n40 *See Id. Compare Le Beau, 1999 Del. LEXIS 143, 737 A.2d at 524* (DCF analysis rejected due to the experts' use of improper variables); *Cede & Co., 684 A.2d at 299* (same).

In this appeal, MPM does not challenge the DCF analysis employed by the Court of Chancery or the specific variables used in the analysis. n41 Instead, MPM focuses on other language in § 262(h) requiring the trial court to "take into account all relevant factors" when determining the fair value of a petitioner's shares. n42 MPM contends that the figures derived from the merger and the prior offers are "relevant factors" that the trial court impermissibly ignored in its determination of fair value. According to MPM, if the trial court had considered these "real world" values, it would have realized that the results of the DCF analysis did not accurately reflect the going concern value of MPM at the date of the merger.

n41 Although MPM objected to some specific variables before the Court of Chancery, it did not raise these issues in its opening brief so we need not consider them.

n42 8 *Del. C.* § 262(h).

The initial determination by the Court of Chancery of the variables the parties should employ in the DCF analysis was a well-reasoned use of discretion. The Court certainly acted as an independent appraiser of MPM, using its judgment to discern which facets of the experts' competing analyses correctly set forth the assumptions necessary for a proper DCF analysis. The only question remaining is whether the Court abused its discretion in refusing to compare the figures derived from this properly-applied DCF analysis to the merger value and the valuations implicit in the prior offers. Values derived in the open market through arms-length negotiations offer better indicia of reliability than the interested party transactions that are often the subject of appraisals under § 262. n43 But the trial court, in its discretion, need not accord any weight to such values when unsupported by evidence that they represent the going concern value of the company at the effective date of the merger or consolidation.

n43 *See, e.g., Le Beau, 737 A.2d 513, 1999 Del. LEXIS 143,* *30 (merger of target into stockholder of 95% of target); *Rapid-American Corp. v. Harris, Del. Supr., 603 A.2d 796 (1992)* (parent-subsidiary merger); *Bell v. Kirby Lumber Corp., Del. Supr., 395 A.2d 730 (1978)* (parent-subsidiary merger).

In this case, MPM proffered evidence of the merger and the prior offers only as part of Lundquist's buy-side DCF. The Court of Chancery properly rejected this DCF approach because it focused on the elements of value that would arise from the merger, rather than on the going concern value of MPM without any consideration of such synergistic values. As noted, section 262(h) explicitly states that the trial court "shall appraise the shares, determining their fair value *exclusive of any element of value arising from the accomplishment or expectation of the merger or consolidation . . . ."* n44 By determining the highest price at which all synergies devolved to the seller, this buy-side analysis was undoubtedly proscribed by § 262(h).

n44 8 *Del. C.* § 262(h) (emphasis supplied).

Irrespective of that fact, MPM contends that the Court of Chancery still should have considered the terms of the merger and the prior offers in its final appraisal decision. To support this contention, MPM points to *Van de Walle v. Unimation Inc.,* n45 where the Court of Chancery found that such transactions are the most reliable indicia of fair value, even more reliable than expert testimony

concerning DCF analyses. n46 But *Van de Walle* differs from this case in a very significant respect. In *Van de Walle,* certain minority stockholders claimed that the target company's board of directors had breached its fiduciary duties in accepting an unfair merger price. In essence, the stockholders argued that the board of directors had failed to obtain the best price available in executing a merger. In this case, a dissenting stockholder petitioned the Court of Chancery to determine the fair value of his shares. Under section 262, the fairness of the price on the open market is not the overriding consideration. Instead section 262(h) requires that the Court of Chancery discern the going concern value of the company irrespective of the synergies involved in a merger. A fair merger price in the context of a breach of fiduciary duty claim will not always be a fair value in the context of determining going concern value.

n45 *1991 Del. Ch. LEXIS 27,* Del. Ch., C.A. No. 7046, Jacobs, V.C. (March 6, 1991).

n46 The court stated that "the fact that a transaction price was forged in the crucible of objective market reality (as distinguished from the unavoidably subjective thought process of a valuation expert) is viewed as strong evidence that the price is fair." *1991 Del. Ch. LEXIS 27,* *50.

We agree with the general statement made by the Court in *Van de Walle.* A merger price resulting from arms-length negotiations where there are no claims of collusion is a very strong indication of fair value. But in an appraisal action, that merger price must be accompanied by evidence tending to show that it represents the going concern value of the company rather than just the value of the company to one specific buyer. In this case, MPM failed to present this additional evidence with respect to either the merger or the prior offers. n47 This led the Court of Chancery to decide that these values were of only marginal relevance, if any. In our view, this determination was not an abuse of discretion.

n47 The prior offers suffered from flaws that made them marginally useful in an appraisal under section 262, under the best of circumstances. Both were remote in time from the date of the merger and neither was actually consummated.

Alleged Obligations to Non-Stockholder Employees

On a claim of error, we review specific factual findings made by the trial court in a section 262 appraisal with a high level of deference. n48 This Court will reverse the findings of the trial court only in cases of clear error and where justice so requires. n49

n48 *Kahn v. Household Acquisition Corp., Del. Supr., 591 A.2d 166, 175 (1991).*

n49 *In re Shell Oil, 607 A.2d at 1219.*

At trial, MPM provided two forms of evidence to prove that it was obliged to provide equity to non-stockholder management. This consisted of three written employment agreements and the live testimony of Thomas Bagley, MPM's President and Chief Executive Officer.

The three written employment agreements each include a section entitled "Long-Term Incentive." According to this section, the specified employees *"will be* granted an option, *subject to rules, regulations, and restrictions* as determined by the Board of Directors of the Company in their sole

discretion to acquire . . . stock in the company." n50 This section goes on to define the specific number of shares that the employee *"shall possibly have the right to acquire...."* n51 The Court of Chancery did not have before it a later agreement showing that these contingent obligations actually vested, and in what amount they vested. Also, MPM's financial statements prior to the merger did not contain any indication of these options. The trial court did not err in finding that the employment agreements alone did not provide sufficient proof of the alleged obligations.

n50 Employment Agreement, P11 (emphasis supplied).

n51 *Id.* (emphasis supplied) (original in uppercase).

Bagley's testimony could have provided the extra element lacking in the employment agreements. He testified that MPM made oral commitments to the non-stockholder management. When asked how MPM determined that payments would be made to non-stockholders, Bagley answered that "we had in all of these instances with all of these people had discussions with them. In some cases we had written commitments to them to provide them with equity participation in the organization, in MPM." The trial court was not convinced by this testimony and found that MPM had failed to provide sufficient evidence to prove that these payments of equity actually were legal obligations of MPM rather than merely costs of the merger. As we have stated, "when the determination of facts turns on a question of credibility and the acceptance or rejection of 'live' testimony by the trial judge, [the trial court's] findings will be approved on review." n52

n52 *Levitt v. Bouvier, Del. Supr., 287 A.2d 671, 673 (1972).*

Conclusion

The Court of Chancery's appraisal of Gilbert's shares in MPM is affirmed in all respects.

143 N.J. 168 (1996)
669 A.2d 1382

RALPH MUELLENBERG AND BIKON-TECHNIK, G.m.B.H., PLAINTIFFS-RESPONDENTS, v. BIKON CORPORATION, DEFENDANT, AND KURT W. BURG, DEFENDANT-APPELLANT, AND ADDA FINANZIARIA, S.R.L. AND DARIO PASSERINI, DEFENDANTS-RESPONDENTS.

The Supreme Court of New Jersey.

Argued September 27, 1995.
Decided January 18, 1996.

Eugene H. Gilmartin argued the cause for appellant (*Barry G. Leveen,*attorney).

Frederick A. Nicoll argued the cause for respondents Ralph Muellenberg and Bikon-Technik, G.m.b.H.

William F. Campbell, III, argued the cause for respondents Adda Finanziaria, S.R.L., and Dario Passerini (*Dillon, Bitar & Luther,* attorneys).

The opinion of the Court was delivered by O'HERN, Justice.

This appeal concerns a court's authority to order shareholders representing a majority of corporate ownership to sell their shares to a minority shareholder whose rights had been oppressed by the majority. We find that the provisions of the New Jersey Corporation Business Act, *N.J.S.A.* 14A:12-7(1)(c) and 14A:12-7(8), do, in rare circumstances, authorize a buy-out of the majority. Because unfolding events in this case have confirmed the judgment of the Chancery Division that the parties would be unable to cooperate in the joint management of the enterprise, we reinstate its judgment ordering the majority shareholders to sell their interest to a minority shareholder. For purposes of this appeal, we accept generally the facts set forth in the majority shareholders' brief.

I

Ralph Muellenberg is a mechanical engineer and an inventor. He has held some 80 patents worldwide in the field of locking devices used generally in the building of machines. These are described variously as "shaft to hub connections," "clamping devices" and "locking assemblies." The devices allow component parts of a machine to attach efficiently to a shaft. In 1972, Muellenberg founded Bikon-Technik GmbH (BTG) in Germany to promote products of his invention. BTG owns the trademarks BIKON, DOBIKON, and BIKON-Technik.

Adda Finanziaria, S.R.L. (Adda) is an Italian holding company owned by the defendant Dario Passerini who is also the general manager and a shareholder in another Italian company, Tecnomeccanica S.N.S. di Sacchi & C. (TM).

Kurt Burg is a mechanical engineer who came to the United States in 1976 from Germany and was employed here by a company known as Ringfeder Corp., also in the clamping device business and a competitor of BTG.

Muellenberg's goal was to establish a family of companies related through common ownership and contract to market his products throughout the world. This integrated ownership structure was aimed at assuring quality and sources of supply. By the end of 1992, worldwide sales of Bikon and Dobikon products (collectively "Bikon Products") totaled nearly $5 million. BTG does not manufacture locking devices itself. In 1979 BTG entered an agreement with TM, which was owned equally by Muellenberg and Adda (Passerini's holding company), to manufacture Bikon products. The agreement provided, among other things, that TM would be the exclusive manufacturer of products for BTG in Italy, that BTG would make specified annual minimum purchases and that BTG would have the exclusive right to sell products manufactured by TM in various countries including the United States (the "Cooperation Agreement"). No royalty or license fees were due to BTG or Muellenberg under the Cooperation Agreement with TM.

Sometime in 1980, Muellenberg and Burg began discussions concerning Burg's possible participation in a United States company to be formed by Muellenberg and Passerini for the promotion and sale of Bikon products in the United States and Canada.[1] Muellenberg had met Burg some years earlier when Burg was a German resident.

To that end Bikon Corp. (BNJ) was incorporated in New Jersey on June 25, 1982. A Stockholders' Agreement provided that Muellenberg, Burg and Passerini would be the initial directors and officers and that Muellenberg would be president. The parties also executed a License Agreement and a Distribution Agreement dated April 12, 1982. The License Agreement granted BNJ the right to exploit Bikon products in the United States in consideration of a license fee to Muellenberg, as owner of the patents, of 5 per cent of the gross receipts of BNJ, payable quarterly.

Pursuant to Burg's request, the Distribution Agreement gave BNJ the right to produce and distribute products developed in accordance with Muellenberg's patents. The Distribution Agreement licensed BNJ to use the common law trademarks BIKON, DOBIKON and the trade name BIKON-Technik in exchange for a fee of 2 per cent of BNJ's gross receipts. BTG also obliged itself to offer newly developed products in the field of shaft to hub connections to BNJ for distribution in the United States. To ensure quality and protect valuable patent and trademark rights, Muellenberg included in the Distribution Agreement a provision requiring that production in the United States be in accordance with drawings and blueprints supplied by BTG which could not be altered without BTG's permission.

Muellenberg, Burg and Passerini subscribed for 100 shares of BNJ stock for $30,000 each. Only Muellenberg invested cash. Burg's subscription was provided in exchange for his

[1] For convenience, we sometimes use the name Passerini to denote the interests of Adda and TM and Muellenberg to denote the interests of BTG.

knowledge of the trade and Passerini's was credited against merchandise to be manufactured by TM for sale by BNJ. Certificates evidencing ownership of 100 shares of BNJ were issued to Muellenberg, Burg and Passerini.

Muellenberg claims that prior to the formation of Bikon Corp., he made it clear to Burg that he, Muellenberg, was to be in control of the company and would be its president, Burg would be general manager and Passerini would be treasurer. Business operations commenced in Burg's River Vale, New Jersey home. In June 1984, Burg and his wife bought a house with an out-building in Monroe, New York and moved the business there. The out-building was renovated with offices upstairs and a warehouse on the first floor. Eventually, BNJ expanded to a warehouse in Monroe. BNJ always paid rent to Burg and his wife for the office space in River Vale and Monroe ($1350/month in 1992).

Despite differences that developed between Muellenberg and Burg, the business prospered. As General Manager and the only officer on site on a regular basis, Burg handled the day-to-day business of BNJ. Muellenberg claims that Burg acted as though he had exclusive control over the business. Disputes arose about the introduction of new products into the BNJ line, the patent and trademark royalty fees, the rent that Burg paid to himself, and Muellenberg's desire to see detailed reports of sales and activities.

Muellenberg also complained that when Passerini fell behind in production capacity, Burg went to Italy without notice to Muellenberg and unilaterally engaged other suppliers. Muellenberg regarded some of them as direct competitors and did not want them to threaten his interests. He viewed introduction into the United States of the Bikon products produced by unlicensed manufacturers as a violation of his patent rights. Burg countered that Passerini had encouraged him to engage the other contractors with Muellenberg's tacit approval.

At first Passerini appeared neutral or inactive. A question arose concerning Passerini's fulfillment of his capital subscription. Claiming that the corporation was deadlocked, Muellenberg instituted these proceedings in the Chancery Division, seeking a dissolution of the corporation and other relief. Burg counterclaimed, seeking to confirm that Passerini was not a shareholder and to compel Muellenberg to sell his stock to Burg.

When Passerini resumed his role, notice was given of a meeting of the shareholders and directors to be held on January 20, 1993, to consider dissolution. On Burg's application, the Chancery Division enjoined any action to dissolve, but not the meeting. Muellenberg and Passerini traveled from Europe to attend the meeting. BNJ's secretary attempted to persuade Burg to attend either by telephone or in person. When Burg refused, the meeting proceeded in his absence.

At that meeting, Muellenberg and Passerini voted to declare a dividend of $180,000 ($600 per share), to retain an outside accountant to determine accrued royalties, to require the signatures of Burg and Muellenberg or Muellenberg alone for future bank withdrawals, and to require Board approval for the selection of suppliers and purchases over $1,000.[2] Muellenberg and Passerini assumed that they had regained control of BNJ and dismissed

[2] On Burg's motion, the Chancery Division enjoined the payment of the dividend and modified the requirements for approval of purchases over $1,000. The court also modified the banking arrangements.

their court actions, except for their application to purchase Burg's stock. The ensuing disputes were tried over eleven days between May 10, 1993 and June 22, 1993.

At trial, the court found that Passerini was a stockholder, having paid for his stock in the transfer of goods. The issues it posed for decision were: (1) Had defendant Burg proven a triggering event under *N.J.S.A.* 14A:12-7 authorizing a buy-out of shares or dissolution, and (2) if a triggering event occurred, should a sale of stock be directed and, if so, from whom to whom? After reviewing the various claims of oppression and mismanagement, the court found that at the January 20, 1993, shareholders' meeting, Muellenberg and Passerini had begun efforts to freeze out Burg. They had declared a $180,000 dividend that they should have known would deprive Bikon of needed cash to operate and thus take away Burg's ability to perform successfully as general manager. In addition, despite the lack of any showing of abuse by Mr. Burg in operating the company, they began to strip Burg of his day-to-day control as general manager by resolving that bank account withdrawals should be made only by plaintiff or by joint signatures of plaintiff and defendant Burg. And, finally, the court found that the majority directors, as "[p]laintiff's counsel acknowledged ... in summation," intended to vote Burg out as a director and terminate him as general manager and employee of the company.

The trial court determined that this course of conduct amounted to oppression. It held that the only fair and equitable remedy under the circumstances was to have one or more of the parties buy the stock of the others. The court concluded that Burg should buy out the interests of Muellenberg and Passerini. The parties agreed on the value of the stock. No stay of the order of the Chancery Division having been obtained, Burg tendered $235,000 each to Muellenberg and Passerini and thereafter changed the name of the corporation to B-Loc Corporation.

On appeal, the Appellate Division reversed and remanded the portion of the trial court's judgment ordering the sale of the shares of Muellenberg and Adda to Burg and terminating Muellenberg and Passerini as corporate officers and directors. It found that the Chancery Division's holding that the facts satisfy the oppression and unfairness standards of *N.J.S.A.* 14A:12-7(1)(c) was "premature and, therefore, erroneous as a matter of law."

It is not sufficient that Muellenberg and Passerini "had started to freeze out" Burg. The statutory remedies of dissolution or buy-out, available when oppression or unfairness has occurred, are so terminal in the context of a corporation's life, that a court should be loathe to reach either result except as a last resort. *See Brenner v. Berkowitz,* 134 *N.J.*488, 510-15 [634 *A.*2d 1019] (1993). * * * Before ordering so extreme a remedy as a buy-out, other less harsh remedies could have been applied.

[*Muellenberg v. Bikon Corp.,* 277 *N.J. Super.* 67, 75-76, 648 *A.*2d 1161 (App.Div. 1994) (citation omitted).]

The Appellate Division held that the trial court should have given the parties an opportunity to operate under their newly adopted governance structure before declaring an impasse. It reasoned that "there was always the possibility that the parties might, out of self-interest, find a way to resolve their differences so as to preclude a maturing `freeze out' from actually occurring, or that they might be assisted in doing so by orders of the court less extreme

than dissolution or buy-out." *Id.* at 76, 648 *A.*2d 1161. Because requiring majority shareholders to sell their interests to a minority shareholder is so contrary to our laws' majoritarian principles of corporate governance, the Appellate Division said courts should contemplate such relief only when "extraordinary equitable considerations and unavoidable consequences" arise.

Defendant Burg petitioned this Court for certification, arguing that the Appellate Division incorrectly limited the scope of *N.J.S.A.* 14A:12-7, improperly invoked a majoritarian principle of corporate governance with respect to a close corporation, and erroneously rejected the decision of the trial court. We granted Burg's petition for certification, 142 *N.J.* 448, 663 *A.*2d 1356 (1995), and stayed the effect of the Appellate Division's opinion until we had reviewed it. We now reverse and reinstate the judgment of the Chancery Division.

II

Unlike their counterparts in a publicly held corporation, shareholders in a close corporation are typically involved in the management and operation of the company. Oftentimes, these parties consist of family members or friends whose participation in the business is their principal source of employment and income. The existence of these family or other bonds may intensify conflicts and misunderstandings between the parties and lead to the deterioration of the company. 2 F. Hodge O'Neal & Robert B. Thompson, *O'Neal's Close Corporations*§ 8.13 at 67 (Callaghan & Co., 3rd ed. 1994). "[M]any participants in closely held corporations are `little people,' unsophisticated in business and financial matters." F. Hodge O'Neal, *Close Corporations: Existing Legislation and Recommended Reform,* 33 *Bus.Law.* 873, 884 (1978). "As minority participants in a close corporation may not anticipate dissension or oppression, and indeed may be unaware of their vulnerability, they frequently fail to bargain for adequate protection against mistreatment." *Id.* at 881.

Because majority shareholders have the power to dictate to the minority the manner in which the corporation is run, a minority shareholder in a close corporation becomes vulnerable when dissension develops. *Bostock v. High Tech Elevator Indus.,* 260 *N.J. Super.* 432, 443-44, 616 *A.*2d 1314 (App.Div. 1992). The controlling shareholders' voting power enables them to freeze-out minority shareholders by terminating their employment, excluding them from participation in management decision-making, and reducing their salary and other income. *Meiselman v. Meiselman,* 309 *N.C.* 279, 307 *S.E.*2d 551, 558 (1983).

The vulnerability of minority shareholders is exacerbated by the illiquidity of their financial stake in the company. They cannot dissolve the company at will like members of a partnership, nor can they sell their shares on the open market like shareholders in a publicly held corporation. *Ibid.* As a consequence, a shareholder challenging the majority in a close corporation is on the horns of a dilemma. The shareholder can neither profitably leave nor safely stay with the corporation. In reality, the only prospective buyer turns out to be the majority shareholder. *Brenner, supra,* 134 *N.J.* at 505, 634 *A.*2d 1019 (quoting *Orchard v. Covelli,* 590 *F. Supp.* 1548, 1557 (W.D.Pa. 1984), *aff'd,* 802 *F.*2d 448 (3d Cir.1986)). This inability of minority shareholders to withdraw from the venture on their own terms makes it easy for controlling shareholders to exploit minority shareholders and defeat their reasonable expectations.

Traditionally, American courts were reluctant to interfere in the internal affairs of a corporation. *Meiselman, supra,* 307 *S.E.*2d at 559 (quoting F. O'Neal, *Oppression of Minority Shareholders* § 9.04, at 582 (1975)). However, "[t]he two principal conceptual barriers to the court granting relief to aggrieved minority shareholders—the principle of majority rule in corporate management and the business judgment rule—actually have only limited validity in small business corporations." O'Neal, *supra,* 33 *Bus.Law.* at 884.

Some courts, like the Supreme Judicial Court of Massachusetts, did recognize that shareholders' interests are different in close corporations, and stated that those shareholders are subject to a higher standard of duty than shareholders and directors of publicly held corporations. In *Donahue v. Rodd Electrotype Co.,* 367 *Mass.* 578, 328 *N.E.*2d 505 (1975), the Massachusetts court held that "stockholders in the close corporation owe one another substantially the same fiduciary duty in the operation of the enterprise that partners owe to one another." *Id.* at 515 (footnote omitted). This heightened duty, which the court labelled one of "utmost good faith and loyalty," was described by then Chief Judge Cardozo of the New York Court of Appeals in *Meinhard v. Salmon:* "Joint adventurers, like copartners, owe to one another, while the enterprise continues, the duty of the finest loyalty. Many forms of conduct permissible in a workaday world for those acting at arm's length, are forbidden to those bound by fiduciary ties." *Meinhard v. Salmon,* 249 N.Y. 458, 164 *N.E.* 545, 546 (1928), *quoted in Donahue, supra,* 328 *N.E.*2d at 516.

Historically, state corporation statutes had provided minority shareholders with little protection against exploitation by controlling shareholders. As Professor O'Neal explained, "Corporation legislation, although designed primarily to meet problems of public-issue corporations, nevertheless applied indiscriminately to all corporations; the statutes did not differentiate between public-issue corporations and close corporations." O'Neal, *supra,* 33 *Bus.Law.* at 873.

Thus for years there was little or no protection that a court could afford oppressed minority shareholders. In *Brenner v. Berkowitz,* Justice Garibaldi furnished an historical overview of the New Jersey Legislature's approach to protecting minority shareholders. She noted that it was not until 1973 that the legislature amended section 14A:12-7 of the Corporation Business Act to provide a specific cause of action to protect minority interests. The present language in 14A:12-7(1)(c) was added by L. 1973, c. 366, § 67, effective May 1, 1974. It provides:

> (1) The Superior Court, in an action under this section, may appoint a custodian, appoint a provisional director, order a sale of the corporation's stock as provided below, or enter a judgment dissolving the corporation, upon proof that
>
> * * * * * * * *
>
> (c) In the case of a corporation having 25 or less shareholders, the directors or those in control have acted fraudulently or illegally, mismanaged the corporation, or abused their authority as officers or directors or have acted oppressively or unfairly toward one or more minority shareholders in their capacities as shareholders, directors, officers, or employees.

The legislature intended to expand the protection available to minority shareholders "who are powerless within a corporation, as well as powerless to leave." *Brenner, supra,* 134 *N.J.* at 506, 634 *A.*2d 1019 (citing *N.J.S.A.* 14A:12-7 (West 1968) Comment on 1972 Amendments).

The first New Jersey case to construe section 14A:12-7(1)(c) was *Exadaktilos v. Cinnaminson Realty Co.,* 167 *N.J. Super.* 141, 400 *A.*2d 554 (Law Div. 1979), *aff'd o.b.,* 173 *N.J. Super.* 559, 414 *A.*2d 994 (App.Div.), *certif. denied,* 85 *N.J.* 112, 425*A.*2d 273 (1980). The court examined the various techniques that controlling members of a close corporation could use to freeze out minority shareholders. *Id.*at 153, 400 *A.*2d 554. It noted that section 14A:12-7(1)(c) had been enacted in response to the failure of traditional principles of corporate law, such as the business judgment rule, to curb these abuses. *Id.* at 154, 400 *A.*2d 554.

In determining whether a particular course of conduct has oppressed a minority shareholder in violation of the new provision, courts should examine the understanding of the parties concerning their roles in corporate affairs.

The special circumstances, arrangements and personal relationships that frequently underlie the formation of close corporations generate certain expectations among the shareholders ... [that] preclude the drawing of any conclusions about the impact of a particular course of corporate conduct on a shareholder without taking into consideration the role that he is expected to play. Accordingly, a court must determine initially the understanding of the parties in this regard. Armed with this information, the court can then decide whether the controlling shareholders have acted in a fashion that is contrary to this understanding or in the language of the statute, "have acted oppressively * * * toward one or more minority shareholders."
[*Id.* at 154-55, 400 *A.*2d 554.]

In this Court's most recent application of section 14A:12-7(1)(c), we defined oppressive conduct to include that which frustrates the reasonable expectations of the minority shareholder. *Brenner, supra,* 134 *N.J.* at 506, 634 *A.*2d 1019 (citing 2 F. Hodge O'Neal & Robert B. Thompson, *O'Neal's Close Corporations* § 9.29 at 132 (Callaghan & Co., 3rd ed. 1988)). This approach takes into account the fact that shareholders in close corporations may have expectations that differ substantially from those of shareholders in public corporations. It also requires courts to be flexible in their treatment of section 14A:12-7(1)(c) cases because of the fact-sensitive nature of their inquiry. *Brenner, supra,* 134 *N.J.* at 516, 634 *A.*2d 1019.

We agree with the emphasis in the Appellate Division's opinion that minority shareholders' expectations must, however, be balanced against the corporation's ability to exercise its business judgment and run its business efficiently. *Id.* at 517, 634 *A.*2d 1019. Thus, courts should always be wary of interfering in the internal affairs of a corporation. As we stated in *Brenner:*

> The limited bases for statutory relief * * * reflect an awareness that minority shareholders know the limitations of their power at the time they make their investment in a close corporation. Mere disagreement or discord between the

> shareholders is not sufficient for a violation of the close corporation statutory provision.
> [*Id.* at 506, 634 *A.*2d 1019.]

With these principles in mind, we turn to the facts of the case to determine whether the conduct of Muellenberg and Passerini reflects more than a disagreement or discord among shareholders, but rather amounted to the oppression of Burg within the meaning of section 14A:12-7(1)(c).

III

To repeat, *N.J.S.A.* 14A:12-7(1)(c) allows a court to grant relief when controlling shareholders "have acted fraudulently or illegally, mismanaged the corporation, or abused their authority as officers or directors or have acted oppressively or unfairly" toward a minority shareholder. The trial court did not find any fraud or mismanagement on the part of Muellenberg or Passerini. The question is whether their actions were oppressive. Ordinarily, oppression by shareholders is clearly shown when they have awarded themselves excessive compensation, furnished inadequate dividends, or misapplied and wasted corporate funds. *Giannotti v. Hamway,* 239 *Va.* 14, 387 *S.E.*2d 725 (1990). This did not occur here.

The remaining measure of oppression in the small corporation is whether the fair expectations of the parties have been met. When personal relations among the participants in a close corporation break down, the "reasonable expectations" that participants had, for example, the expectation that their employment would be secure or that they would enjoy meaningful participation in the management of the business, become difficult, if not impossible, to fulfill. *Meiselman, supra,* 307 *S.E.*2d 551. A person who buys a minority interest in a close corporation does so, not only in the hope of enjoying an increase in the value of the shareholder's stake in the business, but for the assurance of employment in the business in a managerial position. In addition to the security of long-term employment and the prospect of financial return in the form of salary, the expectation includes a voice in the operation and management of the business and the formulation of its plans for future development. *Ingle v. Glamore Motor Sales,* 73 *N.Y.*2d 183, 538 *N.Y.S.*2d 771, 779-80, 535 *N.E.*2d 1311, 1319 (1989) (Hancock, J., dissenting). In this case, it is reasonable to conclude that Burg's fair expectations were that should he give up his prior employment with a competitor company and enter this small corporation, he would enjoy an important position in the management affairs of the corporation.

It is a close question whether the actions taken by Muellenberg and Passerini at the January 20, 1993, meeting amounted to oppression, as Burg contends. Muellenberg and Passerini claim that their declaration of the first dividend in company history was "fair and reasonable" in light of the company's favorable financial position at that time. They dispute the trial court's conclusion that the dividend would deprive Burg of the needed cash to operate BNJ, asserting that sufficient assets were still available to run the company. Muellenberg also maintains that Burg could not have reasonably expected that he would have exclusive authority and control over the business when BNJ's by-laws named Muellenberg president and chief executive officer.

We agree that it cannot be considered oppression when controlling shareholders seek to rein in management and control the affairs of their corporation. But the expectations of Muellenberg and Passerini that they might exercise majority power conflicted with the expectations of Burg, and were confined by their fiduciary duties to their co-venturer. *Bostock, supra,* 260 *N.J. Super.* at 444, 616 *A.*2d 1314. The equities were close. Burg had devoted the most productive years of his life to building up the company. Due in large measure to Burg's efforts, North American sales of Bikon products rose to over $2,000,000 per year. He could not reasonably have expected that after ten years as general manager he would be frozen out of the business. On the other hand, Muellenberg could not reasonably have expected that he, the founder of the enterprise, and Passerini would be ignored in the conduct of the company's affairs.

In other circumstances, the solution proposed by the Appellate Division might have resolved the impasse. Burg could have learned to manage the business more as a partner than as a sole proprietor. But the events that followed the Appellate Division's decision have confirmed that the trial court, which could assess the demeanor and relationship of the witnesses, had a better sense of the internal dynamics among the shareholders and could foreshadow Burg's inevitable ouster from Bikon's picture. That ouster would not have been a fair accommodation of the reasonable expectations of all shareholders.

The remaining issue was whether Burg or Muellenberg and Passerini should survive with BNJ. In 1988, the Legislature amended *N.J.S.A.* 14A:12-7(8) to permit minority shareholders to petition a court to order a buy-out of the majority. As amended, section 14A:12-7(8) provides that if there is a triggering event,

> *[u]pon motion of* the corporation or *any shareholder* who is a party to the proceeding, the court may order the sale of all shares of the corporation's stock held by any other shareholder who is a party to the proceeding to either the corporation or the moving shareholder or shareholders, whichever is specified in the motion, if the court determines in its discretion that such an order would be fair and equitable to all parties under all of the circumstances of the case. (emphasis added).

The statute thus plainly allows the minority to seek a court order for the sale of the stock of "any other shareholder." In most situations, oppressed minority shareholders will lack the resources to buy out the interests of controlling shareholders. As a result, claims of oppression are typically remedied by arranging for the corporation or the majority shareholders to buy out the interests of the minority shareholder. In this case, the record contained the following evidence in support of Burg: Burg was willing and able to purchase the shares of Muellenberg and Passerini; Burg, who owns the land on which BNJ's offices are located, was most active in operating the company since its inception; Burg is the only shareholder who works full-time for BNJ and the company has been his only source of income for over ten years; Burg was primarily responsible for developing the company's contacts in the United States and Canada and is best situated to maintain the existing operation; and finally, it was Burg who sought to preserve the corporation at a time when Muellenberg and Passerini attempted to dissolve it. *See Musto v. Vidas,* 281 *N.J. Super.* 548, 658 *A.*2d 1305 (App.Div. 1995) (reversing minority buy-out of the majority when minority shareholder had not been actively involved in the operation of the company for seven years).

On the other hand, without Muellenberg there would have been no business to divide since he had furnished all the start-up capital and was the inventor of the special design features that propelled the company's sales. Much of BNJ's good will may have derived from the use of the Bikon name. It is, however, too close a call to say that the Chancery Court erred in finding a slight edge in favor of Burg as the surviving shareholder.

Thus, while a minority buy-out of the majority is an uncommon remedy, it was the appropriate one here. The trial court acted within its discretion in ordering Muellenberg and Adda to sell their shares in BNJ to Burg. This remedy is authorized by *N.J.S.A.* 14A:12-7(8) and is consistent with decisions holding that courts are not limited to statutory remedies, but have a wide variety of equitable remedies also available to them. *Brenner, supra,* 134 *N.J.* at 516, 634 *A.*2d 1019; *Walensky v. Jonathan Royce Int'l,* 264 *N.J. Super.* 276, 279, 624 *A.*2d 613 (App.Div.), *certif. denied,* 134 *N.J.* 480, 634 *A.*2d 527 (1993).

Any doubt as to which shareholder should be permitted to invoke the buy-out remedy has been largely dissipated by circumstances. Without resolving the factual disputes set forth in the motions to supplement the record, it appears that since we stayed the Appellate Division's decision, Muellenberg has demonstrated an ability to market his products in the United States without Burg. Muellenberg, on behalf of his solely owned company BTG, made arrangements with a company called North American, Inc. for it to market products under the "Bikon" name that may compete with B-Loc. North American began soliciting B-Loc's customers, advising them that it had been granted the exclusive license to manufacture and distribute "Bikon" locking devices in the United States, Canada and Mexico. In addition, its sales catalogue is similar to the catalogue BNJ used previously. Oral argument convinces us that there is nothing to stand in the way of Muellenberg and Passerini continuing in the American market without real detriment to their reasonable expectations in forming BNJ. The trial court's solution is thus "fair and equitable to all parties" as required by *N.J.S.A.* 14A:12-7(8).

As it stands, BNJ (now B-Loc) no longer can use the "Bikon" trade name. That license was terminated by BTG prior to the commencement of this litigation. The good will and trade name of Bikon inures to Muellenberg's new venture, which may engage in the sale of Bikon fasteners in the domestic U.S. market. Now that the patent has expired on the only Bikon product to generate significant sales in this country, B-Loc and North American are able to compete freely with each other. Realistically, all that plaintiffs Muellenberg and Passerini might reasonably require to advance their undertaking would be the customer lists generated during the period of their joint enterprise with Burg. If those lists are not available to them now, a customer list as of the date of the buy-out should be furnished by Burg.

Accordingly, we reverse the judgment of the Appellate Division and reinstate the judgment of the Chancery Division. We leave to that court the resolution of any unresolved issues attendant to the buy-out.

For Reversal and Reinstatement—Chief Justice WILENTZ, and Justices HANDLER, POLLOCK, O'HERN, GARIBALDI, STEIN and COLEMAN—7.

Opposed—None.

Estate of Mueller v. Commissioner

Estate of Mueller v. Commissioner

Case name: Estate of Mueller v. Commissioner
Citation: T.C. Memo 1992-284, 1992 Tax Ct. Memo LEXIS 310
Date of decision: May 18, 1992
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Beghe
SIC: 3494 Valves and Pipe Fittings, NEC (except metal pipe hangers and supports)
NAICS: 332919 Other Metal Valve and Pipe Fitting Manufacturing
9500

Keywords: Estate tax, Valuation date

COUNSEL:

Stevan Uzelac, Michael A. Indenbaum, and Paul L. Winter, for petitioner.

Thomas M. Rath, for respondent.

JUDGES:

BEGHE

OPINIONBY:

BEGHE

OPINION:

MEMORANDUM FINDINGS OF FACT AND OPINION

BEGHE, Judge. Respondent determined a deficiency of $ 1,985,624 in petitioner's Federal estate tax. The sole issue for decision is the date-of-death fair market value of the 8,924 shares of common stock of the Mueller Co. (the Company) included in the gross estate of Bessie I. Mueller (decedent).

FINDINGS OF FACT

Some of the facts have been stipulated and are so found. We incorporate the stipulation of facts with attached exhibits. Unless otherwise noted, all section references are to the Internal Revenue Code in effect on decedent's date of death, and all Rule references are to the Tax Court Rules of Practice & Procedure.

John S. Mueller, the personal representative of the estate of Bessie I. Mueller, resided in Naples, Florida, at the time the petition in this case was filed.

Bessie I. Mueller, a resident of Port Huron, Michigan, died March 24, 1986, 3 days after the board of directors of the family-owned Mueller Co. apparently approved the cash merger of the Company with an acquisition vehicle to be organized by a Middle East-backed investment bank. Her gross estate included 8,924 common shares of the Company, or 7.5 percent of those outstanding. n1 On May 30, 1986, 67 days after decedent's death, the merger was consummated, essentially on the terms presented at the March 21, 1986, directors' meeting, and all shareholders of the Company received $ 2,150 per share for their stock.

n1 The estate tax return showed 3,500 shares as held by "Ebert B. Mueller, Trustee Under Will -- Marital Trust," 274 shares as held by "Ebert B. Mueller, Trustee Under Life Insurance Agreement -- Marital," and 5,150 shares as held by "Bessie I. Mueller Trust -- property transferred August 9, 1979." Ebert B. Mueller was decedent's husband, who predeceased her. There is no dispute that these shares were includable in the gross estate. The parties have not argued that the holding of the shares in three separate trusts should have any impact on our valuation analysis. We therefore value these shares as if they were held by a single entity on the valuation date.

The estate valued the shares at $ 1,505 per share on the Federal estate tax return, but did not provide any appraisal documentation with the return. Respondent determined that the fair market value of the shares was $ 2,150 per share, the price received by all shareholders of the Company in the merger. At trial, respondent's expert opined that the fair market value of the shares was $ 2,007 per share. One of petitioner's two experts opined that the shares had a value of $ 1,527 per share. The other opined that the value of the shares was between $ 1,400 and $ 1,700 per share, most likely the average of these two extremes, or $ 1,550.

History of the Company

In 1857, Hieronymus Mueller founded the Mueller Co. as a sole proprietorship when he opened a gunsmith shop in Decatur, Illinois. In 1871, Mueller was appointed the Decatur city plumber. The following year he invented the Mueller tapping machine, which enabled gas and water pipes to be tapped while the pipes were under full pressure. This invention is still used throughout the world. The tapping machine was followed in 1882 by Mueller's water pressure regulator, which permitted the main water line pressure to be increased to fight fires without damaging the soft lead pipes used in home plumbing at that time.

In 1885, Mueller converted the business to a partnership with one of his sons and began large-scale manufacturing operations. By 1896, the business had been converted to a corporation, with Hieronymus Mueller owning one-third of the stock, and each of his six sons owning one-ninth. In 1900, Hieronymus Mueller died and his son Henry was named president. Two years later, Henry's brother Adolph succeeded Henry.

Adolph and his descendants tried to keep the Company's stock in the Mueller family. In 1915, 5 years after Henry's death, Adolph bought all the shares of Henry's widow and sold them to his four remaining brothers and one sister, Leda Mueller Cruikshank, on the condition that they not sell or encumber them without family approval. In 1929, however, the Cruikshank family disregarded this condition and offered their Mueller Co. shares to the public. The Mueller family and the Company bought 84 percent of the shares offered, and the balance found its way into outside hands. In response to the Cruikshank

episode, in 1929 Adolph organized a family voting trust with a 10-year term, which was renewed for additional 10-year terms in 1939 and 1949. All shareholder branches of the family, except the Henry Mueller branch, joined the trust, comprising 52 percent of the outstanding shares.

Adolph continued as president until 1939, when his son, William Everett Mueller, succeeded him. William Everett Mueller died in 1947 as the last Mueller to be president of the Company. The Company then sought outside managers and adopted a policy of not hiring family members as new managers, in the belief that family member managers would receive special treatment not necessarily in the interest of family member shareholders. Also, the four remaining shareholder branches of the family became adversarial. The result was that during the period 1953-57, an executive committee of outside directors assumed total management control of the Company. A change in Illinois law in 1957 forbidding such arrangements ended the executive committee's control. The emphasis on outside management continued, however, and in 1968 the last Mueller retired as an officer of the Company.

In 1977, Harlan White, an outsider who had served as president of the Company since 1972, unexpectedly announced his resignation. The board appointed an executive search committee, and after a year's search the committee recommended and the board accepted Edward D. Powers, a professional manager, to replace White as president and chief executive officer. Until 1 year before Powers joined the Company, he had been head of one of the Company's major competitors, the valve division of International Telephone & Telegraph. Powers is currently chairman and chief executive officer of Burnham Service Co., a transportation, warehousing, and distribution firm owned by Investcorp, the Middle East-backed firm that eventually acquired Mueller Co. From approximately 1985 to 1991 he was a member of the board of the Federal Reserve Bank of Chicago, and he currently serves on the boards of directors of Schneider National, Little Rapids Paper Co., and Burnham Service Co.

At about the time Powers became the Company's chief executive, the shareholders began to amend the bylaws of the Company, changing the size and structure of the board of directors. The board was reduced from 12 to 7 members, 4 of whom were "family-designated directors", each representing a surviving shareholder branch of the Mueller family. Illinois law requires cumulative voting for directors, unless the articles of incorporation otherwise provide. Ill. Ann. Stat. ch. 32, par. 7.40(a) (Smith-Hurd 1985). The Company's bylaws also provided for cumulative voting. Inasmuch as each branch of the family held approximately one quarter of the stock, each branch could cumulate its votes and perpetuate its representation on the board. In 1979, the shareholders amended the bylaws to require that three family-designated directors be present to constitute a quorum (family quorum), and that three family-designated directors assent to any board action (family veto). After these changes, the family-designated directors were decedent's son John S. Mueller, Adolph Mueller II, Philip M. Mueller, and A.E. Staley III. Powers, chairman Robert V. Krikorian, and corporate counsel Dudley J. Godfrey were the nonfamily directors.

In 1982, the board unanimously resolved to submit to the shareholders a recapitalization plan whose objective was to freeze the bulk of the then-current value of the Company's stock for estate tax purposes. The plan was opposed by John A. Schluter, a member of the Adolph Mueller branch of the family. Schluter and other members of the Schluter/Adolph Mueller branch of the family believed their branch did not face estate valuation problems and did not see any other need for the proposed recapitalization. Some directors believed the Schluter family planned to take over the Company by

purchasing stock from estates that needed money to pay death taxes. The recapitalization plan was defeated because less than the required two-thirds of the Company's outstanding shares were voted in favor of the plan. Schluter was instrumental in blocking the recapitalization.

Lines of Business

In its early years, the Company had a number of lines of business, from sporting goods to munitions. The Company fabricated one of the earliest automobiles in the United States, and held patents on some of the earliest designs for automobile radiators, spark plugs, and variable speed transmissions. Hieronymus Mueller was experimenting with high-test gasoline when a spark from his pipe ignited some fuel. After he died from burns suffered in the fire, the Company got out of the automobile business and sold its automotive patents.

The "flow control" products -- the tapping machine and the pressure regulator -- became the core of the Company's business. These products evolved into lines of valves and fire hydrants, manufactured in the United States and Canada. The Company's products are used exclusively in large water supply systems. A foray into porcelain bathroom fixtures was abandoned in 1933, and the Company stopped all manufacturing of household plumbing products with the advent of World War II.

The Company is a longtime member of the American Water Works Association (AWWA), the standard-setting organization for municipal flow control products. In 1986, Mueller Co. products satisfied AWWA's standards, and many municipalities required contractors to use Mueller Co. products.

The core business was vulnerable to economic cycles. Management knew it could expect about $ 100 in revenue and $ 40 in pretax profits per housing start, so the Company's revenues and profits were reduced when housing starts declined. Powers convinced the board of directors to authorize a diversifying acquisition program. In the period 1982-84, the Company acquired six firms in an effort to diversify its product lines. The companies acquired were:

Year	Firm acquired	Product
1982	Judd Valve	High-pressure oil field valves
1982	Leopold Co.	Municipal water filters
1982	Superior Stainless	Stainless steel valves and fittings for sanitary use
1984	Valley Pump	Submersible, jet, and turbine pumps for special applications. Renamed Mueller Pump
1984	Tri-Canada, Inc.	Stainless steel valves and fittings for sanitary use. Merged into Superior Stainless to form TCI-Superior
1984	LFE B.V.	Large vacuum-process castings. Located in Northern Ireland. Renamed Mueller Flow Products B.V.

In 1985, the Company also acquired Canada Valve, Inc., another water and gas valve maker. In 1986, the Company had 9 wholly owned subsidiaries and 18 manufacturing facilities in the United States, Canada, and the United Kingdom.

After the acquisition program, and on the valuation date, the Company was a world leader in production of flow control products, processing systems, and pumps for water and natural gas distribution, fire protection, oil and natural gas production, domestic water supply, farm irrigation, and food, beverage, and pharmaceutical processing. The Company was also the largest manufacturer of fire hydrants in the world.

Even after the diversification program, 90 percent of the Company's earnings still came from the core business. The core business is capital intensive, requiring foundries costing tens of millions of dollars. In addition, the foundries create environmentally dangerous wastes. The Company's relative lack of diversification, capital intensiveness, and environmental risks tended to reduce its value.

Despite these vulnerabilities, the Company was doing well financially by the mid-1980's. Under an incentive program created in 1985, in which the Company's return on equity was compared to 30 "peer group" public companies, the Company's return on equity would have ranked as follows:

Year	Rank	Return on Equity
1980	28th	4.41 percent
1981	18th	9.27 percent
1982	23d	2.83 percent
1983	2d	18.28 percent
1984	3d	22.56 percent
1985	2d	22.61 percent

In addition, the Company posted record sales and earnings in 5 of the 7 years ending with 1985. In 1981, the Company reported record sales and earnings, despite the lowest number of housing starts in 30 years. Dividends steadily increased from a low of $ 13 a share in 1975 to $ 32.25 a share in 1985, when the Company earned $ 18.3 million on $ 277.2 million in sales:

	Sales	Earnings	Dividends
Year	($ mil)	($ mil)	($ /share)
1974	$ 90.5	$ 4.8	$ 17.75
1975	72.8	3.3	13.00
1976	79.5	1.4	16.75
1977	97.6	3.1	16.50
1978	117.5	3.5	18.00
1979	127.1	5.6	19.50
1980	121.4	2.7	19.75
1981	142.2	5.7	21.20

1982	130.6	1.8	22.20
1983	176.8	11.5	27.90
1984	212.2	16.0	30.00
1985	277.2	18.3	32.25

The Buyout Transaction

In October or November 1985, Powers told the Company's board of directors that Amsted Industries had expressed some interest in acquiring the Company, but had later decided on a different course of action. The board discussed the possibility of selling the Company. In November, the board voted to form a search committee to interview investment bankers. Philip M. Mueller appeared to oppose selling the Company and voted against the resolution. While Adolph Mueller II was in favor of selling the Company, the rest of his branch of the family, including Schluter, appeared to be against selling. John Mueller was not present at the meeting.

Powers sent letters to several Wall Street investment banking firms, including Morgan Stanley & Co. The search committee interviewed four firms. At a special meeting of the board in December 1985, the directors unanimously chose Morgan Stanley to find a buyer for the Company. Morgan Stanley's representative, Frank Sica, told the board that the Company could bring more than $ 2,000 per share. Powers and John Mueller both thought that estimate was optimistic in light of the business' cyclical nature, capital intensiveness, and environmental risks.

At the December 1985 meeting, Adolph Mueller II retired as a director of the Company. At the board's January 1986 meeting, Schluter replaced Adolph Mueller II as the Adolph Mueller branch's family designated director.

Also at the December 1985 meeting, the board approved a special stock appreciation rights plan (takeover rights plan) whose stated purpose was to:

provide additional incentive to those employees of Mueller Co. and its subsidiaries whose decisions and services are considered to have a significant impact upon the profits of the Company and to encourage those employees to remain as employees throughout and to cooperate with any change in control of the Company.

The takeover rights plan provided that on retirement each of the 11 participants would receive in cash the equivalent of the per share book value of the stock times the number of rights granted to him. If, however, the Company underwent a change in control, then the plan would pay the equivalent of the sales price per share times the number of each participant's rights. These rights were to expire on December 31, 1988. Thus, management had substantial incentive to have the Company acquired at a premium over book value prior to the end of 1988, both under the takeover rights plan and under other stock appreciation rights plans in which members of management had become vested. For example, upon consummation of the merger, Powers received approximately $ 4.8 million with respect to his 2,250 rights, of which 1,200 were granted under the takeover rights plan. But because management did not own any stock, it could not participate in the shareholder vote on a takeover proposal.

On February 21, 1986, the board of directors approved an amendment to the fee agreement with Morgan Stanley. The original agreement compensated Morgan Stanley at a rate of 0.75 percent of the first $ 240 million paid for the Company and 3 percent of any amount more than $ 240 million, plus expenses. The amendment provided that Morgan Stanley would receive an amount equal to 0.75 percent of the purchase price up to $ 240 million, 3 percent of the purchase price between $ 240 million and $ 260 million, and 5 percent of the purchase price greater than $ 260 million, plus expenses. The amendment also provided that if a deal was not consummated, Morgan Stanley would to be entitled to a $ 3 million "breakup fee".

The Company had instructed Morgan Stanley not to make a public announcement of the Company's desire to be acquired. Morgan Stanley instead used its extensive network of business contacts and approached 43 companies it thought would make suitable buyers. Nonetheless, the fact that the Company was seeking a buyer became known in the corporate community, and a number of unsolicited bidders contacted Morgan Stanley, although none of them made an acceptable bid. By February 21, 1986, 16 companies were examining the proposal and 5 had expressed interest. Four interested firms -- British Tire & Rubber (BTR), Kohlberg, Kravis & Roberts (KKR), Georgetown Industries, Inc., and Investcorp -- visited Mueller Co. offices and facilities to conduct due diligence investigations. Of these four firms, Investcorp devoted the most resources to its investigation of the Company. Investcorp sent representatives two separate times; the second time 12-14 Investcorp representatives spent 3 days at the Company. KKR bid $ 235 million to $ 240 million, and BTR bid between $ 220 million and $ 250 million, but the initial bids from Georgetown and Investcorp were the highest.

Prior to March 20, 1986, the Company simultaneously negotiated with Investcorp and Georgetown at the offices of Morgan Stanley in New York. Georgetown ultimately bid $ 270 million. Georgetown's negotiator, former Secretary of the Treasury William Miller, claimed that Georgetown represented the Kuwaiti Investment Authority, a fund operated by the Government of Kuwait. Powers demanded proof of an agency relationship. The negotiations adjourned for a day, but when Miller did not provide an authorization letter from the Kuwaitis, Powers broke off talks with Miller and instead negotiated directly with the president and chief executive officer of Investcorp, Nemir A. Kirdar.

Investcorp refers to itself as a "publicly held investment bank" based in Bahrain, but from the evidence available to us, an important aspect of its operations is to take long-term, controlling positions in companies in which it acquires equity and debt interests. Investcorp had acquired other American companies prior to 1986, such as Tiffany's, Bertram-Trojan Yachts, and A&W Brands, but the Company was Investcorp's biggest acquisition until that time and its first occasion to finance an acquisition with money raised in the U.S. public capital markets.

Investcorp's highest bid had been $ 260 million, but because Sica and Powers expected problems with Schluter if management recommended an offer less than the highest one, Powers pressed Kirdar to increase Investcorp's bid. Kirdar agreed to match Georgetown's $ 270 million offer. After expenses and incentive payments to management, the offer promised to net shareholders $ 2,150 a share. The Investcorp offer also provided for allowing Mueller Co. management to acquire 150,000 shares (of 1 million fully diluted shares) of the surviving corporation's stock on favorable financing terms. In addition, management was to receive an option to purchase an additional 90,000 shares, and an employee stock ownership plan was to receive an option on 60,000 shares.

Investcorp's offer was to be held open only until the Mueller Co. board's March 21, 1986, meeting. Thus, the offer was to terminate by its own terms if not accepted by that date. In addition, completion of the deal was to be conditioned on the following:

. that the warranties each of the parties had made to each other were true, including warranties regarding the nature and ownership of patents and know-how,

. that each party would perform its obligations under the acquisition agreement,

. that the parties would each receive opinion letters from counsel stating that the other party was legally empowered to complete the transaction,

. that the transaction be approved, or the time for objection expire, under the Hart-Scott-Rodino Antitrust Improvements Act and the Canadian Foreign Investment Review Act,

. that no lawsuit seeking to halt the transaction be filed,

. that key employees (including Powers) sign 5-year employment contracts with the Company, and

. that a registration statement or private placement memorandum for the financing of the transaction become effective.

If any of these conditions was not satisfied or waived, the agreement could have been terminated. The agreement also could have been terminated by mutual consent, by failure to win shareholder approval, or by either party without cause after July 31, 1986, if the transaction had not closed.

Investcorp secured financing commitments on March 20, 1986. On that date, Merrill, Lynch, Pierce, Fenner & Smith agreed to place or sell $ 125 million in senior subordinated debentures and issued its "highly confident" letter that it could place $ 60 million of 10-year senior secured notes. Investcorp told Merrill Lynch it would not ask Merrill Lynch to raise the money unless Investcorp had $ 66 million in other funds to invest in the deal.

The Mueller Co. board of directors met on March 21, 1986. All directors but John Mueller were present, constituting a quorum. Although Schluter said he believed the price was fair, he was the only director present at the meeting who did not vote to recommend the Investcorp deal to shareholders. Dudley Godfrey, a board member and the Company's counsel, telephoned John Mueller during the board meeting to obtain his views. Godfrey told the board that John Mueller said he did not wish to stand in the way of a deal, but was personally opposed to selling the Company. However, John Mueller could not be heard by the entire board and did not believe that he was casting his vote by phone. Thus, only two family-designated directors clearly recorded yes votes at the meeting.

Three days later, on March 24, 1986, decedent died. At the time of her death, the estate of her other son, Robert, was undergoing a Federal estate tax audit. Robert Mueller's estate included Mueller Co. shares.

At the time of decedent's death, Powers was pessimistic that the deal would go through. He believed that only the Staley branch of the family could be counted on to vote in favor of the deal. He believed that the Adolph Mueller/Schluter branch and Philip M. Mueller opposed the deal. Powers saw John Mueller, the representative of decedent's branch, as wavering.

Powers also was concerned about a defect in the March 21 meeting. John Mueller had not been "present" and could not have voted at that meeting under Illinois law because he could not hear and be heard by all directors simultaneously. Ill. Ann. Stat. ch. 32, par. 8.15(d) (Smith-Hurd 1985). The family veto provision of the Mueller Co. bylaws ostensibly required yes votes from three family-designated directors, and only two valid family yes votes were recorded at the meeting. The Company's local attorney had advised Powers in October 1985 that the family veto provision violated Illinois law and would be struck down if challenged in court, but the family veto provision had been respected by the board, n2 and Powers believed litigation on the point was inevitable and would threaten the merger. The threat was real because Investcorp had a reputation for shying away from hostile deals.

n2 The parties stipulated that "The minutes of the Mueller Co. Board meetings for the years 1981 through 1986 disclose no action of the board which did not meet the requirements of [the family veto provision]." However, those minutes reflect that the provision probably was not followed at the Mar. 21, 1986, meeting and clearly was not followed at the Nov. 19, 1985 meeting, at which the board voted to form a committee to interview investment bankers. John Mueller was not present at the November 19 meeting, and Philip Mueller voted against the resolution, leaving only two family designated directors who could have "assented to" the board's action. However, the vote to form the committee was not likely to (and did not) lead to a legal challenge, inasmuch as thereafter the entire board unanimously approved the committee's choice of Morgan Stanley as investment banker.

The doubts about the March 21 vote were cleared up at an April 4, 1986, special meeting of the board. By telephone conference call, the board ratified the vote of March 21. John Mueller voted yes, and the other directors voted the same way they had voted at the prior meeting. Schluter proposed that the board merely send the Investcorp deal to shareholders for their vote, but not recommend that shareholders vote in favor of the transaction. Schluter's motion was not seconded. Schluter also reminded the directors that they could be sued for breach of their fiduciary duty to shareholders and that the Company did not have directors and officers liability insurance. The minutes of the April 4 meeting show that the debt offerings were then expected to close on June 18, with the merger closing to occur immediately thereafter.

Schluter continued to threaten legal action to block the sale. Schluter's attorneys assailed the proxy statement as failing to disclose all material facts and accused the board of failing to discharge its fiduciary duty to shareholders. Schluter's attorneys tried to convince the Company to delay mailing the proxy statement, but the Company mailed it anyway. The proxy statement included a favorable fairness opinion from Morgan Stanley.

The directors met informally, on April 15, 1986, to discuss Schluter's criticisms, but took no action. The Company's attorney responded to Schluter's charges on April 16. Schluter's attorney replied that Schluter did not seek to block the merger, but only obtain the best price. However, it seemed to Powers that Schluter was willing to block the sale. On April 16, the Company retained special litigation counsel to prepare for the possibility of a lawsuit by Schluter.

During this period, Powers and other members of management tried to persuade shareholders to vote in favor of the merger. Powers and other members of management had attended decedent's funeral and had used the occasion to try to convince members of her branch of the family to vote for the merger. On

March 30, 1986, Powers wrote a letter to Milton Bush, coadministrator of decedent's estate, emphasizing the cyclical nature of the Company's business. In the letter, Powers relayed management's projection that housing starts would level off, with adverse effects on the Company's earnings. Powers also believed that the merger fever of the mid-1980's was at its height. Powers noted that AWWA, the nationwide standard-setting organization, might approve the design of low-cost European valves, resulting in greater competition for the Company in the municipal water distribution market, the Company's core business, and that the Company might be required to use lightweight ductile iron, used in European valves, rather than cast iron, the material of which Mueller Co. valves were made. This change would have required $ 30-40 million in capital improvements. Powers made similar arguments to the other branches of the Mueller family, but was certain only that the Staley branch would vote in favor of the transaction.

Although John Mueller had voted at the April 4 meeting in favor of recommending the Investcorp deal to shareholders, he had not decided prior to the middle of that month how he would vote the 15,196.1 shares he controlled as trustee. The decedent, who knew she would die soon, had told John Mueller during the first week of March that she opposed the sale. About 2 weeks after his mother's death, John Mueller received a letter from a friend and investment adviser, Samuel R. MacArthur of MacArthur & Co., outlining several alternative courses of action, including a public offering or recapitalization of the Company. However, MacArthur concluded by advising John Mueller to vote for the sale.

On April 10 management made an informal presentation to shareholders in an effort to convince them to vote for the merger. Schluter told shareholders that he and other Mueller Co. shareholders wished to take the Company private by matching or exceeding the Investcorp offer. But Schluter had no financing commitment, and Powers and other members of management said they would not work for Schluter. Powers also argued that the Company and the board of directors had a commitment to Investcorp under a "best efforts" clause in the merger agreement.

Another issue raised at the April 10 meeting was the disposition of family memorabilia and land used by the family but owned by the Company. John Mueller suggested that the Company donate the land, known as Mueller Heights, and some cash to a college in Decatur to establish a museum, and said he would feel better about selling the family company if the family heritage in Decatur were preserved. Investcorp agreed to John Mueller's proposal.

By April 14, John Mueller had decided to vote for the sale. On April 14, 28 shareholders, including John Mueller, entered into a voting agreement naming John Mueller, Philip M. Mueller, and Staley as voting shareholders. By the time of the shareholder meeting, the voting agreement covered more than 60,000 shares of the 119,468.83 shares outstanding.

On May 1, 1986, the day before the annual shareholder meeting, the directors held a special meeting. Schluter again asked that the shareholder vote be postponed to allow him time to put together a leveraged buyout at $ 2,250 a share. All the directors but Schluter voted against the request. The following day, the board held another special meeting to discuss the issues raised at the previous meeting. Schluter's attorney told the board that the proxy statement was incomplete and defective, that the board had a fiduciary responsibility to consider better offers, and that the board could recommend that the shareholders delay voting without violating the agreement with Investcorp. Schluter's motion to postpone the shareholder vote was not seconded.

At all times relevant to this case, the only class of Mueller Co. stock outstanding was common stock. Each share of common stock was entitled to one vote. There was no public market for the shares. On March 21, 1986, decedent's date of death, the various branches of the family held Mueller Co. stock as follows:

Name of Group	Shares	(percent)	Group Members
Schluter	30,567.67	(25.59 %)	Adolph Mueller II, John Schluter
Staley	30,100.00	(25.19 %)	A.E. Staley III
Decedent's	29,766.66	(24.92 %)	Bessie I. Mueller, John S. Mueller
Philip Mueller	26,612.50	(22.28 %)	Philip M. Mueller
Outsiders	2,422.00		(2.03 %)
Total			119,468.83

For the most part, the family shares were held in trust, with family members acting as trustees. Although John Schluter directly owned only 2.5 shares, he beneficially owned 18,971.33 shares, as to 10,800 of which he shared voting power. No Mueller Co. stock was sold or exchanged between March 21 and May 2, 1986.

On May 2, 1986, the Company's 183 shareholders held their annual meeting. Proxies for their shares were held as follows:

A.E. Staley III	61,623.89
Company management	25,786.96
John A. Schluter	22,526.26
No proxy	9,530.72
Unrepresented	1.00
Total	119,468.83

Schluter moved to postpone the meeting until June 10. Powers told the shareholders that Investcorp had waived the conditions that a valid Securities and Exchange Commission registration statement become effective for the debt financing and that the proposed merger obtain favorable review under the Hart-Scott-Rodino Act and the Investment Canada Act (formerly known as the Canadian Foreign Investment Review Act). Power also told the shareholders that financing for the deal was in place and the deal would close by May 30 because Merrill Lynch had agreed to make a "bridge loan" to Investcorp. This type of financing, which was not yet generally used, allowed Investcorp to complete the deal before the public offering of senior subordinated debentures and senior secured notes. Schluter's motion was defeated, 87,410.85 shares to 22,526.26 shares. Shareholders then approved the Investcorp transaction, with 92,761.57 shares voting in favor and 26,706.26 shares abstaining.

On May 14, the Federal Trade Commission and the Department of Justice granted early termination of the premerger notification period required by section 7A of the Clayton Act and section 803.10(b) of the Department of Justice premerger notification rules.

On May 30, the Company merged with Mueller Merger Corp., a subsidiary of Mueller Holdings Corp., an affiliate of Investcorp. Mueller Co. shareholders received $ 2,150 for each of their shares. Merrill Lynch provided a $ 177.9 million bridge loan, giving Investcorp until November 30, 1986, to raise the money in the public market. With loans from Investcorp and affiliates, the Company's management acquired 150,000 of the 1 million fully diluted shares of Mueller Holdings. Morgan Stanley received $ 2,675,000, plus expenses, as its fee.

On July 1, 1986, the registration statement for the debt offering became effective and the notes and debentures were offered to the public. The notes and debentures were delivered on July 10, raising $ 177.9 million.

On July 8, 1986, the merger of the Company and Mueller Holdings Corp. was declared unreviewable under the Investment Canada Act.

ULTIMATE FINDING OF FACT

The March 24, 1986, value of the 8,924 common shares of the Mueller Co. includable in decedent's gross estate was $ 15,170,800, or $ 1,700 a share.

OPINION

The value of decedent's gross estate is the fair market value of property includable in the gross estate. Sec. 2031. Fair market value is defined as "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." United States v. Cartwright, 411 U.S. 546, 551 (1973); Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); sec. 20.2031-1(b), Estate Tax Regs. When the facts indicate that a lawsuit could impair the value of the property, we need not decide the probable outcome of the suit. The only relevant consideration is the effect of the possibility of a suit on the market price for the shares on the valuation date. Estate of Newhouse v. Commissioner, supra at 232-233.

Our task is to determine what a willing buyer would have paid a willing seller on the date of decedent's death for a 7.5-percent equity interest in the Mueller Co. The question of fair market value is a question of fact. Estate of Newhouse v. Commissioner, supra at 217; Estate of Gilford v. Commissioner, 88 T.C. 38 (1987). Valuation issues are "inherently imprecise and capable of resolution only by a Solomon-like pronouncement." Estate of Gilford v. Commissioner, supra at 50. However, we once again intone our warning to parties before this Court that we need not reconcile or average the opinions of the experts. We may choose one approach over another, resulting in a windfall for one party and a disaster for the other. See Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980). We continue to believe that valuation disputes are better settled than litigated.

Whatever the weaknesses of the litigation process in its application to valuation questions, we cannot simply "pick at random any number that happens to lie somewhere between the Commissioner's valuation and the taxpayer's." Akers v. Commissioner, 798 F.2d 894, 897 (6th Cir. 1986), revg. T.C. Memo. 1984-208. We therefore explain how we arrived at our valuation conclusion.

Expert Testimony

We heard expert testimony on the valuation issue, and we weigh that testimony in light of the experts' qualifications and other credible evidence. Estate of Newhouse v. Commissioner, supra at 217. But we are not bound by the opinion of any expert, and we weigh expert testimony in the exercise of sound judgment. Helvering v. National Grocery Co., 304 U.S. 282, 295 (1938); Estate of Newhouse v. Commissioner, supra at 217.

All three experts and the parties agree that the relevant valuation standards are contained in sections 20.2031-1 (valuation of gross estate generally) and 20.2031-2 (valuation of stocks and bonds), Estate Tax Regs., and Rev. Rul. 59-60, 1959-1 C.B. 237 (valuation of stock of closely held corporations). Those standards emphasize that each case should be decided by reference to the facts and circumstances knowable on the valuation date: n3

A sound valuation will be based upon all the relevant facts, but the elements of common sense, informed judgment and reasonableness must enter into the process of weighing those facts and determining their aggregate significance. [Rev. Rul. 59-60, 1959-1 C.B. 237, sec. 3.01.]

n3 Inasmuch as decedent's personal representative did not elect the alternate valuation date under sec. 2032, the valuation date is the date of decedent's death.

Respondent's expert

Respondent presented the expert's report of Willamette Management Associates, Inc., which was prepared under the "direct supervision" of Willamette's managing director, Dr. Shannon Pratt. Kathryn Daly "managed" the report, with the assistance of Scott Beauchene. Both Dr. Pratt and Ms. Daly signed the Willamette report.

Dr. Pratt also testified on behalf of respondent. Dr. Pratt has a doctorate degree in business administration and finance from Indiana University, and is a chartered financial analyst. He is a member of the American Society of Appraisers and of several of the Society's committees, including the theory and techniques committee. He is the author of the book Valuing a Business: Analysis and Appraisal of Closely Held Companies (2d ed. 1989). His academic and professional accomplishments are disclosed by his curriculum vitae, attached to the Willamette report, and the record of his introductory testimony.

Willamette appraised Mueller Co. stock using two methods. First, Willamette figured the Company's "discounted effective merger price." Willamette surveyed various sources for public market takeovers between January 1985 and May 1986. Willamette discarded transactions that were not friendly, leaving a universe of 80 transactions. Willamette then noted that the Mueller Co.-Investcorp merger was consummated 67 days after the valuation date, so it examined the trading price of the stock of each of the target companies in its survey 67 days prior to the consummation of their respective mergers. The median discount was 3.4 percent. Willamette discounted the Mueller Co. takeover price of $ 2,150 a share by 3.4 percent and determined that the discounted effective merger price of Mueller Co. shares on the valuation date was $ 2,077 a share.

We are convinced Willamette made erroneous assumptions at nearly every step of this part of its analysis. First, Willamette figured the discount by looking back 67 days, the exact time it took the transaction to close, even though the Mueller-Investcorp acquisition agreement contemplated an outside date almost 2 months later than what turned out to be the sale date, and there was no indication on the valuation date that the period would be shortened to 67 days. On April 4, the deal was expected by management to close some time after June 18, at least 86 days after the March 24 valuation date. The announcement that the deal would close on May 30 was made at the shareholders meeting on May 2, after Investcorp secured the bridge loan commitment from Merrill Lynch. At that time bridge loans were not widely used and the availability of such a loan could not have been foreseen on the valuation date. Respondent argues that 67 days was a reasonable period because it was the midpoint between the valuation date and the outside termination date. In effect, respondent asks us to average two unreasonable assumptions and hope that we reach a reasonable result. This we decline to do.

The only legitimate use of hindsight is for the limited purpose of establishing what a reasonably well-informed investor might have believed on the valuation date. Estate of Gilford v. Commissioner, supra at 52. No reasonable investor would have believed that the Investcorp-Mueller Co. deal would close exactly 67 days after decedent's death. As we stated in Estate of Newhouse v. Commissioner, 94 T.C at 231, "it would be error to postulate a certainty that did not exist." Common sense tells us that by shortening the "expected" time for the merger to close, Willamette's hindsight approach reduced the amount of the discount from the Investcorp offer price necessary to reach the value on the valuation date, and consequently bolstered respondent's position.

Another way Willamette reduced the discount was to limit its universe to "friendly" acquisitions in which the risk of deal failure was, in our view, lower than in the Company's case. The apparent likelihood of shareholder objections required that acquisitions that were less than friendly be included in the sampling.

Willamette also, of necessity, looked only at public market transactions. We recognize that data on privately held companies is rarely available. But we believe Willamette should have adjusted its discount to reflect the shares' lack of liquidity. Those who bought the stock of the target companies in Willamette's survey on speculation that the deals would go through could have liquidated their positions quickly if the deals cratered. A potential purchaser of Mueller Co. shares would not have had that option, and would have demanded an additional discount for this risk. Nonetheless, Willamette did not adjust for the Company's lack of liquidity in determining an appropriate "discounted effective merger price." Willamette did adjust the second part of its analysis for lack of liquidity, but that discount applied only to the so-called buy-and-hold valuation. We also have concluded the amount of the discount was too small compared to the overall value reached by Willamette, amounting to just 5 percent (25 percent discount times 20 percent weighting) of the total value.

Finally and most importantly, Willamette's hindsight method caused Willamette to use a skewed statistical sample. The decedent died 3 days after the announcement of the proposed merger. Willamette, therefore, should have scoured its vast library n4 for similar tender offers for comparable companies, and looked at the price of target companies a few days after those announcements. Instead, Willamette looked only at deals that actually closed (rather than all deals that were announced) and counted back 67 days.

n4 Dr. Pratt testified:

Willamette has either the most comprehensive, or one of the most comprehensive libraries in the United States, on the subject of valuation of companies and interests of companies. It contains SEC filings, company annual reports. It contains a great deal of both national and regional economic data. It contains a great deal of industry data. It contains a large number of court cases, involving valuation disputes, which are indexed with respect to both the type of case, and the issues involved in the case. It has a key word index file by subject, for various types of things, such as, for example, arbitrage, which is one of the items in it. And it has articles from the financial literature, organized by subject matter, and indexed and so forth, as well as a lot, of course, [of] books, periodicals kept from many years back, and statistical services from which we derive valuation data.

Willamette's sample universe of mergers that actually closed is not representative of the universe of tender offers. The sample was underinclusive because tender offers relating to deals that actually failed were not included. Assume that investors make an educated guess about the likelihood that a deal that was announced 3 days ago will eventually go through. If some potential investors are good predictors, they will be able to avoid investing in the stocks of targets that will not be acquired. The price of those stocks would reflect this belief, resulting in a comparatively large discount from the offer price. These large discounts (if they existed) were excluded from the Willamette analysis, inflating the supposed value of the Mueller Co. stock.

If Willamette instead had looked at all comparable deals a few days after the deals were announced, as petitioner's expert Frederick J. Schroeder did, the potential for bias would have been eliminated. We cannot be sure of the actual effect of Willamette's sampling mistake. The correct sample and Willamette's sample might coincidentally point to the same result, but we cannot jump to that conclusion any more than we can decide this case by rolling dice. We conclude that Willamette's "discounted effective merger price" methodology is flawed not only because it relies on information (the exact day the deal would close) that could not have been known on the valuation date, but also because the methodology limited Willamette to an inappropriate sample.

The second part of Willamette's analysis was an attempt to come up with the value of a minority long-term investment in the Company, on the assumption that some investor would have been willing to make such an investment on March 24, 1986. Willamette chose three methods -- historical price-earnings multiple, historical price-cash flow multiple, and projected earnings and cash flow multiple. In the case of the historical earnings calculations, Willamette multiplied the Company's 1985 earnings per share by the average price-earnings multiple of 11 "comparable" publicly traded firms. Willamette then multiplied the Company's average earnings per share for 3 years, 1983-85, by the average multiple the comparable firms were trading at over their 1983-85 average earnings. Willamette weighted these values (70 percent 1985 earnings, 30 percent 1983-85 earnings) to come up with a weighted average:

	Mueller Earnings Per Share		Price-Earnings Multiple		Preliminary Indicated Value		Weight		Indicated Value
1985	$ 135.67	x	15.7	=	$ 2,130	x	0.7	=	$ 1,491
Avg. 1983-85	121.95	x	21.1	=	2,573	x	0.3	=	772

$ 2,263

Willamette performed the same procedure for historical cash-flow multiples:

	Mueller Cash Flow Per Share		Price-Cash Flow Multiple	Preliminary Indicated Value		Weight	Indicated Value
1985	$ 212.90	x	9.4	$ 2,001	x	0.7 =	$ 1,401
Avg. 1983-85	187.64		12.3	2,308	x	0.3 =	692
							$ 2,093

The same method was applied to 1986 projected earnings and cash-flow multiples, although the weighting was 50-50:

	Mueller Fundamental Per Share		Market Multiple	Preliminary Indicated Value		Weight	Indicated Value
'86 Earnings	$ 193.80	x	13.1 =	$ 2,539	x	0.5 =	$ 1,270
'86 Cash Flow	363.76	x	7.1 =	2,583	x	0.5 =	1,291
							$ 2,561

Willamette then took a weighted average of the weighted averages to reach an indicated fundamental value of $ 2,301 per share:

Approach	Value		Weight	Weighted Value
Past Earnings	$ 2,263	x	0.4 =	$ 905
Past Cash Flow	2,093	x	0.3 =	628
Projected 1986	2,561	x	0.3 =	768
				$ 2,301

This number was discounted by 25 percent, to $ 1,726 per share, toreflect the lack of liquidity of Mueller Co. shares.

We doubt any investor would have applied such an approach to value a minority interest in Mueller Co. on March 24, 1986. There had been two very recent definitive offers for the company. The offerors had developed well-informed opinions on the value of the Company, and the management of the Company had a substantial incentive to maximize the price offered, as did the Company's investment bankers. n5 We believe that those offers, not the mathematical manipulation of the Company's financial results, were the best evidence of the proper starting point for arriving at the Company's value.

n5 We are puzzled that Morgan Stanley's potential breakup fee ($ 3 million) approximated its actual compensation ($ 2.675 million plus expenses), thus making it indifferent, in the short term, to whether Mueller Co. was sold. However, Morgan Stanley certainly would have preferred the deal to go through to

protect its reputation and build additional business in the future. Also, Morgan Stanley did have an incentive to maximize the price paid by the acquiror, since each additional million dollars added to the acquisition price in excess of $ 260 million resulted in $ 50,000 in additional compensation. The fact that Morgan Stanley was not successful in obtaining a price greater than $ 270 million does not change the fact that it had a substantial incentive to do so.

Even if the Georgetown and Investcorp offers did not truly represent the Company's date-of-death value, Willamette's calculations are not a good alternative. Willamette, in its analysis of the Company's fundamentals, used only the most recent 3 full years prior to the Investcorp deal, 1983-85, all banner years. The year Willamette used twice, 1985, was the all-time record year for the Company. Willamette excluded 1981 and 1982 on the ground that they were recession years and might result in a "misleading" valuation. Willamette failed to explain why Mueller Co., a firm that rises and falls on economic cycles, should be analyzed only by reference to good years and not bad years. We think it would have been more appropriate to value a firm such as Mueller Co. by factoring in results from an entire business cycle, and not just a few good years. Rev. Rul. 59-60 recommends that appraisers refer to income statements covering a period of 5 years or more. Rev. Rul. 59-60, 1959-1 C.B. 237, sec. 4.02(d). Respondent's instructions to Form 706, the Federal estate tax return, have for many years required the estate to:

Apply the rules in the section 2031 regulations to determine the value of inactive stock and stock in close corporations. Submit with [Schedule B] complete financial and other data used to determine value, including balance sheets (particularly the one nearest to the valuation date) and statements of the net earnings or operating results and dividends paid for each of the 5 years immediately before the valuation date. [Form 706 Instructions 9 (Rev. July 1990); emphasis added.]

In addition, the weights assigned to the various indicated values seem to have been picked out of the air. We heard no legitimate basis for Willamette's weighting. As respondent said in Rev. Rule. 59-60:

Because valuations cannot be made on the basis of a prescribed formula, there is no means whereby the various applicable factors in a particular case can be assigned mathematical weights in deriving the fair market value. For this reason, no useful purpose is served by taking an average of several factors (for example, book value, capitalized earnings and capitalized dividends) and basing the valuation on the result. Such a process excludes active consideration of other pertinent factors, and the end result cannot be supported by a realistic application of the significant facts in the case except by mere chance. [Rev. Rul. 59-60, 1959-1 C.B. 237, sec. 7.]

Willamette's near-exclusive reliance on earnings and cash flow is precisely the error the revenue ruling warns against, especially considering the capital intensive nature of the Company's business.

To compound the problem, Willamette took a weighted average of its two methods, weighting the effective merger price at 80 percent to reflect the supposed certainty of the deal's going through, and weighting the long-term minority investment price at 20 percent. This weighted average resulted in an indicated value of $ 2,007 per share:

Approach	Value	Weight	Weighted Value
Discounted Merger	$ 2,077 x	0.8 =	$ 1,662
Minority Interest	1,726 x	0.2 =	345

$ 2,007

In addition to our problems with the constituent elements, we question the validity of this equation as a valuation tool. We cannot imagine that any prospective buyer would use such an arbitrary, artificial, and subjective approach to formulate an initial offering price or to calculate a last best offer.

We also believe that the "average of averages" is too error-prone. Assume that Mueller's financial results were reported with 100-percent accuracy. Assume also that Willamette's approach was correct and that the following elements of Willamette's calculation were believed sufficiently accurate for valuation purposes 86.7 percent of the time: the market multiples for earnings and cash flow, the weighting of current versus 3-year average results, the weighting of the various fundamental approaches in reaching the "minority value", the lack of liquidity discount, and the weighting of the minority versus merger prices. These five levels of multiplication also provide five independent opportunities for error. Even though the parameters each are sufficiently accurate 86.7 percent of the time, the final result will be sufficiently accurate only in 86.7 n5 percent of occurrences, or 49 percent of the time.

n5 We are puzzled that Morgan Stanley's potential breakup fee ($ 3 million) approximated its actual compensation ($ 2.675 million plus expenses), thus making it indifferent, in the short term, to whether Mueller Co. was sold. However, Morgan Stanley certainly would have preferred the deal to go through to protect its reputation and build additional business in the future. Also, Morgan Stanley did have an incentive to maximize the price paid by the acquiror, since each additional million dollars added to the acquisition price in excess of $ 260 million resulted in $ 50,000 in additional compensation. The fact that Morgan Stanley was not successful in obtaining a price greater than $ 270 million does not change the fact that it had a substantial incentive to do so.

We heard no testimony on the error rate in Willamette's calculations. In our own calculations, we have found that the amount of the "minority value" can be made as low as $ 1,450 (a 16-percent absolute difference) simply by reducing the market multiples by 10 percent, increasing the lack of liquidity discount by 10 percent (from 25 percent to 27.5 percent), and weighting the smaller of the elements of the weighted averages by 10 percent more (e.g., weighting the 1985 price-earnings calculation at 80 percent and the 1983-85 average price-earnings calculation at 20 percent, rather than 70-30).

Having found Willamette's analysis to be materially flawed, we turn to petitioner's objection to the Willamette report and Dr. Pratt's testimony. Petitioner assails the report and testimony as those of a "hired gun", arguing that the contractual arrangement between Willamette and respondent, and Willamette's resulting involvement in developing respondent's case, cast Willamette in the disturbing, perhaps unethical, role of advocate rather than the neutral expert required by the rules of the American Society of Appraisers and our decision in Estate of Halas v. Commissioner, 94 T.C. 570 (1990), reconsidering T.C. Memo. 1989-536. Petitioner seeks to exclude from evidence entirely the Willamette report and Dr. Pratt's testimony.

While Dr. Pratt testified, Ms. Daly, a senior associate of Willamette and a signatory with Dr. Pratt of the Willamette valuation report, sat at respondent's counsel table to provide "litigation support". The contract between respondent and Willamette in its expert role also governed Willamette's litigation support role. n6 In the latter role, Ms. Daly was not only required to help respondent's counsel understand the

vocabulary of corporate finance, but she and Dr. Pratt (who was also in the courtroom throughout the trial) were additionally responsible for analyzing the reports and testimony of petitioner's experts to aid respondent in preparing for cross-examination.

n6 Respondent resisted the Court's attempt to obtain a copy of the engagement letter. We rely on Dr. Pratt's testimony as to its contents, which are not in dispute.

We believe that Willamette's report was result-oriented and that this was reflected Dr. Pratt's testimony. As a result, Dr. Pratt's report and testimony lacked the objectivity we endorsed in Estate of Halas v. Commissioner, supra, where we held that the attorney's privilege of confidentiality does not apply to appraisers and decided that Willamette could qualify as respondent's expert over the taxpayers' objection. In Estate of Halas we observed that appraisers, by their own Code of Conduct, have third-party responsibilities -- just as certified public accountants do -- to those who rely on their opinions, and that their determinations must be independent and objective. We find here, as the Court of Appeals did in Midstate Fertilizer Co. v. Exchange Natl. Bank of Chicago, 877 F.2d 1333, 1340 (7th Cir. 1989), that Dr. Pratt

offered the Court his CV rather than his economic skills. * * * "The importance of safeguarding the integrity of the [judicial] process requires the trial * * * judge, when he believes an expert's testimony has fallen below professional standards, to say so, as many judges have done." [Citations omitted.]

See also Estate of Hall v. Commissioner, 92 T.C. 312, 338 (1989); Estate of O'Keefe v. Commissioner, T.C. Memo. 1992-210; Estate of Hatchett v. Commissioner, T.C. Memo. 1989-637; Hudspeth v. Commissioner, T.C. Memo. 1985-628, revd. on another issue 914 F.2d 1207 (9th Cir. 1990).

We overrule, however, petitioner's objection to the bifurcated role of Willamette in providing an opinion as to the value of the Mueller stock and providing, simultaneously, litigation support for respondent. Like any expert, Willamette could review, question, and comment on the expert's report and testimony for the opposing party. The conflict arose when Dr. Pratt strayed from the standard of objectivity and "cast aside his scholar's mantle and became a shill" for respondent. Midstate Fertilizer Co. v. Exchange Natl. Bank of Chicago, supra at 1340. A court may rely on one part of an expert's opinion while ignoring another. See Parker v. Commissioner, 86 T.C. 547, 562-563 (1986); Chiu v. Commissioner, 84 T.C. 722, 734 (1985). A court may rely on an expert's criticism of other experts, while disregarding his testimony in support of his report. Pittsburgh Terminal Corp. v. Commissioner, 60 T.C. 80, 89 (1973) ("Although his testimony was clearly biased in respondent's favor, respondent's expert witness demonstrated the folly of [petitioner's expert's theory]"). That is what we do here.

As a result of the foregoing analysis of Willamette's methodology and credibility, we reject most of the contents of the Willamette report and Dr. Pratt's testimony, but take account of Dr. Pratt's criticisms in our analysis of petitioner's experts' reports and testimony.

Petitioner's experts

Frederick J. Schroeder, Jr.

Frederick J. Schroeder, Jr., has been employed by First of Michigan Corp., a member of the New York Stock Exchange, since 1968. He is an executive vice president, a member of the executive committee, and cochairman of the management committee. His primary responsibility is the corporate finance department, helping corporations raise equity and debt financing in both public and private markets. He also is the person who recommends which "risk arbitrage" transactions First of Michigan participates in. He has a master's degree in business administration from Harvard University and a bachelor of arts degree from Georgetown University. n7

n7 Respondent made much of Schroeder's lack of academic credentials and his absence from the rolls of the American Society of Appraisers. The Federal Rules of Evidence, however, make clear that experts are to be judged by what they know, not where or how they learned what they know. Fed. R. Evid. 702; 28 U.S.C. app. at 767 (1988) (Notes of Advisory Committee).

Schroeder's analysis begins with the observation that, inasmuch as an acquisition proposal was under consideration on the valuation date, traditional methods of appraising a closely held corporation are not appropriate. Schroeder instead analyzed the transaction from the perspective of a risk arbitrageur.

Schroeder testified that risk arbitrage is the practice of buying the shares of a company that is the target of a takeover proposal, subject to the risk that the takeover will not be completed. To justify taking the risk, an arbitrageur typically will purchase shares only at a substantial discount from the takeover price. During 1985, many arbitrage firms earned annual returns in excess of 50 percent. This implies that, at that time, an arbitrageur who thought a transaction would be consummated 90 days in the future would try to purchase the stock at a 10.67-percent or greater discount from the offering price. With that percentage discount, the arbitrageur could redeploy his capital three times more that year, earning an aggregate return (including compounding) of 50 percent. See generally Wyser-Pratte, Merger Arbitrage, in The Mergers and Acquisitions Handbook 235 (Rock ed. 1987).

To determine the typical arbitrage discount on the valuation date, Schroeder chose four takeover transactions announced during the first quarter of 1986. In contrast to Willamette's hindsight method, Schroeder looked at the price of the targets 1 week after the announcement of the takeover. Schroeder determined that the targets' shares were trading at an average 11.75-percent discount to the takeover price.

Schroeder then examined the circumstances of the proposed takeover as of March 24, 1986. There was a possibility that Investcorp would back out because of the failure to comply with the family veto provision at the March 21 board meeting. There also was a possibility that the board would reject the proposal definitively at the April 4 meeting, since John Mueller's vote was not certain and the family veto provision required three affirmative votes, only two of which were assured. Another negative factor was that a higher offer was not probable, so all the risk appeared to be on the downside. An arbitrageur also would have had a number of other deals to invest in at that time. On the other hand, financing for the deal appeared more solid than is typical shortly after the announcement of a deal, antitrust did not seem a major concern, and Investcorp already had done a fair amount of due diligence. Schroeder decided that a risk arbitrageur would have required a 9-percent "pure" arbitrage discount, expecting the deal to complete in 90 days or so.

In addition, in Schroeder's opinion, an arbitrageur would have demanded an additional discount to account for the possibility of shareholder rejection. On March 24, 1986, John Schluter was on record as opposing the deal, and he had been influential in scuttling the 1982 recapitalization plan. Schluter might have tried to acquire additional shares to block the deal, and also might have filed a lawsuit to block the sale. In addition, the estates of decedent and her son, Robert, either were undergoing or were subject to estate tax audits, and the administrators of the estates might have voted the estates' shares against the deal in an attempt to reduce the tax liability of the estates. n8 Schroeder estimated that an arbitrageur would have required an additional 5-percent discount to account for the risk of shareholder rejection.

n8 We express no opinion on whether such a tactic would have been well founded.

