Acting Chief Judge Elaine M. Houghton; Judge J. Dean Morgan, Judge C. C. Bridgewater, concur

OPINIONBY:

ELAINE M. HOUGHTON

OPINION:

HOUGHTON, A.C.J. -- Dolores Monaghan appeals from a denial of her motions for imposition of judgment and clarification of her 1987 decree of dissolution of marriage. We reverse and remand.

I. FACTS

Dolores Monaghan and Robert Monaghan were married in 1956. n1 The marriage was dissolved by decree of dissolution (Decree) on September 1, 1987.

n1 The court meaning no disrespect, but for the sake of simplicity and clarity, identifies the parties using their first names. Additionally, the legal documents are inconsistent in the spelling of Dolores, sometimes spelling it "Delores". We spell her name "Dolores" as she signs all documents in that spelling.

The decree divided the parties' community property equally, designated by two separate property schedules. The property schedule awarded to Robert, among other items not at issue:

12. His dental practice, subject to [an] interest in favor of the petitioner, Dolores Monaghan, in an amount computed as 50% of the gross funds received in excess of $ 80,000.00, from the sale of the dental practice.

Both parties were required to pay all encumbrances, liens or debts associated with the property each received and to hold the other harmless from liabilities regarding that property. Each party was further responsible for any income tax liability arising out of the sale of any divided property and debts and obligations accrued since the date of the separation.

On December 24, 1991, Robert executed a contract to sell his dental practice to Alison Polwarth, D.D.S. Dolores did not take part in the negotiations for the sale. That sale consisted of:

[the] entire practice, together with all equipment, improvements, apparatus, furniture and fixtures, leasehold improvements, patients' files/charts, supplies, and all other items located in Monaghan's office and which were used in the practice (except cash and personal effects of Monaghan) . . ..

In the contract of sale, the purchase price, $ 160,000, was apportioned as follows:

Equipment and Leasehold Improvements	$	0
Inventory and Supplies	$	20,000
Covenant Not to Compete	$	109,000
Patient List	$	15,000
Goodwill	$	16,000n2

n2 There are many inconsistencies in the assigned value
for the different assets comprising the dental practice.
For example, the contract of sale values the inventory
and supplies at $ 20,000 and the equipment at $ 0,
while exhibit A to the contract, inventory appraisal,
values inventory and supplies and equpment at $ 30,000.
These inconsistencies, however, are not determinative
of this court's decision, but are factors to be
considered on remand.

The sale documents did not identify any accounts receivable or other monies owed to Robert before the closing date, January 3, 1992. Likewise, accounts payable, obligations incurred or claims against Robert were to be his responsibility. Pursuant to the covenant not to compete, Robert agreed not to practice within Pierce County for five years, subject to specific exceptions. The sale of the practice included a 10% sales commission, payable by the seller. n3

n3 The commission, $ 14,000, represented a total sale price of $ 160,000 less cost of furniture and fixtures, $ 20,000, for a revised total price of $ 140,000. Robert moved to strike the source document for this commission figure. The admissibility of this document was not addressed at the clarification hearing.

Dolores and Robert dispute the value of the dental practice and what the sale of the practice included. Dolores claims the practice sold for $ 160,000 -- the contract-stated price. Robert claims it sold for $ 31,000. He arrived at this figure based upon a value of $ 7.50 per active patient and inclusion of only the patient list and goodwill in the sales price. His calculation excludes the inventory and supplies, and the covenant not to compete. Because, by Robert's calculation, the practice sold for less than his allotted $ 80,000, he believed he owed Dolores nothing and therefore did not share any of the proceeds with her.

On July 17, 1992, Dolores moved for imposition of judgment against Robert. In an accompanying affidavit, Dolores requested an entry of judgment against Robert for 50% of the gross funds received in excess of $ 80,000 from the sale of the practice. By separate motion, Dolores also requested the trial court to clarify the content of the decree regarding the accounts receivable for Robert's dental practice. In an accompanying affidavit, Dolores sought an accounting of the amounts of the accounts receivable that Robert received from the practice. n4

n4 It is not clear what accounts receivable were requested -- at the time of dissolution or at the time of sale.

The matter was submitted to the trial court on affidavits, the contract for the sale of the practice, the decree of dissolution and the property settlement agreement. The trial court granted Robert's motion to strike portions of Dolores' accountant's affidavit to the extent it contained legal conclusions. The trial court did not rule on Robert's other motions to strike portions of Dolores' affidavits and the letter of compromise sent to her counsel.

After the trial court reviewed submitted material, it issued a document entitled "Findings of Fact and Conclusions of Law Re: Petitioner's Motion for Summary Judgment." The trial court denied both of Dolores' motions.At oral argument on this appeal, counsel for both parties conceded that the order below was improperly characterized as summary judgment. The parties agree that on appeal the court should review the record for substantial evidence.

II. ANALYSIS

[1] On review, we therefore determine whether the findings are supported by substantial evidence, and in turn, whether the findings support the conclusions of law and judgment. State v. Halstien, 122 Wash. 2d 109, 128-29, 857 P.2d 270 (1993). Substantial evidence is evidence sufficient to persuade a fair-minded person of the truth of the declared premise. Robinson v. PEMCO Ins. Co., 71 Wash. App. 746, 753, 862 P.2d 614 (1993).

A. Motion for Clarification of Decree

Dolores contends the trial court erred in denying her motion for clarification of the decree's terms regarding Robert's dental practice. n5 She asserts that she is entitled to one-half of the gross funds in excess of $ 80,000. According to Dolores, she is entitled to $ 40,000 and requests a judgment accordingly.

n5 The trial court entered the following findings of fact and conclusions of law:

FINDINGS OF FACT

1. On or about the 1st day of September, 1987, the parties' marriage was dissolved.

2. The respondent husband received his dental practice as part of the property settlement, subject to an interest in favor of the petitioner wife in an amount computed as 50% of the gross funds received in excess of $ 80,000.00 from the sale of the dental practice.

3. The respondent husband sold his dental practice in January, 1992 for the sum of $ 31,000.00

4. The accounts receivable were not sold as part of the dental practice.

5. The covenant not to compete was not sold as part of the dental practice.

. . . .

CONCLUSIONS OF LAW

1. The respondent's dental practice was sold for less than $ 80,000.00, and consequently there is no money due and owing to the petitioner.

2. The accounts receivable were not a part of the sale of the dental practice, and the covenant not to compete was not a part of the sale, and therefore there is no money due and owing to the petitioner.

3. The petitioner's motions are hereby denied.

[2] A clarification of a dissolution decree explicitly defines the rights and obligations that were previously granted. In re Marriage of Jarvis, 58 Wash. App. 342, 345, 792 P.2d 1259 (1990). Construction of a decree is a question of law to be determined by examining the document itself to find out its intended effect. In re Marriage of Bocanegra, 58 Wash. App. 271, 275, 792 P.2d 1263 (1990), review denied, 116 Wash. 2d 1008, 805 P.2d 813 (1991). The court uses general rules of construction applicable to statutes, contracts and other writings to ascertain the meaning of the decree. In re Marriage of Sager, 71 Wash. App. 855, 862, 863 P.2d 106 (1993).