Finally, an arbitrageur would have required a discount to reflect the lack of liquidity of Mueller Co.'s shares. An essential element of the arbitrageur's strategy is the ability to minimize losses and redeploy capital quickly to take advantage of new deals as they are announced. Anyone purchasing 7.5 percent of the Mueller Co.'s stock on the valuation date would not have had an assured exit route; the Company was privately held and there was no public market for its shares. If the Investcorp deal fell through, the investor would have had to wait for another buyout offer, place the shares privately, or hold the shares. Even if the Investcorp deal did close eventually, the investor would have lost access to the funds invested until the merger was consummated. Thus, the investor would not be able to bail out of the Mueller Co. investment to take advantage of more rewarding opportunities. To compensate for lack of liquidity, Schroeder estimated that an arbitrageur would require an additional 15-percent discount from the announced merger price.

In sum, Schroeder testified that an arbitrageur would be willing to pay $ 1,527 per share, a 29-percent discount from the merger price of $ 2,150 per share.

We believe Schroeder's methodology more closely represents the steps a potential investor might reason through to reach an acceptable price. However, as Dr. Pratt pointed out, there are several weaknesses in Schroeder's numerical assumptions. Schroeder used only four transactions in figuring the base arbitrage discount of 11.75 percent. We do not think one can draw valid statistical assumptions from such a small sample. Circumstantial evidence, such as the returns arbitrageurs were making at the time of the Investcorp-Mueller Co. deal, convinces us that Schroeder was in the ballpark, but we do not feel bound by his exact number. Schroeder's other numbers were not as well substantiated by objective evidence, but we believe that they were not out of line with reality. Schroeder also admitted that risk arbitrageurs in the markets for publicly held securities would not have been likely to purchase the shares, but that does not change our belief that any purchaser of the shares would have used an analysis similar to Schroeder's to arrive at an offering price that the seller of a minority interest in the company would have been willing to accept.

Albert A. Koch

Petitioner also presented the testimony of Albert A. Koch, cofounder and managing director of Equity Partners of America, Ltd., since 1987. Koch directs and assists in the valuation of businesses and negotiates mergers and acquisitions. Koch was managing partner of the Detroit office of the accounting firm Ernst & Young from 1981 to 1987. Koch is not involved in risk arbitrage in any way. He graduated with honors from Elizabethtown College.

Koch's analysis was similar to Schroeder's. Koch assessed the impact that several risks would have had on the price an investor would have been willing to pay for a 7.5-percent stake in the Company. Koch opined that the transaction price was fair, that the financing seemed solid, and that the Company had an "acceptable" ability to find another merger partner if Investcorp bowed out. Koch also believed that there was a low to moderate risk that business factors, such as general economic conditions or the loss of a Mueller Co. plant, would threaten the deal prior to closing.

On the other hand, Koch characterized the following three risks as "extremely high": that shareholders would fail to approve the deal by a two-thirds majority, that a lawsuit would block the deal, and that a buyer would be stuck with an illiquid asset if the deal failed to close. Koch stated that it was unlikely that a risk arbitrageur would be interested in such a transaction, but that a private fund operated by a large Wall Street entity might have been willing to assume the risks for a sufficiently large return. n9

n9 KKR, which bid between $ 235 million and $ 240 million for Mueller Co., operated such a fund. This does not necessarily mean KKR would have taken an arbitrage position in the Company; KKR was bidding on its own account for the entire Company.

Koch said that a buyer would have required a discount sufficient to result in a 75-percent to 150-percent annualized return. Koch assumed the transaction would take 120 days to close. Allowing for the effect of compounding three times a year (1 year/120 days), a 75-percent to 150-percent annualized return implies a discount of 21 percent to 35 percent. These discounts in turn imply a price between $ 1,400 and $ 1,700.

Turning to the "willing seller" portion of the willing buyer-willing seller formulation, Koch estimated that a seller would have demanded a price toward the higher end of his estimated spectrum, while the buyer would try to bargain for a lower price. Koch concluded that the most likely result would have been a price that was the average of the two extremes, or $ 1,550 per share.

Koch's analysis, rather than making the error of hindsight, makes the error of converting the deadline for the deal into the expected closing date. Koch assumed the deal would close 120 days after its announcement. Koch did not take into account the more probable outcome that the deal would close less than 120 days from its announcement. If we instead use a 90-day period so that the investment can be compounded four times a year, the range of discounts is 15.0 percent to 25.7 percent, or a per share price range of $ 1,597.45 to $ 1,827.50. The midpoint of these numbers is $ 1,712.48, more than $ 150 per share greater than Koch's estimate.

Koch did not adequately explain why an investor would require a 75-percent to 150-percent annualized return to buy Mueller Co. stock. Koch said that " the Mueller Co. opportunity might appeal to a limited number of investors whose threshold rate of return for ordinary investments is 40 percent to 60 percent." Koch argued that his estimate that certain significant risks were "extremely high" justified the jump in rate of return from 40-60 percent to 75-150 percent, but he did not make the connection sufficiently clear to us.

We also were disturbed by the argumentative tone of the Koch report. The report is replete with exclamation points and italicized emphasis of the major points of petitioner's argument. Having reminded respondent of the importance of objectivity in expert testimony, we see no need to repeat the

lesson here for petitioner's benefit. We simply view the Koch report with some skepticism.

Discussion

We find that none of the experts was entirely convincing. However, we are persuaded that the Schroeder approach is the most representative of the likely thought processes of a hypothetical willing buyer or seller. We agree that a buyer and a seller, each presumed to be committed to maximum economic advantage, would use the $ 2,150 takeover price as a starting point and discount the price to reflect the risks of nonconsummation and lack of liquidity.

Respondent argues that arbitrageurs are not the only category of potential purchasers of stock, and in fact are not the most likely market. Among the alternatives respondent lists are: the public market, companies contacted by Morgan Stanley who might be interested in the Company, other potential buyers not located by Morgan Stanley because there was no public announcement of the deal, a leveraged buy-out, a professional outside investor, a recapitalization, or existing shareholders.

A public offering of a minority interest in the Company does not seem to us to have been a reasonable alternative. Such an offering would have required considerable time and expense. Indeed, it seems likely that dividing a minority interest into even smaller units of ownership might further depress the value of the shares. A public offering of a larger block of stock would have had greater interest to investors in the public market, but a holder of 7.5 percent of the shares would not have had the power to launch such an undertaking. A large public offering was not under consideration at the time of decedent's death, and no reasonable buyer or seller would act on speculation that it would occur.

The also-rans in the bidding for the Company were not a likely market either, because those bidders made their offers for all the shares. There is no evidence suggesting that they were looking for a passive minority investment, with the possible exception of KKR, which operated an arbitrage fund, but which had made a lower offer for the Company in its entirety.

Respondent theorizes that companies not contacted by Morgan Stanley might have been interested in buying a 7.5-percent interest in the Company, but we heard no evidence to convince us either (1) that Morgan Stanley failed to identify any potential purchaser of the Company, or (2) that such a purchaser would have wished to acquire a 7.5-percent interest in the Company. Although there was no public announcement, Morgan Stanley had cast a wide net and the deal was not a secret. Indeed, Morgan Stanley received several unsolicited offers, none of which made a difference in the final bidding.

The alternative suggestion of a leveraged buy-out does not make sense. In effect, the Investcorp deal was a leveraged buyout, and probably the best such deal available to shareholders. Management did not appear particularly interested in mounting a competing bid, and had substantial incentives to see the Investcorp deal through to completion. Schluter's proposal was not likely to do anything but disrupt the Investcorp deal.

Respondent argued that a recapitalization was an alternative. A 7.5-percent shareholder would have had no power to effect a recapitalization of the Company, at least not without acquiring another 60 percent or so of the outstanding shares.

Finally, petitioner counters respondent's "professional investor" and "other shareholder" scenarios by pointing out that respondent has identified no individual or group of professional outside investors who would have been interested in acquiring the Company. In any event, we believe such investors would

analyze the deal much the same as we have.

We believe that respondent, and to some extent petitioner, misapprehends the willing buyer-willing seller test. We need not identify exactly who the buyer would be or even what class of investors the buyer would belong to. The "willing buyer" is supposed to be a hypothetical amalgam of potential buyers in the marketplace. Although we have, in prior opinions, identified types of hypothetical buyers, we did so only to determine which valuation approach, among several reasonable approaches, would result in the highest bid, and therefore the one most acceptable to a willing seller. See, e.g., Estate of Newhouse v. Commissioner, 94 T.C. 193, 245 (1990) ("The choice of the appropriate valuation methodology for a particular stock is, in itself, a question of fact" (emphasis added)); Perdue v. Commissioner, T.C. Memo. 1991-478 (dividing rare coin market into numismatists and "glamour" purchasers). The question is not so much "who", but "how".

We agree with Schroeder and Koch that a buyer would consider three principal adverse factors in deciding what he would be willing to pay for 7.5 percent of the Mueller Co. shares: shareholder rejection, a lawsuit, and lack of liquidity. It is also our task to find the price at which a willing seller would sell. Logically, a willing seller would sell only to the willing buyer making the highest bid. We assume that the potential buyers of the shares would bid up the price of the shares until the person who values the shares most highly -- that is, the person who is most certain that the Investcorp deal will go through, or who is most willing to take the risk that it will not -- wins the bidding. The final result is not an average of the high and low ranges (as Koch suggests) because we assume the price is determined by an "auction" in the marketplace, not the give-and-take of one-on-one negotiation.

First, there is the matter of a base arbitrage discount. This discount is the starting point -- more or less the average discount an investor would demand for a risk arbitrage investment. We believe that there were potential investors who were more risk-tolerant than the risk arbitrageur Schroeder described who would have been interested in a minority investment in the Company's stock. We therefore place a value of 6 percent, rather than 9 percent, on this base discount.

Second, a potential buyer would consider the risk that shareholders would reject the deal. It was not entirely clear at the valuation date what the outcome of a shareholder vote would be. The Company's chief executive was pessimistic that the deal would go through, and most of the shareholder blocks had not expressed an opinion. On the other hand, only Schluter had gone on record as opposing the deal. Another fact to consider is how persuasive management could be expected to be in selling the deal to shareholders. Could it have been expected on the valuation date that someone would hit on an idea that would weaken the resistance of wavering shareholders, such as John Mueller's suggestion to donate the family memorabilia to a local college?

Another factor to consider is that most of the shares were held in trust. The trustees owed a fiduciary duty to the beneficiaries to protect their economic interests. Respondent argues that if the trustees had voted against the Investcorp deal, they would have been derelict in their fiduciary duties. Although the Investcorp deal was attractive, we believe that a trustee could have voted against the deal for legitimate reasons. Besides, we are not so much concerned with the trustees' legal obligations as with what they were likely to do, even if in violation of those obligations. The trustees were primarily members of the Mueller family. We believe that it would have seemed uncertain to a prospective outside purchaser of shares that the trustees would disregard the Company's family heritage.

All these factors indicate to us that a reasonable investor might have assumed that family resistance to the sale could be overcome, but still be concerned that the deal might not win two-thirds shareholder approval. Such an investor would have demanded an additional 5-percent discount, as Schroeder suggested.

Third, the hypothetical buyer would have considered the risk that Schluter or another dissenter would file a lawsuit. We need not decide what the probable outcome of a potential lawsuit would have been in order to determine the value of the shares; we only must try to gauge how the possibility of the suit would affect the fair market value of the shares. Estate of Newhouse v. Commissioner, supra at 232-233.

We heard no testimony from two key participants in the March 21, 1986, board meeting where the merger was first voted on. Dudley Godfrey, the board member who telephoned John Mueller to obtain his views, might have shed additional light on whether John Mueller had indeed voted at that meeting. He could have testified that the phone call was audible to all directors, or that it was not. We did hear testimony from another attorney in Godfrey's law firm, Kenneth Hunt, who was at the meeting, but his recollection of events was not very clear. We also heard testimony from John Mueller and Powers on this point. Respondent argues that because Godfrey was not called, we should draw the inference that his testimony would have hurt petitioner, citing Wichita Terminal Elevator Co. v. Commissioner, 6 T.C. 1158 (1946), affd. on other grounds 162 F.2d 513 (10th Cir. 1947). We disagree. In Wichita Terminal Elevator, the taxpayer submitted practically no evidence. Petitioner in the instant case submitted reams of exhibits and hours of testimony. If respondent believed Godfrey's testimony would have damaged petitioner's case, respondent could have called him as a witness to impeach the recollections of Hunt, Powers, and John Mueller.

We also heard no testimony from John Schluter. Obviously, only he could state definitively what his motivations and intentions were. Respondent again suggests that we employ Wichita Terminal Elevator to draw inferences against petitioner. We again suggest that respondent could have called Schluter as an impeachment witness. In addition, we are not so sure that Schluter's testimony would have been relevant. We are here concerned not with Schluter's actual state of mind, but with the perception of his motivations and intentions by others. Other witnesses testified sufficiently about Schluter's apparent motives and intentions.

Returning to the issue of the likelihood of a lawsuit, we observe that Investcorp could have walked away from the deal if a lawsuit materialized. n10 On March 24, 1986, a reasonable investor could have surmised that a lawsuit could have raised the issue of the validity of the board action at the March 21 meeting, n11 or other issues yet to be exposed in the proxy statement. At the time of decedent's death, Schluter had not yet threatened suit, although a reasonable investor would have foreseen that possibility. After decedent's death, Schluter sent mixed signals. On the one hand, he claimed that he only wanted the best price for shareholders. On the other, he rattled his saber over nit-picky points in the proxy statement, possibly indicating that he would block the merger at any price. The Company hired special litigation counsel to prepare for the possibility that Schluter would sue.

n10 Respondent suggests that Investcorp may not have known about the family veto provision of the bylaws, and therefore Investcorp would not have even considered the option of walking away. We believe it unlikely that an acquiring company with a professional and experienced staff could spend 300 man-hours on due diligence and not read the target company's bylaws.

n11 Respondent argues that the board did in fact comply with the bylaw provision because John Mueller either did "assent" to the deal (even though he was not present at the meeting), or authorized Godfrey to vote in favor of the measure on his behalf. As to the second argument, it is hornbook law that directors may not vote by proxy. 2 Fletcher Cyc. Corp., sec. 427, at 324 (1990); Henn & Alexander, Laws of Corporations and Other Business Enterprises, sec. 208, at 565 (3d ed. 1983). In any event, we need not decide whether these arguments would have carried the day in a lawsuit. The fact that these arguments could have been made, in our view, would have increased the uncertainty over the resolution of a lawsuit, and therefore would have increased the probability of a lawsuit, rather than a settlement without litigation. This in turn would have increased the probability that Investcorp would withdraw.

A reasonable investor might have discounted the possibility of a lawsuit, or assumed that such a suit would be quickly settled or dismissed. We note that no lawsuit ever was filed. Although no one could have known on the valuation date that no suit would be filed, the fact that no suit was filed suggests the reasonableness of a belief that no suit would be filed. See Estate of Gilford v. Commissioner, 88 T.C. 38, 52 (1987). Thus, we believe that a discount of no more than 2.5 percent is in order to account for this risk.

Third, there is the problem of lack of liquidity. We assume that any rational investor would prefer a liquid to an illiquid investment. But the degree of this preference is a matter of uncertainty. Two factors lead us to believe that a lower discount than suggested by Schroeder is appropriate. First, we believe that the prospect of a quick takeover made these shares considerably more liquid. Second, part of the reason for the shareholder rejection and litigation discounts is the lack of liquidity of the shares. To the extent Schroeder's 15-percent lack of liquidity discount was not reduced to reflect the lack of liquidity components of the other discounts, it was too large. We find that a lack of liquidity discount of 7.5 percent is appropriate.

Taking all these factors into account, we believe that a discount from the takeover price of 21 percent is appropriate. This results in a per share fair market value of $ 1,700. We have therefore found that the value of the 8,924 shares of the Company includable in decedent's gross estate was $ 15,170,800.

An appropriate order will be issued.

SUPERIOR
COURT OF NEW JERSEY
APPELLATE DIVISION
DOCKET NO. A-3709-98T1
July 14, 2000

WILLIAM C. MUSTO,
Plaintiff-Appellant/Cross-Respondent,

v.

VINCENT G. VIDAS, JOHN S. DEGNAN, and SEMCOR, INC.,
a New Jersey Corporation,
Defendants-Respondents/Cross-Appellants.

Argued: April 18, 2000
Before Judges Wallace, Jr., Cuff and Lesemann.

On appeal from the Superior Court of New Jersey, Chancery Division, Burlington County.

Ira G. Megdal argued the cause for appellant/cross-respondent (Cozen & O'Connor, attorneys; Mr. Megdal, on the brief).

Anne C. Singer argued the cause for respondents/cross-appellants (Wolf, Block, Schorr and Solis-Cohen, attorneys; Ms. Singer, on the brief).

The opinion of the court was delivered by WALLACE, JR., J.A.D.

This appeal is the sequel to *Musto v. Vidas*, 281 N.J. Super. 548 (App. Div. 1995), *certif. denied*, 143 N.J. 328 (1996) (*Musto I*), wherein we held that plaintiff William Musto was an oppressed shareholder of Semcor, Inc., and that the remedy was a court-ordered buy-out of his shares pursuant to N.J.S.A. 14A:12-7(8) by the other one-third shareholders of Semcor, Inc., Vincent Vidas and John Degnan (defendants).

We remanded for the trial judge to determine the fair value of plaintiff's one-third interest. Following lengthy valuation proceedings, the trial judge valued Semcor, Inc. (Semcor) at $6,240,000 as of December 31, 1990, and plaintiff's share at $2,080,000. On December 26, 1996, the trial judge entered judgment requiring plaintiff to sell his shares in Semcor to defendants in return for $3,052,946. This amount included interest of $128,472 from January 1, 1991 through December 31, 1996, and a $155,526 credit to defendants for payments made to plaintiff pursuant to a

prior order. Subsequently, on June 18, 1997, plaintiff was awarded litigation fees and expenses in the amount of $482,088.03. Plaintiff appeals and defendants cross-appeal.

While the appeal was pending, we remanded the matter to the trial judge to consider plaintiff's motion to supplement the record regarding the sale of Semcor in June of 1998 to Advanced Communication Systems, Inc. (ACS) for approximately $40 million dollars. Following a hearing, the trial judge denied this motion. Plaintiff then filed a new notice of appeal and defendants again filed a cross-appeal.

On appeal, plaintiff contends the trial judge erred in: (1) establishing December 31, 1990 as the valuation date; (2) failing to give plaintiff an equitable adjustment for post-valuation date profits; (3) failing to apply the equitable interest rate advanced by plaintiff's expert; (4) determining he could not alter the valuation date from December 31, 1990; and (5) denying plaintiff's motion to supplement the record. In addition, plaintiff contends we should award him $96,025 for attorney's fees incurred in the appellate courts.

In the cross-appeal, defendants contend the judge erred in: (1) awarding plaintiff litigation expenses; (2) awarding prejudgment interest; (3) failing to grant two equitable adjustments to the fair value claimed by defendants; and (4) holding that the insurance provision in the shareholders' agreement survived the termination of plaintiff's shareholder status. We reject plaintiff's and defendants' various challenges and affirm.

I.

Plaintiff's primary arguments concern the selection of December 31, 1990 as the valuation date for determining fair value. Plaintiff suggests that December 31, 1996 would be a more appropriate and equitable valuation date because that date would take into account defendants' failure to distribute Semcor's profits to all the shareholders between 1991 and 1996, as well as Semcor's growth during these years. Alternatively, plaintiff urges that if December 31, 1990 remains the valuation date, then he is entitled to equitable adjustments to account for these factors.

Defendants maintain the trial judge was correct in not deviating from the presumptive valuation date set forth in the statute (the date of the filing of the complaint) because an award of post-1990 profits under any rationale would constitute an illegal double recovery since the determination of fair value is actually based

upon a company's future income stream. Defendants further assert that plaintiff would not have sought a post-1990 valuation date if Semcor's value had decreased after 1990. Defendants also claim that plaintiff is judicially estopped from contending otherwise because he had asserted as late as 1994 that December 31, 1990 was the proper valuation date.

As an initial matter, we reject defendants' judicial estoppel claim. Generally, the doctrine of judicial estoppel bars a party to a legal proceeding from arguing a position inconsistent with one previously asserted. *Bell Atlantic Network Servs., Inc. v. P.M. Video Corp*., 322 N.J. Super. 74, 94 (App. Div.), *certif. denied*, 162 N.J. 130 (1999)(citation omitted). However, the doctrine is only applicable when the party against whom it is to be applied successfully asserted the inconsistent position in the prior proceeding. *Id.* at 95. Here, plaintiff advanced December 31, 1990 as the valuation date when he was to be the purchaser of the shares, a position which we reversed in *Musto I*. Since plaintiff was not successful in his argument, and the circumstances have now changed, we find no reason to apply the doctrine of judicial estoppel.

We turn now to plaintiff's arguments addressed to the valuation date. Pursuant to N.J.S.A. 14A:12-7(8)(a), in a court- ordered buy-out:

> The purchase price of any shares so sold shall be their fair value as of the date of the commencement of the action or such earlier or later date deemed equitable by the court, plus or minus any adjustments deemed equitable by the court if the action was brought in whole or in part under paragraph 14A:12-7(1)(c).

The "date of the commencement of the action" is considered the presumptive valuation date. *See* Stuart L. Pachman, Title 14A-*Corporations, Comment to 14A:12* (1998-99)(noting that the date of the commencement of the action is the presumptive date for determining the fair value of shares which are bought out).

In *Musto I*, we instructed the trial judge with respect to the determination of the valuation date as follows:

> On remand, the trial court must again determine the valuation date . . . . The trial court found no equitable reason to deviate from [N.J.S.A. 14A:12-7(8)(a)'s] provision that the commencement date of the action be the "presumptive date" for valuation purposes and determined that December 31, 1990 was the valuation date. However, in light of our conclusion that plaintiff should not be re-employed by the corporation, the

> court ordered payment of salary to plaintiff, the passage of time since the filing of the complaint, and other factors the trial court may deem relevant, we do not foreclose the trial court from considering whether a different valuation date would be "deemed equitable."

[*Musto I, supra*, 281 N.J. Super. at 561.]

In determining to maintain December 31, 1990 as the valuation date, Judge Gottlieb stated:

> There's an assumption . . . that we're going to use December 31, [1990] here. Equitable reasons means to me that there's going to be some unfairness brought about by using December 31, [1990] that can't otherwise be addressed. [A]lthough you've given me a menu of reasons why I should deviate from December 31, [1990] and bring it closer to today, the only one that really has any intellectual appeal to me is [an equitable adjustment for post-1990 undistributed profits]. And, in that regard I find that equitably it's not sufficient to overcome the assumption that we're going to go with the filing date, because it can be addressed by another course, and that is just a matter of calculation of the adjustment for the undistributed profit plus interest.

However, Judge Gottlieb subsequently decided against an equitable adjustment for post-1990 corporate profits, stating:

> I determine that post-1990 . . . corporate profits are irrelevant for purposes of an equitable adjustment . . . . I say that because, one, another provision of the statute, which is subsection 8D says, "Interest may be allowed at the rate and from the date determined by the Court to be equitable . . . ." That's the remedy for the post-valuation date use of the money.
>
> However, the interest rate is to be set by me in the exercise of my reasoned judgment or discretion in an equitable fashion obviously, and in order to do that post-1990 financial circumstances . . . of the corporation are meaningful . . . .
>
> If, in fact, I were to allow an equitable adjustment as being participation in the post- valuation date . . . profits of the entity, then intellectually it raises an inconsistency, [because] the valuation as of December 31, 1990 not only factors in what is the present value of this and that . . . but also what is . . . the likely future course of the corporation. As long as that is factored in obtaining a value for purposes of valuation, then you can't have it duplicated by saying not only are we giving you something . . . which is

> based on, in part, the likely future course of the corporation, future earnings . . . we're also going to give you those future earnings. That can't occur. By the declaration in the statute, the provision of which I quoted for interest, that is the remedy that is to be provided.

Plaintiff claims that the trial judge erred by deviating from his original inclination to permit the equitable adjustments which should have been the law of the case.

The "law of the case" doctrine may be applied to the question of whether or not a decision made by a trial judge during one stage of the litigation is binding throughout the course of the action. *State v. Hale*, 127 N.J. Super. 407, 410-11 (App. Div. 1974). The rule is "based upon the sound policy that when an issue is once litigated and decided during the course of a particular case, that decision should be the end of the matter." *Id.* at 410 (citation omitted). As applied to rules or orders of an interlocutory nature, such as a ruling by a trial judge during one stage of the action, application of the doctrine is discretionary. *State v. Reldan*, 100 N.J. 187, 205 (1985).

Here, the trial judge's initial comments concerning equitable adjustments were not included as part of the corresponding April 19, 1996 order. In addition, the issue of post-valuation date profits had neither been briefed nor argued when the trial judge made his comments. Essentially, the trial judge made a tentative observation which he later changed. Under these circumstances, we find no reason to apply the law of the case doctrine.

In arguing that the trial judge abused his discretion by not taking the equities of the case into consideration in setting the valuation date, plaintiff relies on two recent New Jersey Supreme Court decisions, *Balsamides v. Protameen Chems., Inc.*, 160 N.J. 352 (1999) and *Lawson Mardon Wheaton, Inc. v. Smith*, 160 N.J. 383 (1999).

Balsamides involved the question of whether a judicially ordered buy-out pursuant to N.J.S.A. 14A:12-7(8) should include a marketability discount in determining the fair value of the purchaser's shares. *Balsamides, supra*, 160 N.J. at 354. The Court explained that a marketability discount accounts for a lack of liquidity in the shareholder's interest in a close corporation because there is no readily available market for the shares. *Id.* at 373. The Court held that a marketability discount should be applied in light of the equities of the case; specifically, the Court cited the fact that the seller was the oppressor and that

the purchaser should not bear the brunt of the company's illiquidity merely because he or she is the designated buyer. *Id.* at 377-79. In *Lawson Mardon Wheaton*, the issue was whether a marketability discount should be applied in determining fair value in a statutory appraisal action pursuant to N.J.S.A. 14A:11-1 to -11. The Court held that absent the presence of "extraordinary circumstances," such as where the dissenting shareholder has held out in order to exploit the transaction giving rise to the appraisal, the marketability discount should not be applied because to do so would enrich the majority shareholders and penalize the minority shareholders for taking advantage of the protection afforded by the appraisal statute and would inevitably encourage corporate "squeeze-outs." *Lawson Mardon Wheaton, supra*, 160 N.J. at 402-04.

Thus, the *Lawson Mardon Wheaton* and *Balsamides* cases demonstrate that the "equities of the case" must be considered when ascertaining fair value in oppressed shareholder actions. Specifically, the Court stated in *Balsamides*:

> In cases where the oppressing shareholder instigates the problems, as in this case, fairness dictates that the oppressing shareholder should not benefit at the expense of the oppressed . . . . The statute does not allow the oppressor to harm his partner and the company and be rewarded with the right to buy out that partner at a discount. We do not want to afford a shareholder any incentive to oppress other shareholders. What to do when it is the oppressing shareholder who is given the buy-out option is a harder question that we need not decide. The guiding principle we apply in this case and in *Lawson Mardon Wheaton* is that a marketability discount cannot be used unfairly by the controlling or oppressing shareholders to benefit themselves to the detriment of the minority or oppressed shareholders.

[*Balsamides, supra*, 160 N.J. at 382-83 (emphasis added).]

Unlike in *Balsamides* and *Lawson Mardon Wheaton*, the issue of a marketability discount, or any other discount, does not arise in this case; nor was the valuation date an issue in either of the Supreme Court cases. Beyond that, plaintiff's reliance on these cases is weakened by the fact that the "equities of the case" are taken into consideration when setting the valuation date under N.J.S.A. 14A:12-7(8)(a). This section requires that the valuation date be the date of the commencement of the action or such earlier or later date "deemed equitable" by the court, plus or minus any adjustments the court "deem[s] equitable." N.J.S.A. 14A:12-7(8)(a). We are satisfied that Judge Gottlieb considered the

"equities of the case" in reaching his ultimate determination to maintain the presumptive valuation date of December 31, 1990.

Plaintiff also argues that if December 31, 1990 is found to be the appropriate valuation date, then the trial judge erred in failing to make equitable adjustments to fair value to reflect Semcor's growth in the years following the valuation date. In this context, plaintiff does not dispute the trial judge's determination of fair value or its utilization of the income capitalization method of valuation.

There are various factors which are considered fundamental in valuing a close corporation, including: (1) the nature of the business; (2) its history; (3) the economic outlook in general; and (4) the condition and outlook of the specific industry in particular. *Lavene v. Lavene*, 162 N.J. Super. 187, 193-94 (Ch. Div. 1978) (quoting Rev. Rul. 59-60, 1959-1 C.B. 237). Generally, in valuation proceedings the corporation must be valued as a going concern, which necessitates not only examination of the corporation's historical earnings, but also consideration of the corporation's future prospects. *Universal City Studios, Inc. v. Francis I. duPont & Co.,* 334 A.2d 216, 218 (Del. 1975).

In utilizing the income capitalization method of valuation, the company's prospective income growth must be considered. *See Lavene, supra*, 162 N.J. Super. at 195 (noting that "potential future income is a major factor in valuing stocks of closely held corporations"). *See also Olson v. Olson*, 585 N.E.2d 1082, 1089 (Ill. App.)(holding that both the future economic outlook and the capitalization of future earnings are important tools for valuing a close corporation), appeal denied, 596 N.E.2d 630 (Ill. 1992); *Waller v. American Int'l Distribution Corp*., 706 A.2d 460, 463 (Vt. 1997)(stating that the income capitalization method is identical to the discounted future earnings method of valuation). Thus, if the judge had allowed an equitable adjustment to account for a company's actual growth in the years following the valuation date, he might well have accorded plaintiff a double recovery. Consequently, we find no abuse of discretion in the trial judge's denial of plaintiff's request for equitable adjustments to fair value.

Moreover, we disagree with plaintiff's contention that the Supreme Court's reversal of *Muellenberg v. Bikon Corp*., 143 N.J. 168 (1996), which we relied on in *Musto I*, should influence our decision here. Although the Supreme Court in *Muellenberg* found a minority buy-out of the majority was the appropriate remedy, it also distinguished *Musto I* in that the minority shareholder in

Muellenberg was actively involved in the operation of the company since its inception, and the company had been his only source of income for over ten years. *Id.* at 183. That is not the situation here.

In sum, we find no abuse of discretion in the trial judge maintaining the valuation date of December 31, 1990, and in refusing to make equitable adjustments for Semcor's post-valuation date profits.

II.

Plaintiff argues that the trial judge erred by not utilizing an equitable interest rate to allot him a twenty-five percent rate of return as the expected rate of return for the years subsequent to 1990, and by striking his expert's report to that effect.

Defendants argue that the term "equitable interest rate" is not "interest" as that term is used in the accepted sense; namely, a charge for the use of borrowed money. In addition, defendants claim that the term constituted a "net opinion" because the term is not recognized within the valuation field, there is no support for using company profits in setting an interest rate, and the equitable interest rate advanced was similar to the post-valuation profits previously barred by the trial judge.

In his report, plaintiff's expert, Raymond Grossman, asserted that plaintiff was entitled to an "equitable interest rate" under N.J.S.A. 14A:12-7(8)(d) to compensate him for the period after 1990 during which his Semcor investment remained in place. Grossman asserted:

> Musto is entitled to interest from the valuation in the amount deemed equitable by the Court (an Equitable Interest Rate) . . . . The Equitable Interest Rate [EIR] will be applied to the December 31, 1990 fair value of William Musto's Semcor stock in order to equitably adjust the value to ensure that it is fair as of the forthcoming buyout date. The EIR should compensate William Musto for (i) the time delay in receipt of his sale consideration, (ii) the investment risk he bore during this six-year period, and (iii) his opportunity cost of not earning comparable rates of return.
>
> [A]n appropriate EIR for William Musto is one which recognizes that [he] remained an equity investor in Semcor common stock over the post- valuation period, and as an

> investor, he remained at risk to the same market conditions as any other investor in an equity security.
>
> The EIR should be established at a fair rate which ensures that the oppressing shareholders do not benefit from their oppressive actions, at the expense of William Musto.

In determining the EIR, Grossman looked at the following sources: (1) rates of return on comparable securities over the post-valuation period; (2) the expected rate of return for an investor in Semcor as of December 31, 1990; and (3) Semcor's return on equity over the post-valuation period. Grossman determined the EIR range to be between 18% and 33%, and ultimately settled on an EIR of 25%.

In his deposition, Grossman could not identify any authoritative source which uses the term "interest" differently than as a charge for borrowed money. He indicated that the term "equitable interest rate" is different from the term "interest rate" because the former was particular to the facts of this case. Grossman was not aware of any source which defines the term "equitable interest rate." He agreed that the EIR is comparable to the annual dividend stream plaintiff was receiving prior to 1990.

In granting defendants' motion to strike that portion of Grossman's report and to bar Grossman from testifying regarding the EIR, Judge Gottlieb stated:

> I've noted as of January 1, 1991 Mr. Musto became a, in essence, creditor of the corporation, a lender to the corporation . . . . Under 8D, that is what I think the Legislature is talking about . . . .
>
> There are a multitude of other investments for which a return can be obtained, but as a matter of law, I hold that plaintiff has the characteristics of being a creditor/lender as opposed to an equity owner. Therefore, to that end Grossman's report is founded on a legal fallacy and cannot be advanced, I will . . . partly bar that.
>
> Mr. Musto's investment is not to be considered an equity investment to establish an interest rate also because equity investment and interest rate are totally intellectually incompatible.

When there is a court-ordered sale of a corporation's stock, the court may award interest "at the rate and from the date determined by the court to be equitable . . . ." N.J.S.A. 14A:12-7(8)(d). In

the absence of any explicit indication of special meaning, words of a statute are to be given their ordinary and well-understood meaning. *Levin v. Township of Parsippany-Troy Hills*, 82 N.J. 174, 182 (1980).

"Interest" is defined as "compensation fixed by agreement or allowed by law for the use or detention of money, or for the loss of money by one who is entitled to its use," and as "the amount owed to a lender in return for the use of borrowed money." Black's Law Dictionary 816 (7th ed. 1999). The term has also been defined as "an exaction for past due obligations and, in essence, is in the nature of a penalty" and is compensation for delay in payment. *Parsippany Hills Assocs. v. Rent Leveling Bd. of Parsippany-Troy Hills*, 194 N.J. Super. 34, 52 (App. Div.), *certif. denied*, 97 N.J. 643 (1984).

Here, we are satisfied the term "equitable interest rate," as utilized by Grossman, is not encompassed by these definitions. We find no evidence that the term "interest" as used in N.J.S.A. 14A:12-7(8) was intended to have a special meaning as asserted by Grossman. Consequently, we find no abuse of discretion in the trial judge's rejection of plaintiff's proposed equitable interest rate.

III.

Plaintiff argues that the trial judge erred by not granting his motion to supplement the record to take into account Semcor's mid-1998 sale to ACS for approximately $40 million. Specifically, plaintiff contends the sale is relevant as reflective of Semcor's increase in value as of December 1996, as well as the unfairness of adhering to a December 1990 valuation date.

Defendants maintain that the motion was properly denied because the sale of the corporation post-dated the valuation date by over seven years. Further, defendants claim that the sale was not newly discovered evidence as required by R. 4:50-1.

While this appeal was pending, we remanded this matter for the trial judge to consider plaintiff's motion to supplement the record as a motion pursuant to R. 4:50-1. In denying plaintiff's application, Judge Gottlieb viewed the sale of Semcor as a fortuitous event, regardless of the valuation date selected. In addition, the judge cited the policy of finality in litigation, commenting:

> It's not as if the mid-1998 sale occurred on the heels of the 1990 valuation date or, indeed, the requested [1995]

> valuation date.[1] We had, depending on which date would be selected, either a seven and a half or two and [a] half year intervening period. So, we're talking about a time interval that occurs here . . . . If we open up the new valuation date, I am also encouraging the imposition of a great inefficiency on the parties and on the court system itself.
>
> All things being considered, there has to be a balancing of the tension, if you would, between the desire to be absolutely, perfectly, right, and the desire to have a decision, right or wrong, a decision, and let the parties go on with their lives from there. The tension is resolved by the passage of time. If this sale had occurred on February 1, 1991 . . . I think it would have been meaningful. It did not.

Plaintiff points to the Supreme Court's decision in *Lawson Mardon Wheaton*, decided after Judge Gottlieb's denial of the motion, as support for his position.

Lawson Mardon Wheaton arose out of an appraisal action brought by shareholders dissenting from a corporate restructuring in 1991. *Lawson Mardon Wheaton, supra*, 160 N.J. at 389. The company offered to buy out the dissenting shareholders at $41.50 per share. *Id.* at 390. The case eventually reached the Supreme Court under the caption of *Strasenburgh v. Straubmuller*, 146 N.J. 527 (1996), shortly after the company announced an acquisition merger, wherein its stock was purchased for $63.00 per share. *Lawson Mardon Wheaton, supra*, 160 N.J. at 391. In *Strasenburgh*, the Court remanded to the trial court to consider whether to reopen the record to consider the company's recent merger "in making a just and equitable determination of the appraisal value as of 1991." *Strasenburgh, supra*, 146 N.J. at 545. On remand, the trial court declined to reopen the record. We upheld that ruling on appeal. *Lawson Mardon Wheaton, Inc. v. Smith*, 315 N.J. Super. 32 (App. Div. 1998).

The Supreme Court reversed in *Lawson Mardon Wheaton, Inc. v. Smith*, 160 N.J. 383, 404-07 (1999), holding that the trial court erred by refusing to reopen the record to consider the per share acquisition price of the company in 1996 to "gauge, assess, and determine" the fair value of the dissenters' stock on the December 1991 valuation date. The acquisition price was relevant since the company asserted that the fair value of the dissenters' stock was $41.50 per share in December 1991, while the 1996 acquisition price was $63.00 per share, even though the company's fortunes had steadily deteriorated between 1991 and 1996. *Id.* at 406. Thus, as the Court noted: "[t]he Company's own financial statements

disclose that the fair value of the Company was greater in 1991 than in 1996." *Id.* at 405. Therefore, because the company's fortunes had waned during the 1991 to 1996 period, and in light of the 1996 per share sales price, the Court questioned the company's assertion that the fair value of the dissenters' stock in 1991 was worth only $41.50 per share. *Id.* at 407.

Although *Lawson Mardon Wheaton* lends some support to plaintiff's contention, under the facts of this case, we find no abuse of discretion in Judge Gottlieb's decision not to consider the seven-year-old acquisition price. Unlike the situation in *Lawson Mardon Wheaton*, evidence of the 1998 acquisition price was not clearly shown to have aided in the assessment of the fair value of plaintiff's stock in December of 1990. Whatever the fortunes of Semcor after 1990, whether good or bad, they were due to the efforts of defendants.

Consequently, we find no abuse of discretion in the trial judge's refusal to open the judgment to permit plaintiff to supplement the record to consider the 1998 acquisition price of Semcor.

In sum, we find no error in the trial judge's refusal to open the judgment to permit plaintiff to supplement the record to consider Semcor's 1998 sale.

IV.

In plaintiff's reply brief, he challenges for the first time the trial judge's calculation of Semcor's fair value. Specifically, plaintiff questions the income capitalization approach utilized to the extent that the approach understated Semcor's expected future growth rate.

It is well-settled that introduction of a new issue by way of a reply brief is improper. *Selective Ins. Co. of Am. v. Hojnoski*, 317 N.J. Super. 331, 335 (App. Div. 1998); *Interchange State Bank v. Veglia*, 286 N.J. Super. 164, 188 (App. Div. 1995), *certif. denied*, 144 N.J. 377 (1996); *City of Elizabeth v. Elizabeth Fire Officers Ass'n*, 198 N.J. Super. 382, 384 n.2 (App. Div. 1985). Moreover, the issue raised in this matter is not one of public importance. *See Coastal Group v. Planned Real Estate Dev. Section*, 267 N.J. Super. 49, 56 (App. Div. 1993)(addressing the issue of a state agency's authority to order recission, even though improperly raised for the first time in a reply brief, because the Appellate Division considered it to be a matter of public importance); *Hojnoski, supra*, 317 N.J. Super. at 335 (addressing an apparent conflict between a statute and a regulation even

though the issue was raised for the first time in an appellate reply brief). Consequently, we will not consider this issue raised for the first time in plaintiff's reply brief. *See Veglia, supra*, 286 N.J. Super. at 188 (refusing to entertain the issue of the method by which prejudgment interest was calculated since it was improperly raised for the first time in a reply brief).

V.

In his final argument, plaintiff seeks to require defendants to reimburse him for his prior appellate costs in the appellate proceedings. Defendants maintain that plaintiff is not entitled to such fees and costs because he failed to apply for the expenses within ten days after determination of the appeal, as required by R. 2:11- 4, and because a large portion of the expenses were incurred before the Supreme Court. We agree.

By order dated June 4, 1997, Judge Gottlieb awarded plaintiff $482,088.03 for attorney's fees and other litigation costs related to trial court matters. However, the judge denied plaintiff any attorney's fees relating to his appeal because the judge did not "interpret R. 2:11-4 as authorizing this trial court to act on appellate fees, especially where the Appellate Division did not refer that question to me."

R. 2:11-4 provides in pertinent part: "An application for a fee for legal services rendered on appeal shall be made by motion supported by affidavits as prescribed by R. 4:42-9(b) and (c), which shall be served and filed within 10 days after the determination of the appeal." *In Tooker v. Hartford Accident and Indem. Co.,* 136 N.J. Super. 572, 578 (App. Div. 1975), *certif. denied*, 70 N.J. 137 (1976), we held that the trial court lacked the power to award attorney's fees and costs for legal services rendered in the Appellate Division in a prior appeal of the matter because application for such allowances should have been made in the Appellate Division. However, because the proofs were before the court and the opposing party did not challenge the reasonableness of the fee, this court relaxed the ten-day requirement of R. 2:11-4 in the interests of justice and awarded the moving party counsel fees and costs relating to the prior appeal. Ibid.

Unlike in *Tooker*, we find no compelling interests of justice warranting a relaxation of the ten-day requirement under R. 2:11-4. Moreover, we reject plaintiff's claim in his reply brief that R. 2:11-4 does not apply to interlocutory appeals.

VI.

In their cross-appeal, defendants assert that the trial judge erred in awarding counsel fees to plaintiff because the judge relied on the finding that plaintiff was an oppressed shareholder, rather than finding that defendants acted in bad faith, as required by N.J.S.A. 14A:12-7(10). Defendants further claim that they are entitled to counsel fees pursuant to N.J.S.A. 14A:12-7(10) because the trial judge found in *Musto I* that plaintiff did not act in good faith on several occasions.

Plaintiff responds by pointing out that the trial judge did not rely on N.J.S.A. 14A:12-7(10), but awarded him counsel fees pursuant to N.J.S.A. 14A:12-7(8)(d), which allows a court to award counsel fees to a selling oppressed shareholder. Plaintiff further contends that defendants are not entitled to counsel fees under N.J.S.A. 14A:12-7(10) because the trial judge did not find that he acted in bad faith.

Contrary to defendants' contention, the trial judge was not required to find that defendants acted in bad faith in order to award plaintiff counsel fees pursuant to N.J.S.A. 14A:12-7(8)(d). This section does not require the judge to find bad faith, but rather, that the judge find that shareholder oppression took place:

> If the court finds that the action was maintainable under paragraph 14A:12-7(1)(c)[any oppressive action by officers or directors], the court in its discretion may award to the selling shareholder or shareholders reasonable fees and expenses of counsel and of any experts, including accountants, employed by them.

[N.J.S.A. 14A:12-7(8)(d).]

Consequently, we find no abuse of discretion in awarding plaintiff counsel fees pursuant to N.J.S.A. 14A:12-7(8)(d).

Defendants further claim that they are entitled to counsel fees under N.J.S.A. 14A:12-7(10) because of plaintiff's bad faith. This section authorizes the award of reasonable expenses to the injured party where the court finds a party acted "arbitrarily, vexatiously, or otherwise not in good faith . . . ." N.J.S.A. 14A:12-7(10). In rejecting defendants' request for counsel fees, Judge Gottlieb stated:

> I will not subscribe to any affirmative remedy in favor of defendants pursuant to N.J.S.A. 14A:12-7(10) since to do so would be an endorsement of a windfall to some extent and would mean that I have found[,] as I have not[,] that Mr.

> Musto acted in bad faith in bringing the suit (as opposed to advancing particular positions during the case's progress).

We agree and affirm the denial of counsel fees for defendants essentially for the reasons expressed by Judge Gottlieb.

VII.

Defendants also contend the trial judge's award of $1,128,472 in prejudgment interest to plaintiff was grossly excessive and constituted an abuse of discretion. In addition, they claim there are compelling reasons for not awarding prejudgment interest at all, or at least not after March 13, 1992 when defendants formerly moved to purchase plaintiff's stock, because of their offer to pay more for plaintiff's stock than what was ultimately found to be fair value by the trial judge. Further, defendants claim that plaintiff was responsible for needless litigation. Finally, defendants contend that if interest is to be awarded, the trial judge erred in awarding the prime rate, rather than a treasury bill rate or the prejudgment interest rate established by R. 4:42-11, and in awarding compound, rather than simple, interest. Plaintiff maintains that the award of prejudgment interest was proper because defendants had use of his money from the valuation date until his shareholder status was terminated. Further, plaintiff asserts that the trial judge was correct in utilizing the prime rate as the applicable rate of interest and in awarding compound interest.

In awarding prejudgment interest in the amount of $1,128,472 running from January 1, 1991 through December 31, 1996, Judge Gottlieb stated:

> Now interest. Defendants urge that it be not available but realistically as – a cutoff as of March 1992. That is when the several motions were made which memorialized a buy-out offer of the other. I'm not going to go on with that because then that overlooks the ultimate fact and that is that defendant had the use of plaintiff's money . . . .
>
> What I have selected for the use of an interest rate payable here is the prime rate and why I have selected the prime rate is, it is most analogous to a corporate borrower and in light of Semcor's solid financial position . . . . I am not going to use the risk free rates, and by that I refer to the treasury notes, treasury bills, CDs, that sort of thing, since that would be intellectually inconsistent with my earlier determination of fair value where I said the cap rate which I have to apply . . . to the income stream or

> reasonable income in order to arrive at the formulation of value, put a certain amount in there additional for Semcor not being, "risk free."
>
> I have thought about . . . whether it should be compound or simple . . . . What I've done is try, since I'm using the prima [sic] rate . . . to figure out if it were going to ABC Bank what it would be doing in borrowing X dollars for two years, four years, whatever it is, some period longer than one year.
>
> In that marketplace, to my knowledge, it would be compounded on an annual basis at best, maybe compounded at a shorter period of time. That's why I have chosen compounding as opposed to simple. I have chosen annual as opposed to quarterly compounding only because it seems to me that in the light of the events that occurred if it had been the equivalent circumstance the lending of money to Semcor would have been on probably not a quarterly compounding basis but on an annual.

N.J.S.A. 14A:12-7(8)(d) provides in pertinent part:

> Interest may be allowed at the rate and from the date determined by the court to be equitable, and if the court finds that the refusal of the shareholder to accept any offer of payment was arbitrary, vexatious, or otherwise not in good faith, no interest shall be allowed.

Generally, the awarding of prejudgment interest is subject to the trial judge's broad discretion in accordance with principles of equity. *A.J. Tenwood Assocs. v. Orange Senior Citizens Hous. Co.*, 200 N.J. Super. 515, 525 (App. Div.), *certif. denied*, 101 N.J. 325 (1985); *Tobin v. Jersey Shore Bank*, 189 N.J. Super. 411, 414 (App. Div. 1983). We will defer to the trial judge's exercise of discretion involving prejudgment interest unless it represents a manifest denial of justice. *A.J. Tenwood, supra*, 200 N.J. Super. at 525 (citations omitted). The primary consideration in awarding prejudgment interest is that "the defendant has had the use, and the plaintiff has not, of the amount in question; and the interest factor simply covers the value of the sum awarded for the prejudgment period during which the defendant had the benefit of monies to which the plaintiff is found to have been earlier entitled." *Rova Farms Resort, Inc. v. Investors Ins. Co. of Am.*, 65 N.J. 474, 506 (1974).

Defendants claim that either no interest should be awarded or the amount awarded should be reduced because plaintiff was responsible

for the length of the litigation. We disagree. The fact that defendants may have made a buy-out offer prior to the litigation greater than the trial judge's ultimate determination of fair value does not mean that plaintiff's refusal to accept such an offer constitutes unjustified delay. As noted, the initial decision required plaintiff to buy-out defendants' interests. Thereafter, much of the delay was due to the defendants' interlocutory appeal from that initial decision. Moreover, some of the examples of delay cited by defendants were accounted for in the trial judge's reduction of plaintiff's counsel fee award. Therefore, we find no abuse of discretion in the trial judge's decision to award prejudgment interest.

Further, we reject defendants' contention that the prime rate, rather than a lower rate, is an appropriate rate. *See Tobin, supra*, 189 N.J. Super. at 416 (noting that in the context of a wrongful retention or detention of funds by a bank, the appropriate rate of prejudgment interest in such cases is usually the prime lending rate). Similarly, we find no abuse of discretion in the trial judge's decision to award compound rather than simple interest. *Borough of Wildwood Crest v. Smith,* 235 N.J. Super. 404, 407 (App. Div. 1988)(summarily finding no error in the trial court's award of compound rather than simple interest in a condemnation action).

VII.

Defendants further contend the trial judge erred in not granting two equitable adjustments to fair value; namely, an adjustment for the post-1990 compensation paid to plaintiff by Semcor according to court order, and the amount voluntarily paid by Semcor to plaintiff in 1991 as deferred compensation. Defendants claim that the judge's failure to allow for these adjustments resulted in plaintiff receiving more than fair value.

Plaintiff maintains that the compensation he received in both instances does not constitute a double recovery, but rather is separate and distinct from the amount he received for his shares.

In 1991, Semcor paid $550,000 to plaintiff--$200,000 in July and $350,000 in December. Vidas described the payments as deferred compensation for tax purposes and claimed that this was purely a voluntary decision, not done under any legal obligation. Thomas Earp, Semcor's attorney, also testified that the payments were made as deferred compensation for tax purposes.

In his initial decision, Judge Gottlieb found that the alteration of the equal compensation agreement constituted an act of shareholder oppression on the part of defendants and ordered that the compensation be "evened out" for the relevant time period. In *Musto I*, we upheld the trial judge's findings in this regard as supported by substantial credible evidence, and ultimately awarded Musto $693,000. *Musto I, supra*, 281 N.J. Super. at 561-62.

In disallowing the adjustments sought by defendants, Judge Gottlieb stated:

> [I]t was characterized by the defendants as deferred compensation. It has been argued to me that . . . that characterization[] was just a fiction in order to be able to take out of the corporation monies that year and still meet the equal compensation requirements.
>
> [I]t was called deferred compensation . . . to avoid taxes which would otherwise have had to have been paid to the State of New Jersey as a then subchapter S corporation . . . .
>
> So, the first concern that I have is the defendants have selected to go that route . . . in order to gain a tax advantage and now having obtained that tax advantage wish to disavow it. I will not permit that. I find that they are estopped from characterizing it as anything other than deferred compensation for efforts before January 1, 1991.
>
> The second basis is . . . that it was paid pursuant to the equal compensation agreement and not for reasons of distributing to plaintiff a share of the corporation.

As noted above, N.J.S.A. 14A:12-7(8)(a) authorizes a trial judge to make adjustments to fair value, either plus or minus, which the trial judge finds equitable. The fact that Semcor was not obligated to make a payment to plaintiff, but did so voluntarily, does not mean the trial judge was obligated to make an equitable adjustment to fair value to account for the payment, or that his failure to do so constitutes an abuse of discretion.

Moreover, with respect to the court-ordered payment of deferred compensation, that payment and the payment for the fair value of shares are separate and distinct remedies. As we noted in *Musto I*, with respect to the court-ordered payment of compensation:

> Such an award is akin to an award of damages to a minority shareholder as compensation for an injury suffered as a result of the oppressive conduct by the majority . . . . In view of defendants' improper conduct towards plaintiff, it is a reasonable exercise of that power for the trial court to

> award damages to plaintiff equal to Vidas's pay for 1991 and 1992.

[*Musto I, supra*, 281 N.J. Super. at 562.]

Consequently, if defendants were awarded an equitable adjustment for the court-ordered payment, the effect would be to nullify the damages awarded plaintiff for defendants' oppressive conduct. We will not grant such relief.

IX.

Defendants further contend the trial judge erred in holding that paragraph sixteen of the shareholders' agreement, dealing with a shareholder death benefit in the form of deferred compensation, survived plaintiff's termination as a shareholder of Semcor.

Paragraph sixteen of the May 1990 shareholders' agreement provides:

> Deferred Compensation. The parties acknowledge [sic] that each Shareholder serves and has served as an employee, officer, and director of SEMCOR. In consideration of each Shareholder's agreement to continue to perform services as an executive of SEMCOR, SEMCOR has agreed to pay deferred compensation to the Shareholder's family upon his death. Such deferred compensation shall be paid as follows:
>
> > A. The total amount payable as deferred compensation, with respect to each Shareholder, shall be the sum of THREE HUNDRED SIXTY THOUSAND DOLLARS ($360,000).

In a statement of reasons attached to his April 19, 1996 order, Judge Gottlieb stated with respect to the above provision:

> Defendants . . . claim . . . that since plaintiff will no longer be a shareholder, his family (upon his death) should not be entitled to the benefit. But that position overlooks the agreement's declaration that plaintiff had served the corporation and agreed to continue to serve the corporation. To deny plaintiff's position would be to (a) overlook the fact that defendants precluded plaintiff from continuing to serve the corporation; and (b) the court cannot separate the value attributable to past services from that ascribed to potential future service.

N.J.S.A. 14A:12-7(8)(f) provides in pertinent part:

> Upon entry of an order for the sale of shares under this subsection . . . the selling shareholders shall no longer have any rights or status as shareholders, officers, or

> directors, except the right to receive the fair value of their shares plus whatever other amounts as may be awarded. [(emphasis added).]

Thus, the statute expressly permits "other amounts as may be awarded," and does not require that all contractual agreements between shareholders end with the termination of shareholder status. In short, we find nothing in the statute which prohibits the award in question. That is, the trial court, as a court of equity, "has the power of devising the remedy and shaping it in order to fit the circumstances of the case and the complexities involved therein." *Musto I*, *supra*, 281 N.J. Super. at 562.

Consequently, we affirm the trial judge's holding that the death benefit provision of the shareholders' agreement remained in effect after the termination of plaintiff's status as shareholder.

Affirmed.

FOOTNOTES

1. Plaintiff had also advanced a 1995 valuation date in addition to the 1996 valuation date.

JUDGES:

Zollie Steakley, Associate Justice.

OPINIONBY:

STEAKLEY

OPINION:

Section 3.63 of the Texas Family Code n1 requires the Court in a decree of divorce to "order a division of the estate of the parties in a manner that the Court deems just and right . . . ." The controlling question here is whether in this divorce proceeding the accrued good will of the medical practice of the husband, a doctor of medicine specializing in ophthalmology, based as it is on his personal skill, experience and reputation, as well as upon his continuing in the practice, constitutes property that is subject to division as part of the estate of the parties. The trial court and a divided court of civil appeals considered that it was. 477 S.W.2d 395. We hold that it was not.

n1 Vernon's Texas Codes Annotated, Family Code.

The problem is posed in this manner. Petitioner, Dr. James B. Nail, Jr. and his wife, Alice J. Nail, Respondent, were married in 1945. He was subsequently licensed to practice medicine and has practiced in Wichita Falls, Texas, since 1956. His wife sued him for divorce which was granted by

judgment dated August 12, 1971. The court ordered a division of the estate of the parties and that which is questioned here is the following grant to Alice J. Nail in the decree of divorce:

"The Court finds that the value of Alice J. Nail's community interest in said medical practice, including the good will accrued thereto, to be the sum of $40,000.00. This sum shall be paid to Alice J. Nail by James B. Nail, Jr. at the rate of $400.00 per month for a period of twenty-four (24) months beginning August 1, 1971, and continuing to July 1, 1973. Beginning August 1, 1973, the monthly payments from James B. Nail, Jr. to Alice J. Nail shall be reduced to $300.00 per month and shall continue thereafter until the total sum of $40,000.00 shall have been paid by James B. Nail, Jr. to Alice J. Nail, or until the said James B. Nail, Jr. shall cease to practice medicine."

The supporting findings of fact and conclusions of law of the trial court were these:

"That except for the cruel conduct on the part of the said James Barry Nail, Jr. to Alice Jane Nail,the marriage could have continued.

"That had the marriage continued, Alice Jane Nail would have had the benefit of community income in the approximate sum of $53,000.00 per year.

"That during their marriage, James Barry Nail, Jr., completed his pre-medical education, graduated from medical school, completed his internship and his residency in opthalmology.

"That Alice Jane Nail and James Barry Nail, Jr., accumulated and now own the following community property:

(a) The house and lots located at 4502 Martinique Street, Wichita Falls, Texas;

(b) Valuable household fixtures, furnishings and appliances located in the home at 4502 Martinique Street, Wichita Falls, Texas;

(c) The medical practice of James Barry Nail, Jr.;

(d) Two automobiles; and

(e) One boat and motor.

"There are no liquid assets owned by the community estate of Alice Jane Nail and James Barry Nail, Jr.

"That the value of the assets of the medical practice of James Barry Nail, Jr., is $131,759.64, including all fixtures, furniture, equipment, and the value of the good will that has accrued thereto during the marriage of Alice Jane Nail and James Barry Nail, Jr.

"That the approximate value of Defendant's office equipment and office furniture is $735.47.

"That James Barry Nail, Jr., has an earning capacity of approximately $52,000.00 per year.

"That the earning capacity of James Barry Nail, Jr., will increase in subsequent years.

"That Alice Jane Nail is not trained for any employment.

"I conclude from a consideration of the respective ages of the parties, their earning capacities and abilities, the conduct of the Respondent toward the Petitioner, what the Petitioner could have reasonably expected to receive from a continuation of the marriage, except for the conduct of the Respondent, and

from all other factors that it is fair and equitable to grant to the Petitioner Alice Jane Nail, the following property:

(a) . . .

(b) . . .

(c) . . .

(d) A community interest in the medical practice of James Barry Nail, Jr., in the sum of $40,000.00, which said sum shall be payable at the rate of $400.00 per month for a period of 24 months beginning August 1, 1971, and continuing until July 1, 1973. Beginning August 1, 1973, the monthly payments of James Barry Nail, Jr. to Alice Jane Nail should be reduced to $300.00 per month and continue thereafter until the total of $40,000.00 shall have been paid by James Barry Nail, Jr., to Alice Jane Nail, or until the said James Barry Nail, Jr. shall cease to practice medicine; . . ."

It is to be observed that the decree of the court was not based upon a permissible agreement between the parties for support payments to the wife after divorce; nor was it in terms of a court imposed personal obligation of the husband for support of the wife after divorce that would constitute permanent alimony not sanctioned by the statutes and public policy of Texas. See Francis v. Francis, 412 S.W.2d 29 (Tex. 1967); Art. 2328b-4 § 2(f), Art. 4637, Vernon's Ann.Civ.St., and Sec. 3.59 of the Texas Family Code. Rather, the decree in the respects under attack purported to be an exercise of the discretionary powers of the trial court in effecting a just and right division of the estate of the parties.

As noted, the trial court found the value of the husband's medical practice to be $131,759.64, inclusive of fixtures, furniture, equipment and accrued good will; but the court further found the value of the furniture and equipment to be only approximately $735.47, thus leaving a valuation of accrued good will in the sum of $131,024.17. The further finding that the wife's community interest therein was $40,000.00 was derived, at least in part, from the testimony of a witness offered by the wife as an expert that the valuation of the good will of a professional practice would have "a starting point" of "multiplying one full year's billings by one or one and a half". This seems so in light of the trial court finding that the husband had an annual earning capacity of approximately $52,000, one and one-half of which would be $78,000. In any event it is apparent that the award to the wife of $40,000, payable in future monthly installments if, and so long as, the husband practiced his profession, rested upon the conclusion that the accrued good will of the husband's practice constituted property which was subject to division by the court.

Alice J. Nail asserts that the problem is solved by precedents in our State which recognize that a professional man can acquire and voluntarily sell good will. Cited are Randolph v. Graham, 254 S.W. 402 (Tex.Civ.App. 1923, writ ref'd) where it was stated that "[the] good will of a professional man may be as much an asset and a thing to be sold as that of a merchant."; Sanderfur v. Beard, 249 S.W. 274 (Tex.Civ.App. 1923, no writ) and Yeakley v. Gaston, 50 Tex. Civ. App. 405, 111 S.W. 768 (Tex.Civ.App. 1908, no writ). So it is said, the husband's medical practice with its good will was owned by the marital partners; and as such, it was property in existence at the time of the divorce that was subject to valuation and partition in a manner within the discretion of the trial court.

We have found no case in point and solution of the problem is not easy. The division of authority on the question of whether good will may exist in a profession dependent on personal qualities of the owner has been stated in this manner:

". . . It has frequently been held that good will does not adhere to a business or profession dependent solely on the personal ability, skill, integrity, or other personal characteristics of the owner. According to other decisions, however, good will may exist in a professional as well as a commercial business, and may be sold together with the estate, and, irrespective of whether there is technically a good will adherent to a business or profession dependent on personal qualities of the owner, contracts disposing thereof coupled with an agreement that the seller would not compete, if otherwise valid, are enforced. In any case, an involuntary sale cannot be made of a good will based on professional reputation. 38 C.J.S., Good Will, § 3, pp. 952-953

It is generally held that good will has no existence as property in and of itself, as a separate and distinct entity, but only as an incident of a continuing business having locality or name. 38 Am.Jur.2d, Good Will, § 3, p. 914, and cases there cited. The rule has been otherwise stated that as good will must adhere to some principal property or right, the extinction of such right operates to extinguish the good will dependent on it. 38 C.J.S., Good Will, § 4, p. 953. It has been held that good will cannot be levied upon in satisfaction of debts. Lilienthal v. Drucklieb, (Cir. 1898) 84 F. 918. It is the rule in Tennessee that there can be no forced sale or transfer of good will based upon professional reputation and standing against one not assenting. Hunt v. Street, 182 Tenn. 167, 184 S.W.2d 553 (Tenn. 1945); Slack v. Suddoth, 102 Tenn. 375, 52 S.W. 180, 45 L.R.A. 589. The distinction has been drawn that professional good will is not so much fixed or as localized as the good will of a trade, and attaches to the person of the professional man or woman as a result of confidence in his or her skill and ability. Finch Bros. v. Michael, 167 N.C. 322, 83 S.E. 458 (1914).

In any event, it cannot be said that the accrued good will in the medical practice of Dr. Nail was an earned or vested property right at the time of the divorce or that it qualifies as property subject to division by decree of the court. It did not possess value or constitute an asset separate and apart from his person, or from his individual ability to practice his profession. It would be extinguished in event of his death, or retirement, or disablement, as well as in event of the sale of his practice or the loss of his patients, whatever the cause. Cf. Busby v. Busby, 457 S.W.2d 551 (Tex. 1970), and the cases there referred to with approval, where the husband's existing entitlement to future military retirement benefits was held to constitute a vested property right. The crucial consideration was the vesting of a right when the husband reached the requisite qualifications for retirement benefits; the fact that the benefits were subject to divestment under certain conditions did not reduce the right to a mere expectancy. The good will of the husband's medical practice here, on the other hand, may not be characterized as an earned or vested right or one which fixes any benefit in any sum at any future time. That it would have value in the future is no more than an expectancy wholly dependent upon the continuation of existing circumstances. Accordingly, we hold that the good will of petitioner's medical practice that may have accrued at the time of the divorce was not property in the estate of the parties; and that for this reason the award under attack was not within the authority and discretion vested in the trial court by Section 3.63 of the Texas Family Code.

It is to be understood that in resolving the question at hand we are not concerned with good will as an asset incident to the sale of a professional practice, or that may exist in a professional partnership or corporation apart from the person of an individual member, or that may be an element of damage by reason of tortious conduct.

The judgments below are reversed and the cause is remanded to the trial court for further proceedings consistent with this opinion.

* Chief Justice at time of oral argument

OPINIONBY:

THOMAS

OPINION:

THOMAS, Justice.

All of the questions raised in this appeal relate to the exercise of discretion by the trial court in effecting a division of marital property in a divorce action. The primary issue concerns the method adopted for determining the value of stock in a closely-held family corporation. Other allegations of error concern a variance between the decree entered by the trial court and the parties' stipulations; the failure of the trial court to consider tax liabilities and early withdrawal penalties in valuing retirement accounts; and the failure of the trial court to take into account a right of contribution from cotenants in determining the value of the wife's interest in real property held by her in joint tenancy with others. We hold there was no abuse of discretion on the part of the trial court with respect to any valuations. We do modify the decree of divorce to increase the value of the residence awarded to the wife to its stipulated value and, after

that adjustment, we further modify the decree by abolishing periodic payments obviously designed by the trial court to effect an equal distribution. As modified, we affirm the decree of divorce entered by the trial court.

Charles Richard Neuman (the husband) raises the following issues in expressing his dissatisfaction with the property division made by the district court:

I. Did the trial court abuse its discretion by making findings of fact and conclusions of law at variance with the parties' stipulations?

II. Did the trial court abuse its discretion under the particular facts and circumstances of this case by failing to consider tax liabilities and early withdrawal penalties when determining the value of the parties' individual retirement accounts?

III. Did the trial court abuse its discretion by failing to consider appellee's right to contribution from her cotenants when determining the value of her interests in a joint tenancy?

IV. Did the trial court properly determine the value of appellant's closely held stock?

Gretchen Ann Neuman (the wife) offers this statement of the issues in arguing to sustain the property division made by the trial court:

1. Was the trial court's division of property when viewed on an overall basis an abuse of discretion?

2. Was the trial court's valuation of appellee's joint tenancy an abuse of discretion?

3. Did the trial court err as a matter of law and abuse its discretion when it accepted appellee's expert's valuation of appellant's stock?

The husband, by his reply brief, summarizes the case in this way:

V. Is the trial court's property settlement fair and equitable when judged on an overall basis under the particular facts and circumstances of this case?

The Neumans were married on June 7, 1980, in Saratoga. By December of 1989, irreconcilable differences had arisen between them and, following a year of separation, the husband filed for a divorce on May 24, 1990. The wife filed an answer and a counterclaim in which she sought a decree of divorce, custody of their daughter, child support, and an equitable division of their properties. The trial was held on January 4, 1991, with the only matter in dispute before the court being the value, and the appropriate division, of the parties' property.Other issues including custody of their daughter, child support, medical expenses, and visitation of the daughter generally were not in dispute because they had been resolved by stipulations.

The husband and wife each brought substantial assets into the marriage. At that time, the husband owned a house in Rawlins, which was worth approximately $ 57,000, and approximately seventeen shares of Phelps-Dodge stock, a gift from his father in 1979. The wife owned an 85% interest in a cabin and lot near Moran Junction; a Merrill Lynch cash money market account; and interests in two real estate investment companies known as JMB Properties. The wife's property had been acquired with proceeds that she received from a personal injury settlement in 1974.

Before they were married, the husband and wife purchased three acres of land in the Aspen Highlands Development near Elk Mountain. During the time they were married, the Neumans purchased an additional home with the proceeds of the sale of the home owned by the husband prior to the marriage, and they acquired certificates of deposit (CDs), individual retirement accounts (IRAs), life insurance, a vehicle, household furnishings, and a significant amount of cash. The husband worked in his family's trucking business, as service manager, during the ten years of the marriage. The wife was employed as a teacher at Carbon County Child Development Center for the first two years of the marriage, but she was not employed after their daughter was born.

The Neumans had an outstanding mortgage on their home of $ 14,000 but, otherwise, they were free of debt. The husband held eighty-four shares of stock in Neuman Transit Company, Inc. (Neuman Transit), a closely-held corporation owned entirely by the Neuman family. He received sixty of those shares as gifts from his father in 1981, 1982, and 1983, and the other twenty-four shares were distributed to him in settlement of his grandmother's estate in 1988. The trial court found that the value of the husband's shares in Neuman Transit was $ 188,943.

The decree of divorce in this case was filed on March 7, 1991. The district court found a just and equitable division of the property to be as follows:

ASSETS	MR. NEUMAN	MRS. NEUMAN
Family home in Rawlins		$ 76,000.00
3 acres on Elk Mountain	$ 9,000.00	
Household furnishings		8,790.00
1984 Wagoneer		4,425.00
IRAs	28,600.00	2,597.21
Hungry 5	4,463.60	
JMB		5,270.00
Cash value of life insurance	11,608.44	
Ginnie Mae account		5,400.00
Savings		1,900.00
CDs		14,520.58
Neuman Transit stock	188,943.00	
Phelps-Dodge stock	1,000.00	
Merrill Lynch		44,430.00
3 horses	2,200.00	
Loan to Kevin	2,000.00	
Teton County home		61,666.00
	$ 247,815.04	$ 224,998.79

LIABILITIES	MR. NEUMAN	MRS. NEUMAN

Appraisals for trial	620.00	620.00
Mortgage on family home	14,000.00	
	$ 233,195.04	$ 224,378.79

As an additional settlement of their property, the husband was ordered to pay the wife the sum of $ 367.34 per month for twenty-four months. That amount comes within pennies of the disparity between the value of the property according to the decree. Each party was to bear their own attorney fees and costs.

The major issue in this case with respect to the property division is over the valuation of the stock in Neuman Transit. In addressing the husband's claim that the property division was not just and equitable and, therefore, must be held to be an abuse of the trial court's discretion, we look both to the statute and prior cases. The controlling statute in this case, Wyo. Stat. § 20-2-114 (1987), provides, in pertinent part:

In granting a divorce, the court shall make such disposition of the property of the parties as appears just and equitable, having regard for the respective merits of the parties and the condition in which they will be left by the divorce, the party through whom the property was acquired and the burdens imposed upon the property for the benefit of either party and children.

In prior cases, we have held repeatedly that the division of marital property is within the discretion of the trial court and, in the absence of a manifest abuse of that discretion, we will not disturb the result. Mair v. Mair, 823 P.2d 538 (Wyo. 1992) (citing Williams v. Williams, 817 P.2d 884 (Wyo. 1991), and Blanchard v. Blanchard, 770 P.2d 227 (Wyo. 1989)). An abuse of discretion is to be found in a result that shocks the conscience of the court and appears so unfair and inequitable that reasonable persons could not abide it. Grosskopf v. Grosskopf, 677 P.2d 814 (Wyo. 1984) (citing Paul v. Paul, 616 P.2d 707 (Wyo. 1980), and Kane v. Kane, 577 P.2d 172 Wyo. 1978)). In evaluating the question of whether a property division by the trial court is, in fact, just and equitable, we must analyze the situation from the perspective of the overall distribution of the marital assets and liabilities, rather than focusing narrowly on the effects of disposition of any one particular asset. Overcast v. Overcast, 780 P.2d 1371 (Wyo. 1989) (citing Klatt v. Klatt, 654 P.2d 733 (Wyo. 1982), and Paul). We also apply the usual rule that, on appeal, we view the evidence favorably to the successful party in the trial court, ignoring the evidence of the unsuccessful party, and affording to the successful party every reasonable inference that can be drawn from the evidence in the record. Kennedy v. Kennedy, 761 P.2d 995 (Wyo. 1988) (citing Grosskopf.

The major dispute in this case is over the method adopted by the trial court for valuing stock in Neuman Transit. Each of the parties presented an expert witness at trial to testify as to the value of the husband's stock. Pursuant to a stipulation of counsel, the trial court took the testimony of the experts in narrative form. Each of the experts offered an opinion; explained the approach utilized to arrive at his opinion; articulated the reason for selecting the approach utilized; and elaborated generally upon the reasons for the offered opinion.

The chairman of the accounting department of the University of Wyoming was called by the husband to provide an academic and theoretical guide. That witness agreed that the three primary methods of valuation of closely-held stock are book value,capitalization of earnings, and historical earnings. Later,

he testified that the comparable sales approach was a fourth method by which stock of this type commonly is valued. This witness furnished an explanation of each of the various methods of valuation.

Book value is arrived at by taking the aggregate equity of the stockholders in the company and dividing it by the number of outstanding shares. In the capitalization of earnings method, the appraiser uses the average of an accumulation of earnings, normally at least two years, and then discounts the average earnings and multiplies that by an appropriate capitalization factor. IRS Revenue Ruling 59-60 suggests the appropriate capitalization factor be somewhere between twenty and thirty. The historic earnings method represents an attempt to adjust, by price level adjustment, the historical cost statements for earnings power over the life of the entity. When asked about the comparable sales approach used by another expert witness, the Chairman of the Accounting Department said:

Well, comparable sales is probably most difficult with a closely-held corporation, you understand. Because there might not be a comparable sale of a closely-held entity.

So what we normally -- and let me broach the subject in this fashion -- normally we talk about comparable sales when we are talking about the sales of stock that are on an exchange, and we can look at those kinds of comparable companies.

This witness also said that, in valuing a closed-corporation interest in a transportation company, it sometimes is proper to compare assets, liabilities, and interests to a publicly-traded transportation company. This approach is known as common sizing. The witness discussed the advantages and disadvantages of each of the methods of valuation, concluding that to discount an average earnings figure and then capitalize that rate would most consistently achieve the most accurate results.

The valuation expert for the husband, a certified public accountant, testified utilizing a comparable sales approach and then taking a 35% discount for lack of marketability of the Neuman Transit stock, ending with an opinion of a net value of $ 69,058. This witness also used, as a second approach, the common-sizing approach pursuant to which he compared Neuman Transit with Consolidated Freightways and Yellow Freight Company, both publicly traded stocks and, after a discount of 35% plus an additional 39% discount for a loss of business within the last two weeks, he arrived at a net value of $ 73,904. The husband's witness also testified that the book value of the husband's interest in the stock minus the minority discount was $ 45,136. The trial court found that the testimony relating to a comparable sale was not reflective of the actual value of the stock in Neuman Transit. Similarly, the trial court ruled that the evidence of book value did not accurately reflect actual or market value because of the practice of maintaining its equipment rather than replacing it. The trial court also noted that using the husband's expert witness' computation for the price earnings ratio after netting out a 39% reduction for an anticipated loss of gross earnings and a 35% reduction for a minority interest resulted in a value of $ 189,908.43, a value slightly higher than the one the court adopted from the testimony of the wife's expert witness.

The wife called as her expert a witness who also was a certified public accountant and testified utilizing the capitalization of earnings approach. The wife's expert computed the capitalization of earnings based on Neuman Transit's own records for the past ten years. He then adjusted the value of the rolling stock which was almost totally depreciated and arrived at a net value of $ 188,943. This witness offered a second valuation pursuant to a modified book value approach. The wife, in her brief, referred to this as a "liquidation value," and the opinion of the expert, based on this latter method, resulted in a net value of $

247,330. The wife's witness did not apply a discount for the lack of marketability, nor did he adjust for the very recent loss of business in reaching either of his proposed figures. Neuman Transit was dealing with a $ 2 million loss of revenue which, according to the wife's witness, would cause the company to not reach a break-even profit. The witness testified that, if the company were to reach a break-even point, then it would either liquidate or it would go out and find new sources of revenue to offset the loss of revenue. It followed, in the opinion of the wife's expert, that the 39% reduction for loss of business proposed by the husband's expert was inappropriate. The wife's export also testified that the 35% minority discount for the lack of marketability the husband's expert proposed was not applicable in this instance, since it was a divorce case, and the husband was not going to sell his shares of stock.

The trial court adopted the capitalization of earnings approach used by the wife's expert witness and then valued the husband's stock at $ 188,943. The husband challenges the adoption by the court of the approach of the wife's expert claiming that the witness' methods are not in accordance with general accounting principles. Specifically, the husband states in his brief:

As will be shown, the trial court's findings of fact and conclusions of law regarding the valuation of the stock are so at variance with accepted accounting procedures and the law as it exists in our sister states that this court simply will not be able to abide them. As a result, this appeal offers this court the opportunity to decide how stock in a closely held corporation should be properly valued in divorce actions.

While forcefully stated, we are not in accord with the husband's argument. As we have noted above, the trial court is afforded substantial deference in the determination of a just and equitable disposition of the properties ofthe parties in a divorce case. In addition, the precedent and theories offered by both the husband and the wife, in their briefs and arguments together with the literature that has been developed by independent research, reveal numerous methods and factors courts may consider in arriving at a determination of the value of corporate stock.

The challenge by the husband is to both the methodology and certain assumptions relied upon by the wife's expert and later adopted by the district court to calculate the earnings of Neuman Transit. We have selected a relatively recent article as a lucid and concise summary of this problem and the various solutions. Alan S. Zipp, Divorce Valuation of Business Interests: A Capitalization of Earnings Approach, XXIII Fam. L. Q. 89 (1989). Mr. Zipp recognizes that the valuation of a closely-held business is among the more difficult problems in divorce cases, and courts can only expect a reasonable estimate of business value based upon expert testimony. The author then makes the distinction between the valuation of a business for divorce purposes and its value to a willing buyer, primarily because there is no willing buyer in the divorce, and the business will not be sold. In addition, a willing buyer is contemplating future profitability and earnings in the future when making a valuation decision while, in the divorce case, the post-divorce earnings are considered property outside the scope of the rules for distribution of marital property. The legal concept of marital property recognizes the business value as it exists at the date of divorce or separation, and income to be earned after the divorce is not part of that marital property. The capitalization of earnings approach to the valuation of stock in such cases is supported by the Zipp article.

In this case, we are persuaded that the capitalization of earnings approach utilized by the wife's expert witness, and its adoption by the district court, does not result in an abuse of discretion as the husband argues. The wife's expert expressed his preferential method for valuing a company like Neuman Transit,

which has a significant investment. That preferred method is to value the underlying assets, and then apply a calculation to account for goodwill if there is any goodwill. For our purposes, goodwill appropriately is defined as:

Business goodwill for marital property valuation purposes is the reasonable value, in the hands of the current business owner, of the average excess earnings of the business, at the valuation date, based exclusively on the historical earnings of the business and without reference to projected future earnings.

Zipp, supra, at 108.

The wife's expert applied a 15% capitalization rate, which is generally one way of valuing goodwill. The capitalization rate of 15% that the witness used is not challenged by the husband on appeal.

Before the wife's expert applied the 15% capitalization rate, he determined the value of the company's equipment by examining ten years of Neuman Transit's records. He next estimated the actual depreciation of the equipment during the ten-year period and applied this to taxable income and reached a result denominated "Adjusted Net Cash Flow" for each of the ten years. An average for the ten years then was obtained by giving more weight to the net cash flow that was generated in the last five years as opposed to the first five years. The expert witness then subtracted the actual depreciation from the net cash flow and arrived at the profit from operations, from which he subtracted 30% forincome taxes, arriving at the average annual after-tax earnings. He then applied the 15% capitalization rate to reach his final valuation of the husband's shares of stock in the amount of $ 188,943.

A method of valuation that capitalizes the historical past earnings of a business at an appropriate capitalization rate, in order to identify the value of any goodwill possessed by the business at the date of divorce or separation, is appropriate in the context of divorce proceedings because it avoids the problem of valuing a business on the basis of post-divorce earnings and profits. Zipp, supra. This method essentially is the approach that the wife's expert took in reaching his opinion as to value of the Neuman Transit stock, and his approach ultimately was adopted by the trial court. The court considered and evaluated the opinions of both experts. The deliberate nature of this consideration by the trial court is manifest by the nearly five pages of explanation contained in the findings of fact in the decree of divorce.

A trial court is free to assess expert opinion and determine fair market value in light of testimony regarding: the nature of the business, the corporation's fixed and liquid assets at the actual or book value, the corporation's net worth, the marketability of the shares, past earnings or losses and future earning potential.

Bryan v. Bryan, 222 Neb. 180, 382 N.W.2d 603, 606 (Neb. 1986) (citing Dean v. Dean, 87 Wis.2d 854, 275 N.W.2d 902, 912 (Wis. 1979)).

We accept and agree with the reasoning of the Nebraska and Wisconsin Supreme Courts. The trial court is not required to accept any one accounting method of stock valuation as more accurate than another.

The husband agrees that the capitalization of earnings method is a recognized and accepted valuation technique and even that it perhaps is the most widely-used technique for appraising and evaluating on-going businesses. This acknowledgement is in accord with the decision of the trial court as well as

recent accounting literature and case law. The husband insists, however, that the trial court cannot ignore the recent 35% reduction in Neuman Transit's gross revenue. The trial court considered that factor in its findings of fact in the divorce decree and said:

While there was testimony that the Company was going to suffer a 39% reduction in gross revenue as a result of events which had occurred two weeks prior to trial, the Court finds that any such reduction in value based thereon would be speculative and inequitable, considering the age of the Company, the past history of the earnings and the undisputed testimony that the Company was not going out of business, would continue to be in business at least until 2014. Further, a 39% reduction of gross revenue would not be a direct proportional reduction of net income as proposed by plaintiff's expert; but, instead, would cause the Company to not reach break-even point, and liquidation value, or the adjusted net book value, would be more appropriate.

This comment demonstrates that the trial court did not ignore the reduction in gross revenue. The court considered that factor, with all of the circumstances surrounding the case, and concluded that it would be speculative and inequitable to reduce the value accordingly. The approach taken is within the wide discretion afforded the trial court in the area of disposition of marital property, and we hold there was no abuse of discretion by the trial court in the valuation it made of the husband's shares of stock in Neuman Transit.

We emphasize that we do not adopt the capitalization of earnings approach as the only method to value corporate stock. Trial courts should continue to adjudicate marital property dispositions on a case-by-case basis. If we were to adopt a single bright-line method for evaluation of closely-held corporate stock, we would unnecessarily inhibit the invocation by trial courts of methods developed in the future for valuation of stock in a closely-held corporation. Furthermore, we would inhibit other methods that might be appropriate in a particular case. An examination of the literature in this area discloses that the choice of methods for valuing closely-held corporate stock has changed greatly in the past fifteen years, n1 and the capitalization of earnings approach that is the most commonly used method at this time will not necessarily be the method of choice in the future. Certainly, valuation of closely-held corporate stock will remain a battle of the experts, but those witnesses are probably in the best position to keep both counsel for the litigants and the courts current with respect to this troublesome topic.

n1 E.g., W. Terrance Schreier & O. Maurice Joy, Judicial Valuation of "Close Corporation Stock: Alice in Wonderland Revisited, 31 Okla. L. Rev. 853 (1978); MARJORIE A. O'CONNELL, GUIDE TO DIVORCE TAXATION § 12,104 (1987).

Other allegations of error presented by the husband include a variance between the decree of divorce entered by the trial court and the stipulations of the parties; the failure of the trial court to consider tax liabilities and early withdrawal penalties in connection with certain retirement accounts; and the failure of the trial court to consider a right of the wife to contribution from cotenants in its determination of the value of the wife's interest in certain property held by her in joint tenancy with others. This court has remained steadfast in holding that property awards must be viewed in their entirety and not considered on the basis of individual items. Ebeling v. Ebeling, 782 P.2d 584 (Wyo. 1989) (citing Barney v. Barney, 705 P.2d 342 (Wyo. 1985)). In light of that rule, little purpose would be served in this case by analyzing the individual assets in any attempt to calculate the precise financial effect of the divorce decree.

Financial equality is not a prerequisite of a just and equitable distribution. Ebeling (citing Blanchard, 770 P.2d 227). The district court has greatdiscretion under § 20-2-114 in making disposition of marital property to determine what is a just and equitable division. We hold that the trial court did not abuse its discretion in making the division of property in this case. In a reply brief, the husband asks this court to limit its review to a determination of whether substantial equality actually has been achieved by the trial court's division of marital estate. We are of the opinion that substantial equality was achieved.

We turn now to an area that we believe does demand further consideration. The decree of divorce must be modified because of an error that occurred in the valuation of the Rawlins home. As noted previously, it was valued at $ 76,000, and there was a mortgage of $ 14,000 on the home chargeable to the husband. The husband, in his reply brief, asserts that, even though the trial court's judgment is entitled to great deference, the appellate court should not defer to valuation errors that affect the essence of the property settlement. We are in accord. The correct value that should be attributable to the wife with respect to the family home should be the stipulated fair market value of $ 90,000.

The husband gains support for his argument from the Supreme Court of South Dakota in Warne v. Warne, 360 N.W.2d 510 (S.D. 1984). In Warne, the trial court allocated a mortgage on a house to the wife as an asset and to the husband as a debt. The purchase price of the house was $ 40,000 with $ 36,000 remaining unpaid. The trial court valued the home at $ 40,000 and awarded it to the wife debt-free, which required allocation of the $ 36,000 debt to the husband. Upon appeal by the husband, the South Dakota court held that the court did not overlook the mortgage nor fail to properly account for it. In the context of this case, the point of Warne is that the court did not award the wife only the equity in the house which was $ 4,000, but the full value of the house which was $ 40,000. The rationale articulated by the South Dakota court is persuasive:

This Court limits its review to determine whether there was an equitable division of property. The trial court has broad discretion in dividing property. Error does occur, however, when the trial court fails to properly value assets and thereby establishes a false net worth.

Warne, 360 N.W.2d at 512 (citations omitted).

While it would appear from the record that, subsequent to the decree of divorce, the mortgage on the home was paid by the husband, if the scheduled payments were met, that does not impact the division which occurred in the decree. Correction of this error results in attributing an additional $ 14,000 to the wife and increases the total assets distributed to her to $ 238,998.79.

We are satisfied that the court awarded an additional property settlement to the wife in the amount of $ 367.34 for 24 months in order to balance as perfectly as possible the disparity in the total property awarded to each. That disparity has been abrogated by crediting the wife with an additional $ 14,000 and, in fact, she now would have some $ 5,000 more than the husband received according to the decree of divorce. It is our conclusion, in light of the circumstances, that the decree of divorce should be further modified to delete the requirement for the 24 monthly payments by the husband to the wife.

We conclude that the decree should be modified to correct the technical error and to delete the periodic payments awarded to balance the division of the marital property. Except forthis correction, we conclude that there was no abuse of discretion by the trial court. We hold that, as modified, the decree of divorce entered by the district court should be affirmed.

Full Text of Court Cases

Estate of Newhouse v. Commissioner of Internal Revenue

Case name: Estate of Newhouse v. Commissioner of Internal Revenue
Date of decision: February 28, 1990
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Williams
SIC: 2711 Newspapers: Publishing, or Publishing and Printing (except Internet newspaper publishing)
NAICS: 511110 Newspaper Publishers

COUNSEL:

Albert H. Turkus, Judith A. Mather, James A. Treaner III, Bernard J. Long, Jr., Linda A. Fritts, and Richard L. Braunstein, for the petitioners.

Robert S. Shilliday, Jr., Albert L. Sandlin, and Howard P. Levine, for the respondent.

JUDGES:

Williams, Judge.

OPINIONBY:

WILLIAMS

OPINION:

The Commissioner determined a deficiency in the Federal estate tax due from the estate of Samuel I. Newhouse in the amount of $ 609,519,855. The Commissioner also determined an addition to tax for fraud pursuant to section 6653(b) n1 in the amount of $ 304,759,927. The Commissioner has conceded the addition to tax for fraud.

n1 All section references are to the Internal Revenue Code of 1954 as amended and in effect at decedent's death.