Dolores contends that the trial court erred in ascribing a $ 31,000 value to the dental practice because it did not interpret the contract of sale as a whole pursuant to Berg v. Hudesman, 115 Wash. 2d 657, 801 P.2d 222 (1990). Dolores asserts that when engaging in such an interpretation, the court must "'declare the meaning of what is written, and not what was intended to be written.'" Berg v. Hudesman, at 669 (quoting J.W. Seavey Hop Corp. v. Pollack, 20 Wash. 2d 337, 348-49, 147 P.2d 310 (1944)). "Unilateral and subjective" beliefs about the impact should not be considered as representing the intent of the parties. Olympia Police Guild v. City of Olympia, 60 Wash. App. 556, 559, 805 P.2d 245 (1991). Dolores asserts that a plying these stated principles to the sales contract for the dental practice compels a finding that Robert sold his practice for $ 160,000. She further asserts that there is substantial evidence that at the time of dissolution, the parties placed a much higher value on the sale than $ 31,000. Furthermore, she argues that the $ 31,000 figure is at odds with the decree itself in which she says the court assigned a minimum value of $ 80,000.

[3] The basis for the trial court's conclusion that the dental practice sold for less than $ 80,000 is not evident from the record. Findings of fact and conclusions oflaw should be sufficient to suggest the factual basis for the ultimate conclusions. Groff v. Dept. of Labor and Industries, 65 Wash. 2d 35, 40, 395 P.2d 633 (1964); see also In re Marriage of Berg, 47 Wash. App. 754, 756, 737 P.2d 680 (1987) (A trial court is required to create an adequate record of the proceedings for appellate review); In re LaBelle, 107 Wash. 2d 196, 219, 728 P.2d 138 (1986), citing, Maehren v. Seattle, 92 Wash. 2d 480, 487-88, 599 P.2d 1255 (1979), cert. denied, 452 U.S. 939 (1981) (trial court must establish and set forth the

existence or nonexistence of determinative factual matters). Inadequate written findings may be supplemented by the trial court's oral decision or statements in the record. LaBelle, at 219 (citations omitted). Supplementing the trial court record with the court's oral ruling here, however, is not helpful because the trial court did not explain how it reached its conclusion. In its oral ruling, the trial court said:

I don't think anything other than the goodwill was contemplated here. I don't think anything as far as the fixtures, furniture, equipment is contemplated here. The covenant not to compete I don't believe is contemplated here.

[4] In valuing a closely-held business or a business largely dependent upon intangible assets associated with a professional practice, the trial court "'must set forth on the record which factors and methods were used in reaching its finding' of value". Berg, 47 Wash. App. at 757, quoting, In re Marriage of Hall, 103 Wash. 2d 236, 247, 692 P.2d 175 (1984). In Berg, the trial court simply accepted the husband's (the managing spouse's) value of a closely-held corporation in contravention to the expert's testimony. On appeal, the court found nothing in the record to rebut the expert's testimony, and thus remanded for redetermination of book value of the corporation. The circumstances in Berg are similar to those here. The trial court agreed with Robert's valuation of the practice without explaining how it reached its conclusion and despite Dolores providing an accountant's affidavit as to what the "value" of a business typically includes.

From our review of the record, there was not substantial evidence to support the trial court's finding that Robert sold his dental practice for the sum of $ 31,000. Furthermore, not only is the record silent as to how the trial court reached its overall conclusion, but also the record is incomplete as to how the court reached its determination of value for goodwill.

[5] Goodwill is an intangible asset of a business representing the expectation of a continued public patronage. It cannot be disposed of apart from the business as a whole. In re Marriage of Knight, 75 Wash. App. 721, 726, 880 P.2d 71 (1994), review denied, 126 Wash. 2d 1011, 892 P.2d 1089 (1995). Our Supreme Court has held that a trial court evaluating goodwill must use one or more of the accepted methods in determining value when appropriate. Hall, 103 Wash. 2d at 243-45. n6 The Hall court recognized that the methods are not exclusive, but may be used in conjunction with the factors laid out In re Marriage of Fleege, 91 Wash. 2d 324, 588 P.2d 1136 (1979), "to achieve a just and fair evaluation of the existence and value of any professional's goodwill." Hall, at 245. Fleege involved a dispute about whether a dental practice included goodwill which could be valued. The Fleege court set forth factors to consider in valuing goodwill such as: "the practitioner's age, health, past demonstrated earning power, professional reputation in the community as to his judgments, skill, knowledge and his comparative professional success." Hall, 242. On remand the trial court is to set forth specifically the method used in determining the value of the goodwill.

n6 The Hall court recognized the following methods as acceptable for determining value of goodwill: Straight capitalization accounting method, capitalization of excess earnings, IRS variation of capitalized excess earnings method, market value approach and buy/sell agreement method. Hall, at 243-45.

[6] Dolores further contends that the covenant not to compete is interrelated to goodwill and should be included in the total value of the practice. We agree with thetrial court that a covenant not to compete is not an asset of the dental practice. However, while a covenant not to compete is the separate property of the covenantee because it restricts the covenantee's future conduct, it is related to and

interdependent to goodwill. See Knight, Vale & Gregory v. McDaniel, 37 Wash. App. 366, 369-70, 680 P.2d 448, review denied, 101 Wash. 2d 1025 (1984). Moreover, because the trial court failed to make adequate findings regarding the assigned value of the various assets of the practice, we have no way of determining whether the $ 109,000 assigned to the noncompetition clause is fair. Dolores' accounting expert opined that for accounting purposes, the seller would amortize the $ 160,000 sales figure, not just the $ 31,000, and therefore that was the proper sale price.

Washington courts have not addressed the treatment of a covenant not to compete in a dissolution context, but other jurisdictions have. See, e.g., Lucas v. Lucas, 95 N.M. 283, 621 P.2d 500, 502 (N.M. 1980); Also see Carr v. Carr, 108 Idaho 684, 701 P.2d 304 (Idaho 1985) (goodwill and a covenant not to compete essentially the same here, because both spouses involved in daily operations of truck stop). In these jurisdictions, the court basically assesses the fairness of the segregation and assigned value of the noncompetition clause in relation to other assets. If the apportionment is unfair because the assigned value is the majority of the business assets, then a more fair and objective apportionment is needed. See In re Marriage of Quay, 18 Cal. App. 4th 961, 22 Cal.Rptr.2d 537, 541-42 (1993) (preliminary determination of fairness of covenant not to compete in relation to the assigned value of the other business' assets is necessary).

In Lucas, the wife filed for divorce and requested the court to divide the property equitably. The community property included some stock in a funeral home -- a business operated by the husband. The business was sold shortly after the divorce was final. Part of the sales agreement was a covenant not to compete between the husband and the buyer. The wife asked the court to consider the covenant not to compete community property. The court stated:

Upon the lawful dissolution of marriage, the right to compete becomes a personal right and, therefore, the separate property of the owner, who may then relinquish or exercise that right to his or her own benefit.