After concessions, the remaining issues for our decision are: (1) The value, for purposes of the Federal estate tax, of 10 shares of class A common stock and 990 shares of class B common stock of Advance Publications, Inc., owned by Samuel I. Newhouse, Sr. (Newhouse) at the time of his death, and (2) the value, for purposes of the Federal estate tax, of 100 shares of common stock in Newhouse Broadcasting Co. owned by Newhouse at the time of his death.

FINDINGS OF FACT

Some of the facts were stipulated and are so found. Newhouse died testate on August 29, 1979. His sons, S.I. Newhouse, Jr. (S.I., Jr.), and Donald E. Newhouse (Donald), were duly appointed executors of his estate.At the time of his death, Newhouse resided in Palm Beach, Florida. The executors timely filed a Federal estate tax return on May 27, 1980, and elected to value the Newhouse estate as of February 29, 1980, the alternate valuation date.

On Schedule B of the estate tax return, the executors valued the 10 shares of class A common stock and the 990 shares of class B common stock in Advance Publications, Inc. (Advance), at $ 8,595,000 and $ 170,181,000, respectively, based on an appraisal by Chemical Bank. Also on Schedule B of the estate tax return, the executors valued the 100 shares of common stock in Newhouse Broadcasting Co. (N.B. Co.) at $ 68,300,000. In the notice of deficiency dated May 18, 1983, the Commissioner valued the 10 shares class A common stock and the 990 shares of class B common stock in Advance at $ 420,000,000 and $ 811,800,000, respectively, and valued the 100 shares of common stock in N.B. Co. at $ 91,600,000. On August 12, 1983, petitioners timely filed their petition in this case.

I. VALUE OF ADVANCE COMMON STOCK

A. Organization and Operations

Advance is a corporation organized under the laws of the State of New York that publishes newspapers and magazines.Advance's principal place of business was and always has been in New York. At the time of Newhouse's death, the officers of Advance were: Newhouse, President and Treasurer; Mitzi Newhouse, Newhouse's wife, Vice President; S.I., Jr., Vice President; Donald, Secretary.

In 1922, Newhouse and Judge Hyman Lazarus, a New Jersey lawyer, formed a partnership to acquire 51 percent of the stock of the Staten Island Advance which published a newspaper, The Staten Island Advance. In 1924, Newhouse bought Judge Lazarus' shares and soon after purchased the remaining 49 percent. Newhouse filed a Certificate of Incorporation (the certificate) for the Staten Island Advance Co., Advance's predecessor, on May 12, 1924. From the time Newhouse incorporated Advance, Newhouse's brothers Theodore (Ted) and Norman were employed at Advance, and all three brothers shared equally in the management of the business.

In 1932, Advance acquired the controlling interest in the Long Island Daily Press Publishing Co., the first of a long line of newspaper acquisitions. In 1939, Advance bought two newspaper properties in Syracuse, New York. Advance further enlarged its operations by purchasing an Oregon newspaper in 1950 and newspapers in Alabama in 1956. On February 29, 1980, Advance operated either by itself or through a wholly owned subsidiary, 50 newspapers in 22 markets as well as magazines published by Conde Nast Publications, Inc. (Conde Nast). n2 After each acquisition one of the brothers was assigned primary responsibility for the acquired property and assumed management of its operations. To provide on-site management, one of the three brothers would visit each newspaper located outside of the New York City area weekly or monthly. The visiting brother would meet with the local publisher and department heads to discuss circulation, current advertising and advertising development, accounts, compensation plans, editorial quality, production facilities, and distribution. After S.I., Jr., and Donald joined the management team, the five family members would meet frequently to discuss the operations of the out-of-town newspapers and plans for the acquisition of new properties. The topics at the family meetings included the purchase of new capital equipment, consideration of policies about purchasing newsprint, the setting of rates, and discussions of circulation techniques and distribution policies.

n2 As of Feb. 29, 1980, Advance owned and operated the following newspapers: The Staten Island Advance in New York, New York; the National News Service Co. in Washington, D.C.; The Birmingham News in Birmingham, Alabama; The Huntsville News and The Huntsville Times in Huntsville, Alabama; The Jersey Journal in Jersey City, New Jersey; The Post-Standard, The Syracuse Herald-Journal, and the Syracuse Herald-American in Syracuse, New York; The St. Louis Globe in St. Louis, Missouri; The Ann Arbor News in Ann Arbor, Michigan; The Bay City Times in Bay City, Michigan; The Flint Journal in Flint, Michigan; The Grand Rapids Press in Grand Rapids, Michigan; The Jackson Citizen Patriot in Jackson, Michigan; The Kalamazoo Gazette in Kalamazoo, Michigan; The Muskegon Chronicle in Muskegon, Michigan; The Saginaw News in Saginaw, Michigan; The Mississippi Press and The Mississippi Press Register in Pascagoula, Mississippi; The Mobile Register, The Mobile Press, and The Press-Register in Mobile, Alabama; The Star-Ledger in Newark, New Jersey; The Oregonian and the Oregon Journal in Portland, Oregon; Parade in New York, New York; The Patriot, The Evening News, and the Sunday Patriot News in Harrisburg, Pennsylvania; The Plain Dealer in Cleveland, Ohio; The Union, The News, and the Republican, in Springfield, Massachusetts; The Times-Picayune and the States Item in New Orleans, Louisiana. Advance also owned Electric Delivery System, Inc., a distribution and delivery company for the Times-Picayune and Mercury Express, Inc., a distribution and delivery company for The Birmingham News.

As of Feb. 29, 1980, Advance operated the following magazines: Vogue, Vogue Guides, Glamour, Mademoiselle, House & Garden, House & Garden Guides, Bride's, Self, Street & Smith, Analog, Vogue Patterns, and GQ in the United States; Vogue in Brazil, Australia, and Germany; Vogue, House & Garden, and Bride's & Setting Up Home in England, Vogue, Vogue Shopping, L'Uomo Vogue, Casa Vogue, Uomo Mare, Vogue Bambini, and Lei in Italy; Vogue, Vogue Beaute, Vogue Homes, Maison & Jardin, Maison, and Club Maison in France.

As of Feb. 29, 1980, Advance also owned Art Gravure and Diversified Printing, two printing companies. Advance also owned a 49-percent interest in Catawba Newsprint Co., a newsprint manufacturing company.

When there was no scheduled meeting, the five family members, who all arrived at work very early in the morning, would speak with each other by telephone before other employees had come to work. Between monthly visits they communicated by telephone with the local management of newspapers they oversaw and regularly received financial reports, advertising reports, circulation reports, and other pertinent data. Financial and operating reports from the out-of-town newspapers were shared among the five family members. The family members considered the periodic visits to the out-of-town properties and the consensus decision-making to be hallmarks of their management style. Throughout Advance's history, all major decisions were reached by unanimous agreement after discussion in which all partook. Each visiting family member would write a report on the management of the out-of-town newspaper (issues, decisions, future) that was circulated to the other family members. While no person dominated the discussions, some deference in matters relating to a particular newspaper was shown to the family member who was responsible for that newspaper. Decisions were never made by voting. The consensus style of management has been utilized throughout the time the family has managed Advance. Despite disagreements, discussions always proved fruitful and consensus was reached.

In the 1950's S.I., Jr., and Donald joined their father and uncles in the business. Working primarily under the supervision of their uncles, S.I., Jr., and Donald learned the family business from the ground up. In the beginning both Donald and S.I., Jr., attended the family management meetings as mere observers but by the mid-1960's their advice was sought by their father and uncles. After several years of learning editorial and production management, S.I., Jr., and Donald were each assigned to manage an out-of-town property. S.I., Jr., worked in the Conde Nast organization and Donald started at the Long Island and the Jersey City newspapers.

The management of Advance was eventually shared among all five of the family members. Until the last year of his life when he became too ill to travel, Newhouse supervised the newspaper properties in Newark, New Jersey; Syracuse, New York; Harrisburg, Pennsylvania; St. Louis, Missouri; New Orleans, Louisiana; and Mobile, Alabama. Ted managed the newspaper properties in Portland, Oregon; Birmingham, Alabama; Huntsville, Alabama; Springfield, Massachusetts and later the Booth divisions in Michigan. Norman was responsible for the newspaper in Cleveland, Ohio, and later for the newspapers in New Orleans and Mobile when he moved to New Orleans in the late 1960's. S.I., Jr., made periodic visits to the newspaper in Cleveland, Ohio to help Norman and managed Conde Nast; after his father became ill, he oversaw St. Louis. Donald traveled with Ted to the newspapers in Birmingham and Huntsville. After his father became ill, Donald took over supervision of the operations at Newark, Syracuse, Harrisburg, Jersey City, and Staten Island.

Throughout its history, Advance had a policy of reinvesting earnings to finance further acquisitions. Advance traditionally minimized the dividends declared. From 1973 to 1979, dividends were declared and paid at their highest historical level in the amount of $ 200 per share although in 1977, 1978, and 1979, Advance had retained earnings of $ 411,206,000, $ 503,858,000, and $ 475,969,000, respectively, and total operating income of $ 148,217,000, $ 173,947,000, and $ 159,895,000, respectively. Each shareof stock received the same amount of dividends.

B. Capital Structure

On August 26, 1924, the stock of Advance, viz, 200 shares of common stock, par value $ 100, was reclassified into 1,000 shares, no par value.

By a "Certificate of Increase of Number of Shares, Change of Previously Authorized Shares and Classification of Shares" filed August 26, 1936, Advance authorized 6,000 no-par shares divided equally among class A, class B, and class C common stock (the 1936 amendment). The right to vote for the board of directors was given to the holders of the class A stock exclusively. The class B and class C shareholders were explicitly denied the right to vote on certain matters referenced in the New York Stock Corporation Law and General Corporation Law. n3 Furthermore, the class B stock and the class C stock could be redeemed in whole or in part at the prices of $ 175 and $ 199.50 per share, respectively, after September 1, 1939, at the discretion of the board of directors. The 1936 amendment also provided for equal participation in dividends of all three classes of stock, and finally, established a liquidation preference in the Class B stock of $ 175 per share, then in the class C stock of $ 199.50 per share and ultimately in the class A stock of $ 333 per share, with the residual value to be divided equally among all classes.

n3 Specifically the Class B and the Class C shareholders were denied the right to vote:

in a proceeding for mortgaging the property and franchises of the Corporation, pursuant to Section 16 of the Stock Corporation Law; for guaranteeing the bonds of another Corporation, pursuant to Section 19 of the Stock Corporation Law; for sale of the franchises and property, pursuant to Section 20 of the Stock Corporation Law; for establishing priorities or creating preferences among several classes of stock, pursuant to Section 36 of the Stock Corporation Law; for consolidation, pursuant to Section 86 of the Stock Corporation Law; for voluntary dissolution, pursuant to Section 105 of the Stock Corporation Law; for change of name, pursuant to the General Corporation Law * * *.

On December 27, 1938, Advance filed a "Certificate of Change of All Its Previously Authorized Shares Without Par Value Issued or Unissued, (1) class 'A' Stock Into the Same Number of Shares of Common Stock, Without Par Value; (2) class 'B' Stock and class 'C' Stock Into the Same Number of Shares of Preferred Stock, Without Par Value And Reclassification of Shares" (the 1938 amendment). This amendment provided that the 6,000 shares of authorized class A, class B, and class C common stock would be reclassified to create two classes of stock: the 2,000 shares of class A would become no-par common stock and the 4,000 shares of class B and class C would become no-par preferred. The amendment further provided that the preferred shareholders would receive noncumulative dividends of $ 12 per share before any dividends would be paid to the common shareholders, and the remainder of declared dividends would be shared proportionately by the common and the preferred shareholders. The preferred shareholders were also entitled to a liquidation preference of $ 187.25 per share before payment to the common shareholders of $ 333 per share could be made. The residual value would be divided pro rata among all shareholders. The entire voting power for the election of the board of directors was reserved to the common shareholders and the voting rights of the preferred shareholders were explicitly restricted. n4 The amendment further provided that the preferred stock could be redeemed after September 1, 1944, at $ 187.25 per share at the discretion of the board of directors.

n4 The preferred was not entitled to vote:

in a proceeding for mortgaging the property and franchises of the Corporation, pursuant to Section 16 of the Stock Corporation Law; for guaranteeing the bonds of another Corporation, pursuant to Section 10 of the Stock Corporation Law; for sale of the franchise and property, pursuant to Section 20 of the Stock Corporation Law; for establishing priorities or creating preferences among the several classes of stock, pursuant to Section 86 of the Stock Corporation Law; for voluntary dissolution, pursuant to Section 105 of the Stock Corporation Law; for change of name, pursuant to the General Corporation Law * * *.

On December 27, 1949, Advance filed a "Certificate of Amendment of Certificate of Incorporation" (the 1949 amendment), which provided that the preferred and the common stock would participate proportionately in all dividends. The amendment retained the preferred's liquidation preference of $ 187.25, but abandoned the common's liquidation preference of $ 333 per share and the preferred's right to share in the residual value. The common shareholders were given exclusive right to the residual liquidation value. With one important exception, the voting rights remained substantially the same. n5 Also in 1949, Advance changed its name from Staten Island Advance Co. to Advance Publications, Inc.

n5 Prior to the 1949 amendment, the preferred shareholders had been specifically prohibited from voting on "establishing priorities or creating preferences among the several classes of stock" but this limitation was removed in the 1949 amendment.

On December 22, 1952, Advance filed another "Certificate of Amendment of Certificate of Incorporation" which provided for the transformation of the 2,000 shares of authorized common stock into 20 shares of class A common voting stock and 1,980 shares of class B common nonvoting stock (the 1952 amendment). A "Certificate of Amendment of Certificate of Incorporation" was filed on January 5, 1955, to change the number of directors.

On December 27, 1956, the last change in Advance's corporate structure was made by "Certificate of Amendment to Certificate of Incorporation" n6 (the 1956 amendment) stating that: (1) Dividends were to be shared equally between the class A common, the class B common, and the preferred shareholders, (2) and the preferred shareholders were entitled to a liquidation preference of $ 187.25 per share before the class A common and the class B common shared equally in the residual liquidation value, and (3) the limitation on the voting rights of the preferred shareholders on voluntary dissolution was removed.

n6 All future references in this opinion to "the certificate" are to the original Certificate of Incorporation as amended.

Prior to 1936, Newhouse owned 786 of the 1,000 authorized shares of Advance no-par common stock. After the 1936 amendment, Newhouse's shares were changed to 1,000 shares of class A common. At this time, 1,000 shares of class B common were issued to his wife, Mitzi Newhouse (Mitzi), and 500 shares of class C common were issued in trust for each of his sons, S.I., Jr. and Donald. After the 1938 amendment, Newhouse's class A common was exchanged for 1,000 shares of common stock, Mitzi's shares of class B common were exchanged for 1,000 shares of preferred stock and the 500 shares of class C common stock held in each trust for S.I., Jr., and Donald were exchanged for shares of preferred stock. On or about December 27, 1938, an additional 250 shares of preferred stock were issued to each trust for S.I., Jr., and Donald. In 1947, 500 shares of preferred stock apiece were issued to Ted and Norman. In 1948, the trust distributed 400 shares of preferred stock to S.I., Jr., and in 1950 the trust distributed to him an additional 350 shares of preferred stock. In 1950, the trust distributed 750 shares of preferred stock to Donald.

At the time of Newhouse's death, Newhouse still owned all the common stock andMitzi Newhouse owned 1,000 shares of preferred stock, S.I., Jr., and Donald each owned 750 shares of preferred stock and Ted and Norman each owned 500 shares of preferred stock. By will, Newhouse left 300 shares of Advance class B common stock to Mitzi.

In 1959 Advance and all of its shareholders executed separate agreements providing that at their deaths, Advance would redeem enough stock from the shareholder's estate to cover Federal estate taxes. The 1959 agreements between Advance and Ted, Norman, S.I., Jr., and Donald were superseded by a shareholders' agreement in 1974. The 1959 agreement between Advance and Mitzi was superseded in 1978 when the shareholders' agreement executed in 1974 was amended to include Mitzi's stock. The 1959 agreement between Advance and Newhouse continued in effect until the time of Newhouse's death.

On April 24, 1974, Advance, Newhouse, Ted, Norman, S.I., Jr., and Donald executed an agreement limiting the rights of any subsequent owner of the preferred stock who had not executed the agreement to dispose of their stock (the 1974 shareholders' agreement). The purpose of the 1974 shareholders' agreement was to:

make certain the continued ability of Advance to operate as a closely held corporation with a harmonious group of shareholders, and to continue its management policies and procedures which have proven successful in the past, despite change which may result from the deaths or other transfers of shares by Theodore Newhouse, Norman N. Newhouse or Samuel I. Newhouse, Sr.

Particularly, the family members were concerned with the fragmentation of closely held, family-owned companies that they felt frequently occurred in the newspaper industry.

The 1974 shareholders' agreement provided that in the event of a sale or exchange of preferred stock, Advance would first have the right to buy the stock on the same terms as offered by the prospective buyer. Furthermore, upon the determination of a majority of the board of directors, Advance was given the right to acquire all or any part of the shares of preferred stock from a shareholder upon the death of a preferred shareholder, upon an involuntary transfer of preferred shares by operation of law or otherwise, or whenever a majority of the board of directors determined in good faith that (1) the preferred shareholder had violated an agreement with Advance resulting in a materially adverse effect on Advance or its shareholders, (2) the shareholder threatened to dispute Advance over his rights as a shareholder, or (3) when it would be in Advance's interests to reduce the number of preferred shareholders. If the preferred shareholder and Advance could not agree on the purchase price, the "fair value" of the preferred shares would be determined by Chemical Bank. Chemical Bank's decision would be binding on the preferred shareholders and Advance and was not judicially reviewable except as required by New York arbitration law.

The 1974 shareholders' agreement also provided that at the deaths of Ted, Norman, S.I., Jr., and Donald, and their spouses, their personal representatives could require Advance to purchase preferred stock from the respective estates in an amount that satisfied, but did not exceed, the estate's cost for taxes, funeral expenses, and administrative expenses of the estate. On April 18, 1978, the 1974 shareholders' agreement was amended to include Mitzi Newhouse's 1,000 shares of preferred stock. n7

n7 In 1980, the 1974 shareholders' agreement was amended to include 300 shares of Class B common stock that Mitzi received under S.I., Sr.'s will.

After Newhouse's death, the estate requested Chemical Bank to determine the value of the class A common and class B common stock that Newhouse held at the date of death. In a letter dated April 29, 1980, Chemical Bank explained that, after considering financial statements for the years 1973 through 1979 and the certificate, and after visiting some of Advance's key properties, Chemical Bank concluded that the class A common stock was worth five times as much per share as the class B common stock and that the class B common stock shares were equal in value to the preferred shares. The report concluded that the value of Newhouse's class A common stock had an aggregate value of $ 8,595,000, viz, $ 859,500 per share and the class B common stock had an aggregate value of $ 170,181,000, viz, $ 171,900 per share.

C. State Law Issues

There are three basic methods for a shareholder to realize value from a corporation: (1) The redemption of stock, (2) the payment of dividends or distributions, and (3) a merger or liquidation in which stock is cashed out or exchanged for value. Consequently, the rights and privileges of the various classes of Advance stock determine the constraints on a purchaser of the Advance common stock in attempting to realize the value of his purchase. On February 29, 1980, a buyer of the Advance common stock could

have elected the board of directors. The preferred stock, however, could vote on and block corporate liquidation. On February 29, 1980, the Advance preferred stock could not be redeemed without the preferred shareholders' consent. The preferred stock could vote on any charter change that affected its class rights or gave new class rights or authorized a new class of stock. The preferred shareholders were entitled to 78 percent of all dividends declared out of current and retained earnings; the common stock was entitled to 22 percent.

The allocation of all the other rights and privileges pertaining to shareholders is unclear. The preferred shareholders might be entitled to participate equally in dividends declared from capital surplus. It is not clear whether a buyer of the Advance common stock could effect a merger to eliminate or cash out the preferred shareholders. It is also unclear what price the common shareholder would have to pay the preferred shareholders in an appraisal proceeding or a fair value proceedingunder New York law. The extent of the disagreement over the rights and privileges of the classes of Advance stock under New York law would be certain to result in litigation in the event that the common shareholder attempted to cash out the preferred stock through a merger or otherwise attempted to effect a constructive redemption or liquidation that returned less than 78 percent of the value of Advance to the preferred shareholders.

Petitioner's expert witnesses on New York law included Loeber Landau, a partner with Sullivan & Cromwell who specializes in corporate and securities law, Martin Lipton, a partner with Wachtell, Lipton, Rosen & Katz who specializes in corporate and securities law, and Robert H. Mundheim, Dean of the University of Pennsylvania Law School, whose area of expertise is corporate law. With the consent of respondent, petitioner also submitted reports without accompanying testimony from the law firm of Cravath, Swaine & Moore and from John McNally, a partner with the law firm of White & Case who specializes in corporate law.

Respondent's expert witnesses included Victor Brudney, a professor emeritus from Harvard Law School who taught finance and corporate law, Stanley Siegel, the associate dean of New York University Law School who teaches business planning, corporate finance, and tax, and John C. Coffee, Jr., a professor at Columbia University Law School who teaches corporate and securities law. With the consent of petitioner, respondent also submitted reports without testimony from Melvin A. Eisenberg, a professor of law at Boalt School of Law at the University of California at Berkeley, and James D. Cox, professor of law at Duke University.

The experts considered the relative rights and powers of the common and preferred shareholders. In preparing their reports the experts relied on the certificate, the 1974 shareholders' agreement, the New York Business Corporation Law (McKinney 1980) (the Business Corporation Law), and New York case law. The experts treated the class A common stock and the class B common stock as one block of identical shares for purposes of analyzing the relative rights of the common and the preferred stock. All the experts commenced their legal analysis from the standpoint of a prospective buyer of the common stock of Advance who would want to be able to realize value greater than his investment despitepossible hostility from the preferred shareholders.

1. Redemption

The Advance stock cannot be redeemed at the request of either the shareholders or the corporation except as permitted under the 1974 shareholders' agreement. The certificate would have to be amended to force a redemption of preferred stock. Although the certificate is silent on voting rights for amendments to the certificate, sections 804 and 801(b)(12) of the Business Corporation Law provide that an amendment to "fix, change or abolish" the "relative rights, preferences and limitations" of any shares of stock "including any provisions in respect of * * * the redemption of any shares" entitles the nonvoting shareholders to a class vote. Consequently, the preferred shareholders were entitled to a class vote on any proposed amendment to the certificate and by sheer numbers could have overruled any proposed amendment to the certificate adverse to their interests.

2. Dividends

The certificate requires that the common and the preferred shareholders participate pro rata in dividends. The common shareholder can receive only 1000/4500 or 22 percent of all dividends declared and paid out of earningswhile the preferred shareholders are entitled to 3500/4500 or 78 percent.

a. Source of Dividends

Section 4(a) of the certificate provides:

The holders of the Preferred Stock, the Class A Common Stock and the Class B Common Stock shall participate equally in proportion to the number of shares of such stock held by them respectively, whether Preferred Stock, Class A Common Stock or Class B Common Stock, in any and all dividends which may be declared and paid by the corporation out of its earnings. [Emphasis supplied.]

The experts disagreed about the common shareholder's entitlement to more than 22 percent of dividends declared from sources other than current or retained earnings such as from capital surplus. They also disagreed over whether the shareholder who forced a sale of assets would be entitled to more than 22 percent of dividends out of sales proceeds. The dispute focused in part over the characterization of the proceeds as earnings or capital surplus.

b. Stock Split or Stock Dividend

There were 1,000 shares of authorized and unissued common stock and 500 shares of authorized and unissued preferred stock on February 29, 1980. For the common shareholder to dilute the voting power of the preferred shareholders sufficiently to obtain the power to liquidate Advance, the certificate would have to be amended to authorize the issuance of new stock. Even if the common shareholder distributed all the authorized but unissued stock to himself, he would not have enough to force liquidation. Under New York law a stock split requires the approval of the shareholders. An attempt to dilute the voting power of the preferred shareholders through a stock split or a stock dividend would also require an amendment to the certificate.

New York law provides for preemptive rights to shareholders whose shares have unlimited dividend rights where the issuance of new shares would adversely affect the shareholders' dividend rights under section 622(b) of the Business Corporation Law. The experts disagreed whether a plan by the common shareholder to issue himself additional stock would give rise to preemptive rights in the preferred stock.

c. Nonpayment of Dividends

Despite the preferred shareholders' entitlement to 78 percent of declared and paid dividends, the common shareholder could, through his control over the board of directors, cease declaring dividends altogether. The experts disputed the extent that fiduciary obligations of the board to the preferred shareholders would limit their exercise of this power.

3. Liquidation or Merger

Under the terms of the certificate, the preferred shareholders are entitled to receive only $ 187.25 per share in the event of liquidation. All the experts assumed that a purchaser of the common stock would prefer liquidation as the means to extract the value of the investment and that the preferred shareholders would oppose liquidation.

a. Liquidation

Under New York law, liquidation requires a two-thirds majority. The experts agreed that as of February 29, 1980, the preferred shareholders were entitled to vote on the liquidation. Section 612(a) of the Business Corporation Law provides a vote for each share of stock of all classes of stock unless specifically denied by the certificate of incorporation. Because the right to vote on liquidation is not explicitly denied to the preferred shareholders, the statute authorizes a vote.

b. Mergers

The experts on both sides focused primarily on several possible merger transactions the common shareholder could employ to try to limit the preferred shareholders' rights. The objectives of any merger would be to dilute the preferred stock, to reduce its claim to dividends, and to eliminate the class. A vote on mergers is explicitly reserved to the common shareholders in the certificate. The possible mergers discussed were (1) the freeze-out merger, and (2) the freeze-in merger.

(1) Freeze-Out Merger

In a freeze-out merger, the common shareholder's goal is to force a merger that would require the preferred shareholders to exchange their Advance stock for cash. The common shareholder could then either retain his interest in the corporation, sell it, or liquidate it. Respondent's experts believed that the common shareholder could implement this plan because the common stock controls the election of the board of directors and has practical control over the board's decisions. The freeze-out merger would merge Advance into a corporation owned by the common shareholder or the purchaser. The common shareholder would exchange Advance common stock for the stock of the acquirer while the preferred shareholders exchanged their stock for cash. The experts disagreed about whether such a merger would be allowed over the objections of the preferred shareholders. Section 903(a)(2) n8 of the Business Corporation Law provides for a class vote if a plan for merger contains an amendment to the certificate which would entitle the shareholders of that class to vote. Business Corporation Law sections 804(a)(2) n9 and 801(b)(12) n10 provide a class vote on amendments that change or abolish the relative rights and preferences of any shares of stock. In light of these rights, the historical participation of the preferred shareholders in directing corporate affairs, their understanding that the shares were of equal value, on the one hand, and the common stock's right to elect the board of directors, approve sales of assets, and approve mergers, on the other, the experts dispute whether the preferred shareholders would have a class vote on the proposed merger, and, if they did not, whether the freeze-out merger would be allowed under New York law.

n8 Sec. 903(a)(2) provides that notwithstanding any provision in the certificate of incorporation:

the holders of shares of a class or series shall be entitled to vote and to vote as a class (on a merger) if the plan of merger * * * contains any provision which, if contained in an amendment to the certificate of incorporation, would entitle the holders of shares of such class or series to vote and to vote as a class thereon. In such case, in addition to the authorization of the merger * * * by vote of the holders of two-thirds of all outstanding shares entitled to vote thereon, the merger * * * shall be authorized by vote of the holders of a majority of all outstanding shares of each class or series.

n9 Sec. 804(a) provides a class vote on a certificate amendment that would:

(1) Exclude or limit their right to vote on any matter, except as such right may be limited by voting rights given to new shares then being authorized of any existing or new class or series.

(2) Change their shares under subparagraphs (b)(10), (11) or (12) of section 801 * * * or provide that their shares may be converted into shares of any other class or into shares of any other series of the same class, or alter the terms or conditions upon which their shares are convertible or change the shares issuable upon conversion of their shares, if such action would adversely affect such holders, or

(3) Subordinate their rights, by authorizing shares having preferences which would be in any respect superior to their rights.

n10 Secs. 801(b)(10), (11), and (12) referred to in sec. 804(a)(2) apply to certificate amendments that would:

(10) * * * reduce the par value of any authorized shares of any class with par value, whether issued or unissued.

(11) * * * change any authorized shares, with or without par value, whether issued or unissued, into a different number of shares of the same class or into the same or a different number of shares of any one or more classes or any series thereof, either with or without par value.

(12) * * * fix, change or abolish the designation of any authorized class of any series thereof or any of the relative rights, preferences and limitations of any shares of any authorized class or any series thereof, whether issued or unissued, including any provisions in respect of any undeclared dividends whether or not cumulative or any sinking fund for the redemption or purchase of any shares, or any preemptive right to acquire shares or other securities.

(2) Freeze-In Merger

In a freeze-in merger, the common shareholder exchanges his Advance stock for cash or stock in an acquiring company while the preferred shareholders retain their Advance stock. This proposal would be intended to dilute the preferred shareholders' ability to block liquidation, by authorizing and issuing at least 6,000 new shares of voting common. The Advance common stock would be traded to the acquiring company in exchange for its stock. Because the common shareholder would then hold 7,000 shares of stock, a liquidation could be accomplished over the objection of the preferred shareholders. Although the preferred shareholders would retain their stock, they would have lost their ability to influence the affairs of Advance and would be susceptible to redemption. The acquiring corporation would then be able to overpower the preferred shareholders and liquidate Advance. As with the freeze-out merger, the experts disputed whether the freeze-in merger would be allowed over the objections of the preferred.

D. Valuation Opinions

In order to demonstrate the correct value of the Advance common stock, the parties introduced the testimony of several experts. Peter Fahey and Gary Gensler, partners with the investment banking firm of Goldman Sachs & Co., prepared reports and testified for petitioner about the fair market value of the Advance common stock. n11 Petitioner also introduced the reports and testimony of Robert J. Harrity of Chemical Bank on the value of the common stock, and David Wilkofsky of Wilkofsky, Gruen Associates, Inc., on the general economic conditions of the newspaper and magazine publishing industries in 1979 and early 1980. Rupert Murdoch, the chief executive officer of The News Corp., a newspaper and magazine publishing company, and Douglas McCorkindale a vice president of Gannett Corp., a media company, both testified about the criteria a buyer would use in considering the purchase of the Advance common stock. n12 Respondent introduced the report and testimony of Joseph P. Baniewicz, a financial analyst for the Internal Revenue Service.

n11 Respondent challenged the expertise of the Goldman Sachs employees because they are "graduates of business schools with no formal education in the valuation of stock." Fahey and Gensler testified that they routinely value stock in closely held corporations in order to advise their clients on possible purchases or sales. We do not share respondent's doubt as to their qualifications.

n12 Respondent challenged the relevance of the testimony of Murdoch and McCorkindale because neither wanted to purchase the Advance stock. It is their views on the considerations warranted in analyzing the potential purchase of the Advance common stock, not whether they would in fact have purchased the stock, that interest us.

According to the experts from Goldman Sachs and Chemical Bank, there were a number of factors that would have influenced a prospective buyer of the Advance common stock. Some, such as the capital structure and uncertain relative rights and limitations of the Advance stock, were internal to Advance. Others, such as the particular economic conditions of the newspaper and magazine publishing industries and the general negative economic mood of 1979 and early 1980, were external to Advance. The size and financial strength of Advance itself, particularly in comparison with other newspaper and magazine publishing companies, would have been a consideration for a prospective willing buyer. Finally, the most likely willing buyers would have faced other concerns, suchas antitrust considerations or difficulties complying with Federal Communications Commission regulations, that would have affected the ultimate selling price.

1. General Economic Conditions

In late 1979 and early 1980, high inflation and "record high" interest rates predominated. Many economists were uncertain or pessimistic about the near future, forecasting an economic slowdown or recession. The 1979 decision of the Federal Reserve Board to manage the supply of money rather than interest rates resulted in a sharp rise in interest rates. Although the economy had experienced a period of growth after the recession of 1974-1975, in 1979 economic growth slowed again, as inflation rose rapidly and interest rates soared. The gross national product grew at an annual rate of only 1.2 percent in constant dollars in the first half of 1980; unemployment was high and was expected to rise, and oil prices were increasing.

One of the byproducts of the tightening money supply and unrestrained interest rates was a new attitude of wariness and reluctance to lend on the part of many banks and lending institutions. In late October of 1979, the Chairman of the Federal Reserve Board warned banks against making "nonproductive" takeover loans. Due to the negative economic outlook, the late 1970's experienced a decline in merger activity. Of the acquisitions for which data was disclosed, only 2 percent of the private companies acquired in the first half of 1980 were sold for more than $ 100 million.

2. Industry Economic Conditions

The economic malaise of the country affected the newspaper and magazine publishing industry. Although revenues rose, the increase was consumed by inflation. The newspaper publishing industry was considered "mature" by the late 1970's. The markets for Advance's newspapers had been fully penetrated, and newspaper circulation was expected to remain fairly constant and stable.

The newspaper and magazine publishing industry also suffered from the growing competition of television in late 1979 and early 1980. Local advertising revenues were increasingly devoted to television at the expense of newspapers, particularly evening newspapers, and, in 1980, newspaper advertising revenues were expected to decline, in real terms. The popularity of evening newspapers had begun to be displaced by the television evening news. Most of the large newspaper publishing companies were acquiring holdings in the broadcast media to diversify away from the newspaper business. Furthermore, the use of "preprints," printed advertising inserts that were slipped into the newspapers for a fee, grew in the later 1970's. The fee brought in from preprints was less than the revenue that straight advertising would have generated. The preprint publishers competed with newspaper publishers for advertising dollars.

Economic conditions discouraged advertising expenditures. Television was becoming a considerable rival for local advertising dollars and cable television was expected to continue the trend as independent television stations competed for local advertising dollars. The annual growth rate for total newspaper advertising dropped from 13.5 percent in 1979 to 6.7 percent in 1980 although retail spending growth only declined from 14.9 percent in 1979 to 10.9 percent in 1980. Furthermore, much of the growth that did occur in advertising in 1979 and 1980 came from increased use of preprints and did not significantly benefit the newspaper publishing companies.

Due to adverse economic conditions, total newspaper circulation per adult declined between 1975 and 1980 and the rate of that decline increased in 1979 and 1980. The decline in circulation was largely attributable to the decline in evening newspaper readership. Similarly, circulation revenue grew between 1975 and 1978 but then tapered off and actually declined by 5.1 percent in 1980.

The costs of newsprint and production labor rose, as the total spending on newspapers was decreasing in 1979 and 1980. Total expenditures for newsprint rose in 1979, outpacing the increase in newspaper revenues from 1979 to 1980. Although labor costs were suppressed by labor contracts predating the period of acute inflation, the labor contracts also delayed automation by requiring newspaper publishing companies to retain costly labor-intensive printing processes. Additionally, the decrease in bulk mail rates in 1978 caused an increase in direct mail advertising which, in turn, cut into newspaper advertising revenue.

The health of the magazine publishing industry also weakened in the late 1970's and early 1980. Because magazine advertising is national, magazine publishing industry conditions reflected the overall economic conditions. A slowdown in advertising expenditures began in 1979 and worsened in 1980. Magazine circulation dropped at the same time. Finally, the Wilkofsky report mentioned that in 1979 and 1980 the growth in production labor costs exceeded the growth in magazine revenues.

3. Competitive Position

Many of Advance's newspaper properties were situated in economically depressed markets that suffered from low population growth and high unemployment. Many of the markets in which Advance operated newspapers were extremely competitive. Additionally, in its 22 newspaper markets, Advance operated 10 morning newspapers, 19 evening newspapers, and 21 Sunday newspapers, so, in all but three of its markets, Advance had evening newspapers. In over half its markets Advance published no morning paper. In 1979, Advance's revenues increased by only 4.1 percent though inflation grew at the rate of 11.3 percent. Operating margins for Advance's newspaper properties declined from 21.6 percent in 1978 to 18 percent in 1979, resulting in a 13-percent decline in operating income for 1979. Furthermore, the rate of increase in total advertising linage decreased and total circulation actually decreased. For Advance's aggregate operations, operating income fell by $ 14 million from 1978 to 1979 and the operating margin decreased from 17.8 percent in 1978 to 14.8 percent in 1979.

Advance's subsidiary, Conde Nast, published seven consumer magazines that were predominantly fashion oriented. Although revenues were increasing in 1979, costs were increasing faster. Conde Nast's operating cash-flow margin declined from 14 percent in 1977 to 7.8 percent in 1979.

4. Size of Advance

As of February 29, 1980, Advance was the fourth largest newspaper and magazine publishing company in the United States. On December 31, 1979, Advance had a consolidated book value of $ 505,400,000 and retained earnings of $ 475,969,000. At that time, only seven or eight corporate acquisitions for more than $ 1 billion had ever occurred, and there had been no acquisitions of more than $ 350 million in the media industry. n13

n13 In 1976, the Herald Co., a subsidiary of Advance, acquired Booth Newspapers, Inc., for $ 304,588,598.

In early 1980, before leveraged buy-outs gained wide popularity, Advance could have borrowed an amount requiring interest obligations of not more than two-thirds of its operating income or, under the prevailing interest rate of 18 3/4 percent, $ 565 million. Because Advance had planned capital expenditures of $ 228 million, the remaining $ 337 million would be available to be distributed to the shareholders. Of this amount, only 22 percent would belong to the common shareholder.

5. Legal Uncertainty

A prospective buyer of the Advance common stock would want to know the rights of the preferred shareholders to gauge what corporate affairs the common stock could control and to project how to maximize the value of the investment. The prospective buyer would have received contradictory expert legal opinions on the relative rights and privileges of the common and preferred stock. This uncertainty would significantly depress the purchase price of the common stock. The prospective buyer would have been sure of protracted and expensive litigation. A substantial likelihood of considerable delay in

effecting plans to cash-out the preferred existed. The litigation might take between 6 and 10 years to resolve in New York courts, and substantial probability existed that any action taken by the common shareholder to defeat the claims of the preferred shareholders would be blocked. Furthermore, because interest rates in February 1980 were extraordinarily high and the size of Advance would require financing, the carrying costs of the purchase would be enormous.

6. Antitrust and FCC Difficulties

Generally, only a media business would be interested in purchasing Advance. Because only a very sizable media business could afford to buy Advance, it would be likely that some of the potential buyer's newspaper and magazine markets would overlap with some of Advance's newspaper and magazine markets. This would raise potential problems under both the antitrust laws and the Federal Communications Commission (FCC) regulations.

The operative antitrust law looks to whether a purchase might lessen competition, and the Department of Justice monitored newspaper acquisitions with particular scrutiny in 1980. A newspaper and magazine publisher that bought the Advance common stock would probably need to sell some current holdings or sell off some of Advance's assets after the purchase. As with antitrust, the FCC cross-ownership rules might require the buyer to sell certain assets.

7. Accounting Problem

The experts disagreed that, if the buyer were a corporation, the common shareholder could not report in its consolidated earnings the full amount of Advance's earnings and profits without, at a minimum, disclosing that the preferred shareholders were entitled to 78 percent of declared dividends out of those earnings. If a corporate buyer of Advance's common stock were to attribute more than 22 percent of Advance's earnings to the common stock interest, the financial statements would not comport with generally accepted accounting principles and would result in a qualified opinion on the buyer's consolidated financial statements. Such a qualified opinion would be unacceptable to users of the financial statements, including, for example, lenders, shareholders, and if the buyer's stock was publicly traded, the public.

II. VALUE OF N.B. CO. COMMON STOCK

N.B. Co. is a corporation that was organized under the laws of the State of New York in August 1944. On February 29, 1980, its principal place of business was located in Syracuse, New York. N.B. Co., either by itself or through wholly owned subsidiary corporations, operated television broadcasting, radio broadcasting, cable television, and microwave businesses. N.B. Co. operated radio and television broadcasting stations in Syracuse, New York; Elmira, New York; Birmingham, Alabama; Harrisburg, Pennsylvania; and St. Louis, Missouri. N.B. Co. operated cable television companies in many localities in New York State n14 and in Corapolis, Pennsylvania; Canonsburg, Pennsylvania; and Anniston, Alabama. N.B. Co. operated microwave stations in New York, New Hampshire, New Jersey, Ohio, Massachusetts, Vermont, Pennsylvania, and Alabama. As of February 29, 1980, N.B. Co. had contracted to sell all of its television broadcasting stations. The total value of N.B. Co. on the valuation date was $ 206,361,416.

n14 These are: Carthage, Corning, Delhi, Fulton, Malone, Massena, Ogdensburg, Oneonta, Potsdam, Rome, Sidney, Syracuse suburbs, Troy, Binghamton, Vestal/Endicott, Cooperstown, Franklin, Milford, New Berlin, Oxford, and Richfield Springs.

N.B. Co.had one class of stock authorized. As of February 29, 1980, 225 shares of voting common stock were authorized and outstanding, owned as follows:

Shareholder	No. Shares	Percentage
Petitioner	100	44.44
S.I., Jr.	60	26.67
Donald	60	26.67
Mitzi	5	2.22

In its estate tax return, petitioner valued the N.B. Co. stock at $ 68.3 million based on a valuation report prepared by Chemical Bank.

OPINION

I. VALUE OF ADVANCE COMMON STOCK

The first issue for our decision is the value of Newhouse's 10 shares of class A common stock and 990 shares of class B common stock as of February 29, 1980. A derivative issue is the value, for purposes of the marital deduction, of 300 shares of class B common stock.

Property is included in the gross estate at its fair market value, which is "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." Sec. 20.2031-1(b), Estate Tax Regs.; United States v. Cartwright, 411 U.S. 546, 551 (1973). If the property is stock that is not listed on an exchange andcannot be valued with reference to bid and asked prices or historical sales prices, the value of stock in comparable corporations engaged in the same or similar line of business must be considered. Sec. 2031(b). Also considered are the corporation's management, net worth, earnings, and ability to pay dividends. Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963), remanded on other grounds 344 F.2d 763 (6th Cir. 1965).

The determination of the fair market value of property is a question of fact. Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. a Memorandum Opinion of this Court. At trial, we received opinion evidence testimony from many expert witnesses, and we weigh that testimony in light of the expert's qualifications as well as all the other credible evidence. Estate of Christ v. Commissioner, 480 F.2d 171, 174 (9th Cir. 1973), affg. 54 T.C. 493 (1970); Estate of Gilford v. Commissioner, 88 T.C. 38, 56 (1987). Nonetheless, we are not bound by the opinion of any expert witness and will accept or reject expert testimony in the exercise of sound judgment. Helvering v. National Grocery Co., 304 U.S. 282, 295 (1938); Estate of Hall v. Commissioner, 92 T.C. 312, 338 (1989).

Respondent's Revenue Ruling 59-60, 1959-1 C.B. 237, has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value; it lists the following factors to be considered:

(a) The nature of the business and the history of the enterprise from its inception. (b) The economic outlook in general and the condition and outlook of the specific industry in particular. (c) The book value of the stock and the financial condition of the business. (d) The earning capacity of the company. (e) The dividend paying capacity. (f) Whether or not the enterprise has goodwill or other intangible value. (g) Sales of the stock and the size of the block of stock to be valued. (h) The market price of stocks of corporations engaged in the same or a similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter. [1959-1 C.B. at 238-239.]

Only facts reasonably known at the valuation date may serve as the basis for valuation. Estate of Gilford v. Commissioner, 88 T.C. 38, 52-53 (1987). Generally, valuations based on subsequent events whose occurrence was not foreseeable at the time of the valuation date are not helpful. Messing v. Commissioner, 48 T.C. 502, 509 (1967). n15 The willing buyer is a purely hypothetical figure and valuation does not take into account the personal characteristics of the actual recipients of the stock. Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981). The hypothetical willing buyer and seller are presumed to be dedicated to achieving the maximum economic advantage. Estate of Curry v. United States, 706 F.2d 1424, 1429 (7th Cir. 1983). This advantage must be achieved in the context of market conditions, the constraints of the economy, and the financial and business experience of the corporation existing at the valuation date. Moreover, in valuing stock,the rights, restrictions, and limitations of the various classes of stock must be considered. n16

n15 Subsequent events affecting the character or quality of the property to be valued should be distinguished from subsequent market activity which can provide helpful comparable sales.

n16 See Estate of Anderson v. Commissioner, T.C. Memo. 1988-511. E.g., Estate of Van Horne v. Commissioner, 78 T.C. 728 (1982), affd. 720 F.2d 1114 (9th Cir. 1983).

A. State Law Issue

A willing buyer would want to know the relative rights and powers of the two classes of common stock and one class of preferred. If the rights and powers of the preferred stock are sufficient to significantly limit the ability of the common stock to control the company and its assets, then the value of the common stock will be significantly less than if the common enjoyed full and unrestricted control over corporate affairs. The parties agree that the common stock controls the board of directors and, by extension, the management of the business and that the preferred shareholders have the ability and the motivation to block a proposed liquidation.

Respondent believes that the common stock, through other means than by liquidation, could arrogate to itself substantially all of the value of Advance. Respondent proffers the "subtraction method" of valuation, i.e., value the whole of Advance, value the preferred, and the difference equates to the value of the common. Petitioner argues that the common stock does not control Advance, and the preferred is entitled to 78 percent of dividends declared out of earnings. Consequently, the preferred is worth far more than respondent believes. Moreover, petitioner argues, the extent of the common stock's rights to force the preferred out of Advance are unclear at best. With this uncertainty, the value of the common stock is substantially less than respondent determined.

1. Redemption

The certificate could be amended to allow redemption of the preferred stock only with the consent of the preferred shareholders. Respondent's experts do not dispute the power of the preferred shareholders to block an amendment that could force redemption of the preferred stock. The common shareholder cannot force the redemption of preferred stock.

2. Dividends

The experts from both sides presumed that a buyer of petitioner's common stock would want to eliminate or at least limit the preferred shareholders' rights to 78 percent of declared dividends. They discussed several ways of doing this.

a. Source of Dividends

The experts agree that all shareholders participate pro rata in dividends declared out of earnings. Respondent's experts, Coffee and Siegel, believe that the certificate's allocation of dividends among the shareholders limits the preferred shareholders to a fully participating share only from those dividends paid out of earnings or earned surplus. n17 The preferred would not, in their view, participate in distributions of capital surplus, ordinarily available as a source for dividends under New York law. n18 Siegel and Coffee concluded that the common shareholder could receive dividends paid out of capital surplus, for example, by borrowing against assets and distributing the cash to the common shareholder without sharing the distribution with the preferred shareholders.

n17 Under New York law, "earnings" is defined as the corporation's income in a current year, "earned surplus" is defined as retained and undistributed earnings from prior years, and "capital surplus" is defined as unrealized appreciation in assets.

n18 Sec. 510 of the Business Corporation Law permits a corporation to make dividend distributions in cash, property, or bonds unless to do so would make the corporation insolvent, would violate a term of the corporate charter, or would reduce the value of net assets remaining in the corporation below the value of stated capital.

Petitioner's expert, Mundheim, disagreed and opined that the certificate does not speak at all about dividends paid from sources other than earnings. Alternatively, Mundheim noted, the language could mean that no shareholder, preferred or common, could receive dividends paid out of capital surplus. Mundheim explained that under New York corporation law there is a general underlying assumption that all shares are considered equal and therefore, differences between various classes of stock must be specifically designated and will not be inferred. Mundheim concluded that because the meaning was ambiguous, a New York court would construe the certificate against the background of the general rule that classes of stock are different only to the extent the differences are explicit, and would conclude that the two classes of stock should participate pro rata as to dividends from sources other than earnings as well.

Regardless of the source of dividends, the experts on both sides agreed that a prospective buyer of the Advance common stock would want to circumvent the preferred shareholders' right to 78 percent of declared dividends. To avoid paying the major portion of dividends to the preferred shareholders, the common shareholder would have to alter the preferred shareholders' rights and privileges, but the experts disagreed about whether the common shareholder could succeed.

b. Stock Split or Stock Dividend

Mundheim also concluded that because an amendment to increase the number of shares held by the common shareholder would clearly impinge on the voting rights of the preferred stock, the preferred shareholders would be allowed to vote against the proposed amendments under sections 801(b)(12) and 804 of the Business Corporation Law. Respondent's experts agree that the common shareholder would be unable to effect a stock split or stock dividend without the consent of the preferred shareholders.

c. Preemptive Rights

Shareholders generally have preemptive rights where the issuance of new shares would adversely affect their dividend rights. Coffee, respondent's expert, argued that the preferred shareholders would not have preemptive rights to acquire unissued or treasury shares of stock pursuant to exceptions to section 622(b) of the Business Corporation Law. As of February 29, 1980, Advance had no treasury shares and if all authorized common stock were issued it would not give the common shareholder the power to liquidate Advance. Because section 622 also provides an exception for the issuance of new shares necessary for a merger or consolidation, Coffee believed that new shares could be issued to the common shareholder pursuant to a plan of merger and could dilute the preferred shareholders' control over liquidation.

Lipton, petitioner's expert, countered that Coffee's maneuver would be viewed, not as necessary to effect a merger, but as an attempt to derogate the preferred shareholder's rights. A New York court, in Lipton's view, would not permit the dilution of the preferred stock.

d. Nonpayment of Dividends

Coffee noted that the board of directors could stop paying dividends. He argued that a decision by the board of directors to curtail or cease the payment of dividends would be difficult to overturn because New York courts are highly disinclined to review a corporation's dividend policy. According to Coffee, in order to force the board of directors to pay dividends in New York, a shareholder must show that the nonpayment expressed hostility to the shareholders directly and that the failure to pay dividends was detrimental to both the shareholders and the corporation. Coffee further noted that Advance's past dividends had historically been low in relation to its earnings and that a preferred shareholder would find it particularly difficult to force a hostile board of directors (elected by the common) to pay dividends.

The Cravath, Swaine & Moore report submitted by petitioner maintained that an abrupt cessation of dividends without a demonstrable business purpose might constitute a breach of the directors' fiduciary duties. Furthermore, although the nonpayment of dividends may be burdensome to the preferred shareholders, it has an obvious correlative detriment for the common shareholder's extraction of corporate profits. n19

n19 Siegel suggests that the common shareholder might avoid the hardship of the cessation of dividends by paying himself a handsome salary but such a possibility implies that the common shareholder is an individual, not a corporation, and thus, impermissibly relies on personal characteristics of a particular willing buyer. See Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981).

The common shareholder could not force a redemption of the preferred stock and probably could not issue more stock to himself to dilute the preferred shareholders' voting power. Finally, the board of directors elected by the common shareholder might not be allowed to cease all dividends.Therefore, the

common shareholder's ability to defeat the claims of the preferred shareholders to 78 percent of earnings is subject to considerable doubt.

3. Liquidation or Merger

All of the experts considered liquidating or merging the corporation as a way to disenfranchise the preferred shareholders.

a. Liquidation

The experts proceeded on the assumption that the preferred shareholders would not agree to a liquidation because the certificate sets a liquidation preference for the preferred stock at only $ 187.25 per share. Because the preferred shareholders are entitled to vote on liquidation, they could prevent it. This assumption comports with economic reality.

b. Mergers

The experts disagreed at all points on whether the common shareholder could dispose of the preferred shareholders by freeze-out or freeze-in merger.

(1) Freeze-Out Merger

Mundheim and Landau, petitioner's experts, noted several problems with the proposed freeze-out merger, structured as an acquisition by a third-party corporation. Mundheim and Landau found a significant likelihood that, under New York law, the preferred shareholders as a class would be entitled to vote ona freeze-out merger notwithstanding the fact that the certificate expressly reserves voting power over mergers to the common shareholder. Cravath, Swaine & Moore agreed, noting that a merger that threatened to diminish the preferred shareholders' entitlement to dividends or required the preferred shareholders to exchange their stock for cash would trigger a class vote. If the proposed freeze-out merger were viewed as a forced redemption, because its effect is to abolish the rights of the preferred, a class vote would be triggered because the preferred would be entitled to vote if the forced redemption were attempted in the form of an amendment to the certificate. Lipton also observed that the freeze-out merger amounts to a de facto forced redemption which is not permitted under the certificate. He opined that the common stock could not accomplish by indirect means what is forbidden by direct means.

Landau also noted that the historical development of the rights and privileges of the two classes of stock from the original certificate through the various amendments shows that the preferred shareholders were increasingly given a participating role through the capital structure. Landau concluded that the preferred shareholders were given equal status with the common shareholders in sharing the future earnings of Advance.

Respondent's experts disagreed that the preferred shareholders would be entitled to a class vote in the event of a freeze-out merger. Coffee based his conclusion on his analysis that the statutory language refers only to situations in which the "relative rights, preferences, or limitations" of the minority shares are changed and not to the total cancellation of the stock. He argued that:

the purpose of both sections 804 and 903 is to protect continuing shareholders against a change in their legal rights, not to prevent the voting majority from cashing out another class. The danger addressed by these sections was that of being locked in under a new and different legal regime, not that of being frozen out.

Coffee noted that not only does the statute protect minority shareholders from abuse by the majority shareholder, but it also protects the majority shareholders from unreasonable minority shareholders. Brudney and Siegel echoed Coffee's reasoning in their reports.

Petitioner's experts doubted whether such a transaction could pass muster under the New York requirement of fiduciary care on the part of the board of directors toward the shareholders, especially if the merger had no business purpose. Mundheim noted "under New York law, directors and controlling shareholders, such as the holder of Advance's common stock, have broad fiduciary responsibilities and may not direct the affairs of the corporation so as to favor themselves at the expense of other shareholders." Landau agreed. Mundheim concluded that because such a merger would have no purpose other than to force out the preferred shareholders for the exclusive benefit of the common shareholder, a New York court would not uphold it. Cravath, Swaine & Moore's report stated that where the corporate structure clearly protects the preferred shareholders' right to prevent liquidation, a court would not allow the board of directors to accomplish indirectly what they could not do directly.

Mundheim determined that a freeze-out merger could violate the New York requirements of procedural and substantive fairness. The leading New York case, Alpert v. 28 Williams Street, 63 N.Y.2d 557, 483 N.Y.S.2d 667, 473 N.E.2d 19 (1984), imposes an overall equitable requirement that a freeze-out merger must have an "independent corporate purpose for the merger" and include a fair price for the shareholders who are being frozen out. Mundheim noted that the court in Alpert ruled that a fair cash-out price would be "reasonably related to the value that might be set by an appraisal proceeding" and offered five factors for determining that amount. n20 Mundheim stated that it was impossible to be sure at the date of purchase of the common stock what fair value the New York courts might set for the preferred stock. While it was unclear whether a New York court would aim for the going concern price or the liquidation price in setting fair value, he noted that under recent New York cases, fair value might not be restricted by contractual provisions. In Mundheim's view a court might look beyond the stated liquidation preference amount and historical dividends and decide that the preferred and the common stock were fundamentally equal.

n20 The five factors listed in Alpert v. 28 Williams Street, 63 N.Y.2d 557, 483 N.Y.S.2d 677, 665, 473 N.E.2d 19 (1984), are net asset value, book value, earnings, market value, and investment value.

Lipton opined without equivocation that the preferred would be entitled to 78 percent of the going concern value of the corporation because "the terms of the Preferred Stock were specifically engineered to ensure that the holders of the Preferred Stock share proportionately in whatever level of pay-out the Company as a going concern makes on its capital stock." Lipton also suggested that a court might determine that the common shareholder had breached his fiduciary duties if, in negotiating the terms of the proposed merger, the common shareholder allocated more than 22 percent of the purchase price to the common and gave the preferred shareholders less than 78 percent of the purchase price.

Respondent's experts did not believe that the proposed freeze-out merger would violate those fiduciary duties. Eisenberg noted that under New York law, preferred stock is purely a creation of contract law and that the only fiduciary duty running to a preferred shareholder is the duty to satisfy the contractual entitlements. Since the proposed merger would not violate any of the Advance preferred shareholders' existing contractual rights, he reasoned they would have no grounds to complainof unfair treatment.

Respondent's experts concluded that although the preferred shareholders were entitled to receive fair value in the event of a freeze-out merger, the courts would not be inclined to value the rights of the preferred shareholders at 78 percent of the total value of the corporation. Coffee believed that a New York court would not derive fair value by measuring the corporation's going concern value but rather would compute the weighted average of the liquidation preference, the historical dividends, the book value per share, and the recent earnings history. Furthermore, Coffee noted that even if the court disagreed with the figure offered by the common shareholder, it would simply require that a higher price be paid, still allowing the transaction to proceed.

Brudney believed that a New York court would be most influenced by the historical dividend stream in computing fair value for the preferred stock. Because Advance has historically always reinvested the bulk of its earnings and paid minimal dividends, he opined, the preferred shareholders are on notice that they are entitled to no more than a future projection of historical dividends, or "the capitalized value of an annual amount equal to the dividend paid to [the preferred shareholders] during the last several years." Siegel concluded that fair value would lie between the liquidation preference amount of $ 187.25 per share and a number representing maximum possible dividend participation in Advance as a going concern.

Finally, all the experts agree that not only would a merger have to be fair but the transaction would have to have a business purpose that would benefit Advance as a whole and not just the controlling shareholder. Nonetheless, the experts disagreed about what constitutes a valid business purpose under New York law.

If the freeze-out were perceived as little more than an attempt to dispossess the preferred shareholders as cheaply as possible, petitioner's expert, Mundheim, believed it would not be sustained by a New York court. Mundheim explained that in the proposed freeze-out "there would be no independent corporate purpose -- no improvement in management, no increase in capitalization, simply a reshuffling of the corporate structure for the exclusive benefit of the Common Stock at the expense of the to-be-ousted Preferred Stock." McNally agreed that a New York court would not consider the removal of the preferred shareholders for the sole benefit of the common shareholder to be a sufficient business purpose.

Respondent's expert, Coffee, agreed that the New York courts require a business purpose but argued that it does not have to be substantial. As a possible business purpose, Coffee suggested the need to avoid Advance's future obligation to redeem the preferred shares at the death of the shareholders, or the need to be able to redeem the preferred shares in the event of a future transfer by an existing shareholder in order to remain a closely-held corporation. Coffee also recommended the need to avoid hostility and dissension among the shareholders as a valid business reason.

(2) Freeze-In Merger

The objective of this transaction would be to dilute the preferred stock by issuing proportionately more common in the course of the merger while leaving the preferred stock in place. The dilution would have to be sufficient to give the common the ability to liquidate Advance over any objection by the preferred. Petitioner's experts, Landau and Mundheim, determined that like the freeze-out merger, the freeze-in merger would alsotrigger the class vote under sections 801(b)(12) and 804 of the Business Corporation Law. Although the freeze-in merger would appear to leave the rights and preferences of the preferred stock unchanged, Landau and Mundheim believed that a New York court would not stop at a superficial

analysis. Because the rights of the preferred would in effect be dramatically reduced by the presence of an increased number of voting common shares, the statute would impose a class vote. Respondent's experts disagree because the form of the transaction leaves the preferred shareholders untouched.

Acknowledging that there are no dispositive New York cases on this point, Mundheim warned that the freeze-in merger would be subject to the same judicial requirements of business purpose and procedural and substantive fairness, as well as fiduciary duties, as the freeze-out merger. Mundheim concluded that a New York court would not be satisfied that the transaction had a business purpose.

Respondent's expert, Siegel, stated that "There appears to be no reason why the business purpose test, as applied under New York law, would be applied more restrictively to a freeze-in than to a freeze-out."Coffee agreed that although the preferred shareholders in a freeze-in merger would have to be treated equitably and the preferred stock could not be diluted unfairly, "the burden on the plaintiffs attacking such a [freeze-in] merger would be substantially higher than in the case of a 'freeze-out' merger." Coffee and Eisenberg surmised that if the preferred shareholders were guaranteed the continuation of the historic dividend rate as a part of the terms of the merger they would have no grounds to complain of mistreatment. Coffee also suggested that if the board of directors were composed of persons who were neither shareholders nor corporate management, their actions would be substantially immunized from derivative suits by minority shareholders.

As Mundheim noted, considering the size of Advance, the purchaser would have to capitalize the acquiring corporation in the proposed merger very heavily. Furthermore, although the common shareholder would want the freeze-in to be done quickly because the Advance preferred shareholders would be entitled to 78 percent of declared dividends until the merger was approved and the carrying costs of the investment in the common would be significant,the inevitable litigation would foreclose any quick accomplishment of the merger.

(3) Waiting Out the Preferred

Respondent's expert witnesses suggested that the buyer of Advance common stock could ultimately acquire complete control by buying the preferred stock as it is transferred from the existing preferred shareholders to new owners. Coffee outlined a plan which could be employed in lieu of the mergers: first, the common shareholder would replace the board of directors, suspend the payment of all dividends, fire the family members, and issue all the authorized but unissued stock to himself in exchange for property of equal value. As the preferred shareholders died or attempted to transfer their stock to third parties, the corporation could purchase it, exercising the rights set forth in the 1974 shareholders' agreement. Then the new common shareholder would approach each remaining preferred shareholder and offer to buy his stock at a certain price, "explaining that he did not intend to acquire all the Preferred Stock, but only enough to give it two thirds voting control. The risks of being a holdout and the prospect of eventual liquidation could also be politely explained." Rather than be the last preferred shareholder holding less than one-third of the total outstanding stock and having to accept the contractual liquidation value of $ 187.25 per share, Coffee believed that, in light of the advanced ages of Norman, Ted, and Mitzi, each preferred shareholder would be willing to sell his stock to the common shareholder quickly, or, alternatively, the preferred shareholders would acknowledge the futility of resisting and agree to a common sales price.

Siegel suggested more strongly coercive techniques for ousting the preferred shareholders such as selling off Advance assets for less than the highest market value either alone or in conjunction with a third party. Siegel indicated that it might not be necessary to actually engage in such transactions because it might be enough to "vaguely and darkly threaten such tactics to maximize the pressure on the Preferred Stock's holders." Time, Siegel concluded, would be on the side of the common shareholder because three of the preferred shareholders were elderly. Coffee also opined that the 1974 shareholders' agreement makes it inevitable that ultimately the corporation will be able to acquire allof the preferred stock and that preferred shareholders would choose to sell their stock to the corporation rather than risk having to accept liquidation value of $ 187.25 per share. Coffee noted that once the shares had been reacquired by the corporation, they could be issued to the common shareholder without invoking preemptive rights which do not apply to treasury shares under New York law.

Petitioner's experts explained that a buyer of the Advance common stock would be very unsure of his rights and powers to effect the major corporate restructuring and of the rights of the preferred shareholders to block his efforts. Angered preferred shareholders would bring legal action seeking either injunctive relief or the recision of the transaction. Further obfuscating any predictable outcome of litigation, the experts disagreed on whether a New York court would entertain parol evidence of the understandings of the Newhouse family members about the relative rights and powers of shareholders or how much weight the court would give it. Lipton noted that faced with legal uncertainty of such magnitude, a buyer would insist on indemnification and other protections against the claims of the preferred shareholders. An indemnification provision would depress the value the hypothetical willing seller would receive.

Petitioner's experts believed that a buyer of the common stock who cannot also purchase the preferred stock would be in a precarious situation. The report from Cravath, Swaine & Moore described the situation as analogous to:

the relationship between a person who owns a house surrounded by someone else's land and the surrounding landowner. * * * neither the holders of the Preferred Stock nor the holders of the Class B Common Stock have an easement to realize the full value of their interests in the Company, but the holders of the Class A Common Stock have no right to that portion of value of the Company attributable to the interests of the holders of the Class B Common Stock and Preferred Stock.

Analysis

Initially we must resolve whether we need to determine the relative rights and preferences of the two classes of Advance stock. Petitioner contends that to discern what a hypothetical willing buyer would be willing to pay for the common stock we need only determine that there is substantial uncertainty among respected legal experts about the rights and powers of the classes of stock and about the extent of the common shareholder's authority over the corporate assets. Petitioner argues that this uncertainty will strongly influence the willing buyer's purchase offer. Petitioner contends that we do not need to decide whether a common shareholder would succeed or fail in eliminating the claims of the preferred shareholders, but only that the willing buyer could not be secure about his ability to do so and would offer a commensurately lower price for the stock.

Respondent counters that we must first decide whether, in fact, the common shareholder could ultimately secure complete control over the assets of Advance through any one of the methods suggested by his expert witnesses. Respondent maintains that we cannot rule on the value of the common stock without first deciding the common shareholder's rights.

The focus of a valuation inquiry, however, is on the existing facts, circumstances, and factors at the valuation date that influence a hypothetical willing buyer and willing seller in determining a selling price. We agree with petitioner that it is the likely understanding of the rights and privileges of the Advance common stock that will influence the terms of sale, not whether we resolve this dispute over New York law. Indeed, we believe that it would be error to postulate a certainty that did not exist. Any potential buyer would be investing millions of dollars in this acquisition. Such a buyer would not assume legal certainty in the face of divided legal counsel. n21

n21 We struck from evidence the valuation report of one of respondent's experts precisely because he assumed legal certainty (i.e., that respondent's legal experts were correct) where none existed. Having made this flawed assumption, his report became irrelevant. See Estate of Hall v. Commissioner, 92 T.C. 312, 338-339 (1989).

To decide the exact rights and powers of the Advance common stock under New York law, we would have to decide that a willing buyer would ignore or discount some of the expert advice we heard. We believe that we cannot, however, disregard the effect of the mixed legal advice on the hypothetical willing buyer's commitment of funds to a purchase price. Not only would our resolution of this issue not make the hypothetical willing buyer feel secure on February 29, 1980, it would distort the reality in which the fair market value must be determined.

A hypothetical willing buyer would have had the counsel of several advisers of formidable reputation: Landau & Lipton, noted corporate lawyers; Professors Coffee, Cox, Eisenberg, and Brudney and Deans Mundheim and Siegel, all affiliated with prestigious educational institutions. He could have read legal memoranda from White & Case and Cravath, Swain & Moore, well-respected law firms. The hypothetical willing seller would also have been aware of this conflicting legal advice and the uncertainty of obtaining economic dominance in Advance. Not only is the law disputed, but the experts cite substantially the same cases to support their diametrically opposed positions. Moreover, no expert's views were patently unreasonable. No willing buyer, faced with the conflicting arguments and opinions of these respected legal experts could choose which one is right. The legal uncertainty will strongly affect his decision on the value of the common stock. "[The] Court must not 'permit the positing of transactions which are unlikely and plainly contrary to the economic interest of a hypothetical buyer.'" Estate of Hall v. Commissioner, 92 T.C. at 337, citing to Estate of Curry v. Commissioner, 706 F.2d 1424, 1429 (7th Cir. 1983). To assume the correctness of the views of either respondent's or petitioner's legal experts would distort the facts in which a willing buyer would have negotiated the purchase and would result in a transaction plainly contrary to the buyer's economic interests.

In arguing that we must decide that one side or the other is right, respondent relies on several cases that are not directly applicable to the case at hand. In Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981), the parties did not dispute the proper treatment of a decedent's community property under Texas law. In Estate of Watts v. Commissioner, 823 F.2d 483 (11th Cir. 1987), the process and implication of the dissolution and liquidation of a partnership under Oregon law was clear and easily resolved. In Estate of Reynolds v. Commissioner, 55 T.C. 172 (1970), the Government urged this Court

to overlook restrictions on stock imposed by a voting trust. Although we concluded that the voting trust restrictions would "most likely be valid," we decided that the threat of the enforcement of the voting trust restrictions would be significant in itself to a potential investor. 55 T.C. at 193-194. Two of these cases involve legal disputes capable of fairly ready determination. In the other, the actual resolution of the State law question was deemed unnecessary and supports our approach here. n22

n22 See also Estate of Mundy v. Commissioner, T.C. Memo. 1976-395 (validity of redemption provisions under Florida law were not necessary to evaluate effect of redemption provisions on prospective purchaser of restricted stock).

In this case, the State law question cannot be resolved short of actual litigation subsequent to an actual purchase. The one certainty that the willing buyer would confront, which the willing seller would also have to take into account, is that with the State law issues as difficult to resolve and as fiercely contested as the relative rights and privileges of the Advance stock, there would be litigation. It would be nonsensical to believe that the preferred shareholders would not try to vindicate their economic interests.

B. Valuation Opinions

Petitioner approached the willing buyer, willing seller test by soliciting the expert advice of investment bankers who daily counsel clients that buy and sell stock in businesses like Advance. Petitioner's experts evaluated the Advance common stock as if they were giving advice to a client, reviewing the advantages and the disadvantages that a client would face. Then, analyzing benchmark values for several approaches to selling the Advance common stock and relying on their experience and judgment, petitioner's experts determined a likely sales price. n23

n23 On brief, respondent argues that Goldman Sachs' approach only explores what a willing buyer would pay for the Advance common stock and should therefore be disregarded. What respondent has failed to see is that the highest price a willing buyer would pay is also the price that a willing seller wants.

Respondent approached the valuation of Advance very differently. Respondent's theory of valuation takes the sum of the value of the Advance's assets in excess of certain planned expenditures and certain liabilities, and reduces that sum by a value attributable to the presence of the preferred stock. The remainder represents the value of the common stock and the price that respondent believes a willing buyer would pay to a willing seller. Several portions of respondent's expert's report were stricken from the record because they were based on an assumption without foundation. Specifically, Baniewicz based his analysis on the assumption that the value of the Advance common stock would be determined by subtracting from the value of the entire company the value of the preferred stock (the subtraction method).

None of respondent's expert witnesses testified that they would have advised a willing buyer to use the subtraction method in deciding the value of the stock. None could testify that they had ever advised the use of the subtraction method in advising buyers or sellers of closely held stock in any comparable situation.

1. General and Industry Economic Conditions

The period immediately preceding the valuation date was characterized by economic gloom. The economy was in a state of near-recession with high interest rates and high inflation. The newspaper and magazine publishing industry reflected the nation's troubles. Costs were high, competition increasing, and circulation and advertising revenues at a standstill or decreasing. A willing buyer and a willing seller would be aware of these economic conditions as they negotiated their price for the Advance common stock.

Respondent's expert witness, Baniewicz, found that the prognosis for the newspaper and magazine publishing industry was not as grim as we have found it to be. Although he agreed that the economy as a whole was not robust in late 1979 and early 1980, he stated that total advertising revenues rose in 1978 and 1979 and that the percentage of total U.S. advertising that was devoted to newspaper advertising decreased only slightly. Baniewicz' revenue figures, however, were not adjusted for inflation. Because classified advertising remained strong in 1978 and 1979, Baniewicz believed that no one expected that the impact on the publishing industry of the projected 1980 recession would be serious. Baniewicz also noted that magazine circulation grew in 1978 but leveled off in 1979. He further surmised that because magazine readers tend to have higher incomes, and because that demographic segment was expected to grow in 1980, the long-term outlook for growth in the magazine publishing industry would have been positive. We have concluded that Baniewicz' findings at best represent a few isolated bright spots in an otherwise gloomy economic picture.

2. Competitive Position

In order to compare Advance's financial strength and performance in relation to others in the industry, Goldman Sachs chose eight companies whose business mixes would be meaningfully comparable to Advance. n24 Relying on data from these eight companies, Goldman Sachs concluded that because Advance's earnings were already within the range of the industry norm for large publicly held companies, Advance's historical profit was reasonably indicative that its earning capacity had been fully achieved. Goldman Sachs noted that Advance paid relatively low dividends, although there were sufficient earnings to pay considerably more. Furthermore, Goldman Sachs determined that Advance retained a high cash balance relative to comparable businesses. Advance also had $ 145 million for planned extraordinary capital expenditures at the date of valuation. Goldman Sachs' comparison shows that Advance had relatively high operating income and net income and exceptionally low long-term debt in 1979.

n24 These eight companies were: Affiliated Publications, Inc., Dow Jones & Co., Gannett Co., Knight-Ridder Newspapers, Inc., Media General, Inc., The New York Times Co., The Times Mirror Co., and The Washington Post Co.

3. Size of Advance and Legal Uncertainty

As the Chemical Bank report explained, a willing buyer's business judgment in valuing the Advance common stock would be formed in large part by the uncertainty of the common's power to defeat the preferred's claim to 78 percent of dividends:

The possibility that any speculative buyer's attempt to deny the preferred shareholders what they believed to be the fair value of their shares would fail makes it extremely unlikely that any such buyer would have risked the enormous capital required to buy the Common Stock based on such speculation * * *.

Because of the millions of dollars needed to buy the common stock of Advance, the prevailing high interest rates, and the inevitability of litigation (aside from the possibility of failure), no one would have been willing to make such a speculative investment in early 1980 at a price determined by respondent's subtraction method. Goldman Sachs believed, and we agree, that the uncertainty inherent in purchasing only the common stock combined with the enormous investment required would depress the price that any buyer would offer. Goldman Sachs explained further the effect of fiduciary duties to the preferred shareholders on any buyer's judgment on the value of the common stock: "most acquirers want the ability to enter into transactions, with affiliates or otherwise, without being challenged as to the fairness of those transactions to non-controlling shareholders."

McCorkindale, vice president of Gannett Corp., stated that Gannett would not be interested in a purchase of the Advance common stock, unless the preferred stock were also available. Gannett, he explained, generally avoided purchases of less than 100 percent of the outstanding stock. McCorkindale was also concerned that the Advance common shareholder would have fiduciary responsibilities toward the preferred shareholders. Murdoch, chief executive officer of The News Corp., agreed that the Advance common stock would not be attractive because of the existence of the preferred shareholders.

4. Antitrust and FCC Difficulties

J. Paul McGrath, a partner of Dewey, Ballantine, Bushby , Palmer & Wood, specializing in the antitrust ramifications of mergers and acquisitions, testified on behalf of petitioner. McGrath stated that any media company large enough to buy Advance would have overlapping markets and would need to divest itself of some of its holdings.

Murdoch agreed that purchasing Advance was made less desirable by "various Justice Department and Federal Communications Commission restrictions."

McCorkindale explained that if Gannett had purchased the Advance common stock, Gannett would have had several newspaper properties in overlapping markets. Furthermore, in contemplating an acquisition, McCorkindale also considers long-term anticipated expansion into new markets. Owning one ofAdvance's newspaper properties might preclude the buyer from later purchasing a competing newspaper that was more desirable.

5. Accounting Problem

The parties disagreed about how the purchaser of Advance's common stock would account for the earnings of Advance on its books. Petitioners introduced the testimony and report of Abraham Briloff, a certified public accountant and Professor Emeritus of Baruch College, and Ronald J. Murray, a certified public accountant and a partner with the accounting firm of Coopers & Lybrand.

Briloff stated that pursuant to generally accepted accounting principles, a corporate owner of the common stock interest in Advance could report in consolidated earnings only Advance's earnings and profits attributable to the common stock and no amount attributable to the preferred stock interests. Murray and Briloff agreed that a corporate owner could report only 22 percent of Advance's earnings on its consolidated financial income statement.

Contradicting the reports of Murray and Briloff, respondent introduced the report and testimony of Gustav A. Gomprecht, a certified public accountant and a retired partner of KMG Main Hurdman. Gomprecht, in his prepared report and on direct examination, concluded that the financial statements of

the buyer of Advance's common stock could include all of Advance's net income. Gomprecht based his view in part on his belief that the common shareholder could represent that, until dividends were paid out of earnings, the shareholder was entitled to all earnings. Gomprecht conceded on cross-examination that if the common shareholder included the earnings of Advance in its financial statements without at least a footnote stating that 78 percent would have to be distributed to the preferred shareholders when declared, those financial statements would be misleading.

In the end we believe that Briloff and Gomprecht came to the same conclusion. Once Advance declares a dividend from earnings, retained or current, 78 percent would be distributed to the preferred shareholders. The holder of the common stock would be entitled to no more than 22 percent, and if the buyer's financials suggested entitlement to more, they would be misleading. Given the size of Advance's earnings, it is likely that such a misstatement would be material.

6. Valuation Analyses

a. Goldman Sachs' Valuation

In valuing the Advance common stock, Goldman Sachs applied the methods it uses daily to advise buyers and sellers of stock and securities. First, Goldman Sachs assessed four benchmarks of value that a prospective buyer of Advance would consider. These benchmarks would be used to ascertain the correct value of Advance by a buyer for analytical purposes but are not determinative of the value of the common stock. The four benchmarks are: (1) The public trading market value, i.e., the value if Advance stock had been actively traded on the stock market; (2) the initial public offering value, or the net value realizable by the shareholders who first introduce Advance stock on the public stock market; (3) the possible merger market value, or the amount realized by the shareholders if they sold all their stock to one party in a private sale; and (4) the arithmetic sum value, or the sum of the values of each of the assets if sold in independent transactions.

Goldman Sachs concluded that the public trading value for Advance as of February 29, 1980, was $ 905 million. At that time the stock market indices were declining and media companies were lagging behind the market. GoldmanSachs evaluated eight businesses that were active in the media industry and comparable to Advance in business mix. n25 Advance placed near the middle of these companies in overall financial performance. Furthermore, though Advance was well managed, Goldman Sachs believed the public market would have disapproved of Advance's concentration in newspapers, particularly evening newspapers, and magazines at a time when other media companies were diversifying into television. Goldman Sachs estimated a price-earnings multiple of approximately 9.4 times earnings or $ 905 million.

n25 On brief, respondent objected to Goldman Sachs' choice of the eight comparable businesses on the grounds that Advance's unique capital structure set it apart from those eight corporations. Respondent failed at trial to introduce evidence (whether on cross or through direct examination of his own witnesses) that would suggest any lack of merit in using these businesses as comparables. Moreover, respondent's own expert, Baniewicz, used four of those businesses as comparables (Gannett Co., Knight-Ridder Newspapers, Inc., The New York Times Co., and The Times Mirror Co.) to evaluate Advance's financial position.

Goldman Sachs also determined that the initial public offering value for Advance on February 29, 1980, was $ 778 million. Ordinarily the price at the initial public offering would be subject to a discount of between 5 and 10 percent below the anticipated price once the stock is established on the market. There is an additional underwriter's gross spread discount of about 7 percent. These two discounts applied to $ 905 million produced $ 778 million. An initial public offering of all the Advance stock would have been more than 20 times larger than any initial public offering for several years preceding February 1980. The magnitude of the offering would have further lowered the realizable value.

Although Goldman Sachs decided that practically it would be difficult to arrange a merger of Advance, they determined that if there was a merger the shareholders could have realized between $ 1.1 and $ 1.2 billion. Although the merger market for small newspaper companies was flourishing around February 1980, Advance was already efficiently managed and a prospective buyer would not have believed that he could quickly and easily improve the operating margins or increase the revenue.Furthermore, the size of Advance would have daunted all but the largest prospective buyers. For these and other reasons, both Goldman Sachs and Chemical Bank could not find any comparable historical mergers by which to measure the merger value of Advance. Additionally, neither the general economic conditions nor the newspaper publishing industry were conducive to a major acquisition.

Finally, Goldman Sachs computed the arithmetic sum value of $ 1.5 billion by assuming that each of Advance's properties was sold independently. Although unlikely in a real market situation, Goldman Sachs assumed for the purposes of the report that the purchase prices realized would be unaffected by the simultaneous sale of all of the other properties. n26 After reviewing the economic conditions' effect on the value of newspaper properties, Goldman Sachs evaluated each of Advance's assets. Goldman Sachs considered the local economies and demographic pictures for each newspaper and compared the Advance advertising and circulation trends to those of other newspapers. They also considered the individual newspaper properties from the point of view of the mergers and acquisitions market.

n26 Respondent complained on brief that Goldman Sachs' arithmetic sum value represented future income potential to the exclusion of current asset value. This is due, in part, to Goldman Sachs' analysis of the newspaper properties as going concerns, in contrast to Baniewicz' liquidation value approach. Nonetheless, because Goldman Sachs and Baniewicz ultimately came very close to agreeing on the aggregate value of the newspaper properties, we do not believe that this discrepancy is worth further consideration.

The sale of all of Advance's newspaper and magazine properties at one time would have had a seriously depressing effect on the market for such properties. Furthermore, in order to avoid significant tax consequences, the sale of all of the properties would have to be accomplished within 1 year. In light of the difficulties, Goldman Sachs concluded that its arithmetic sum value was not realistic.

Keeping in mind their four benchmarks of value for Advance's entire business, Goldman Sachs then turned to a discussion of the possible types of buyers for the Advance common stock. The report contemplated four types of investors: (1) The passive investor, (2) the active investor, (3) the control investor, and (4) the public.

A passive investor would not be interested in managing Advance and would not attempt to wrest control from management. Expecting to realize value from dividends and private resale, the passive investor would not expect to extract value from Advance through liquidation, merger, or public offering. The

passive investor would consider that Advance's stock was not publicly traded which would depress expectations of resale value. Due to this illiquidity, lack of control, and the uncertainties and constraints affecting the purchase, Goldman Sachs concluded that the passive investor would have offered 30 percent less than the public trading market value of the common stock and thus only $ 141 million for the common stock.

The active investor would be inclined to pursue action, short of seeking control, that would quickly maximize the return on his investment. One course of action would be to declare a dividend of Advance's excess cash and any funds that could be obtained through borrowing. Because of the high prevailing interest rate and planned capital expenditures, the common shareholder could extract no more than $ 74 million of excess cash plus loan proceeds. Advance also had $ 145 million of excess cash which could be distributed with the loan proceeds. Because of the time and uncertainty involved in this plan of action, the active investor would pay no more than 85 percent of the amount he hoped to extract. This figure would be far less than the $ 141 million the passive investor would be willing to pay.

Alternatively, the active investor might cause the excess cash to be distributed immediately and then cause Advance to pay dividends at the highest possible level. Assuming that the active investor would insist on an after-tax yield on his investment of about 13 or 14 percent, Goldman Sachs concluded that the active investor would be willing to pay $ 150 million for the Advance common stock.

A control investor would have purchased the Advance common stock with the goal of acquiring 100 percent of the equity ownership and control of the company. A control investor would hope to realize value from his purchase by dividend distributions, by liquidation, or by merger, but Advance's unusual capital structure would prevent the latter two courses of action without eliminating the preferred stock or securing their consent. The preferred had the right to block liquidation. Because the common's power to effect a merger adverse to the preferred's interests was so uncertain, Goldman Sachs concluded that any willing buyer, as a matter of sound business judgment, would analyze the value of the common as if that option were foreclosed. Goldman Sachs' analysis is persuasive.

Goldman Sachs concluded that only another media company would be interested in acquiring Advance and that none of the major media companies would have considered buying the common stock without first eliminating the claims of the preferred shareholders. Because the control investor would assume that he could not receive anything except 22 percent of the highest level of dividends declared, he would be in the same position as the active investor and would pay no more than what the active investor would pay, viz, $ 150 million.

Goldman Sachs concluded that an underwritten public offering would be the best way to sell the Advance common stock, requiring the three different types of stock to be recapitalized into a single class. Goldman Sachs' research indicated that in approximately half of the transactions in which voting control was transferred the buyers paid a premium for control. Goldman Sachs concluded that no control premium was warranted. Goldman Sachs then determined that, after exchanging the class A common stock one for three, and the class B common and the preferred stock one for one, the offering price would be $ 25 per share subject to a 7-percent discount. The price for all the shares would be $ 778 million, and for petitioner's shares it would be $ 176 million.

Because the benchmark value for a public offering, $ 176 million, was the highest value, Goldman Sachs concluded that the value of petitioner's Advance common stock was $ 176 million on February 29, 1980.

b. Chemical Bank's Valuation

Chemical Bank applied two analytical approaches: (1) A discounted cash-flow analysis, and (2) a comparison with the financial performances of publicly traded companies in a similar line of business. Chemical Bank did not use a breakup value analysis because it believed a buyer in early 1980 could not have maximized the return on his investment by liquidating Advance and selling off its assets. Chemical Bank declined to employ acquisition multiples (information relating to mergers and acquisitions) because there were no acquisitions of publishing businesses of Advance's size and complexity between 1975 and 1980, and Chemical concluded that other acquisitions were not sufficiently similar to be meaningful.

After calculating a value for Advance as a whole, Chemical Bank derived appropriate discounts and premiums and computed a value for petitioner's Advance stock. Based on Advance's financial data from the preceding 5 years, Chemical Bank projected the future cash-flow for the next 10 years and discounted it back to 1979 in order to determine the net present value of Advance. In forecasting the future growth of Advance, Chemical Bank used a growth rate of 10 percent, which was the rate that Advance had experienced prior to the date of valuation. A discount rate for the risk of the investment of 18 or 19 percent was applied. Under the discounted cash-flow model, Chemical Bank figured that Advance was worth between $ 738 and $ 814 million.

Chemical Bank chose eight newspaper or magazine publishers and compared them to Advance by earnings, book value, cash-flow, earnings before interest and taxes, and earnings before depreciation, interest, and taxes. These comparisons revealed a range of value for Advance between $ 854 and $ 926 million.

Chemical Bank assumed a worst-case scenario for the potential buyer's consideration of realizable value, viz, that the right to 22 percent of declared dividends was the common shareholder's sole method for extracting cash from the corporation. Using the midpoint number from the range of value produced by the discounted cash-flow analysis and the comparable businesses analysis, Chemical Bank computed that the Advance common stock was worth 22 percent of $ 906 million or $ 201.31 million. Chemical Bank applied a control premium of 7 percent to the class A common shares over the class B common shares. Finally, a 15-percent discount for lack of marketability was applied. Chemical Bank valued the Advance common stock at $ 1.831 million and $ 169.422 million for the class A common stock and the class B common stock respectively, or $ 171,253,000 altogether.

c. Baniewicz' Report

Baniewicz valued all the properties owned by Advance on February 29, 1980, and derived a total value of $ 1,555,773,000. He subtracted foreseeable capital expenditures and unfunded pension liabilities and then added excess cash, arriving at a value of $ 1,505,943,000. Baniewicz' ultimate conclusion of the value of all of Advance thus agrees with the arithmetic sum value calculated by Goldman Sachs.

Baniewicz' report went on to place a value on the preferred stock and to reach a value for the common stock by subtracting the value of the preferred from the value of Advance. Cf. Rev. Rul. 83-120, 1983-2 C.B. 170. Finally, he allocated the value he determined for the common stock between the class A

common and the class B common.

The section of Baniewicz' report that discussed the value of the preferred stock was stricken from the record. The report was based on two erroneous assumptions unsupportable on this record: (1) That the preferred stock enjoyed only those rights and privileges that respondent's legal experts said it did (a best-case scenario), and (2) that a willing buyer and willing seller would have approached the valuation of the Advance common stock by determining the net value of all assets and subtracting the value of the preferred stock.

The hypothetical willing buyer is presumed to be aware of all the pertinent facts. Such a buyer would be privy to the differing legal opinions on the common shareholder's ability to defeat the claims of the preferred shareholders to 78 percent of Advance's earnings. We do not believe that a willing buyer would have chosen to ignore the legal advice of petitioner's five legal experts. A fully informed buyer would not have assumed the correctness of the advice of respondent's five legal experts. We, therefore, cannot accept Baniewicz' underlying assumptions about the rights and privileges of the preferred stock. Rather, the record makes clear that any willing buyer would have considerable uncertainty about the common shareholder's rights to confine the preferred stock's interest in Advance to less than 78 percent of the value of Advance. Because Baniewicz' report assumes a confident willing buyer, certain that the preferred shareholders' right to 78 percent of declared dividends can be defeated, who is unmoved by the warnings of petitioner's legal experts, this portion of his analysis assumed a transaction at odds with the economic interest of any buyer. Consequently, this portion of his report was not useful to us and was stricken from the record. Estate of Hall v. Commissioner, 92 T.C. 312, 338-339 (1989).

The other problem with Baniewicz' report was his use of the subtraction method for valuing the Advance common stock. Although the subtraction method may on occasion be an appropriate valuation method, some foundation for applying the subtraction method to a corporation whose capital structure is as unusual and complicated as Advance's is necessary. Respondent had to establish that the subtraction method was appropriate to valuing Advance. While Baniewicz was on the stand, respondent's counsel promised that two of his subsequent witnesses would testify that in their experience (Baniewicz had no qualifying experience on this point), a willing buyer would use the subtraction method to value the common stock in Advance. In fact, their proffered testimony fell far short and was ultimately stricken from the record as irrelevant. As a result, Baniewicz' employment of the subtraction method was not meaningful. Without the subtraction method, Baniewicz' report says nothing more than that the sum of the values of all of the assets of Advance was $ 1.5 billion.

Conclusion

The first issue we must resolve is whether the parties correctly applied the willing buyer, willing seller test to these facts. Each party accuses the other on brief of adopting a rigid formulaic analysis that does not do justice to the complexity of this factual situation. Hamm v. Commissioner, 325 F.2d 934, 940 (8th Cir. 1963).

The choice of the appropriate valuation methodology for a particular stock is, in itself, a question of fact. O'Malley v. Ames, 197 F.2d 256, 258 (8th Cir. 1952); Riss v. Commissioner, 56 T.C. 388, 430 (1971), affd. sub nom. Commissioner v. Transport Mfg. & Equipment Co., 478 F.2d 731 (8th Cir. 1973), affd. cause remanded 478 F.2d 1160 (8th Cir. 1973).

Goldman Sachs analyzed four benchmarks of value that willing buyers use to determine the value of stock to be purchased, and Chemical Bank valued Advance by utilizing discounted cash-flow and Advance's comparative position. These represent perfectly acceptable applications of the willing buyer, willing seller test. Respondent, however, failed to qualify any expert who could testify that a willing buyer and a willing seller would value the Advance common stock using the subtraction method. Moreover, in the face of the legal uncertainty confronting a willing buyer and willing seller on whether the common could limit the preferred's 78-percent interest in dividends and perhaps in the value of the whole business, we believe that no willing buyer or willing seller being fully informed would have used such a method to determine the value of the common stock. Respondent has no support for using the subtraction method.

Respondent faults petitioner for adhering inflexibly to a "joint sale" theory. Respondent characterizes petitioner's position as follows: because a third party contemplating a merger with Advance would be unsure of the common shareholder's rights to eliminate the claims of the preferred shareholders and would be highly averse to protracted and expensive litigation, the third party would not agree to the merger. Thus, the only way for the common shareholder to realize value, other than through dividend distributions, would be to effect a merger transaction with the preferred shareholders' blessing. The terms of such a merger would require that 78 percent of the value of Advance would go to the preferred shareholders, and the common shareholder could not hope to get more than 22 percent of the total value of Advance.

We do not find any merit in respondent's attacks on petitioner's "joint sale" theory, and we note that respondent misstates petitioner's theory. n27 Petitioner's theory is that a fully informed willing buyer would take into account the uncertain state of the common stock's rights in deciding what value to pay for it.

n27 Indeed it was one of respondent's experts that assumed that the willing buyer, willing seller test required the preferred shareholders to consent to the sale of all Advance stock. This testimony was stricken as fundamentally flawed.

Respondent argues that this theory is unsound for several reasons. First, respondent contends that the common shareholder would protect the third party by indemnifying it against any claims of the preferred. As noted above, however, an indemnification provision would simply allocate the risk from the third party to the common shareholder. It in no way lessens the risk itself; rather it lessens the value the seller may realize. Respondent's second argument, that corporations are not as risk averse as petitioner claims, is irrelevant because: (1) While a willing buyer may employ the corporate form to effect the acquisition, we do not assume that the willing buyer would be a corporation and, more importantly for this case, (2) it is an assertion completely without support in the record. Respondent then notes that because the preferred shareholders would immediately seek an injunction, the common shareholder and the third party buyer would not have to wait to find out if their planned defeat of the preferred's claims would work. We do not think that this would end the suspense because the outcome of the litigation is not clear to us. Respondent's fourth argument is that the preferred shareholders would settle the litigation for the capitalized value of future dividends. Obviously, they would not if they were represented by Messrs. Landau, Mundheim, or Lipton.

The foundation of respondent's approach is his view that we must resolve the question of the various legal entitlements of the common and preferred stock in his favor. Respondent's position assumes that a willing buyer would not be uncertain about his ability to dispose of the claims of the preferred shareholders. In effect, respondent argues that a willing buyer would not hesitate to pay $ 1,231,800,000, as Baniewicz suggests, for the Advance common stock because of his ability to eliminate the preferred stock. This is an astonishing proposition on this record. Noted legal experts have given contrary views in this case. Petitioner's experts' opinions were unscathed by cross-examination. Their opinions were well reasoned and persuasive. We believe the likelihood of the common shareholder's legal rights to eliminate the preferred is, at best, in equipoise. The one thing the willing buyer would not have had is certainty about the ability to eliminate the preferred at the values that respondent used in his subtraction method.

Not only is there no support in the record for the subtraction method in this case, but we conclude that it is far too simplistic a method for the valuation of the Advance common stock. An underlying fallacy in this theory of valuation is the assumption that the sum of the fair market values of the preferred stock and the common stock, each sold independently to separate buyers, must equal the net value of the entire company as a going concern. Massive amounts of credible evidence in this case indicate that this assumption is not supportable.

If all the common and preferred stock in the company were sold at one time to a single buyer, we have little doubt that the price would approach the values that the experts on both sides determined for the business as a whole. But if either class of stock is sold separately, a buyer cannot be reasonably certain of his ability to eliminate or control the other shareholders, and the price will be less than its proportionate share of the total value. Although the subtraction method may be suitable for other situations, its use is inappropriate for Advance. We conclude that the correct value of the Advance common stock on February 29, 1980, was $ 176 million.

A subissue that we must address is the value of the 300 shares of class B common stock that Newhouse left to his wife by will. Petitioners submitted Goldman Sachs' report that states that the 300 shares of class B common stock were worth $ 51,757,576. Goldman Sachs calculated this figure by allocating $ 170,800,000 (of the value of the common stock, $ 176,000,000,) to the class B and $ 5,200,000 to the class A. This allocation was derived from Goldman Sachs' initial public offering analysis. Petitioner argues that, because the stock conveyed no control and because the value of the 300 shares of class B common stock must be determined without reference to any other stock Mitzi held, the correct value was $ 51,757,576. Petitioner also submitted an analysis of the value of the class B common stock by Chemical Bank. Chemical Bank determined the value of the 300 shares of class B common stock to be $ 51,340,000.

Respondent argues that the correct value of the 300 shares of class B common stock is $ 246 million. As support for this position, respondent relies on reports that were not admitted into evidence. The figure wasderived by discounting his value for the class B stock by 33 percent for lack of control and substantial voting restrictions. Baniewicz' argument supporting his calculation allocating his figure for the total value of Advance common stock between the class A and the class B was not admitted into evidence.

We have already concluded that the combined value of class A and the class B is $ 176 million. Respondent argues that a 33-percent discount of the value of class A to reflect the differential voting rights is appropriate to find the value of the class B, but offers no evidence to support his position. We conclude that Goldman Sachs' analysis produces a reasonable and correct value for the class B stock. Goldman Sachs determined that the best way to realize the value in the Advance stock would be through a public sale. First, it would be necessary to recapitalize Advance creating a single class of common stock. Goldman Sachs determined that the preferred stock and the class B stock would be traded for equal amounts of the new stock but the class A common stock would be traded for three shares of the new stock. The value of the class A common stock was $ 5.2 million and the value of the class B was $ 170.8 million. The value of 300 shares of class B common stock was $ 51,757,576.

II. VALUE OF N.B. CO. COMMON STOCK

In the notice of deficiency, the value determined for the 100 shares of N.B. Co. stock was $ 91,600,000 which is simply 44.44 percent of $ 206,400,000. On brief, respondent argues Baniewicz' determination that a 16.67-percent "discount" would be appropriate. n28 Petitioner derives the value of $ 59,600,000 by applying a discount of 35 percent to the 44.44 percent block of stock. The sole dispute that we must resolve is whether a discount is appropriate and, if so, how large it should be.

n28 Baniewicz calculated that the value of the 100 shares would be $ 76,372,500. Respondent did not explain the discrepancy between his figure and Baniewicz' result.

Respondent's determination in the notice of deficiency, which he supported through the testimony of William B. Cate, is undeniably wrong. Ignoring discounts for lack of control and lack of marketability is contraryto long-established valuation methods well accepted by the Courts in cases presenting the value of stock in closely held corporations. Estate of Andrews v. Commissioner, 79 T.C. 938 (1982); Estate of Bright v. United States, 658 F.2d 999, 1002-1003 (5th Cir. 1981); Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963). The discounts are conceptually distinct: (1) The discount for lack of control reflects the minority shareholders' inability to compel liquidation and inability to realize a pro rata share of the corporation's net asset value. Harwood v. Commissioner, 82 T.C. 239, 267 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); (2) the lack of marketability discount reflects that there is no ready market for the shares of a closely held corporation. Estate of Andrews v. Commissioner, supra at 953. While the appropriate amount of discount to apply is a question of fact, Ward v. Commissioner, 87 T.C. 78, 109 (1986), it is unreasonable to argue that no discount should be considered for a minority interest in a closely held corporation.

A. Goldman Sachs' Report

Petitioner submitted a report in which Goldman Sachs determined that a willing buyer would pay a willing seller $ 59.6 million for the 100 shares of N.B. Co. common stock on February 29, 1980. In preparing the report, Goldman Sachs reviewed the corporate bylaws, the Certificate of Incorporation, and the financial statements from the preceding 5 years. Additionally, Goldman Sachs read the 1980 valuation report prepared by Chemical Bank n29 and the valuation report prepared by respondent's expert, Baniewicz.

n29 The 1980 valuation report of Chemical Bank was the basis of petitioner's claim on its estate tax return that the N.B. Co. stock was worth $ 68.3 million. For purposes of trial, however, the parties agreed to use $ 206.4 million for the value of the entire company and so petitioner discarded Chemical Bank's

1980 valuation.

Goldman Sachs concluded that the 100 shares of commonstock, representing 44.44 percent of the stock, lacked voting control. In other words, this block of stock neither controlled management nor controlled cash flow or distributions. A buyer of the 100 shares would not have the power to sell corporate assets or to register the stock with the Securities and Exchange Commission preparatory to an initial public offering. Because the stock interest had no control over corporate affairs, Goldman Sachs concluded that a buyer of the stock would hope to realize the value from his investment when the stock was initially offered to the public.

Goldman Sachs believed that a public offering was unlikely. In view of the large size of the company, a public offering would not have been feasible under market conditions at the valuation date. Moreover, while N.B. Co. had in excess of $ 25 million in cash and virtually no debt, management had expressed no interest in taking the company public. Furthermore, N.B. Co. had, as of the valuation date, arranged to sell its five television broadcasting stations that generated more than half of N.B. Co.'s revenue and planned to reinvest the proceeds in new television broadcasting stations.

Because liquidation of the corporation was unlikely, Goldman Sachs concluded that the only means of disposing of the 100 shares of N.B. Co. common stock would be through private placement. Because the 100 shares do not convey control over the company, no control premium would be warranted. The private placement investor would expect to realize value on his investment only through the receipt of dividends and the eventual resale of his shares. Goldman Sachs estimated the value of the future annual dividend income from the 100 shares at $ 889,000 based on historical dividends for 1978 and 1979. Although the corporation had the ability to pay higher dividends, the private placement investor would not have the power to compel it to do so. At the valuation date, publicly traded corporate bonds were yielding 14 and 15 percent and a buyer would not have accepted a lower rate of return on his investment from his N.B. Co. stock. Additionally, Goldman Sachs determined that in circumstances that suggest no expectation of a public offering for at least 5 years, the investor would not pay more than the total value discounted by between 33 to 55 percent. Goldman Sachs concluded that a discount of35 percent would be appropriate to the N.B. Co. common stock. Applying a discount of 35 percent to 44.44 percent of the total value of N.B. Co. of $ 206.4 million, Goldman Sachs derived a fair market value for the 100 shares of common stock of $ 59.6 million.

B. Baniewicz' Report

Baniewicz determined that the 100 shares of stock would bear a control premium because, though 44.44 percent was not a majority interest, it was the "largest outstanding ownership interest" and thus "would participate in decisions controlling the affairs of the corporation." Because the stock did not represent a majority interest, Baniewicz concluded that a 25-percent control premium, rather than a full 50-percent control premium, was warranted. In order to attain a 25-percent control premium, Baniewicz applied a 16.67-percent discount from full liquidation value of $ 206.4 million because the liquidation value included a 50-percent control premium that had to be reduced. Thus, Baniewicz' 16.67-percent discount is actually a reduced control premium.

We cannot accept respondent's position. Control means that, because of the interest owned, the shareholder can unilaterally direct corporate action, select management, decide the amount of distribution, rearrange the corporation's capital structure, and decide whether to liquidate, merge, or sell

assets. The owner of the 100 shares of N.B. Co. could not accomplish any of these actions. Baniewicz explained at trial that the owner of the 100 shares would have effective control because he would have the largest block of stock. Having a substantial or even the largest block of stock does not necessarily create effective control, and it certainly does not in this closely held corporation. The owner of the 100 N.B. Co. shares enjoys no attributes of control. Participating in corporate decisions is a right that any stock interest may enjoy (and which in this case the other stock interests also enjoyed), but unless that interest controls (which in a closely held corporation typically means a majority interest), a control premium is unsupportable.

We conclude that petitioner's position, as explained in the Goldman Sachs report, is reasonable and fair. The discount of 35 percent combines discounts for lack of control and lack of marketability. A combined discount of 35 percent is well within precedent. See Estate of Watts v. Commissioner, T.C. Memo. 1985-595, affd. 823 F.2d 483 (11th Cir. 1987); Drybrough v. United States, 208 F. Supp. 279 (D. Kan. 1962). n30 We conclude that the value of the 100 shares of N.B. Co. stock was $ 59,600,000 on February 29, 1980.

n30 See also Martin v. Commissioner, T.C. Memo. 1985-424.

In light of the foregoing, concessions, and the need to calculate various administration expense deductions,

Decision will be entered under Rule 155.

LEXSEE 1990 U.S. Tax Ct. LEXIS 9

Estate of Samuel I. Newhouse, Deceased, Samuel I. Newhouse, Jr. and Donald E. Newhouse, Executors, Petitioner, v. Commissioner of Internal Revenue, Respondent

Docket No. 23588-83

UNITED STATES TAX COURT

94 T.C. 193; 1990 U.S. Tax Ct. LEXIS 9; 94 T.C. No. 14

February 28, 1990

February 28, 1990, Filed

DISPOSITION:

Decision will be entered under Rule 155.

SYLLABUS:

Decedent, N, owned all of the outstanding shares of class A voting and class B nonvoting common stock in a closely held corporation, A, at his death. Other family members owned all of the outstanding shares of A's preferred stock. A's corporate charter provided that the voting common stock had exclusive rights to elect the board of directors, that all three classes of stock participated pro rata in dividends declared out of earnings, that the preferred stock had a liquidation preference, and that only the common stock could vote on plans for merger. The preferred stock was authorized by statute to vote on corporate liquidation. Both P and R submitted testimony and reports of numerous expert witnesses about the rights of A's common shareholder under State law to extract wealth from the corporation

through redemption, dividends, or merger and liquidation. The experts, whose opinions were well-reasoned, disagreed about almost every issue, and we find that a willing buyer would have been uncertain about the rights and privileges of A's common stock. N also owned 100 shares of common stock in NB, and other family members owned the remaining 125 shares of NB. Held: Where a State law issue about the relative rights and duties of different classes of stock is incapable of resolution except through actual litigation, as evidenced by the profound disagreement of several noted experts, a willing buyer would experience uncertainty about the rights of the common shareholder. The willing buyer and willing seller would take into account the likelihood of protracted and unpredictable litigation in negotiating a purchase price. Held, further, the fair market value of N's stock in A is determined. Held, further, N's interest in closely held NB, representing 44.44 percent of the voting stock, does not control NB and will not carry a control premium. Held, further, the fair market value of N's NB common stock is determined.

COUNSEL:

Albert H. Turkus, Judith A. Mather, James A. Treaner III, Bernard J. Long, Jr., Linda A. Fritts, and Richard L. Braunstein, for the petitioners.

Robert S. Shilliday, Jr., Albert L. Sandlin, and Howard P. Levine, for the respondent.

JUDGES:

Williams, Judge.

OPINIONBY:

WILLIAMS

OPINION:

The Commissioner determined a deficiency in the Federal estate tax due from the estate of Samuel I. Newhouse in the amount of $ 609,519,855. The Commissioner also determined an addition to tax for fraud pursuant to section 6653(b) n1 in the amount of $ 304,759,927. The Commissioner has conceded the addition to tax for fraud.

n1 All section references are to the Internal Revenue Code of 1954 as amended and in effect at decedent's death.

After concessions, the remaining issues for our decision are: (1) The value, for purposes of the Federal estate tax, of 10 shares of class A common stock and 990 shares of class B common stock of Advance Publications, Inc., owned by Samuel I. Newhouse, Sr. (Newhouse) at the time of his death, and (2) the value, for purposes of the Federal estate tax, of 100 shares of common stock in Newhouse Broadcasting Co. owned by Newhouse at the time of his death.

FINDINGS OF FACT

Some of the facts were stipulated and are so found. Newhouse died testate on August 29, 1979. His sons, S.I. Newhouse, Jr. (S.I., Jr.), and Donald E. Newhouse (Donald), were duly appointed executors of his estate.At the time of his death, Newhouse resided in Palm Beach, Florida. The executors timely filed a Federal estate tax return on May 27, 1980, and elected to value the Newhouse estate as of February 29, 1980, the alternate valuation date.

On Schedule B of the estate tax return, the executors valued the 10 shares of class A common stock and the 990 shares of class B common stock in Advance Publications, Inc. (Advance), at $ 8,595,000 and $ 170,181,000, respectively, based on an appraisal by Chemical Bank. Also on Schedule B of the estate tax return, the executors valued the 100 shares of common stock in Newhouse Broadcasting Co. (N.B. Co.) at $ 68,300,000. In the notice of deficiency dated May 18, 1983, the Commissioner valued the 10 shares class A common stock and the 990 shares of class B common stock in Advance at $ 420,000,000 and $ 811,800,000, respectively, and valued the 100 shares of common stock in N.B. Co. at $ 91,600,000. On August 12, 1983, petitioners timely filed their petition in this case.

I. VALUE OF ADVANCE COMMON STOCK

A. Organization and Operations

Advance is a corporation organized under the laws of the State of New York that publishes newspapers and magazines.Advance's principal place of business was and always has been in New York. At the time of Newhouse's death, the officers of Advance were: Newhouse, President and Treasurer; Mitzi Newhouse, Newhouse's wife, Vice President; S.I., Jr., Vice President; Donald, Secretary.

In 1922, Newhouse and Judge Hyman Lazarus, a New Jersey lawyer, formed a partnership to acquire 51 percent of the stock of the Staten Island Advance which published a newspaper, The Staten Island Advance. In 1924, Newhouse bought Judge Lazarus' shares and soon after purchased the remaining 49 percent. Newhouse filed a Certificate of Incorporation (the certificate) for the Staten Island Advance Co., Advance's predecessor, on May 12, 1924. From the time Newhouse incorporated Advance, Newhouse's brothers Theodore (Ted) and Norman were employed at Advance, and all three brothers shared equally in the management of the business.

In 1932, Advance acquired the controlling interest in the Long Island Daily Press Publishing Co., the first of a long line of newspaper acquisitions. In 1939, Advance bought two newspaper properties in Syracuse, New York. Advance further enlarged its operations by purchasing an Oregon newspaper in 1950 and newspapers in Alabama in 1956. On February 29, 1980, Advance operated either by itself or through a wholly owned subsidiary, 50 newspapers in 22 markets as well as magazines published by Conde Nast Publications, Inc. (Conde Nast). n2 After each acquisition one of the brothers was assigned primary responsibility for the acquired property and assumed management of its operations. To provide on-site management, one of the three brothers would visit each newspaper located outside of the New York City area weekly or monthly. The visiting brother would meet with the local publisher and department heads to discuss circulation, current advertising and advertising development, accounts, compensation plans, editorial quality, production facilities, and distribution. After S.I., Jr., and Donald joined the management team, the five family members would meet frequently to discuss the operations of the out-of-town newspapers and plans for the acquisition of new properties. The topics at the family meetings included the purchase of new capital equipment, consideration of policies about purchasing newsprint, the setting of rates, and discussions of circulation techniques and distribution policies.

n2 As of Feb. 29, 1980, Advance owned and operated the following newspapers: The Staten Island Advance in New York, New York; the National News Service Co. in Washington, D.C.; The Birmingham News in Birmingham, Alabama; The Huntsville News and The Huntsville Times in Huntsville, Alabama; The Jersey Journal in Jersey City, New Jersey; The Post-Standard, The Syracuse Herald-Journal, and the Syracuse Herald-American in Syracuse, New York; The St. Louis Globe in St. Louis, Missouri; The

Ann Arbor News in Ann Arbor, Michigan; The Bay City Times in Bay City, Michigan; The Flint Journal in Flint, Michigan; The Grand Rapids Press in Grand Rapids, Michigan; The Jackson Citizen Patriot in Jackson, Michigan; The Kalamazoo Gazette in Kalamazoo, Michigan; The Muskegon Chronicle in Muskegon, Michigan; The Saginaw News in Saginaw, Michigan; The Mississippi Press and The Mississippi Press Register in Pascagoula, Mississippi; The Mobile Register, The Mobile Press, and The Press-Register in Mobile, Alabama; The Star-Ledger in Newark, New Jersey; The Oregonian and the Oregon Journal in Portland, Oregon; Parade in New York, New York; The Patriot, The Evening News, and the Sunday Patriot News in Harrisburg, Pennsylvania; The Plain Dealer in Cleveland, Ohio; The Union, The News, and the Republican, in Springfield, Massachusetts; The Times-Picayune and the States Item in New Orleans, Louisiana. Advance also owned Electric Delivery System, Inc., a distribution and delivery company for the Times-Picayune and Mercury Express, Inc., a distribution and delivery company for The Birmingham News.

As of Feb. 29, 1980, Advance operated the following magazines: Vogue, Vogue Guides, Glamour, Mademoiselle, House & Garden, House & Garden Guides, Bride's, Self, Street & Smith, Analog, Vogue Patterns, and GQ in the United States; Vogue in Brazil, Australia, and Germany; Vogue, House & Garden, and Bride's & Setting Up Home in England, Vogue, Vogue Shopping, L'Uomo Vogue, Casa Vogue, Uomo Mare, Vogue Bambini, and Lei in Italy; Vogue, Vogue Beaute, Vogue Homes, Maison & Jardin, Maison, and Club Maison in France.

As of Feb. 29, 1980, Advance also owned Art Gravure and Diversified Printing, two printing companies. Advance also owned a 49-percent interest in Catawba Newsprint Co., a newsprint manufacturing company.

When there was no scheduled meeting, the five family members, who all arrived at work very early in the morning, would speak with each other by telephone before other employees had come to work. Between monthly visits they communicated by telephone with the local management of newspapers they oversaw and regularly received financial reports, advertising reports, circulation reports, and other pertinent data. Financial and operating reports from the out-of-town newspapers were shared among the five family members. The family members considered the periodic visits to the out-of-town properties and the consensus decision-making to be hallmarks of their management style. Throughout Advance's history, all major decisions were reached by unanimous agreement after discussion in which all partook. Each visiting family member would write a report on the management of the out-of-town newspaper (issues, decisions, future) that was circulated to the other family members. While no person dominated the discussions, some deference in matters relating to a particular newspaper was shown to the family member who was responsible for that newspaper. Decisions were never made by voting. The consensus style of management has been utilized throughout the time the family has managed Advance. Despite disagreements, discussions always proved fruitful and consensus was reached.

In the 1950's S.I., Jr., and Donald joined their father and uncles in the business. Working primarily under the supervision of their uncles, S.I., Jr., and Donald learned the family business from the ground up. In the beginning both Donald and S.I., Jr., attended the family management meetings as mere observers but by the mid-1960's their advice was sought by their father and uncles. After several years of learning editorial and production management, S.I., Jr., and Donald were each assigned to manage an out-of-town property. S.I., Jr., worked in the Conde Nast organization and Donald started at the Long Island and the Jersey City newspapers.

The management of Advance was eventually shared among all five of the family members. Until the last year of his life when he became too ill to travel, Newhouse supervised the newspaper properties in Newark, New Jersey; Syracuse, New York; Harrisburg, Pennsylvania; St. Louis, Missouri; New Orleans, Louisiana; and Mobile, Alabama. Ted managed the newspaper properties in Portland, Oregon; Birmingham, Alabama; Huntsville, Alabama; Springfield, Massachusetts and later the Booth divisions in Michigan. Norman was responsible for the newspaper in Cleveland, Ohio, and later for the newspapers in New Orleans and Mobile when he moved to New Orleans in the late 1960's. S.I., Jr., made periodic visits to the newspaper in Cleveland, Ohio to help Norman and managed Conde Nast; after his father became ill, he oversaw St. Louis. Donald traveled with Ted to the newspapers in Birmingham and Huntsville. After his father became ill, Donald took over supervision of the operations at Newark, Syracuse, Harrisburg, Jersey City, and Staten Island.

Throughout its history, Advance had a policy of reinvesting earnings to finance further acquisitions. Advance traditionally minimized the dividends declared. From 1973 to 1979, dividends were declared and paid at their highest historical level in the amount of $ 200 per share although in 1977, 1978, and 1979, Advance had retained earnings of $ 411,206,000, $ 503,858,000, and $ 475,969,000, respectively, and total operating income of $ 148,217,000, $ 173,947,000, and $ 159,895,000, respectively. Each shareof stock received the same amount of dividends.

B. Capital Structure

On August 26, 1924, the stock of Advance, viz, 200 shares of common stock, par value $ 100, was reclassified into 1,000 shares, no par value.

By a "Certificate of Increase of Number of Shares, Change of Previously Authorized Shares and Classification of Shares" filed August 26, 1936, Advance authorized 6,000 no-par shares divided equally among class A, class B, and class C common stock (the 1936 amendment). The right to vote for the board of directors was given to the holders of the class A stock exclusively. The class B and class C shareholders were explicitly denied the right to vote on certain matters referenced in the New York Stock Corporation Law and General Corporation Law. n3 Furthermore, the class B stock and the class C stock could be redeemed in whole or in part at the prices of $ 175 and $ 199.50 per share, respectively, after September 1, 1939, at the discretion of the board of directors. The 1936 amendment also provided for equal participation in dividends of all three classes of stock, and finally, established a liquidation preference in the Class B stock of $ 175 per share, then in the class C stock of $ 199.50 per share and ultimately in the class A stock of $ 333 per share, with the residual value to be divided equally among all classes.

n3 Specifically the Class B and the Class C shareholders were denied the right to vote:

in a proceeding for mortgaging the property and franchises of the Corporation, pursuant to Section 16 of the Stock Corporation Law; for guaranteeing the bonds of another Corporation, pursuant to Section 19 of the Stock Corporation Law; for sale of the franchises and property, pursuant to Section 20 of the Stock Corporation Law; for establishing priorities or creating preferences among several classes of stock, pursuant to Section 36 of the Stock Corporation Law; for consolidation, pursuant to Section 86 of the Stock Corporation Law; for voluntary dissolution, pursuant to Section 105 of the Stock Corporation Law; for change of name, pursuant to the General Corporation Law * * *.

On December 27, 1938, Advance filed a "Certificate of Change of All Its Previously Authorized Shares Without Par Value Issued or Unissued, (1) class 'A' Stock Into the Same Number of Shares of Common Stock, Without Par Value; (2) class 'B' Stock and class 'C' Stock Into the Same Number of Shares of Preferred Stock, Without Par Value And Reclassification of Shares" (the 1938 amendment). This amendment provided that the 6,000 shares of authorized class A, class B, and class C common stock would be reclassified to create two classes of stock: the 2,000 shares of class A would become no-par common stock and the 4,000 shares of class B and class C would become no-par preferred. The amendment further provided that the preferred shareholders would receive noncumulative dividends of $ 12 per share before any dividends would be paid to the common shareholders, and the remainder of declared dividends would be shared proportionately by the common and the preferred shareholders. The preferred shareholders were also entitled to a liquidation preference of $ 187.25 per share before payment to the common shareholders of $ 333 per share could be made. The residual value would be divided pro rata among all shareholders. The entire voting power for the election of the board of directors was reserved to the common shareholders and the voting rights of the preferred shareholders were explicitly restricted. n4 The amendment further provided that the preferred stock could be redeemed after September 1, 1944, at $ 187.25 per share at the discretion of the board of directors.

n4 The preferred was not entitled to vote:

in a proceeding for mortgaging the property and franchises of the Corporation, pursuant to Section 16 of the Stock Corporation Law; for guaranteeing the bonds of another Corporation, pursuant to Section 10 of the Stock Corporation Law; for sale of the franchise and property, pursuant to Section 20 of the Stock Corporation Law; for establishing priorities or creating preferences among the several classes of stock, pursuant to Section 86 of the Stock Corporation Law; for voluntary dissolution, pursuant to Section 105 of the Stock Corporation Law; for change of name, pursuant to the General Corporation Law * * *.

On December 27, 1949, Advance filed a "Certificate of Amendment of Certificate of Incorporation" (the 1949 amendment), which provided that the preferred and the common stock would participate proportionately in all dividends. The amendment retained the preferred's liquidation preference of $ 187.25, but abandoned the common's liquidation preference of $ 333 per share and the preferred's right to share in the residual value. The common shareholders were given exclusive right to the residual liquidation value. With one important exception, the voting rights remained substantially the same. n5 Also in 1949, Advance changed its name from Staten Island Advance Co. to Advance Publications, Inc.

n5 Prior to the 1949 amendment, the preferred shareholders had been specifically prohibited from voting on "establishing priorities or creating preferences among the several classes of stock" but this limitation was removed in the 1949 amendment.

On December 22, 1952, Advance filed another "Certificate of Amendment of Certificate of Incorporation" which provided for the transformation of the 2,000 shares of authorized common stock into 20 shares of class A common voting stock and 1,980 shares of class B common nonvoting stock (the 1952 amendment). A "Certificate of Amendment of Certificate of Incorporation" was filed on January 5, 1955, to change the number of directors.

On December 27, 1956, the last change in Advance's corporate structure was made by "Certificate of Amendment to Certificate of Incorporation" n6 (the 1956 amendment) stating that: (1) Dividends were to be shared equally between the class A common, the class B common, and the preferred shareholders,

(2) and the preferred shareholders were entitled to a liquidation preference of $ 187.25 per share before the class A common and the class B common shared equally in the residual liquidation value, and (3) the limitation on the voting rights of the preferred shareholders on voluntary dissolution was removed.

n6 All future references in this opinion to "the certificate" are to the original Certificate of Incorporation as amended.

Prior to 1936, Newhouse owned 786 of the 1,000 authorized shares of Advance no-par common stock. After the 1936 amendment, Newhouse's shares were changed to 1,000 shares of class A common. At this time, 1,000 shares of class B common were issued to his wife, Mitzi Newhouse (Mitzi), and 500 shares of class C common were issued in trust for each of his sons, S.I., Jr. and Donald. After the 1938 amendment, Newhouse's class A common was exchanged for 1,000 shares of common stock, Mitzi's shares of class B common were exchanged for 1,000 shares of preferred stock and the 500 shares of class C common stock held in each trust for S.I., Jr., and Donald were exchanged for shares of preferred stock. On or about December 27, 1938, an additional 250 shares of preferred stock were issued to each trust for S.I., Jr., and Donald. In 1947, 500 shares of preferred stock apiece were issued to Ted and Norman. In 1948, the trust distributed 400 shares of preferred stock to S.I., Jr., and in 1950 the trust distributed to him an additional 350 shares of preferred stock. In 1950, the trust distributed 750 shares of preferred stock to Donald.

At the time of Newhouse's death, Newhouse still owned all the common stock andMitzi Newhouse owned 1,000 shares of preferred stock, S.I., Jr., and Donald each owned 750 shares of preferred stock and Ted and Norman each owned 500 shares of preferred stock. By will, Newhouse left 300 shares of Advance class B common stock to Mitzi.

In 1959 Advance and all of its shareholders executed separate agreements providing that at their deaths, Advance would redeem enough stock from the shareholder's estate to cover Federal estate taxes. The 1959 agreements between Advance and Ted, Norman, S.I., Jr., and Donald were superseded by a shareholders' agreement in 1974. The 1959 agreement between Advance and Mitzi was superseded in 1978 when the shareholders' agreement executed in 1974 was amended to include Mitzi's stock. The 1959 agreement between Advance and Newhouse continued in effect until the time of Newhouse's death.

On April 24, 1974, Advance, Newhouse, Ted, Norman, S.I., Jr., and Donald executed an agreement limiting the rights of any subsequent owner of the preferred stock who had not executed the agreement to dispose of their stock (the 1974 shareholders' agreement). The purpose of the 1974 shareholders' agreement was to:

make certain the continued ability of Advance to operate as a closely held corporation with a harmonious group of shareholders, and to continue its management policies and procedures which have proven successful in the past, despite change which may result from the deaths or other transfers of shares by Theodore Newhouse, Norman N. Newhouse or Samuel I. Newhouse, Sr.

Particularly, the family members were concerned with the fragmentation of closely held, family-owned companies that they felt frequently occurred in the newspaper industry.

The 1974 shareholders' agreement provided that in the event of a sale or exchange of preferred stock, Advance would first have the right to buy the stock on the same terms as offered by the prospective buyer. Furthermore, upon the determination of a majority of the board of directors, Advance was given the right to acquire all or any part of the shares of preferred stock from a shareholder upon the death of a preferred shareholder, upon an involuntary transfer of preferred shares by operation of law or otherwise, or whenever a majority of the board of directors determined in good faith that (1) the preferred shareholder had violated an agreement with Advance resulting in a materially adverse effect on Advance or its shareholders, (2) the shareholder threatened to dispute Advance over his rights as a shareholder, or (3) when it would be in Advance's interests to reduce the number of preferred shareholders. If the preferred shareholder and Advance could not agree on the purchase price, the "fair value" of the preferred shares would be determined by Chemical Bank. Chemical Bank's decision would be binding on the preferred shareholders and Advance and was not judicially reviewable except as required by New York arbitration law.

The 1974 shareholders' agreement also provided that at the deaths of Ted, Norman, S.I., Jr., and Donald, and their spouses, their personal representatives could require Advance to purchase preferred stock from the respective estates in an amount that satisfied, but did not exceed, the estate's cost for taxes, funeral expenses, and administrative expenses of the estate. On April 18, 1978, the 1974 shareholders' agreement was amended to include Mitzi Newhouse's 1,000 shares of preferred stock. n7

n7 In 1980, the 1974 shareholders' agreement was amended to include 300 shares of Class B common stock that Mitzi received under S.I., Sr.'s will.

After Newhouse's death, the estate requested Chemical Bank to determine the value of the class A common and class B common stock that Newhouse held at the date of death. In a letter dated April 29, 1980, Chemical Bank explained that, after considering financial statements for the years 1973 through 1979 and the certificate, and after visiting some of Advance's key properties, Chemical Bank concluded that the class A common stock was worth five times as much per share as the class B common stock and that the class B common stock shares were equal in value to the preferred shares. The report concluded that the value of Newhouse's class A common stock had an aggregate value of $ 8,595,000, viz, $ 859,500 per share and the class B common stock had an aggregate value of $ 170,181,000, viz, $ 171,900 per share.

C. State Law Issues

There are three basic methods for a shareholder to realize value from a corporation: (1) The redemption of stock, (2) the payment of dividends or distributions, and (3) a merger or liquidation in which stock is cashed out or exchanged for value. Consequently, the rights and privileges of the various classes of Advance stock determine the constraints on a purchaser of the Advance common stock in attempting to realize the value of his purchase. On February 29, 1980, a buyer of the Advance common stock could have elected the board of directors. The preferred stock, however, could vote on and block corporate liquidation. On February 29, 1980, the Advance preferred stock could not be redeemed without the preferred shareholders' consent. The preferred stock could vote on any charter change that affected its class rights or gave new class rights or authorized a new class of stock. The preferred shareholders were entitled to 78 percent of all dividends declared out of current and retained earnings; the common stock was entitled to 22 percent.

The allocation of all the other rights and privileges pertaining to shareholders is unclear. The preferred shareholders might be entitled to participate equally in dividends declared from capital surplus. It is not clear whether a buyer of the Advance common stock could effect a merger to eliminate or cash out the preferred shareholders. It is also unclear what price the common shareholder would have to pay the preferred shareholders in an appraisal proceeding or a fair value proceedingunder New York law. The extent of the disagreement over the rights and privileges of the classes of Advance stock under New York law would be certain to result in litigation in the event that the common shareholder attempted to cash out the preferred stock through a merger or otherwise attempted to effect a constructive redemption or liquidation that returned less than 78 percent of the value of Advance to the preferred shareholders.

Petitioner's expert witnesses on New York law included Loeber Landau, a partner with Sullivan & Cromwell who specializes in corporate and securities law, Martin Lipton, a partner with Wachtell, Lipton, Rosen & Katz who specializes in corporate and securities law, and Robert H. Mundheim, Dean of the University of Pennsylvania Law School, whose area of expertise is corporate law. With the consent of respondent, petitioner also submitted reports without accompanying testimony from the law firm of Cravath, Swaine & Moore and from John McNally, a partner with the law firm of White & Case who specializes in corporate law.

Respondent's expert witnesses included Victor Brudney, a professor emeritus from Harvard Law School who taught finance and corporate law, Stanley Siegel, the associate dean of New York University Law School who teaches business planning, corporate finance, and tax, and John C. Coffee, Jr., a professor at Columbia University Law School who teaches corporate and securities law. With the consent of petitioner, respondent also submitted reports without testimony from Melvin A. Eisenberg, a professor of law at Boalt School of Law at the University of California at Berkeley, and James D. Cox, professor of law at Duke University.

The experts considered the relative rights and powers of the common and preferred shareholders. In preparing their reports the experts relied on the certificate, the 1974 shareholders' agreement, the New York Business Corporation Law (McKinney 1980) (the Business Corporation Law), and New York case law. The experts treated the class A common stock and the class B common stock as one block of identical shares for purposes of analyzing the relative rights of the common and the preferred stock. All the experts commenced their legal analysis from the standpoint of a prospective buyer of the common stock of Advance who would want to be able to realize value greater than his investment despitepossible hostility from the preferred shareholders.

1. Redemption

The Advance stock cannot be redeemed at the request of either the shareholders or the corporation except as permitted under the 1974 shareholders' agreement. The certificate would have to be amended to force a redemption of preferred stock. Although the certificate is silent on voting rights for amendments to the certificate, sections 804 and 801(b)(12) of the Business Corporation Law provide that an amendment to "fix, change or abolish" the "relative rights, preferences and limitations" of any shares of stock "including any provisions in respect of * * * the redemption of any shares" entitles the nonvoting shareholders to a class vote. Consequently, the preferred shareholders were entitled to a class vote on any proposed amendment to the certificate and by sheer numbers could have overruled any proposed amendment to the certificate adverse to their interests.

2. Dividends

The certificate requires that the common and the preferred shareholders participate pro rata in dividends. The common shareholder can receive only 1000/4500 or 22 percent of all dividends declared and paid out of earningswhile the preferred shareholders are entitled to 3500/4500 or 78 percent.

a. Source of Dividends

Section 4(a) of the certificate provides:

The holders of the Preferred Stock, the Class A Common Stock and the Class B Common Stock shall participate equally in proportion to the number of shares of such stock held by them respectively, whether Preferred Stock, Class A Common Stock or Class B Common Stock, in any and all dividends which may be declared and paid by the corporation out of its earnings. [Emphasis supplied.]

The experts disagreed about the common shareholder's entitlement to more than 22 percent of dividends declared from sources other than current or retained earnings such as from capital surplus. They also disagreed over whether the shareholder who forced a sale of assets would be entitled to more than 22 percent of dividends out of sales proceeds. The dispute focused in part over the characterization of the proceeds as earnings or capital surplus.

b. Stock Split or Stock Dividend

There were 1,000 shares of authorized and unissued common stock and 500 shares of authorized and unissued preferred stock on February 29, 1980. For the common shareholder to dilute the voting power of the preferred shareholders sufficiently to obtain the power to liquidate Advance, the certificate would have to be amended to authorize the issuance of new stock. Even if the common shareholder distributed all the authorized but unissued stock to himself, he would not have enough to force liquidation. Under New York law a stock split requires the approval of the shareholders. An attempt to dilute the voting power of the preferred shareholders through a stock split or a stock dividend would also require an amendment to the certificate.

New York law provides for preemptive rights to shareholders whose shares have unlimited dividend rights where the issuance of new shares would adversely affect the shareholders' dividend rights under section 622(b) of the Business Corporation Law. The experts disagreed whether a plan by the common shareholder to issue himself additional stock would give rise to preemptive rights in the preferred stock.

c. Nonpayment of Dividends

Despite the preferred shareholders' entitlement to 78 percent of declared and paid dividends, the common shareholder could, through his control over the board of directors, cease declaring dividends altogether. The experts disputed the extent that fiduciary obligations of the board to the preferred shareholders would limit their exercise of this power.

3. Liquidation or Merger

Under the terms of the certificate, the preferred shareholders are entitled to receive only $ 187.25 per share in the event of liquidation. All the experts assumed that a purchaser of the common stock would prefer liquidation as the means to extract the value of the investment and that the preferred shareholders would oppose liquidation.

a. Liquidation

Under New York law, liquidation requires a two-thirds majority. The experts agreed that as of February 29, 1980, the preferred shareholders were entitled to vote on the liquidation. Section 612(a) of the Business Corporation Law provides a vote for each share of stock of all classes of stock unless specifically denied by the certificate of incorporation. Because the right to vote on liquidation is not explicitly denied to the preferred shareholders, the statute authorizes a vote.

b. Mergers

The experts on both sides focused primarily on several possible merger transactions the common shareholder could employ to try to limit the preferred shareholders' rights. The objectives of any merger would be to dilute the preferred stock, to reduce its claim to dividends, and to eliminate the class. A vote on mergers is explicitly reserved to the common shareholders in the certificate. The possible mergers discussed were (1) the freeze-out merger, and (2) the freeze-in merger.

(1) Freeze-Out Merger

In a freeze-out merger, the common shareholder's goal is to force a merger that would require the preferred shareholders to exchange their Advance stock for cash. The common shareholder could then either retain his interest in the corporation, sell it, or liquidate it. Respondent's experts believed that the common shareholder could implement this plan because the common stock controls the election of the board of directors and has practical control over the board's decisions. The freeze-out merger would merge Advance into a corporation owned by the common shareholder or the purchaser. The common shareholder would exchange Advance common stock for the stock of the acquirer while the preferred shareholders exchanged their stock for cash. The experts disagreed about whether such a merger would be allowed over the objections of the preferred shareholders. Section 903(a)(2) n8 of the Business Corporation Law provides for a class vote if a plan for merger contains an amendment to the certificate which would entitle the shareholders of that class to vote. Business Corporation Law sections 804(a)(2) n9 and 801(b)(12) n10 provide a class vote on amendments that change or abolish the relative rights and preferences of any shares of stock. In light of these rights, the historical participation of the preferred shareholders in directing corporate affairs, their understanding that the shares were of equal value, on the one hand, and the common stock's right to elect the board of directors, approve sales of assets, and approve mergers, on the other, the experts dispute whether the preferred shareholders would have a class vote on the proposed merger, and, if they did not, whether the freeze-out merger would be allowed under New York law.

n8 Sec. 903(a)(2) provides that notwithstanding any provision in the certificate of incorporation:

the holders of shares of a class or series shall be entitled to vote and to vote as a class (on a merger) if the plan of merger * * * contains any provision which, if contained in an amendment to the certificate of incorporation, would entitle the holders of shares of such class or series to vote and to vote as a class thereon. In such case, in addition to the authorization of the merger * * * by vote of the holders of two-thirds of all outstanding shares entitled to vote thereon, the merger * * * shall be authorized by vote of the holders of a majority of all outstanding shares of each class or series.

n9 Sec. 804(a) provides a class vote on a certificate amendment that would:

(1) Exclude or limit their right to vote on any matter, except as such right may be limited by voting rights given to new shares then being authorized of any existing or new class or series.

(2) Change their shares under subparagraphs (b)(10), (11) or (12) of section 801 * * * or provide that their shares may be converted into shares of any other class or into shares of any other series of the same class, or alter the terms or conditions upon which their shares are convertible or change the shares issuable upon conversion of their shares, if such action would adversely affect such holders, or

(3) Subordinate their rights, by authorizing shares having preferences which would be in any respect superior to their rights.

n10 Secs. 801(b)(10), (11), and (12) referred to in sec. 804(a)(2) apply to certificate amendments that would:

(10) * * * reduce the par value of any authorized shares of any class with par value, whether issued or unissued.

(11) * * * change any authorized shares, with or without par value, whether issued or unissued, into a different number of shares of the same class or into the same or a different number of shares of any one or more classes or any series thereof, either with or without par value.

(12) * * * fix, change or abolish the designation of any authorized class of any series thereof or any of the relative rights, preferences and limitations of any shares of any authorized class or any series thereof, whether issued or unissued, including any provisions in respect of any undeclared dividends whether or not cumulative or any sinking fund for the redemption or purchase of any shares, or any preemptive right to acquire shares or other securities.

(2) Freeze-In Merger

In a freeze-in merger, the common shareholder exchanges his Advance stock for cash or stock in an acquiring company while the preferred shareholders retain their Advance stock. This proposal would be intended to dilute the preferred shareholders' ability to block liquidation, by authorizing and issuing at least 6,000 new shares of voting common. The Advance common stock would be traded to the acquiring company in exchange for its stock. Because the common shareholder would then hold 7,000 shares of stock, a liquidation could be accomplished over the objection of the preferred shareholders. Although the preferred shareholders would retain their stock, they would have lost their ability to influence the affairs of Advance and would be susceptible to redemption. The acquiring corporation would then be able to overpower the preferred shareholders and liquidate Advance. As with the freeze-out merger, the experts disputed whether the freeze-in merger would be allowed over the objections of the preferred.

D. Valuation Opinions

In order to demonstrate the correct value of the Advance common stock, the parties introduced the testimony of several experts. Peter Fahey and Gary Gensler, partners with the investment banking firm of Goldman Sachs & Co., prepared reports and testified for petitioner about the fair market value of the Advance common stock. n11 Petitioner also introduced the reports and testimony of Robert J. Harrity of Chemical Bank on the value of the common stock, and David Wilkofsky of Wilkofsky, Gruen Associates, Inc., on the general economic conditions of the newspaper and magazine publishing industries in 1979 and early 1980. Rupert Murdoch, the chief executive officer of The News Corp., a newspaper and

magazine publishing company, and Douglas McCorkindale a vice president of Gannett Corp., a media company, both testified about the criteria a buyer would use in considering the purchase of the Advance common stock. n12 Respondent introduced the report and testimony of Joseph P. Baniewicz, a financial analyst for the Internal Revenue Service.

n11 Respondent challenged the expertise of the Goldman Sachs employees because they are "graduates of business schools with no formal education in the valuation of stock." Fahey and Gensler testified that they routinely value stock in closely held corporations in order to advise their clients on possible purchases or sales. We do not share respondent's doubt as to their qualifications.

n12 Respondent challenged the relevance of the testimony of Murdoch and McCorkindale because neither wanted to purchase the Advance stock. It is their views on the considerations warranted in analyzing the potential purchase of the Advance common stock, not whether they would in fact have purchased the stock, that interest us.

According to the experts from Goldman Sachs and Chemical Bank, there were a number of factors that would have influenced a prospective buyer of the Advance common stock. Some, such as the capital structure and uncertain relative rights and limitations of the Advance stock, were internal to Advance. Others, such as the particular economic conditions of the newspaper and magazine publishing industries and the general negative economic mood of 1979 and early 1980, were external to Advance. The size and financial strength of Advance itself, particularly in comparison with other newspaper and magazine publishing companies, would have been a consideration for a prospective willing buyer. Finally, the most likely willing buyers would have faced other concerns, suchas antitrust considerations or difficulties complying with Federal Communications Commission regulations, that would have affected the ultimate selling price.

1. General Economic Conditions

In late 1979 and early 1980, high inflation and "record high" interest rates predominated. Many economists were uncertain or pessimistic about the near future, forecasting an economic slowdown or recession. The 1979 decision of the Federal Reserve Board to manage the supply of money rather than interest rates resulted in a sharp rise in interest rates. Although the economy had experienced a period of growth after the recession of 1974-1975, in 1979 economic growth slowed again, as inflation rose rapidly and interest rates soared. The gross national product grew at an annual rate of only 1.2 percent in constant dollars in the first half of 1980; unemployment was high and was expected to rise, and oil prices were increasing.

One of the byproducts of the tightening money supply and unrestrained interest rates was a new attitude of wariness and reluctance to lend on the part of many banks and lending institutions. In late October of 1979, the Chairman of the Federal Reserve Board warned banks against making "nonproductive" takeover loans. Due to the negative economic outlook, the late 1970's experienced a decline in merger activity. Of the acquisitions for which data was disclosed, only 2 percent of the private companies acquired in the first half of 1980 were sold for more than $ 100 million.

2. Industry Economic Conditions

The economic malaise of the country affected the newspaper and magazine publishing industry. Although revenues rose, the increase was consumed by inflation. The newspaper publishing industry was considered "mature" by the late 1970's. The markets for Advance's newspapers had been fully penetrated, and newspaper circulation was expected to remain fairly constant and stable.

The newspaper and magazine publishing industry also suffered from the growing competition of television in late 1979 and early 1980. Local advertising revenues were increasingly devoted to television at the expense of newspapers, particularly evening newspapers, and, in 1980, newspaper advertising revenues were expected to decline, in real terms. The popularity of evening newspapers had begun to be displaced by the television evening news. Most of the large newspaper publishing companies were acquiring holdings in the broadcast media to diversify away from the newspaper business. Furthermore, the use of "preprints," printed advertising inserts that were slipped into the newspapers for a fee, grew in the later 1970's. The fee brought in from preprints was less than the revenue that straight advertising would have generated. The preprint publishers competed with newspaper publishers for advertising dollars.

Economic conditions discouraged advertising expenditures. Television was becoming a considerable rival for local advertising dollars and cable television was expected to continue the trend as independent television stations competed for local advertising dollars. The annual growth rate for total newspaper advertising dropped from 13.5 percent in 1979 to 6.7 percent in 1980 although retail spending growth only declined from 14.9 percent in 1979 to 10.9 percent in 1980. Furthermore, much of the growth that did occur in advertising in 1979 and 1980 came from increased use of preprints and did not significantly benefit the newspaper publishing companies.

Due to adverse economic conditions, total newspaper circulation per adult declined between 1975 and 1980 and the rate of that decline increased in 1979 and 1980. The decline in circulation was largely attributable to the decline in evening newspaper readership. Similarly, circulation revenue grew between 1975 and 1978 but then tapered off and actually declined by 5.1 percent in 1980.

The costs of newsprint and production labor rose, as the total spending on newspapers was decreasing in 1979 and 1980. Total expenditures for newsprint rose in 1979, outpacing the increase in newspaper revenues from 1979 to 1980. Although labor costs were suppressed by labor contracts predating the period of acute inflation, the labor contracts also delayed automation by requiring newspaper publishing companies to retain costly labor-intensive printing processes. Additionally, the decrease in bulk mail rates in 1978 caused an increase in direct mail advertising which, in turn, cut into newspaper advertising revenue.

The health of the magazine publishing industry also weakened in the late 1970's and early 1980. Because magazine advertising is national, magazine publishing industry conditions reflected the overall economic conditions. A slowdown in advertising expenditures began in 1979 and worsened in 1980. Magazine circulation dropped at the same time. Finally, the Wilkofsky report mentioned that in 1979 and 1980 the growth in production labor costs exceeded the growth in magazine revenues.

3. Competitive Position

Many of Advance's newspaper properties were situated in economically depressed markets that suffered from low population growth and high unemployment. Many of the markets in which Advance operated newspapers were extremely competitive. Additionally, in its 22 newspaper markets, Advance

operated 10 morning newspapers, 19 evening newspapers, and 21 Sunday newspapers, so, in all but three of its markets, Advance had evening newspapers. In over half its markets Advance published no morning paper. In 1979, Advance's revenues increased by only 4.1 percent though inflation grew at the rate of 11.3 percent. Operating margins for Advance's newspaper properties declined from 21.6 percent in 1978 to 18 percent in 1979, resulting in a 13-percent decline in operating income for 1979. Furthermore, the rate of increase in total advertising linage decreased and total circulation actually decreased. For Advance's aggregate operations, operating income fell by $ 14 million from 1978 to 1979 and the operating margin decreased from 17.8 percent in 1978 to 14.8 percent in 1979.

Advance's subsidiary, Conde Nast, published seven consumer magazines that were predominantly fashion oriented. Although revenues were increasing in 1979, costs were increasing faster. Conde Nast's operating cash-flow margin declined from 14 percent in 1977 to 7.8 percent in 1979.

4. Size of Advance

As of February 29, 1980, Advance was the fourth largest newspaper and magazine publishing company in the United States. On December 31, 1979, Advance had a consolidated book value of $ 505,400,000 and retained earnings of $ 475,969,000. At that time, only seven or eight corporate acquisitions for more than $ 1 billion had ever occurred, and there had been no acquisitions of more than $ 350 million in the media industry. n13

n13 In 1976, the Herald Co., a subsidiary of Advance, acquired Booth Newspapers, Inc., for $ 304,588,598.

In early 1980, before leveraged buy-outs gained wide popularity, Advance could have borrowed an amount requiring interest obligations of not more than two-thirds of its operating income or, under the prevailing interest rate of 18 3/4 percent, $ 565 million. Because Advance had planned capital expenditures of $ 228 million, the remaining $ 337 million would be available to be distributed to the shareholders. Of this amount, only 22 percent would belong to the common shareholder.

5. Legal Uncertainty

A prospective buyer of the Advance common stock would want to know the rights of the preferred shareholders to gauge what corporate affairs the common stock could control and to project how to maximize the value of the investment. The prospective buyer would have received contradictory expert legal opinions on the relative rights and privileges of the common and preferred stock. This uncertainty would significantly depress the purchase price of the common stock. The prospective buyer would have been sure of protracted and expensive litigation. A substantial likelihood of considerable delay in effecting plans to cash-out the preferred existed. The litigation might take between 6 and 10 years to resolve in New York courts, and substantial probability existed that any action taken by the common shareholder to defeat the claims of the preferred shareholders would be blocked. Furthermore, because interest rates in February 1980 were extraordinarily high and the size of Advance would require financing, the carrying costs of the purchase would be enormous.

6. Antitrust and FCC Difficulties

Generally, only a media business would be interested in purchasing Advance. Because only a very sizable media business could afford to buy Advance, it would be likely that some of the potential buyer's newspaper and magazine markets would overlap with some of Advance's newspaper and magazine

markets. This would raise potential problems under both the antitrust laws and the Federal Communications Commission (FCC) regulations.

The operative antitrust law looks to whether a purchase might lessen competition, and the Department of Justice monitored newspaper acquisitions with particular scrutiny in 1980. A newspaper and magazine publisher that bought the Advance common stock would probably need to sell some current holdings or sell off some of Advance's assets after the purchase. As with antitrust, the FCC cross-ownership rules might require the buyer to sell certain assets.

7. Accounting Problem

The experts disagreed that, if the buyer were a corporation, the common shareholder could not report in its consolidated earnings the full amount of Advance's earnings and profits without, at a minimum, disclosing that the preferred shareholders were entitled to 78 percent of declared dividends out of those earnings. If a corporate buyer of Advance's common stock were to attribute more than 22 percent of Advance's earnings to the common stock interest, the financial statements would not comport with generally accepted accounting principles and would result in a qualified opinion on the buyer's consolidated financial statements. Such a qualified opinion would be unacceptable to users of the financial statements, including, for example, lenders, shareholders, and if the buyer's stock was publicly traded, the public.

II. VALUE OF N.B. CO. COMMON STOCK

N.B. Co. is a corporation that was organized under the laws of the State of New York in August 1944. On February 29, 1980, its principal place of business was located in Syracuse, New York. N.B. Co., either by itself or through wholly owned subsidiary corporations, operated television broadcasting, radio broadcasting, cable television, and microwave businesses. N.B. Co. operated radio and television broadcasting stations in Syracuse, New York; Elmira, New York; Birmingham, Alabama; Harrisburg, Pennsylvania; and St. Louis, Missouri. N.B. Co. operated cable television companies in many localities in New York State n14 and in Corapolis, Pennsylvania; Canonsburg, Pennsylvania; and Anniston, Alabama. N.B. Co. operated microwave stations in New York, New Hampshire, New Jersey, Ohio, Massachusetts, Vermont, Pennsylvania, and Alabama. As of February 29, 1980, N.B. Co. had contracted to sell all of its television broadcasting stations. The total value of N.B. Co. on the valuation date was $ 206,361,416.

n14 These are: Carthage, Corning, Delhi, Fulton, Malone, Massena, Ogdensburg, Oneonta, Potsdam, Rome, Sidney, Syracuse suburbs, Troy, Binghamton, Vestal/Endicott, Cooperstown, Franklin, Milford, New Berlin, Oxford, and Richfield Springs.

N.B. Co.had one class of stock authorized. As of February 29, 1980, 225 shares of voting common stock were authorized and outstanding, owned as follows:

Shareholder	No. Shares	Percentage
Petitioner	100	44.44
S.I., Jr.	60	26.67
Donald	60	26.67
Mitzi	5	2.22

In its estate tax return, petitioner valued the N.B. Co. stock at $ 68.3 million based on a valuation report prepared by Chemical Bank.

OPINION

I. VALUE OF ADVANCE COMMON STOCK

The first issue for our decision is the value of Newhouse's 10 shares of class A common stock and 990 shares of class B common stock as of February 29, 1980. A derivative issue is the value, for purposes of the marital deduction, of 300 shares of class B common stock.

Property is included in the gross estate at its fair market value, which is "the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts." Sec. 20.2031-1(b), Estate Tax Regs.; United States v. Cartwright, 411 U.S. 546, 551 (1973). If the property is stock that is not listed on an exchange andcannot be valued with reference to bid and asked prices or historical sales prices, the value of stock in comparable corporations engaged in the same or similar line of business must be considered. Sec. 2031(b). Also considered are the corporation's management, net worth, earnings, and ability to pay dividends. Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963), remanded on other grounds 344 F.2d 763 (6th Cir. 1965).

The determination of the fair market value of property is a question of fact. Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. a Memorandum Opinion of this Court. At trial, we received opinion evidence testimony from many expert witnesses, and we weigh that testimony in light of the expert's qualifications as well as all the other credible evidence. Estate of Christ v. Commissioner, 480 F.2d 171, 174 (9th Cir. 1973), affg. 54 T.C. 493 (1970); Estate of Gilford v. Commissioner, 88 T.C. 38, 56 (1987). Nonetheless, we are not bound by the opinion of any expert witness and will accept or reject expert testimony in the exercise of sound judgment. Helvering v. National Grocery Co., 304 U.S. 282, 295 (1938); Estate of Hall v. Commissioner, 92 T.C. 312, 338 (1989).

Respondent's Revenue Ruling 59-60, 1959-1 C.B. 237, has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value; it lists the following factors to be considered:

(a) The nature of the business and the history of the enterprise from its inception. (b) The economic outlook in general and the condition and outlook of the specific industry in particular. (c) The book value of the stock and the financial condition of the business. (d) The earning capacity of the company. (e) The dividend paying capacity. (f) Whether or not the enterprise has goodwill or other intangible value. (g) Sales of the stock and the size of the block of stock to be valued. (h) The market price of stocks of corporations engaged in the same or a similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter. [1959-1 C.B. at 238-239.]

Only facts reasonably known at the valuation date may serve as the basis for valuation. Estate of Gilford v. Commissioner, 88 T.C. 38, 52-53 (1987). Generally, valuations based on subsequent events whose occurrence was not foreseeable at the time of the valuation date are not helpful. Messing v. Commissioner, 48 T.C. 502, 509 (1967). n15 The willing buyer is a purely hypothetical figure and valuation does not take into account the personal characteristics of the actual recipients of the stock. Estate of Bright v. United States, 658 F.2d 999, 1006 (5th Cir. 1981). The hypothetical willing buyer and

seller are presumed to be dedicated to achieving the maximum economic advantage. Estate of Curry v. United States, 706 F.2d 1424, 1429 (7th Cir. 1983). This advantage must be achieved in the context of market conditions, the constraints of the economy, and the financial and business experience of the corporation existing at the valuation date. Moreover, in valuing stock,the rights, restrictions, and limitations of the various classes of stock must be considered. n16

n15 Subsequent events affecting the character or quality of the property to be valued should be distinguished from subsequent market activity which can provide helpful comparable sales.

n16 See Estate of Anderson v. Commissioner, T.C. Memo. 1988-511. E.g., Estate of Van Horne v. Commissioner, 78 T.C. 728 (1982), affd. 720 F.2d 1114 (9th Cir. 1983).

A. State Law Issue

A willing buyer would want to know the relative rights and powers of the two classes of common stock and one class of preferred. If the rights and powers of the preferred stock are sufficient to significantly limit the ability of the common stock to control the company and its assets, then the value of the common stock will be significantly less than if the common enjoyed full and unrestricted control over corporate affairs. The parties agree that the common stock controls the board of directors and, by extension, the management of the business and that the preferred shareholders have the ability and the motivation to block a proposed liquidation.

Respondent believes that the common stock, through other means than by liquidation, could arrogate to itself substantially all of the value of Advance. Respondent proffers the "subtraction method" of valuation, i.e., value the whole of Advance, value the preferred, and the difference equates to the value of the common. Petitioner argues that the common stock does not control Advance, and the preferred is entitled to 78 percent of dividends declared out of earnings. Consequently, the preferred is worth far more than respondent believes. Moreover, petitioner argues, the extent of the common stock's rights to force the preferred out of Advance are unclear at best. With this uncertainty, the value of the common stock is substantially less than respondent determined.

1. Redemption

The certificate could be amended to allow redemption of the preferred stock only with the consent of the preferred shareholders. Respondent's experts do not dispute the power of the preferred shareholders to block an amendment that could force redemption of the preferred stock. The common shareholder cannot force the redemption of preferred stock.

2. Dividends

The experts from both sides presumed that a buyer of petitioner's common stock would want to eliminate or at least limit the preferred shareholders' rights to 78 percent of declared dividends. They discussed several ways of doing this.

a. Source of Dividends

The experts agree that all shareholders participate pro rata in dividends declared out of earnings. Respondent's experts, Coffee and Siegel, believe that the certificate's allocation of dividends among the shareholders limits the preferred shareholders to a fully participating share only from those dividends paid out of earnings or earned surplus. n17 The preferred would not, in their view, participate in

distributions of capital surplus, ordinarily available as a source for dividends under New York law. n18 Siegel and Coffee concluded that the common shareholder could receive dividends paid out of capital surplus, for example, by borrowing against assets and distributing the cash to the common shareholder without sharing the distribution with the preferred shareholders.

n17 Under New York law, "earnings" is defined as the corporation's income in a current year, "earned surplus" is defined as retained and undistributed earnings from prior years, and "capital surplus" is defined as unrealized appreciation in assets.

n18 Sec. 510 of the Business Corporation Law permits a corporation to make dividend distributions in cash, property, or bonds unless to do so would make the corporation insolvent, would violate a term of the corporate charter, or would reduce the value of net assets remaining in the corporation below the value of stated capital.

Petitioner's expert, Mundheim, disagreed and opined that the certificate does not speak at all about dividends paid from sources other than earnings. Alternatively, Mundheim noted, the language could mean that no shareholder, preferred or common, could receive dividends paid out of capital surplus. Mundheim explained that under New York corporation law there is a general underlying assumption that all shares are considered equal and therefore, differences between various classes of stock must be specifically designated and will not be inferred. Mundheim concluded that because the meaning was ambiguous, a New York court would construe the certificate against the background of the general rule that classes of stock are different only to the extent the differences are explicit, and would conclude that the two classes of stock should participate pro rata as to dividends from sources other than earnings as well.

Regardless of the source of dividends, the experts on both sides agreed that a prospective buyer of the Advance common stock would want to circumvent the preferred shareholders' right to 78 percent of declared dividends. To avoid paying the major portion of dividends to the preferred shareholders, the common shareholder would have to alter the preferred shareholders' rights and privileges, but the experts disagreed about whether the common shareholder could succeed.

b. Stock Split or Stock Dividend

Mundheim also concluded that because an amendment to increase the number of shares held by the common shareholder would clearly impinge on the voting rights of the preferred stock, the preferred shareholders would be allowed to vote against the proposed amendments under sections 801(b)(12) and 804 of the Business Corporation Law. Respondent's experts agree that the common shareholder would be unable to effect a stock split or stock dividend without the consent of the preferred shareholders.

c. Preemptive Rights

Shareholders generally have preemptive rights where the issuance of new shares would adversely affect their dividend rights. Coffee, respondent's expert, argued that the preferred shareholders would not have preemptive rights to acquire unissued or treasury shares of stock pursuant to exceptions to section 622(b) of the Business Corporation Law. As of February 29, 1980, Advance had no treasury shares and if all authorized common stock were issued it would not give the common shareholder the power to liquidate Advance. Because section 622 also provides an exception for the issuance of new

shares necessary for a merger or consolidation, Coffee believed that new shares could be issued to the common shareholder pursuant to a plan of merger and could dilute the preferred shareholders' control over liquidation.

Lipton, petitioner's expert, countered that Coffee's maneuver would be viewed, not as necessary to effect a merger, but as an attempt to derogate the preferred shareholder's rights. A New York court, in Lipton's view, would not permit the dilution of the preferred stock.

d. Nonpayment of Dividends

Coffee noted that the board of directors could stop paying dividends. He argued that a decision by the board of directors to curtail or cease the payment of dividends would be difficult to overturn because New York courts are highly disinclined to review a corporation's dividend policy. According to Coffee, in order to force the board of directors to pay dividends in New York, a shareholder must show that the nonpayment expressed hostility to the shareholders directly and that the failure to pay dividends was detrimental to both the shareholders and the corporation. Coffee further noted that Advance's past dividends had historically been low in relation to its earnings and that a preferred shareholder would find it particularly difficult to force a hostile board of directors (elected by the common) to pay dividends.

The Cravath, Swaine & Moore report submitted by petitioner maintained that an abrupt cessation of dividends without a demonstrable business purpose might constitute a breach of the directors' fiduciary duties. Furthermore, although the nonpayment of dividends may be burdensome to the preferred shareholders, it has an obvious correlative detriment for the common shareholder's extraction of corporate profits. n19

n19 Siegel suggests that the common shareholder might avoid the hardship of the cessation of dividends by paying himself a handsome salary but such a possibility implies that the common shareholder is an individual, not a corporation, and thus, impermissibly relies on personal characteristics of a particular willing buyer. See Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981).

The common shareholder could not force a redemption of the preferred stock and probably could not issue more stock to himself to dilute the preferred shareholders' voting power. Finally, the board of directors elected by the common shareholder might not be allowed to cease all dividends.Therefore, the common shareholder's ability to defeat the claims of the preferred shareholders to 78 percent of earnings is subject to considerable doubt.

3. Liquidation or Merger

All of the experts considered liquidating or merging the corporation as a way to disenfranchise the preferred shareholders.

a. Liquidation

The experts proceeded on the assumption that the preferred shareholders would not agree to a liquidation because the certificate sets a liquidation preference for the preferred stock at only $ 187.25 per share. Because the preferred shareholders are entitled to vote on liquidation, they could prevent it. This assumption comports with economic reality.

b. Mergers

The experts disagreed at all points on whether the common shareholder could dispose of the preferred shareholders by freeze-out or freeze-in merger.

(1) Freeze-Out Merger

Mundheim and Landau, petitioner's experts, noted several problems with the proposed freeze-out merger, structured as an acquisition by a third-party corporation. Mundheim and Landau found a significant likelihood that, under New York law, the preferred shareholders as a class would be entitled to vote ona freeze-out merger notwithstanding the fact that the certificate expressly reserves voting power over mergers to the common shareholder. Cravath, Swaine & Moore agreed, noting that a merger that threatened to diminish the preferred shareholders' entitlement to dividends or required the preferred shareholders to exchange their stock for cash would trigger a class vote. If the proposed freeze-out merger were viewed as a forced redemption, because its effect is to abolish the rights of the preferred, a class vote would be triggered because the preferred would be entitled to vote if the forced redemption were attempted in the form of an amendment to the certificate. Lipton also observed that the freeze-out merger amounts to a de facto forced redemption which is not permitted under the certificate. He opined that the common stock could not accomplish by indirect means what is forbidden by direct means.

Landau also noted that the historical development of the rights and privileges of the two classes of stock from the original certificate through the various amendments shows that the preferred shareholders were increasingly given a participating role through the capital structure. Landau concluded that the preferred shareholders were given equal status with the common shareholders in sharing the future earnings of Advance.

Respondent's experts disagreed that the preferred shareholders would be entitled to a class vote in the event of a freeze-out merger. Coffee based his conclusion on his analysis that the statutory language refers only to situations in which the "relative rights, preferences, or limitations" of the minority shares are changed and not to the total cancellation of the stock. He argued that:

the purpose of both sections 804 and 903 is to protect continuing shareholders against a change in their legal rights, not to prevent the voting majority from cashing out another class. The danger addressed by these sections was that of being locked in under a new and different legal regime, not that of being frozen out.

Coffee noted that not only does the statute protect minority shareholders from abuse by the majority shareholder, but it also protects the majority shareholders from unreasonable minority shareholders. Brudney and Siegel echoed Coffee's reasoning in their reports.

Petitioner's experts doubted whether such a transaction could pass muster under the New York requirement of fiduciary care on the part of the board of directors toward the shareholders, especially if the merger had no business purpose. Mundheim noted "under New York law, directors and controlling shareholders, such as the holder of Advance's common stock, have broad fiduciary responsibilities and may not direct the affairs of the corporation so as to favor themselves at the expense of other shareholders." Landau agreed. Mundheim concluded that because such a merger would have no purpose other than to force out the preferred shareholders for the exclusive benefit of the common shareholder, a New York court would not uphold it. Cravath, Swaine & Moore's report stated that where the corporate structure clearly protects the preferred shareholders' right to prevent liquidation, a court would not allow the board of directors to accomplish indirectly what they could not do directly.

Mundheim determined that a freeze-out merger could violate the New York requirements of procedural and substantive fairness. The leading New York case, Alpert v. 28 Williams Street, 63 N.Y.2d 557, 483 N.Y.S.2d 667, 473 N.E.2d 19 (1984), imposes an overall equitable requirement that a freeze-out merger must have an "independent corporate purpose for the merger" and include a fair price for the shareholders who are being frozen out. Mundheim noted that the court in Alpert ruled that a fair cash-out price would be "reasonably related to the value that might be set by an appraisal proceeding" and offered five factors for determining that amount. n20 Mundheim stated that it was impossible to be sure at the date of purchase of the common stock what fair value the New York courts might set for the preferred stock. While it was unclear whether a New York court would aim for the going concern price or the liquidation price in setting fair value, he noted that under recent New York cases, fair value might not be restricted by contractual provisions. In Mundheim's view a court might look beyond the stated liquidation preference amount and historical dividends and decide that the preferred and the common stock were fundamentally equal.

n20 The five factors listed in Alpert v. 28 Williams Street, 63 N.Y.2d 557, 483 N.Y.S.2d 677, 665, 473 N.E.2d 19 (1984), are net asset value, book value, earnings, market value, and investment value.

Lipton opined without equivocation that the preferred would be entitled to 78 percent of the going concern value of the corporation because "the terms of the Preferred Stock were specifically engineered to ensure that the holders of the Preferred Stock share proportionately in whatever level of pay-out the Company as a going concern makes on its capital stock." Lipton also suggested that a court might determine that the common shareholder had breached his fiduciary duties if, in negotiating the terms of the proposed merger, the common shareholder allocated more than 22 percent of the purchase price to the common and gave the preferred shareholders less than 78 percent of the purchase price.

Respondent's experts did not believe that the proposed freeze-out merger would violate those fiduciary duties. Eisenberg noted that under New York law, preferred stock is purely a creation of contract law and that the only fiduciary duty running to a preferred shareholder is the duty to satisfy the contractual entitlements. Since the proposed merger would not violate any of the Advance preferred shareholders' existing contractual rights, he reasoned they would have no grounds to complainof unfair treatment.

Respondent's experts concluded that although the preferred shareholders were entitled to receive fair value in the event of a freeze-out merger, the courts would not be inclined to value the rights of the preferred shareholders at 78 percent of the total value of the corporation. Coffee believed that a New York court would not derive fair value by measuring the corporation's going concern value but rather would compute the weighted average of the liquidation preference, the historical dividends, the book value per share, and the recent earnings history. Furthermore, Coffee noted that even if the court disagreed with the figure offered by the common shareholder, it would simply require that a higher price be paid, still allowing the transaction to proceed.

Brudney believed that a New York court would be most influenced by the historical dividend stream in computing fair value for the preferred stock. Because Advance has historically always reinvested the bulk of its earnings and paid minimal dividends, he opined, the preferred shareholders are on notice that they are entitled to no more than a future projection of historical dividends, or "the capitalized value of an annual amount equal to the dividend paid to [the preferred shareholders] during the last several years."

Siegel concluded that fair value would lie between the liquidation preference amount of $ 187.25 per share and a number representing maximum possible dividend participation in Advance as a going concern.

Finally, all the experts agree that not only would a merger have to be fair but the transaction would have to have a business purpose that would benefit Advance as a whole and not just the controlling shareholder. Nonetheless, the experts disagreed about what constitutes a valid business purpose under New York law.

If the freeze-out were perceived as little more than an attempt to dispossess the preferred shareholders as cheaply as possible, petitioner's expert, Mundheim, believed it would not be sustained by a New York court. Mundheim explained that in the proposed freeze-out "there would be no independent corporate purpose -- no improvement in management, no increase in capitalization, simply a reshuffling of the corporate structure for the exclusive benefit of the Common Stock at the expense of the to-be-ousted Preferred Stock." McNally agreed that a New York court would not consider the removal of the preferred shareholders for the sole benefit of the common shareholder to be a sufficient business purpose.

Respondent's expert, Coffee, agreed that the New York courts require a business purpose but argued that it does not have to be substantial. As a possible business purpose, Coffee suggested the need to avoid Advance's future obligation to redeem the preferred shares at the death of the shareholders, or the need to be able to redeem the preferred shares in the event of a future transfer by an existing shareholder in order to remain a closely-held corporation. Coffee also recommended the need to avoid hostility and dissension among the shareholders as a valid business reason.

(2) Freeze-In Merger

The objective of this transaction would be to dilute the preferred stock by issuing proportionately more common in the course of the merger while leaving the preferred stock in place. The dilution would have to be sufficient to give the common the ability to liquidate Advance over any objection by the preferred. Petitioner's experts, Landau and Mundheim, determined that like the freeze-out merger, the freeze-in merger would alsotrigger the class vote under sections 801(b)(12) and 804 of the Business Corporation Law. Although the freeze-in merger would appear to leave the rights and preferences of the preferred stock unchanged, Landau and Mundheim believed that a New York court would not stop at a superficial analysis. Because the rights of the preferred would in effect be dramatically reduced by the presence of an increased number of voting common shares, the statute would impose a class vote. Respondent's experts disagree because the form of the transaction leaves the preferred shareholders untouched.

Acknowledging that there are no dispositive New York cases on this point, Mundheim warned that the freeze-in merger would be subject to the same judicial requirements of business purpose and procedural and substantive fairness, as well as fiduciary duties, as the freeze-out merger. Mundheim concluded that a New York court would not be satisfied that the transaction had a business purpose.

Respondent's expert, Siegel, stated that "There appears to be no reason why the business purpose test, as applied under New York law, would be applied more restrictively to a freeze-in than to a freeze-out."Coffee agreed that although the preferred shareholders in a freeze-in merger would have to be treated equitably and the preferred stock could not be diluted unfairly, "the burden on the plaintiffs attacking such a [freeze-in] merger would be substantially higher than in the case of a 'freeze-out' merger." Coffee and Eisenberg surmised that if the preferred shareholders were guaranteed the

continuation of the historic dividend rate as a part of the terms of the merger they would have no grounds to complain of mistreatment. Coffee also suggested that if the board of directors were composed of persons who were neither shareholders nor corporate management, their actions would be substantially immunized from derivative suits by minority shareholders.

As Mundheim noted, considering the size of Advance, the purchaser would have to capitalize the acquiring corporation in the proposed merger very heavily. Furthermore, although the common shareholder would want the freeze-in to be done quickly because the Advance preferred shareholders would be entitled to 78 percent of declared dividends until the merger was approved and the carrying costs of the investment in the common would be significant,the inevitable litigation would foreclose any quick accomplishment of the merger.

(3) Waiting Out the Preferred

Respondent's expert witnesses suggested that the buyer of Advance common stock could ultimately acquire complete control by buying the preferred stock as it is transferred from the existing preferred shareholders to new owners. Coffee outlined a plan which could be employed in lieu of the mergers: first, the common shareholder would replace the board of directors, suspend the payment of all dividends, fire the family members, and issue all the authorized but unissued stock to himself in exchange for property of equal value. As the preferred shareholders died or attempted to transfer their stock to third parties, the corporation could purchase it, exercising the rights set forth in the 1974 shareholders' agreement. Then the new common shareholder would approach each remaining preferred shareholder and offer to buy his stock at a certain price, "explaining that he did not intend to acquire all the Preferred Stock, but only enough to give it two thirds voting control. The risks of being a holdout and the prospect of eventual liquidation could also be politely explained." Rather than be the last preferred shareholder holding less than one-third of the total outstanding stock and having to accept the contractual liquidation value of $ 187.25 per share, Coffee believed that, in light of the advanced ages of Norman, Ted, and Mitzi, each preferred shareholder would be willing to sell his stock to the common shareholder quickly, or, alternatively, the preferred shareholders would acknowledge the futility of resisting and agree to a common sales price.

Siegel suggested more strongly coercive techniques for ousting the preferred shareholders such as selling off Advance assets for less than the highest market value either alone or in conjunction with a third party. Siegel indicated that it might not be necessary to actually engage in such transactions because it might be enough to "vaguely and darkly threaten such tactics to maximize the pressure on the Preferred Stock's holders." Time, Siegel concluded, would be on the side of the common shareholder because three of the preferred shareholders were elderly. Coffee also opined that the 1974 shareholders' agreement makes it inevitable that ultimately the corporation will be able to acquire allof the preferred stock and that preferred shareholders would choose to sell their stock to the corporation rather than risk having to accept liquidation value of $ 187.25 per share. Coffee noted that once the shares had been reacquired by the corporation, they could be issued to the common shareholder without invoking preemptive rights which do not apply to treasury shares under New York law.

Petitioner's experts explained that a buyer of the Advance common stock would be very unsure of his rights and powers to effect the major corporate restructuring and of the rights of the preferred shareholders to block his efforts. Angered preferred shareholders would bring legal action seeking either injunctive relief or the recision of the transaction. Further obfuscating any predictable outcome of

litigation, the experts disagreed on whether a New York court would entertain parol evidence of the understandings of the Newhouse family members about the relative rights and powers of shareholders or how much weight the court would give it. Lipton noted that faced with legal uncertainty of such magnitude, a buyer would insist on indemnification and other protections against the claims of the preferred shareholders. An indemnification provision would depress the value the hypothetical willing seller would receive.

Petitioner's experts believed that a buyer of the common stock who cannot also purchase the preferred stock would be in a precarious situation. The report from Cravath, Swaine & Moore described the situation as analogous to:

the relationship between a person who owns a house surrounded by someone else's land and the surrounding landowner. * * * neither the holders of the Preferred Stock nor the holders of the Class B Common Stock have an easement to realize the full value of their interests in the Company, but the holders of the Class A Common Stock have no right to that portion of value of the Company attributable to the interests of the holders of the Class B Common Stock and Preferred Stock.

Analysis

Initially we must resolve whether we need to determine the relative rights and preferences of the two classes of Advance stock. Petitioner contends that to discern what a hypothetical willing buyer would be willing to pay for the common stock we need only determine that there is substantial uncertainty among respected legal experts about the rights and powers of the classes of stock and about the extent of the common shareholder's authority over the corporate assets. Petitioner argues that this uncertainty will strongly influence the willing buyer's purchase offer. Petitioner contends that we do not need to decide whether a common shareholder would succeed or fail in eliminating the claims of the preferred shareholders, but only that the willing buyer could not be secure about his ability to do so and would offer a commensurately lower price for the stock.

Respondent counters that we must first decide whether, in fact, the common shareholder could ultimately secure complete control over the assets of Advance through any one of the methods suggested by his expert witnesses. Respondent maintains that we cannot rule on the value of the common stock without first deciding the common shareholder's rights.

The focus of a valuation inquiry, however, is on the existing facts, circumstances, and factors at the valuation date that influence a hypothetical willing buyer and willing seller in determining a selling price. We agree with petitioner that it is the likely understanding of the rights and privileges of the Advance common stock that will influence the terms of sale, not whether we resolve this dispute over New York law. Indeed, we believe that it would be error to postulate a certainty that did not exist. Any potential buyer would be investing millions of dollars in this acquisition. Such a buyer would not assume legal certainty in the face of divided legal counsel. n21

n21 We struck from evidence the valuation report of one of respondent's experts precisely because he assumed legal certainty (i.e., that respondent's legal experts were correct) where none existed. Having made this flawed assumption, his report became irrelevant. See Estate of Hall v. Commissioner, 92 T.C. 312, 338-339 (1989).

To decide the exact rights and powers of the Advance common stock under New York law, we would have to decide that a willing buyer would ignore or discount some of the expert advice we heard. We believe that we cannot, however, disregard the effect of the mixed legal advice on the hypothetical willing buyer's commitment of funds to a purchase price. Not only would our resolution of this issue not make the hypothetical willing buyer feel secure on February 29, 1980, it would distort the reality in which the fair market value must be determined.

A hypothetical willing buyer would have had the counsel of several advisers of formidable reputation: Landau & Lipton, noted corporate lawyers; Professors Coffee, Cox, Eisenberg, and Brudney and Deans Mundheim and Siegel, all affiliated with prestigious educational institutions. He could have read legal memoranda from White & Case and Cravath, Swain & Moore, well-respected law firms. The hypothetical willing seller would also have been aware of this conflicting legal advice and the uncertainty of obtaining economic dominance in Advance. Not only is the law disputed, but the experts cite substantially the same cases to support their diametrically opposed positions. Moreover, no expert's views were patently unreasonable. No willing buyer, faced with the conflicting arguments and opinions of these respected legal experts could choose which one is right. The legal uncertainty will strongly affect his decision on the value of the common stock. "[The] Court must not 'permit the positing of transactions which are unlikely and plainly contrary to the economic interest of a hypothetical buyer.'" Estate of Hall v. Commissioner, 92 T.C. at 337, citing to Estate of Curry v. Commissioner, 706 F.2d 1424, 1429 (7th Cir. 1983). To assume the correctness of the views of either respondent's or petitioner's legal experts would distort the facts in which a willing buyer would have negotiated the purchase and would result in a transaction plainly contrary to the buyer's economic interests.

In arguing that we must decide that one side or the other is right, respondent relies on several cases that are not directly applicable to the case at hand. In Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981), the parties did not dispute the proper treatment of a decedent's community property under Texas law. In Estate of Watts v. Commissioner, 823 F.2d 483 (11th Cir. 1987), the process and implication of the dissolution and liquidation of a partnership under Oregon law was clear and easily resolved. In Estate of Reynolds v. Commissioner, 55 T.C. 172 (1970), the Government urged this Court to overlook restrictions on stock imposed by a voting trust. Although we concluded that the voting trust restrictions would "most likely be valid," we decided that the threat of the enforcement of the voting trust restrictions would be significant in itself to a potential investor. 55 T.C. at 193-194. Two of these cases involve legal disputes capable of fairly ready determination. In the other, the actual resolution of the State law question was deemed unnecessary and supports our approach here. n22

n22 See also Estate of Mundy v. Commissioner, T.C. Memo. 1976-395 (validity of redemption provisions under Florida law were not necessary to evaluate effect of redemption provisions on prospective purchaser of restricted stock).

In this case, the State law question cannot be resolved short of actual litigation subsequent to an actual purchase. The one certainty that the willing buyer would confront, which the willing seller would also have to take into account, is that with the State law issues as difficult to resolve and as fiercely contested as the relative rights and privileges of the Advance stock, there would be litigation. It would be nonsensical to believe that the preferred shareholders would not try to vindicate their economic interests.

B. Valuation Opinions

Petitioner approached the willing buyer, willing seller test by soliciting the expert advice of investment bankers who daily counsel clients that buy and sell stock in businesses like Advance. Petitioner's experts evaluated the Advance common stock as if they were giving advice to a client, reviewing the advantages and the disadvantages that a client would face. Then, analyzing benchmark values for several approaches to selling the Advance common stock and relying on their experience and judgment, petitioner's experts determined a likely sales price. n23

n23 On brief, respondent argues that Goldman Sachs' approach only explores what a willing buyer would pay for the Advance common stock and should therefore be disregarded. What respondent has failed to see is that the highest price a willing buyer would pay is also the price that a willing seller wants.

Respondent approached the valuation of Advance very differently. Respondent's theory of valuation takes the sum of the value of the Advance's assets in excess of certain planned expenditures and certain liabilities, and reduces that sum by a value attributable to the presence of the preferred stock. The remainder represents the value of the common stock and the price that respondent believes a willing buyer would pay to a willing seller. Several portions of respondent's expert's report were stricken from the record because they were based on an assumption without foundation. Specifically, Baniewicz based his analysis on the assumption that the value of the Advance common stock would be determined by subtracting from the value of the entire company the value of the preferred stock (the subtraction method).

None of respondent's expert witnesses testified that they would have advised a willing buyer to use the subtraction method in deciding the value of the stock. None could testify that they had ever advised the use of the subtraction method in advising buyers or sellers of closely held stock in any comparable situation.