Lucas, 621 P.2d at 502. The court held that the valuation and segregation of the business assets were fair. The court reasoned that each shareholder could determine whether the price paid was adequate and that the evidence presented distinguished the amount paid for the sale of the stock from the amount paid for the covenant not to compete. Lucas, at 502. Thus the covenant not to compete was the personal property of the husband. Lucas, at 502. We find the reasoning of Lucas and Quay persuasive.

Here, we cannot determine the fairness of the assigned value of the covenant not to compete relative to the other assets. Dolores had no part in the negotiations and valuations for the sale of the dental practice, yet the trial court erroneously found that she was bound by Robert's determination, fair or not. Generally, covenants not to compete are used to protect a legitimate business interest and "should be no greater in scope than is necessary to protect the business or goodwill of the employer." Knight, Vale & Gregory, 37 Wash. App. at 370. On remand, the trial court is to segregate the value of the practice from the value of the covenant not to compete based upon all of the evidence rather than one party's bald assertions. The trial court is further required to evaluate the equity of the apportioned value of all assets and make adequate findings to support its conclusion.

B. Tenants in Common: Accounts Receivable

Dolores contends that if the accounts receivable were not included in the sale of the dental practice, then they are undistributed property. Dolores' accountant testified by affidavit that accounts receivable usually are included for business valuation purposes. The sales documents excluded the accounts receivable.

[7] Community property not disposed of by decree is held by the parties as tenants in common. In re Marriage of De Carteret 26 Wash. App. 907, 908, 615 P.2d 513 (1980). The adjudication of rights in property not disposed of in a dissolution decree requires an independent action for partition. Devine v. Devine, 42 Wash. App. 740, 743, 711 P.2d 1034 (1985). The court in the partition action is to determine the value of the accounts receivable at the time of dissolution. Where property is held as tenants in common, our Supreme Court has held that the parties intended them to share the property equally, unless the court is shown otherwise. Cummings v. Anderson, 94 Wash. 2d 135, 141, 614 P.2d 1283 (1980). Accounts receivable at the time of sale may have been earned subsequent to the dissolution and would be Robert's separate property. On remand, the trial court is to determine what accounts receivable are undistributed community property.

C. Motion to strike

Robert moved to strike portions of James Hughes' affidavit to the extent he offered a legal opinion and portions of Dolores' and Hughes' affidavits that reference offers of compromise. n7 The trial court partially granted Robert's motion to strike, but did not address the admissibility of the motion to strike portions of Dolores' affidavit and the entire letter of compromise. Generally, after a trial court has made a tentative ruling on a matter or has refused to rule entirely, the party requesting the ruling is obligated to raise the motion again to ensure that there is an adequate record on appeal. State v. Noltie, 116 Wash. 2d 831, 844, 809 P.2d 190 (1991). Here, however the trial court found that the practice sold for less than $ 80,000, which ended further analysis. On remand the trial court will have to rule on the admissibility of this evidence. We note, however, that the documents may indeed include offers of compromise which can be excluded upon proper motion pursuant to ER 408.

n7 Attached to Hughes' affidavit is a letter of compromise between the parties' counsel.

[8] Additionally, on appeal, Dolores contends that the trial court improperly considered portions of Robert's affidavit that discussed how she and Robert reached their property agreement. Dolores did not properly preserve this objection for appeal and thus it will not be considered. See Parkin v. Colocousis, 53 Wash. App. 649, 652, 769 P.2d 326 (1989) (failing to make appropriate objection to affidavit at the trial court generally waives the issue on appeal).

D. Attorney fees

Dolores requests attorney fees. She believes that she is entitled to them because of Robert's opposition to her motion, maintaining it was frivolous. However, Robert's opposition to Dolores' contentions is not so devoid of merit as to justify the imposition of attorney fees. There being no other basis for the award of fees, we decline to award attorney fees.

61 T.C.M. 2445 (1991)
T.C. Memo. 1991-178

Nancy N. Mooneyham
v.
Commissioner.

Docket No. 1.5661-89.

United States Tax Court.

Filed April 17, 1991.

Glenn C. Carpenter and John O. Germino, for the petitioner. Mary E. Wynne, for the respondent.

Memorandum Findings of Fact and Opinion

COHEN, Judge:

Respondent determined a deficiency of $59,650 in petitioner's gift tax liability for 1985. The issue for decision is the value of a one-half undivided interest in real property given by petitioner to her brother.

Findings of Fact

Operative Facts

Some of the facts have been stipulated, and the stipulated facts are incorporated in our findings by this reference. Petitioner was a resident of Rancho Mirage, California, at the time she filed her petition.

Prior to January 2, 1985, petitioner owned 100 percent of certain real property consisting of approximately 62,000 square feet on North Wolfe Road in Sunnyvale, California (the property). On January 2, 1985, petitioner transferred a 50-percent undivided interest in the property to her brother.

In 1985, petitioner and her brother each contributed an undivided 50-percent interest in the property to a partnership known as "Nancy-Wolfe Investments, A California General Partnership." The partnership constructed a single-story commercial building on the property. The building was completed in September 1986.

Petitioner filed a gift tax return for the calendar year ended December 31, 1985, reporting a gift in the amount of $488,000 arising out of the transfer of the property. The amount reported on the gift tax return was supported by an appraisal, dated April 11, 1985, by David Ingram, Jr. (Ingram), attached to the return (the Ingram I appraisal). The Ingram I appraisal

determined that the value of the property as a whole, as of October 10, 1984, was $1,302,000, but that, after applying a discount of 25 percent for a fractional interest, the value of the portion transferred was $488,000.

In the notice of deficiency sent March 31, 1989, respondent determined that the fair market value of the gift was $651,000, 50 percent of the value of the whole property determined in the Ingram I appraisal.

Procedural Facts

In the petition filed June 30, 1989, petitioner alleged, among other things:

(1) The fair market value of the Property gifted to Justin J. Jacobs, Jr. on January 2, 1985 was correctly valued at $488,000, based on comparable sales of similar properties as substantiated by an informed Member of the American Institute of Real Estate Appraisers.

By notice served May 9, 1990, this case was set for trial in San Francisco, California, on October 15, 1990. Attached to the Notice Setting Case for Trial was the Court's Standing Pre-Trial Order, which stated, among other things, that documentary and written evidence was to be marked and stipulated in accordance with Rule 91(b), Tax Court Rules of Practice and Procedure, and that:

Any documents or materials which a party expects to utilize in the event of trial (except for impeachment), but which are not stipulated, shall be identified in writing and exchanged by the parties at least 15 days before the first day of the trial session. The Court may refuse to receive in evidence any document or material not so stipulated or exchanged, unless otherwise agreed by the parties or allowed by the Court for good cause shown. * * *

The Standing Pre-Trial Order required that trial memoranda be submitted to the Court and served on the adverse party at least 15 days before the trial date.