1. General and Industry Economic Conditions

The period immediately preceding the valuation date was characterized by economic gloom. The economy was in a state of near-recession with high interest rates and high inflation. The newspaper and magazine publishing industry reflected the nation's troubles. Costs were high, competition increasing, and circulation and advertising revenues at a standstill or decreasing. A willing buyer and a willing seller would be aware of these economic conditions as they negotiated their price for the Advance common stock.

Respondent's expert witness, Baniewicz, found that the prognosis for the newspaper and magazine publishing industry was not as grim as we have found it to be. Although he agreed that the economy as a whole was not robust in late 1979 and early 1980, he stated that total advertising revenues rose in 1978 and 1979 and that the percentage of total U.S. advertising that was devoted to newspaper advertising decreased only slightly. Baniewicz' revenue figures, however, were not adjusted for inflation. Because classified advertising remained strong in 1978 and 1979, Baniewicz believed that no one expected that the impact on the publishing industry of the projected 1980 recession would be serious. Baniewicz also noted that magazine circulation grew in 1978 but leveled off in 1979. He further surmised that because magazine readers tend to have higher incomes, and because that demographic segment

was expected to grow in 1980, the long-term outlook for growth in the magazine publishing industry would have been positive. We have concluded that Baniewicz' findings at best represent a few isolated bright spots in an otherwise gloomy economic picture.

2. Competitive Position

In order to compare Advance's financial strength and performance in relation to others in the industry, Goldman Sachs chose eight companies whose business mixes would be meaningfully comparable to Advance. n24 Relying on data from these eight companies, Goldman Sachs concluded that because Advance's earnings were already within the range of the industry norm for large publicly held companies, Advance's historical profit was reasonably indicative that its earning capacity had been fully achieved. Goldman Sachs noted that Advance paid relatively low dividends, although there were sufficient earnings to pay considerably more. Furthermore, Goldman Sachs determined that Advance retained a high cash balance relative to comparable businesses. Advance also had $ 145 million for planned extraordinary capital expenditures at the date of valuation. Goldman Sachs' comparison shows that Advance had relatively high operating income and net income and exceptionally low long-term debt in 1979.

n24 These eight companies were: Affiliated Publications, Inc., Dow Jones & Co., Gannett Co., Knight-Ridder Newspapers, Inc., Media General, Inc., The New York Times Co., The Times Mirror Co., and The Washington Post Co.

3. Size of Advance and Legal Uncertainty

As the Chemical Bank report explained, a willing buyer's business judgment in valuing the Advance common stock would be formed in large part by the uncertainty of the common's power to defeat the preferred's claim to 78 percent of dividends:

The possibility that any speculative buyer's attempt to deny the preferred shareholders what they believed to be the fair value of their shares would fail makes it extremely unlikely that any such buyer would have risked the enormous capital required to buy the Common Stock based on such speculation * * *.

Because of the millions of dollars needed to buy the common stock of Advance, the prevailing high interest rates, and the inevitability of litigation (aside from the possibility of failure), no one would have been willing to make such a speculative investment in early 1980 at a price determined by respondent's subtraction method. Goldman Sachs believed, and we agree, that the uncertainty inherent in purchasing only the common stock combined with the enormous investment required would depress the price that any buyer would offer. Goldman Sachs explained further the effect of fiduciary duties to the preferred shareholders on any buyer's judgment on the value of the common stock: "most acquirers want the ability to enter into transactions, with affiliates or otherwise, without being challenged as to the fairness of those transactions to non-controlling shareholders."

McCorkindale, vice president of Gannett Corp., stated that Gannett would not be interested in a purchase of the Advance common stock, unless the preferred stock were also available. Gannett, he explained, generally avoided purchases of less than 100 percent of the outstanding stock. McCorkindale

was also concerned that the Advance common shareholder would have fiduciary responsibilities toward the preferred shareholders. Murdoch, chief executive officer of The News Corp., agreed that the Advance common stock would not be attractive because of the existence of the preferred shareholders.

4. Antitrust and FCC Difficulties

J. Paul McGrath, a partner of Dewey, Ballantine, Bushby , Palmer & Wood, specializing in the antitrust ramifications of mergers and acquisitions, testified on behalf of petitioner. McGrath stated that any media company large enough to buy Advance would have overlapping markets and would need to divest itself of some of its holdings.

Murdoch agreed that purchasing Advance was made less desirable by "various Justice Department and Federal Communications Commission restrictions."

McCorkindale explained that if Gannett had purchased the Advance common stock, Gannett would have had several newspaper properties in overlapping markets. Furthermore, in contemplating an acquisition, McCorkindale also considers long-term anticipated expansion into new markets. Owning one ofAdvance's newspaper properties might preclude the buyer from later purchasing a competing newspaper that was more desirable.

5. Accounting Problem

The parties disagreed about how the purchaser of Advance's common stock would account for the earnings of Advance on its books. Petitioners introduced the testimony and report of Abraham Briloff, a certified public accountant and Professor Emeritus of Baruch College, and Ronald J. Murray, a certified public accountant and a partner with the accounting firm of Coopers & Lybrand.

Briloff stated that pursuant to generally accepted accounting principles, a corporate owner of the common stock interest in Advance could report in consolidated earnings only Advance's earnings and profits attributable to the common stock and no amount attributable to the preferred stock interests. Murray and Briloff agreed that a corporate owner could report only 22 percent of Advance's earnings on its consolidated financial income statement.

Contradicting the reports of Murray and Briloff, respondent introduced the report and testimony of Gustav A. Gomprecht, a certified public accountant and a retired partner of KMG Main Hurdman. Gomprecht, in his prepared report and on direct examination, concluded that the financial statements of the buyer of Advance's common stock could include all of Advance's net income. Gomprecht based his view in part on his belief that the common shareholder could represent that, until dividends were paid out of earnings, the shareholder was entitled to all earnings. Gomprecht conceded on cross-examination that if the common shareholder included the earnings of Advance in its financial statements without at least a footnote stating that 78 percent would have to be distributed to the preferred shareholders when declared, those financial statements would be misleading.

In the end we believe that Briloff and Gomprecht came to the same conclusion. Once Advance declares a dividend from earnings, retained or current, 78 percent would be distributed to the preferred shareholders. The holder of the common stock would be entitled to no more than 22 percent, and if the buyer's financials suggested entitlement to more, they would be misleading. Given the size of Advance's earnings, it is likely that such a misstatement would be material.

6. Valuation Analyses

a. Goldman Sachs' Valuation

In valuing the Advance common stock, Goldman Sachs applied the methods it uses daily to advise buyers and sellers of stock and securities. First, Goldman Sachs assessed four benchmarks of value that a prospective buyer of Advance would consider. These benchmarks would be used to ascertain the correct value of Advance by a buyer for analytical purposes but are not determinative of the value of the common stock. The four benchmarks are: (1) The public trading market value, i.e., the value if Advance stock had been actively traded on the stock market; (2) the initial public offering value, or the net value realizable by the shareholders who first introduce Advance stock on the public stock market; (3) the possible merger market value, or the amount realized by the shareholders if they sold all their stock to one party in a private sale; and (4) the arithmetic sum value, or the sum of the values of each of the assets if sold in independent transactions.

Goldman Sachs concluded that the public trading value for Advance as of February 29, 1980, was $ 905 million. At that time the stock market indices were declining and media companies were lagging behind the market. GoldmanSachs evaluated eight businesses that were active in the media industry and comparable to Advance in business mix. n25 Advance placed near the middle of these companies in overall financial performance. Furthermore, though Advance was well managed, Goldman Sachs believed the public market would have disapproved of Advance's concentration in newspapers, particularly evening newspapers, and magazines at a time when other media companies were diversifying into television. Goldman Sachs estimated a price-earnings multiple of approximately 9.4 times earnings or $ 905 million.

n25 On brief, respondent objected to Goldman Sachs' choice of the eight comparable businesses on the grounds that Advance's unique capital structure set it apart from those eight corporations. Respondent failed at trial to introduce evidence (whether on cross or through direct examination of his own witnesses) that would suggest any lack of merit in using these businesses as comparables. Moreover, respondent's own expert, Baniewicz, used four of those businesses as comparables (Gannett Co., Knight-Ridder Newspapers, Inc., The New York Times Co., and The Times Mirror Co.) to evaluate Advance's financial position.

Goldman Sachs also determined that the initial public offering value for Advance on February 29, 1980, was $ 778 million. Ordinarily the price at the initial public offering would be subject to a discount of between 5 and 10 percent below the anticipated price once the stock is established on the market. There is an additional underwriter's gross spread discount of about 7 percent. These two discounts applied to $ 905 million produced $ 778 million. An initial public offering of all the Advance stock would have been more than 20 times larger than any initial public offering for several years preceding February 1980. The magnitude of the offering would have further lowered the realizable value.

Although Goldman Sachs decided that practically it would be difficult to arrange a merger of Advance, they determined that if there was a merger the shareholders could have realized between $ 1.1 and $ 1.2 billion. Although the merger market for small newspaper companies was flourishing around February 1980, Advance was already efficiently managed and a prospective buyer would not have believed that he could quickly and easily improve the operating margins or increase the revenue.Furthermore, the size of Advance would have daunted all but the largest prospective buyers. For these and other

reasons, both Goldman Sachs and Chemical Bank could not find any comparable historical mergers by which to measure the merger value of Advance. Additionally, neither the general economic conditions nor the newspaper publishing industry were conducive to a major acquisition.

Finally, Goldman Sachs computed the arithmetic sum value of $ 1.5 billion by assuming that each of Advance's properties was sold independently. Although unlikely in a real market situation, Goldman Sachs assumed for the purposes of the report that the purchase prices realized would be unaffected by the simultaneous sale of all of the other properties. n26 After reviewing the economic conditions' effect on the value of newspaper properties, Goldman Sachs evaluated each of Advance's assets. Goldman Sachs considered the local economies and demographic pictures for each newspaper and compared the Advance advertising and circulation trends to those of other newspapers. They also considered the individual newspaper properties from the point of view of the mergers and acquisitions market.

n26 Respondent complained on brief that Goldman Sachs' arithmetic sum value represented future income potential to the exclusion of current asset value. This is due, in part, to Goldman Sachs' analysis of the newspaper properties as going concerns, in contrast to Baniewicz' liquidation value approach. Nonetheless, because Goldman Sachs and Baniewicz ultimately came very close to agreeing on the aggregate value of the newspaper properties, we do not believe that this discrepancy is worth further consideration.

The sale of all of Advance's newspaper and magazine properties at one time would have had a seriously depressing effect on the market for such properties. Furthermore, in order to avoid significant tax consequences, the sale of all of the properties would have to be accomplished within 1 year. In light of the difficulties, Goldman Sachs concluded that its arithmetic sum value was not realistic.

Keeping in mind their four benchmarks of value for Advance's entire business, Goldman Sachs then turned to a discussion of the possible types of buyers for the Advance common stock. The report contemplated four types of investors: (1) The passive investor, (2) the active investor, (3) the control investor, and (4) the public.

A passive investor would not be interested in managing Advance and would not attempt to wrest control from management. Expecting to realize value from dividends and private resale, the passive investor would not expect to extract value from Advance through liquidation, merger, or public offering. The passive investor would consider that Advance's stock was not publicly traded which would depress expectations of resale value. Due to this illiquidity, lack of control, and the uncertainties and constraints affecting the purchase, Goldman Sachs concluded that the passive investor would have offered 30 percent less than the public trading market value of the common stock and thus only $ 141 million for the common stock.

The active investor would be inclined to pursue action, short of seeking control, that would quickly maximize the return on his investment. One course of action would be to declare a dividend of Advance's excess cash and any funds that could be obtained through borrowing. Because of the high prevailing interest rate and planned capital expenditures, the common shareholder could extract no more than $ 74 million of excess cash plus loan proceeds. Advance also had $ 145 million of excess cash which could be distributed with the loan proceeds. Because of the time and uncertainty involved in this plan of action, the active investor would pay no more than 85 percent of the amount he hoped to extract. This figure would be far less than the $ 141 million the passive investor would be willing to pay.

Alternatively, the active investor might cause the excess cash to be distributed immediately and then cause Advance to pay dividends at the highest possible level. Assuming that the active investor would insist on an after-tax yield on his investment of about 13 or 14 percent, Goldman Sachs concluded that the active investor would be willing to pay $ 150 million for the Advance common stock.

A control investor would have purchased the Advance common stock with the goal of acquiring 100 percent of the equity ownership and control of the company. A control investor would hope to realize value from his purchase by dividend distributions, by liquidation, or by merger, but Advance's unusual capital structure would prevent the latter two courses of action without eliminating the preferred stock or securing their consent. The preferred had the right to block liquidation. Because the common's power to effect a merger adverse to the preferred's interests was so uncertain, Goldman Sachs concluded that any willing buyer, as a matter of sound business judgment, would analyze the value of the common as if that option were foreclosed. Goldman Sachs' analysis is persuasive.

Goldman Sachs concluded that only another media company would be interested in acquiring Advance and that none of the major media companies would have considered buying the common stock without first eliminating the claims of the preferred shareholders. Because the control investor would assume that he could not receive anything except 22 percent of the highest level of dividends declared, he would be in the same position as the active investor and would pay no more than what the active investor would pay, viz, $ 150 million.

Goldman Sachs concluded that an underwritten public offering would be the best way to sell the Advance common stock, requiring the three different types of stock to be recapitalized into a single class. Goldman Sachs' research indicated that in approximately half of the transactions in which voting control was transferred the buyers paid a premium for control. Goldman Sachs concluded that no control premium was warranted. Goldman Sachs then determined that, after exchanging the class A common stock one for three, and the class B common and the preferred stock one for one, the offering price would be $ 25 per share subject to a 7-percent discount. The price for all the shares would be $ 778 million, and for petitioner's shares it would be $ 176 million.

Because the benchmark value for a public offering, $ 176 million, was the highest value, Goldman Sachs concluded that the value of petitioner's Advance common stock was $ 176 million on February 29, 1980.

b. Chemical Bank's Valuation

Chemical Bank applied two analytical approaches: (1) A discounted cash-flow analysis, and (2) a comparison with the financial performances of publicly traded companies in a similar line of business. Chemical Bank did not use a breakup value analysis because it believed a buyer in early 1980 could not have maximized the return on his investment by liquidating Advance and selling off its assets. Chemical Bank declined to employ acquisition multiples (information relating to mergers and acquisitions) because there were no acquisitions of publishing businesses of Advance's size and complexity between 1975 and 1980, and Chemical concluded that other acquisitions were not sufficiently similar to be meaningful.

After calculating a value for Advance as a whole, Chemical Bank derived appropriate discounts and premiums and computed a value for petitioner's Advance stock. Based on Advance's financial data from the preceding 5 years, Chemical Bank projected the future cash-flow for the next 10 years and discounted it back to 1979 in order to determine the net present value of Advance. In forecasting the

future growth of Advance, Chemical Bank used a growth rate of 10 percent, which was the rate that Advance had experienced prior to the date of valuation. A discount rate for the risk of the investment of 18 or 19 percent was applied. Under the discounted cash-flow model, Chemical Bank figured that Advance was worth between $ 738 and $ 814 million.

Chemical Bank chose eight newspaper or magazine publishers and compared them to Advance by earnings, book value, cash-flow, earnings before interest and taxes, and earnings before depreciation, interest, and taxes. These comparisons revealed a range of value for Advance between $ 854 and $ 926 million.

Chemical Bank assumed a worst-case scenario for the potential buyer's consideration of realizable value, viz, that the right to 22 percent of declared dividends was the common shareholder's sole method for extracting cash from the corporation. Using the midpoint number from the range of value produced by the discounted cash-flow analysis and the comparable businesses analysis, Chemical Bank computed that the Advance common stock was worth 22 percent of $ 906 million or $ 201.31 million. Chemical Bank applied a control premium of 7 percent to the class A common shares over the class B common shares. Finally, a 15-percent discount for lack of marketability was applied. Chemical Bank valued the Advance common stock at $ 1.831 million and $ 169.422 million for the class A common stock and the class B common stock respectively, or $ 171,253,000 altogether.

c. Baniewicz' Report

Baniewicz valued all the properties owned by Advance on February 29, 1980, and derived a total value of $ 1,555,773,000. He subtracted foreseeable capital expenditures and unfunded pension liabilities and then added excess cash, arriving at a value of $ 1,505,943,000. Baniewicz' ultimate conclusion of the value of all of Advance thus agrees with the arithmetic sum value calculated by Goldman Sachs.

Baniewicz' report went on to place a value on the preferred stock and to reach a value for the common stock by subtracting the value of the preferred from the value of Advance. Cf. Rev. Rul. 83-120, 1983-2 C.B. 170. Finally, he allocated the value he determined for the common stock between the class A common and the class B common.

The section of Baniewicz' report that discussed the value of the preferred stock was stricken from the record. The report was based on two erroneous assumptions unsupportable on this record: (1) That the preferred stock enjoyed only those rights and privileges that respondent's legal experts said it did (a best-case scenario), and (2) that a willing buyer and willing seller would have approached the valuation of the Advance common stock by determining the net value of all assets and subtracting the value of the preferred stock.

The hypothetical willing buyer is presumed to be aware of all the pertinent facts. Such a buyer would be privy to the differing legal opinions on the common shareholder's ability to defeat the claims of the preferred shareholders to 78 percent of Advance's earnings. We do not believe that a willing buyer would have chosen to ignore the legal advice of petitioner's five legal experts. A fully informed buyer would not have assumed the correctness of the advice of respondent's five legal experts. We, therefore, cannot accept Baniewicz' underlying assumptions about the rights and privileges of the preferred stock. Rather, the record makes clear that any willing buyer would have considerable uncertainty about the common shareholder's rights to confine the preferred stock's interest in Advance to less than 78 percent of the value of Advance. Because Baniewicz' report assumes a confident willing buyer, certain that the

preferred shareholders' right to 78 percent of declared dividends can be defeated, who is unmoved by the warnings of petitioner's legal experts, this portion of his analysis assumed a transaction at odds with the economic interest of any buyer. Consequently, this portion of his report was not useful to us and was stricken from the record. Estate of Hall v. Commissioner, 92 T.C. 312, 338-339 (1989).

The other problem with Baniewicz' report was his use of the subtraction method for valuing the Advance common stock. Although the subtraction method may on occasion be an appropriate valuation method, some foundation for applying the subtraction method to a corporation whose capital structure is as unusual and complicated as Advance's is necessary. Respondent had to establish that the subtraction method was appropriate to valuing Advance. While Baniewicz was on the stand, respondent's counsel promised that two of his subsequent witnesses would testify that in their experience (Baniewicz had no qualifying experience on this point), a willing buyer would use the subtraction method to value the common stock in Advance. In fact, their proffered testimony fell far short and was ultimately stricken from the record as irrelevant. As a result, Baniewicz' employment of the subtraction method was not meaningful. Without the subtraction method, Baniewicz' report says nothing more than that the sum of the values of all of the assets of Advance was $ 1.5 billion.

Conclusion

The first issue we must resolve is whether the parties correctly applied the willing buyer, willing seller test to these facts. Each party accuses the other on brief of adopting a rigid formulaic analysis that does not do justice to the complexity of this factual situation. Hamm v. Commissioner, 325 F.2d 934, 940 (8th Cir. 1963).

The choice of the appropriate valuation methodology for a particular stock is, in itself, a question of fact. O'Malley v. Ames, 197 F.2d 256, 258 (8th Cir. 1952); Riss v. Commissioner, 56 T.C. 388, 430 (1971), affd. sub nom. Commissioner v. Transport Mfg. & Equipment Co., 478 F.2d 731 (8th Cir. 1973), affd. cause remanded 478 F.2d 1160 (8th Cir. 1973).

Goldman Sachs analyzed four benchmarks of value that willing buyers use to determine the value of stock to be purchased, and Chemical Bank valued Advance by utilizing discounted cash-flow and Advance's comparative position. These represent perfectly acceptable applications of the willing buyer, willing seller test. Respondent, however, failed to qualify any expert who could testify that a willing buyer and a willing seller would value the Advance common stock using the subtraction method. Moreover, in the face of the legal uncertainty confronting a willing buyer and willing seller on whether the common could limit the preferred's 78-percent interest in dividends and perhaps in the value of the whole business, we believe that no willing buyer or willing seller being fully informed would have used such a method to determine the value of the common stock. Respondent has no support for using the subtraction method.

Respondent faults petitioner for adhering inflexibly to a "joint sale" theory. Respondent characterizes petitioner's position as follows: because a third party contemplating a merger with Advance would be unsure of the common shareholder's rights to eliminate the claims of the preferred shareholders and would be highly averse to protracted and expensive litigation, the third party would not agree to the merger. Thus, the only way for the common shareholder to realize value, other than through dividend distributions, would be to effect a merger transaction with the preferred shareholders' blessing. The

terms of such a merger would require that 78 percent of the value of Advance would go to the preferred shareholders, and the common shareholder could not hope to get more than 22 percent of the total value of Advance.

We do not find any merit in respondent's attacks on petitioner's "joint sale" theory, and we note that respondent misstates petitioner's theory. n27 Petitioner's theory is that a fully informed willing buyer would take into account the uncertain state of the common stock's rights in deciding what value to pay for it.

n27 Indeed it was one of respondent's experts that assumed that the willing buyer, willing seller test required the preferred shareholders to consent to the sale of all Advance stock. This testimony was stricken as fundamentally flawed.

Respondent argues that this theory is unsound for several reasons. First, respondent contends that the common shareholder would protect the third party by indemnifying it against any claims of the preferred. As noted above, however, an indemnification provision would simply allocate the risk from the third party to the common shareholder. It in no way lessens the risk itself; rather it lessens the value the seller may realize. Respondent's second argument, that corporations are not as risk averse as petitioner claims, is irrelevant because: (1) While a willing buyer may employ the corporate form to effect the acquisition, we do not assume that the willing buyer would be a corporation and, more importantly for this case, (2) it is an assertion completely without support in the record. Respondent then notes that because the preferred shareholders would immediately seek an injunction, the common shareholder and the third party buyer would not have to wait to find out if their planned defeat of the preferred's claims would work. We do not think that this would end the suspense because the outcome of the litigation is not clear to us. Respondent's fourth argument is that the preferred shareholders would settle the litigation for the capitalized value of future dividends. Obviously, they would not if they were represented by Messrs. Landau, Mundheim, or Lipton.

The foundation of respondent's approach is his view that we must resolve the question of the various legal entitlements of the common and preferred stock in his favor. Respondent's position assumes that a willing buyer would not be uncertain about his ability to dispose of the claims of the preferred shareholders. In effect, respondent argues that a willing buyer would not hesitate to pay $ 1,231,800,000, as Baniewicz suggests, for the Advance common stock because of his ability to eliminate the preferred stock. This is an astonishing proposition on this record. Noted legal experts have given contrary views in this case. Petitioner's experts' opinions were unscathed by cross-examination. Their opinions were well reasoned and persuasive. We believe the likelihood of the common shareholder's legal rights to eliminate the preferred is, at best, in equipoise. The one thing the willing buyer would not have had is certainty about the ability to eliminate the preferred at the values that respondent used in his subtraction method.

Not only is there no support in the record for the subtraction method in this case, but we conclude that it is far too simplistic a method for the valuation of the Advance common stock. An underlying fallacy in this theory of valuation is the assumption that the sum of the fair market values of the preferred stock and the common stock, each sold independently to separate buyers, must equal the net value of the entire company as a going concern. Massive amounts of credible evidence in this case indicate that this assumption is not supportable.

If all the common and preferred stock in the company were sold at one time to a single buyer, we have little doubt that the price would approach the values that the experts on both sides determined for the business as a whole. But if either class of stock is sold separately, a buyer cannot be reasonably certain of his ability to eliminate or control the other shareholders, and the price will be less than its proportionate share of the total value. Although the subtraction method may be suitable for other situations, its use is inappropriate for Advance. We conclude that the correct value of the Advance common stock on February 29, 1980, was $ 176 million.

A subissue that we must address is the value of the 300 shares of class B common stock that Newhouse left to his wife by will. Petitioners submitted Goldman Sachs' report that states that the 300 shares of class B common stock were worth $ 51,757,576. Goldman Sachs calculated this figure by allocating $ 170,800,000 (of the value of the common stock, $ 176,000,000,) to the class B and $ 5,200,000 to the class A. This allocation was derived from Goldman Sachs' initial public offering analysis. Petitioner argues that, because the stock conveyed no control and because the value of the 300 shares of class B common stock must be determined without reference to any other stock Mitzi held, the correct value was $ 51,757,576. Petitioner also submitted an analysis of the value of the class B common stock by Chemical Bank. Chemical Bank determined the value of the 300 shares of class B common stock to be $ 51,340,000.

Respondent argues that the correct value of the 300 shares of class B common stock is $ 246 million. As support for this position, respondent relies on reports that were not admitted into evidence. The figure wasderived by discounting his value for the class B stock by 33 percent for lack of control and substantial voting restrictions. Baniewicz' argument supporting his calculation allocating his figure for the total value of Advance common stock between the class A and the class B was not admitted into evidence.

We have already concluded that the combined value of class A and the class B is $ 176 million. Respondent argues that a 33-percent discount of the value of class A to reflect the differential voting rights is appropriate to find the value of the class B, but offers no evidence to support his position. We conclude that Goldman Sachs' analysis produces a reasonable and correct value for the class B stock. Goldman Sachs determined that the best way to realize the value in the Advance stock would be through a public sale. First, it would be necessary to recapitalize Advance creating a single class of common stock. Goldman Sachs determined that the preferred stock and the class B stock would be traded for equal amounts of the new stock but the class A common stock would be traded for three shares of the new stock. The value of the class A common stock was $ 5.2 million and the value of the class B was $ 170.8 million. The value of 300 shares of class B common stock was $ 51,757,576.

II. VALUE OF N.B. CO. COMMON STOCK

In the notice of deficiency, the value determined for the 100 shares of N.B. Co. stock was $ 91,600,000 which is simply 44.44 percent of $ 206,400,000. On brief, respondent argues Baniewicz' determination that a 16.67-percent "discount" would be appropriate. n28 Petitioner derives the value of $ 59,600,000 by applying a discount of 35 percent to the 44.44 percent block of stock. The sole dispute that we must resolve is whether a discount is appropriate and, if so, how large it should be.

n28 Baniewicz calculated that the value of the 100 shares would be $ 76,372,500. Respondent did not explain the discrepancy between his figure and Baniewicz' result.

Respondent's determination in the notice of deficiency, which he supported through the testimony of William B. Cate, is undeniably wrong. Ignoring discounts for lack of control and lack of marketability is contraryto long-established valuation methods well accepted by the Courts in cases presenting the value of stock in closely held corporations. Estate of Andrews v. Commissioner, 79 T.C. 938 (1982); Estate of Bright v. United States, 658 F.2d 999, 1002-1003 (5th Cir. 1981); Estate of Leyman v. Commissioner, 40 T.C. 100, 119 (1963). The discounts are conceptually distinct: (1) The discount for lack of control reflects the minority shareholders' inability to compel liquidation and inability to realize a pro rata share of the corporation's net asset value. Harwood v. Commissioner, 82 T.C. 239, 267 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); (2) the lack of marketability discount reflects that there is no ready market for the shares of a closely held corporation. Estate of Andrews v. Commissioner, supra at 953. While the appropriate amount of discount to apply is a question of fact, Ward v. Commissioner, 87 T.C. 78, 109 (1986), it is unreasonable to argue that no discount should be considered for a minority interest in a closely held corporation.

A. Goldman Sachs' Report

Petitioner submitted a report in which Goldman Sachs determined that a willing buyer would pay a willing seller $ 59.6 million for the 100 shares of N.B. Co. common stock on February 29, 1980. In preparing the report, Goldman Sachs reviewed the corporate bylaws, the Certificate of Incorporation, and the financial statements from the preceding 5 years. Additionally, Goldman Sachs read the 1980 valuation report prepared by Chemical Bank n29 and the valuation report prepared by respondent's expert, Baniewicz.

n29 The 1980 valuation report of Chemical Bank was the basis of petitioner's claim on its estate tax return that the N.B. Co. stock was worth $ 68.3 million. For purposes of trial, however, the parties agreed to use $ 206.4 million for the value of the entire company and so petitioner discarded Chemical Bank's 1980 valuation.

Goldman Sachs concluded that the 100 shares of commonstock, representing 44.44 percent of the stock, lacked voting control. In other words, this block of stock neither controlled management nor controlled cash flow or distributions. A buyer of the 100 shares would not have the power to sell corporate assets or to register the stock with the Securities and Exchange Commission preparatory to an initial public offering. Because the stock interest had no control over corporate affairs, Goldman Sachs concluded that a buyer of the stock would hope to realize the value from his investment when the stock was initially offered to the public.

Goldman Sachs believed that a public offering was unlikely. In view of the large size of the company, a public offering would not have been feasible under market conditions at the valuation date. Moreover, while N.B. Co. had in excess of $ 25 million in cash and virtually no debt, management had expressed no interest in taking the company public. Furthermore, N.B. Co. had, as of the valuation date, arranged to sell its five television broadcasting stations that generated more than half of N.B. Co.'s revenue and planned to reinvest the proceeds in new television broadcasting stations.

Because liquidation of the corporation was unlikely, Goldman Sachs concluded that the only means of disposing of the 100 shares of N.B. Co. common stock would be through private placement. Because the 100 shares do not convey control over the company, no control premium would be warranted. The private placement investor would expect to realize value on his investment only through the receipt of

dividends and the eventual resale of his shares. Goldman Sachs estimated the value of the future annual dividend income from the 100 shares at $ 889,000 based on historical dividends for 1978 and 1979. Although the corporation had the ability to pay higher dividends, the private placement investor would not have the power to compel it to do so. At the valuation date, publicly traded corporate bonds were yielding 14 and 15 percent and a buyer would not have accepted a lower rate of return on his investment from his N.B. Co. stock. Additionally, Goldman Sachs determined that in circumstances that suggest no expectation of a public offering for at least 5 years, the investor would not pay more than the total value discounted by between 33 to 55 percent. Goldman Sachs concluded that a discount of35 percent would be appropriate to the N.B. Co. common stock. Applying a discount of 35 percent to 44.44 percent of the total value of N.B. Co. of $ 206.4 million, Goldman Sachs derived a fair market value for the 100 shares of common stock of $ 59.6 million.

B. Baniewicz' Report

Baniewicz determined that the 100 shares of stock would bear a control premium because, though 44.44 percent was not a majority interest, it was the "largest outstanding ownership interest" and thus "would participate in decisions controlling the affairs of the corporation." Because the stock did not represent a majority interest, Baniewicz concluded that a 25-percent control premium, rather than a full 50-percent control premium, was warranted. In order to attain a 25-percent control premium, Baniewicz applied a 16.67-percent discount from full liquidation value of $ 206.4 million because the liquidation value included a 50-percent control premium that had to be reduced. Thus, Baniewicz' 16.67-percent discount is actually a reduced control premium.

We cannot accept respondent's position. Control means that, because of the interest owned, the shareholder can unilaterally direct corporate action, select management, decide the amount of distribution, rearrange the corporation's capital structure, and decide whether to liquidate, merge, or sell assets. The owner of the 100 shares of N.B. Co. could not accomplish any of these actions. Baniewicz explained at trial that the owner of the 100 shares would have effective control because he would have the largest block of stock. Having a substantial or even the largest block of stock does not necessarily create effective control, and it certainly does not in this closely held corporation. The owner of the 100 N.B. Co. shares enjoys no attributes of control. Participating in corporate decisions is a right that any stock interest may enjoy (and which in this case the other stock interests also enjoyed), but unless that interest controls (which in a closely held corporation typically means a majority interest), a control premium is unsupportable.

We conclude that petitioner's position, as explained in the Goldman Sachs report, is reasonable and fair. The discount of 35 percent combines discounts for lack of control and lack of marketability. A combined discount of 35 percent is well within precedent. See Estate of Watts v. Commissioner, T.C. Memo. 1985-595, affd. 823 F.2d 483 (11th Cir. 1987); Drybrough v. United States, 208 F. Supp. 279 (D. Kan. 1962). n30 We conclude that the value of the 100 shares of N.B. Co. stock was $ 59,600,000 on February 29, 1980.

n30 See also Martin v. Commissioner, T.C. Memo. 1985-424.

In light of the foregoing, concessions, and the need to calculate various administration expense deductions,

Decision will be entered under Rule 155.

T.C. Memo. 1998-279

United States Tax Court

WILLIAM NORWALK, TRANSFEREE, ET AL.[1], Petitioners v. COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 20686-96, 20767-96, 20772-96, 20773-96 Filed July 30, 1998

Harry J. Kaplan and John F. Hopkins, for petitioners.

LaVonne D. Lawson, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

RUWE, JUDGE: These consolidated cases involve transferee liability, deficiencies, penalties, and an addition to tax determined by respondent as follows:

William Norwalk, Transferee
docket No. 20685-96

Year	Transferee Liability
1992	$165,940

Robert DeMarta, Transferee
docket No. 20686-96

Year	Transferee Liability
1992	$505,935

DeMarta & Norwalk, CPA's, Inc.
docket No. 20767-96

Accuracy-related Penalty

Year	Deficiency	Sec. 6662
1992	$232,540	$46,508

William R. Norwalk
docket No. 20772-96

Accuracy-related Penalty

Year	Deficiency	Sec. 6662
1992	$44,088	$8,818

Robert and Patricia DeMarta

docket No. 20773-96

		Addition to Tax	Accuracy-related Penalty
Year	Deficiency	Sec. 6651(a)(1)	Sec. 6662
1992	$150,249	$7,512	$30,050

After concessions by the parties, the issues for decision are: (1) Whether DeMarta & Norwalk, CPA's, Inc. (the corporation), realized a gain of $588,297 on the distribution of its intangible assets to its shareholders in a liquidation; (2) whether the corporation is liable for depreciation recapture in the amount of $15,643 on the distribution of its tangible assets to its shareholders in a liquidating distribution in 1992; (3) whether Robert and Patricia DeMarta realized a capital gain of $505,935 on the receipt of property from the corporation in a liquidating distribution in 1992; (4) whether William R. Norwalk realized a capital gain of $165,940 on the receipt of property from the corporation in a liquidating distribution in 1992; (5) whether the corporation is entitled to a deduction, reported as consulting fees, of $40,000 for payments to the shareholders in 1992; (6) whether Robert DeMarta and William R. Norwalk are required to report such payments, in the amounts of $23,320 and $16,680, respectively, as dividend income; (7) whether Robert and Patricia DeMarta are liable for an addition to tax under section 6651(a)(1)[2] and an accuracy- related penalty under section 6662; (8) whether the corporation is liable for an accuracy-related penalty under section 6662; (9) whether William Norwalk is liable for an accuracy-related penalty under section 6662; and (10) whether Messrs. DeMarta and Norwalk are liable as transferees for the corporation's 1992 Federal income tax liability.

FINDINGS OF FACT

Some of the facts are stipulated and are incorporated herein by this reference.

At the time of the filing of the petitions in these consolidated cases, each of the individual petitioners resided in Fremont, California, and the corporate petitioner, DeMarta & Norwalk, CPA's, Inc., maintained its principal office in Fremont, California. Robert DeMarta and William Norwalk (sometimes referred to as the shareholders) are certified public accountants (C.P.A.'s) and provide accounting services on a full-time basis. Mr. DeMarta became a C.P.A. in approximately 1970, while Mr. Norwalk became a C.P.A. in 1980.

In 1985, Messrs. DeMarta and Norwalk organized DeMarta & Norwalk, CPA's, Inc., which was incorporated in California on August 14, 1985. The business of the corporation was the practice of public accounting. At all times during the corporation's existence, Messrs. DeMarta and Norwalk have been its only shareholders.

On September 3, 1985, Messrs. DeMarta and Norwalk signed separate agreements with the corporation regarding their respective ownership interests in, and rights and duties regarding, the corporation. Each agreement is entitled "Employment Agreement". The

effective date set forth on these agreements was October 1, 1985, and each provides, among other things, the following:

TERM

5. The term of employment shall be five years from the date specified in Schedule A attached to this Agreement, subject to the following conditions:

(a) This Agreement may be terminated at any time by mutual agreement in writing of the Corporation and Employee.

(b) Employee shall have the absolute right to unilaterally terminate this Agreement by providing the Board of Directors with written notice of termination and, in that case, termination shall occur upon the expiration of ninety (90) days after the date of the notice.

* * * * *

(h) Either party may terminate this Agreement after the expiration of 15 months by giving the other 30 days written notice.

RESTRICTIVE COVENANT

6. Employee agrees that during the term of this Agreement he will not engage in any other business duties or pursuits whatsoever, directly or indirectly, except activities approved in writing by the Board of Directors, directorships in companies not in competition with the Corporation, and passive personal investments. Furthermore, Employee will not, directly or indirectly, acquire, hold, or retain any interest in any business competing with or similar in nature to the business of the Corporation, and will not own or hold to any substantial degree any securities in any company competing with the Corporation.

* * * * *

DISCLOSURE OF INFORMATION

8. Employee recognizes and acknowledges that the list of the Corporation's clients, as it may exist from time to time, is a unique asset of the Corporation's business. Employee will not, during or after the term of employment, disclose the list of the Corporation's clients or any part of it to any person, firm, corporation, association, or other entity for any reason or purpose whatsoever. In the event of a breach or threatened breach by Employee of the provisions of this Paragraph, the Corporation shall be entitled to an injunction restraining Employee from disclosing, in whole or in part, the list of the Corporation's clients, or from rendering any services to any person, firm, corporation, association, or other entity to whom the list, in whole or in part, has been disclosed or is threatened to be disclosed. Nothing in this Agreement shall be construed as prohibiting the

> Corporation from pursuing any other remedies available to the Corporation for disclosure, including the recovery of damages from Employee.

* * * * *

RECORDS

> 11. On the termination of this Agreement, Employee shall not be entitled to keep or preserve records or charts of the Corporation as to any client unless a client specifically requests a different disposition of those records, and in no event shall Employee be entitled to the records of clients not served by him.

Subsequent to the term of the shareholders' respective agreements with the corporation, no other agreements between the shareholders and the corporation were entered into. Accordingly, Messrs. DeMarta and Norwalk were not bound by any covenant not to compete on June 30, 1992.

As of June 30, 1992, in addition to the shareholders, the corporation had eight employees, four of whom were accountants. No other employee of the corporation signed any employment agreement with the corporation.

On June 30, 1992, the corporation's assets were distributed to its shareholders. On that date, Mr. DeMarta held 75 percent of the corporation's stock, while Mr. Norwalk held the remaining 25 percent. Only a nominal amount of assets was left in the corporation after this distribution. This distribution constituted a complete liquidation of the corporation in 1992. The corporation did not continue to provide accounting services after June 30, 1992, and the business of the corporation did not continue. The corporation has never been dissolved.

The corporation reported the following revenues and expenditures on its Federal income tax returns for the years 1988 through 1992:

Item from returns	1988	1989	1990	1991	1992
Gross receipts	$666,185	$850,527	$938,096	$967,495	$730,989

From 1988 to 1992, the shareholders received the following salaries from the corporation:

Year	Mr. DeMarta	Mr. Norwalk
1988	$98,024	$70,000
1989	107,463	79,920

1990	107,440	69,923
1991	107,440	89,901
1992	40,880	33,774

A portion of the salaries paid to Messrs. DeMarta and Norwalk was derived from bank loans guaranteed by the shareholders and from loans made to the corporation by the shareholders. At the beginning of the corporation's 1992 tax year, it had outstanding loans from shareholders of $22,533. At the end of the corporation's 1992 tax year, its liabilities included outstanding loans from the shareholders of $96,678.

In addition to their salaries from the corporation, Messrs. DeMarta and Norwalk received $23,320 and $16,680, respectively, in 1992. A total of $40,000 representing these additional amounts was deducted by the corporation as consulting fees on its 1992 Federal income tax return. Mr. Norwalk reported this additional amount as ordinary income on his 1992 Federal income tax return. Mr. DeMarta did not report any of this additional amount on his Federal income tax return.

On January 3, 1992, as reflected in the corporation's minutes, the board of directors (Messrs. DeMarta and Norwalk) authorized the distribution of the corporation's assets and liabilities to the shareholders. These corporate minutes provided the following reason for this distribution:

> Due to lack of profitability, it was decided to stop practice as Certified Public Accountants within the structure of DeMarta & Norwalk. It was further decided to distribute all available assets and liabilities to the shareholders. Each shareholder would then be able to pursue a professional practice on their own or as partners with other CPA(s).

On July 1, 1992, following the distribution of the corporation's assets, Messrs. DeMarta and Norwalk became partners of the accounting firm Ireland, San Filippo (the partnership), and transferred assets, distributed to them by the corporation, to the partnership. The partnership did not use the corporation's name. The tangible assets distributed to the shareholders included all the corporation's furniture and equipment, which the corporation reported on its 1992 Federal income tax return at a value of $59,455. These assets were contributed to the partnership at an agreed value of $59,455. The shareholders also transferred their share of the corporation's receivables to the partnership. These assets were contributed to the partnership (less liabilities assumed by the partnership) in exchange for the opening balances of the respective partnership capital accounts of Messrs. DeMarta and Norwalk. The partnership did not assume tax obligations of the corporation, nor did it assume the debts owed by the corporation to the shareholders. The opening capital account balances in the partnership for Messrs. DeMarta and Norwalk were $39,202 and $28,041, respectively.

Messrs. DeMarta and Norwalk each executed a partnership agreement when they joined the partnership. Under the terms of the partnership agreement, Messrs. DeMarta and Norwalk were treated as equal partners and subject to the same formula for allocation of

compensation. This partnership agreement also contained certain provisions restricting the partners' ability to compete with the partnership.

The partnership assumed the corporation's lease and occupied its former offices from July 1, 1992, to April 25, 1994. On April 28, 1994, after vacating these offices, the partnership subleased the space. At the time of the sublease, the remaining term of the lease was 8 months. The partnership subsidized one-third of the rent when it subleased the space.

As of June 30, 1992, other than the shareholders, the corporation employed the following persons: Barbara Bailey; Karin Laster; Beverly Hagan, C.P.A.; Thomas Tang, C.P.A.; Don Christman, C.P.A.; Jeanette Joyce, accountant; Judy Cunningham, administrator; and Joan Long, secretary. After the liquidation of the corporation, many of its former employees were subsequently employed by the partnership. By the end of October 1992, both Beverly Hagan and Thomas Tang left the partnership to set up their own separate accounting practices. When Mr. Tang left, Barbara Bailey, a computer consultant, and Karin Laster, a bookkeeper, also left the partnership to work for Mr. Tang.

When Ms. Hagan and Mr. Tang left to set up their individual practices, they each sent announcements to former clients of the corporation and to clients of the partnership informing them of their move. The partnership received at least 92 requests from former clients to have the information contained in their files made available to either Ms. Hagan or Mr. Tang. Pursuant to these client authorizations, the partnership permitted Ms. Hagan and Mr. Tang to copy the files of clients that left the partnership. Neither Messrs. DeMarta and Norwalk nor the partnership requested any compensation for any clients lost to either Ms. Hagan or Mr. Tang. Five years following the liquidation of the corporation, only about 10 percent of the accounts serviced by the corporation remained with the partnership.

OPINION

The principal issue underlying all these consolidated cases is the fair market value of the corporation's assets on the date of distribution.

CUSTOMER-BASED INTANGIBLES

Respondent contends that when the corporation was liquidated, it distributed to its shareholders "customer-based intangibles" in addition to tangible assets. Respondent describes the intangible assets at issue to include the corporation's client base, client records and workpapers, and goodwill (including going-concern- value). Respondent's position is that these intangibles were assets of the corporation that had a specific value and that when distributed to the shareholders in the liquidation, triggered taxable gain to the corporation. Liability in respect of a deficiency in the corporation's tax and penalty was then asserted by respondent against the shareholders of the corporation as transferees. Respondent also determined that the transfer of the customer-based intangibles received by the shareholders generated taxable gain to the shareholders.

Petitioners maintain that the corporation did not own the intangibles in question. Rather, petitioners argue that the accountants themselves owned the intangibles, and, thus, there was no transfer nor any corresponding taxable gain attributable to these intangibles.

Generally, gain or loss must be recognized by a liquidating corporation on the distribution of property in complete liquidation as if such property were sold to the distributee at its fair market value. Sec. 336(a). Petitioners do not contend that the provisions of section 336(a) should not apply here. The corporation must recognize gain calculated as the difference between the fair market value of the distributed property and the corporation's basis in that property.

Moreover, amounts received by the shareholders in a distribution in complete liquidation of the corporation must be treated as in full payment in exchange for the corporation's stock. Sec. 331(a). The shareholders must recognize any gain on the receipt of the property in the liquidating distribution. The gain to the shareholder is computed by subtracting the shareholder's adjusted basis in the stock from the amount realized. Sec. 1001(a); sec. 1.331-1(b), Income Tax Regs. The amount realized is the sum of any money received on the distribution plus the fair market value of the property received (other than money).[3] Sec. 1001(b). This gain is reduced by the outstanding corporate liabilities assumed by the shareholders, if any. Here, the loans payable to the shareholders totaled $96,678 as of June 30, 1992.[4]

We have recognized that goodwill is a vendible asset which can be sold with a professional practice. LaRue v. Commissioner, 37 T.C. 39, 44 (1961); Watson v. Commissioner, 35 T.C. 203, 209 (1960). Goodwill is often defined as the expectation of continued patronage. Newark Morning Ledger Co. v. United States, 507 U.S. 546 (1993). In Rudd v. Commissioner, 79 T.C. 225, 238 (1982), we stated:

> The goodwill of a public accounting firm can generally be described as the intangibles that attract new clients and induce existing clients to continue using the firm. These intangibles may include an established firm name, a general or specific location of the firm, client files and workpapers (including correspondence, audit information, financial statements, tax returns, etc.), a reputation for general or specialized services, an ongoing working relationship between the firm's personnel and clients, or accounting, auditing, and tax systems used by the firm. * * *

In determining the value of goodwill, there is no specific rule, and each case must be considered and decided in light of its own particular facts. MacDonald v. Commissioner, 3 T.C. 720, 726 (1944). Moreover, in determining such value it is well established that the earning power of the business is an important factor. Estate of Krafft v. Commissioner, T.C. Memo. 1961-305. In Staab v. Commissioner, 20 T.C. 834, 840 (1953), we stated:

> Goodwill, then, is an intangible consisting of the excess earning power of a business. A normal earning power is expected of the business assets, and if the business has greater earnings, then the business may be said to have goodwill. This excess in earning power may be due to any one or more of several reasons,

> and usually this extra value exists only because the business is a going concern, being successful and profitable. Goodwill may arise from: (1) the mere assembly of the various elements of a business, workers, customers, etc., (2) good reputation, customers' buying habits, (3) list of customers and their needs, (4) brand name, (5) secret processes, and (6) other intangibles affecting earnings.

Both parties presented testimony from expert witnesses regarding the value of the corporation's intangible assets. In appraising the value of the corporation's intangibles, petitioners' expert stated: "Intangible value within a company (or goodwill value) is based upon the existence of excess earnings." After examining financial information from the corporation's Federal income tax returns, the pay history of Messrs. DeMarta and Norwalk, and Federal Government guidelines for an accountant's pay, he found that the corporation did not have excess earnings or earnings over and above a return on tangible assets. Consequently, petitioners' expert concluded that the corporation was worth the value of its tangible assets[5] and that there was no intangible or goodwill value at the time of the distribution to the shareholders. He then addressed the valuation of the corporation's client list. Recognizing that in a service-related business the client relationship is normally between the client and the professional who services that client, petitioners' expert concluded that "Without an effective non- competition agreement, the clients have no meaningful value." Recognizing that there was no restriction on the ability of the individual accountants to compete with the corporation, he concluded that the client-related goodwill and intangibles belonged to the professional accountants (individually) who serviced the clients and that a list of these clients had no material value.

We have held that there is no salable goodwill where, as here, the business of a corporation is dependent upon its key employees, unless they enter into a covenant not to compete with the corporation or other agreement whereby their personal relationships with clients become property of the corporation. Martin Ice Cream Co. v. Commissioner, 110 T.C. 189, 207 (1998) ("personal relationships of a shareholder-employee are not corporate assets when the employee has no employment contract with the corporation"); Estate of Taracido v. Commissioner, 72 T.C. 1014, 1023-1024 (1979); Cullen v. Commissioner, 14 T.C. 368, 372 (1950); MacDonald v. Commissioner, supra at 727; cf. Schilbach v. Commissioner, T.C. Memo. 1991-556.[6]

We have no doubt that most, if not all, of the clients of the corporation would have "followed" the accountant who serviced that client if the accountant would have left the corporation. For instance, when Mr. Tang and Ms. Hagan left the partnership shortly after the corporation was liquidated, at least 92 clients engaged these former employees to provide future services. On the record here, it is reasonable to assume that the personal ability, personality, and reputation of the individual accountants are what the clients sought. These characteristics did not belong to the corporation as intangible assets, since the accountants had no contractual obligation to continue their connection with it. There is no persuasive evidence that the name and location of the corporation had any value other than for their connection with the accountants themselves.

The situation in the instant case is similar to that in MacDonald v. Commissioner, supra. In MacDonald, the taxpayer and his wife were the sole shareholders in an incorporated insurance agency. They subsequently liquidated the corporation, distributing all assets to the husband, who proceeded to set up an insurance agency under a name similar to the name of the liquidated corporation and solicited the clients of the corporation.

The issue presented to us in that case was whether there was any valuable goodwill passing from the corporation to the taxpayers upon liquidation of the corporation. The corporation had no exclusive right to the business of any policyholder, and without a covenant not to compete from the taxpayer, the business of the corporation had no market value. In holding that there was no goodwill passing to the taxpayers because the goodwill was solely attributable to the personal abilities of the taxpayers, we stated:

> The facts in the instant cases established that any value which this business may have had on July 31, 1941, in addition to its tangible assets, was due to the personal ability, business acquaintanceship, and other individualistic qualities of D. K. MacDonald. As one witness put it, "Mr. MacDonald was the Company." The policy of the corporation was decided by D. K. MacDonald and all employees worked under his direction and supervision. There existed no contract between the corporation and any of its employees, including D. K. MacDonald, with respect to future services. Neither the name of the corporation, its location, its agency agreements, nor its existing policies with customers had any value. If the law prevents the recognition of the personal ability and personality of D. K. MacDonald as an element of this corporation's goodwill for income tax purposes, then petitioners did not receive any goodwill as a result of their acquisition of this corporation's assets.
>
> We find no authority which holds that an individual's personal ability is part of the assets of a corporation by which he is employed where, as in the instant cases, the corporation does not have a right by contract or otherwise to the future services of that individual. . . . (MacDonald v. Commissioner, 3 T.C. at 727.]

We further held in MacDonald that there was no marketable asset embodying the goodwill of the corporation which could be sold to a third party. We recognized the possibility that a purchaser might take over the customer list of the corporation on a contingency basis. In holding that this type of an arrangement has no fair market value, we stated:

> It is true that goodwill may be the subject of exchange. Here, however, Cassatt and Company [the seller] did not undertake to transfer its goodwill to Pierce [the purchaser] in exchange for property of an ascertainable market value. On the contrary the transfer was made in consideration of Pierce's promise to share with Cassatt and Company for six years in the future any commissions which it might earn during that period from business with Cassatt customers. The receipt of such commissions was wholly contingent upon Pierce's remaining in business and obtaining business from the former Cassatt customers, neither of which it was under any obligation to do. It is settled that such a promise to make payments in the future "wholly contingent upon facts and circumstances not possible to foretell

> with anything like fair certainty" has no ascertainable fair market value. Burnet v. Logan, 283 U.S. 404, 413, 51 S. Ct. 550, 552, 75 L.Ed. 1143. (Id. at 729 (quoting Cassatt v. Commissioner, 137 F.2d 745, 748 (3d Cir. 1943), affg. 47 B.T.A. 400 (1942)).]

Therefore, for the same reasons as given in MacDonald, we hold that at the time of the corporation's liquidation it had no goodwill, either in terms of a client list or in any other form, which could be distributed to the individual shareholders or sold to a third party.

We have carefully considered the testimony of respondent's experts who testified that in their opinion a fair value of the corporation would be $870,000, of which $266,000 would represent the value of the client list and $369,000 would represent goodwill.[7] However, we conclude that their opinion regarding the intangible assets of the corporation is of no probative force in light of other evidence of record and existing case law.

Respondent's experts based their opinion as to the value of the goodwill and the client list upon an approximation of earnings that they made based upon the volume of business actually done by the corporation but using cost percentages normal to the industry, which were far less than the corporation's actual operating costs. These approximations are not in line with the actual experience of the corporation, and the record does not establish that there was any reasonable expectation that such costs could have been so reduced. See Estate of Krafft v. Commissioner, T.C. Memo. 1961-305.

More importantly, respondent's experts valued the corporation's client list and goodwill as if a covenant not to compete was in effect on the date of distribution. Respondent's expert, Mr. Kettell, testified that such a restriction is a very important factor in valuing the intangibles of the corporation. However, we have found that there were no restrictions on the corporation's employees to compete with it on the date of distribution. Nevertheless, in determining the corporation's value, respondent's experts relied upon the restrictions expressed in the partnership agreement executed by Messrs. DeMarta and Norwalk after the distribution of the corporation's assets. The parties to the partnership agreement are Messrs. DeMarta and Norwalk and the existing partners of the partnership, not the corporation. This agreement was not enforceable by the corporation and should have no bearing on the valuation of the corporation on the date that it distributed its assets.

In view of the foregoing, we conclude that there were no transferable "customer-based intangibles" belonging to the corporation independent of the abilities, skills, and reputation of the individual accountants. "Ability, skill, experience, acquaintanceship, or other personal characteristics or qualifications do not constitute goodwill as an item of property, nor do they exist in such form that they could be the subject of transfer." Providence Mill Supply Co. v. Commissioner, 2 B.T.A. 791, 793 (1925). In O'Rear v. Commissioner, 28 B.T.A. 698, 700 (1933), affd. 80 F.2d 473 (6th Cir. 1935), we stated that "it is at least doubtful whether a professional man can sell or dispose of any goodwill which may attach to his practice EXCEPT PERHAPS BY CONTRACTING TO

REFRAIN FROM PRACTICING." (Emphasis added.) Because there was no enforceable contract which restricted the practice of any of the accountants at the time of the distribution, their personal goodwill did not attach to the corporation. Any goodwill transferred to the partnership was that of the individual accountants, not the corporation. Under these circumstances, we conclude that the value of any "customer-based intangibles" that the corporation may have had was nominal. We hold that petitioners have met their burden of establishing that value is not allocable to the customer-based intangibles as determined by respondent.

TANGIBLE ASSET VALUE

Respondent increased the corporation's taxable income by $15,643 for section 1245 depreciation-recapture income, resulting from the distribution of its tangible assets to the shareholders.[8] Section 1245(a)(1) provides for the recapture of depreciation as ordinary income upon the disposition of section 1245 property. Personal property used in a trade or business is section 1245 property. Sec. 1245(a)(3)(A). Here, the amount recaptured is the amount by which the lower of the recomputed basis of the property or the fair market value of such property, exceeds the adjusted basis of the property. Sec. 1245(a)(1). Recomputed basis means the adjusted basis of the property recomputed by adding thereto all adjustments reflected in such adjusted basis on account of deductions allowed or allowable to the taxpayer for depreciation.[9] Sec. 1245(a)(2)(A).

The corporation reported an adjusted basis in its tangible assets of $59,455 on its 1992 Federal income tax return. Respondent's experts stated that the corporation's tangible assets, which were distributed to the shareholders and then transferred to the partnership, had a fair market value of $102,000. Respondent's experts arrived at their opinion by estimating the replacement cost of items listed on an asset ledger and then subtracting an amount for accumulated depreciation based upon an estimate using each item's age and useful life. The amount of depreciation was calculated using the experts' own "in house developed software."[10] However, none of the tangible assets were inspected by respondent's experts, nor did they have any actual knowledge of the nature or condition of the assets distributed.

Petitioners, on the other hand, argue that the tangible assets of the corporation had a fair market value equal to, or less than, the corporation's adjusted basis in the assets on the date of distribution. The tangible assets at issue were contributed to the partnership at an agreed value equal to the corporation's basis as reported on its 1992 Federal income tax return. Petitioners rely upon the contribution value of the tangible assets as evidence of the assets' fair market value. It is well established that the best evidence of fair market value is the amount paid for property in an arm's-length transaction at or near the relevant valuation date. Chiu v. Commissioner, 84 T.C. 722, 734 (1985). Respondent does not argue that the contribution of the tangible assets by the shareholders was other than at arm's length, and the opinions of respondent's experts do not convince us that the fair market value of the tangible assets at the time of the distribution was anything other than $59,455. Accordingly, the corporation did not realize recapture income on the distribution.

CONSULTING FEES

The corporation paid the shareholders $40,000 in addition to their salaries for 1992, which the corporation deducted as consulting fees. Respondent determined that the corporation was not entitled to the subject deduction and that the shareholders must report the amounts they received with respect to this deduction as dividend income. No documentary evidence has been presented to establish that the $40,000 deducted by the corporation was paid to the shareholders for services provided to the corporation in the year deducted. The corporation has failed to meet its burden of establishing that it is entitled to deduct the $40,000 payment to the shareholders in 1992 as consulting fees or that it should not characterize the amounts as dividends as respondent contends.

Petitioners Robert and Patricia DeMarta conceded respondent's determination in regard to this issue. Petitioner William Norwalk reported the $16,680 as business income and deducted $1,425 as business expenses. Respondent adjusted this by determining that the $16,680 was unreported dividend income and simultaneously reducing reported business income by $15,255 (the difference between the $16,680 business income and $1,425 expense) that Mr. Norwalk reported. This results in a net increase in taxable income of $1,425, which we uphold.

FAILURE TO FILE -- SECTION 6651(a)

Respondent determined that Robert and Patricia DeMarta are liable for an addition to tax under the provisions of section 6651(a). Section 6651(a) imposes an addition to tax for failure to timely file a return, unless the taxpayer establishes that such failure is due to reasonable cause and not due to willful neglect. Mr. and Mrs. DeMarta failed to file their 1992 individual tax return within the period allowed for filing. An extension to file their return was granted until October 15, 1993. According to the notice of deficiency issued to Mr. and Mrs. DeMarta, their 1992 return was filed on October 27, 1993. Petitioners have provided no evidence or argument on this issue. We find that Mr. and Mrs. DeMarta are liable for the addition to tax in accordance with section 6651(a)(1).

IMPOSITION OF ACCURACY-RELATED PENALTY -- SECTION 6662(a)

Respondent has determined that the corporation, William R. Norwalk, and Robert and Patricia DeMarta are liable for accuracy- related penalties under section 6662(a). Section 6662(a) provides that, if it is applicable to any portion of an underpayment in taxes, there shall be added to the tax an amount equal to 20 percent of the portion of the underpayment to which section 6662 applies. Section 6662(b)(1) provides that section 6662 shall apply to the portion of any underpayment attributable to negligence or disregard of rules or regulations. Section 6662(c) provides that the term "negligence" includes any failure this title, and the term "disregard" includes any careless, reckless, or intentional disregard of rules or regulations. Negligence is the lack of due care or failure to do what a reasonable and ordinarily prudent person would do under the circumstances. Neely v. Commissioner, 85 T.C. 934, 947 (1985).

However, under section 6664(c), no penalty shall be imposed under section 6662(a) with respect to any portion of any underpayment if it is shown that there was a reasonable cause for such portion and that the taxpayer acted in good faith with respect to such portion. The Commissioner's determination is presumptively correct and will be upheld unless the taxpayer is able to rebut the presumption. Luman v. Commissioner, 79 T.C. 846, 860-861 (1982); Bixby v. Commissioner, 58 T.C. 757, 791 (1972); Reily v. Commissioner, 53 T.C. 8, 13-14 (1969).

In the notices of deficiency issued to the corporation, William R. Norwalk, and Robert and Patricia DeMarta, respondent applied the section 6662(a) penalty to "all or part of the underpayment of tax". With regard to the $23,320 adjustment conceded by petitioners Robert and Patricia DeMarta, they have presented no evidence to show that they acted with reasonable cause or good faith.[11] Therefore, we find that the accuracy-related penalty under section 6662(a) applies to the underpayment of tax associated with this settled issue.

In regard to the $40,000 deducted by the corporation as consulting fees, we have upheld respondent's determination. After thoroughly reviewing the record in these cases, we find no persuasive evidence or argument that the corporation acted with reasonable cause or good faith with respect to this issue. On this record, we hold that the corporation negligently or intentionally disregarded rules or regulations with regard to the underpayment of tax associated with this issue. Accordingly, the accuracy-related penalty under section 6662(a) is sustained with respect to the underpayment of tax associated with this deduction by the corporation.

Mr. Norwalk reported his allocable portion of the dividend ($16,680) on his return. Even though he did not characterize this amount as a dividend, the net effect of this was de minimis. We find that any understatement attributable to this was not due to negligence. Thus, Mr. Norwalk is not liable for the accuracy-related penalty under section 6662(a).

TRANSFEREE LIABILITY

Section 6901(a)(1)(A) authorizes the assessment of transferee liability in the same manner as the taxes in respect of which the liability was incurred. This provision does not create a new liability; it merely provides a remedy for enforcing the existing liability of the transferor. Coca-Cola Bottling Co. v. Commissioner, 334 F.2d 875, 877 (9th Cir. 1964), affg. 37 T.C. 1006 (1962); Mysse v. Commissioner, 57 T.C. 680, 700-701 (1972). The Commissioner has the burden of proving all the elements necessary to establish the taxpayer's liability as a transferee except for proving that the transferor was liable for the tax. Sec. 6902(a); Rule 142(d).

The substantive questions of whether a transferee is liable for the transferor's obligation and the extent of his liability depend on State law. See Commissioner v. Stern, 357 U.S. 39, 45 (1958); Adams v. Commissioner, 70 T.C. 373, 389 (1978), affd. without published

opinion 688 F.2d 815 (2d Cir. 1982). All the transfers in the instant case occurred in California; hence, California law governs. Adams v. Commissioner, supra at 390.

Respondent contends that Messrs. DeMarta and Norwalk are liable as transferees under Cal. Corp. Code section 2009 (West 1990). That section provides creditors with a cause of action against shareholders who have received assets improperly distributed upon dissolution of a corporation. Id. Cal. Corp. Code section 2004 (West 1990) provides the proper method of distributing corporate assets in a dissolution:

> After determining that all the known debts and liabilities of a corporation in the process of winding up have been paid or adequately provided for, the board shall distribute all the remaining corporate assets among the shareholders according to their respective rights and preferences or, if there are no shareholders, to the persons entitled thereto. * * *

Therefore, in order to impose transferee liability on the shareholders under this California law, respondent must prove that the shareholders improperly distributed the assets of the corporation.

At the time the corporation was liquidated, its liabilities included outstanding loans from the shareholders of $96,678.[12] On the basis of our findings in this case, we hold that respondent has not shown that the assets the shareholders received exceeded this amount.[13] The corporate minutes signed by Messrs. DeMarta and Norwalk and dated May 1, 1992, state:

> It was resolved that the Corporation, DeMarta & Norwalk, would distribute most of its assets and liabilities to the shareholders.
>
> Each shareholder would be distributed his share of assets and liabilities (except for shareholders loans). The net asset received by each shareholder would be credited as payment toward his shareholder loan.
>
> There does not appear to be sufficient net assets to pay back the full amount of the shareholder loans and therefore there will be no assets available for distribution against stock, retained earnings or dividends.
>
> This distribution is to take place prior to June 30, 1992.

There is nothing in the record that would indicate that the receipt of the corporate assets was anything other than partial payment of this debt. Based upon the meager record presented on this issue, we do not find that the assets were improperly distributed under Cal. Corp. Code section 2004; thus, this law is not a valid basis for transferee liability in this case.

Respondent also contends that the shareholders are liable as transferees under Cal. Civ. Code section 3439.04 (West 1997), which provides:

> A transfer made or obligation incurred by a debtor is fraudulent as to a creditor, whether the creditor's claim arose before or after the transfer was made or the

> obligation was incurred, if the debtor made the transfer or incurred the obligation as follows:
>
> > (a) With actual intent to hinder, delay, or defraud any creditor of the debtor.
> >
> > (b) Without receiving a reasonably equivalent value in exchange for the transfer or obligation, and the debtor:
> >
> > > (1) Was engaged or was about to engage in a business or a transaction for which the remaining assets of the debtor were unreasonably small in relation to the business or transaction; or
> > >
> > > (2) Intended to incur, or believed or reasonably should have believed that he or she would incur, debts beyond his or her ability to pay as they became due.

Therefore, in order to establish that Messrs. DeMarta and Norwalk are liable as transferees for the amounts they received from the corporation, respondent must prove: (1) The corporation transferred the assets with "actual intent to hinder, delay, or defraud" the Internal Revenue Service; or (2) the corporation made the transfer without receiving a reasonably equivalent value in exchange for the transfer.

Actual intent may be established from circumstances surrounding the transfer of the assets. Menick v. Goldy, 280 P.2d 844 (Cal. Ct. App. 1955); Burns v. Radoicich, 176 P.2d 77 (Cal. Ct. App. 1947). As respondent recognizes, transferee liability generally results:

> when stockholders receive corporate distributions for which they do not pay an adequate and full consideration at a time when the corporation is insolvent, or thereby becomes insolvent, or is in process of liquidation. [Lesser v. Commissioner, 47 T.C. 564, 585 (1967).]

After carefully reviewing the record, we find that respondent has not met his burden of proving either actual intent to defraud or that the shareholders received assets for which they did not pay adequate and full consideration. Accordingly, we hold that Messrs. DeMarta and Norwalk are not liable as transferees.

Decisions will be entered under Rule 155.

FOOTNOTES

1. The following cases are consolidated: Robert DeMarta, Transferee, docket No. 20686-96; DeMarta & Norwalk, CPA's, Inc., docket No. 20767-96; William R. Norwalk, docket No. 20772-96; and Robert and Patricia DeMarta, docket No. 20773-96.

2. Unless otherwise indicated, all section references are to the Internal Revenue Code in effect for the taxable year in issue, and all Rule references are to the Tax Court Rules of Practice and Procedure.

3. sec. 1.331-1(e), Income Tax Regs., provides that a shareholder's gain or loss on a liquidating distribution be calculated on a per-share basis. The parties have stipulated the shareholders' bases in the corporation's stock, which are used for purposes of calculating the shareholder gain on the distribution.

4. It is not clear from the record whether respondent allowed any reduction for liabilities assumed by the shareholders in making his determination.

5. Petitioners' expert expressed no opinion with respect to the value of the tangible assets of the corporation.

6. In support of his position, respondent cites Schilbach v. Commissioner, T.C. Memo. 1991-556. In Schilbach, we found that a medical practice, operating as a corporation, had goodwill despite the lack of a covenant not to compete. Schilbach is distinguishable from the instant case in that in Schilbach some of the goodwill of the medical practice was inherent in the operating entity and was not solely dependent upon the employee-shareholder's ability. Moreover, in Schilbach, we found it doubtful that the employee-shareholder would have competed with the medical practice due to his inability to obtain malpractice insurance and his physical and mental condition. We do not find that the same circumstances exist in the instant cases.

7. Respondent made no separate determination as to any going- concern-value that the corporation may have had. Moreover, respondent's experts fail to attribute any value to such an asset.

8. Neither party argues that any of the tangible assets of the corporation is other than sec. 1245 property.

9. Petitioners submitted a list of the tangible assets at issue, which reflects an approximate recomputed basis of $179,880. Because both parties contend that the fair market value of the property is less than this amount, we rely on the fair market value to determine any gain recognized from depreciation recapture.

10. "Additionally, the market approach was used as a check for some items, such as computer equipment.

11. With respect to the adjustments in the notice of deficiency issued to Robert and Patricia DeMarta, the parties filed a stipulation of settled issues with this Court on Oct. 24, 1997.

12. Loans from shareholders increased by more than $74,000 from Jan. 1 to June 30, 1992.

13. If we had upheld respondent's principal determination regarding the value of the "customer-based intangibles", there would be no question that the assets exceeded the corporate debt owed to the shareholders.

66 N.Y.2d 576 (1985)

Michael O'Brien, Respondent-Appellant, v. Loretta O'Brien, Appellant-Respondent.

Court of Appeals of the State of New York.

Argued November 11, 1985.
Decided December 26, 1985.

Albert J. Emanuelli for appellant-respondent.

Willard H. Da Silva and *Richard J. Keidel* for respondent-appellant.

Sally Weinraub, *Shirley Tolley* and *Brynne Haines* for Westchester Women's Bar Association, amicus curiae.

Chief Judge WACHTLER and Judges JASEN, MEYER, KAYE, ALEXANDER and TITONE concur with Judge SIMONS; Judges MEYER and TITONE concur in separate concurring opinions.

SIMONS, J.

In this divorce action, the parties' only asset of any consequence is the husband's newly acquired license to practice medicine. The principal issue presented is whether that license, acquired during their marriage, is marital property subject to equitable distribution under Domestic Relations Law § 236 (B) (5). Supreme Court held that it was and accordingly made a distributive award in defendant's favor.[1] It also granted defendant maintenance arrears, expert witness fees and attorneys' fees (114 Misc 2d 233). On appeal to the Appellate Division, a majority of that court held that plaintiff's medical license is not marital property and that defendant was not entitled to an award for the expert witness fees. It modified the judgment and remitted the case to Supreme Court for further proceedings, specifically for a determination of maintenance and a rehabilitative award (106 AD2d 223). The matter is before us by leave of the Appellate Division.

We now hold that plaintiff's medical license constitutes "marital property" within the meaning of Domestic Relations Law § 236 (B) (1) (c) and that it is therefore subject to equitable distribution pursuant to subdivision 5 of that part. That being so, the Appellate Division erred in denying a fee, as a matter of law, to defendant's expert witness who evaluated the license.

[1] The action was originally instituted by plaintiff husband and defendant wife asserted a counterclaim in her answer. Subsequently, the husband withdrew his complaint and reply to the counterclaim and the wife received an uncontested divorce.

Plaintiff and defendant married on April 3, 1971. At the time both were employed as teachers at the same private school. Defendant had a bachelor's degree and a temporary teaching certificate but required 18 months of postgraduate classes at an approximate cost of $3,000, excluding living expenses, to obtain permanent certification in New York. She claimed, and the trial court found, that she had relinquished the opportunity to obtain permanent certification while plaintiff pursued his education. At the time of the marriage, plaintiff had completed only three and one-half years of college but shortly afterward he returned to school at night to earn his bachelor's degree and to complete sufficient premedical courses to enter medical school. In September 1973 the parties moved to Guadalajara, Mexico, where plaintiff became a full-time medical student. While he pursued his studies defendant held several teaching and tutorial positions and contributed her earnings to their joint expenses. The parties returned to New York in December 1976 so that plaintiff could complete the last two semesters of medical school and internship training here. After they returned, defendant resumed her former teaching position and she remained in it at the time this action was commenced. Plaintiff was licensed to practice medicine in October 1980. He commenced this action for divorce two months later. At the time of trial, he was a resident in general surgery.

During the marriage both parties contributed to paying the living and educational expenses and they received additional help from both of their families. They disagreed on the amounts of their respective contributions but it is undisputed that in addition to performing household work and managing the family finances defendant was gainfully employed throughout the marriage, that she contributed all of her earnings to their living and educational expenses and that her financial contributions exceeded those of plaintiff. The trial court found that she had contributed 76% of the parties' income exclusive of a $10,000 student loan obtained by defendant. Finding that plaintiff's medical degree and license are marital property, the court received evidence of its value and ordered a distributive award to defendant.

Defendant presented expert testimony that the present value of plaintiff's medical license was $472,000. Her expert testified that he arrived at this figure by comparing the average income of a college graduate and that of a general surgeon between 1985, when plaintiff's residency would end, and 2012, when he would reach age 65. After considering Federal income taxes, an inflation rate of 10% and a real interest rate of 3% he capitalized the difference in average earnings and reduced the amount to present value. He also gave his opinion that the present value of defendant's contribution to plaintiff's medical education was $103,390. Plaintiff offered no expert testimony on the subject.

The court, after considering the life-style that plaintiff would enjoy from the enhanced earning potential his medical license would bring and defendant's contributions and efforts toward attainment of it, made a distributive award to her of $188,800, representing 40% of the value of the license, and ordered it paid in 11 annual installments of various amounts beginning November 1, 1982 and ending November 1, 1992. The court also directed plaintiff to maintain a life insurance policy on his life for defendant's benefit for the unpaid balance of the award and it ordered plaintiff to pay defendant's counsel fees of $7,000 and her expert witness fee of $1,000. It did not award defendant maintenance.

A divided Appellate Division, relying on its prior decision in *Conner v Conner* (97 AD2d 88) and the decision of the Fourth Department in *Lesman v Lesman* (88 AD2d 153, *appeal dismissed* 57 N.Y.2d 956), concluded that a professional license acquired during marriage is not marital property subject to distribution. It therefore modified the judgment by striking the trial court's determination that it is and by striking the provision ordering payment of the expert witness for evaluating the license and remitted the case for further proceedings.

On these cross appeals, defendant seeks reinstatement of the judgment of the trial court. Plaintiff contends that the Appellate Division correctly held that a professional license is not marital property but he also urges that the trial court failed to adequately explain what factors it relied on in making its decision, that it erroneously excluded evidence of defendant's marital fault and that the trial court's awards for attorneys and expert witness fees were improper.

II

The Equitable Distribution Law contemplates only two classes of property: marital property and separate property (Domestic Relations Law § 236 [B] [c], [d]). The former, which is subject to equitable distribution, is defined broadly as *"all* property acquired by either or both spouses during the marriage and before the execution of a separation agreement or the commencement of a matrimonial action, *regardless of the form in which title is held"* (Domestic Relations Law § 236 [B] [1] [c] [emphasis added]; *see*, § 236 [B] [5] [b], [c]). Plaintiff does not contend that his license is excluded from distribution because it is separate property; rather, he claims that it is not property at all but represents a personal attainment in acquiring knowledge. He rests his argument on decisions in similar cases from other jurisdictions and on his view that a license does not satisfy common-law concepts of property. Neither contention is controlling because decisions in other States rely principally on their own statutes, and the legislative history underlying them, and because the New York Legislature deliberately went beyond traditional property concepts when it formulated the Equitable Distribution Law (*see generally*, 2 Foster-Freed-Brandes, Law and the Family — New York ch 33, at 917 *et set.*[1985 Cum Supp]). Instead, our statute recognizes that spouses have an equitable claim to things of value arising out of the marital relationship and classifies them as subject to distribution by focusing on the marital status of the parties at the time of acquisition. Those things acquired during marriage and subject to distribution have been classified as "marital property" although, as one commentator has observed, they hardly fall within the traditional property concepts because there is no common-law property interest remotely resembling marital property. "It is a statutory creature, is of no meaning whatsoever during the normal course of a marriage and arises full-grown, like Athena, upon the signing of a separation agreement or the commencement of a matrimonial action. [Thus] [i]t is hardly surprising, and not at all relevant, that traditional common law property concepts do not fit in parsing the meaning of `marital property'" (Florescue, "Market Value", *Professional Licenses and Marital Property: A Dilemma in Search of a Horn*, 1982 NY St Bar Assn Fam L Rev 13 [Dec.]). Having classified the "property" subject to distribution, the Legislature did not attempt to go further and define it but left it to the courts to determine what interests come within the terms of section 236 (B) (1) (c).

We made such a determination in *Majauskas v Majauskas* (61 N.Y.2d 481), holding there that vested but unmatured pension rights are marital property subject to equitable

distribution. Because pension benefits are not specifically identified as marital property in the statute, we looked to the express reference to pension rights contained in section 236 (B) (5) (d) (4), which deals with equitable distribution of marital property, to other provisions of the equitable distribution statute and to the legislative intent behind its enactment to determine whether pension rights are marital property or separate property. A similar analysis is appropriate here and leads to the conclusion that marital property encompasses a license to practice medicine to the extent that the license is acquired during marriage.

Section 236 provides that in making an equitable distribution of marital property, "the court shall consider: * * * (6) any equitable claim to, interest in, or direct or indirect contribution made to the acquisition of such marital property by the party not having title, including joint efforts or expenditures and contributions and services as a spouse, parent, wage earner and homemaker, and *to the career or career potential* of the other party [and] * * * (9) the impossibility or difficulty of evaluating any component asset or any interest in a business, corporation or *profession"* (Domestic Relations Law § 236 [B] [5] [d] [6], [9] [emphasis added]). Where equitable distribution of marital property is appropriate but "the distribution of an interest in a business, corporation or *profession* would be contrary to law" the court shall make a distributive award in lieu of an actual distribution of the property (Domestic Relations Law § 236 [B] [5] [e] [emphasis added]). The words mean exactly what they say: that an interest in a profession or professional career potential is marital property which may be represented by direct or indirect contributions of the non-title-holding spouse, including financial contributions and nonfinancial contributions made by caring for the home and family.

The history which preceded enactment of the statute confirms this interpretation. Reform of section 236 was advocated because experience had proven that application of the traditional common-law title theory of property had caused inequities upon dissolution of a marriage. The Legislature replaced the existing system with equitable distribution of marital property, an entirely new theory which considered all the circumstances of the case and of the respective parties to the marriage (Assembly Memorandum, 1980 NY Legis Ann, at 129-130). Equitable distribution was based on the premise that a marriage is, among other things, an economic partnership to which both parties contribute as spouse, parent, wage earner or homemaker (*id.*, at 130; *see*, Governor's Memorandum of Approval, 1980 McKinney's Session Laws of NY, at 1863). Consistent with this purpose, and implicit in the statutory scheme as a whole, is the view that upon dissolution of the marriage there should be a winding up of the parties' economic affairs and a severance of their economic ties by an equitable distribution of the marital assets. Thus, the concept of alimony, which often served as a means of lifetime support and dependence for one spouse upon the other long after the marriage was over, was replaced with the concept of maintenance which seeks to allow "the recipient spouse an opportunity to achieve [economic] independence" (Assembly Memorandum, 1980 NY Legis Ann, at 130).

The determination that a professional license is marital property is also consistent with the conceptual base upon which the statute rests. As this case demonstrates, few undertakings during a marriage better qualify as the type of joint effort that the statute's economic partnership theory is intended to address than contributions toward one spouse's acquisition of a professional license. Working spouses are often required to contribute substantial income as wage earners, sacrifice their own educational or career goals and

opportunities for child rearing, perform the bulk of household duties and responsibilities and forego the acquisition of marital assets that could have been accumulated if the professional spouse had been employed rather than occupied with the study and training necessary to acquire a professional license. In this case, nearly all of the parties' nine-year marriage was devoted to the acquisition of plaintiff's medical license and defendant played a major role in that project. She worked continuously during the marriage and contributed all of her earnings to their joint effort, she sacrificed her own educational and career opportunities, and she traveled with plaintiff to Mexico for three and one-half years while he attended medical school there. The Legislature has decided, by its explicit reference in the statute to the contributions of one spouse to the other's profession or career (*see*, Domestic Relations Law § 236 [B] [5] [d] [6], [9]; [e]), that these contributions represent investments in the economic partnership of the marriage and that the product of the parties' joint efforts, the professional license, should be considered marital property.

The majority at the Appellate Division held that the cited statutory provisions do not refer to the license held by a professional who has yet to establish a practice but only to a going professional practice (*see, e.g.*, *Arvantides v Arvantides*, 64 N.Y.2d 1033; *Litman v Litman*, 61 N.Y.2d 918). There is no reason in law or logic to restrict the plain language of the statute to existing practices, however, for it is of little consequence in making an award of marital property, except for the purpose of evaluation, whether the professional spouse has already established a practice or whether he or she has yet to do so. An established practice merely represents the exercise of the privileges conferred upon the professional spouse by the license and the income flowing from that practice represents the receipt of the enhanced earning capacity that licensure allows. That being so, it would be unfair not to consider the license a marital asset.

Plaintiff's principal argument, adopted by the majority below, is that a professional license is not marital property because it does not fit within the traditional view of property as something which has an exchange value on the open market and is capable of sale, assignment or transfer. The position does not withstand analysis for at least two reasons. First, as we have observed, it ignores the fact that whether a professional license constitutes marital property is to be judged by the language of the statute which created this new species of property previously unknown at common law or under prior statutes. Thus, whether the license fits within traditional property concepts is of no consequence. Second, it is an overstatement to assert that a professional license could not be considered property even outside the context of section 236 (B). A professional license is a valuable property right, reflected in the money, effort and lost opportunity for employment expended in its acquisition, and also in the enhanced earning capacity it affords its holder, which may not be revoked without due process of law (*see*, *Matter of Bender v Board of Regents*, 262 App Div 627, 631; *People ex rel. Greenberg v Reid*, 151 App Div 324, 326). That a professional license has no market value is irrelevant. Obviously, a license may not be alienated as may other property and for that reason the working spouse's interest in it is limited. The Legislature has recognized that limitation, however, and has provided for an award in lieu of its actual distribution (*see*, Domestic Relations Law § 236 [B] [5] [e]).

Plaintiff also contends that alternative remedies should be employed, such as an award of rehabilitative maintenance or reimbursement for direct financial contributions *(see, e.g.*, *Kutanovski v Kutanovski*, 109 AD2d 822, 824; *Conner v Conner*, 97 AD2d 88,

101, *supra; Lesman v Lesman*, 88 AD2d 153, 158-159, *supra)*. The statute does not expressly authorize retrospective maintenance or rehabilitative awards and we have no occasion to decide in this case whether the authority to do so may ever be implied from its provisions (*but see*, *Cappiello v Cappiello*, 66 N.Y.2d 107). It is sufficient to observe that normally a working spouse should not be restricted to that relief because to do so frustrates the purposes underlying the Equitable Distribution Law. Limiting a working spouse to a maintenance award, either general or rehabilitative, not only is contrary to the economic partnership concept underlying the statute but also retains the uncertain and inequitable economic ties of dependence that the Legislature sought to extinguish by equitable distribution. Maintenance is subject to termination upon the recipient's remarriage and a working spouse may never receive adequate consideration for his or her contribution and may even be penalized for the decision to remarry if that is the only method of compensating the contribution. As one court said so well, "[t]he function of equitable distribution is to recognize that when a marriage ends, each of the spouses, based on the totality of the contributions made to it, has a stake in and right to a share of the marital assets accumulated while it endured, not because that share is needed, but because those assets represent the capital product of what was essentially a partnership entity" (*Wood v Wood*, 119 Misc 2d 1076, 1079). The Legislature stated its intention to eliminate such inequities by providing that a supporting spouse's "direct or indirect contribution" be recognized, considered and rewarded (Domestic Relations Law § 236 [B] [5] [d] [6]).

Turning to the question of valuation, it has been suggested that even if a professional license is considered marital property, the working spouse is entitled only to reimbursement of his or her direct financial contributions (*see*, Note, *Equitable Distribution of Degrees and Licenses: Two Theories Toward Compensating Spousal Contributions*, 49 Brooklyn L Rev 301, 317-322). By parity of reasoning, a spouse's down payment on real estate or contribution to the purchase of securities would be limited to the money contributed, without any remuneration for any incremental value in the asset because of price appreciation. Such a result is completely at odds with the statute's requirement that the court give full consideration to both direct and indirect contributions "made to the acquisition of such marital property by the party not having title, including joint *efforts* or expenditures and *contributions and services as a spouse, parent*, wage earner *and homemaker"* (Domestic Relations Law § 236 [B] [5] [d] [6] [emphasis added]). If the license is marital property, then the working spouse is entitled to an equitable portion of it, not a return of funds advanced. Its value is the enhanced earning capacity it affords the holder and although fixing the present value of that enhanced earning capacity may present problems, the problems are not insurmountable. Certainly they are no more difficult than computing tort damages for wrongful death or diminished earning capacity resulting from injury and they differ only in degree from the problems presented when valuing a professional practice for purposes of a distributive award, something the courts have not hesitated to do (*see*, *Arvantides v Arvantides*, 64 N.Y.2d 1033, *supra; Litman v Litman*, 93 AD2d 695, *affd* 61 N.Y.2d 918, *supra; Billington v Billington*, 111 AD2d 203; *Cohen v Cohen*, 104 AD2d 841, *appeal dismissed* 64 N.Y.2d 773; *Nehorayoff v Nehorayoff*, 108 Misc 2d 311). The trial court retains the flexibility and discretion to structure the distributive award equitably, taking into consideration factors such as the working spouse's need for immediate payment, the licensed spouse's current ability to pay and the income tax consequences of prolonging the period of payment (*see*, Internal Revenue Code [26 USC] § 71 [a] [1]; [c] [2]; Treas Reg [26 CFR] § 1.71-1 [d] [4]) and, once it has received evidence of

the present value of the license and the working spouse's contributions toward its acquisition and considered the remaining factors mandated by the statute (*see*, Domestic Relations Law § 236 [B] [5] [d] [1]-[10]), it may then make an appropriate distribution of the marital property including a distributive award for the professional license if such an award is warranted. When other marital assets are of sufficient value to provide for the supporting spouse's equitable portion of the marital property, including his or her contributions to the acquisition of the professional license, however, the court retains the discretion to distribute these other marital assets or to make a distributive award in lieu of an actual distribution of the value of the professional spouse's license *(see*, *Majauskas v Majauskas*, 61 N.Y.2d 481, 493, *supra)*.

III

Three additional issues remain for our consideration.

First, plaintiff notes that the statute requires the trial court to state the factors it considered and the basis for its decision in making distribution and that neither the parties nor counsel may waive that requirement (*see*, Domestic Relations Law § 236 [B] [5] [g]). He contends that the court failed to adequately do so in this case. We have held recently that while section 236 (B) (5) (g) does not require the court to analyze each of the factors stated in subdivision (5) (d) and give reasons as to each, it still must set forth all the factors it considered and the reason for its decision (*Cappiello v Cappiello*, 66 N.Y.2d 107, *supra*). Unless the trial judge reveals not only the factors he considered, but also his reasoning for the award made, intelligent review of the broad discretion entrusted to him is not possible.

The evidence before the trial court in this case supported its factual findings but its decision does not indicate what factors it considered, or the weight it attributed to them, in making the distributive award to defendant. Nevertheless, the Appellate Division has the same authority to make an award of marital property as does the trial court *(see*, *Majauskas v Majauskas*, 61 N.Y.2d 481, *supra)*, and it may effectuate the award and set forth the factors it considers determinative and the reasons for its decision or it may remit the matter to Special Term for that purpose if it is unable to do so (*see*, *Kobylack v Kobylack*, 62 N.Y.2d 399).