The Standing Pre-Trial Order also set forth the requirement that any expert witness to be called by a party prepare a written report to be submitted to the Court and served upon the adverse party at least 30 days before the trial, in accordance with Rule 143(f), Tax Court Rules of Practice and Procedure.

In a letter dated September 13, 1990, which was submitted as an expert report for petitioner, Ingram valued the property as a whole at $1,105,000, and he valued a one-half interest in the property at $414,375 on the date of the gift (the Ingram II appraisal). The Ingram II appraisal ignored comparable sales used in the Ingram I appraisal and set forth various statistics purportedly demonstrating a decline in the market for industrial properties in Santa Clara County (including, but not limited to, Sunnyvale) during 1985.

Neither the Ingram I appraisal nor the Ingram II appraisal set forth any comparable sales or other explanation supporting the opinion of Ingram that a 25-percent discount for a fractional interest was appropriate.

A report of John H. Denton (Denton), a lawyer and real estate appraiser, was also submitted for petitioner. Denton reviewed various reasons why a discount for a fractional interest would be required, based on his experience, and rendered the opinion that a discount in the range of 15 percent to 30 percent would be appropriate. He did not identify factors that would determine whether the discount in a particular case would be at the upper or lower end of the range he used.

On October 17, 1990, at the commencement of trial, petitioner's counsel indicated for the first time that he wished to offer in evidence copies of deeds reflecting sales that counsel's office "handled years ago." By using those deeds, petitioner's counsel intended to support Denton's trial testimony that Denton then believed that 25 percent was the proper discount. Petitioner's counsel sought to justify the belated tender of the documents by reference to a contention in respondent's trial memorandum that comparable sales are necessary to satisfy petitioner's burden of proof. That memorandum, however, had been served September 28, 1990. The Court sustained respondent's objection on the ground that the documents had not been exchanged in accordance with the Standing Pre-Trial Order, when petitioner's counsel first secured the copies of the deeds, or at the calendar call on October 15, 1990, and respondent was prejudiced in being unable to verify the facts that the deeds supposedly established.

Ultimate Findings of Fact

As of the date of the gift, the fair market value of the property owned by petitioner on North Wolfe Road in Sunnyvale, California, was $1,302,000. The value of a 50-percent fractional interest was 50 percent of the total less 15 percent, or $553,350.

Opinion

We have set forth as facts found by us the procedural history and the methodology used by petitioner's experts because those facts are material to our rejection of the conclusions of those experts.

Petitioner used the fair market value set out in the Ingram I appraisal on the gift tax return filed in relation to the gift and reaffirmed that value in her petition filed with this Court. As an owner, her opinion of value may be given weight. Her return and petition were admissions that should be binding on petitioner absent cogent proof that the reported value was erroneous. See, *e.g., Estate of Hall v. Commissioner* [Dec. 45,484], 92 T.C. 312, 337-338 (1989). The testimony offered by petitioner in this case to support a lower value is not cogent proof; it is barely evidence.

Ingram testified at trial and attempted to disavow his 1985 appraisal, which was proximate in time to the gift, by indicating that he had then been away from and had lost touch with the geographical area. He acknowledged that the comparables used by him in 1985 were still comparables, although his 1990 appraisal ignored them. On cross-examination, he testified about his 1990 use of statistics as follows:

Q Then these numbers may not be indicative and probably are not indicative of the value of the subject property?
A There was no attempt to make them comparable.
Q Thank you. Your letter states that Sunnyvale was not affected by the down turn in the market until later than the rest of Silicon Valley. Isn't it true that North San Jose was hit harder and faster than Sunnyvale by the down turn in the market?
A Yes. I think so.
Q So then doesn't the averaging of North San Jose sales figures with Sunnyvale sales figures distort the picture of Sunnyvale land values as portrayed in your Table 3?
A There may be some distortion.

We conclude that the Ingram I appraisal as to the value of the whole property, which was initially asserted by petitioner and was adopted by respondent, is much more reliable than the Ingram II appraisal.

Denton, although claiming to be a real estate appraiser, did not give an opinion of the value of the whole property. His report set out various reasons why a 15 to 30-percent discount for a fractional interest of property would be appropriate. Neither his report nor his testimony at trial gave any reason for choosing 25 percent as applied to the property in issue other than the use of 25 percent by Ingram.

Petitioner's counsel complained at trial that Denton was prevented from explaining his conclusion that 25 percent was appropriate because respondent objected to and the Court excluded documents from petitioner's counsel's file shown to the witness shortly prior to trial but not shown to respondent prior to trial. Regardless of the untimeliness of this tender of documents, an expert's opinion should be based on objective information that he independently has available or secures, not information so blatantly foisted upon him by a party's representative. His credibility is adversely affected when he is thus made into an advocate for the party. See *Estate of Halas v. Commissioner* [Dec. 46,522], 94 T.C. 570, 577-579 (1990). Cross-examination of Denton disclosed further that his report and testimony were in large part petitioner's counsel's argument in the form of testimony. The Court disapproves of this methodology in this case and as a general practice.

On the other hand, the testimony of Ingram and of Denton was some, although weak, evidence that the fair market value of a fractional interest in real property cannot be derived merely by applying the percentage of the interest in the whole to the value of the whole property. Petitioner contends that a discount is appropriate because of problems of control, lack of marketability, and costs of partition relating to a fractional undivided interest. Petitioner's arguments are logical and are supported by numerous precedents. See *Propstra v. United States* [82-2 USTC ¶ 13,475], 680 F.2d 1248 (9th Cir. 1982) [15 percent]; *Estate of Campanari v. Commissioner* [Dec. 14,685], 5 T.C. 488, 492 (1945) [12-1/2 percent]; *Estate of Henry v. Commissioner* [Dec. 14,259], 4 T.C. 423, 447 (1944) [10 percent], affd. [47-1 USTC ¶ 10,558] 161 F.2d 574 (3rd Cir. 1947); *Stewart v. Commissioner* [Dec. 8710], 31 B.T.A. 201 (1934) [15 percent]; *Estate of Youle v. Commissioner* [Dec. 45,579(M)], T.C. Memo. 1989-138 [12-1/2 percent].

Respondent argues that a discount is not appropriate in this case because petitioner and her brother had a plan jointly to develop the property through a partnership. Respondent

persists in attempting to have the Court consider the identity of a related transferee of property in determining fair market value a position that has repeatedly been rejected in favor of assuming a hypothetical unrelated buyer. See, e.g., *Propstra v. United States* [82-2 USTC ¶ 13,475], 680 F.2d at 1251-1252; *Estate of Bright v. United States* [81-2 USTC ¶ 13,436], 658 F.2d 999, 1001 (5th Cir. 1981); *Minahan v. Commissioner* [Dec. 43,746], 88 T.C. 492, 499 (1987). In any event, the reasons for discounting the fractional interest in this case continued to have force even after the transfer, because the donee only had a 50-percent interest in the subsequent venture.