Plaintiff also contends that the trial court erred in excluding evidence of defendant's marital fault on the question of equitable distribution. Arguably, the court may consider marital fault under factor 10, "any other factor which the court shall expressly find to be just and proper" (Domestic Relations Law § 236 [B] [5] [d] [10]; *see*, Scheinkman, 1981 Practice Commentary, McKinney's Cons Laws of NY, Book 14, Domestic Relations Law C236B:13, pp 205-206 [1977-1984 Supp Pamphlet]). Except in egregious cases which shock the conscience of the court, however, it is not a "just and proper" factor for consideration in the equitable distribution of marital property (*Blickstein v Blickstein*, 99 AD2d 287, 292, *appeal dismissed* 62 N.Y.2d 802; *see*, *Stevens v Stevens*, 107 AD2d 987; *Pacifico v Pacifico*, 101 AD2d 709; *McMahan v McMahan*, 100 AD2d 826). That is so because marital fault is inconsistent with the underlying assumption that a marriage is in part an economic partnership and upon its dissolution the parties are entitled to a fair share of the marital estate, because fault will usually be difficult to assign and because introduction of the issue may involve the courts in time-consuming procedural maneuvers relating to collateral issues

(*see*, *Blickstein v Blickstein*, *supra*, at p 292; *McMahan v McMahan*, *supra*, at p 827). We have no occasion to consider the wife's fault in this action because there is no suggestion that she was guilty of fault sufficient to shock the conscience.

Finally, plaintiff contends that the trial court erred in allowing defendant an award of counsel fees and defendant contends the Appellate Division erred in deleting the trial court's award of expert witness fees. The decision to award either expert witness fees or attorney's fees lies, in the first instance, in the discretion of the trial court and then in the Appellate Division whose discretionary authority is as broad as the trial court's is *(see*, Domestic Relations Law § 237 [a], [c]; *Majauskas v Majauskas*, 61 N.Y.2d 481, 493-494, *supra)*. Because the Appellate Division's affirmance of the award of counsel fees cannot be characterized as an abuse of discretion as a matter of law, the issue is beyond our review (*see*, *Majauskas v Majauskas*, *supra*, at p 494; *Patron v Patron*, 40 N.Y.2d 582). Its decision to delete the award of expert fees, as a matter of law, was apparently based on the fact that the expert's testimony was directed solely to the value of plaintiff's license, evidence that was unnecessary in view of its determination that the license was not marital property. We have concluded that the license is marital property, however, and on remand the court may exercise its discretion to determine whether an award of expert fees is warranted and if so their proper amount *(see*, *Litman v Litman*, 61 N.Y.2d 918, *supra)*.

Accordingly, in view of our holding that plaintiff's license to practice medicine is marital property, the order of the Appellate Division should be modified, with costs to defendant, by reinstating the judgment and the case remitted to the Appellate Division for determination of the facts, including the exercise of that court's discretion (CPLR 5613), and, as so modified, affirmed. Question certified answered in the negative.

MEYER, J. (concurring).

I concur in Judge Simons' opinion but write separately to point up for consideration by the Legislature the potential for unfairness involved in distributive awards based upon a license of a professional still in training.

An equity court normally has power to "`change its decrees where there has been a change of circumstances"' (*People v Scanlon*, 11 N.Y.2d 459, 462, *on second appeal* 13 N.Y.2d 982). The implication of Domestic Relations Law § 236 (B) (9) (b), which deals with modification of an order or decree as to maintenance or child support, is, however, that a distributive award pursuant to section 236 (B) (5) (e), once made, is not subject to change. Yet a professional in training who is not finally committed to a career choice when the distributive award is made may be locked into a particular kind of practice simply because the monetary obligations imposed by the distributive award made on the basis of the trial judge's conclusion (prophecy may be a better word) as to what the career choice will be leaves him or her no alternative.

The present case points up the problem. A medical license is but a step toward the practice ultimately engaged in by its holder, which follows after internship, residency and, for particular specialties, board certification. Here it is undisputed that plaintiff was in a residency for general surgery at the time of the trial, but had the previous year done a residency in internal medicine. Defendant's expert based his opinion on the difference

between the average income of a general surgeon and that of a college graduate of plaintiff's age and life expectancy, which the trial judge utilized, impliedly finding that plaintiff would engage in a surgical practice despite plaintiff's testimony that he was dissatisfied with the general surgery program he was in and was attempting to return to the internal medicine training he had been in the previous year. The trial judge had the right, of course, to discredit that testimony, but the point is that equitable distribution was not intended to permit a judge to make a career decision for a licensed spouse still in training. Yet the degree of speculation involved in the award made is emphasized by the testimony of the expert on which it was based. Asked whether his assumptions and calculations were in any way speculative, he replied: "Yes. They're speculative to the extent of, will Dr. O'Brien practice medicine? Will Dr. O'Brien earn more or less than the average surgeon earns? Will Dr. O'Brien live to age sixty-five? Will Dr. O'Brien have a heart attack or will he be injured in an automobile accident? Will he be disabled? I mean, there is a degree of speculation. That speculative aspect is no more to be taken into account, cannot be taken into account, and it's a question, again, Mr. Emanuelli, not for the expert but for the courts to decide. It's not my function nor could it be."

The equitable distribution provisions of the Domestic Relations Law were intended to provide flexibility so that equity could be done. But if the assumption as to career choice on which a distributive award payable over a number of years is based turns out not to be the fact (as, for example, should a general surgery trainee accidentally lose the use of his hand), it should be possible for the court to revise the distributive award to conform to the fact. And there will be no unfairness in so doing if either spouse can seek reconsideration, for the licensed spouse is more likely to seek reconsideration based on real, rather than imagined, cause if he or she knows that the nonlicensed spouse can seek not only reinstatement of the original award, but counsel fees in addition, should the purported circumstance on which a change is made turn out to have been feigned or to be illusory.

TITONE, J. (concurring).

I join in the majority opinion by Judge Simons for the court, and, like Justice Jackson, forthrightly surrender my contrary views in *Conner v Conner* (97 AD2d 88, 105 [Titone, J. P., concurring]) to a more cogent position (*McGrath v Kristensen*, 340 US 162, 178 [Jackson, J., concurring]).

Order modified, with costs to defendant, and case remitted to the Appellate Division, Second Department, for further proceedings in accordance with the opinion herein and, as so modified, affirmed. Question certified answered in the negative.

T.C. Memo. 2003-280

UNITED STATES TAX COURT

PETER S. PERACCHIO, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 10470-01. Filed September 25, 2003.

P transferred limited partner interests in a family limited partnership (PT) to a family trust (T) pursuant to two separate transactions. In one of the transactions, P transferred a 45.47-percent limited partner interest to T for no consideration. In the other transaction, P transferred a 53.48-percent limited partner interest to T in exchange for T's promissory note in the amount of $646,764.

Held: Fair market value of the transferred PT interests determined. See sec. 2512, I.R.C.

Eric M. Nemeth, Michael J. Mulcahy, and Brian C. Bernhardt, for petitioner.

John W. Stevens, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

HALPERN, Judge: By notice of deficiency dated May 25, 2001 (the notice of deficiency), respondent determined a deficiency in Federal gift tax for calendar year 1997 with respect to petitioner in the amount of $328,317. Petitioner timely filed a petition for redetermination. The dispute involves the value of interests in a family limited partnership transferred by petitioner to a family trust.

Unless otherwise noted, all section references are to the Internal Revenue Code in effect on the date of the transfers, and all Rule references are to the Tax Court Rules of Practice and Procedure. All dollar amounts have been rounded to the nearest dollar.

FINDINGS OF FACT

Some facts are stipulated and are so found. The stipulation of facts, with accompanying exhibits, is incorporated herein by this reference. At the time he filed the petition, petitioner resided in Grosse Pointe Woods, Michigan.

Formation of the Trust and the Partnership

On November 25, 1997 (the valuation date), petitioner, as settlor, and petitioner's wife, as trustee, executed a trust agreement creating the Peracchio Family Trust (the trust). On the same day, petitioner, the trust, and petitioner's son, John R. Peracchio, executed an agreement of limited partnership (the partnership agreement) with respect to Peracchio Investors, L.P.,

a Delaware limited partnership (the partnership). Petitioner contributed cash and securities with a designated value of $2,013,765 to the partnership in exchange for a 0.5-percent general partner interest and a 99.4-percent limited partner interest in the partnership, which, collectively, represented 2,013.765 partnership units. Petitioner's son contributed $1,000 to the partnership in exchange for a 0.05-percent general partner interest in the partnership, which represented one partnership unit. The trust contributed $1,000 to the partnership in exchange for a 0.05-percent limited partner interest in the partnership, which also represented one partnership unit.

Transfers of Partnership Units

Also on the valuation date, petitioner made three transfers of partnership units. Petitioner gratuitously transferred 9.0788 partnership units (representing 0.45 percent of all partnership units outstanding) to his son, to be held in the capacity of a general partner. Petitioner also gratuitously transferred 916.667 partnership units (representing 45.47 percent of all partnership units outstanding) to the trust, to be held in the capacity of a limited partner. Petitioner transferred an additional 1,077.9409 partnership units (representing 53.48 percent of all partnership units outstanding) to the trust, to be held in the capacity of a limited partner, in exchange for the trust's promissory note in the amount of $646,764. After the

foregoing transfers, the percentage ownership of the partnership was as follows:

General Partners	
Peter S. Peracchio	0.05%
John R. Peracchio	0.50%
Limited Partners	
Peter S. Peracchio	0.45%
Peracchio Family Trust	99.00%
Total	100.00%

Partnership Assets

The partnership's assets on the valuation date consisted entirely of cash and marketable securities.[1] The partnership's domestic stock portfolio on that date consisted of shares in 44 companies, with no apparent concentration in any particular industry.

Relevant Provisions of the Partnership Agreement

Among other things, the partnership agreement provides as follows:

The partnership will continue in existence until November 25, 2047 (the termination date), unless sooner terminated in accordance with the terms of the partnership agreement. No limited partner may withdraw his capital from the partnership

[1] The partnership held certain marketable securities indirectly through investment funds, including "open-end" investment funds. We understand from the expert reports received into evidence in this case that, although shares of open-end investment funds are not themselves publicly traded, a holder thereof generally can liquidate his investment at any time by tendering his shares to the fund for repurchase at a price equal to their pro rata share of the fund's net asset value (NAV).

prior to the termination date without the written consent of the general partners.

Partners may freely transfer their partnership units to or for the benefit of certain family members and charitable organizations (permitted transferees). A partner desiring to transfer his partnership units to someone other than a permitted transferee must first offer those units to the partnership on the same terms and conditions. The partnership then has 30 days to exercise its option to purchase such units. Regardless of the identity of the transferee, no transferee of partnership units can attain the legal status of a partner in the partnership without the unanimous consent of all general partners.

Limited partners have no right to participate in the management of the partnership's affairs, and partnership distributions are subject to the discretion of the general partners.

The Gift Tax Return

Petitioner timely filed Form 709, United States Gift (and Generation Skipping Transfer) Tax Return, for 1997 (the Form 709). In a statement attached to the Form 709, petitioner reported his gratuitous transfer of 9.0788 partnership units to his son at a value of $9,070. In the same statement, petitioner reported his gratuitous transfer of 916.667 partnership units to the trust at a value of $550,000. In another attachment to the Form 709, petitioner disclosed that he had determined the value

of his gratuitous transfer to the trust by (1) multiplying the number of partnership units transferred (916.677) by their designated "per unit" value of $1,000, and (2) applying a combined discount of 40 percent (for lack of control and lack of marketability) to the resulting figure.

The Notice of Deficiency

By the notice of deficiency, respondent determined a deficiency in Federal gift tax with respect to petitioner in the amount of $328,317, based primarily on an increase in 1997 taxable gifts in the amount of $797,843.[2] Specifically, respondent (1) increased the value of petitioner's gratuitous transfer to the trust from $550,000 to $916,667, and (2) determined an additional gift in the amount of $431,176, representing the amount by which, according to respondent, the value of the additional 1,077.9409 partnership units transferred by petitioner to the trust exceeded the consideration received therefor.[3]

Respondent based his determination on four alternative theories: (1) that the partnership lacks economic substance and

[2] Respondent also determined that, in preparing the Form 709, petitioner failed to account for $70,500 of taxable gifts made in prior years. Petitioner does not dispute that determination and has paid the portion of the asserted deficiency (plus interest) attributable thereto.

[3] Respondent did not adjust the value of petitioner's gratuitous transfer of 9.0788 partnership units to his son.

therefore should be disregarded for Federal gift tax purposes, (2) that the partnership agreement should be treated as a restriction on the right to sell or use property (i.e., the property underlying the transferred partnership units) which must be disregarded under section 2703(a)(2) in determining the Federal gift tax value of such property, (3) that the provision in the partnership agreement restricting a limited partner's ability to liquidate his interest by withdrawing from the partnership should be treated as an applicable restriction under section 2704(b) which must be disregarded in determining the Federal gift tax value of the transferred partnership units, and (4) that in determining the fair market value of the transferred partnership units under the general valuation rule of section 2512, no discounts for lack of control and lack of marketability are warranted. Respondent has since abandoned the first three of those four alternative theories and has modified his position with respect to the remaining theory to allow for a 4.4-percent discount for lack of control and a 15-percent discount for lack of marketability.

OPINION

I. Introduction

We must determine the fair market value, as of the date of transfer, of 45.47-percent and 53.48-percent limited partner

interests (the gifted interest and the sold interest,[4] respectively, and, collectively, the transferred interests) in Peracchio Investors, L.P. (the partnership) transferred by petitioner to the Peracchio Family Trust (the trust) in separate transactions occurring on November 25, 1997 (the valuation date). The parties agree that, because the partnership's assets on the valuation date consisted entirely of cash and marketable securities, the partnership's net asset value (NAV) on that date is the appropriate starting point for determining the fair market value of the transferred interests. The parties further agree that, in valuing the transferred interests, it is appropriate to discount each interest's pro rata share of the partnership's NAV to reflect the lack of control and lack of marketability inherent in the transferred interests. The parties disagree on the magnitude of those discounts. For purposes of reporting the value of the gifted interest on his Federal gift tax return and establishing the consideration for the sold interest, petitioner applied a combined discount of 40 percent. Respondent contends that 4.4-percent and 15-percent discounts for lack of control and lack of marketability, respectively, are appropriate, yielding a combined discount (applying the separate discounts serially) of 18.74 percent.

[4] We use the term "sold interest" solely for descriptive convenience (i.e., without regard to the proper characterization, for Federal gift tax purposes, of petitioner's transfer of that interest).

Petitioner bears the burden of proof.[5] Rule 142(a)(1).

II. Law

Section 2501(a) imposes a tax on the transfer of property by gift. Section 2512(a) provides that, if a gift is made in property, the value of the property on the date of the gift is considered the amount of the gift. Section 25.2512-1, Gift Tax Regs., provides that the value of property for Federal gift tax purposes is "the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell, and both having reasonable knowledge of relevant facts." The willing buyer and willing seller are hypothetical persons, rather than specific individuals or entities, and their characteristics are not necessarily the same as those of the donor and the donee. Estate of Newhouse v. Commissioner, 94 T.C. 193, 218 (1990) (citing Estate of Bright v.

[5] Petitioner does not raise the applicability of sec. 7491(a), which operates to shift the burden of proof to the Commissioner in certain circumstances. See Rule 142(a)(2). However, petitioner argues for the first time in his posttrial reply brief that, under general principles of Federal tax law, respondent bears the burden of proof on the ground that the notice of deficiency is arbitrarily excessive and without foundation. As petitioner did not timely raise that issue, we decline to consider it. See, e.g., Graham v. Commissioner, 79 T.C. 415, 423 (1982) ("It is well settled that this Court will not consider issues raised for the first time on brief when to do so prevents the opposing party from presenting evidence or arguments that might have been presented if the issue had been timely raised.").

United States, 658 F.2d 999, 1006 (5th Cir. 1981)).[6] The hypothetical willing buyer and willing seller are presumed to be dedicated to achieving the maximum economic advantage. Estate of Newhouse, supra at 218.

III. Expert Opinions

A. Introduction

In this case, the parties rely exclusively on expert testimony to establish the appropriate discounts to be applied in determining the fair market value of the transferred interests. Of course, we are not bound by the opinion of any expert witness, and we may accept or reject expert testimony in the exercise of our sound judgment. Helvering v. Natl. Grocery Co., 304 U.S. 282, 295 (1938); Estate of Newhouse v. Commissioner, supra at 217. Although we may largely accept the opinion of one party's expert over that of the other party's expert, see Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980), we may be selective in determining what portions of each expert's opinion, if any, to accept, Parker v. Commissioner, 86 T.C. 547, 562 (1986). Finally, because valuation necessarily involves an approximation, the figure at which we arrive need not be directly traceable to specific testimony if it is within the range of

[6] Although the cited cases involved the Federal estate tax, it is well settled that the Federal estate tax and the Federal gift tax, being in pari materia, should be construed together. See, e.g., Shepherd v. Commissioner, 283 F.3d 1258, 1262 n.7 (11th Cir. 2002) (citing Harris v. Commissioner, 340 U.S. 106, 107 (1950)), affg. 115 T.C. 376 (2000).

values that may be properly derived from consideration of all the evidence. Estate of True v. Commissioner, T.C. Memo. 2001-167 (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285).

B. Petitioner's Experts

Petitioner offered Timothy R. Dankoff and Charles H. Stryker as expert witnesses to testify concerning the value of the transferred interests. Mr. Dankoff is a partner in Plante & Moran, LLP, an accounting and management consulting firm. He is accredited as a senior appraiser by the American Society of Appraisers and has been involved in business valuation activities since 1986. Mr. Stryker is a partner in the valuation and appraisal group of BDO Seidman, LLP, an accounting and consulting firm. He has been performing valuation services for approximately 25 years. The Court accepted Mr. Dankoff and Mr. Stryker as experts in valuation and received into evidence as their expert testimony their respective written analyses regarding the value of the transferred interests.

In his written report, Mr. Dankoff concludes that, based on a 7.7-percent minority interest discount and a 35-percent marketability discount, the fair market values of the gifted interest and the sold interest on November 30, 1997 (5 days after the valuation date), were $550,000 and $646,764, respectively. Mr. Stryker concludes in his written report that, based on a 5-

percent minority interest discount and a 40-percent marketability discount, the fair market value of the gifted interest on the valuation date was $522,609. Mr. Stryker did not separately calculate the fair market value of the sold interest.

C. Respondent's Expert

Respondent offered Francis X. Burns as an expert witness to testify concerning the value of the transferred interests. Mr. Burns is managing director of InteCap, Inc., a financial consulting firm that specializes in valuation services. He has been performing valuation services for approximately 15 years and has testified as an expert in several valuation cases. The Court accepted Mr. Burns as an expert in valuation and received into evidence as his expert testimony his written analysis regarding the value of the transferred interests.

In his written report, Mr. Burns concludes that, based on a 4.4-percent minority interest discount and a 15-percent marketability discount, the fair market values of the gifted interest and the sold interest on the valuation date were $742,071 and $872,794, respectively.

IV. Discussion

A. Net Asset Value of the Partnership

Mr. Dankoff's firm valued the assets petitioner contributed to the partnership (the contributed assets) at $2,013,765. In his written report, Mr. Dankoff acknowledges that such figure

(upon which petitioner's other expert, Mr. Stryker, relied as well)[7] is based on values reported in brokerage account statements as of November 30, 1997 (5 days after the valuation date). Respondent's expert, Mr. Burns, concludes in his written report that the value of the contributed assets on the valuation date was $2,008,370.[8] We accept Mr. Burns's conclusion in that regard.[9] Taking into account the $2,000 in cash contributed by the other partners of the partnership, we conclude that the partnership's NAV on the valuation date was $2,010,370.

B. Minority Interest (Lack of Control) Discount

1. Introduction

Pursuant to the partnership agreement, a hypothetical buyer of all or any portion of the transferred interests would have limited control of his investment. For instance, such holder (1) would have no say in the partnership's investment strategy, and (2) could not unilaterally recoup his investment by forcing the partnership either to redeem his interest or to undergo a complete liquidation. The parties agree that the hypothetical

[7] Mr. Stryker also inappropriately added approximately $640 of interest earned by the partnership in December 1997.

[8] Mr. Burns actually identifies that figure as the partnership's NAV. In doing so, he overlooks the $2,000 contributed by the other partners, which the parties have stipulated.

[9] Although the parties stipulated that, for purposes of the notice of deficiency, respondent relied on the valuation of the contributed assets by Mr. Dankoff's firm, the parties did not stipulate the accuracy of that figure.

"willing buyer" of a transferred interest would account for such lack of control by demanding a reduced sales price; i.e., a price that is less than the interest's pro rata share of the partnership's NAV.

2. Comparison to Closed End Investment Funds

a. Overview

Each expert witness determined a minority interest discount for the transferred interests by reference to shares of publicly traded, closed end investment funds, which typically trade at a discount relative to their share of fund NAV.[10] The idea is that, since such shares (by definition) enjoy a high degree of marketability, those discounts must be attributable, at least to some extent, to a minority shareholder's lack of control over the investment fund.[11]

---

[10] We understand from the expert reports received into evidence in this case that, unlike a shareholder of an open-end fund (and similar to a holder of a limited partner interest in the partnership), a shareholder of a closed end fund cannot obtain the liquidation value of his investment (i.e., his pro rata share of the fund's NAV) at will by tendering his shares to the fund for repurchase.

[11] That there are other factors involved in the pricing of closed end fund shares is evidenced by the fact that shares of some funds trade at a premium relative to their share of fund NAV. In his written report, Mr. Burns suggests that positive pricing factors include heightened investor interest in the specific attributes of a fund, while additional negative pricing factors (i.e., in addition to lack of control) include fund management fees and administration fees. Absent any further refinement of the data contained in the record, we assume that, within each sample of closed end funds we consider in our analysis, such positive factors and additional negative factors

(continued...)

Both Mr. Dankoff and Mr. Burns determine a minority interest discount factor for each type of investment held by the partnership, based (to the extent possible) on discounts observed in shares of closed end funds holding similar assets.[12] They then determine their respective minority interest discounts for the transferred interests by calculating the weighted average of such factors, based on the partnership's relative holdings of each asset type. That is an approach we have previously followed in the context of investment partnerships, see McCord v. Commissioner, 120 T.C. 358, 376-387 (2003), and we shall do so again here.

b. Partnership Asset Categories

Both Mr. Dankoff and Mr. Burns divide the assets of the partnership into five basic categories: cash and money market funds, U.S. Government bond funds, municipal bonds, domestic equities, and foreign equities. We utilize those categories in our analysis, except that we divide the "municipal bonds" category into "national" and "Michigan" subcategories.

[11](...continued)
roughly offset each other.

[12] Although petitioner's other expert, Mr. Stryker, purports to derive his minority interest discount from discounts observed in shares of closed end funds, his methodology is comparatively both imprecise (his 5-percent discount is not statistically derived from observed discounts) and incomplete (he considers only domestic equity funds). For those reasons, we give no weight to that portion of Mr. Stryker's testimony.

c. Partnership Assets in Each Category

In his written report, Mr. Burns includes a list of partnership investments (and their values as of the valuation date) by asset category. That list, as modified by the aforementioned refinement of the "municipal bonds" category and two additional classification changes[13] (as well as the addition of $2,000 to the "Cash and Money Market Funds" category to reflect contributions by partners other than petitioner, see supra note 8), yields the following profile of partnership assets as of the valuation date:

Asset Type	FMV	Percentage
Cash & money market funds	$883,622	44.0
U.S. Government bond funds	7,988	0.4
State & local bonds (MI)	41,750	2.1
Natl. Muni bond funds	101,145	5.0
Domestic equities	877,179	43.6
Foreign equities	98,686	4.9
Total	$2,010,370	100.0

d. Date of Price/NAV Data

Both Mr. Dankoff and Mr. Burns obtain their closed end fund data from tables prepared by Lipper Analytical Services (Lipper) and published in Barron's. However, Mr. Dankoff relies on data as of October 24, 1997, while Mr. Burns utilizes data as of

[13] Because "money market fund" is a term of art, see 17 C.F.R. sec. 270.2a-7(b) and (c) (1997), we have also reclassified "Fidelity MI Muni Money Market" and "Short Term Income Fund-Govt." (listed by Mr. Burns as a municipal bond fund and a U.S. Government bond fund, respectively) as money market funds, which is how they are classified in brokerage statements introduced into evidence.

November 21, 1997. Absent any explanation from Mr. Dankoff as to why it would be more appropriate for us to use his less contemporaneous data, we utilize Mr. Burns' price and NAV data in our analysis.

e. Samples of Closed End Funds

i. Cash and Money Market Funds

Both Mr. Dankoff and Mr. Burns implicitly recognize the lack of an appropriate sample of closed end funds from which to derive a minority interest discount factor for the "cash and money market funds" asset category. In his written report, Mr. Dankoff assigns a 5-percent discount factor to that asset category and notes that such figure is "[j]udgmentally determined recognizing the relative risk/return tradeoff of this asset category vis a vis U.S. Government Bond Funds". Mr. Burns assigns a 2-percent discount factor to the "cash and money market funds" asset category, noting without further explanation that such figure is an estimate. While we find neither expert persuasive on this issue, we utilize a 2-percent discount factor in our analysis on the grounds that (1) respondent has effectively conceded that a discount factor of up to 2 percent would be appropriate, and (2) petitioner has failed to carry his burden of persuading us that a figure in excess of 2 percent would be appropriate.

ii. U.S. Government Bond Funds[14]

Mr. Burns' written report includes a copy of the aforementioned Lipper closed end fund table published in the November 24, 1997, edition of Barron's (the Lipper table). That table lists 13 funds under the heading "U.S. Gov't Bond Funds" and contains NAV data for 12 of those funds.[15] Mr. Dankoff winnows that sample to seven unidentified funds, apparently on the basis of "outliers and asset homogeneity with the subject assets". Mr. Dankoff offers no data in support of his refinement of the sample, and we see no obvious "outliers" in the group. Accordingly, we include in our sample (as did Mr. Burns) all 12 of the funds for which NAV data is set forth in the Lipper table.

iii. State and Local Bonds (Michigan)

The Lipper table lists five Michigan funds under the heading "Single State Muni Bond". We include in our sample (as did Mr. Dankoff, apparently) all five of those funds.[16]

---

[14] The partnership's lone investment in U.S. Government bonds on the valuation date was itself in the form of shares of a closed end investment fund, Putnam Intermediate Government (PGT). While it may be more appropriate under these circumstances simply to utilize that fund's price-to-NAV discount in our analysis (rather than a discount derived from a sample of funds), the record does not contain that information.

[15] See supra note 14.

[16] Although Mr. Dankoff does not identify the funds included in his sample, he does indicate that his sample contains five funds. Mr. Burns did not create a separate sample of single State funds invested in Michigan-based obligations.

iv. National Municipal Bond Funds

The Lipper table lists 99 funds under the heading "National Muni Bond Funds" and contains NAV data for 81 of those funds. As we see no obvious outliers in the data, we include all 81 of those funds in our sample.[17]

v. Domestic Equities

The Lipper table lists 24 funds under the heading "General Equity Funds" and 21 funds under the heading "Specialized Equity Funds". Mr. Dankoff apparently included both types of funds in his sample, which is comprised of 44 funds. Mr. Burns, on the other hand, limited his sample to general equity funds. As referenced in our findings of fact, the partnership's domestic stock portfolio was widely diversified on the valuation date. We therefore follow Mr. Burns' lead and limit our sample to general equity funds. We further limit our sample by excluding two funds from the Lipper table which were trading at unusually high premiums relative to the other domestic equity funds listed in that table.[18]

---

[17] We cannot deduce from the record whether Mr. Burns included all 81 of those funds in his sample. However, we note that the average discount of Mr. Burns's sample (3.3 percent) is very close to the average discount of our sample (3.4 percent).

Mr. Dankoff did not create a separate sample of national municipal bond funds.

[18] Shares of "MFS Special Val" (MFV) and "NAIC Growth" (GRF) were trading at premiums of 27.3 percent and 51.3 percent, respectively. No other general equity fund listed in the Lipper

(continued...)

vi. Foreign Equities

The Lipper table lists 91 funds under the heading "World Equity Funds" and contains NAV and price data for 89 of those funds.[19] Unlike Mr. Burns, we exclude from our sample three funds from the Lipper table which were trading at unusually high premiums relative to the other foreign equity funds listed in that table.[20]

f. Representative Discount Within the Range of Sample Fund Discounts

Mr. Dankoff calculates the mean (average) discount and the median (midpoint) discount with respect to each of his fund samples. In each instance, the median discount is greater than the mean discount. Mr. Dankoff opts to use the median, rather than the mean, discount with respect to each sample for purposes of determining a minority interest discount factor for each

---

[18](...continued)
table was trading at a premium greater than 11.1 percent.

By contrast, discounts among general equity funds listed in the Lipper table showed less variation, ranging from 2.1 percent to 26.4 percent and averaging 12.8 percent.

[19] Mr. Dankoff inexplicably derives his sample from the "World Income Funds" (global bond funds) listed by Lipper.

[20] Shares of "Thai Capital" (TC), "Malaysia" (MF), and "Thai" (TTF) were trading at premiums of 35.1 percent, 36 percent, and 55.7 percent, respectively. No other world equity fund listed in the Lipper table was trading at a premium greater than 21.9 percent.

By contrast, discounts among world equity funds listed in the Lipper table showed less variation, ranging from 1.6 percent to 31.3 percent and averaging 16.8 percent.

corresponding asset category of the partnership. At trial, he testified that medians "in my opinion are often more relevant [than means] because it takes outliers out of the equation". However, Mr. Dankoff's written report suggests that he may have accounted for outliers (by excluding them from his samples) prior to determining sample medians: "After adjusting for outliers and asset homogeneity with the subject assets, we then calculated a weighted average median discount". In any event, Mr. Dankoff eventually conceded at trial that "I don't think I have a good reason as to why one was better than the other, and I think either one [median or mean] could have been used." Because it seems more straightforward to us to account for obvious outliers by excluding them from the samples in question, we utilize the mean discount from each of our samples as the minority interest discount factor for each corresponding asset category of the partnership.

g. Minority Interest Discount Factor for Each Asset Category

Based on the methodology described above, we conclude that the appropriate minority interest discount factors for the partnership asset categories are as follows:

Asset Type	Discount Factor
Cash & money market funds	2.0%
U.S. Government bond funds	6.9%
State & local bonds (MI)	3.5%
Natl. Muni bond funds	3.4%

Domestic equities	9.6%
Foreign equities	13.8%

3. Determination of the Minority Interest Discount

The minority interest discount factors determined above yield a weighted average discount of 6.02 percent, determined as follows:

Asset Type	Percent of NAV	Percent Disc. Factor	Percent Weighted Average
Cash & money market funds	44.0	2.0	0.88
U.S. Government bond funds	0.4	6.9	0.03
State and local bonds (MI)	2.1	3.5	0.07
Natl. Muni bond funds	5.0	3.4	0.17
Domestic equities	43.6	9.6	4.19
Foreign equities	4.9	13.8	0.68
Discount			6.02

Rounding to the nearest percentage point, we conclude that the appropriate minority interest discount for the transferred interests is 6 percent.

C. Marketability Discount

1. Introduction

The parties agree that, to reflect the lack of a ready market for the transferred interests, an additional discount should be applied to the partnership’s NAV (after applying the minority interest discount) for purposes of determining the fair market value of those interests. Such a discount is commonly referred to as a “marketability discount”. The parties disagree on the appropriate magnitude of that discount in the context of the transferred interests.

2. Analyses of Petitioner's Experts

a. General Approach

Both Mr. Dankoff and Mr. Stryker start with a benchmark discount or range of discounts and then determine, based on the factors we analyzed in Mandelbaum v. Commissioner, T.C. Memo. 1995-255, affd. without published opinion 91 F.3d 124 (3d Cir. 1996), whether the marketability discount for the transferred interests should be greater than, less than, or equal to (or within) the benchmark discount (or range of discounts). Because we are unpersuaded by either expert's determination of the appropriate benchmark (starting point), we give little weight to their respective analyses.

b. Mr. Dankoff's Analysis

In his written report, Mr. Dankoff states that, in Mandelbaum v. Commissioner, supra, the Tax Court "established a benchmark lack of marketability discount range of 35% to 45%". He subsequently states that he analyzed the factors we reviewed in Mandelbaum "as they relate to the subject Partnership in order to determine whether the Partnership's lack of marketability discount should be above, below or within the range indicated by the benchmark range of 35% to 45%." Thus, although Mr. Dankoff refers to numerous empirical studies elsewhere in his report, he derives his quantitative starting point (35 percent to 45 percent) from the Mandelbaum case.

To the extent Mr. Dankoff believes that the benchmark range of discounts we utilized in Mandelbaum v. Commissioner, supra, is controlling in this or any other case, he is mistaken.[21] Nothing in Mandelbaum suggests that we ascertained that range of discounts for any purpose other than the resolution of that case. To the contrary, we specifically stated that we were using the upper and lower limits of that range "as benchmarks of the marketability discount for the shares at hand." (Emphasis added.) If, instead, Mr. Dankoff simply believes that such range of discounts is equally appropriate under the facts of this case, he offers no justification whatsoever for that view. We believe he would be hard pressed to do so; the entity at issue in Mandelbaum, an established operating company, bears little resemblance to the partnership.[22]

[21] Petitioner's counsel indeed asserts in his posttrial brief that Mandelbaum v. Commissioner, T.C. Memo. 1995-255, affd. without published opinion 91 F.3d 124 (3d Cir. 1996), "sets a benchmark for lack of marketability discounts in the range of 35% to 45%", suggesting his belief that the Court in Mandelbaum established a legal standard in that regard to be followed in subsequent cases.

[22] Petitioner indeed states in his posttrial reply brief that "Petitioner did not rely on the factual basis of Mandelbaum or claim that the instant case should be similarly decided based on factual similarities".

c. Mr. Stryker's Analysis

In his written report, Mr. Stryker cites a series of empirical studies known as restricted stock studies,[23] which, according to him, "center around a 30% marketability discount for transfers of restricted stock." After analyzing the factors we reviewed in Mandelbaum v. Commissioner, supra,[24] Mr. Stryker concludes that "a discount of 40% was applicable to the freely traded value of Peracchio's interests. (10 percentage points higher than the private placement studies.)" Thus, Mr. Stryker derives his quantitative starting point (30 percent) from restricted stock studies.

While restricted stock studies certainly have some probative value in the context of marketability discount analysis, see, e.g., McCord v. Commissioner, 120 T.C. at 390-393, Mr. Stryker makes no attempt whatsoever to analyze the data from those studies as they relate to the transferred interests. Rather, he simply lists the average discounts observed in several such studies, effectively asking us to accept on faith the premise

[23] Restricted stock studies (also referred to by Mr. Stryker as private placement studies) compare the private-market price of restricted shares of public companies (i.e., shares that, because their issuance was not registered with the Securities and Exchange Commission (SEC), generally cannot be sold in the public market for a certain period of time without SEC registration) with the coeval public-market price of such companies' unrestricted shares.

[24] Mr. Stryker also considers factors discussed in Rev. Rul. 77-287, 1977-2 C.B. 319, which are generally subsumed within the Mandelbaum factors.

that the approximate average of those results provides a reliable benchmark for the transferred interests. Absent any analytical support, we are unable to accept that premise, particularly in light of the fundamental differences between an investment company holding easily valued assets (such as the partnership) and the operating companies that are the subject of the restricted stock studies.

3. Analysis of Respondent's Expert

Unfortunately, Mr. Burns does not offer a satisfactory alternative to the inadequate analyses of petitioner's experts. Following a brief analysis of six factors "that may influence the size of the marketability discount", he concludes in his written report:

> It is reasonable to assume that a negotiation between buyer and seller would initially focus on a discount for lack of marketability in the range of 5% to 25%. A discount above this range would not be justified for a conservatively-managed partnership holding highly liquid marketable securities and cash investments; while a discount below the range would ignore the costs and effort that might be required to find a willing buyer. I believe that a fair outcome of such a negotiation between buyer and seller would entail an adjustment of approximately 15% to reflect marketability concerns.

In his testimony at trial, Mr. Burns confirmed that the lower limit of his suggested range of discounts (5 percent) represents the typical sales commission charged by brokers of interests in private limited partnerships. However, he also testified that an additional discount (unspecified in degree)

would be warranted to account for the admittedly thin nature of that secondary market. Regarding his suggested upper limit of 25 percent, Mr. Burns essentially testified that such figure derives from his attempt "to extricate somehow * * * from the restricted stock studies" the portion of the observed discount level which, in his opinion, readily translates to the transferred interests. Given the lack of quantitative evidence in support of that attempt, as well as Mr. Burns's tacit acknowledgment that the lower limit of his suggested range of discounts is understated, we are not persuaded by his opinion that the appropriate range of marketability discounts for the transferred interests is 5 to 25 percent. We are even less impressed by his arbitrary selection of the midpoint of that range (15 percent) as his suggested discount.

4. Determination of the Marketability Discount

Having expressed our dissatisfaction with the experts' respective analyses, we must nevertheless determine an appropriate marketability discount for the transferred interests. As noted above, respondent's expert states in his written report that a marketability discount above 25 percent would not be justified for an entity with the characteristics of the partnership. We treat that statement as a concession that a marketability discount of up to 25 percent (rather than the arbitrarily selected 15 percent) would be appropriate for the

transferred interests. Because petitioner has failed to carry his burden of persuading us that a figure in excess of 25 percent would be appropriate, we utilize a 25-percent marketability discount for purposes of determining the fair market value of the transferred interests.

D. Valuation Conclusion

We conclude that the fair market values of the gifted interest and the sold interest on the valuation date were $644,446 and $757,972, respectively, determined as follows:[25]

Total NAV	$2,010,370
1 percent of NAV	20,104
Less: 6-percent minority interest discount	(1,206)
Marketable value	18,898
Less: 25-percent marketability discount	(4,725)
FMV of 1-percent interest	14,173
FMV of 45.47-percent interest	644,446
FMV of 53.48-percent interest	757,972

To reflect the foregoing,

Decision will be entered under Rule 155.

[25] For ease of computation, we determine the fair market value of a 1-percent interest.

Full Text of Court Cases

Piscopo v. Piscopo

Case name: Piscopo v. Piscopo
Citation: 232 N.J. Super. 559, 557 A.2d 1040, 1989 N.J. Super. LEXIS 169
Date of decision: May 1, 1989
Country: US
State or Federal: State
State/Jurisdiction: New Jersey
Court: Court of Appeals
Type of action: Marital Dissolution
Judge: Ashbey
Experts: Irwin Marks, C.P.A.
SIC: 7389 Business Services, NEC (tobacco sheeting service)
NAICS: 561499 All Other Business Support Services

Keywords: Marital dissolution

COUNSEL:

Francis W. Donahue argued the cause for appellant, cross-respondent (Skoloff & Wolfe, attorneys, Francis W. Donahue, of counsel, Francis W. Donahue and Phyllis S. Klein, on the brief).

Charles C. Abut argued the cause for respondent, cross-appellant (Lowen & Abut, attorneys, Louis J. Lamatina, on the brief).

JUDGES:

King, Brody and Ashbey. The opinion of the court was delivered by Ashbey, J.A.D.

OPINIONBY:

ASHBEY

OPINION:

This is an appeal from the provisions of a judgment of divorce between plaintiff entertainer and comedian Joseph and defendant Nancy Piscopo. The novel issue raised by the trial judge's holding is that the marital property included plaintiff's "celebrity goodwill." See Piscopo v. Piscopo, 231 N.J. Super. 576, 580-581 (Ch.Div.1988).

At trial plaintiff claimed that the goodwill attributed to his celebrity status was not an asset subject to equitable distribution. On appeal he concedes that celebrity goodwill could be a distributable marital asset. His argument is personal, that his reputation as a celebrity could not be related to probable future

earnings, but only to possible future earnings. Defendant asserts that the goodwill associated with plaintiff's status as a celebrity is an intangible but quantifiable asset recognizable by analogy to well-accepted New Jersey caselaw, and therefore an equitably distributable marital asset.

Irwin Marks, C.P.A., was appointed by the trial judge to value plaintiff's business and pension interests and to calculate the value, if any, of celebrity goodwill and the actual disposable income of plaintiff. Marks had experience as an accountant for famous entertainment personalities. He rendered two reports and testified at trial.

Marks found that substantially all of plaintiff's earned income flowed through Piscopo Productions, Inc., with plaintiff's compensation from the corporation determined at the end of each year. n1 Marks said the valuation of plaintiff's business was analogous to valuing any other professional corporation. He used three out of five years of income from which to derive an average adjusted net income of $ 288,150 and average adjusted gross receipts of $ 635,452.

n1 Piscopo Productions, Inc., as the trial judge noted, was actually owned: plaintiff: 51%; defendant: 48%; plaintiff's father: 1%. Two other business entities, "Joe Piscopo West" and "Little Joey Music," were not treated separately by the accountant, based upon the manner in which plaintiff had designated them for accounting and tax purposes.

Marks had never valued the business of a show business personality. He had familiarized himself with publications and with custom of the trade, which was to take a percentage of the celebrity's average gross earnings and to apply an appropriate discount. He calculated plaintiff's celebrity goodwill by taking 25% of his average gross earnings over the three year period. He applied no further discount. He said that by using the figure of 25%, he had already discounted the applicable percentage based upon his experience and training. n2 Marks attributed to plaintiff's celebrity goodwill a value of $ 158,863.

n2 Plaintiff's supplemental answers to interrogatories listed the fair market value of Piscopo Productions at a value which his accountant read to be at least $ 205,000. Plaintiff's case information statement listed the value of Piscopo Productions at $ 115,000. His accountant was unable to explain these values, although neither was intended to include goodwill.

Under N.J.S.A. 2A:34-23, the court may "effectuate an equitable distribution of the property, both real and personal, which was legally and beneficially acquired by them or either of them during the marriage." n3 While no New Jersey case has held that celebrity goodwill is a form of "property" to be distributed within the meaning of the statute, goodwill is a legally protected interest. J. B. Liebman & Co., Inc. v. Leibman, 135 N.J.Eq. 288, 292 (Ch.1944); In re Hall, 99 N.J.L. 1, 2 (Sup.Ct.1923), aff'd 100 N.J.L. 405 (E. & A. 1924).

n3 This statute has been recently amended. See L. 1988, c. 153, § 4.

In the context of equitable distribution, the leading case holding that goodwill is a distributable asset is Dugan v. Dugan, 92 N.J. 423 (1983). In Dugan the Supreme Court held that the goodwill attributed to the solely owned professional corporation of a lawyer was subject to equitable distribution,despite the fact that ethical considerations prevented plaintiff from selling his practice. The Court said that business goodwill existed although the business depended entirely upon the skill of one person and had no book value. Id. at 429. The Court defined goodwill as "essentially reputation that will probably generate future business." Ibid. The Court said further:

. . . [goodwill] does not exist at the time professional qualifications and a license to practice are obtained. A good reputation is earned after accomplishment and performance. Field testing is an essential ingredient before goodwill comes into being. Future earning capacity per se is not goodwill. However, when that future earning capacity has been enhanced because reputation leads to probable future patronage from existing and potential clients, goodwill may exist and have value. When that occurs the resulting goodwill is property subject to equitable distribution. [Id. at 433].

The trial judge in this case analogized the celebrity goodwill of plaintiff to the professional goodwill of Dugan. Piscopo v. Piscopo, 231 N.J. Super. at 580 (slip opinion at 5). Plaintiff distinguishes Dugan on the ground that a successful professional has a reliable future income, whereas show business is volatile. The Dugan Court said, however, that the valuation of goodwill is not measured by future earnings, but by past earning capacity and the probability that such past earnings will continue. Dugan v. Dugan, 92 N.J. at 433.

Contrary to plaintiff's contention, "the possible" earnings which the Dugan Court distinguished from "probable" earnings referred to earnings from a new license or degree untested in the marketplace. Plaintiff's record of past earning was undisputed. It was also undisputed that whatever plaintiff had achieved as a celebrity had taken place during the marriage. While the trial judge recognized that it would be difficult to value plaintiff's celebrity goodwill, that difficulty would not affect its includability in the marital estate. n4 Id. at 435.

n4 The issue of valuation is moot. While the trial judge's published opinion deferred valuation, at oral argument we were advised that the parties stipulated $ 98,708.60 as the value of plaintiff's celebrity goodwill.

The trial judge said:

. . . The Court cannot countenance the anomaly that would result if one branch of Chancery vigorously protected plaintiff's person and business from another's "unjust enrichment by the theft of [his] goodwill," Ali v. Playgirl, Inc., 447 F.Supp. 723, 729 (S.D.N.Y.1978), while another branch deprived a spouse from sharing in that very same protectible interest. [Piscopov. Piscopo, 231 N.J. Super. at 579 (slip opinion at 4)].

The trial judge also cited authority in which a person's name and likeness had been recognized as a property right and given legal protection. Estate of Presley v. Russen, 513 F.Supp. 1339, 1359 (D.N.J.1981); Canessa v. J.I. Kislak, Inc., 97 N.J. Super. 327, 339 (Law Div.1967). Piscopo v. Piscopo, 231 N.J. Super. at 579 (slip opinion at 4).

In her opinion, the trial judge also cited a New York case, Golub v. Golub, 139 Misc.2d 440, 527 N.Y.S.2d 946 (Sup.Ct.1988), where the court ruled on a similar question. The financial issues there stemmed from the divorce of actress and model Marisa Berenson. The New York court recognized her earning potential as an asset and held that her spouse was entitled to a share of its value. Unlike plaintiff, Berenson had established a successful modeling and acting career before the marriage, but during the course of the marriage her earnings appreciated, due, in part, as the court found, to the husband's efforts. (The husband was an attorney.) The court held that this increase in value was marital property subject to equitable distribution (the court did not use the term "goodwill"). The New York court said:

. . . There seems to be no rational basis upon which to distinguish between a degree, a license, or any other special skill that generates substantial income. In determining the value of marital property, all such income generating assets should be considered if they accumulated while the marriage endured. If one spouse has sacrificed and assisted the other in an effort to increase that other spouse's earning capacity, it should make no difference what shape or form that asset takes so long as it in fact results in an increase earning capacity. . . .

The noncelebrity spouse should be entitled to a share of the celebrity spouse's fame, limited, of course, by the degree to which that fame is attributable to the noncelebrity spouse. The source of the fame must still be traced to the marital efforts. [139 Misc.2d at 446-447, 527 N.Y.S.2d at 950 (citation omitted)]. n5

n5 Our review of the Golub record indicates that the court awarded no equitable distribution for any portion of the celebrity goodwill. That portion of the opinion was omitted from publication. A somewhat similar result was reached in Getz v. Getz, N.Y.L.J., Mar. 2, 1989, at 28-29 (N.Y.Sup.Ct.1989).

The court-appointed accountant in the case before us calculated the value of plaintiff'scorporation by including plaintiff's goodwill and the trial judge also so allocated the goodwill in her oral opinion. In her published opinion, however, and in the final judgment of divorce, the trial judge separately listed the asset.

Plaintiff contends, and we agree, that NewYork law differs materially from ours and from that of other states because in New York the value of a license alone is considered marital property. n6 Plaintiff's reliance on Lynn v. Lynn, 91 N.J. 510 (1982), and on Mahoney v. Mahoney, 91 N.J. 488 (1982), however, is misplaced. We accept the accountant's analysis which conforms to ours and to that of the majority of states concerning the value in a marital estate of a business which is based upon personal competence. n7 Plaintiff had such a business, the earnings of which were undisputed, and which he conceded had value.

n6 See O'Brien v. O'Brien, 66 N.Y.2d 576, 489 N.E.2d 712, 498 N.Y.S.2d 743 (Ct.App.1985); McGowan v. McGowan, 142 A.D.2d 355, 535 N.Y.S.2d 990 (App.Div.1988); cf. Annotation, "Spouse's professional degree or license as marital property for purposes of alimony, support, or property settlement," 4 A.L.R.4th 1294, 1295-1301 (1981 & Supp.1988) (collected cases); Rubin v. Rubin, 230 Neb. 919, 434 N.W.2d 329 (Sup.Ct.1989) (medical degree is not distributable asset); Hoak v. Hoak, 370 S.E.2d 473 (W.Va.Sup.Ct.1988) (professional degree earned during marriage is not marital property subject to equitable distribution).

n7 See Annotation, "Accountability of good will of professional practice in actions arising from divorce or separation," 52 A.L.R.3d 1344, 1344-1346 (1973 & Supp.1988) (collected cases); 24 Am.Jur.2d, Divorce and Separation, § 899 at 881-882; Molloy v. Molloy, 158 Ariz. 64, 761 P.2d 138 (Ct.App.1988) (husband's interest in law firm's goodwill is distributable asset); Buckl v. Buckl, 373 Pa.Super. 521, 542 A.2d 65 (Super.Ct.1988) (value of husband's portion of goodwill in architectural firm is subject to equitable distribution); Peerenboom v. Peerenboom, 147 Wis.2d 547, 433 N.W.2d 282 (Ct.App.1988) (goodwill of dental practice is distributable asset to the extent it is marketable and exceeds value of practice's assets and husband's skills and services); but see Antolik v. Harvey, Haw.App. , 761 P.2d 305 (Ct.App.1988) (true goodwill, that which is not dependent upon voluntary continued presence of professional, is distributable asset).

We agree with the Family Part that the goodwill value of plaintiff's business was a distributable marital asset and affirm that part of the judgment.

[Here the court disposed of other issues on appeal.]

75 Md. App. 113 (1988)
540 A.2d 833

LEO PRAHINSKI
v.
MARGARET E. PRAHINSKI.

No. 1187, September Term, 1987.

Court of Special Appeals of Maryland.

May 6, 1988.
Certiorari Granted September 2, 1988.

Cheryl Lynn Hepfer (Meehan, Kovach and Hepfer, P.A., on the brief), Upper Marlboro, for appellant.

Marvin E. Perlis, Silver Spring, for appellee.

Argued before MOYLAN, BLOOM and POLLITT, JJ.

BLOOM, Judge.

Leo Prahinski appeals from a judgment of the Circuit Court for Prince George's County severing the bonds of matrimony between him and appellee, Margaret Prahinski. Although the divorce aspect of the case was uncontested, appellant is aggrieved by those portions of the judgment that distributed certain marital property between the parties and granted a substantial monetary award in addition to indefinite alimony. Specifically, appellant contends:

1. The trial court erred in its valuation of the appellant's business.
2. The trial court erred in awarding indefinite alimony to appellee and in making that award the trial court failed to consider the required statutory factors.
3. The trial court erred in requiring that alimony payments begin after the payment of a monetary award representing the business value; and
4. The trial court erred in the distribution of marital assets and likewise failed to consider the required statutory factors.

In her brief, appellee presents us with a fifth issue. But since she failed to file a cross-appeal pursuant to Md. Rule 1012g, she may not raise this issue on appeal. *See, Joseph H. Munson Co. v. Sec. of State,* 294 Md. 160, 168, 448 A.2d 935 (1982), *aff'd,* 467 U.S. 947, 104 S.Ct. 2839, 81 L.Ed.2d 786 (1984). Consequently, we will address only those issues that were presented by appellant.

Background

The parties met as college students at the University of Maryland. They were married in 1965, at which time appellee, who had completed her freshman year, decided to discontinue her education in order to maintain the family home and, eventually, to raise the parties' two children.[1] Appellant completed his undergraduate studies and continued his education in law school. In 1971, appellant started his own law practice. Appellee worked with appellant in that practice; she was, as appellant acknowledged, legal secretary, office manager, and a "Gal Friday, doing anything and everything necessary. She was very helpful." Initially, appellant's practice was varied in that he handled negligence cases, estate and will work, some collection work, and domestic relations cases. As appellant testified, he "was dying for [the] Lawyer Referral Service to call with cases."

In 1974, appellant handled his first real estate settlement; by 1977 or 1978 real estate settlement work became a major portion of his practice. As that aspect of the practice grew, appellee's involvement in the practice also grew. Appellant testified that at the time of the trial his practice was probably 95 to 97% settlement work with the remaining percentage being wills work and the giving of legal advice to clients on a variety of matters.

In 1983, appellant became involved with another woman. The parties separated in March 1984. Appellee continued to work for appellant at his law office until October 1986, at which time appellant insisted that she leave the office because of the pending divorce litigation. During the separation, appellee remained in the family home while appellant resided in a house in Montgomery County.

Appellee filed for divorce on November 14, 1986. Hearings were held on July 1, 2, and 6, 1987. At the conclusion of the July 6 hearing, the court granted the parties an absolute divorce, holding the property disposition, monetary award, and alimony issues under advisement. By written order dated July 7, 1987, and filed July 10, 1987, the court incorporated its oral order of absolute divorce, provided for the distribution of marital assets, and granted a monetary award and indefinite alimony. It is from that order that this appeal was taken.

Business Evaluation

A major issue in this case is the evaluation of the husband's business. The court found it to be worth $300,000, which consisted entirely of goodwill since the tangible physical assets were worth less than the liens thereon and the business bank accounts were separately valued. The court granted appellee a monetary award of $150,000, specifically designated as one-half of the value of the business, payable, with interest, at the rate of $3,000 per month. Appellant's first, and principal, argument on appeal is that the evaluation and, therefore, the monetary award based thereon are erroneous.

The threshold consideration of the business evaluation issue is what is the nature of appellant's business. Appellant contends that his business is a law practice that specializes in real estate settlements; appellee contends that it is a title business. The trial court, agreeing with appellee, found appellant's business to be a title business and not a law

[1] At the time of the divorce, the children were emancipated and thus no child custody issues were presented.

practice, and valued it as such. We believe that finding to be clearly erroneous. Md. Rule 1086. On the basis of the evidence presented, appellant's business is unquestionably a law practice and not a title company.

A law practice specializing in real estate transactions and a title business are essentially similar in the functions they perform and the services they provide. Both examine land records and approve titles to real estate; both prepare deeds, mortgages and other documents deemed necessary or appropriate to effectuate transfers of title to realty and the securing of liens thereon; both conduct settlements and collect and disburse funds in connection with sales and mortgages of real estate; both either issue to, or obtain for, the purchaser or mortgagee title insurance. An attorney may conduct such business in his own name, as an attorney, or he may opt to do so as, and under the name of, a title company. A title company need not be owned by an attorney, but a title company may need to have an attorney on its staff or be associated with one, since, in certain Maryland counties, a deed, mortgage, or deed of trust cannot be recorded "unless it bears a certification that the instrument has been prepared by an attorney admitted to practice before the Court of Appeals, under his supervision, or by or on behalf of one of the parties named in the instrument." *See,* Md. Real Prop.Code Ann. § 3-104(f) (1988 Repl.Vol.). Whether operated as a law practice or title company, it would appear that the real estate settlement business can produce substantial income.[2]

Despite the similarities, the practice of law, even one dedicated almost exclusively to real estate transactions, is not merely the operation of a title company, and a title company is not a law practice. The difference is not so much in the nature of the "finished product" — an insured title or mortgage — delivered to the client, but in the nature of the responsibility assumed by the provider, particularly in the eyes of the client. The client of the title company may expect no more than the finished product; the client of the attorney has every reason to expect and rely upon the attorney's professional expertise, advice and counsel in addition to the product he could obtain from a title company. The difference may be largely in the perception of the client, but it is that perception, and the professional reputation attached thereto, that would cause the client to choose an attorney rather than a title company to provide the service.

In the case *sub judice,* when appellant began his law practice in 1971, he held himself out to the public, as he continues to do, as "Leo F.X. Prahinski, Attorney at Law." According to his testimony, as his skills in conducting settlements grew realtors began to return to him for settlements. When asked why realtors returned, appellant testified that "they can count on me to help if a problem comes up in getting a case settled, and they bring [cases] to my office because they know [the transactions] will settle." Appellant further testified that he often gave legal advice at settlements and explained each party's obligation under the contracts and the law. Finally, appellant testified that he frequently gave legal advice to people, drafted wills, answered legal questions, occasionally handled a negligence case, and handled legal matters relating to real estate other than settlements. None of this evidence was contradicted; to a large extent it was corroborated.

[2] In 1986, when refinancing of home mortgages became attractive as the result of falling interest rates, appellant earned over $200,000 in settlement work.

Appellee relies heavily on the fact that much of the work done at the business was done by appellant's staff[3] rather than by appellant. That is not unusual in law practices, in many of which non-lawyers—student law clerks, paralegals, and secretaries—do much of the research and clerical work, which the attorney reviews and then adds his professional imprimatur to create a legal end product. According to the evidence, that is precisely what occurred in appellant's office. Appellant's staff did clerical work and initial research. Appellant, applying his professional judgment, would then review their work, conduct the settlement, and certify the settlement forms, pursuant to Md. Real Prop.Code Ann., § 3-104(f), thereby taking full professional responsibility for the work done by his staff as well as by himself.

The only evidence to the effect that appellant's business was a title business rather than a law practice came from appellee's expert witness. That witness, a certified public accountant, was accepted by the court as an expert in the field of accounting and appraising service businesses. The witness's expertise did not, however, include the classification of businesses. And since a title business and a law practice are both service businesses, with considerable similarity between them, the expert's testimony that appellant's business was a title and escrow business should be scrutinized carefully. In one sense, the witness was correct; the bulk of appellant's business or practice resembled that of a title business with an in-house counsel. But the witness's opinion that he was valuing a title company ignores the fact that appellant rendered legal advice on matters other than real estate settlements and held himself out to the public as an attorney, not as a title company. To a large extent, the witness's opinion that appellant's business was not the practice of law was based upon his own admittedly limited experience in attending real estate settlements, at which, he claimed, he never heard legal advice asked for or given. All of the other evidence being entirely to the contrary, the testimony of appellee's expert witness that appellant's practice was a title company business cannot make it so. As we recently noted in *Ziegler v. Kawasaki Heavy Industries, Ltd.,* 74 Md. App. 613, 539 A.2d 701 (1988), quoting *Bernstein v. Reforzo,* 37 Md. App. 724, 732, 379 A.2d 181 (1977), *cert. granted,* 282 Md. 738 (1978), *appeal dismissed,* May 18, 1978, an expert opinion has "no greater value than the facts on which it is based." Slip op. at 18. In this case it has no value at all, since the facts upon which the opinion was based simply do not support the opinion, and the witness lacked the expertise adequately to evaluate those facts. The court should not have accepted the witness's opinion as to the nature of appellant's practice; in so doing it made a factual finding that was clearly erroneous. Md. Rule 1086.

Having held that the expert witness wrongly characterized appellant's practice as a title company, we turn now to the valuation of that practice.

A law practice, like a title company, is a service business; and whatever classification he assigned to it, appellee's expert was valuing a service business, a subject on which he did qualify as an expert.

[3] The fact that appellant had non-lawyers working for him did not transform his business from that of a law practice to a title business. Rule 5.3 of the Maryland Rules of Professional Conduct, permits non-lawyer assistants so long as the lawyer maintains proper supervision over the non-lawyer assistants. *See* 306 Md. LXXVII for the text of Rule 5.3. In the case *sub judice* there is no indication that appellant did not practice in accordance with Rule 5.3.

Appellant testified that the law practice had tangible assets of $11,000, but was burdened by $13,000 in liabilities. This evidence was not controverted, and appellee's expert conceded that the law practice had no "tangible assets entering into [the] net worth" of appellant's practice. Nevertheless, the expert placed a value of $450,000 on the business, which the court, for some unexplained reason, reduced to $300,000, on the basis of which it granted appellee a monetary award of $150,000.

There being no tangible assets, the expert's evaluation and the court's finding of value were based entirely on an intangible asset, "goodwill." Appellant contends that goodwill is not marital property. In the alternative, he contends that if goodwill is marital property, then it was improperly valued in the instant case. Before considering appellant's contentions, we shall examine the nature of goodwill.

Goodwill is an intangible property asset commonly defined as:

> [T]he advantage or benefit, which is acquired by an establishment, beyond the mere value of the capital, stock, funds, or property employed therein, in consequence of the general public patronage and encouragement, which it receives from constant or habitual customers, on account of its local position, or common celebrity, or reputation for skill or affluence, or punctuality, or from other accidental circumstances or necessities, or even from ancient partialities or prejudices.

J. Story, *Commentaries on the Law of Partnership as a Branch of Commercial and Maritime Jurisprudence,* § 99, at 139 (Boston 1841). The Court of Appeals recognized this definition in *Brown v. Benzinger,* 118 Md. 29, 35, 84 A. 79 (1912). In *Hagan v. Dundore,* 187 Md. 430, 442, 50 A.2d 570 (1947), the Court of Appeals noted that "goodwill" had been variously defined, from Lord Eldon's terse definition of "the probability that the old customers will resort to the old place," Cruttwell v. Lye, 17 Ves.Jr. 335, 346, 34 Eng.Rep. 129, 134 (ch. 1810), to "the goodwill of a business comprises those advantages which may inure to the purchaser from holding himself out to the public as succeeding to an enterprise which has been identified in the past with the name and repute of his predecessor." *Knoedler v. Boussod,* 47 F. 465, 466 (S.D.N.Y. 1891), *aff'd.,* 55 F. 895 (2nd Cir.1893).

The preceding characterizations of goodwill raise the question of when is goodwill, specifically professional goodwill, an asset with value and therefore property to be included in an equitable distribution pursuant to Md. Fam.Law Code Ann. § 8-201 *et seq. See also, Archer v. Archer,* 303 Md. 347, 493 A.2d 1074 (1985) (only items imbued with the traditional indicia of "property," *i.e.,* transferable, assignable, devisable, subject to conveyance, sale, pledge or inheritance, are proper subjects of equitable distribution). The key issue as to the professional goodwill of a sole proprietorship, as in the case *sub judice,* has to do with the value, if any, which can be attributed to it, causing it to be subject to equitable distribution.

Whether professional goodwill can be marital property susceptible to valuation and distribution as such has been the subject of many articles. *See, e.g.,* Parkman, *The Treatment of Professional Goodwill in Divorce Proceedings,* 18 Fam.L.Q. 213 (1984); Family Law Comment, *The Recognition and Valuation of Professional Goodwill in the Marital Estate,* 66 Marg.L.Rev. 697 (1983); Note, *Treating Professional Goodwill As Marital*

Property in Equitable Distribution States, 58 *N.Y.U.L.Rev.* 554 (1983); Foster, *Equitable Distribution of Professional Degrees, Licenses and Goodwill,* 1 Fairshare 9 (Jan. 1983); Raggio, *Professional Goodwill and Professional Licenses as Property Subject to Distribution Upon Dissolution of Marriage,* 16 *Fam.L.Q.* 147 (1982); Kennedy & Thomas, *Putting A Value on: Education and Goodwill,* 2 *Fam.Advoc.* 3 (1979); Lurvey, *Professional Goodwill on Marital Dissolution: Is It Property or Another Name for Alimony?,* 52 *Cal.St.B.J.* 27 (1977). *See also, Accountability for Goodwill of Professional Practice in Actions Arising from Divorce or Separation,* 52 A.L.R.3d 1344 (1973). The courts have been as active as the commentators in addressing the question of professional goodwill in an equitable distribution. *See, e.g., Wilson v. Wilson,* 294 Ark. 194, 741 S.W.2d 640 (1987); *Wisner v. Wisner,* 129 Ariz. 333, 631 P.2d 115 (Ct.App. 1981), *harmonized, Mitchell v. Mitchell,* 152 Ariz. 317, 732 P.2d 208 (1987) (*en banc*); *In re Marriage of Foster,* 42 Cal. App.3d 577, 117 Cal. Rptr. 49 (1974); *In re Marriage of Nichols,* 43 Colo. App. 383, 606 P.2d 1314 (1979); *In re Marriage of White,* 98 Ill. App.3d 380, 53 Ill.Dec. 786, 424 N.E.2d 421 (1981), *appeal after remand,* 151 Ill. App.3d 778, 104 Ill.Dec. 424, 502 N.E.2d 1084 (1986); *Powell v. Powell,* 231 Kan. 456, 648 P.2d 218 (1982); *Heller v. Heller,* 672 S.W.2d 945 (Ky. Ct. App. 1984); *In re Marriage of Hull,* 712 P.2d 1317 (Mont. 1986); *Taylor v. Taylor,* 222 Neb. 721, 386 N.W.2d 851 (1986); *Hurley v. Hurley,* 94 N.M. 641, 615 P.2d 256 (1980), *limited overruling on other grounds, Ellsworth v. Ellsworth,* 97 N.M. 133, 637 P.2d 564 (1981); *Weaver v. Weaver,* 72 N.C. App. 409, 324 S.E.2d 915 (1985); *Goger v. Goger,* 27 Or. App. 729, 557 P.2d 46 (1976); *Nail v. Nail,* 486 S.W.2d 761 (Tex. 1972); *In re Marriage of Fleege,* 91 Wash.2d 324, 588 P.2d 1136 (1979) (*en banc*); *Holbrook v. Holbrook,* 103 Wis.2d 327, 309 N.W.2d 343 (1981). The specific issue of the professional goodwill of an attorney's practice in a divorce situation has also been addressed by some courts. *See, e.g., In re Marriage of Fenton,* 134 Cal. App.3d 451, 184 Cal. Rptr. 597 (1982); *Dugan v. Dugan,* 92 N.J. 423, 457 A.2d 1 (1983) (goodwill of a law practice is subject to distribution); *Beasley v. Beasley,* 359 Pa.Super. 20, 518 A.2d 545 (1986), *allocatur denied,* 516 Pa. 631, 533 A.2d 90 (1987) (professional goodwill of a law practice operated as a sole proprietorship is not marital property). Since Maryland has not heretofore addressed the question of professional goodwill relative to an equitable distribution, we deem it appropriate to examine the cases from our sister states and analyze how they have handled this question. Before we do so, however, we should consider whether the fact that appellant's business is a law practice affects the determination of its goodwill value for purposes of equitable distribution.

In *Archer v. Archer, supra,* the Court of Appeals held that a medical degree or license was not marital property, but merely reflected the possibility of future earnings. 303 Md. at 357, 493 A.2d 1074. The *Archer* rationale, of course, is equally applicable to a law degree and a license to practice law. Insofar as such degrees and licenses reflect future earnings, they should be treated as considerations affecting alimony and not as marital property. *See, Archer v. Archer,* 303 Md. at 359, 493 A.2d 1074. Nevertheless, when the opportunity provided by the license or degree is exercised, goodwill *may* come into existence, and if it does, it should be differentiated from earning capacity. True goodwill reflects not simply a *possibility* of future earnings, but a *probability* based on existing circumstances. That is what distinguishes it from the professional license or degree, to which is attached a mere prospect of enhanced future earnings that are too remote and speculative for the degree or license itself to be deemed property. *Archer,* 303 Md. at 357,

493 A.2d 1074. Unlike the license and the degree, goodwill is a marketable and transferable asset. *See Dugan v. Dugan, supra,* 457 A.2d at 6.

There may be some degree of likelihood that goodwill exists as a valuable asset of a law firm; it is doubtful that the practice of a sole practitioner enjoys any marketable goodwill. A principal attribute of goodwill of any business, trade, or profession is its firm or trade name. There are law firms bearing the names of long deceased partners.[4] Presumably, the right to use the firm name, which is a major part of the goodwill of the firm, is a valuable asset. But the sole practitioner, practicing under his own name, as is the case with appellant here, does not have a trade name that is transferable. No one but appellant can practice law under the name "Leo F.X. Prahinski, Attorney-at-law." His trade name is not a saleable, transferable commodity.

After a divorce, a lawyer's law practice will continue to benefit from whatever goodwill it may have had during the marriage. If, in fact, goodwill exists, it would be inequitable to ignore the contribution of the attorney's spouse to the development of that goodwill during the marriage. If it does exist, therefore, goodwill is an asset to be valued and considered in equitable distribution. Obviously, equitable distribution does not require that all property be part of some monetary award, but the attorney's spouse is entitled to have *true* goodwill, as distinguished from future earnings, considered as any other property acquired during the marriage. Accordingly, a number of jurisdictions have held that professional goodwill is property subject to distribution. *See, e.g., In re Marriage of Lopez,* 38 Cal. App.3d 93, 113 Cal. Rptr. 58 (1974); *Dugan v. Dugan,* 92 N.J. 423, 457 A.2d 1 (1983); *In re Marriage of Kaplan,* 23 Wash. App. 503, 597 P.2d 439 (1979).

There is considerable doubt, based on ethical considerations, that the goodwill of a law practice can be sold or transferred. *See,* Maryland State Bar Assoc., Inc. Committee on Ethics, Opinion 81-55 (1981) (citing *Validity of Contract for Sale of "Goodwill" of Law Practice,* 79 A.L.R.3d 1243 (1977)). Even so, such goodwill may be proven to exist and to be a real element of economic worth. Its valuation would present difficulty, but the fact that ethically it could not be sold should not necessarily eliminate goodwill as an element of value to be considered by the court in making an equitable distribution. *See, Stein v. Stein,* 66 N.J. 340, 331 A.2d 257 (1975); *Levy v. Levy,* 164 N.J. Super. 542, 397 A.2d 374 (1978). That even true goodwill cannot *ethically* be sold may adversely affect but not necessarily eliminate its value as property, capable of being transferred, devised, or inherited. Therefore, if there is true goodwill in an attorney's practice, separable from his individual future earning capacity, then a value can be placed on it. Whether, in this case, appellant's law practice has true goodwill is the question which we now address.

[4] The Comment to Rule 7.5 of the Maryland Rules of Professional Conduct states that: "A firm may be designated by the names of all or some of its members, *by the names of deceased* or retired members where there has been a continuing succession in the firm's identity or by a trade name such as the `ABC Legal Clinic.'" 13 Md. Reg. 11 (May 23, 1986) (part II) at 45 (emphasis added). *Cf.* 13 Md. Reg. 11 (May 23, 1986) (part II) at 3 (comment by Judge Cole where he stated that he did not concur in the adoption of the emphasized portion of the Comment to Rule 7.5 because of his belief that it is "false and misleading for a firm to state as a part of the firm name the name of a lawyer who has been deceased for a period in excess of five years.")

Essentially, three positions have been taken relative to professional goodwill as marital property. Currently, the majority view is that professional goodwill is a business asset with a determinable value and is thus marital property. *See, e.g., Wisner v. Wisner,* 129 Ariz. 333, 631 P.2d 115 (Ct.App. 1981), *harmonized, Mitchell v. Mitchell,* 152 Ariz. 317, 732 P.2d 208 (1987) (*en banc*); *In re Marriage of Foster,*42 Cal. App.3d 577, 117 Cal. Rptr. 49 (1974); *In re Marriage of Nichols,* 43 Colo. App. 383, 606 P.2d 1314 (1979); *In re Marriage of White,* 98 Ill. App.3d 380, 53 Ill.Dec. 786, 424 N.E.2d 421 (1981), *appeal after remand,* 151 Ill. App.3d 778, 104 Ill.Dec. 424, 502 N.E.2d 1084 (1986); *Heller v. Heller,* 672 S.W.2d 945 (Ky. Ct. App. 1984); *In re Marriage of Hull,* 712 P.2d 1317 (Mont. 1986); *Dugan v. Dugan,*92 N.J. 423, 457 A.2d 1 (1983); *Hurley v. Hurley,* 94 N.M. 641, 615 P.2d 256 (1980), *limited overruling on other grounds, Ellsworth v. Ellsworth,* 97 N.M. 133, 637 P.2d 564 (1981); *Weaver v. Weaver,* 72 N.C. App. 409, 324 S.E.2d 915 (1985); *Goger v. Goger,* 27 Or. App. 729, 557 P.2d 46 (1976); *In re Marriage of Fleege,* 91 Wash.2d 324, 588 P.2d 1136 (1979). The Courts that have found such goodwill to be marital property have generally adopted a method of evaluation involving the capitalization of excess earnings. For example, in ***Dugan v. Dugan, supra,*** the New Jersey Supreme Court suggested a capitalization of excess earnings method as follows:

> 1. Ascertain what a professional of comparable experience, expertise, education and age would be earning as an employee in the same general locale;
> 2. Determine and average the professional's net income before federal and state income taxes for a period of years, preferably five;
> 3. Compare the actual average with the employee norm; and
> 4. Multiply the excess by a capitalization factor.

92 N.J. at 439-40, 457 A.2d at 9-10. *See also,* Internal Revenue Service, Rev.Rule. 68-609, 1968 — 2 C.B. 327. The Internal Revenue Service Rule was the method utilized by appellee's expert witness in the case *sub judice.* He testified that it is the method permitted by the Internal Revenue Service to determine fair market value of intangible assets based upon excess earnings. When only a capitalization of excess earnings method of evaluation is applied to a professional practice, the value determined, characterized as "professional goodwill," represents nothing more than an entity's future earning capacity; it is not necessarily an asset that may be sold, transferred, or assigned. *See Taylor v. Taylor, supra,* 386 N.W.2d at 857-58. The capitalization of excess earnings approach, therefore, according to Professor Parkman, does nothing more than place "a value on an individual's reputation, which is something possessed by everyone." Parkman, *supra,* 18 *Fam.L.Q.* at 219. Since professional reputation is a factor that affects one's ability to obtain future earnings, it is clearly a relevant factor for alimony. Whether it should be a factor in an equitable distribution is not so clear. To the extent that professional reputation may be deemed to be "uniquely personal to the holder," it would not be marital property. *See Unkle v. Unkle,* 305 Md. 587, 596, 505 A.2d 849 (1986).

Some courts, taking a second approach, have held that professional goodwill is not property and thus cannot be marital property. *See e.g., Powell v. Powell,* 231 Kan. 456, 648 P.2d 218 (1982); *Beasley v. Beasley,* 359 Pa.Super. 20, 518 A.2d 545, *allocatur denied,* 516 Pa. 631, 533 A.2d 90 (1987); *Nail v. Nail,* 486 S.W.2d 761 (Tex. 1972); *Holbrook v. Holbrook,* 103 Wis.2d 327, 309 N.W.2d 343 (1981). Illustrative of the reasoning for this is the Wisconsin Supreme Court's statement that:

> [t]he concept of professional goodwill evanesces when one attempts to distinguish it from future earning capacity. Although a professional business's good reputation, which is essentially what its goodwill consists of, is certainly a thing of value, we do not believe that it bestows on those who have an ownership interest in the business an actual separate property interest. The reputation of a law firm or some other professional business is valuable to its individual owners to the extent that it assures continued substantial earnings in the future. It cannot be separately sold or pledged by the individual owners. The goodwill or reputation of such a business accrues to the benefit of the owners only through increased salary.

103 Wis.2d at 350, 309 N.W.2d at 354. This approach ignores that probability that "goodwill" as a business asset can be separate and distinct from reputation and thus valuable as an intangible property, whereas the first approach blurred the distinction between goodwill and the mere prospect for future earnings.

At least two courts have taken a third approach, somewhat between the two stated above. *See, e.g., Wilson v. Wilson,* 294 Ark. 194, 741 S.W.2d 640 (1987); *Taylor v. Taylor,* 222 Neb. 721, 386 N.W.2d 851 (1986). They have held:

> (1) Where goodwill is a marketable business asset distinct from the personal reputation of a particular individual, as is usually the case with many commercial enterprises, that goodwill has an immediately discernible value as an asset of the business and may be identified as an amount reflected in a sale or transfer of a business.
> (2) If the goodwill depends on the continued presence of a particular individual, such good will, by definition, is not a marketable asset distinct from the individual.

Wilson, 741 S.W.2d at 647; *Taylor,* 222 Neb. at 731, 386 N.W.2d at 858.

We believe this third approach to be a sound one, as it recognizes the difference between true goodwill and an individual's reputation, which may be characterized as the ability to obtain future earnings masquerading as goodwill. This approach also has an advantage of being more flexible than either of the other two. Of the three it is the one most consistent with the holdings that in any calling the existence of goodwill and its value, if any, are questions of fact. *See, Wilson v. Wilson,* 741 S.W.2d at 647; *Taylor v. Taylor, supra,* 386 N.W.2d at 859; *In re Marriage of Foster,* 42 Cal. App.3d 577, 117 Cal. Rptr. 49 (1974); *Levy v. Levy,* 164 N.J. Super. 542, 397 A.2d 374 (1978). *See also,* B. Goldberg, *Valuation of Divorce Assets,* § 8.3 (1984). That is, whether an asset is true goodwill or merely the reputation of an individual enhancing his prospects for future earnings should be determined, on a case by case basis, by the trier of fact.

We shall adopt the view expressed in the third approach as the one that correctly distinguishes true goodwill from personal reputation and recognizes the former as property. Accordingly, we hold that for professional goodwill to be marital property it must be a business asset having a value independent of the continued presence or reputation of any particular individual. That is, it must be shown to be an asset distinct from, and thus not dependent on, the reputation or continued presence of the individual professional.

In the case *sub judice,* the appellee did not and could not make such a showing. Appellant is a sole practitioner. Were he to terminate his activity, the lights would go out and the value of his practice would be extinguished. The practice itself is non-transferable. A lawyer's clients cannot be sold; the right to represent them can only be transferred with their express consent; they have the absolute right to select their own future representation. Aside from the tangible physical property, which in this case is worth less than the liens burdening it, there is nothing of value in appellant's law practice that he can legitimately transfer to a purchaser of his practice. Perhaps because of the nature of appellant's practice, there is no evidence that there are any accounts receivable that might be assigned to a purchaser.

Appellee's expert witness conceded that his evaluation of the goodwill of appellant's practice or business was based upon the assumption that if appellant were to sell his practice he would have to agree not to compete with the purchaser. When questioned as to whether the absence of such an agreement not to compete would have a dramatic effect on his valuation, the witness acknowledged that it would. The fact that such a non-competition clause was an essential factor in the expert's valuation *sub judice* clearly establishes that what the expert referred to as "goodwill" was in reality the appellant's reputation. The value of the business was entirely dependent either on appellant continuing in the practice or agreeing not to compete if he sold it.[5] Therefore, the goodwill associated with appellant's law practice is of the type entirely dependent upon appellant's reputation and not true goodwill, *i.e.,* an independent asset of the business. It is simply *not* a marketable asset severable from appellant, and the value assigned to this "goodwill" is in reality a calculation of appellant's future earnings. As noted *supra,* the prospect for future earnings is a proper consideration for alimony, ***Brodak v. Brodak,*** 294 Md. 10, 28, 447 A.2d 847 (1982), but it is not marital property subject to equitable distribution. *See, Archer v. Archer,* 303 Md. at 357-59, 493 A.2d 1074. Therefore, the trial court erred in treating appellant's law practice, which had no assets other than its supposed goodwill, as marital property.

We deem it appropriate to emphasize that our decision with respect to goodwill in this case should not be taken as a holding or even an implication that goodwill, as a saleable or marketable asset, may never exist in a professional practice. *See,* Parkman, *supra,* 18 Fam.L.Q. at 215-21. It is difficult to imagine how the law practice of a sole practitioner can enjoy goodwill that is severable from the reputation of the practitioner himself, but if a party were to produce appropriate evidence establishing the salability or marketability of professional goodwill as a distinct and separate asset of the business, then such true goodwill would be deemed to be property that could be considered in the equitable distribution of marital property. In the instant case, however, there was no such evidence; therefore, the granting of a monetary award based upon an evaluation of goodwill as marital property subject to equitable distribution was reversible error.

The law practice was not totally devoid of marital property assets. There was a substantial business bank account upon which a monetary award might be based. As to that, the court will undoubtedly take into account Mrs. Prahinski's work in her husband's practice that contributed to the accumulation of that asset.

[5] Such a clause in the case of an attorney would not be possible because of ethical considerations. *See,* Maryland Rules of Professional Conduct, Rule 5.6, at 306 Md. LXXIX.

Indefinite Alimony[6]

The trial court granted appellee indefinite alimony of $1,000 per month, to commence when appellant had completed his payments of the monetary award which represented the value of appellant's business.[7] Maryland Fam. Law Code Ann. § 11-106(c) permits a court to grant indefinite alimony under certain conditions. In the case *sub judice,* the trial court found that "the incomes of the parties following the divorce will be unconscionably disparate even after the [appellee] shall have made as much progress toward self-support as can reasonably be expected...." This finding comports with Md. Fam. Law Code Ann. § 11-106(c)(2), which states that the "court may award alimony for an indefinite period, if the court finds that even after the party seeking alimony will have made as much progress toward becoming self-supporting as can be reasonably expected, the respective standards of living of the parties will be unconscionably disparate." A trial court's finding and award of alimony is not to be disturbed on appeal unless the court exercised its discretion arbitrarily or its judgment was clearly wrong. *Brodak v. Brodak,* 294 Md. at 28-29, 447 A.2d 847. Having reviewed the evidence, we are not persuaded that the trial judge abused her discretion or exercised it arbitrarily or erroneously in awarding indefinite alimony. There was certainly sufficient evidence to support her finding that there is a gross disparity in earnings and incomes between the parties, which may be expected to continue indefinitely. Considering the efforts expended by appellee to further her husband's career and the circumstances surrounding the breakup of the marriage, we would be hard put to find error, arbitrariness, or abuse in the determination that continuation of such disparity would be unconscionable.

Despite our holding that on the basis of the evidence an award of permanent alimony was not improper, we are required to set aside this award for two reasons. First, it was ordered to begin *in futuro,* based upon certain assumptions as to the probable state of each party's finances after appellant had paid off the monetary award. This was erroneous as a matter of law. *See, Unkle v. Unkle,* 305 Md. 587, 597-98, 505 A.2d 849 (1986). Second, our holding that the monetary award must be vacated and remanded, because it was based on an improper valuation of the so-called "goodwill" of appellant's law practice as marital property, requires us to vacate the award of alimony as well. As we noted in *Campolattaro v. Campolattaro,* 66 Md. App. 68, 75, 502 A.2d 1068 (1986), "alimony and a monetary award are significantly interrelated and largely inseparable. The decision to award one or both must be made after a consideration of them in their mutual context." Here, the trial court specifically based its alimony award upon the monetary award, making the former

[6] In this argument and the one concerning the equitable distribution *infra,* appellant questions whether the trial court considered the statutory factors as required by the Family Law Code. In response to this argument, we note that the trial court's order recites "that all of the required statutory factors regarding alimony, marital property, and monetary award hav[e] been considered and made part of the record." This language is sufficient for us to conclude that the trial court considered the required statutory factors. *See, Campolattaro v. Campolattaro,* 66 Md. App. 68, 502 A.2d 1068 (1986). Furthermore, a trial court is not required to articulate each step in its thought process, *Bangs v. Bangs,* 59 Md. App. 350, 475 A.2d 1214 (1984), and a recitation that the trial court considered the statutory factors is sufficient.

[7] Because we have already held that the valuation of appellant's business was error, the award of that value and its payment schedule were reversed. Contingent on that award was the court's order for payment of alimony. Because the monetary award is no longer present, the court's order requiring that appellant begin alimony payment after the payment of the monetary award is reversed. As such, we need not reach appellant's third contention of trial court error.

contingent upon the latter. Furthermore, whether an award of alimony, either as to amount or duration, is error can only be determined in light of all the factors in the case, including a monetary award. *See Cotter v. Cotter,* 58 Md. App. 529, 473 A.2d 970 (1984). The remand on the issue of the monetary award will in all probability necessitate an alimony reconsideration. For these reasons, the award of indefinite alimony is also vacated and remanded for reconsideration.

On remand, the court will, of course, consider appellant's future earning capacity in its determination of alimony. *Brodak v. Brodak,* 294 Md. at 28, 447 A.2d 847. Appellee's expert witness apparently calculated appellant's anticipated future earnings as the value of the business. As we indicated *supra,* those expected future earnings should be considered in an alimony award rather than in an equitable distribution. The court may wish to take into account, as an equitable factor in awarding alimony, appellee's contribution to appellant's business and its effect, if any, in enhancing the growth of his reputation and thus his prospects for future earnings. Md.Fam.Law Code Ann., § 11-106(b).

Distribution of Marital Assets

Maryland's equitable distribution system involves a three-step process. The first is the determination of whether property is marital or separate. Md.Fam.Law Code Ann. § 8-203. *See also,* Md.Fam.Law Code Ann. § 8-201(e) (definition of marital property). Once property is determined to be marital, the second step is the placing of a value on that property. Md.Fam.Law Code Ann. § 8-204. The third step involves an adjustment of the equities and the rights of the parties which may require the court to grant a monetary award. Md.Fam.Law Code Ann. § 8-205. The Maryland courts have no authority to transfer the ownership of personal or real property from one party to the other. Md.Fam.Law Code Ann. § 8-202(a)(3). *See also, Ward v. Ward,* 48 Md. App. 307, 426 A.2d 443 (1981). With this law in mind, we now turn to the equitable distribution made by the court in the case *sub judice.*

Apparently, appellant does not contest the trial court's handling of steps one and two. What he contends is that the court erred in distribution of the marital assets under step three. We shall examine his assertions of error relative to the items of property he asserts were distributed incorrectly.

The court found all of the parties' property to be marital and stated that "the marital property of the parties is divided as follows:

Husband		Wife	
Greenacres	$ 50,000	Glen Ave.	$ 93,000
Cadillac	13,000	Toyota	6,962
Sailboat	20,000	Oldsmobile	200
IRA	4,000	IRA	4,000
1/2 Keogh	65,000	1/2 Keogh	65,000
1/2 Business	150,000	1/2 Business	150,000
Office Furn.	10,200	Household Furn.	2,000
1/2 Norwich	$ 13,500	1/2 Norwich	$ 13,500
1/2 Fontana	16,200	1/2 Fontana	16,200

Cash in Accts.	46,000	LMF	37,500
	$387,900		$388,362"

In this division, the court gave no consideration (except for the business and the rental properties) to its own findings as to how the properties were titled. In effect, the above division attempts to transfer the ownership of some of the property from one party to another (more accurately, from both parties jointly to one of them), which is forbidden by Md.Fam.Law Code Ann. § 8-202(a)(3). The property erroneously allocated included:

> *Glen Ave. Property,* the family home, which is titled in both parties as tenants by the entirety.
> *Sailboat,* also titled in both parties as tenants by the entirety.
> *A one-half Interest in LMF Partnership,* owned by the parties as tenants by the entirety.

By awarding the sailboat to appellant and the family home and the interest in the LMF partnership to appellee, instead of partitioning those properties by ordering that they be sold and the proceeds distributed to the parties, the court improperly transferred ownership of the property. Md.Fam.Law Code Ann. § 8-202(a)(3). Consequently, these contested provisions of the judgment must be vacated and remanded for a proper equitable distribution.

The parties also held as tenants by the entirety two rental properties identified as "Norwich Road" and "Fontana Drive." The court found these properties to be marital property and ordered that they be sold with the proceeds being evenly divided between the parties. Appellant asserts that this distribution was erroneous because the court failed to consider appellant's testimony that he made substantial contributions of cash to maintain the properties during the parties' separation whereas appellee made no contributions. Therefore, appellant argues, instead of ordering that the proceeds of the rental properties be distributed evenly, the court should have provided for reimbursement to appellant of his cash contributions to the properties. We disagree.

The cash that appellant testified he expended to maintain the properties after the parties separated was money acquired during the marriage. Property acquired during a separation and prior to divorce is marital property. *Campolattaro v. Campolattaro,* 66 Md. App. at 81, 502 A.2d 1068; *Cotter v. Cotter,* 58 Md. App. at 537, 473 A.2d 970; *Gravenstine v. Gravenstine,* 58 Md. App. 158, 177, 472 A.2d 1001 (1984). Accordingly, the funds that appellant used to maintain the rental properties were as much marital property as the real estate upon which those funds were expended. Ordering an equal distribution of the proceeds of sales of the rental properties, therefore, was not error.

Appellant also contests the distribution of the two automobiles to appellee. The court found that the Oldsmobile was titled in appellee's name; therefore, the award of the Oldsmobile to appellee was proper. The other automobile, a 1983 Toyota, was also awarded to appellee, despite the fact, as noted by the court, that there was no evidence as to how that vehicle was titled. Since we are remanding the case for proper distribution of the parties' properties, the trial court, upon remand, should receive evidence as to how the Toyota is titled in order

that it may be distributed properly. *See,* Md.Transp.Code Ann. § 13-101.1 (each vehicle in Maryland requires a certificate of title).

The parties' household furnishings were distributed to the appellee. There being no evidence presented as to title or ownership of this property, there is nothing to rebut the presumption that the parties acquired and own the household furnishings as tenants by the entireties. *See, Bender v. Bender,* 282 Md. 525, 534, 386 A.2d 772 (1978). Consequently, unless the parties can agree upon a distribution, either of them may require a sale in lieu of partition. Md.Fam.Law Code Ann., § 8-202(b)(2).

Appellant complains that the court failed to include certain jewelry in the distribution. During the trial, appellee testified that she possessed jewelry worth approximately $5,000, some of which she had received as gifts from appellant, some as gifts from her mother, and some as payment for services rendered by appellee and appellant. The trial court made no findings on this evidence. On remand, the court should make a factual determination as to ownership of the jewelry and whether any of it is marital property, in order that it may be distributed, or if appropriate, considered in connection with the granting of a monetary award.

Appellant has not contested the transfer of any other property. Nevertheless, since the court's distribution is fraught with error, a remand for redistribution of many of the items may well result in upsetting the balance of equities that the trial court attempted to create. We deem it necessary, therefore, to vacate the entire distribution of property to allow the trial court to start with a clean slate in making an equitable distribution of the parties' property. In so doing, we remind the court that it cannot transfer title, Md.Fam.Law Code Ann. § 8-202(a)(3); if it concludes that distribution of property in accordance with title would be inequitable, it has the authority to grant a monetary award to either party in order to adjust that inequity.[8]

Conclusion

The judgment of the Circuit Court for Prince George's County is affirmed as to the decree of absolute divorce but reversed and remanded for further proceedings as to distribution of property, grant of a monetary award, and alimony.

JUDGMENT AFFIRMED IN PART AND REVERSED IN PART, AND REMANDED FOR FURTHER PROCEEDINGS CONSISTENT WITH THIS OPINION.

COSTS TO BE PAID BY APPELLEE.

[8] Appellant asserts that the trial court erred in failing to consider the parties' debts in making the distribution. Because we are vacating the distribution for other reasons, we need not address that issue here. On remand, however, the court should consider the testimony concerning the marital debts prior to making any distribution. *See* *Schweizer v. Schweizer,* 301 Md. 626, 434 A.2d 267 (1984); *Green v. Green,* 64 Md. App. 122, 494 A.2d 721 (1985).

Prahinski v. Prahinski

Case name: Prahinski v. Prahinski
Citation: 321 Md. 227, 582 A.2d 784, 1990 Md. LEXIS 183
Date of decision: December 6, 1990
Country: US
State or Federal: State
State/Jurisdiction: Maryland
Court: Court of Appeals
Type of action: Marital Dissolution
Judge: Cole
SIC: 8111 Legal Services
NAICS: 541110 Offices of Lawyers

Keywords: Marital dissolution, Personal goodwill

COUNSEL:

M. Albert Figinski (Arnold M. Weiner, Peter B. Rosenwald, II, Melnicove, Kaufman, Weiner, Smouse & Garbis, P.A., on brief), Arnold M. Weiner Baltimore, for petitioner.

Daniel F. Thomas (Thomas & Kalichman, on brief), Daniel F. Thomas, Baltimore, for respondent.

JUDGES:

Eldridge, Cole, Rodowsky, McAuliffe, Adkins, Blackwell, JJ. and Charles E. Orth, Jr., Judge of the Court of Appeals, (retired) Specially Assigned, JJ. Murphy, C.J., Eldridge, Cole, Rodowsky, McAuliffe, Chasanow and Charles E. Orth, Jr., Judge of the Court of Appeals, (retired), Specially Assigned, JJ. Dissenting Opinion by Rodowsky, J., in which Murphy, C.J. and Eldridge, J. join. Chief Judge Murphy and Judge Eldridge join in the views expressed in this dissenting opinion.

OPINIONBY:

COLE

OPINION:

In this case we must determine whether the goodwill of a solo law practice is a value includable as marital property for purposes of calculating a monetary award upon divorce.

The facts are neither complicated nor in dispute. Margaret and Leo F. X.Prahinski were married on March 20, 1965. Margaret discontinued her education after her freshman year in college in order to maintain the family home. Leo continued his formal education and eventually obtained a law degree. In

1971, Leo started his own law practice. Margaret became his secretary, and as the law practice grew, so did Margaret's responsibilities in the office. Gradually, the focus of the practice shifted to real estate settlements and Margaret's position evolved into that of office manager.

Leo became involved with another woman in 1983. The parties separated thereafter, and Margaret filed for divorce on November 14, 1986. The Circuit Court for Prince George's County granted an absolute divorce, and on July 10, 1987, the court filed a written order determining what was marital property, providing for distribution of marital assets, and granting both a monetary award and indefinite alimony. Included in the monetary award was one-half of the value of the law practice.

Leo appealed to the Court of Special Appeals claiming that the trial court erred in considering his law practice to be marital property consisting totally of goodwill and dividing the value thereof equally between the parties. Leo also questioned the proprietyof setting the amount of alimony at a time far in advance of when the alimony payments were to commence.

The Court of Special Appeals, 75 Md.App. 113, 540 A.2d 833 (1988), held that the value of the practice consisted entirely of the reputation of Leo F. X. Prahinski, Attorney-at-Law, and was therefore personal to him. As such, the value of the practice was not marital property and could not be subject to distribution as part of the monetary award. The intermediate appellate court left open the possibility that goodwill in a solo practice could be marital property if it could be shown that the goodwill was severable from the reputation of the practitioner. Additionally, the Court of Special Appeals held that it was improper for alimony to be set now when the payments were not to begin until some future time because it would be impossible to predict the economic circumstances of the parties on the date when alimony was to begin. Furthermore, that court held that alimony should take into consideration the monetary award. Since that award must be recalculated, that court declaredthe previous alimony calculation was invalid. The intermediate appellate court, therefore, remanded the case to the trial court for proper calculation of both the monetary award and alimony. Margaret petitioned this Court for certiorari which we granted in order to address the important issue involved.

We set forth several sections of the Maryland Code (1984, 1989 Cum.Supp.) Family Law Article which we believe impact upon our disposition of this case.

Section 8-201(e) provides:

(e) Marital property. -- (1) "Marital Property" means the property, however titled, acquired by 1 or both parties during the marriage.

(2) "Marital property" does not include property:

(i) acquired before the marriage;

(ii) acquired by inheritance or gift from a third party;

(iii) excluded by valid agreement; or

(iv) directly traceable to any of these sources.

Section 8-203 -- Marital Property. -- Determination. (a) Time of court action. -- In a proceeding for an annulment or an absolute divorce, if there is a dispute as to whether certain property is marital property, the court shall determine which property is marital property:

(1) when the court grants an annulment oran absolute divorce[.]

Section 8-205 provides in pertinent part

(a) Grant of award. -- Subject to the provisions of subsection (b) of this section, after the court determines which property is marital property, and the value of the marital property, the court may transfer ownership of an interest in a pension, retirement, profit sharing, or deferred compensation plan from 1 party to either or both parties, grant a monetary award, or both, as an adjustment of the equities and rights of the parties concerning marital property, whether or not alimony is awarded.

(b) Factors in determining amount and method of payment or terms of transfer. -- The court shall determine the amount and the method of payment of a monetary award, or the terms of the transfer of the interest in the pension, retirement, profit sharing, or deferred compensation plan, or both, after considering each of the following factors:

(1) the contributions, monetary and nonmonetary, of each party to the wellbeing of the family;

(2) the value of all property interests of each party;

(3) the economic circumstances of each party at the time the award is to be made;

(4) the circumstances that contributed tothe estrangement of the parties;

(5) the duration of the marriage;

(6) the age of each party;

(7) the physical and mental condition of each party;

(8) how and when specific marital property or interest in the pension, retirement, profit sharing, or deferred compensation plan, was acquired, including the effort expended by each party inaccumulating the marital property or the interest in the pension, retirement, profit sharing, or deferred compensation plan, or both;

(9) any award of alimony and any award or other provision that the court has made with respect to family use, personal property or the family home; and

(10) any other factor that the court considers necessary or appropriate to consider in order to arrive at a fair and equitable monetary award or transfer of an interest in the pension, retirement, profit sharing, or deferred compensation plan, or both.

Under the above provisions, it seems to us that trial courts are required first to determine which property is marital, what the value of this marital property is, and then to apply the ten factors in § 8-205(b) to determine what monetary award represents an "adjustment of the equities and rights of the parties"in the marital property.

Margaret argues that the value of the practice should be considered marital property, and therefore subject to a monetary award to compensate her for her contributions thereto. She insists that the majority of the work handled by the practice did not require an attorney, and that she contributed the overwhelming majority of the time and effort which made the practice successful. To deny her an

equitable share of the goodwill inherent in the practice, she claims, would frustrate the purpose of the monetary award statute, which seeks to adjust the rights of the parties based upon their contributions during the marriage.

Specifically, Margaret contends that goodwill is a form of property which the practice acquired during the marriage; hence it fits the definition of marital property, no matter whose name is on the business. She further urges this Court to adopt the position that the professional goodwill of a sole proprietorship is valuable property to be included in the marital estate.

Leo maintains that his vocation has always been a solo law practice. As such, any intangible value assigned to the business is a result of his personal reputation as an attorney. The only way that goodwill could be considered marital property, he argues, is if the goodwill had a value independent of the continued presence or reputation of the sole practitioner. He contends that he is the only person who can practice under the name "Leo F.X. Prahinski, Attorney-at-law." He claims he could not sell his practice and its intangible assets to anyone; therefore, he concludes that the goodwill is personal to him and should not be considered marital property.

The characterization of goodwill and its relationship to a business is crucial to the determination of this issue. In Hagan v. Dundore, 187 Md. 430, 50 A.2d 570 (1946), we examined the sale of a partnership interest. In so doing, we took notice of the definitions of goodwill applied by other jurisdictions. One such definition states: "The goodwill of a business comprises those advantages which may inure to the purchaser from holding himself out to the public as succeeding to an enterprise which has been identified in the past with the name and repute of his predecessor." Id. at 442, 50 A.2d at 576 (quoting Knoedler v. Boussod, 47 F. 465, 466 (S.D.N.Y. 1891), aff'd, 55 F. 895 (2d Cir.1893)) (emphasis added). According to this definition, goodwill can exist in those situations in which a business has successive owners, each one benefitting from the management of the business by the preceding owners.

Goodwill exists, however, in businesses that are still in the hands of their founders and which may never be sold. We took notice of such a situation in Brown v. Benzinger, 118 Md. 29, 84 A. 79 (1912), where we quoted Lord Eldon's definition of goodwill as "the probability that the old customers will resort to the old place." Id. at 35, 84 A. at 81 (quoting Cruttwell v. Lye, 34 Eng.Rep. 129, 134 (Ch. 1810)). Such a definition provides for the presence of goodwill in a business even if no monetary value has ever been placed on it.

In Brown, the Court was confronted with the sale of a "business conducted by [the vendor] as surgeon chiropodist." 118 Md. at 31,84 A. at 79. That opinion makes clear that as long ago as 1912, this Court considered the goodwill involved in a profession to be different from the goodwill involved in a commercial business. Examining the decisions from other jurisdictions, the Brown court noted that in the context of a non-competition agreement in the sale of a business, the goodwill of a professional practice had been held to be personal to the practitioner. The Court specifically observed that there was a distinction

between the sale of the good will of a trade or business of a commercial character where the location is an important feature of the business, and the sale of an established practice and good will of a person engaged in a profession or calling where the income therefrom is the immediate or direct result of his labor and skill and where integrity, skill, ability and other desirable personal qualities follow the person and not the place.

Id. at 36, 84 A. at 81 and cases cited therein.

Having recognized the existence of goodwill in the above noted situations, we must now determine whether goodwill can exist in the particular circumstances of the instant case. Although the trial court found that the business was predominantly a title company and treated it as such, both parties' arguments to this Court are based on the Court of Special Appeals' holding that the business was a sole proprietorship, and in particular a solo law practice. It should be noted that neither party is contesting the status of the license to practice law. n1 What is being contested is the existence of goodwill in a practice established once the professional license has been obtained.

n1 As we held in Archer v. Archer, 303 Md. 347, 493 A.2d 1074 (1985), "a professional degree or license does not possess any of the basic characteristics of property within the ambit of marital property." Id. at 357, 493 A.2d at 1079.

Because the question of whether professional goodwill is marital property is one of first impression in Maryland, we found it beneficial to review the decisions of the courts of other states which have addressed the issue. This review revealed three positions. The view most often followed treats goodwill as marital property in all cases. n2 Thenext largest group considers goodwill to be personal to the practitioner, and therefore not marital property. n3 Finally, a small group of states requires a case-by-case examination to determine how goodwill should be treated. n4 It is interesting to note that the classification of a jurisdiction as a community property state or anequitable distribution state is not determinative of its treatment of goodwill.

Wisner, 129 Ariz. 333, 631 P.2d 115 (1981); In re Marriage of Foster, 42 Cal.App.3d 577, 117 Cal.Rptr. 49 (1974); Golden v. Golden, 270 Cal.App.2d 401, 75 Cal.Rptr. 735 (1969); Mueller v. Mueller, 144 Cal.App.2d 245, 301 P.2d 90 (1956); In re Marriage of Nichols, 43 Colo.App. 383, 606 P.2d 1314 (1979); Wright v. Wright, 469 A.2d 803 (Del.Fam.Ct.1983); In re Marriage of Kapusta, 141 Ill.App.3d 1010, 96 Ill.Dec. 234, 491 N.E.2d 48 (1986); Porter v. Porter, 526 N.E.2d 219 (Ind.App.1988); Heller v. Heller, 672 S.W.2d 945 (Ky.Ct.App.1984); Rethman v. Rethman, 429 Mich. 868, 413 N.W.2d 679 (1987); Kowalesky v. Kowalesky, 148 Mich.App. 151, 384 N.W.2d 112, app. den., 425 Mich. 876 (1986); Roth v. Roth, 406 N.W.2d 77 (Minn. Ct.App.1987); Hanson v. Hanson, 738 S.W.2d 429 (Mo.1987); Taylor v. Taylor, 736 S.W.2d 388 (Mo.1987); In re Marriage of Hull, 219 Mont. 480, 712 P.2d 1317 (1986); Dugan v. Dugan, 92 N.J. 423, 457 A.2d 1 (1983); Hurley v. Hurley, 94 N.M. 641, 615 P.2d 256 (1980), overruled on other grounds by Ellsworth v. Ellsworth, 97 N.M. 133, 637 P.2d 564 (1981); Dorton v. Dorton, 77 N.C.App. 667, 336 S.E.2d 415 (1985); Jondahl v. Jondahl, 344 N.W.2d 63 (N.D.1984); Goger v. Goger, 27 Or.App. 729, 557 P.2d 46 (1976); Sorensen v. Sorensen, 769 P.2d 820 (Utah 1989); Gardner v. Gardner, 748 P.2d 1076 (Utah 1988); In re Marriage of Fleege, 91 Wash.2d 324, 588 P.2d 1136 (1979).

n3 Powell v. Powell, 231 Kan. 456, 648 P.2d 218 (1982); Pearce v. Pearce, 482 So.2d 108 (La.1986); Beasley v. Beasley, 359 Pa.Super. 20, 518 A.2d 545 (1986); Wood v. Wood, 378 S.E.2d 59 (S.C.App.1989); Smith v. Smith, 709 S.W.2d 588 (Tenn.Ct.App.1985); Austin v. Austin, 619 S.W.2d 290 (Tex.Civ.App.1981); Geesbreght v. Geesbreght, 570 S.W.2d 427 (Tex.Civ.App.1978); Nail v. Nail, 486 S.W.2d 761 (Tex.1972); Holbrook v. Holbrook, 103 Wis.2d 327, 309 N.W.2d 343 (1981).

n4 Richmond v. Richmond, 779 P.2d 1211 (Alaska 1989); Wilson v. Wilson, 294 Ark. 194, 741 S.W.2d 640 (1987); Antolik v. Harvey, 7 Haw.App. 313, 761 P.2d 305 (1988); Taylor v. Taylor, 222 Neb. 721, 386 N.W.2d 851 (1986).

The view that the goodwill of a solo practice should be considered as marital property was early on set forth in the California decisions of Mueller v. Mueller, 144 Cal.App.2d 245, 301 P.2d 90 (1956) and Golden v. Golden, 270 Cal.App.2d 401, 75 Cal.Rptr. 735 (1969).

In Mueller, the husband was the sole owner of a dental laboratory which employed six people. The wife sought to have the value of the business divided at the time of the divorce. The husband argued that the goodwill of the business was wholly dependent upon his personal skill and ability. The court examined the business and concluded that the business was too old and too large to be dependent solely upon the owner for its goodwill, 144 Cal.App.2d at 251, 301 P.2d at 95, and held that the value of this business was to be divided between the parties. Furthermore, the Mueller court examined the argument that goodwill cannot arise in a professional business depending upon the personal skill and ability of a particular person. Even though unnecessary to its decision, the court stated that this argument was based on the definition of goodwill set forth by Lord Eldon, and the better, more modern, view is that the skill and learning acquired by a professional has intangible value which may be transferred. Id. at 251, 301 P.2d at 94-95. This left open the possibility that professional goodwill could also be divided upon divorce.

The court in Golden used the opening left by Mueller to hold that professional goodwill was marital property. The husband in Golden was a sole practicing physician. The wife sought a division of the value of the practice when the couple was divorced. The court, looking to Mueller, 270 Cal.App.2d at 405, 75 Cal.Rptr. at 737, set forth the holding that "the better rule is that, in a divorce case, the good will of the husband's professional practice as a sole practitioner should be taken into consideration in determining the award to the wife." Id.

The Golden court distinguished a divorce from the dissolution of a partnership, in which it might be difficult to determine the correct share upon distribution.

[I]n a matrimonial matter, the practice of the sole practitioner husband will continue, with the same intangible value as it had during the marriage. Under the principles of community property law, the wife, by virtue of her position of wife, made to that value the same contribution as does a wife to any of the husband's earnings and accumulations during marriage. She is as much entitled to be recompensed for that contribution as if it were represented by the increased value of stock in a family business.

Id. at 405, 75 Cal.Rptr. at 738 (emphasis added).

Although the California court used community property law to give the wife credit for the increase in the goodwill value during the marriage, the non-monetary contribution aspect of equitable distribution principles tends to accomplish the same result. Note, Treating Professional Goodwill as Marital Property in Equitable Distribution States, 58 N.Y.U.L.Rev. 554, 558 (1983).

The New Jersey case of Dugan v. Dugan, 92 N.J. 423, 457 A.2d 1 (1983) presents a situation which is quite similar to the instant case, but in that case the court held that the goodwill of a solo law practice was marital property. The husband was an attorney who operated his practice as a wholly-owned professional corporation. New Jersey and Maryland both place the following limitations on the practice

of law: (1) sole practitioners cannot sell their law practices, id. at 436, 457 A.2d at 8, (2) restrictive covenants prohibiting competition by the transferor of the practice are not allowed, and (3) clients may not be sold between practices. Regarding domestic relations law, both Maryland and New Jersey are equitable distribution states, and neither treats a professional degree or license to practice as property. See Lynn v. Lynn, 91 N.J. 510, 453 A.2d 539 (1982).

The New Jersey court began its analysis by looking at the various definitions of goodwill used in other states. Its conclusion was that goodwill exists and is a legally protected interest. 92 N.J. at 429, 457 A.2d at 4. Next the court examined the relationship between goodwill and "going concern value." Goodwill was found to be closely related to reputation, and the definition settled on by the New Jersey court was that goodwill "is equivalent to the excess of actual earnings over expected earnings based on a normal rate of return on investment." Id. at 431, 457 A.2d at 5.

Examining the relationship between goodwill and earning capacity (as that relates to a medical degree), the court found a difference between the two:

Future earning capacity per se is not goodwill. However, when that future earning capacity has been enhanced because reputation leads to probable future patronage from existing and potential clients, goodwill may exist and have value. When that occurs the resulting good will is property subject to equitable distribution.

Id. at 433, 457 A.2d at 6.

Having distinguished goodwill from earning capacity and having found goodwill subject to equitable distribution, the court went on to state its rationale for the decision:

After divorce, the law practice will continue to benefit from that goodwill as it had during the marriage. Much of the economic value produced during an attorney's marriage will inhere to the goodwill of the law practice. It would be inequitable to ignore the contribution of the non-attorney spouse to the development of that economic resource. An individual practitioner's inability to sell a law practice does not eliminate existence of goodwill and its value as an asset to be considered in equitable distribution. Obviously, equitable distribution does not require conveyance or transfer of any particular asset. The other spouse, in this case the wife, is entitled to have that asset considered as any other property acquired during the marriage partnership.

Id. at 434, 457 A.2d at 6 (emphasis added).

The view that professional goodwill is personal to the practitioner and is not marital property is articulated by the Texas court in Nail v. Nail, 486 S.W.2d 761 (Tex.1972). Despite the fact that Texas, like California, is a community property state, the Nail court held that the goodwill built up by a medical practice was personal to the husband doctor. The court determined that the goodwill was based on the husband's personal skill, experience, and reputation. Because the goodwill was not an asset separate and apart from the doctor, it would be extinguished if he died, retired, or became disabled. Because of the personal nature of this asset, it was not considered by the court as an earned or vested property right at the time of the divorce, and did not qualify as property subject to division in a divorce proceeding. Id. at 764.

Taylor v. Taylor, 222 Neb. 721, 386 N.W.2d 851 (1986), sets forth the middle ground between the two extremes. The trial court found that the husband's professional medical corporation contained no goodwill which was subject to distribution upon divorce. On appeal, the Nebraska Supreme Court affirmed that finding. In so doing, however, the appellate court noted that in proper circumstances, professional goodwill might exist as a salable or marketable business asset. Id. at 732, 386 N.W.2d at 858-59. Whether such a situation existed would be a question of fact. If the goodwill was found to be saleable or marketable, the court could divide that goodwill as a marital asset. The court stated that the essential factor which would determine the goodwill to be personal would be its dependence upon the continued presence of the individual. Id. at 731, 386 N.W.2d at 858. See also, Richmond v. Richmond, 779 P.2d 1211 (Alaska 1989) and Antolik v. Harvey, 7 Haw.App. 313, 761 P.2d 305 (1988).

Taylor, therefore, provides for a case-by-case analysis to determine whether goodwill in a particular situation should be considered marital property. Unlike the Texascourt, Taylor does not rule out the possibility that a professional solo practice might contain such goodwill. And unlike the California cases, it allows for distinctions between those situations where goodwill is truly personal and where it is indeed marital property. It was this rationale which the Court of Special Appeals found persuasive. 75 Md.App. at 133, 540 A.2d at 843.

After reviewing these three alternatives and the rationale of their respective supporting cases, we are of the opinion that the goodwill of a solo law practice is personal to the individual practitioner. Goodwill in such circumstances is not severable from the reputation of the sole practitioner regardless of the contributions made to the practice by the spouse or employees. In order for goodwill to be marital property, it must be an asset having a separate value from the reputation of the practitioner.

We are not convinced that the goodwill of a solo law practice can be separated from the reputation of the attorney. It is the attorney whose name, whether on the door or stationery, is the embodiment of the practice. We are cognizant that in this computer age many law practices, and in Leo's practice in particular, much of the research and "form" work is done by nonlawyers. In the final analysis, however, it is the attorney alone who is responsible for the work that comes out of the office. Rule of Professional Conduct 5.3(c). In the instant case, the responsibility is solely Leo's, and no amount of work done by Margaret will shift the responsibility to her. The attorney's signature or affidavit places his seal of approval on the work being done and makes the attorney liable for its accuracy and authenticity. This professional assurance is what might have convinced some clients to use Leo F.X. Prahinski, Attorney-at-Law, instead of going to a title company to have their settlements completed. The assurance would end should Leo somehow remove himself from the practice. Therefore, the goodwill generated by the attorney is personal to him and is not the kind of asset which can be divided as marital property.

Because the instant case involves the practice of law,special considerations arise which might not be present in other professional practices. In Brown v. Benzinger, 118 Md. 29, 84 A. 79 (1912), we quoted with approval from Yeakley v. Gaston, 50 Tex.Civ.App. 405, 111 S.W. 768 (1908) where the court said, "the sale of goodwill by a professional carries with it the obligation that he will abstain from practice in the future in the territory from which he binds himself to withdraw." It is clear that an attorney, as distinguished from other professionals, may not covenant to abstain from the practice of law, and therefore, may not sell his or her goodwill. The ABA/BNA Lawyer's Manual on Professional Conduct § 91:801 states:

because of [the] ethical proscriptions, authorities have generally prohibited a lawyer's sale of his or her goodwill. [Citing], Geffen v. Moss, 53 Cal.App.3d 215, 125 Cal.Rptr. 687 (1975); Detroit Bank and Trust Co. v. Coopes, 93 Mich.App. 459, 287 N.W.2d 266 (1979); Lake County Bar Association v. Patterson, 64 Ohio St.2d 163, 413 N.E.2d 840 (1980);In re Laubenheimer [113 Wis.2d 680], 335 N.W.2d 881 [624] (Wis.1983); ABA Formal Opinion 266 (June 2, 1945); see also Sterett, The Sale of a Law Practice, 121 U.Pa.L.Rev. 306 (1972); Annot. 79 ALR 3d 1243 (1981).

Other professions do not have the prohibition against the sale of goodwill. Brown v. Benzinger, supra (sale of her practice "including goodwill" by a "surgeon chiropodist"); Warfield v. Booth, 33 Md. 63 (1870) (sale of a physician's practice including goodwill); Spaulding v. Benenati, 57 N.Y.2d 418, 456 N.Y.S.2d 733, 442 N.E.2d 1244 (1982) (goodwill of a dentist is a saleable asset); Dwight v. Hamilton, 113 Mass. 175 (1873) (goodwill of a physician is a saleable asset).

Since a lawyer's goodwill is not a saleable asset, it has no commercial value. The methods for valuing the marketable goodwill of a profession or business would not be applicable to an attorney's nonmarketable goodwill. The fact that a lawyer's goodwill cannot be sold by the lawyer isanother factor in our determination that it is not marital property.

Of equal importance is the fact that Maryland lawyers are governed by the Rules of Professional Conduct, which deal specifically with situations in which lawyers and nonlawyers work together.

Rule 5.4 provides in pertinent part:

(b) A lawyer shall not form a partnership with a nonlawyer if any of the activities of the partnership consist of the practice of law.

* * *

(d) A lawyer shall not practice with or in the form of a professional corporation or association authorized to practice law for profit if:

(1) a nonlawyer owns any interest therein, except that a fiduciary representative of the estate of a lawyer may hold the stock or interest of the lawyer for a reasonable time during administration;

(2) a nonlawyer is a corporate director or officer thereof; or

(3) a nonlawyer has the right to direct or control the professional judgment of the lawyer.

This rule clearly prohibits Leo from making Margaret a partner in his law practice. In fact, the practice was set up as "Leo F.X. Prahinski, Attorney-at-Law" and there is no indication that Rule 5.4(d) was not followed. Because Margaret cannot be a partner in the practice, she cannot claim a partner's interest in the practice upon her divorce from her lawyer husband.

Under these circumstances the non-lawyer spouse has no interest in the lawyer-spouse's practice and therefore the goodwill of the practice may not be included as marital property. We hold that a non-lawyer spouse cannot be a partner (silent or otherwise) in the practice of law in Maryland.

We have noted, as did the Court of Special Appeals, that the circuit court included the value of the goodwill of the legal practice of Leo F.X. Prahinski as a part of the marital property. The alimony and the monetary award were both calculated with the value being a factor. This was error. Therefore, the entitlements of the spouse must be recalculated. n5

n5 We have not addressed the other issues certified for review and need not do so because of the disposition we make in this case.

JUDGMENT OF THE COURT OF SPECIAL APPEALS AFFIRMED. PETITIONER TO PAY THE COSTS.

DISSENTBY:

RODOWSKY

DISSENT:

RODOWSKY, Judge, dissenting.

I respectfully dissent. By mixing the Marital Property Act, Family Law Article § § 8-201 through 8-205, with the Rules of Professional Conduct, principally Rule 5.6(a), without giving effect to the purpose of either ingredient, the Court has produced an inequitable result. Although the spouse of a person engaged as a sole proprietor in a trade or business may receive an equitable award in the value of the goodwill of that proprietorship, and although the spouse of a person engaged as a sole practitioner in a profession, other than law, may receive an equitable award in the value of the goodwill of that professional practice, the Court holds that the spouse of a person engaged as a sole practitioner in the legal profession cannot even be considered for an equitable award in the value of the goodwill of that law practice because, solely in the latter instance, goodwill is not marital property.

Archer v. Archer, 303 Md. 347, 493 A.2d 1074 (1985), held that there is no marital property in a license to practice medicine. But there this Court said:

"Our cases have generally construed the word 'property' broadly, defining it as a term of wide and comprehensive signification embracing '"everything which has exchangeable value or goes to make up a man's wealth -- every interest or estate which the law regards of sufficient value for judicial recognition."' Deering v. Deering, 292 Md. 115, 125, 437 A.2d 883 (1981); Diffendall v. Diffendall, 239 Md. 32, 36, 209 A.2d 914 (1965). In Bouse v. Hutzler, 180 Md. 682, 686, 26 A.2d 767 (1942), we said that the word 'property,' when used without express or implied qualifications, 'may reasonably be construed to involve obligations, rights and other intangibles as well as physical things.' 'Goodwill,' for example, has been characterized as a legally protected valuable property right. Schill v. Remington Putnam Co., 179 Md. 83, 88-89, 17 A.2d 175 (1941)."

303 Md. at 356, 493 A.2d at 1079.

Indeed, the majority opinion acknowledges that "[t]he view most often followed treats goodwill as marital property in all cases." Opinion at 234 (footnote omitted). Thus, if a brain surgeon or a house painter were to divorce, most courts would permit the spouse to show both goodwill in the solo practice or sole proprietorship and the value thereof. This is consistent with the policy of Maryland's Marital Property Act

"that nonmonetary contributions within a marriage should be recognized in the event that a marriage is dissolved; that a spouse whose activities do not include the production of income may nevertheless have contributed toward the acquisition of property by either or both spouses during the marriage; that when a marriage is dissolved, the property interests of the spouses should be adjusted fairly and equitably, with careful consideration given to both monetary and nonmonetary contributions made by the

respective spouses; and that the accomplishment of these objectives necessitates that there be a departure from the inequity inherent in Maryland's old 'title' system of dealing with the marital property of divorcing spouses."

Archer v. Archer, 303 Md. at 351-52, 493 A.2d at 1076-77.

The Court nevertheless holds that the majority rule in this country does not apply here because "the goodwill of a solo law practice is personal to the individual practitioner. . . . In order for goodwill to be marital property, it must be an asset having a separate value from the reputation of the practitioner." Opinion at 239. "Because the instant case involves the practice of law, special considerations arise which might not be present in other professional practices." Opinion at 240.

Although today's holding is clearly limited to solo legal practitioners, the holding seems to rest, at least in part, on equating goodwill with professional reputation and then denying marital property in a professional reputation. In my view that does not distinguish attorneys and brain surgeons from house painters for marital property purposes. Where services are involved a reputation for competently rendering the particular service is a component of goodwill whether we deal with a trade, a business or a profession. The nonmonetary support rendered by the spouse while the service provider was expending the time and effort required for quality performance, and thereby was building the reputation, is precisely the type of contribution within a marriage which the General Assembly intended be recognized under the Marital Property Act.

If, on the other hand, both the rationale and the holding of the majority opinion are limited to solo legal practitioners, then it seems to be principally because, under the majority's reasoning, "an attorney, as distinguished from other professionals, may not covenant to abstain from the practice of law, and therefore, may not sell his or her goodwill." Opinion at 240. Rule 5.6, entitled "Restrictions on Right to Practice," subsection (a), prohibits a lawyer from participating in offering or making "[a] partnership or employment agreement that restricts the rights of a lawyer to practice after termination of the relationship, except an agreement concerning benefits upon retirement[.]" The rationale underlying the prohibition "is that such covenants impinge upon the right of future clients to free choice of counsel." G. Hazard, Jr. & W. Hodes, The Law of Lawyering: A Handbook on the Model Rules of Professional Conduct 486 (1985). The freedom of choice of future clients is in no way diminished by recognizing a spouse'smarital property interest in the goodwill of a solo law practice.

The only effect of the Rules of Professional Conduct on the problem before us is to complicate valuation. Because a solo law practice, unlike a medical practice or accounting practice, cannot be sold directly, valuation of a law practice might require comparisons to be drawn to other professions, particularly if a multiplier of some part of the net earnings of the law practice must be used. See Dugan v. Dugan, 92 N.J. 423, 439-40, 457 A.2d 1, 9-10 (1983) (multiplier to be applied to excess of average annual net income from practice over annual salary available in same general locale to attorney of comparable experience, expertise, education and age).

Finally, it is at least interesting to note that experienced counsel for the respondent did not even urge the majority holding. Recognizing the inequity of denying marital property in the goodwill of a professional practice while allowing marital property in the goodwill of sole proprietorships, trades and businesses, counsel urged that goodwill which ultimately rested on personal reputation not be included in marital property in the case of any trade, business or profession.

Rapid-American Corp. v. Harris

603 A.2d 796 (1992)

RAPID-AMERICAN CORPORATION and McCrory Parent Corp., Respondents Below, Appellants/Cross-Appellees, v. David HARRIS, Leeburn Securities Limited, Cede & Co., Curt Rothschild, Naomi Weiss, Bastion Management Ltd., Bastion Fund-1980 L.P., Sea Venture International L.P., Cordoba Investment Ltd., and 398737 Ontario Ltd., Petitioners Below, Appellees/Cross-Appellants.

Supreme Court of Delaware.

Submitted: May 21, 1991.

Decided: January 23, 1992.

William O. LaMotte, III and Robert J. Valihura, Jr., Morris, Nichols, Arsht & Tunnell, Wilmington, Jeffrey R. Mann (argued), Tab K. Rosenfeld (Rubin, Baum, Levin, Constant & Freidman, New York City, of counsel), for appellants/cross-appellees.

Stuart B. Young and Bruce L. Silverstein, Young, Conaway, Stargatt & Taylor, Wilmington, Eliot Lauer (argued), Benard V. Preziosi, Jr. (Curtis, Mallet-Prevost, Colt & Mosle, New York City, of counsel), for appellees/cross-appellants.

Before CHRISTIE, C.J., HORSEY and MOORE, JJ.

MOORE, Justice.

This consolidated appeal challenges the results of a statutory appraisal of Rapid-American Corporation ("Rapid") which awarded certain dissenting shareholders $51.00 per share. On January 31, 1981, Rapid and R.K. Holding Corporation merged into Kenton Corporation ("Kenton"). After the merger, Rapid was transformed into a privately-held corporation. Meshulam Riklis and his family acquired 60% of Rapid through his controlling interest in Kenton. Carl H. Lindener, Riklis' partner, obtained the other 40% of Rapid's shares through his controlling interest in American Financial Corporation ("AFC").

Appellees and cross-appellants ("Harris"), owned 58,400 shares of Rapid before the merger. Harris brought a statutory appraisal action pursuant to 8 Del.C. § 262, contesting the merger consideration. The merger price included cash and securities worth approximately $28.00 per share. After a trial in the Court of Chancery, the court awarded Harris $51.00 per share plus simple interest. See *Harris v. Rapid American Corp.,* Del.Ch., C.A. No. 6462, Chandler, V.C., slip op. at 43, 1990 WL 146488 (Oct. 2, 1990).

Rapid now challenges the trial court's decision to award Harris $51.00 per share. It claims that the results of the appraisal are unrealistic because the $51.00 award represents a 200% premium over Rapid's unaffected market price at the time of the merger. Rapid maintains that the trial court's error was the result of its decision to adopt Harris' valuation technique. Rapid claims that Harris' appraisal methodology violated Delaware law.

Harris further claims that the trial court erred when it failed to include a "control premium" in its valuation of Rapid. Harris argues that the inclusion of a "control premium" was necessary to compensate Rapid's shareholders for their 100% ownership in three operating subsidiaries. Harris also challenges the award of simple interest. He urges us to adopt a "rule" presumptively requiring the trial court to award only compound interest pursuant to 8 Del.C. § 262(i).

After carefully examining the record, we affirm the trial court's decision to adopt Harris' valuation technique. Harris' methodology does not contravene Delaware law. We also affirm the trial court's decision to award Harris simple interest. The unambiguous statutory language of 8 Del.C. § 262(i) gives a court broad discretion to award either compound or simple interest. We reject any attempt to artificially fashion a "rule" upsetting the legislature's clear intent.

Finally, we reverse the denial of a "control premium" to Harris. We find that the trial court had an affirmative duty to consider the nature of the enterprise as an element of its valuation. Rapid, as a parent company owning a 100% interest in three valuable subsidiaries, was entitled to an adjustment of its inherent value as a going concern to reflect the economic reality of its structure at the corporate level. The valuation technique the trial court applied artificially discounted Rapid's ownership interest in its subsidiaries and deprived all of Rapid's shareholders of fair value.

We decline, however, to consider Harris' claim that the inclusion of the "control premium" merited an adjustment of Rapid's fair value to $73.28 per share. Instead we remand this case back to the Court of Chancery for a recalculation of Rapid's fair value. The trial court should consider the "control premium," together with all traditional "relevant factors," to determine if Harris is entitled to anything more than his original $51.00 per share award.

I.

The underlying facts of this case are not in serious dispute. Rapid was a publicly-held conglomerate receiving 99% of its net sales and most of its operating profits from three wholly-owned subsidiaries. These subsidiaries included the McCrory Corporation ("McCrory"), Schenley Industries, Inc. ("Schenley"), and McGregor-Duniger, Inc. ("McGregor"). Rapid and each subsidiary had a full and distinct set of executives and operating officers. All of the subsidiaries maintained independent financial reports and records.

McCrory was Rapid's largest subsidiary. It was responsible for over half of Rapid's net sales and operating profits. McCrory was basically a retailing company owning such well-known subsidiaries and divisions as Lerner Shops, McCrory, and J.J. Newberry Stores. McCrory also held interests in other retailing and merchandising operations.

Schenley, Rapid's second largest subsidiary, was a distiller, importer and distributor of alcoholic spirits. It generated approximately 25% of Rapid's net sales and operating profits. Finally, McGregor was Rapid's smallest subsidiary. A clothing manufacturer and distributor, it generated less than 1% of Rapid's net sales and operating profits.

Rapid, as a whole, was burdened with a significant amount of debt before the merger. It was capitalized with close to 75% in long-term and short-term debt. Prior to the merger, Rapid carried the debt at market value instead of its face amount and book value. Apparently, the market value of Rapid's debt was deeply discounted because it was subject, at that time, to a significantly low rate of interest. At the parent level, Rapid also held certain valuable assets including a substantial art collection.

A.

The merger transaction leading to the appraisal began in 1974. At that time, Riklis, Rapid's CEO and Chairman, began to purchase Rapid's shares in the open market through his interests in Kenton and AFC. Rapid also contemporaneously began to repurchase large blocks of its own shares. The repurchase program ultimately *800 increased Riklis' control of Rapid's outstanding shares.

On April 11, 1980, Rapid announced that it had agreed to merge with Kenton into a newly reformed Rapid-American corporation. On the eve of the merger, Kenton and AFC controlled 46.5% of Rapid's outstanding stock. After the merger was effectuated on January 31, 1981, Rapid's shareholders received a compensation package worth approximately $28. The compensation included $45 principal in a newly-issued 10% sinking fund subordinated debenture, $3 in cash and an additional $.25. This nominal cash fee represented settlement consideration for certain pending derivative suits.

Rapid employed an independent Transaction Review Committee ("TRC") to evaluate the merger price. The TRC retained Bear Stearns & Co. to provide financial advice. The TRC also employed Standard Research Consultants ("SRC") to determine, among other things, the fairness of the proposed transaction to Rapid's shareholders. Arthur H. Rosenbloom, SRC's head consultant and expert witness at trial, led the investigation. The examination continued for approximately six months. SRC ultimately concluded that the $28.00 compensation package was fair to Rapid's shareholders.

SRC's valuation technique considered Rapid on a consolidated basis. It evaluated Rapid based on an analysis of earnings and dividends. Harris, slip op. at 7. SRC calculated price/earnings ratios for each subsidiary and adjusted its figures to include certain dividend ratios. It figured each subsidiaries' contribution to the parent's operating

income for a set period of time to calculate Rapid's ultimate value. SRC then tested its figures against various established financial ratios of similarly situated corporations. Id.

Harris retained Willamette Management Associates, Inc. ("WMA") to evaluate the merger consideration. In contrast to SRC's technique, WMA separately evaluated each of Rapid's subsidiaries. WMA reasoned that its "segmented" approach to valuation was particularly appropriate because of the difficulty of finding a conglomerate comparable to Rapid.

The trial court carefully considered both the SRC and WMA analyses. The court rejected SRC's approach, ruling that WMA's "segmented" comparative valuation was more reliable. The court specifically noted that after considering the "voluminous" record, WMA's methodology was "by far the most reliable analysis presented in this appraisal action." *Harris,* slip op. at 21. The court found that SRC's evaluation suffered from a number of defects including its failure to consider that Rapid had adjusted its accounting techniques during the relevant time period. Id. at 7-18. The court also faulted SRC for its decision not to treat Rapid on a debt-free basis. Id. Finally, the court explicitly rejected SRC's valuation, and held that it violated Delaware law. Id. at 16. The court found that SRC's valuation technique "determined the value of [Harris'] shares as freely trading minority shareholders instead of considering Harris' proportionate (1.5%) [sic] interest in Rapid as a going concern...." Id.

The court adopted a modified version of WMA's valuation technique in a highly detailed, forty-three page opinion. It then ruled that Rapid's fair value at the time of the merger was $51.00 per share. See id. at 43. The trial court also awarded Harris 12.75% simple interest. Id.

B.

The Court of Chancery adopted WMA's comparative analysis. Id. at 19. It examined each of Rapid's subsidiaries as a separate entity. Id. It then compared the subsidiaries to a group of comparable publicly-traded companies. Id.

WMA examined the financial statements of the subsidiaries and the comparables to develop certain pricing multiples. Id. at 20 These multiples were based on revenues, pre-interest and tax earnings, earnings "before depreciation, amortization, interest and taxes [and] tangible book value of invested capital...." Id. WMA specifically treated each subsidiary and comparable on a debt-free basis in an effort to factor out the vagaries of "managerial discretion" and to treat the companies on a "level playing field." Id. The analysis yielded a market value of invested capital for each segment. Id. The trial court also considered an average of the subsidiaries' financials for the five years preceding the merger, but placed special emphasis on the twelve months before the merger. Id. at 20-21. After calculating the market value of invested capital for each segment, the court subtracted out the market value of all senior debt and preferred equity to calculate the value of each segment's common equity. Id. at 13, 21. The trial court also considered "various parent-level" factors. Id.

The Vice Chancellor rejected WMA's inclusion of a "control premium" in its final evaluation of each Rapid subsidiary. Id. at 21-22. It found that the addition of a "control premium" violated Delaware law. Id. at 29, 35, 38. The court reasoned that the "control premium" contravened the proscription against weighing factors affecting valuation "at the shareholder level." Id. at 29.

II.

We now turn to the merits of Rapid's appeal. Rapid launches a complex and detailed attack on the trial court's decision to award Harris $51.00 per share. Despite its breadth, Rapid's argument ultimately reduces to one fundamental point. It maintains that the trial court erroneously relied on WMA's "segmented" valuation technique instead of employing SRC's methodology.

Rapid first claims that its valuation did not violate Delaware law and was more reliable than Harris' computation. It then proposes that WMA's valuation contravened Delaware law and improperly neglected to consider certain specific aspects of Rapid's financial structure. Rapid makes four specific arguments. It contends that: (1) WMA's valuation incorrectly included a "control premium"; (2) WMA's valuation was erroneously based upon a "break-up" or liquidation value of Rapid's subsidiaries; (3) WMA only valued Rapid's subsidiaries and did not consider the value of the parent; and finally (4) WMA's valuation techniques only treated Rapid's debt at its market value and not at its book value.

Harris argues that WMA's technique was not violative of Delaware law. He maintains that WMA's valuation methodology was inherently more reliable.

A.

We first note that the parties dispute the applicable standard of review. Rapid urges us to exercise de novo plenary review.

Rapid contends that the trial court committed legal error when it ruled that SRC's valuation contravened Delaware law. Rapid claims that the court misinterpreted the trial testimony of its expert, Rosenbloom, that SRC quantified Rapid as its "value to the minority shareholder representing a freely traded minority interest, with neither premium for control nor discount for lack of marketability or minority interest." Rapid also argues that the WMA analysis suffers from a number of fundamental defects. It concludes that the trial court must have contravened Delaware appraisal law by adopting WMA's supposedly flawed technique.

Harris maintains that we can only examine the record for an abuse of discretion. He characterizes the trial court's decision to adopt the modified WMA approach as a mixed question of law and fact. Harris concludes that the trial court's ultimate decision reflected a choice between the competing views of experts.

1.

We agree with Harris' assessment of the issues presented in this aspect of Rapid's appeal. Rapid's claim that the trial court committed legal error is unconvincing for two reasons. First, Rapid only argues that the court mistakenly thought that the SRC valuation applied a minority discount at the shareholder level. It only quarrels with the Vice Chancellor's interpretation of trial testimony. Rapid does not recognize that Delaware law entrusts the assessment of trial witnesses in an appraisal action to the discretion of the fact-finder. See *Kahn v. Household Acquisition Corp.,* Del.Supr., 591 A.2d 166, 175 (1991); *Alabama By-Products Corp. v. Neal,* Del.Supr., 588 A.2d 255, 258-59 (1991); *Cavalier Oil Corp. v. Harnett,* Del. Supr., 564 A.2d 1137, 1146 (1989). We can only examine the trial judge's alleged failure to "understand" expert trial testimony in this case for an abuse of discretion. Id.

Second, Rapid implies that the court rejected its valuation solely because of the Vice Chancellor's supposed misinterpretation of Rosenbloom's testimony. Rapid's argument is somewhat disingenuous. The trial court explicitly stated that it rejected SRC's valuation for "several reasons." *Harris,* slip op. at 18. The court also noted that it accepted the WMA method because SRC's valuation did not treat Rapid on a debt free basis or make a LIFO/FIFO adjustment. Id. at 19.

Rapid's objection to the trial court's adoption of WMA's valuation also attacks the application of law to the facts. It does not follow, however, that a trial court commits legal error every time it adopts a view of the evidence contrary to that held by the losing party.

2.

It is well-settled that we accord "a high level of deference" to a trial court's determination of value in a statutory appraisal proceeding. See *Kahn,* 591 A.2d at 175; *Alabama By-Products,* 588 A.2d at 258-59; *Cavalier,* 564 A.2d at 1146. It is frequently the case in appraisal proceedings that valuation disputes become a battle of experts. Id. We have noted that the trial judge, as finder of fact in appraisal cases, enjoys the unique opportunity to examine the record and assess the demeanor and credibility of witnesses. Id. Accordingly, we will overturn an appraisal decision only if the trial court abused its discretion. Id. A court abuses its discretion in an appraisal proceeding when its factual findings do not have record support and its valuation is not the result of an orderly and logical deductive process. See *Alabama By-Products,* 588 A.2d at 259 (citing *Levitt v. Bouvier,* Del.Supr., 287 A.2d 671, 673 (1972)).

B.

We now turn to the specific merits of Rapid's appeal to determine whether the trial court abused its discretion. We first consider Rapid's claim that the court's "segmented" valuation technique violated Delaware law because it supposedly assessed Rapid's

value on a liquidation basis instead of considering it as a going concern.[1] Rapid argues that the court's valuation approach was identical to the liquidation technique rejected in *Bell v. Kirby Lumber Corp.,* Del.Ch., 395 A.2d 730 (1978), modified, Del.Supr., 413 A.2d 137 (1980).

1.

We start with a brief overview of the law. It is now "axiomatic" that in a statutory appraisal proceeding, the dissenting shareholders are entitled to receive "fair value" representing their "proportionate interest in a going concern." Cavalier, 564 A.2d at 1144 (quoting *Tri-Continental Corp. v. Battye,* Del.Supr., 74 A.2d 71, 72 (1950)). The court must consider "all relevant factors" to determine "fair value" exclusive of "post-merger events or other possible business combinations." See 8 Del.C. § 262(h); *Kahn,* 591 A.2d at 174; *Alabama By-Products,* 588 A.2d at 257-58; *Cavalier,* 564 A.2d at 1144; *Weinberger v. UOP, Inc.,* Del.Supr., 457 A.2d 701, 713 (1983).

Bell best illustrates the law. Kirby Lumber Corporation ("Kirby"), the company subject to the appraisal in Bell, was a manufacturing concern primarily engaged in the production of lumber and plywood. *Bell,* 395 A.2d at 732. Kirby also held a vast acreage of timberland. Id. at 733. Kirby harvested the timber on a "sustained yield" basis to maintain a steady and constant supply of natural resources for its wood production operations. Id.

The dissenting shareholders argued that the court should have evaluated Kirby on its acquisition value. Id. at 735-36. They claimed that Kirby's natural resources were much more valuable than its worth as an on-going concern. Id. The dissenters thus maintained that the court should have set Kirby's "fair value" at the price a third party would have paid for the company instead of relying on an evaluation of earnings or market price. Id.

The trial court rejected the dissenters' argument. Id. at 736. It reasoned that the liquidation value incorrectly assumed that Kirby would not have continued in its pre-merger form as an on-going concern. Id. This Court affirmed. *Bell,* 413 A.2d at 142. We agreed that the dissenters' liquidation approach violated the statute and improperly failed to consider Kirby's value apart from its acquisition value. Id.

2.

We find nothing in the record to convincingly support the claim that the court's "segmented" valuation technique was either identical or even similar to the liquidation approach rejected in Bell. The modified WMA valuation explicitly considered Rapid's subsidiaries as going concerns. See *Harris,* slip op. at 34-35. It placed special emphasis on financial data cumulated from operating results and not liquidation values. Id. at 19-22.

[1] We consider the merits of Rapid's critique of the trial court's "controlling person/control premium" analysis infra at Part III.

The "segmented" technique itself also did not manifest a liquidation analysis. Instead, the "segmented" approach best mirrored economic reality. Indeed, even Riklis admitted that "Rapid's value is best found in the sum of its parts." Id. at 10.

Riklis is right. The record fully supports our conclusion that the "segmented" valuation did not involve consideration of Rapid's break-up value. Instead, the court independently valued Rapid's three major subsidiaries according to their value as going concerns. There was no abuse of discretion.

3.

Rapid also challenges the trial court's decision not to consider its inherent value as a parent within WMA's "segmented" accounting technique. The record, however, indicates that WMA not only considered Rapid's parent-level financials, but that the trial court explicitly decided to exclude them. The court, after considering the record, held:

> I accept petitioner's determination that Rapid's parent-level revenues, assets and expenses amounted to a wash ... [p]etitioners' determination that these assets and expenses effectively cancel each other out is reasonable and has not been contradicted by respondents' evidence.

Harris, slip op. at 42.

Our review of the record also indicates that there was no need to add Rapid's parent-level considerations to its "fair value." The parent-level financial data is inconclusive and does not significantly affect the trial court's analysis. Again, there was no abuse of discretion.

4.

Rapid finally contests WMA's evaluation of its debt. Rapid faults the trial court for its decision to net out its debt to facilitate the "segmented" comparative analysis. Rapid also argues that the trial court artificially inflated Rapid's fair value when the court calculated equity value by subtracting the market value and not the higher book value of its debt. Rapid concludes that the court should not have considered its debt at market value because the discount between market and book value is only relevant upon an acquisition and liquidation. Rapid's argument is not persuasive.

Initially we note that Rapid did not explicitly object at trial to WMA's debt-free valuation. The court found that "[r]espondents have not objected to Willamette's debt-free valuation." Harris, slip op. at 13. Rapid's appeal of this valuation issue therefore is barred under Supreme Court Rule 8. In any event, the court did not abuse its discretion when it adopted WMA's debt-free approach.

The face value of Rapid's debt at the time of the merger was $652,589,000, while the contemporaneous market value of the same debt was $356,154,000. The court was

free to consider the realities of the market place in its evaluation of Rapid's intrinsic value. See, e.g., *Alabama By-Products,* 588 A.2d at 258; *Cavalier,* 564 A.2d at 1142-43; *Weinberger,* 457 A.2d at 713. In view of the well-established principle that a court can consider "all relevant factors" affecting value, there was no abuse of discretion in taking account of the market value of Rapid's debt.

5.

In sum, we find that the trial court did not abuse its discretion when it adopted a modified form of the WMA "segmented" valuation approach to determine the "fair value" of Rapid's shares before the merger. The "segmented" technique considered each subsidiary as a going concern. It did not attempt to ascertain Rapid's liquidation value.

The trial court also explicitly considered Rapid on its parent level. After considering the voluminous trial record, the court was convinced that the parent-level considerations were a "wash" and did not significantly impact Rapid's ultimate value. Finally, the court properly considered Rapid's debt at its market value. Far from constituting an abuse of discretion, the trial court's analysis of the debt issue reflected a proper consideration of market realities.

Accordingly, we affirm these three aspects of the trial court's decision.

III.

We now consider the merits of Harris' cross-appeal. The trial court determined the publicly traded equity ("PTE") value of Rapid's shares after adopting WMA's "segmented" comparative valuation technique. See Harris, slip op. at 22-38. The court, however, refused to add a "control premium" to the PTE for each of Rapid's operating subsidiaries. The court, citing Cavalier, reasoned that adding a "control premium" violated 8 Del.C. § 262 because it contravened the general proscription against weighing any additional factors affecting valuation "at the shareholder level." Id. at 29, 35, 38.

Harris claims that the trial court's decision to exclude a "control premium" constituted legal error. He argues that the court should have considered and valued Rapid's 100% interest in its subsidiaries. Harris maintains that WMA's valuation technique only compared its subsidiaries' PTE's with the individual shares of similar corporations trading in the market. He notes that the market price of these comparable corporations are discounted and do not reflect a control premium. Harris concludes that the trial court effectively treated Rapid as a minority shareholder in its wholly-owned subsidiaries. Harris contends that the trial court gave the new, privately-held Rapid, a windfall at his expense.

Rapid claims that the trial court did not commit error. Rapid, citing to Cavalier and Bell, argues that the addition of a control premium violates Delaware law because it takes into account Rapid's liquidation value. In sum, Rapid assumes that it could not realize a

"control premium" unless it was sold to a third party. Rapid also argues that Harris only owned 1.2% of its outstanding shares and factually was not entitled to realize a "control premium."

A.

In this respect the trial court's decision implicated a question of law. We review such matters de novo to determine whether the trial court "erred in formulating or applying legal precepts." *Gilbert v. El Paso Co.,* Del.Supr., 575 A.2d 1131, 1142 (1990); Cavalier, 564 A.2d at 1141. After reviewing the entire record, we conclude that the trial court misinterpreted applicable legal precepts by erroneously omitting the "control premium."

B.

A stock appraisal is a statutory remedy. See *Alabama By-Products,* 588 A.2d at 256; *Cede & Co. v. Technicolor, Inc.*, Del. Supr., 542 A.2d 1182, 1186 (1988); *Weinberger,* 457 A.2d at 714. The statute contemplates that a reviewing court must exclude from its calculations "any element of value arising from the accomplishment or expectation of the merger or consolidation...." 8 Del.C. § 262(h).

This Court, in accordance with the statutory mandate, has consistently held that a dissenting stockholder in an appraisal action is only entitled to "that which has been taken from him [or, in other words] his proportionate interest in a going concern." Tri-Continental, 74 A.2d at 72; see also *Cavalier,* 564 A.2d at 1144; *Cede,* 542 A.2d at 1186; *Weinberger,* 457 A.2d at 714. Two distinct but related concepts emerge from the statutory scheme. First, a court cannot assign value to any "speculative" events arising out of the merger or consolidation. See *Cavalier,* 564 A.2d at 1144; *Cede,* 542 A.2d at 1187; *Weinberger,* 457 A.2d at 714. Second, the court must value the dissenter's proportionate interest in the corporation as a "going concern" taking into account all other "relevant factors" affecting value. Id. See *Bell,* 413 A.2d at 142. In accordance with this principle, a court cannot adjust its valuation to reflect a shareholder's individual interest in the enterprise. As *Cavalier* succinctly states:

> The dissenting shareholder's proportionate interest is determined only after the company as an entity has been valued. In that determination the [trial court] is not required to apply further weighing factors at the shareholder level, such as discounts to minority shares for asserted lack of marketability.

564 A.2d at 1144 (emphasis added).

Rapid, in apparent agreement with the trial court, seizes upon *Cavalier*, and argues that the phrase "such as" similarly prohibits a court from adding "a control premium" at the shareholder level. Rapid indicates that adding a control premium at the shareholder level violates this Court's decision in *Bell*. It reasons that a control premium typically only "arises out" of the merger and is not part of Rapid's going-concern value.

We disagree with the trial court's characterization of the "control premium" in this case as an impermissible shareholder level adjustment. Its reliance on *Cavalier* and *Bell* is misplaced. The "control premium" Harris urged the trial court to adopt represented a valid adjustment to its valuation model which "applied a [bonus] at the company level against all assets...." *Cavalier,* 564 A.2d at 1144.

C.

Weinberger recognized that there is no one exclusive means of assigning value to a Delaware corporation for purposes of an appraisal. 457 A.2d at 713-14. It interpreted the statutory language "all relevant factors" to include a multitude of non-speculative considerations. Id. 8 Del.C. § 262(h). Of course, one of the most important factors to consider is the very "nature of the enterprise" subject to the appraisal proceeding. Id.; see *Cavalier,* 564 A.2d at 1144-45; *Tri-Continental,* 74 A.2d at 72, 73.

Tri-Continental recognized that a court had the authority to discount the value of the enterprise at the corporate level. 74 A.2d at 76. The company appraised in Tri-Continental was a leveraged closed-end mutual fund. Id. at 73. The court understood that the shares of a leveraged closed-end mutual fund ordinarily trade at a discount of its underlying assets. Id. at 76. The court concluded:

> [T]he full value of the corporate assets to the corporation is not the same as the value of those assets to the common stockholder because of the factor of discount. To fail to recognize this conclusion... is to fail to face the economic facts and to commit error.

Id. (Emphasis added).

Cavalier also recognized the importance of assigning a realistic market value to the appraised corporation. 564 A.2d at 1144. Cavalier claimed that the *Tri-Continental* decision authorized shareholder level discounts to devalue the shares of the minority dissenters. The Court rejected that argument. It correctly interpreted *Tri-Continental* as standing for the proposition that an appraisal valuation must include consideration of the unique nature of the enterprise. Id. It drew the important distinction between assigning value at the corporate level and the shareholder level. Id. Cavalier authorized corporate level discounting as a means of establishing the intrinsic value of the enterprise. Id. at 1144. The court, however, rejected shareholder level discounting. It found that an appraisal explicitly considering the minority discount at the shareholder level both injects speculative elements into the calculation, and more importantly:

> [F]ail[s] to accord to a minority shareholder the full proportionate value of his shares [which] imposes a penalty for lack of control, and unfairly enriches the majority shareholders who may reap a windfall from the appraisal process by cashing out a dissenting shareholder, a clearly undesirable result.

Id. at 1145.

Rapid misses the fundamental point that Harris was not claiming a "control premium" at the shareholder level. Harris urged the trial court to add a premium at the parent level to compensate all of Rapid's shareholders for its 100% ownership position in the three subsidiaries. WMA's valuation technique arrived at comparable values using the market price of similar shares. These shares presumptively traded at a price that discounted the "control premium."

The trial court's decision to reject the addition of a control premium within the WMA valuation model placed too much emphasis on market value. Indeed, the Court of Chancery long ago rejected exclusive reliance upon market value in an appraisal action. See *Chicago Corp. v. Munds,* Del. Ch., 172 A. 452, 455 (1934); see also *Tri-Continental,* 74 A.2d at 72. *Munds,* referring to the 1929 market crash, found:

> The experience of recent years is enough to convince the most causal observer that the market in its appraisal of values must have been woefully wrong in its estimates at one time or another within the interval of a space of time so brief that fundamental conditions could not possibly have become so altered as to affect true worth.

172 A. at 455. *Munds* continued:

> [I]f the market quotations are lower than what all the relevant facts that bear on value show it to have been worth, he should not be compensated according to the market's estimate.

Id. at 456.

Munds' succinct evaluation of the market has lost none of its lustre. Recent price changes in the stock market dramatically illustrate the defects of an overstated reliance on market price to determine a corporation's intrinsic value in an appraisal proceeding. Cf. Application of Del. Racing Assoc., Del.Supr., 213 A.2d 203, 211 (1965) (emphasizing importance of considering market value in appraisal but nonetheless rejecting exclusive reliance on market price). While we do not fault the WMA valuation methodology, we do find that the trial court's decision to exclude the control premium may have inadvertently altered the reliability of its findings.

Rapid was a parent company with a 100% ownership interest in three valuable subsidiaries. The trial court's decision to exclude the control premium at the corporate level practically discounted Rapid's entire inherent value. The exclusion of a "control premium" artificially and unrealistically treated Rapid as a minority shareholder. Contrary to Rapid's arguments, Delaware law compels the inclusion of a control premium under the unique facts of this case.[2] Rapid's 100% ownership interest in its

[2] We are fully aware of the Court of Chancery's decision in *Cede & Co. v. Technicolor, Inc.,* Del. Ch., Civ.A. No. 7129, Allen, C. 1990 WL 161084 (Oct. 19, 1990), which explicitly rejected the inclusion of a "control premium" in a calculation of the intrinsic value of dissenting shares. Id. at 50-52 & n. 41. We note that *Cede* is factually distinguishable and did not consider a corporate level "control premium." We now express no view on the particular merits of the trial court's holding in *Cede,* a case in which an appeal is now pending before this Court.

subsidiaries was clearly a "relevant" valuation factor and the trial court's rejection of the "control premium" implicitly placed a disproportionate emphasis on pure market value. See *Weinberger,* 457 A.2d at 712-13; *Munds,* 172 A. at 456.

We also reject Rapid's implicit claim that the inclusion of a "control premium" violates our decision in Bell. Rapid seems to contend that a "control premium" is only payable when the corporation is liquidated. It concludes that the addition of a "control premium" incorrectly inflates Rapid's worth to an acquisition value instead of pricing its inherent value as a going concern.

We reject Rapid's arguments because Bell is easily distinguishable on its facts. Unlike Bell, the WMA valuation technique did not assume that an acquiror would liquidate Rapid. WMA's valuation technique added the "control premium" to reflect market realities. Rapid may have had a different value as a going concern if the court had considered that it enjoyed a 100% interest in its three major subsidiaries.

We recognize that the term "control premium" may be misleading here. The past decade has proven that an acquiror is often willing to pay a "control premium" in return for a majority interest in a corporation. Nonetheless, the WMA valuation technique utilized the control premium as a means of making its valuation more realistic. Under the circumstances presented here, the trial court was under a duty to assess the value of Rapid's full ownership in its subsidiaries.

Harris also argues that the control premium increases Rapid's fair value to $73.28 per diluted share, and urges us to adopt that sum on appeal. The trial court explicitly rejected the control premium without analysis. It now must reconsider that action. There is no basis for us to adopt Harris' claimed valuation.

Accordingly, we reverse the Court of Chancery and remand. The court must consider the "control premium," together with all other traditional valuation elements, and determine what, if any, additional value is to be ascribed to Harris' stock above the $51.00 per share initial finding.

IV.

We next turn to the second and final aspect of Harris' cross-appeal. Harris claims that the trial court abused its discretion by awarding him 12.75% simple interest. The trial court, after considering Harris' arguments, decided "not to depart from this Court's standard practice of allowing only simple interest." *Harris,* slip op. at 43. Harris now claims that the trial court abused its discretion in awarding only simple interest because it did not state a rationale for its ruling. Harris claims that the trial court ignored the recently amended language in 8 Del.C. § 262(i) which provides that "[i]nterest may be simple or compound, as the Court may direct." Id.

Harris, citing to two decisions from other jurisdictions, *In re Valuation of Common Stock of McLoon Oil Co.*, Me.Supr., 565 A.2d 997, 1007-08 (1989), and *Sarrouf v. New*

England Patriots Football Club, Inc., Supr., 397 Mass. 542, 492 N.E.2d 1122, 1128-29 (1986), urges this Court to adopt a "rule" presumptively awarding compound interest in every appraisal case. Harris claims that the Court should adopt this "rule" for three basic reasons. First, he argues that dissenting shareholders, unlike other investors, are deprived of their investment during the pendency of the appraisal proceeding. Harris concludes that no "prudent investor" would select a long term investment paying only simple interest. Second, he maintains that the respondent corporation has the unfair use of the dissenter's resources during the appraisal proceeding and, unlike a commercial bank, should not be allowed to pay only simple interest. Finally, Harris argues that awarding simple interest only encourages investors to settle appraisal cases, and prevents them from legitimately vindicating their rights under the statute.

Rapid claims that the trial court did not abuse its discretion. Extrapolating from *Felder v. Anderson, Clayton & Co.,* Del. Ch., 159 A.2d 278, 286 (1960), Rapid suggests that Delaware law now provides that courts presumptively award simple interest in an appraisal case unless the dissenters *808 prove that the respondent corporation either prolonged the appraisal in bad faith, or somehow acted inequitably in relation to the valuation.

A.

We note that 8 Del.C. § 262(i) vests the trial court with the discretion to decide whether to award simple or compound interest. We review the trial court's decision to award Harris simple interest for an abuse of discretion. See *Kahn,* 591 A.2d at 175; *Alabama By-Products,* 588 A.2d at 258-59; *Cavalier,* 564 A.2d at 1146. After carefully viewing the record in this case, we do not find any abuse of discretion by the trial judge's award of simple interest.

B.

We recognize that no Delaware case has ever explicitly considered the factors which determine whether a court should award either compound or simple interest.[3] The starting point of any analysis, however, must begin with the statutory corporation law. When the law is clear, our analysis usually ends with the statute itself. See, e.g., *Staar Surgical Co. v. Waggoner,* Del. Supr., 588 A.2d 1130, 1137 n. 2 (1991); *Alabama By-Products Corp.,* 588 A.2d at 258 n. 1.

The recent amendment to the appraisal statute is clear and precise. It provides:

> The Court shall direct the payment of the fair value of the shares, together with interest, if any, by the surviving or resulting corporation to the stockholders entitled thereto. Interest may be simple or compound, as the Court may direct.

[3] See, e.g., *Cede,* slip op. at 70-82; *Pinson v. Campbell-Taggart, Inc.,* Del.Ch., C.A. No. 7499, Jacobs, V.C., 1989 WL 17438 (Feb. 28, 1989); *Charlip v. Lear Siegler, Inc.,* Del.Ch., C.A. No. 5178, Walsh, V.C., 1985 WL 11565 (July 2, 1985).

8 Del.C. § 262(i) (emphasis added). We reject both Harris' and Rapid's arguments because 8 Del.C. § 262(i) clearly gives the trial court absolute discretion to determine the form of interest it will award in a statutory appraisal action.

Harris' argument turns the permissive language of the statute into a mandatory requirement necessitating the award of compound interest in all cases. The arguments Harris raises in support of his "rule" could apply in every successful statutory appraisal action. The General Assembly certainly recognized this fact when it amended the statute in 1987. The legislature easily could have eliminated the provision mentioning simple interest and mandated an award of only compound interest. Harris' "rule" thus strips the statute of its clear and unambiguous meaning.

Rapid's "extrapolation" of the dictum in *Felder* is no more convincing. Indeed, Rapid's "bad faith" analysis intrudes on the purpose of an appraisal action. We have repeatedly emphasized that a statutory appraisal action is merely a method for dissenting shareholders to receive an independent judicial evaluation of the fair value of their shares. *Alabama By-Products,* 588 A.2d at 256; *Cede,* 542 A.2d at 1186; *Weinberger,* 457 A.2d at 714. We have recognized that allegations of fraud and bad faith have a limited place in a statutory appraisal action. See *Alabama By-Products,* 588 A.2d at 258 & n. 1 (court can consider claims of bad faith to assess credibility of trial witnesses).

A derivative suit alleging bad faith and a statutory appraisal are two distinct causes of action. Id.; see *Cede,* 542 A.2d at 1187; *Rabkin v. Philip A. Hunt Chemical Corp.,* Del.Supr., 498 A.2d 1099, 1107-08 (1985). Rapid's argument upsets this dichotomy. It requires the court to explicitly consider allegations of bad faith to adjust the amount of the award. We have clearly ruled that the purpose of an appraisal action is not to punish the respondent corporation. See *Tri-Continental,* 74 A.2d at 72. The court must only award interest to fairly compensate dissenting shareholders for their losses incurred during the pendency of an appraisal. There is no punitive aspect of an appraisal proceeding.

Under 8 Del.C. § 262(i) the trial court is vested with the clear discretion to award either simple or compound interest. It must take into account "all relevant factors" in reaching its decision. While not exhaustive, some of these factors can include the considerations enumerated in 8 Del.C. § 262(h). See 8 Del.C. § 262(h) ("[i]n determining the fair rate of interest, the Court may consider ... the rate of interest which the surviving or resulting corporation would have to pay to borrow money during the pendency of the proceeding.")

The trial court had the opportunity to fully consider the merits of Harris' claim in post-trial briefing. It also had the opportunity to hear expert testimony and evaluate the credibility and demeanor of witnesses throughout this lengthy trial. In view of the trial court's broad powers under 8 Del.C. § 262(i), there clearly was no error or abuse of discretion in awarding Harris simple interest.

Based on the foregoing, the judgment of the Court of Chancery is AFFIRMED IN PART AND REVERSED IN PART. The matter is REMANDED to the Court of Chancery for further proceedings consistent herewith.

114 T.C. No. 9

UNITED STATES TAX COURT

ESTATE OF CHARLES E. REICHARDT, DECEASED,
WILLIAM D. REICHARDT, INDEPENDENT EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 1224-98. Filed March 1, 2000.

Decedent (D) had two children, C and W. On June 17, 1993, D formed a revocable family trust (the trust) and a family limited partnership (the partnership). The trust was the general partner of the partnership. D, C, and W were named cotrustees, but only D performed any functions as trustee.

D transferred his residence and all of his other property (except for his car, personal property, and some cash) to the partnership through the trust. D's transfer was not a bona fide sale for full and adequate consideration. On Oct. 22, 1993, D gave C and W each a 30.4-percent interest in the limited partnership. D retained possession and enjoyment of and the right to income from the property he transferred to the partnership until he died on Aug. 21, 1994.

Held: The fair market value at D's date of death of assets D transferred to the partnership is included in D's gross estate. See sec. 2036(a), I.R.C.

Rex B. Cruse, Jr., and S. Jeffrey Gately, for petitioner.

Deborah H. Delgado, T. Richard Sealy III, and James G. MacDonald, for respondent.

COLVIN, Judge: Respondent determined that petitioner is liable for a deficiency in gift tax of $161,494 for gifts made by decedent in 1993 and a deficiency in estate tax of $358,771. After concessions,[1] the issue for decision is whether assets that decedent transferred to the partnership are included in his gross estate under section 2036(a). We hold that they are, and that the fair market value of those assets was $1,634,654 when decedent died.[2]

[1] Respondent no longer contends that (1) the partnership is a sham or that (2) the duty of consistency or sec. 2703(a)(2) applies here. Petitioner's motion to shift the burden of proof regarding those theories is moot.

[2] In light of this holding, we need not decide whether, as respondent contends, (1) the assets transferred to the partnership are included in decedent's gross estate under sec. 2038, (2) any "applicable restriction" in the partnership agreement is disregarded under sec. 2704(b), (3) lapsed liquidation rights are included in decedent's gross estate under sec. 2704(a), or (4) decedent did not make another gift to his children in 1994.

Unless stated otherwise, section references are to the Internal Revenue Code. Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are so found.

A. Decedent and His Family

Decedent was married to Jessie Glenn Reichardt (Mrs. Reichardt). They had two children, Carolyn A. Reichardt Foose (Carolyn Foose) and William D. Reichardt (William Reichardt). Mrs. Reichardt died at age 77 on December 6, 1991. Decedent lived at 214 Encino, Alamo Heights, San Antonio, Texas (214 Encino), when he died on August 21, 1994.

B. Mrs. Reichardt

1. Mrs. Reichardt's Inheritance

Mrs. Reichardt graduated from Rice University in Houston, Texas. Her father died in 1971. Mrs. Reichardt handled her own business affairs. Mrs. Reichardt inherited from her father an undivided one-half interest in several parcels of real property in Kleberg and Nueces Counties, Texas, and various securities. Mrs. Reichardt's sister, Ruth Welch (Welch), inherited the other one-half interest in the property.

Mrs. Reichardt's uncle, Jessie Dennett, died in 1973. Mrs. Reichardt inherited from Jessie Dennett a one-half undivided interest in real property in Kleberg County, Texas, and a one-

third undivided interest in real property in San Patricio and Cameron Counties, Texas. Welch inherited the other one-half interest in the Kleberg County property. Welch and Mrs. Reichardt's cousin, Ella Gordan, also each inherited one-third interests in the San Patricio and Cameron Counties property. The Cameron and San Patricio Counties property remained in the name of the Estate of Jessie Dennett through the time of trial in this case. Mrs. Reichardt and Welch managed Mrs. Reichardt's separate property.

Mrs. Reichardt and her children knew that Mr. Reichardt was involved with another woman (not identified in the record). Mrs. Reichardt considered filing for divorce (at a time not specified in the record) but never did so.

When she died, Mrs. Reichardt's separate property included undivided interests in 22 parcels of real property in four Texas counties and some securities. Her community property included four checking accounts, a note receivable from Bruce Graham (Graham) dated November 23, 1987 (the Graham note), stock and bonds, two cars, the residence at 214 Encino, and three rental properties on Routt Street (the Routt rental property) in San Antonio.

2. Mrs. Reichardt's Will

In her will, Mrs. Reichardt left decedent all of her community property and a life interest in her separate property.

Mrs. Reichardt authorized decedent to sell, lease, or otherwise dispose of any of the property subject to the life interest on terms that he deemed advisable, without requiring him to account for or replace any of it. Her will provided that decedent would lose his life interest in her separate property if he remarried. Mrs. Reichardt left the remainder interest to her children and appointed decedent and their children as joint independent coexecutors.

3. Probate of Mrs. Reichardt's Estate

On May 17, 1993, decedent signed and filed an inventory in the probate court for his wife's estate without consulting his children. Decedent reported that Mrs. Reichardt's estate included $744,597.50 in separate property and $612,648.50 in community property (a total of $1,357,246). Decedent mistakenly reported that her estate included no real estate in Nueces County, Texas, and that some securities were both community and separate property.

In November 1993, Thomas L. Goade (Goade), a real estate appraiser retained by Mrs. Reichardt's estate, concluded that, as of September 15, 1993, her estate had $411,178.50 in community assets and $775,986.67 in separate assets (a total of $1,187,165.17). On November 30, 1993, decedent and his children, as coexecutors, filed an amended inventory using the asset values provided by Goade.

C. Decedent’s Decision To Form a Family Limited Partnership

William Reichardt met with John R. Hannah (Hannah), a certified public accountant, and asked about post mortem estate planning for his mother’s estate. Hannah recommended that the children and decedent form a family limited partnership. Decedent, who had just been diagnosed with terminal cancer, and William Reichardt met with Hannah on June 5, 1993, to discuss Mrs. Reichardt's estate.

On June 17, 1993, decedent signed his will and a durable power of attorney and formed a revocable living trust called the Reichardt Family Trust (the trust) and a family limited partnership called Reichardt Partners, Ltd. (the partnership). Decedent appointed himself and his children as cotrustees and authorized each trustee to act on behalf of the trust. The trust instrument provided that decedent was entitled to receive the net income of the trust, which was to be paid at least annually, and that he was entitled to use the corpus of the trust for his support, maintenance, health, and general welfare. The trust instrument provided that the trust property and accumulated income would be divided into as many equal shares as the number of his children when decedent died.

The trust was the partnership's only general partner.

On June 21, 1993, the Texas secretary of state approved and recorded the certificate of the partnership.

D. Transfer of Assets to the Trust and Partnership

Decedent transferred all of his property (except for his car, personal effects, and a small amount of cash[3]) to the partnership. Decedent signed deeds individually and on behalf of Mrs. Reichardt's estate transferring his and the estate's interest in 214 Encino, the Routt rental property, and the Nueces and Kleberg Counties property to the trust. He also signed deeds as trustee transferring those interests in that property to the partnership. Decedent deposited $20,540 of partnership funds in his personal checking accounts in July and August 1993. Decedent transferred to the trust, which then transferred to the partnership, (1) investment accounts at Rauscher Pierce Refsnes, Inc. (Rauscher Pierce), on June 29, 1993, and Smith Barney Shearson, Inc. (Smith Barney), on August 16, 1993, (2) the Graham note on August 12, 1993, and (3) $32,871.78 in cash on August 13, 1993.[4] Before and after the transfers, decedent's children let him control the two investment accounts, the note receivable, and the cash.

Decedent individually, and with William Reichardt and Carolyn Foose as coexecutors of Mrs. Reichardt's estate, transferred the Graham note which had been Mrs. Reichardt's and

[3] Decedent had $2,389 in his personal checking account when he died.

[4] Decedent transferred the cash directly to the partnership.

decedent's community property from Mrs. Reichardt's estate to the trust. On August 12, 1993, decedent, as trustee, conveyed the Graham note from the trust to the partnership.

On August 13, 1993, decedent transferred $32,871.78 from his two personal accounts at Frost National Bank in San Antonio to a new partnership account at that bank. Decedent received at least $20,540 of the $32,871.78 from rental income from property he had transferred to the partnership.

The Estate of Jessie Dennett made no payments to Mrs. Reichardt's estate or to decedent from rent receipts or property sales distributions in 1993 and 1994 from any of the real property in Cameron County. The Estate of Jessie Dennett paid $30,000 to Mrs. Reichardt's estate on June 19, 1995, as its share of the proceeds from the sale of some real property. This amount was deposited in the partnership's bank account.

Decedent lived at 214 Encino before and after he transferred it to the trust and to the partnership. He paid no rent to the trust or the partnership to use that residence.

E. Decedent's Gift of Limited Partnership Interests to His Children

On October 22, 1993, decedent gave each of his children a 30.4-percent interest in the partnership.[5]

[5] Petitioner contends that decedent's children received assignee interests. We need not decide whether they received limited partnership interests or assignee interests because,

(continued...)

F. Management of the Partnership Assets

Decedent controlled and managed, or allowed the coowners to control and manage, the partnership assets in the same manner both before and after he transferred them to the partnership. He used the same brokers and managers before and after he transferred the property. No one except decedent signed partnership checks and documents. Welch managed the Kleberg County property before and after October 22, 1993, and August 21, 1994. The executors for the Estate of Jessie Dennett managed the Cameron County property before and after October 22, 1993, and August 21, 1994. Decedent's relationship to the partnership assets did not change when he conveyed them to the trust and partnership.

Hannah's firm made adjusting entries in the partnership's accounting records in an attempt to classify items of income and expense between decedent and the partnership. The difference between cash on hand in the partnership account and the amount in the general journal was $8,116 in 1993 and $13,507 in 1994. Hannah's firm assumed that these were the amounts of decedent's personal expenses that the partnership paid in those years.

[5](...continued)
under sec. 2036(a), decedent's gross estate includes the assets that he conveyed to the trust and partnership.

G. Tax Returns

The partnership filed income tax returns (Forms 1065, U.S. Partnership Return of Income) for 1993, 1994, 1995, 1996, and 1997. The trust filed income tax returns (Form 1041, U.S. Fiduciary Income Tax Return) for 1994, 1995, 1996, and 1997.

In March 1994, decedent and his children, as executors, filed a Federal estate tax return for Mrs. Reichardt's estate in which they reported a gross estate of $1,092,290. Hannah prepared the return.

Decedent filed a Federal gift tax return for 1993 on April 15, 1994. In it, he reported that he had given a 30.4-percent interest in the partnership to each of his two children and that each gift had a value of $310,000 as of October 22, 1993.

After decedent died, petitioner obtained an appraisal of decedent’s estate and the 1993 gifts. On Schedule F of the estate tax return, petitioner reported that, when decedent died, his gross estate included a 36.46-percent limited partnership interest in the partnership which had a fair market value of $346,000, and a 1-percent general partnership interest in the partnership which had a fair market value of $13,000.

OPINION

A. Section 2036(a)

A decedent’s gross estate includes the value of property interests transferred by the decedent during his or her lifetime

(other than a bona fide sale for full and adequate consideration) if the decedent retained for life the possession or enjoyment of the property, or the right to the income from the property. See sec. 2036(a).[6] Respondent determined and contends that assets that decedent conveyed to the partnership are includable in his estate under section 2036(a). Petitioner contends that section 2036(a) does not apply because decedent did not retain enjoyment (i.e., economic benefits) of the transferred property and that the transfer was for full and adequate consideration.

B. Whether Decedent's Gross Estate Includes Assets Held by the Partnership When Decedent Died

We must decide whether section 2036(a) applies to the following property: (1) Decedent's residence at 214 Encino and the Routt rental property; (2) a one-half interest in property in

[6] Sec. 2036 provides as follows:

> SEC. 2036(a). General Rule.--The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death--
>
> (1) the possession or enjoyment of, or the right to the income from, the property, or
>
> (2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

Kleberg and Nueces Counties; (3) a one-third interest in the Cameron and San Patricio property; (4) investment accounts at Rauscher Pierce and Smith Barney Shearson; (5) the Graham note; and (6) cash; i.e., all of the property alleged to have been in the partnership when decedent died (the transferred property).

1. Whether Decedent Retained Possession, Enjoyment, or the Right to the Income From the Transferred Property During His Lifetime

For purposes of section 2036(a), a transferor retains the enjoyment of property if there is an express or implied agreement at the time of the transfer that the transferor will retain the present economic benefits of the property, even if the retained right is not legally enforceable. See Guynn v. United States, 437 F.2d 1148, 1150 (4th Cir. 1971); Estate of McNichol v. Commissioner, 265 F.2d 667, 671 (3d Cir. 1959), affg. 29 T.C. 1179 (1958); Estate of Spruill v. Commissioner, 88 T.C. 1197, 1225 (1987); Estate of Rapelje v. Commissioner, 73 T.C. 82, 86 (1979); Estate of Honigman v. Commissioner, 66 T.C. 1080, 1082 (1976); Estate of Gilman v. Commissioner, 65 T.C. 296, 306-307 (1975), affd. 547 F.2d 32 (2d Cir. 1976); sec. 20.2036-1(a), Estate Tax Regs. (last sentence).

In deciding whether there was an implied agreement, we consider all of the facts and circumstances surrounding the transfer and subsequent use of the property. See Estate of Spruill v. Commissioner, supra; Estate of Rapelje v.

Commissioner, supra at 86-87. Petitioner bears the burden (which is especially onerous for transactions involving family members) of proving that an implied agreement or understanding between decedent and his children did not exist when he transferred the property at issue to the trust and to the partnership. See Estate of Skinner v. United States, 316 F.2d 517, 520 (3d Cir. 1963); Estate of Rapelje v. Commissioner, supra at 86; Estate of Hendry v. Commissioner, 62 T.C. 861, 872 (1974).

Petitioner contends that decedent and his children did not have an implied agreement that decedent could continue to use the property after he conveyed it to the partnership. Petitioner contends that the partnership was formed (a) to curtail decedent's enjoyment of the property transferred to the limited partnership, (b) to prevent him from taking imprudent actions with regard to the property and to settle family disharmony regarding the assets, and (c) to give the children more control over the assets.

a. Whether Decedent Curtailed His Enjoyment of the Transferred Property

Decedent did not curtail his enjoyment of the transferred property after he formed the partnership. Nothing changed except legal title. Decedent managed the trust which managed the partnership. Decedent was the only trustee to sign the articles of limited partnership, the deeds, the transfer of lien, and any document which could be executed by one trustee on behalf of the

trust. Decedent was the only trustee to open brokerage accounts or sign partnership checks. He did not open any accounts for the trust.

Decedent commingled partnership and personal funds. He deposited some partnership income in his personal account. He used the partnership's checking account as his personal account. He lived at 214 Encino without paying rent before or after he transferred it to the trust and to the partnership. Decedent's relationship to the assets at issue remained the same after he transferred them. If a decedent's relationship to assets remains the same after a transfer as it was before a transfer, the value of the assets may be included in the decedent's gross estate. See sec. 2036(a)(1); Guynn v. United States, supra; Estate of Hendry v. Commissioner, supra at 874; Estate of Schauerhamer v. Commissioner, T.C. Memo. 1997-242. Here, nothing changed after decedent transferred his interests in the property to the trust and the partnership, except legal title.

Petitioner contends that decedent had no relationship to any of the real property except for 214 Encino and the Routt rental property because Welch and the Estate of Jessie Dennett managed those properties. We disagree. Section 2036 applies not only if a transferor retains possession or enjoyment of property, but also if a transferor retains the right to income from the property. See sec. 2036(a)(1). We believe that decedent and his

children had an implied agreement that decedent could retain for his lifetime the right to the income from all of the real property that the partnership had when decedent died. Thus, decedent did not curtail his enjoyment of the transferred property after he transferred it to the trust and partnership.

Decedent's estate tax return states that when decedent died he had personal property, a car, and $2,389 cash, and he was owed a $429 Federal income tax refund and a $733 medical refund. Decedent apparently conveyed nearly all of his assets to the trust and partnership.[7] This suggests that decedent had an implied agreement with his children that he could continue to use those assets. Cf. Estate of Paxton v. Commissioner, 86 T.C. 785, 810 (1986).

b. Whether Decedent Transferred Property to the Trust and Partnership To Prevent Decedent From Treating the Property Imprudently, To Settle Family Disharmony, and To Give Children Control Over Assets

Petitioner contends that decedent formed the partnership to prevent him from treating the transferred property imprudently. We disagree because decedent controlled the partnership, and he had the power to act alone on behalf of the trust which was the

[7] Based on the estate tax return for decedent's estate and Hannah's records, respondent alleges that decedent gave about 98 percent of his property to the partnership. Petitioner's only response was that respondent's allegation is not based on the record and is "unsupported by calculations." Respondent's 98-percent estimate appears to be reasonable.

partnership's sole general partner. He alone (1) executed the articles of limited partnership, the deeds, and the transfer of lien; (2) opened the brokerage accounts; and (3) signed all of the partnership checks.