Respondent also contends that petitioner has not satisfied her burden of proving that any discount is appropriate. Respondent relies on *Estate of Campanari v. Commissioner, supra; Estate of Clapp v. Commissioner* [Dec. 40,642(M)], T.C. Memo. 1983-721; and *Estate of Iacono v. Commissioner* [Dec. 37,414(M)], T.C. Memo. 1980-520. There is, however, evidence in this case that a discount is appropriate and, as indicated above, that evidence is consistent with common sense and precedent. Respondent has presented no evidence from which the Court could conclude that, under the facts of this case, no discount or a lesser discount was appropriate.

We are not bound by the opinion of any expert witness when that opinion is contrary to our own judgment, and we may embrace or reject expert testimony, whichever, in our best judgment, is appropriate. *Chiu v. Commissioner* [Dec. 42,027], 84 T.C. 722, 734 (1985), and cases cited therein; see *Estate of Fawcett v. Commissioner* [Dec. 33,387], 64 T.C. 889, 900-901 (1975). Based on this unsatisfactory record, therefore, our best judgment is that a discount is appropriate and that in this case a discount of 15 percent must be applied to one-half of the value of the whole property as found in the Ingram I appraisal to obtain the fair market value of the 50-percent interest given by petitioner to her brother.

Decision will be entered under Rule 155.

Jon E. Abramczyk, Morris, Nichols, Arsht & Tunnell, Wilmington, DE.

JUDGES:

MYRON T. STEELE, VICE-CHANCELLOR.

OPINIONBY:

MYRON T. STEELE

OPINION:

Petitioner seeks appraisal of his shares in respondent MPM Enterprises, Inc. ("MPM") pursuant to 8 Del. C. § 262. On September 29, 1997, I issued an Opinion ("the September Opinion") that determined the fair value of petitioner's shares should be calculated using a discounted cash flow analysis. Despite the guidance provided in the September Opinion, the parties later informed me that they were unable to agree on the appropriate discount rate, a necessary element of a discounted cash flow analysis. Although the parties agree that the discount rate should be based on MPM's weighted average cost of capital ("WACC"), the parties dispute each component of the WACC: the cost of debt, the cost of equity and the debt to total capital ratio.

I consider the parties' submissions as motions for reargument. None of the issues I decide in this Opinion were presented to the Court at the December 1996 appraisal hearing. Thus, arguably, I wrote the September Opinion while laboring under a misapprehension of fact, and therefore grant the motions

for reargument. I heard the parties' motions for reargument on February 26, 1998.

A. Cost of Debt and Debt to Total Capital Ratio

During the December 1996 hearing, petitioner, on the advice of his appraisal expert Patricof & Co. Capital Corp. ("Patricof"), and respondent, on the advice of its appraisal expert Advest, Inc. ("Advest"), each proposed a discount rate to the Court. The September Opinion stated: "Because I find that petitioner has presented a more thorough and convincing approach to the determination of the discount rate, I accept petitioner's overall method...." n1 Petitioner's discount rate was based on, among other things, a cost of debt of 10.5% and a debt to total capital ratio of 5%.

n1 Gilbert v. MPM Enters., Inc., Del. Ch., 709 A.2d 663, 1997 Del. Ch. LEXIS 141, *14, 1997 WL 63298 at *4 (1997).

Ironically, petitioner later realized that the cost of debt and debt to total capital ratio that respondent proposed at the December 1996 hearing were more favorable to petitioner's position than those statistical elements petitioner himself proposed. Thus, although petitioner is content to use his overall method for calculating the discount rate, he now wishes to use respondent's cost of debt (9.6% n2) and debt to total capital ratio (10%). Respondent correctly notes that the September Opinion did not indicate that there should be any change to the values petitioner proffered and opposes the use of respondent's own proffered values absent a ruling from this Court.

n2 Petitioner contends that respondent used a cost of debt of 9.5%, but the record indicates that the figure used was 9.6%.

In support of his request to use respondent's values, petitioner explains that the values he submitted to the Court at the December 1996 hearing were merely assumptions, and were presented to the Court as such, whereas respondent's values represented its true or actual cost of debt and debt to total capital ratio. It is certainly plausible that Advest was able to discern from its client's records the actual cost of debt and the actual debt to total capital ratio on the merger date.

The Court's goal in an appraisal action is to determine with as much accuracy as possible the fair value of petitioner's shares on the date of the merger. For this reason, the Court prefers to rely on actual information taken from the company's financial or other records rather than on experts' estimates wherever possible. Thus, were petitioner's explanation of his new-found preferred reliance on respondent's number entirely accurate, it might be appropriate to revise the September Opinion to take account of MPM's actual information.

Respondent argues, however, that the values proffered in the earlier hearing were not, in fact, "actual," but were merely its own "estimates" based on its expert's judgment. Respondent is partially correct. Advest's valuation report clearly states that the capital structure or debt to total capital ratio used was based on the market average ratio of debt to total capital. n3 Thus, Advest did not use MPM's actual capital structure or debt to total capital ratio, and there is no clear basis upon which to revise the September Opinion on the theory the revision would be more factually accurate.

n3 Advest valuation report at 8, 46, 47, Ex. F. p.160. Elsewhere in the report, Advest clearly states that it relied on a company's "own" or "actual" capital structure. Id. at 41.

Advest's valuation report does, however, purport to use MPM's actual cost of debt on the merger date. n4 William Linquist, one of Advest's employees, also testified at the December 1996 hearing that Advest used MPM's actual cost of debt on the merger date. n5 In keeping with the Court's goal of determining with as much accuracy as possible the fair value of petitioner's shares on the merger date, the parties should use MPM's actual cost of debt when calculating the discount rate.

B. Cost of Equity

1. Beta

Beta is a measure of a stock's volatility relative to the stock market as a whole. Because privately held companies such as MPM have no observable betas, the parties used the median beta of comparable companies as the beta for MPM. At the December 1996 hearing, petitioner's proffered beta was based on the median beta of seven companies, and respondent's proffered beta was based on the median beta of three companies. Because respondent's three companies were "more comparable" to MPM than petitioner's seven companies, I stated in the September Opinion that the cost of equity should be calculated using Patricof's overall method "except that the comparable beta employed shall be based on the average beta of respondent's comparable companies." n6

n6 Gilbert, 709 A.2d 663, 1997 Del. Ch. LEXIS 141 at *29, 1997 WL 63298 at *8. The parties have agreed to use the median beta of the comparable companies.

Unknown to me, and seemingly of no concern to the parties at the original hearing, the parties' experts defined beta differently in their valuation reports. Petitioner's expert used "adjusted" beta to calculate the discount rate, and respondent's expert used "raw" beta. I had assumed that both experts used "raw beta," commonly referred to simply as "beta."

Several entities publish lists of public companies' "raw" betas. Because the entities that publish "raw" betas use different data collection intervals and measurement periods, it may appear that one public company has several "raw" betas. If one controls for the different data collection intervals and measurement periods, however, one company's "raw" beta would, in principle, not vary among the reporting services. "Adjusted" beta is calculated by plugging "raw" beta into an adjustment formula. The entities that publish companies' "raw" betas usually publish the companies' "adjusted" betas as well. Because adjustment formulae may differ among the publications, the same company may have several "adjusted" betas.

The parties presented no evidence at the December 1998 hearing on the subject of "raw" or "adjusted" betas. Respondent correctly discerned that the September Opinion assumed that "raw" beta would be used, and respondent opposed using "adjusted" beta without a ruling from this Court.

Bloomberg, the source petitioner originally used to find his "adjusted" beta values, also publishes "raw" betas. At the February 1998 hearing, petitioner's counsel candidly admitted that he did not understand the difference between "raw" and "adjusted" beta and that he did not know why Patricof chose to use "adjusted" beta rather than "raw" beta. More importantly, Patricof's representative testified at his

deposition that he did not know how Bloomberg "adjusted" the comparable companies' "raw" betas or why "adjusted" betas were used in this case instead of "raw" betas. n7 Petitioner did not attempt to clarify this point at the February 1998 hearing.

n7 Deposition of Kenneth W. McGraw, October 23, 1996, at 286-87.

After the February 1998 hearing, the parties submitted numerous affidavits from finance professors explaining and extolling the virtues of either "adjusted" or "raw" beta. I decline, however, to consider those affidavits as evidence in this action. Most are based on the review of two letters to the Court and the September Opinion, not on the entire record or even on the experts' valuation reports. Furthermore, the affidavits, not surprisingly, offer contradictory conclusions on the issue of "raw" versus "adjusted" beta. Because there has been no opportunity to examine the affiants, the Court has no basis to determine their reliability.

Based on the remaining evidence in the record, I conclude that "raw" beta should be used to calculate the discount rate. Although "adjusted" beta may be appropriately used in future cases when supported by a record subject to the crucible of cross-examination, I find that petitioner did not meet his burden to prove why "adjusted" beta should be used in this case.

This Court (and respondent) recognizes Bloomberg as an appropriate source for determining "raw" betas. Therefore, the median "raw" beta, as published by Bloomberg, of respondent's three comparable companies will be used to determine the discount rate.

2. Small Company Premium

Petitioner included a small company premium of 2% in his cost of equity calculation. A small company premium "is appropriate to reflect that 'on average, smaller companies have higher rates of return than larger companies.'" n8 Petitioner determined the amount of the small company premium by relying on tables published by Ibbotson & Associates.

n8 Hintmann v. Fred Weber, Inc., 1998 Del. Ch. LEXIS 26, *11, Del. Ch., C.A. No. 12839, 1998 WL 83052 at *4, Steele, V.C. (Feb. 17, 1998)(citing SHANNON P. PRATT ET AL., VALUING A BUSINESS 171 (3d ed. 1996)).

The small company premia that Ibbotson publishes are based on companies' market capitalization. In its valuation report, Patricof stated that based on MPM's size, approximately $ 366 million under the discounted cash flow analysis, the Ibbotson table listed a corresponding small company premium in the range of 0-5%. Patricof chose a small company premium in the middle of that range, 2%.

After this Court's Opinion and the parties' negotiations, it appears that MPM's market capitalization is closer to $ 200 million. Thus, MPM is a smaller company than Patricof originally calculated, and a small company premium would seem even more appropriate. The Ibbotson table, however, suggests a different range of small company premia for a company of MPM's size: 2.67 to 3.14. n9 Respondent suggests a small company premium in the middle of that range, 2.87%.

n9 It makes sense that as the value of the company goes down, the small company premium goes up because the premium is meant to reflect that smaller companies require greater returns.

Petitioner seeks to eliminate the small company premium altogether. In support of his position, petitioner suggests that a small company premium was used in his original calculation because MPM is significantly smaller than the seven comparable companies he chose. The Court, however, ordered petitioner to use respondent's three companies, which are smaller than MPM. Petitioner suggests that if Patricof had itself chosen the three comparable companies at the outset of its analysis, it would not have added a small company premium because MPM is larger than those companies.

Petitioner seems to be confusing the small company premium used in a cost of equity calculation with an adjustment for small size in a market-based guideline comparable company analysis. When one estimates a private company's value based on the value of comparable, public companies, it may be appropriate to account for the fact that the company being valued is smaller than the guideline companies used for comparative purposes. In this case, however, the Court ordered the parties to use an income method of valuation known as a discounted cash flow analysis. A discount rate is a necessary part of the discounted cash flow analysis, and a cost of equity is a necessary part of every discount rate.

The cost of equity is the amount of expected return that is required to attract investment in an equity instrument. Obviously, one would expect a return at least as great as the return on a virtually risk free investment in Treasury bills. Because investment in equity instruments is not risk free, investors in equity instruments would also expect some premium over the expected return on a T-bill. If investing in equity instruments from a small company, one might expect an additional premium over the basic equity premium to reflect that investments in smaller companies generally entail a higher degree of risk than investments in larger companies. n10 Finally, when the cost of equity is estimated using the CAPM, as here, the equation also includes beta, which I addressed above.

n10 This is not to say that only a basic equity premium and a small company premium may be considered when estimating a cost of equity Additional premia may be added, if appropriate, for industry-specific risks or for other investment-specific risks not captured by the other three categories of premia.

In theory, then, one would expect the cost of equity for a $ 200 million company to be greater than the cost of equity for a $ 357 million company. Thus, if a small company premium was appropriate for a $ 357 million company, an issue settled by the September Opinion and not before me today, then it should also be appropriate for a $ 200 million company. The parties shall include a small company premium of 2.87% in their calculation of MPM's cost of equity.

CONCLUSION

The parties shall calculate MPM's WACC using a cost of debt of 9.6% and a debt to total capital ratio of 5%. MPM's cost of equity shall include (1) the median of the comparable companies' "raw" betas, as published by Bloomberg, and (2) a small company premium of 2.87%.

IT IS SO ORDERED.

Keywords: Dilution, Discount rate, Fair value, Going concern

COUNSEL:

Jon E. Abramczyk, Esquire, and Christopher F. Carlton, Esquire, of Morris, Nichols, Arsht & Tunnell, Wilmington, Delaware; Richard J. McCarthy, Esquire, *pro hac vice* (argued) of Edwards & Angell, Boston, Massachusetts, for Appellant.

Allen M. Terrell, Jr., Esquire (argued), and Srinivas M. Raju, Esquire, of Richards, Layton & Finger, Wilmington, Delaware, for Appellee.

JUDGES:

Before VEASEY, Chief Justice, WALSH and HARTNETT, Justices.

OPINIONBY:

VEASEY

OPINION:

Upon appeal from the Court of Chancery.

VEASEY, Chief Justice:

In this appeal of a statutory appraisal action under 8 *Del. C.* § 262, we consider whether the Court of Chancery committed legal error or, alternatively, abused its discretion by applying an appraisal analysis that accorded no weight to the terms of the merger giving rise to the appraisal action or to the terms of two prior offers for equity stakes in the subject corporation. We further consider whether the Court of Chancery erred in refusing to consider the dilutive effect of alleged obligations incurred by the company to non-stockholder employees. We affirm the judgment of the Court of Chancery on the ground that under well-established precedent of this Court, the Court of Chancery did not commit legal error or abuse its discretion in its choice and application of appraisal methods.

Facts

Petitioner below-appellee, Jeffrey D. Gilbert instituted a statutory appraisal action as the sole dissenting stockholder of respondent below-appellant, M.P.M. Enterprises, Inc. ("MPM"), following MPM's merger into a subsidiary of Cookson Group, PLC ("Cookson") a London-based industrial concern, on May 2, 1995.

Prior to the merger, MPM was a Delaware corporation, headquartered in Franklin, Massachusetts. It was engaged in the design, manufacture and distribution of screen printers. n1 Business was very good in the 1980s and early 1990s. In fact, according to MPM's consolidated financial statements, in fiscal years 1991-94, MPM's sales increased from $ 13.5 million to $ 55.5 million and MPM's net income increased from $ 8,300 to $ 6.5 million. In March 1995, MPM and Cookson signed an Agreement of Merger that provided for immediate payments by Cookson of $ 65 million upon consummation of the merger, with contingent earn-out payments up to an additional $ 73,635 million. n2 On May 2, 1995, the parties consummated the merger.

n1 Screen printers are one form of machine used in the surface mount technology industry to attach electronic components to circuit boards. Screen printers use a squeegee to push solder paste through a stencil onto specific points on circuit boards where components need to be attached.

n2 The contingent earn-out depended on MPM's average annual earnings between June 1, 1995 and June 30, 1998. If the average annual earnings met or exceeded $ 35 million, the entire contingent payout became due. If the average annual earnings fell between $ 14 million and $ 35 million, some contingent payout less than the maximum became due. If the average annual earnings fell below $ 14 million, no contingent payout became due.

Gilbert owned 600 shares of MPM's common stock and 200 shares of MPM's preferred stock, giving him an ownership stake in MPM of 7.273% on a fully diluted basis. Under the terms of the merger, Gilbert would have received $ 4.56 million (minus transactional costs) and the opportunity to receive contingent payments of up to an additional $ 5.36 million if MPM reached the earn-out goals set forth in the Merger Agreement. Apparently believing that these sums did not reflect MPM's going concern value at the date of the merger, Gilbert chose to exercise his statutory appraisal right, pursuant to 8 *Del. C.* § 262(a), and filed an action in the Court of Chancery.

In the appraisal action, MPM presented expert testimony concerning MPM's going concern value at the date of the merger from William A. Lundquist and Advest, Inc. (collectively "Lundquist"). In response, Gilbert presented expert testimony from Kenneth W. McGraw and Patricof & Co. (collectively "McGraw"). As is often the case in such actions before the Court of Chancery, these experts came up with widely divergent appraisal values. Lundquist, focusing on a supposedly gloomy outlook for MPM and its industry, placed MPM's going concern value at $ 81.7 million. In contrast, McGraw focused on a particularly rosy outlook for MPM and its industry, placing MPM's going concern value at $ 357.1 million.

Lundquist arrived at his appraisal value through two separate discounted cash flow ("DCF") analyses along with a comparable public companies analysis. He constructed both a "sell-side" DCF (representing the transaction from MPM's point of view) and a "buy-side" DCF (representing the transaction from a buyer's point of view). The buy-side analysis, representing the price at which all of the synergies from the transaction go to the seller, resulted in the highest price a reasonable buyer would pay for MPM. As part of his analysis, Lundquist compared the values derived from the buy-side analysis to the terms of the merger, as well as two earlier offers for equity interests in MPM from Dover Technologies n3 and TA Associates, Inc. n4 (the "prior offers"). In his comparable public companies analysis, Lundquist compared MPM's EBITDA, EBIT and P/E ratios to those of comparable public companies to determine a fair market value for MPM.

n3 Dover is the parent company of one of MPM's principal competitors. In 1994, following due diligence, Dover offered to pay $ 50 million and assume certain MPM liabilities for all of the equity in MPM. MPM claims that it did not accept this offer because of antitrust concerns, not because of any insufficiency in the offer.

n4 TA is a venture capital group that, in October 1994, offered to invest $ 10- $ 20 million in MPM based on an assumed equity value for MPM of between $ 50- $ 65 million.

After examining the data, Lundquist concluded that the comparable public companies approach was problematic because MPM was not in a position to go public, rendering comparison unhelpful. He also concluded, based on the sell-side DCF, that MPM's equity value at the time of the merger was $ 90.5 million. He then discounted this amount by 8.8% (the amount of alleged obligations to non-stockholder employees) and again by 1% (the transaction costs borne by approving stockholders) to arrive at a fair market value for MPM at the date of the merger of $ 81.7 million. n5 Assuming that this last figure included some synergies from the merger (disallowed by § 262), n6 Lundquist pegged it as the highest possible going concern value for MPM at the date of the merger.

n5 The Court of Chancery ignored the 1% reduction for transaction costs and used $ 82.5 million as the fair value arrived at by Lundquist.

n6 As explicated later in this Opinion, section 262(h) directs the Court of Chancery to "appraise the shares, determining their fair value exclusive of any element of value arising from the accomplishment or expectation of the merger or consolidation. . . ."

McGraw performed two analyses: a DCF analysis and a comparative public companies analysis. McGraw took the values from each of these approaches, weighted them equally, and arrived at a fair market value for MPM's equity at the date of the merger of $ 357.1 million. n7

n7 McGraw found a value of $ 347.5 million using the comparative public company approach and $ 366 million using the DCF approach.

In evaluating the various approaches, the Court of Chancery settled on a DCF analysis as the best method for discerning MPM's going concern value at the date of the merger. n8 It first noted that it could not consider Lundquist's buy-side DCF analysis because this method approached the value from the buyer's perspective, rather than valuing the company as a going concern, as required by § 262. n9 In addition, the Court of Chancery stated that it would not use Lundquist's proffer of previous offers to invest in MPM because "these figures represent nothing more than offers to purchase, which were surely based on the value of MPM to a particular entity." n10 Finally, the Court discarded the opposing comparative public company analyses as being relatively weak in comparison to the DCF analyses. n11 Finding that the DCF analysis conducted by McGraw, Gilbert's expert, was the more "thorough and convincing approach to the determination of the discount rate," the Court accepted Gilbert's framework as a starting point. n12

n10 *Id.*

n11 *Id.*

n12 *Id. at 669.*

The first step in the Court of Chancery's manipulation of this framework was to determine revenue growth projections. The Court found that, although MPM management had predicted 1995 sales of $ 108 million in April 1995, it was apparent by the date of the merger that MPM would have a very difficult time meeting this projection. n13 Therefore, the Court based the cash flow forecast on the assumption that MPM's 1995 revenues would be lower than the April projection. n14

n13 *Id.*

n14 *709 A.2d at 669-70.*

Also included in the April management projection were projected revenue growth rates of 38.9% for 1996, 20% for 1997 and 22.2% for 1998. At the date of the merger, MPM had recently developed a new product. Gilbert argued that, at the date of the merger, this product was expected to revolutionize the screen printing industry and, therefore, the Court of Chancery should adjust the growth rates upward. MPM, on the other hand, noted that this new product was experiencing serious development problems at the date of the merger and, therefore, the trial court should adjust the growth rates

downward. The Court rejected both attempts to adjust the growth rates, finding no way to conclude that the April 1995 projection had not incorporated both of these claims. n15 For the same reason, it refused to adjust the April 1995 projection for research and development expenses. n16

n15 *Id. at 671.*

n16 *Id.* This projection had research and development expenses at 10% of sales for 1995 and 14% of sales for 1996-1998.

Assuming a five year DCF projection, the next step was to determine the terminal value of MPM at the end of fiscal year 2000. n17 Both experts used comparable public companies to make this determination. Finding that Lundquist, MPM's expert, had "convincingly demonstrated the appropriateness of [his] selection [of comparable companies]" the Court of Chancery used the terminal value multiple of 7.5 provided by MPM. n18

n17 *Id.*

n18 *Id. at 672.*

The Court of Chancery next moved to the determination of the proper discount rate. It approved of McGraw's methods, but disapproved of the comparable companies McGraw used in applying these methods. n19 It solved this problem by holding that "MPM's discount rate shall be that rate determined through use of [McGraw's] CAPM model except that the comparable beta employed shall be based on the *average beta of [MPM's] comparable companies."* n20

n19 *709 A.2d at 672-73.*

n20 *Id. at 673* (emphasis in original).

As a final matter, the Court of Chancery considered MPM's claim that Gibson's ownership percentage in MPM should be diluted by 8.8%, or the amount of obligations it claimed to have outstanding to non-stockholder employees. It found that MPM had failed to provide any evidence that these obligations existed, or that litigation had been threatened over them. n21 Accordingly, the Court refused to allow a dilution of Gibson's ownership percentage based on these alleged obligations. n22

n21 *Id.*

n22 *Id.*

The opinion of the Court of Chancery left some issues unanswered, as it never provided the actual discount rate that the parties should apply. On April 24, 1998, the Court issued a second opinion, in which it determined several components of the discount rate: the cost of debt (9.6%); the debt to total capital ratio (5%); the source of "raw" beta data (Bloomberg); and a small company premium (2.87%). n23 On May 22. 1998, the Court issued a final order and judgment, in which it determined that MPM's equity value at the date of the merger was $ 156,331,000. n24 On a per share basis, this translated into a value of $ 14,211.91, or a total of $ 11,369,528 for Gilbert's 800 shares. n25

n23 *Gilbert v. M.P.M. Enterprises, Inc., 1998 Del. Ch. LEXIS 60,* *13, Del. Ch., C.A. No. 14416-NC (April 24, 1998).

n24 *Gilbert v. MPM Enterprises, Inc.,* Del. Ch., C.A. No. 14416-NC (May 22, 1998).

n25 *Id.* The trial court also added interest of 8.15%, compounded monthly, from May 2, 1995 to the date of payment. The trial court calculated this amount as $ 3,921.46 per share. *Id.*

MPM appealed to this Court, challenging the decision of the Court of Chancery on two grounds. First, MPM claimed that the Court erred in failing to consider the terms of the merger or the terms of the prior offers in its determination of fair value. Second, MPM challenged the Court's conclusion that there was no evidence of record to support the dilution of Gilbert's ownership share due to obligations owed to non-stockholder employees.

From the language in the opinions of the Court of Chancery, we were unable to discern why the Court did not use the values derived from the merger and the prior offers in its determination of fair value. We could not determine whether it accorded these values no weight after admitting them into evidence, or whether it refused to admit them into evidence as inconsistent with legally acceptable methods of valuation under § 262. We remanded this matter to the Court of Chancery for clarification so that it could provide a better explanation of its analysis with respect to both the merger and the prior offers. n26 In the event its determination was factual and not legal, we further asked the Court to recite the facts it relied on in according zero weight to these values. n27

n26 *MPM Enterprises v. Gilbert,* Del. Supr., No. 266, 1998, Walsh, J. (Nov. 23, 1998) (Order).

n27 *Id.*

In its remand opinion, the Court of Chancery clarified its position with respect to the merger and the prior offers. n28 The Court stated that it did not mean to imply that § 262 barred consideration of specific offers for a company, and that it did, in fact, consider the relevance of each of these offers to the fair value of MPM at the date of the merger. n29 It explained that, while potentially relevant, the evidence with respect to both the merger and the prior offers was of only marginal utility and therefore received no weight in the final analysis. n30 The Court further explained that, rather than relying on specific evidence supporting its decision to accord zero weight to these offers, it relied on the absence of any credible evidence provided by MPM that established a nexus between the values derived from the offers at issue and the going concern value of MPM at the date of the merger. n31

The Relevance of the Merger and Prior Offers

We review the findings of the trial court in a statutory appraisal proceeding with a high level of deference. n32 In such cases, "the discretion to weigh the evidence belongs to the Court of Chancery with our review one of abuse of that discretion." n33 But our review is *de novo* to the extent the trial court decision implicates the statutory construction of § 262. n34

n32 *See In re Shell Oil Co., Del. Supr., 607 A.2d 1213, 1219 (1992).*

n33 *Id. at 1221.*

n34 *See M. G. Bancorporation v. Le Beau, 737 A.2d 513, 1999 Del. LEXIS 143,* (Del. 1999), *reh'g den.,* May 27, 1999.

In this case, the Court of Chancery did not err in its decision regarding the admissibility of the terms of the merger and of the prior offers. It did admit all of these offers into evidence, although it did not dwell on them and ultimately chose not to accord them any weight. Therefore, the inquiry must shift to whether the Court abused its discretion in refusing to give any weight to the terms of the merger and of the prior offers in its appraisal of Gilbert's shares.

Section 262(h) requires the trial court to "appraise the shares, determining their fair value exclusive of any element of value arising from the accomplishment or expectation of the merger or consolidation." n35 Fair value, as used in § 262(h), is more properly described as the value of the company to the stockholder as a going concern, rather than its value to a third party as an acquisition. We have long recognized that failure to value a company as a going concern may result in an understatement of fair value. n36

n35 8 *Del. C.* § 262(h).

n36 *See Gonsalves v. Straight Arrow Publishers, Inc., Del. Supr., 701 A.2d 357, 362 (1997); Cede & Co. v. Technicolor, Del. Supr., 684 A.2d 289, 299 (1996); Baron v. Pressed Metals of America, Inc., Del. Supr., 35 Del. Ch. 581, 123 A.2d 848, 854 (1956).*

In *Weinberger v. UOP* n37 and its progeny, n38 we elucidated the extent of the discretion of the Court of Chancery in choosing a method of valuation in a statutory appraisal. *Weinberger* acknowledged the Court's discretion to use "any techniques or methods which are generally considered acceptable in the financial community and otherwise admissible in court, subject to our interpretation of 8 *Del. C.* § 262(h)." n39 Assuming the variables applied by the trial court are proper, a DCF analysis is one such technique or method of determining going concern value that is within the trial court's discretion to use. n40