Petitioner emphasizes that decedent's children were concerned that he would give Mrs. Reichardt's property to his lady friend. Despite that, Mrs. Reichardt's will gave decedent the power to consume all of her separate property in which she gave him a life interest. Mrs. Reichardt was sophisticated and capable. We do not think she would have given him such broad power if she had the concern that petitioner alleges. In addition, decedent did not do what petitioner says his children suspected he would do. The facts suggest that this argument of petitioner's is, at best, overstated.

Petitioner also alleges that decedent formed the trust and partnership to give his children control over the assets while he was living. The facts suggest otherwise. Decedent's children, as cotrustees, could have taken, but did not take, actions related to the trust or exercise control over the assets while decedent lived.

c. Fiduciary Duties

Petitioner contends that decedent's fiduciary duties as a general partner and trustee precluded him from retaining enjoyment of the assets. We disagree. Decedent's fiduciary

duties did not deter him from continuing to possess and enjoy the house in which he lived or the other assets he conveyed to the partnership. Decedent's children, as cotrustees, did nothing to preclude him from doing so. This suggests that decedent and his children had an implied agreement to allow decedent to continue to enjoy partnership property throughout his life.

Petitioner points out that decedent's children could have revoked his management powers. However, they did not. This suggests that they and decedent had an implied agreement that he could continue to possess, enjoy, and retain the right to income from all of the property that he conveyed.

Decedent used at least $8,116 of partnership funds in 1993 for personal purposes and $13,507 in 1994. Petitioner contends that, at the end of 1993 (before decedent died) and 1994 (after decedent died), Hannah's firm prepared yearend adjusting entries which reclassified items of income and expense as relating to decedent and the partnership. Petitioner contends that the adjusting entries show there was no implied agreement for decedent to continue to enjoy partnership property.

We disagree. The 1993 yearend and 1994 post mortem adjusting entries made by Hannah's firm were a belated attempt to undo decedent's commingling of partnership and personal accounts. There is no evidence that the partnership or decedent transferred

any funds to the other as a result of the adjusting entries.[8] After-the-fact paperwork by decedent's C.P.A. does not refute that decedent and his children had agreed that decedent could continue to use and control the property during his life.

d. Conclusion

We conclude that decedent and his children had an implied agreement that decedent could continue to possess and enjoy the assets and retain the right to the income from the assets that he conveyed to the partnership during his lifetime.

2. Whether Decedent Transferred Property to the Partnership in a Bona Fide Sale for Full and Adequate Consideration

Section 2036(a) does not apply if the transfer of property was part of a bona fide sale in exchange for full and adequate consideration. A bona fide sale is an arm's-length business transaction between a willing buyer and a willing seller. See Wheeler v. United States, 77 AFTR 2d 96-1405, 96-1411, 96-1 USTC par. 60,226 (W.D. Tex. 1996) (value of homestead is included in decedent's gross estate under section 2036(a) in part because there was no bona fide sale among family members).

[8] Petitioner did not establish the accuracy of the records that Hannah's firm used to prepare the adjusting entries. The parties stipulated that the adjusting entries summarized other underlying records but not that the underlying records are accurate or complete. Petitioner does not identify all of the records on which the summary was based. One of the underlying records that petitioner produced is another summary that is extremely vague, e.g., $8,116 "Various C.E. Reichardt". Petitioner's reliance on the adjusting entries is misplaced.

Petitioner contends that decedent received full and adequate consideration because he received partnership interests, family disputes were settled, and his children became involved in family assets. We disagree. Decedent's children gave nothing to decedent or the partnership when he transferred property to the trust and the partnership, and they did not involve themselves in the partnership.

Petitioner contends that decedent's children gave consideration to the partnership in the form of their remainder interests. We disagree for reasons stated in paragraph B-4, below.

Petitioner contends that decedent sold the transferred property to the partnership in exchange for partnership interests as consideration. We disagree. Petitioner did not sell the transferred property to the partnership. See Wheeler v. United States, supra.

3. Comparison of This Case to Schauerhamer v. Commissioner

Petitioner contends that this case is distinguishable from Schauerhamer v. Commissioner, T.C. Memo. 1997-242. We held in Schauerhamer that property transferred to three family limited partnerships was included in the transferor's estate under section 2036(a). This case is similar to Schauerhamer in that, in both cases, the decedents and their children had implied agreements for the decedents to use property that they had

transferred to family limited partnerships established for the benefit of family members. In Schauerhamer, the children testified that they intended the decedent's relationship with the transferred assets to remain the same after the transfer. Here, the objective evidence (described above) shows that there was an implied agreement that the decedent could continue to enjoy the property, the children did not deny that there was such an agreement, and we have so found. The decedents in both Schauerhamer and the instant case commingled funds. Petitioner cites no significant distinction between Schauerhamer v. Commissioner, supra, and this case.

4. Whether Interests in the Cameron, San Patricio, Nueces, and Kleberg Counties Property Held by the Partnership Are Not Subject to Section 2036 Because Decedent Never Owned Those Interests

Petitioner contends that Mrs. Reichardt's interests in the Cameron, San Patricio, Nueces, and Kleberg Counties property are not subject to section 2036 because they passed directly from her estate to the partnership and decedent never owned any interest in them. We disagree.

The interests in the Cameron, San Patricio, Nueces, and Kleberg Counties property were Mrs. Reichardt's separate property. Under her will, a life interest in that property vested in decedent under Texas law when Mrs. Reichardt died. See Tex. Prob. Code Ann. sec. 37 (West Supp. 1999). Decedent's life interest included the power to consume all of Mrs. Reichardt's

interest in the property. There are no deeds transferring the Cameron and San Patricio Counties property to the trust and partnership. Thus, the only way interests in those properties could reach the partnership is for decedent to have used the power to consume to convey all of Mrs. Reichardt's interest in those properties to the partnership.

Decedent transferred his interest in the Nueces and Kleberg Counties property to the trust and partnership when he signed deeds on behalf of himself as an individual. Petitioner contends that the deeds establish that Mrs. Reichardt's interest in the Nueces and Kleberg Counties property passed directly from Mrs. Reichardt's estate to the trust and therefore is not included in decedent's estate under section 2036. We disagree. Mrs. Reichardt's interest in the Nueces and Kleberg Counties property vested in decedent as provided under Texas law. See Tex. Prob. Code Ann. sec. 37 (West Supp. 1999).

Petitioner contends that decedent's children gave their remainder interests in Mrs. Reichardt's separate property to the partnership, and thus decedent did not own those interests. We disagree. Decedent's children testified vaguely and unconvincingly about whether they contributed their remainder interests to the partnership. There is no documentary evidence that they did so. We believe that they could not have done so because decedent consumed all of Mrs. Reichardt's separate

property, leaving no remainder for the children. See Hudspeth v. Hudspeth, 756 S.W.2d 29, 31 (Tex. App. 1988) (life tenant may destroy any contingent interests held by remaindermen if testator expressly gives life tenant power to completely dispose of corpus); Calvert v. Thompson, 339 S.W.2d 685 (Tex. App. 1960) (same). No document shows that decedent transferred only a life interest in any asset to the trust or partnership.

We conclude that decedent owned and gave to the trust and partnership during his lifetime all of the interests in the Cameron, San Patricio, Nueces, and Kleberg Counties property that had belonged to Mrs. Reichardt when she died.[9] Thus, those property interests are subject to section 2036.

5. Conclusion

We conclude that section 2036(a) applies to all of the property that decedent transferred to the partnership.

C. Amount Included in Decedent's Estate Under Section 2036(a)

To decide the amount included in decedent's estate under section 2036(a), we must decide the value on the date of decedent's death of the property that decedent transferred to the partnership. James R. Parks (Parks), petitioner's expert who

[9] Decedent's life interest in the Cameron and San Patricio Counties property included the power to convey that property to the partnership. Decedent did so even though that property remained in the name of the Estate of Jessie Dennett. See Logan v. Logan, 156 S.W.2d 507, 512 (Tex. 1941); King v. Evans, 791 S.W.2d 531 (Tex. App. 1990).

adopted Goade's estimates for real property, and Francis X. Burns (Burns), respondent's expert, disagree about the value of some of the partnership assets when decedent died.

The following summarizes the parties' positions and our holding about the values of the partnership assets on August 21, 1994, before discounts.

	Estimate by		
Assets	Goade & Parks	Burns	Conclusion
Bexar County land	$378,900	$421,000	$378,900
Kleberg County land	212,017	235,575	212,017
Nueces County land	78,750	87,500	78,750
Cameron County land	42,239	0	42,239
San Patricio County land[1]	-0-	--	-0-
Rauscher Pierce	672,345	672,345	672,345
Smith Barney	119,902	119,465	[2]119,465
Note receivable	140,594	140,594	140,594
Cash	26,072	26,072	26,072
Liabilities	(35,728)	(35,728)	(35,728)
Totals	1,635,091	1,666,823	1,634,654

[1] Goade estimated that the San Patricio County property had no value because most of it was under water most of the year. Burns did not include the San Patricio County property in his report.

[2] Burns listed the value of each security in the Smith Barney portfolio. In his report, Parks stated a total for Smith Barney, but no information on specific securities because he found them to be unavailable. We accept Burns' estimate.

Parks used the estimates of Goade, a professional real estate appraiser, as the values for the real property. Goade applied a 10-percent fractional interest discount. Burns concluded that no fractional interest discount should be applied to the real property values. Goade is a qualified real estate

appraiser; Burns admitted in his testimony that he is not. We accept Goade's appraisal.

We conclude that the value of the assets (less liabilities) that decedent transferred to the partnership through the trust is $1,634,654. This value is included in decedent's estate under section 2036(a).

To reflect the foregoing and concessions of the parties,

Decision will be entered under Rule 155.

56 T.C.M. (CCH) 1033 (1989)
T.C. Memo. 1989-13.

Estate of Ruben Rodriguez, Deceased, Zoila P. Rodriguez, person in possession and administratrix, et al.[1]

v.

Commissioner.

Docket No. 46423-86, 48430-86, **20276-87**.

United States Tax Court.

Filed January 10, 1989.

William E. Frantz and Donald B. DeLoach, 3390 Peachtree Rd. N.E., Atlanta, Ga. for the petitioners. John B. Grattan, 3390 Peachtree Rd. N.E., Atlanta, Ga., for the petitioners in Docket Nos. 48430-86 and **20276-87** only. Julie M. T. Foster, for the respondent.

1034 *1034 ## Memorandum Findings of Fact and Opinion

WILLIAMS, Judge:

In these consolidated cases the Commissioner determined a deficiency of $215,208 in Federal estate tax due from the estate of Ruben **Rodriguez**.

The Commissioner also determined a deficiency in petitioners' Federal income tax of $128,903.67 for the taxable year 1982 and an addition to tax of $12,890.37 pursuant to section 6661.[2] The Commissioner further determined a deficiency in petitioner Zoila **Rodriguez**' Federal income tax of $137,873.69 for the taxable year 1983 and an addition to tax of $34,468.42 pursuant to section 6661.

These cases were consolidated for purposes of trial, briefing and opinion. The estate tax deficiency is attributable in part to respondent's determination that the value of a building used by decedent's corporation is includable in decedent's estate. The Federal income tax deficiencies arise out of the same determination, viz, that decedent rather than the corporation owned the building.

The issues we must decide are: (1) whether the property used as the principal place of business of decedent's corporation is includable in decedent's gross estate pursuant to section 2033; because of our resolution of this issue, we do not reach the question of the value of that property, (2) whether certain mortgage payments are includable in petitioners' income as constructive dividends, (3) whether petitioners are liable for additions to tax pursuant to 6661, (4) the value for Federal estate tax purposes of decedent's stock in his corporation, and (5) whether the entire value of a certificate of deposit decedent owned jointly with his wife and his wife's mother is includable in decedent's gross estate pursuant to section 2040.

Findings of Fact

Some of the facts have been stipulated and are so found. Ruben **Rodriguez** ("decedent") died intestate on June 7, 1982, survived by his wife, Zoila **Rodriguez** ("petitioner"), two minor children of their marriage and four adult children from previous marriages. Decedent resided in Atlanta, Georgia at his death. The administratrix, Zoila **Rodriguez**, timely filed the estate tax return. On the date that each petition was filed, Zoila **Rodriguez**, as an individual and as administratrix, resided in Atlanta, Georgia.

Decedent purchased an existing company, Maria Tortilla, Inc., in 1970 and renamed it Los Amigos Tortilla Manufacturing ("Los Amigos"). Los Amigos is a corn and flour tortilla manufacturing business providing "shells" used by Mexican styled restaurants for tacos, burritos, etc. Decedent and petitioner incorporated Los Amigos on August 11, 1972. Los Amigos was a closely held corporation from the date of its incorporation until decedent's death. Its securities were not registered with the Securities and Exchange Commission and were not regularly traded in any market. Decedent was President of Los Amigos until his death, and petitioner was Secretary/Treasurer.

On the date of decedent's death, Los Amigos' outstanding stock consisted of 10,000 shares of common stock, 7,000 (70 percent) of which was owned by decedent and 3,000 (30 percent) of which was owned by petitioner. Decedent's estate tax return reported the fair market value of decedent's 7,000 shares of common stock in Los Amigos as $500,000 or $71.42 per share. In his statutory notice, respondent determined that the fair market value of decedent's stock at the date of his death was $823,000.

Prior to his death, decedent had been in the tortilla manufacturing business for approximately thirty years. From 1972, the year Los Amigos was incorporated, until his death in 1982, decedent was in charge of the entire operation of Los Amigos. His duties included overseeing purchasing, manufacturing, sales, distribution, personnel matters, quality control and equipment maintenance. He worked at least two shifts and was at the Los Amigos plant during most of its operating hours. Petitioner also worked at Los Amigos, but her duties involved only in-house bookkeeping.

On September 28, 1976, the decedent purchased property located at 251 Armour Drive, N.E., Atlanta, Georgia ("Armour Drive property") which consisted of 1.865 acres improved with a building used as an office and warehouse. Decedent purchased the Armour Drive property for Los Amigos' operations, and it has been Los Amigos' principal place of business since 1976. The Armour Drive property was purchased for a cost of $275,000. The closing statement reflects that the decedent purchased the property in his own name and paid $50,000 as a down payment, plus closing costs. On September 28, 1976, the decedent executed a Deed to Secure Debt to the seller in the amount of $225,000 and received a Warranty Deed from the seller. The decedent was solely and personally liable on the purchase money note and security deed for the purchase balance. No corporate resolution specifically authorized either the corporation to purchase the Armour Drive property or the decedent to acquire the property for the corporation.

Decedent had no expertise in real estate matters at the time he purchased the Armour Drive property. The sellers of the Armour
1035 Drive property *1035 refused to sell the property to Los Amigos because they considered the corporation too much of a credit risk. Instead, they required decedent's personal liability. The sale, therefore, was closed in decedent's name.

Pursuant to decedent's instructions, Los Amigos' certified public accountant placed the Armour Drive property on the corporation's books as a corporate asset. The accountant listed the down payment decedent had made on the property as a liability owed to decedent. The accountant also designated the remaining indebtedness owed on the mortgage secured by the Armour Drive property as a liability owed to the sellers on the corporate books. Los Amigos subsequently paid the liability owed decedent for the down payment.

The Armour Drive property was titled in the decedent's name from the date of purchase throughout his lifetime and at the date of his death. Decedent and Los Amigos consistently treated the Armour Drive property as a corporate asset. Los Amigos treated the Armour Drive property as a corporate asset on its books and records from 1976 until the time of the trial. From January 1977 through December 1986, Los Amigos made all monthly mortgage payments for the Armour Drive property. The January 1977 mortgage payment was in the amount of $2,881.99; February 1977 through December 1986 mortgage payments were in the amount of $1,881.99 (principal and interest). During the years 1976 through 1986, Los Amigos deducted depreciation and interest paid on the mortgage note for the Armour Drive property on its corporate income tax returns. Los Amigos paid and deducted the property taxes on the Armour Drive property on its corporate income tax returns from 1977 through 1986. During the years 1976 through 1986, Los Amigos paid all the insurance premiums related to the Armour Drive property. Los Amigos also made and paid for all of the improvements to the building located on the Armour Drive property during the relevant years.

From the purchase of the property in 1976 through decedent's death in 1982, there was no lease agreement between the decedent and Los Amigos for the Armour Drive property. Los Amigos did not pay rent and claimed no deduction for rent for

these years. Subsequent to decedent's death through 1986, there was no lease agreement between petitioner and Los Amigos for the Armour Drive property. Los Amigos did not pay any rent and claimed no deduction for rent for these years.

Decedent did not claim deductions for depreciation, property tax or interest with respect to the Armour Drive property on his 1976 through 1982 joint Federal income tax returns. Petitioner did not report the Armour Drive property as property owned by decedent at the date of death on decedent's estate tax return.

On July 26, 1982, petitioner's attorney, S. Andrew Shuping, Jr., filed an Application for Twelve Month's Support with the Fulton County Probate Court on behalf of petitioner. Shuping also was attorney for Los Amigos and knew for two or three years prior to decedent's death that the Armour Drive property was titled in decedent's name. On September 7, 1982, the Fulton County Probate Court entered a Final Order granting the Application for Twelve Month's Support. The Order included the Armour Drive property. On September 9, 1982, attorney Shuping recorded the Certificate of Order of Year's Support.

Los Amigos' income before taxes for the years 1978 through 1986 was as follows:

Year	*Income (loss)*
1978	$ 82,045
1979	108,456
1980	249,677
1981	239,619
1982	378,315
1983	87,378
1984	(182,848)
1985	(522,536)
1986	171,439

At the date of decedent's death, Los Amigos was the owner and beneficiary of a life insurance policy (face amount $250,000) on the life of the decedent. One-half of the life insurance was payable to creditors on a machinery debt at his death.

After decedent's death, petitioner became president of Los Amigos. During the period immediately after decedent's death, petitioner received numerous inquiries from customers, suppliers and others about whether Los Amigos would continue to offer the same quality product, service and price that it had offered during decedent's management of the company. Los Amigos suffered a decline in business after decedent's death. Los Amigos lost the flour tortilla account of Del Taco Mexican Cafes after decedent's death because the flour tortillas were breaking and cracking. Del Taco Mexican Cafes was one of Los Amigos' principal customers during 1981 and 1982 for corn and flour tortillas and the largest account that was lost. Although Del Taco gave Los Amigos the opportunity to correct the flour tortilla problem, Los Amigos was unable to perform to acceptable standards under petitioner's management. Los Amigos' failure to perform was a consequence of decedent's death. Del Taco then gave the account to another company, and paid thirty percent more for the product previously produced by Los Amigos prior to decedent's death.

1036 *1036 At decedent's death, he jointly owned a certificate of deposit. C&S National Bank issued Certificate of Deposit No. S 0854399 in the face amount of $50,000 to decedent, petitioner, and Rosa Perez who is petitioner's mother.

Opinion

The first issue we must decide is whether the Armour Drive property is includable in decedent's gross estate. Decedent purchased the property in his name in 1976 after the sellers refused to sell it to Los Amigos. Thereafter, Los Amigos used the property in its business, consistently treating the property as a corporate asset. At his death, decedent still held legal title to the property.

Petitioners contend that the beneficial ownership of the property was owned by Los Amigos on the date of decedent's death. Petitioners argue that decedent purchased the Armour Drive property only because the sellers would not sell to Los Amigos

and that decedent merely held bare, legal title to the property as the trustee of an implied resulting trust in favor of Los Amigos. Respondent argues that decedent owned the Armour Drive property legally and beneficially and the property, therefore, is includable in decedent's gross estate pursuant to section 2033.

Section 2033 provides that the value of the gross estate includes the value of all property to the extent of the decedent's interest at the time of his death. The regulations pursuant to section 2033 also provide that the "gross estate includes property beneficially owned by the decedent at the time of his death." Sec. 20.2033-l(a), Estate Tax Regs.

Georgia law applies to determine what interest decedent had in the property on the date of his death. *Commissioner v. Estate of Bosch* [67-2 USTC ¶ 12,472], 387 U.S. 456 (1967). The pertinent Georgia statute provides as follows:

> Trusts are either express or implied. Express trusts are those trusts created and manifested by agreement of the parties. Implied trusts are those trusts which are inferred by law from the nature of the transaction or the conduct of the parties.

Ga. Code Ann. sec. 53-12-22 (1982). The statute further describes the circumstances that give rise to an implied trust:

> A trust is implied:
>
> (1) Whenever the legal title is in one person but the beneficial interest, either from the payment of the purchase money or from other circumstances, is either wholly or partially in another;
>
> (2) Where, from any fraud, one person obtains the title to property which rightly belongs to another;
>
> (3) Where, from the nature of the transaction, it is manifest that it was the intention of the parties that the person taking the legal title should have no beneficial interest; or
>
> (4) Where a trust is expressly created but uses either are not declared, are ineffectually declared, extend only to a part of the estate, or fail from any cause, in which case a resulting trust is implied for the benefit of the grantor or testator or his heirs.

Ga. Code Ann. sec. 53-12-26 (1982).

Because this case does not involve fraud or an express trust, only the first and third statutory classifications are relevant. Generally, trusts arising under the first and third categories in the statute are resulting trusts. *Hancock v. Hancock,* 205 Ga. 684, 54 S.E.2d 385, 389 (1949).

An implied resulting trust arises because of the mutual intention of the parties to create the trust. *Hall v. Higgison,* 222 Ga. 373, 149 S.E.2d 808, 810 (1966); see *Estate of Spruill v. Commissioner* [Dec. 43,904], 88 T.C. 1197, 1222-1224 (1987). After reviewing the statute and Georgia case law thereunder, the Georgia Supreme Court stated in 1982:

> circumstances may be offered as evidence of an intention (whether or not expressly articulated by each party) that title shall vest in one and beneficial ownership in the other. The scope of such evidence includes all of the facts and circumstances surrounding the transaction. The ultimate inquiry is whether there was, in truth, a mutual understanding, *not* whether such an understanding was expressed in plain and unambiguous terms. [Emphasis in original.]

Harrell v. Harrell, 249 Ga. 170, 290 S.E.2d 906, 907 (1982).

Decedent paid the down payment and personally signed the note for the Armour Drive property because the sellers required his personal liability. Pursuant to decedent's instructions, Los Amigos entered the property on its books as a corporate asset. The corporation repaid decedent for the down payment on the property and made all mortgage payments. In addition, Los Amigos paid all insurance premiums, property taxes and building improvement costs on the property. Los Amigos also deducted depreciation, interest paid on the mortgage note and property tax on its corporate income tax returns. Decedent did not claim deductions for depreciation, interest or property tax on his Federal income tax returns with respect to the Armour Drive property.

1037 Decedent did not lease *1037 the property to Los Amigos, and Los Amigos did not claim any deductions for rent on its corporate income tax returns.

In short, Los Amigos and decedent consistently treated the Armour Drive property as a corporate asset throughout the years at issue. Holding title as petitioner did is, moreover, a common practice to secure the liability of the beneficial owner. Under the facts and circumstances of this case, we find that decedent and Los Amigos mutually understood that while legal title would remain in decedent, beneficial ownership would vest in Los Amigos.

In *Estate of Spruill v. Commissioner* [Dec. 43,904], 88 T.C. 1197 (1987), a case decided under Georgia law, decedent held legal title at his death to the homesite of his daughter and her husband. Decedent had constructed their homesite and conveyed it to them for $20,000. The daughter and her husband were unable to obtain a loan for the purchase price; they conveyed the property back to the decedent who borrowed $20,000 and used the property as security to obtain the loan. Decedent's daughter and her husband paid decedent until decedent told them no more payments were necessary. The daughter asked decedent to deed her the property, but decedent told her he would take care of it in his will. We found that decedent and his daughter mutually understood at the time the daughter conveyed the property back to decedent that she was to retain beneficial ownership of the homesite. 88 T.C. at 1215.

Similarly, in the present case, decedent purchased the Armour Drive property solely for use in Los Amigos' business. Decedent did not exercise control over the property except through his authority as a corporate officer; Los Amigos used and controlled the property as a corporate asset. Decedent had legal title as security for Los Amigos' debt to him for the purchase price. Pursuant to decedent's instructions, Los Amigos' accountant reported the Armour Drive property as beneficially owned by Los Amigos for both book and tax purposes. We find a mutual understanding between decedent and Los Amigos at the time decedent purchased the property that decedent was to have bare legal title and Los Amigos was to have beneficial ownership of the Armour Drive property. The evidence in this case supports the finding of a resulting trust under Georgia law.

Respondent argues that petitioner took an inconsistent position with respect to the ownership of the property in the probate court. There petitioner asserted that the decedent owned the Armour Drive property in order to set aside the property for her year's support. Petitioner's position here, however, is not inconsistent: the Georgia state probate court determines the passage of legal title at death; petitioner, therefore, properly listed all property to which decedent held legal title in the probate court proceeding. Beneficial ownership, not legal title, governs the Federal estate tax consequences here. Inclusion of the asset in the probate court and exclusion from the gross estate for Federal estate tax purposes are entirely consistent in this case.

Respondent also contends that under Georgia law, petitioners must show the existence of a resulting trust by clear and convincing evidence. We do not find it necessary to decide this issue. Petitioners have provided sufficient evidence of a resulting trust whether the standard is by the preponderance of the evidence or by clear and convincing evidence. *Estate of Spruill v. Commissioner,* 88 T.C. at 1218 n. 18.

We conclude that decedent held the property in an implied resulting trust for the benefit of Los Amigos. The property, therefore, is not includable in decedent's gross estate.

Because of our holding, petitioner need not include in her income any part of the mortgage payments made by Los Amigos. These were not constructive dividends. Furthermore, petitioners are not liable for the additions to tax pursuant to section 6661 which respondent determined because of petitioners' failure to report as constructive income Los Amigos' mortgage payments. Petitioners properly reported their transactions with Los Amigos, and the property was properly excluded from decedent's gross estate. It was an asset owned by Los Amigos and not by decedent.

We next must determine the fair market value of decedent's stock in Los Amigos at decedent's death. Decedent owned 70 percent of the Los Amigos stock at the time of his death. Petitioners' expert witness, who assumed Los Amigos owned the Armour Drive property, appraised the fair market value of the stock at trial at $332,700. Respondent's expert witness, who assumed that decedent owned the Armour Drive property, valued the stock at $823,000.

Property includable in the gross estate must be valued. Sec. 2031(a). Value is generally the fair market value at the time of decedent's death. Sec. 20.2031-l(b), Estate Tax Regs. Fair market value is "the price at which the property would change hands

between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts." Sec. 20.2031-1(b), Estate Tax Regs.; *Estate of Hecksher v. Commissioner* [Dec. 33,023], 63 T.C. 485, 490 (1975). Subsequent events are relevant to determining the fair market value at the date of death if the events were reasonably foreseeable at the valuation date. *Ithaca Trust Co. v. United States* [1 USTC ¶ 386], 279 U.S. 151, 155 (1929); *Estate of Gilford v. Commissioner* [Dec. 43,622], 88 T.C. 38, 52 (1987).

Valuation of closely held stock for tax purposes is imprecise; each case turns on its own particular facts. *Hamm v.*
1038 *Commissioner* [64-1 USTC ¶ 12,206], 325 F.2d 934, 938 (8th Cir. 1963), affg. a Memorandum Opinion of this *1038 Court, cert. denied 377 U.S. 993 (1964); *Messing v. Commissioner* [Dec. 28,532], 48 T.C. 502, 512 (1967). Valuation is "necessarily an approximation arrived at by the trial court" after considering all the relevant factors. *Anderson v. Commissioner* [58-1 USTC ¶ 9117], 250 F.2d 242, 249 (5th Cir. 1957), affg. on the valuation issue a Memorandum Opinion of this Court [Dec. 21,874(M)], cert. denied 356 U.S. 950 (1958). Valuation of closely held stock is a "question of judgment rather than mathematics." *Hamm v. Commissioner, supra* at 940.

Petitioners and respondent each presented one expert witness at trial who valued decedent's 70 percent interest in Los Amigos. Petitioners' expert witness, Glen A. Hultquist concluded the stock was worth $332,700.[3] Respondent's expert witness, Philip J. Schneider, appraised the stock at $823,000.

Both experts considered the following factors from Revenue Ruling 59-60, 1959-1 C.B. 237, 238, in determining the fair market value of Los Amigos:

> (a) The nature of the business and the history of the enterprise from its inception. (b) The economic outlook in general and the condition and outlook of the specific industry in particular. (c) The book value of the stock and the financial condition of the business. (d) The earning capacity of the company. (e) The dividend-paying capacity. (f) Whether or not the enterprise has goodwill or other intangible value.

Expert witnesses' opinions are supposed to aid the court in understanding an area requiring specialized training, knowledge or judgment. As the trier of fact, we are not, however, bound by the experts' opinions. *Silverman v. Commissioner* [76-2 USTC ¶ 13,148], 538 F.2d 927, 933 (2d Cir. 1976), affg. a Memorandum Opinion of this Court [Dec. 32,831(M)]; *Chiu v. Commissioner* [Dec. 42,027], 84 T.C. 722, 734 (1985). One expert may be persuasive on one particular element of valuation while another expert may provide more incisive help on some other element of valuation. *Parker v. Commissioner* [Dec. 42,966], 86 T.C. 547, 562 (1986); *Estate of Gallo v. Commissioner* [Dec. 42,241(M)], T.C. Memo. 1985-363. Consequently, using our best judgment, we may adopt some portions and reject other portions of expert testimony. *Helvering v. National Grocery Co.* [38-2 USTC ¶ 9312], 304 U.S. 282 (1938).

In valuing the Los Amigos stock for trial, Hultquist combined an income and a book value approach. Under the income approach, Hultquist adjusted pre-tax income to account for the loss of the decedent, the key man in the business. The earnings as adjusted were $210,000. He capitalized the adjusted earnings using a 30 percent capitalization rate.[4] Hultquist next determined the book value of Los Amigos. He used the book value method because thirteen companies he examined in the food industry were sold at a percentage of book value. He adjusted the book value based on one of the thirteen sales, the only company he found truly comparable, at 80 percent of book value. Hultquist used a weighted average of the resulting amounts from the income and book value approaches, 40 percent for the income approach and 60 percent for the book value approach. Hultquist discounted the weighted average by 35 percent for lack of marketability. Seventy percent of the result was the value of decedent's 70 percent stock interest, $332,700.

Respondent's expert witness, Schneider, used only an income approach. Schneider first adjusted Los Amigos' income as if decedent owned the Armour Drive property rather than Los Amigos. He then used a 28.46 percent capitalization rate to determine the value of the corporation. Schneider noted that although normally he would adjust the capitalization rate to account for the loss of a key man, he did not adjust the rate here because of the $250,000 life insurance policy on decedent. Also, he testified that decedent's salary would pay for a replacement. Seventy percent of the corporation's value, $823,000, was the value respondent used in his deficiency notice.

Both experts used a capitalization of earnings method in determining their appraised value of Los Amigos. We accept as

appropriate the use of the capitalization of earnings method. See *Central Trust Co. v. United States* [62-2 USTC ¶ 12,092], 305 F.2d 393, 404 (Ct. Cl. 1962); *Estate of Huntsman v. Commissioner* [Dec. 33,976], 66 T.C. 861, 876 (1976).

We reject, however, Hultquist's adjustment to value based on a percentage of book value. The businesses that were sold at a percentage of book value, as petitioners' expert found, were not comparable with one exception. We find that petitioners have not shown that using the book value method to adjust the value determined by the capitalized earnings method is appropriate in this case. We agree with respondent's expert that the appropriate valuation approach to use in this case is the capitalization of earnings unadjusted by book value. We also believe the capitalization rate of 28.46 percent used by respondent's expert was appropriate.

Nevertheless, we do not agree with respondent's expert that no adjustment for the loss of a key man is necessary in this case.
1039 Respondent *1039 argues that an adjustment is inappropriate because Los Amigos maintained $250,000 of insurance on decedent's life. Also, respondent's expert witness testified that he did not make any allowance for the value of decedent as a key man because his replacement cost was equal to his salary. These arguments understate the importance of decedent to Los Amigos and the adverse effect his death had on business. We agree with petitioners that an adjustment is necessary to account for the loss of decedent.

The evidence shows that decedent was the dominant force behind Los Amigos. He worked long hours supervising every aspect of the business. At the time of his death, Los Amigos' customers and suppliers were genuinely and understandably concerned about the future of the business without decedent. In fact, Los Amigos soon lost one of its largest accounts due to an inability to maintain quality. The failure was due to decedent's absence from operations. Profits fell dramatically without decedent to run the business. No one was trained to take decedent's place.

Capitalizing earnings is a sound valuation method requiring no adjustment only in a case where the earning power of the business can reasonably be projected to continue as in the past. Where, as in this case, a traumatic event shakes the business so that its earning power is demonstrably diminished, earnings should properly be adjusted. See *Central Trust Co. v. United States,* 305 F.2d at 403. An adjustment to earnings before capitalizing them to determine the company's value rather than a discount at the end of the computation is appropriate to reflect the diminished earnings capacity of the business. We adopt petitioners' expert's adjustment to earnings for the loss of the key man.

The final adjustment to value remaining in issue is a discount for lack of marketability. Respondent contends that any discount for lack of marketability is offset by a control premium for decedent's 70 percent interest. Petitioners, on the other hand, discounted the value by 35 percent for lack of marketability.

Respondent has confused the discount for lack of marketability with a discount for minority interest. A discount for lack of marketability is warranted in this case because no established market exists for unlisted, closely held stock. *Estate of Piper v. Commissioner* [Dec. 36,315], 72 T.C. 1062, 1085 (1979).

Respondent's argument that a control premium offsets the discount for lack of marketability is unfounded in the present case. Both parties valued decedent's 70 percent interest beginning with the value of 100 percent of the company. A "control premium" should be added to value determined from sales of minority interests.

Petitioners, however, have not met their burden of proof that the appropriate discount is 35 percent. Based on the facts and circumstances in this case, we find that the proper discount for lack of marketability is 10 percent. Consequently, the value of decedent's interest in Los Amigos at the date of his death was $465,000 ($378,000 (capitalized $210,000 earnings at 28.46 percent) × 90 percent (10 percent discount for lack of marketability) × 70 percent (ownership interest) = 465,000).

The final issue remaining is whether the entire value of a $50,000 certificate of deposit ("CD") owned jointly by decedent, petitioner and petitioner's mother, is includable in decedent's gross estate. Petitioners contend that only $30,000 should be included in the estate because petitioner's mother, Rosa Perez ("Perez") provided adequate and full consideration in the amount of $20,000 toward the purchase of the CD. Petitioners assert that Perez had loaned decedent $20,000 prior to the time decedent purchased the CD and that decedent made Perez a joint tenant on the CD in consideration of the $20,000 loan. Respondent argues that the entire $50,000 is includable in decedent's gross estate pursuant to section 2040. Section 2040[5]

1040 *1040 requires inclusion of jointly owned property in decedent's estate to the extent of decedent's interest in the property. Petitioners have the burden of proof to show if any part of the $50,000 should be excluded from decedent's gross estate. Petitioners concede that the joint ownership was not a "qualified joint ownership" pursuant to section 2040(b).

Petitioners must show that Perez provided $20,000 consideration for her interest in the CD. To support their position, petitioners submitted the following evidence: (1) the CD showing that decedent, petitioner and Perez were joint owners; (2) petitioner's testimony that Perez loaned decedent $20,000; and (3) petitioner's testimony that decedent placed Perez' name on the CD in consideration for the $20,000 loan. Petitioners did not, however, call Perez to testify. Nor did they present tangible evidence of the loan transaction such as cancelled checks or loan documents. Petitioners did not explain these failures. The failure of a party to introduce evidence within its possession and which, if true, would be favorable to him, gives rise to a presumption that if produced it would be unfavorable. *Wichita Terminal Elevator Co. v. Commissioner* [Dec. 15,171], 6 T.C. 1158 (1946), affd. [47-1 USTC ¶ 9253] 162 F.2d 513 (10th Cir. 1947). We find that on this issue petitioners have not sustained their burden of proof that respondent's determination is incorrect. We hold, therefore, that the entire $50,000 value of the CD is includable in decedent's gross estate.

Decisions will be entered under Rule 155.

[1] Cases of the following petitioners are consolidated with this case: Ruben **Rodriguez**, Deceased and Zoila **Rodriguez**, docket No. 48430-86, Zoila **Rodriguez**, docket No. **20276-87**.

[2] All section references are to the Internal Revenue Code of 1954 as in effect at the date of the decedent's death or for the years at issue, as appropriate, unless otherwise indicated.

[3] Hultquist initially valued the stock at $500,000 in a two-page report used on decedent's estate tax return.

[4] Both Hultquist and respondent's expert used a study by Ibottson and Sinquefield to arrive at a capitalization rate of 28.46 percent. Hultquist rounded the 28.46 percent rate up to 30 percent "because of the unique business conditions" of Los Amigos.

[5] SEC. 2040. JOINT INTERESTS.

(a) GENERAL RULE. — The value of the gross estate shall include the value of all property to the extent of the interest therein held as joint tenants with right of survivorship by the decedent and any other person, or as tenants by the entirety by the decedent and spouse, or deposited, with any person carrying on the banking business, in their joint names and payable to either or the survivor, except such part thereof as may be shown to have originally belonged to such other person and never to have been received or acquired by the latter from the decedent for less than an adequate and full consideration in money or money's worth: Provided, That where such property or any part thereof, or part of the consideration with which such property was acquired, is shown to have been at any time acquired by such other person from the decedent for less than an adequate and full consideration in money or money's worth, there shall be excepted only such part of the value of such property as is proportionate to the consideration furnished by such other person:

* * *

(b) CERTAIN JOINT INTERESTS OF HUSBAND AND WIFE. —

(1) INTERESTS OF SPOUSE EXCLUDED FROM GROSS ESTATE. — Notwithstanding subsection (a), in the case of any qualified joint interest, the value included in the gross estate with respect to such interest by reason of this section is one-half of the value of such qualified joint interest.

(2) QUALIFIED JOINT INTEREST DEFINED. — For purposes of paragraph (1), the term "qualified joint interest" means any interest in property held by the decedent and the decedent's spouse as —

(A) tenants by the entirety, or

(B) joint tenants with right of survivorship, but only if the decedent and the spouse of the decedent are the only joint tenants.

T.C. Memo. 1984-626.

Estate of Myrtle M. Sawade, deceased, Louise C. (Dewey) Hornstein, Executor; Myrtle M. Sawade Revocable Living Trust (executed May 17, 1977), Louise C. (Dewey) Hornstein, Trustee, as Transferee; Dinan E. Hornstein, Kathleen H. Rivero, and Louise C. (Dewey) Hornstein A/K/A Dewey C. Hornstein, as Transferees

v.

Commissioner.

Docket No. **23656-82**.

United States Tax Court.

Filed December 3, 1984.

215 *215 John L. Sullivan, 611 Olive St., St. Louis, Mo., for the petitioners. James A. Kutten, for the respondent.

Memorandum Findings of Fact and Opinion

KÖRNER, Judge: Respondent determined a deficiency in the Federal estate tax of the Estate of Myrtle M. **Sawade**, against the Myrtle M. **Sawade** Revocable Trust, and against the Trust remaindermen as transferees in the amount of $131,216.37. After concessions, the issues for decision are: (1) Whether the distribution of 19,910 shares of Baldor Electric Company stock to the beneficiaries of the Myrtle M. **Sawade** Revocable Living Trust occurred (thus fixing their valuation date), within the meaning of section 2032(a),[1] when the successor trustee instructed her stock-broker to effect the transfer, or when the shares were transferred on the corporation's books; (2) whether petitioners are entitled to a blockage discount for certain shares of Baldor Electric Company. If yes, whether the blocks consist of two blocks of 19,910 and 9,540 shares, or of four blocks of 6,637, 6,637, 6,636 and 9,540 shares; (3) whether the valuation of three certificates of deposit should include the accrued interest thereon; and (4) whether the estate properly valued 320 acres of real estate in Fergus County, Montana.

Findings of Fact

Some of the facts have been stipulated and are so found. The stipulation of facts and exhibits attached thereto are incorporated herein by this reference.

Petitioner Louise C. (Dewey) Hornstein is the Executrix of the Estate of Myrtle M. **Sawade** (hereinafter the "Estate"), and successor trustee of the Myrtle M. **Sawade** Revocable Living Trust (hereinafter the "Trust"). She resided in St. Louis, Missouri, at the time the petition in this case was filed. Petitioners Dinan E. Hornstein and Kathleen H. Rivero resided in St. Louis, Missouri, and Miami, Florida, respectively, at the time the petition was filed.

I.

On May 19, 1977, Myrtle M. **Sawade**, as grantor, created the Trust. The Trust document provided that the grantor was to retain the lifetime right to the income of the Trust. The grantor appointed her sister, Louise C. (Dewey) Hornstein, as successor trustee.

The Trust document provided that, upon the grantor's death, the successor trustee was authorized, in her sole discretion, to expend such sums of the principal of the Trust's estate as she deemed proper to pay the following expenses of Myrtle M. **Sawade**: (1) Expenses of her last illness and funeral; (2) debts; (3) expenses of administration of her estate; and (4) all taxes, including Federal estate taxes. All actions of the successor trustee in the exercise of the above-mentioned powers were to be conclusive and binding on all parties in interest. The document provided, further, that all other provisions providing for the distribution of trust property after the death of the grantor were subject to the right of the successor trustee to withhold, in whole or in part, such transfer of assets

pending a determination by her of the actions to be taken regarding the payment of the expenses. The beneficiaries, other than the grantor, had no power to assign, transfer, encumber or otherwise anticipate or dispose of any interest, either principal or income, they may have had in the property held in the trust estate. Any such assignment, transfer, encumbrance or other attempted anticipation or disposition was to be void and of no effect. The remaining trust property after the payment of the expenses, was to be transferred to the remaindermen: Louise C. (Dewey) Hornstein, Dinan E. Hornstein, and Kathleen H. Rivero, free of trust. The grantor reserved the
216 right to revoke the trust during her lifetime. Myrtle M. **Sawade** (hereinafter the "decedent") died on October 10, *216 1978, in St. Louis, Missouri, without having revoked the Trust.

Louise C. (Dewey) Hornstein, Dinan E. Hornstein, Kathleen H. Rivero, and the decedent each maintained separate brokerage accounts at Newhard, Cook, and Company (hereinafter "Newhard") in St. Louis, Missouri. After her death, Myrtle M. **Sawade's** account became the account for the Trust.

On October 26, 1978, an inventory was taken of the items contained in safe deposit box number 1830 in decedent's name at the Chippewa Bank, formerly Chippewa Trust Company, in St. Louis, Missouri. Amongst the items contained therein were Baldor Electric Company (hereinafter "Baldor") stock certificates number S932 and CU6721, representing ownership of 20,204 and 19,910 shares, respectively, owned by the Trust. On the same day, the two Baldor stock certificates, totaling 40,114 shares, were handed to John P. Cummings, a stockbroker employed by Newhard, who deposited them in the Trust's account.

The following letter was executed on October 30, 1978, by Louise C. (Dewey) Hornstein, as successor trustee, and hand delivered to John P. Cummings on the same day:

Mr. John P. Cummings Vice-President Newhard, Cook & Co. 300 North Broadway St. Louis, Missouri 63102 Re: *Trust Estate of Myrtle **Sawade***

Dear Mr. Cummings:

I have heretofore delivered to you as my agent two certificates representing ownership of the trust estate in Baldor Electric Company, being Certificate No. CU6721 for 19,910 shares and Certificate No. S932 for 20,204 shares.

Please accept this letter, which I have personally dated, as my irrevocable instructions to you, as the Successor Trustee of the trust estate of Myrtle **Sawade**, to effect delivery of 19,910 shares of Baldor Electric Company stock now held by you as my agent to the following persons in the shares indicated:

To Dewey C. Hornstein SS#XXX-XX-XXXX 10 Plaza Square Apt. 314 St. Louis, Mo. 63103—6,636 shares *To Kathleen H. Rivero* SS#XXX-XX-XXXX 1408 S.E. Bayshore Dr. Apt. 1204 Miami, Florida 33131—6,637 shares *To Dinan E. Hornstein* SS#XXX-XX-XXXX 1809 Wyoming Street St. Louis, Mo. 63118—6,637 shares Very truly yours, /s/ Louise C. (Dewey) Hornstein Dated: October 30, 1978

On November 13, 1978, Louise C. (Dewey) Hornstein executed a stock assignment (stock power of attorney) to Newhard in blank (as to the distributees) for Baldor stock certificates number S932 and CU6721 as "Louise C. Hornstein, Successor Trustee."

Newhard sent a letter, dated November 14, 1978, to the Stock Transfer Department of Mercantile Trust Company (hereinafter "Mercantile") in St. Louis, Missouri, the stock transfer agent for Baldor, requesting that it transfer the 40,114 shares owned by the Trust as follows:

(a) Stock certificate number CU6721 was to be distributed between Louise C. (Dewey) Hornstein, Kathleen H. Rivero, and Dinan E. Hornstein. New stock certificates were to be issued; Louise C. (Dewey) Hornstein was to receive 6,636 shares of stock, Kathleen H. Rivero was to receive 6,637 shares of stock, and Dinan E. Hornstein was to receive 6,637 shares of stock.

(b) The 20,204 shares of Baldor stock, represented by stock certificate number S932, were to be reregistered in the name of "Louise C. Hornstein, Successor Tstee. U/A Dtd. 5/17/77 M/B Myrtle M. **Sawade**."

The Stock Transfer Department of Mercantile returned the stock certificates to Newhard on November 16, 1978, stating that the certificates were returned without the requested action being performed since an inheritance tax waiver from the State of Missouri was needed before Mercantile would process the requested transfer.

On December 19, 1978, Newhard sent a letter to the Stock Transfer Department of Mercantile requesting that the 40,114 shares of

Baldor owned by the Trust be transferred in an identical manner as set forth in Newhard's directions in their November 14, 1978 letter to Mercantile. Newhard's November 19, 1978 letter included a Missouri inheritance tax waiver. The shares were transferred on the books of the corporation, according to Newhard's directions, on December 20, 1978. The corresponding reregistered stock
217 certificates were sent to Newhard and transferred out of the Trust's account and into the individual *217 brokerage accounts of Louise C. (Dewey) Hornstein, Dinan E. Hornstein and Kathleen H. Rivero, to the extent of 19,910 shares; the remaining 20,204 shares went into the Trust's account.

The Estate timely elected to value all the property included in the gross estate under the alternate valuation method in section 2032. The 19,910 shares of Baldor stock represented by stock certificate number CU6721 were valued as of October 30, 1978, the date on which Louise C. (Dewey) Hornstein, acting as successor trustee, executed the letter instructing Newhard to effect delivery of the Baldor stock to the remaindermen.

Respondent determined that the shares of Baldor stock transfererd to the three individual distributees during the six-month alternate valuation period should have been valued on December 20, 1978, the date the stock was transferred on the books of the corporation by the stock transfer agent, and increased the taxable estate by $117,164.38, due to the difference in the value of the stock on that date, as compared to October 30, 1978.

II.

On or about June 3, 1977, Myrtle M. **Sawade** transferred 157 shares apiece of Baldor stock as a gift to Louise C. (Dewey) Hornstein, Dinan E. Hornstein, and Kathleen H. Rivero, for a total of 471 shares. In May 1978, the stock of Baldor split two-for-one. On or about September 6, 1978, Myrtle M. **Sawade** transferred 98 shares of Baldor stock to each of the above-mentioned donees, for a total of 294 shares. None of the above shares were sold or otherwise disposed of by the respective donees prior to April 10, 1979.

The Trust sold 11,900 shares of Baldor stock in 41 separate sale transactions during the six-month alternate valuation period, and 3,504 shares thereafter. The following chart reflects the date, number of shares and price per share of the shares sold by the Trust. The chart also reflects the market volume, high, low, and closing price for the corresponding sale dates:

	Summary of **Sawade** Trust Sales		Market Performance During Corresponding Sale Dates

Subtotal	3,504[3]					
Grand total	15,404					

218 *218 The gross estate of Myrtle M. **Sawade** thus included:

(a) 1,236 shares that were transferred by the decedent without consideration during the three-year period ending on the date of her death, under section 2035. These 1,236 shares consisted of 471 shares transferred on June 3, 1977, subsequently split two-for-one, and the September 6, 1978 transfer of 294 shares; and are to be valued as of April 10, 1979.[4]

(b) Also included in the gross estate were 11,900 shares of Baldor stock that were sold by the Trust during the alternate valuation period in 41 separate transactions; these shares are to be valued at each sale's respective price under section 2032(a)(1).[5]

(c) The gross estate also included 19,910 shares of Baldor stock transferred to the Trust remaindermen as described above.[6]

(d) The gross estate further included 8,304 shares of Baldor stock that were not disposed of during the six-month alternate valuation period. These shares are to be valued at the end of said six-month period, April 10, 1979, under section 2032(a)(2).[7]

Baldor stock was traded on the American Stock Exchange during the years 1978 and 1979. The following chart reflects the weekly volume of Baldor stock traded during 1978:

On December 20, 1978, the mean between the highest and lowest selling prices was $25.1875.[27] The mean between the highest and lowest quoted selling prices was $30.875 on April 10, 1979.[28]

Petitioners valued the 19,910 shares of Baldor stock represented by stock certificate number CU6721 as of October 30, 1978, the date on which the successor trustee hand delivered the letter to her broker instructing him to effect delivery of the shares to the remaindermen. The shares were valued at $19.3125 per share,[29] for a total of $384,318.75. The 8,304 shares of Baldor stock that were not disposed of at the end of the six-month alternate valuation period were valued as of this date, April 10, 1979, at $28.375 per share,[30] for a total of $235,626.

Respondent determined that the appropriate valuation date for the 19,910 shares that were transferred to the remaindermen was
220 December 20, 1978, the date on which the shares were transferred on the books *220 of the issuing corporation. Respondent also determined that the appropriate value was the mean between the highest and lowest selling price on December 20, 1978, $25.1875, for a total of $501,483.13. Respondent accordingly increased the taxable estate by $117,164.38. Respondent agreed with petitioners that the 8,304 shares that were in the Estate at the end of the alternate valuation period were to be valued as of April 10, 1979. Respondent determined that the value of each share of Baldor stock on April 10, 1979, was $30.875, the mean between the highest and lowest selling price on that date, for a total of $256,386. Respondent accordingly increased the taxable estate by $20,760.[31]

III.

Decedent held three certificates of deposit at the Chippewa Bank, each with a face value of $10,000. At the time of her death the accrued, but unpaid, interest on all three certificates of deposit was $56.28.

A certificate of deposit at the Chippewa Bank may be cashed in before maturity, but a penalty of six month's interest is applied. If the owner of a certificate of deposit dies, however, the estate can either cash in the certificate of deposit, without penalty, and receive the face value of the certificate plus the entire accrued interest, or roll over the certificate of deposit into a new certificate issued in the name of the estate or an heir, without penalty.

IV.

At the time of her death, the decedent owned 320 acres of real estate in Fergus County, Montana. There were no structures on the property.

In Montana, property is classified and valued by the local government (and by private appraisers) according to its highest and best use. The highest and best use of the instant real estate is for grazing. Grazing land is classified by Fergus County numerically 1G through 6G, according to the average inches of yearly rainfall, type of vegetation that grows on it, quality of the soil, and water rights. Class 1G is the best and 6G is the worst; 6G is practically desert.

The real estate in issue is classified 4G, which is considered very poor land; only sparse grass and a lot of sage brush can be found on it. Approximately 50 acres of 4G grazing land are required to support an animal for about four months. There are no streams running through the property, nor are there any wells on the property, and no water rights exist. The average annual precipitation in the area is 10 inches of rainfall. Several ranchers in Fergus County have built small dams in ditches to catch rainfall runoff, thus creating a small reservoir. No such dams can be constructed on the instant land, as there is no creek to dam up, and the land is flat.

The nearest road leading to the property is a dirt trail about two or three miles away. The nearest paved road is west of the property, at a place called Bohemian Corners, twenty miles away. To get to the decedent's property one has to take a gravel road from Bohemian Corners, to a ranch owned by one Stier, and cut across his property. The **Sawade** property has no right of way over Stier's property. Roy, Montana, the nearest town, is approximately twenty-eight miles away.

Most of the land surrounding the property belongs to the Crooked Creek State Grazing Cooperative, a semi-governmental agency that leases grazing rights to its members. The other two properties adjoining the instant land belong to private persons. The total assessed value of the property (for local tax purposes) was $805, approximately $2.52 an acre, in 1978, and $806 in 1983.

Petitioners relied on an expert appraisal valuing the land at $50 an acre, or $16,000 total, in including the value of the land as part of the gross estate at the alternate valuation date.

Respondent determined in his statutory notice of deficiency that the fair market value of the real estate was $70 an acre on April 10, 1979, and correspondingly increased the taxable estate by $6,400.

Ultimate Findings of Fact

1. The alternate valuation date for 19,910 shares of decedent's stock in Baldor is December 20, 1978, the date on which the shares were transferred on the books of the issuing corporation.

221 2. The value of 19,910 shares of decedent's Baldor stock which are to be *221 valued at December 20, 1978, is $25.1875 per share. The value of 9,540 shares of said stock which are to be valued at April 10, 1979, is $30.875 per share.

3. The value, includable in the gross estate, of decedent's three certificates of deposit includes the accrued interest thereon.

4. The fair market value of decedent's 320 acres of grazing land located in Fergus County, Montana, was $16,000 at the alternate valuation date.

Opinion

I.

The alternate valuation date issue

The Estate elected to value the gross estate under the alternate valuation method of section 2032.[32] Section 2032 provides in pertinent part:

> SEC. 2032. ALTERNATE VALUATION.
>
> (a) General.—The value of the gross estate may be determined, if the executor so elects, by valuing all the property included in the gross estate as follows:
>
> (1) In the case of property distributed, sold, exchanged, or otherwise disposed of, within 6 months after the decedent's death such property shall be valued as of the date of distribution, sale, exchange, or other disposition.
>
> (2) In the case of property not distributed, sold, exchanged, or otherwise disposed of, within 6 months after the decedent's death such property shall be valued as of the date 6 months after the decedent's death.
>
> * * *

The phrase "distributed, sold, exchanged, or otherwise disposed of" comprehends all possible ways by which property ceases to form a part of the gross estate. Section 20.2032-1(c)(1), Estate Tax Regs. The term "distributed" means the first to occur of the following: (i) The entry of an order or decree of distribution, if the order or decree subsequently becomes final; (ii) The segregation or separation of the property from the estate or trust so that it becomes unqualifiedly subject to the demand or disposition of the distributee; or (iii) The actual paying over or delivery of the property to the distributee. Section 20.2032-1 (c)(2), Estate Tax Regs.

The issue for resolution is whether a segregation or separation of 19,910 shares of Baldor stock from the Trust occurred, so that they became unqualifiedly subject to the demand or disposition of the distributees, when the successor trustee hand delivered a letter to Mr. Cummings instructing him to effect delivery of the shares to the distributees.[33]

In *Hertsche v. United States* [65-2 USTC ¶ 12,325], 244 F. Supp. 347 (D. Or. 1965), affd. per curiam [66-2 USTC ¶ 12,424], 366 F. 2d 93 (9th Cir. 1966), the District Court held that the value of some shares of stock distributed by the executor pursuant to a probate court order was determinable as of the date of the order directing distribution, not the date of physical delivery. The validity of section 20.2032-1(c) was upheld. In interpreting the word "distributed" as used in section 2032(a)(1), the District Court stated:

> The shifting of the economic benefits of the property rather than the formal delivery is sufficient for the purposes of taxation. [*Hertsche,* 244 F. Supp. at 350.]

In *Estate of Prell v. Commissioner* [Dec. 28,438], 48 T.C. 67 (1967) the executors of the estate assigned and delivered certain shares of stock to the residuary legatees on August 9, 1960. On the same day the legatees signed receipts for the stock and the stock certificates were delivered to a local stock brokerage house for forwarding to the issuing corporation so that the ownership of the shares of stock could be transferred on the corporation's books. On August 15, 1960, the corporation transferred the ownership of the shares on its stock transfer books and issued new stock certificates to the legatees. Under Ohio probate law, an executor could not distribute the assets of the estate until certain conditions were met, one of which was the expiration of six months from the date of the executor's appointment. The executors argued that the first date that the stock could have been legally delivered to the legatees, October 5, 1960, was the appropriate date for alternate valuation purposes. In rejecting the taxpayer's argument, this Court noted that the Ohio statute was intended to protect claimants of the estate; there was no evidence that there were any present or prospective claimants of the estate. This Court cited *Hertsche, supra,* and held that the word "distribution," as used in section 2032
222 and as defined in section 20.2032-1, Income Tax Regs., relates *222 to the shifting of the economic benefits of the property transferred, rather than to technicalities of state law. *Estate of Prell v. Commissioner,* 48 T.C. at 70. The alternate valuation date was held to be August 9, 1960, the date on which the stock was assigned and delivered to the legatees.

The relevant question then becomes: When were the economic benefits of the Baldor Electric Company stock transferred to the Trust remaindermen in this case?

Upon the death of the grantor-trustee, legal title to the trust properties passed to the successor trustee; the equitable title remained in the remaindermen.[34] *Watson v. Hardwick,* 231 S.W. 964 (Mo. 1921); *Garland v. Smith,* 164 Mo. 1, 64 S.W. 188 (1901); *McDaniel Title Co.v. Lemons,* 626 S.W. 2d 686 (Mo. App. 1981); *Penney v. White,* 594 S.W. 2d 632 (Mo. App. 1980). The remaindermen's interest was not certain as to any specific dollar value or specific property; the trustee had the power, in her sole discretion, to expend the principal of the Trust to pay certain items. The actions of the trustee in exercise of this power would be conclusive and binding on the remaindermen. The remaindermen could not pursue an action in state court to compel the successor trustee to transfer the stock. The death of the decedent, therefore, did not operate as a consolidation of the right to the economic benefits of the stock in the remaindermen.

In her letter dated October 30, 1978, Louise C. (Dewey) Hornstein, acting as successor trustee, instructed John P. Cummings, a stockbroker at Newhard, "to effect delivery" of 19,910 shares of Baldor stock, *held by him as her agent,* meaning that delivery had not been completed and was to be completed in the future.

A naked contract of agency—that is, one not coupled with an interest—may be revoked by the principal at any time, at least before performance by the agent, thereby terminating the agent's authority to act in the principal's behalf. *Chamberlain v. Grisham,* 360 Mo. 655, 230 S.W. 2d 721 (1950); *Berberet v. Myers,* 240 Mo. 58, 144 S.W. 824 (1912). This is so even if the agency agreement provides that the agency is irrevocable. *Kilpatrick v. Wiley,* 197 Mo. 123, 95 S.W. 213 (1906). The only exception to the rule is that a principal may not summarily revoke the authority of his agent in those cases where the agent has acquired with the authority conferred an interest in the subject matter of the agency. But an interest sufficient to render the agency irrevocable must be an interest in the thing itself or in the property which is the subject of the agency, and a mere interest in the results or proceeds of the execution of the authority as by way of compensation is not enough. *Meyer v. Pulitzer Pub. Co.,* 156 Mo. App. 170, 136 S.W. 5 (1911).

In any case where the agency is revoked by the principal, if it appears that the agent, induced by his appointment, has in good faith incurred expense and devoted time and labor in the matter of the agency without having had a sufficient opportunity to recoup from the undertaking, the principal will be required to compensate the agent. *Want v. Century Supply Company,* 508 S.W. 2d 515 (Mo. App. 1974). This is the agent's sole recourse. *Clarkson v. Standard Brass Mfg. Co.,* 237 Mo. App. 1018, 170 S.W. 2d 407 (1943). The right of the principal cannot otherwise be questioned. *Berberet, supra.*

Neither John P. Cummings nor Newhard had any interest in the 19,910 shares of Baldor stock. The statement in the October 30, 1978 letter to John P. Cummings that the instructions therein contained were irrevocable was ineffective under Missouri law. The above-mentioned letter did not constitute a distribution of the stock, as the successor trustee had the power to revoke her instructions at any time; she did not validly relinquish her right to transfer legal title of the stock to anyone other than the remaindermen.

Missouri law is determinative of when a distribution occurred.[35] A purchase includes taking by gift or any other voluntary transaction creating an interest in property. Section 400.1-201(32), Mo. Ann. Stat. (Vernon 1965). The acts of the successor trustee seeking to
223 transfer stock to the distributees are a voluntary transaction *223 which can create an interest in property within the meaning of the statute.

The execution of a stock assignment to Newhard for the two stock certificates, by the successor trustee on November 13, 1978, did not constitute a transfer of the shares of stock. An endorsement of a security, whether special or in blank, does not constitute a transfer until delivery of the security on which it appears, or if the endorsement is on a separate document, until delivery of both the document and the security. Section 400.8-309, Mo. Ann. Stat. (Vernon 1965). Delivery requires that the security be "in form to be negotiated by the purchaser." Section 400.8-314 Mo. Ann. Stat. (Vernon 1965). Thus, it must be at least endorsed and "any other requisite which may be necessary to obtain registration of the transfer of the security," such as a Missouri inheritance tax waiver, satisfied.[36] Sections 400.8-316, 400.8-401, Mo. Ann. Stat. (Vernon 1965). Section 400.8-313(1) provides, in pertinent part, that delivery to a purchaser occurs when: (a) he or a person designated by him acquires possession of a security; or (b) his broker acquires possession of a security specially endorsed to or issued in the name of the purchaser; or (c) his broker sends him confirmation of the purchase and also by book entry or otherwise identifies a specific security in the broker's possession as belonging to the purchaser; or (d) with respect to an identified security to be delivered while still in the possession of a third person when that person acknowledges that he holds for the purchaser; or (e) appropriate entries on the books of a clearing corporation are made under section 400.8-320.

We do not have here the situation described in section 400.8-313(1)(a), Mo. Ann. Stat. (Vernon 1965), since the remaindermen did not acquire possession of the stock prior to the transfer of the shares on the books of the issuing corporation, and Mr. Cummings was acting as an agent of the successor trustee when he obtained possession of the two stock certificates, not as the broker of the remaindermen.[37] Section 400.8-313(1)(b) is similarly not applicable here as the certificates obtained by the broker were not specially endorsed in the name of the distributees, nor did he take possession as the broker of the transferees until the transaction was completed, when the shares were taken out of the Trust's account and into the individual transferees' accounts.

Nor does section 400.8-313(1)(c) establish a date of distribution, as the shares were never identified by Newhard as belonging to the remaindermen, but stayed in the Trust's account until they were re-registered in the names of the distributees and received by Newhard on December 29, 1978.

Section 400.8-313(1)(d), Mo. Ann. Stat. (Vernon 1965), generally applies to margin trading, where the securities are pledged to secure the remainder of the purchase price not advanced by the purchaser. 3 Anderson, *Uniform Commercial Code,* 762 (1971). When Newhard received the reregistered stock certificates on December 29, 1978, it held the new certificates for the remaindermen, but this is not the delivery date, since the stock was earlier transferred on the books of the corporation.

We hold that the Baldor stock was distributed to the remaindermen on December 20, 1978, the date on which the shares of stock
224 were transferred on the books of the corporation.[38] Such date is accordingly *224 to be used as the alternate valuation date for 19,910 shares of Baldor stock.[39]

Petitioners argue that in *Prell* we held "the empty form of a receipt evidencing a momentary physical fact and not a true delivery of possession [to constitute a distribution under section 2032(a), and that this] should bolster the fact pattern of this case where the fiduciary took all possible steps within her control to effect distribution as of a specific date." In *Prell, supra,* the stock transfers were completed before the stock transfers were recorded on the stock transfer books of the issuing corporation. The distribution was completed upon the executor's endorsement of the shares and physical delivery of the stock certificates to the legatees, followed by the signing of receipts by the legatees acknowledging delivery therefor. The regulations clearly state that the actual delivery of the property to the distributees constitutes a distribution. Section 20.2032-1(c) (2)(iii), Estate Tax Regs. Neither the statute nor the regulations require that the distribution take any specified amount of time.

There was no segregation or separation of the property here from the Trust prior to the transfer of the stock on the books of the corporation, constituting delivery of the property to the remaindermen.

On this issue we hold for respondent.

II.

The blockage discount issue

The second issue for resolution is whether petitioners are entitled to a blockage discount in valuing the 19,910 shares of Baldor stock transferred to the remaindermen and the 9,540 shares that had not been disposed of on April 10, 1979; and if yes, whether section 2032 contemplates a transactional approach requiring that the distribution of 6,636 shares to Louise C. (Dewey) Hornstein; 6,637 shares to Dinan E. Hornstein; and 6,637 shares to Kathleen H. Rivero be considered as separate transactions for purposes of the blockage discount analysis.

Petitioners' position is that the introduction of two blocks of stock consisting of 19,910 and 9,540 shares, respectively, into the market would have depressed the market price of the stock. This argument is based on the theory of blockage. Petitioners' expert, Elmer Jarret, a trader for Newhard, testified that a 1 to 1½ point discount should be applicable for blocks of 19,910 and 9,540 shares on October 30, 1978, and April 10, 1979, respectively. Mr. Jarret's opinion on a blockage discount was based upon the assumption that the entire amount of each block would be sold on the respective valuation dates, as if each entire block were dumped on the market in one transaction at one time on each valuation date. Mr. Jarret did not consider the alternative of disposing of the stock in small amounts over a reasonable period of time, nor was he aware of the number of Baldor shares outstanding.

Respondent contends that a blockage discount is not proper and that the shares of Baldor stock should be valued at the mean between the highest and lowest selling prices on the respective valuation dates. Respondent argues that for purposes of our analysis, four different blocks of stock must be considered, consisting of: 6,636 shares transferred to Louise C. (Dewey) Hornstein; 6,637 shares transferred to Dinan E. Hornstein; 6,637 shares transferred to Kathleen H. Rivero; and 9,540 shares that had not been
225 disposed of at the end of the alternate valuation period, *225 on April 10, 1979. Respondent argues, in support of his contention, that section 2032 requires a transactional approach.

When the executor elects the alternate valuation method in section 2032, the value of every item of property includable in the decedent's gross estate is the fair market value thereof at the appropriate valuation date. Section 20.2031-1(b), Estate Tax Regs.

Generally, if there is a market for stock, in a stock exchange, in an over-the-counter market, or otherwise, the mean between the highest and lowest quoted selling prices on the valuation date is the fair market value per share. Section 20.2031-2(b)(1), Estate Tax Regs.; *Rogers v. Helvering* [39-2 USTC ¶ 9742], 107 F. 2d 394 (2d Cir. 1939); affg. [Dec. 8848] 31 B.T.A. 994 (1935); *Estate of*

Damon v. Commissioner [Dec. 28,678], 49 T.C. 108 (1967).

Under certain circumstances, however, the value of a share of stock determined on the basis of selling or bid and asked prices does not reflect its fair market value. The size of the block of stock may be a factor to consider in determining whether the bid and asked prices reflect the fair market value of stock. Section 20.2031-2(e), Estate Tax Regs., explicity recognizes this in providing that:

> * * *
>
> In certain exceptional cases, the size of the block of stock to be valued in relation to the number of shares changing hands in sales may be revelant in determining whether selling prices reflect the fair market value of the block of stock to be valued. If the executor can show that the block of stock to be valued is so large in relation to the actual sales on the existing market that it could not be liquidated in a reasonable time without depressing the market, the price at which the block could be sold as such outside the usual market, as through an underwriter, may be a more accurate indication of value than market quotations. Complete data in support of any allowance claimed due to the size of the block of stock being valued shall be submitted with the return. On the other hand, if the block of stock to be valued represents a controlling interest, either actual or effective, in a going business, the price at which other lots change hands may have little relation to its true value.

The reasoning on which this theory of valuation is based is that a large block of stock cannot ordinarily be marketed and turned into cash as readily as a few shares; also, that where there is only a limited market for a stock, offering a large block of the stock depresses the market and lowers the price that can be obtained. The conclusion that flows from this premise is that evidence of sales of small blocks of stock is not a criterion of the value of a large block of the same stock. *Phipps v. Commissioner,* 127 F. 2d 214 (10th Cir. 1942), cert. denied 317 U.S. 645 (1942).

Blockage is not a law of economics, a principle of law or a rule of evidence. If the value of a given number of shares is influenced by the size of the block, this is a matter of evidence and not of doctrinaire assumption. *Safe Deposit & Trust Co. of Baltimore v. Commissioner* [Dec. 9549], 35 B.T.A. 259 (1937), affd. 95 F. 2d 806 (4th Cir. 1938). Blockage is not a rule of law, but a question of fact. *Estate of Christie v. Commissioner* [Dec. 32,546(M)], T.C. Memo. 1974-95. There is no presumption of blockage. *Maytag v. Commissioner* [51-1 USTC ¶ 10,800], 187 F. 2d 962 (10th Cir. 1951). Only those shares remaining in the estate on the alternate valuation date are considered for blockage discount. Section 2032; *Estate of Van Horne v. Commissioner* [Dec. 38,964], 78 T.C. 728 (1982), affd. 720 F. 2d 1114 (9th Cir. 1983), cert. denied ___ U.S. ___ (May 14, 1983). Petitioners bear the burden of proof. Rule 142(a); *Welch v. Helvering* [3 USTC ¶ 1164], 290 U.S. 111 (1933).

As a threshold requirement for consideration of evidence of the price at which shares could be sold outside the usual market, it must be shown that actual sales on the market, at or near the valuation date, are not representative of the value of the stock held because of the disproportion between the volume of market sales and the block of stock to be valued. *Estate of Van Horne v. Commissioner, supra.* The taxpayers must affirmatively show that the block is so big in comparison with the amounts of the stock which have been traded in on the exchange where it is listed that it could not be sold on such market at its quoted prices within a reasonable time by skilled brokers following prudent practices for liquidation. *Helvering v. Maytag,* 125 F. 2d 55 (8th Cir. 1942); *Mott v. Commissioner* [43-2 USTC ¶ 10,077], 139 F. 2d 317 (6th Cir. 1943); *Graff v. Munford,* 150 F. 2d 825 (2d Cir. 1945).

In valuing a block of stock, we are not required to assume that the entire block was dumped on the market at one time on the
226 valuation date. Rather, the inquiry must be directed to the effect upon the *226 market based on the assumption that the block was being fed out into the market during a reasonable period of time. *Estate of Van Horne v. Commissioner, supra,* 78 T.C. at 742. What is a reasonable period of time depends on all the facts and circumstances.

In *Bankers Trust Co.v. United States,* the Court of Claims made the following statement:

> While a large block of shares dumped on the market at one moment will ordinarily depress the market price for a time, *Seas Shipping Co.v. Commissioner, supra,* 371 F. 2d at 530, the courts which have considered the blockage issue have concluded that the problem should be treated in terms of whether the market could have absorbed the shares within a reasonable period of time. *Richardson v. Commissioner,* 151 F. 2d 102 (C.A. 2, 1945), cert. denied 326 U.S. 66 S. Ct. 490, 90 L. Ed. 485 (1946); *White Farm Equipment Co., supra,* 61 T.C. at 215. In those cases in which either a blockage discount has been allowed or the market price disregarded entirely because too large a block was involved, the number of shares being valued was very much greater than the total shares traded in a year. See, *e.g.,*

> *Amerada Hess Corp., supra,* 517 F. 2d at 89, 91 (665,000 shares being valued; 440,000 traded during entire year); *Moore-McCormack Lines, Inc., supra,* 44 T.C. at 760 (300,000 shares being valued; 166,000 traded during entire year). *Bankers Trust Co.v. United States,* 518 F. 2d 1210, 1221-1222 (Ct. Cl. 1975), cert. denied 424 U.S. 966 (1976). [40]

Applying the above-mentioned case to the facts of this case, we are persuaded that respondent must prevail on this issue. A total of 682,500 and 756,200 shares of Baldor stock were traded in 1978 and 1979, respectively. (The number of shares traded during 1979 is reduced to 746,796 if the 15,404 shares sold by the Trust is not taken into account.) Even assuming, arguendo, that for purposes of section 2032 we only have two blocks of stock consisting of 19,910 and 9,540 shares (to be valued at December 20, 1978, and April 10, 1979, respectively), the number of shares here involved is far below the total number of shares traded in the respective years, and is even less than the total shares traded in the respective months and weeks involved, as our findings of fact show. The Trust's sale of 11,900 shares of Baldor stock during the 5½ week period between January 31, 1979, and March 9, 1979, showed that a large block could be sold in smaller units over a reasonable period of time without depressing the market.

Petitioners have failed to favor us with any evidence relating to the condition of the corporation which was the issuer of the stock in question. We are not advised as to its worth, its present, past or prospective earnings or even the number of shares outstanding. In short, this record leaves us with only the volume of shares traded and the quoted bid and asked prices upon which to make our determination of the value of the stock in controversy.

We do have the conclusory opinion of petitioners' witness, a stockbroker, that a blockage discount of 1 to 1½ points was appropriate for a block of 19,910 shares; and that a block of 9,540 also required a discount of 1 to 1½ points. However, we cannot give much weight to that opinion inasmuch as it is based upon an incorrect definition of blockage, viz., that the shares in question are to be valued as all dumped on the market at the same time. Petitioners have failed to sustain their burden of proof. As was stated in *Estate of McKitterick* [Dec. 11,222], 42 B.T.A. 130, 137 (1940):

> Failure of the record to disclose that the market was so inactive on or about the critical date [valuation date] that it would have been impossible to dispose of the stock * * * in a reasonably short period of time thereafter, prevents the application of the so-called blockage theory. * * *

Upon the record before us, we conclude that the fair market value of the Baldor shares of stock was $25.1875 on December 20, 1978, and $30.875 on April 10, 1979.

In view of our holding that petitioners are not entitled to a blockage discount in valuing the shares of Baldor stock, we find it unnecessary to determine whether section 2032 requires a transactional approach.

On this issue we hold for respondent.

III.

The accrued interest issue

227 The third issue for resolution is whether the valuation of three certificates of deposit *227 should include $56.28 of interest accrued thereon.

Section 2031 provides that the value of the gross estate of the decedent is determined by including the value of all property at the relevant valuation date. Section 20.2031-4, Estate Tax Regs., provides:

> The fair market value of notes, secured or unsecured, is presumed to be the amount of unpaid principal, plus interest accrued to the date of death, unless the executor establishes that the value is lower or that the notes are worthless. * * *

In *Jeschke v. United States,* ___ F. Supp. ___ (D. Kan. 1984), 53 AFTR 2d 84-1644, 84-1 USTC ¶ 13,562 (appeal pending, 10th Cir. October 26, 1984), the District Court held that the interest accrued was includable on the Federal estate tax return under sections 2031, 2033, and 2040.

At the time of his death, Emil J. Jeschke, owned 334 certificates of deposit in the face amount of $460,000.00. Each certificate was issued jointly in the name of the decedent, one of his children, his grandchildren, his great-grandchildren, or his wife. The accrued interest on these certificates of deposit was not reported on Form 706. In rejecting the taxpayer's argument that accrued interest should not be included in the gross estate since the estate had no right to receive it, the District Court stated:

> Rev. Rul. 79-340, 1979-2 C.B. [320] is particularly instructive on this issue. This ruling dealt with the value of certificates of deposit for estate tax purposes, when the certificates of deposit were redeemable before maturity without penalty upon the death of the owner. This is exactly the situation we have here. Value, according to the ruling, includes the value of the accrued interest to the date of death. This is so, because the certificates of deposit are worth no less than the most valuable right inherent in their ownership, and because these certificates may be redeemed at death without forfeiture of interest, their value includes the par value plus accrued interest to date of death. Revenue rulings do not have the force of law, but they are official interpretations by the Service and should be given weight. *Macey's Jewelry Corp. v. United States* [68-1 USTC ¶15,782], 387 F. 2d 70, 72 (5th Cir. 1967).

We have found that the value of the certificates includes the interest accrued.

On this issue we hold for respondent.

IV.

The real estate valuation issue

The final issue for resolution is the fair market value of 320 acres of grazing land located in Fergus County, Montana, on April 10, 1979, the end of the six-month alternate valuation period.

Fair market value is a question of fact to be resolved from a consideration and weighing of all the relevant evidence in the record. *Kaplan v. Commissioner* [Dec. 27,248], 43 T.C. 663 (1965). Section 20.2031-1(b), Estate Tax Regs., provides that the value of every item in the gross estate is the fair market value, defined as follows:

> The fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. The fair market value of a particular item of property includible in the decedent's gross estate is not to be determined by a forced sale price. Nor is the fair market value of an item of property to be determined by the price of the item in a market other than that in which such item is most commonly sold to the public, taking into account the location of the item wherever appropriate.

Respondent determined, in his statutory notice of deficiency, that the fair market value of the real estate was $22,400.00 ($22,400 ÷ 320 = $70.00 an acre). The deficiency determinations of the statutory notice of deficiency carry with them a presumption of correctness. *Welch v. Helvering, supra;* Rule 142(a). Petitioner bears the burden of overcoming this presumption. Respondent relies on this presumption of correctness in asserting that the fair market value of the property is $22,400.

Petitioners submitted evidence, through an appraiser whom we consider qualified, sufficient to overcome the presumption of correctness attached to the determination in respondent's statutory notice of deficiency. The burden of going forward then shifted to respondent. Respondent's "evidence" regarding the fair market value of the land in issue is limited to the following notation on page two of the explanation of items accompanying the statutory notice of deficiency:

> It is determined that the fair market value at the alternate valuation date, of the property shown on Schedule A was
228 $22,400.00 instead of $16,000 reported on *228 the estate tax return. Therefore, the taxable estate is increased $6,400.

Respondent did not introduce the report of an appraiser or the testimony of any witness in support of the higher valuation figure.[41]

On this issue we hold for petitioners.

To reflect the foregoing,

Decision will be entered under Rule 155.

[1] All statutory references herein are to the Internal Revenue Code of 1954, as in effect in the years in issue, unless otherwise indicated. All rule references are to the Tax Court Rules of Practice and Procedure.

[2] This subtotal represents sale transactions during the six-month alternate valuation period.

[3] This subtotal represents sale transactions after the six-month alternate valuation period.

[4] The parties agree as to the valuation date, but not as to the correct value.

[5] The parties agree as to both the valuation dates and values.

[6] The parties disagree both as to the correct valuation date and values.

[7] The parties agree as to the valuation date, but not as to the correct value.

[8] 2/20/1978 was a holiday. No shares were traded on that date.

[9] 3/24/1978 was a holiday. No shares were traded on that date.

[10] 5/29/1978 was a holiday. No shares were traded on that date.

[11] 9/4/1978 was a holiday. No shares were traded on that date.

[12] 11/23/78 was a holiday. No shares were traded on that date.

[13] 2/19/1979 was a holiday. No shares were traded on that date.

[14] 4/13/1979 was a holiday. No shares were traded on that date.

[15] 5/28/1979 was a holiday. No shares were traded on that date.

[16] 7/4/1979 was a holiday. No shares were traded on that date.

[17] 9/3/1979 was a holiday. No shares were traded on that date.

[18] 11/22/1979 was a holiday. No shares were traded on that date.

[19] On July 6, 1978, Baldor stock split two-for-one.

[20] A total of 1,700 shares of Baldor stock were sold by the Trust during this month.

[21] The Trust sold 7,800 shares of Baldor stock during this month.

[22] Sales of Baldor stock by the Trust totaled 2,400 shares during this month.

[23] A total of 2,500 shares of Baldor stock were sold by the Trust during this month.

[24] The Trust sold 1,004 shares of Baldor stock during this month.

[25] On September 24, 1979, Baldor stock split three-for-one.

[26] A total of 15,404 shares of Baldor stock were sold by the Trust during the year 1979; 11,900 of these 15,404 shares were sold during the 5½ week period between January 31, 1979, and March 9, 1979.

[27] The actual computation is as follows: 25¾ (high) + 25 5/8 (low) = 50.375 ÷ 2 = 25.1875.

[28] The actual computation is as follows: 31 (high) + 30¾ (low) = 61.750 ÷ 2 = 30.875.

[29] This figure is the mean between the highest and lowest selling prices on October 30, 1978, (23¼ (high) + 20 3/8 (low) = 43.625 ÷ 2 = 21.8125), less a 2.5 point discount for blockage (21.8125 - 2.5 = 19.3125).

[30] This figure is the mean between the highest and lowest selling prices on April 10, 1979, (31 (high) + 30¾ (low) = 61.75 ÷ 2 = 30.875), less a 2.5 point discount for blockage (30.875 - 2.5 = 28.375). The 1,236 previously gifted shares that were not disposed of by the donee during the alternate valuation period were not included in the gross estate. Petitioners have stipulated that these shares of stock should have been included in the gross estate, but contend that a 2.5 point blockage discount is appropriate in valuing the shares. Thus, a total of 9,540 shares are to be valued as of April 10, 1979.

[31] Respondent further determined that the 1,236 shares of previously gifted stock were to be included in the gross estate and valued as of April 10, 1979, at $30.875 per share, for a total of $38,161.50. Respondent accordingly increased the taxable estate by $38,161.50.

[32] Generally, all property interests includable in the gross estate are valued on the date of the decedent's death. Sec. 2031(a).

[33] There was no order or decree of distribution.

[34] Ordinarily, the legal title to the trust property does not vest automatically in the persons beneficially entitled on termination of the trust, but remains in the trustee until he makes a conveyance or distribution of it. 4 *Scott on Trusts,* sec. 345 (3d ed. 1967).

[35] The Missouri Uniform Commercial Code was adopted at the 1963 Regular Session of the General Assembly, and became effective on July 1, 1965, applicable to transactions entered into and events occurring after July 1, 1965. The 1977 amendments to the Uniform Commercial Code have not been adopted.

[36] Sec. 400.8-401, Mo. Ann. Stat. (Vernon 1965), provides in pertinent part:

400.8-401 Duty of issuer to register transfer

(1) Where a security in registered form is presented to the issuer with a request to register transfer, the issuer is under a duty to register the transfer as requested if

* * *

(d) any applicable law relating to the collection of taxes has been complied with; and

* * *

We find the requirement under Missouri law that an inheritance tax waiver be submitted in order for the shares of stock to be transferred by the stock transfer agent by a corporation not to be a technicality of state law. Petitioners do not argue otherwise. Cf. *Estate of Prell v. Commissioner* [Dec. 28,438], 48 T.C. 67 (1967).

[37] Petitioners argue that the stockbroker was acting as the individual agent of all of the remaindermen, based on the fact that all of the remaindermen maintained individual accounts at Newhard. On this record, it is clear that Newhard was acting as the agent of the successor trustee, not the remaindermen, in effecting the stock transfer.

[38] Petitioners argue that the "[t]rustee should not be compelled to merely place the stock in the stream of commerce for eventual transfer at the whim and convenience of a stock transfer clerk in a large stock transfer institution with the date of transfer to be determined by such variables as the illness of employees on a particular day or shifts in mood as to work habits." This contention is without merit. The delays criticized by petitioners are those of the executor-successor trustee, and not of Newhard or the stock transfer agent.

[39] Compare *Richardson v. Commissioner* [Dec. 41,608(M)], T.C. Memo. 1984-595. In *Richardson,* taxpayer, the beneficial owner of 1,442 shares of Babcock & Wilcox stock held under a living trust with the First Trust Company of Montana (Trust Company), sent a letter dated August 11, 1977, to the Trust Company withdrawing the stock from the living trust and requesting that the stock be delivered to the First National Bank & Trust Company of Helena, Montana (Bank), which was instructed as to the disposition of such stock by letter sent on the same day. The stock was donated to eight different charities. United Technologies made a tender offer to the shareholders of Babcock & Wilcox of $48 per share. A new tender offer at a price of $55 per share was made by J. Ray McDermott & Co., followed by a final offer of $62.50 per share, in response to which the 1,442 shares of Babcock & Wilcox were delivered to J. Ray McDermott on August 22, 1977, by the Bank. The transfer of the tendered shares on the books of Babcock & Wilcox, and issuance of new stock certificates, took place on September 16, 1977. This Court held that the gift of the stock to the eight charities was completed upon the Bank's tender of the stock to J. Ray McDermott & Co. *Londen v. Commissioner* [Dec. 27,600], 45 T.C. 106 (1965), distinguished. The facts of this case are clearly distinguishable. Furthermore, in *Richardson,* taxpayer's letter to the Trust Company, followed by the Bank's actions in furtherance of taxpayer's directives created an irrevocable trust under Montana law. No such situation is present here.

[40] See *Wheeler v. Commissioner* [Dec. 35,198 (M)], T.C. Memo. 1978-208. *Wheeler* involved the valuation of 32,029 shares of restricted, unregistered stock. The average trading volume during the first five months of the valuation year was in excess of 10,000 shares per month. This Court held that a blockage discount was inappropriate in view of the fact that the market was able to absorb the shares within a reasonable period of time.

[41] Respondent cites *Whitt v. Commissioner* [Dec. 40,108(M)], T.C. Memo. 1983-262, in support of his position. *Whitt* involved the valuation of 343 acres of land. The sole evidence introduced by the taxpayers was a deed by which five of the heirs sold their one-sixth interest in the land to the sixth heir. The Court held that the deed was relevant evidence as to the fact that the land had been sold, not to the effect that the sale was freely negotiated. This was deemed insufficient to contradict the testimony of the expert and his appraisal, introduced by respondent. The facts of this case are clearly distinguishable.

Schecter v. Watkins

395 Pa. Superior Ct. 363 (1990)

577 A.2d 585

Benjamin C. SCHECTER, M.D., Appellant, v. Donald R. WATKINS, M.D., Edward S. Konwinski, M.D. and Surgical Associates of Bradford.

Supreme Court of Pennsylvania.

Argued August 23, 1989.

Filed June 20, 1990.

Robert Gawlas, Wilkes-Barre, for appellant.

William J. Kubiak, Bradford, for appellees.

Before CAVANAUGH, BROSKY and ROWLEY, JJ.

BROSKY, Judge.

This is an appeal from the judgment entered on a jury verdict in favor of appellees and against appellant after denial of post-trial motions.

Appellant raises the following issues on appeal: (1) whether the trial court erred in granting appellees a compulsory non-suit on appellant's breach of contract action and denied his points for charge; (2) whether the trial court erred in refusing certain points for charge regarding appellant's "freeze-out" claim in favor of its own instructions; (3) whether the trial court erred in prohibiting appellant from presenting testimony that he owned an interest in Surgical Associates and in ruling, instead, that no stock option existed; (4) whether the trial court erred in refusing to permit appellant to read certain admissions made by appellees, in permitting appellant to read only portions of certain admissions of appellees and in failing to charge the jury concerning the effect of the admissions; (5) whether the trial court erred in denying appellant's Motion in limine at trial concerning acts of misconduct occurring prior to the renewal of his employment contract and in refusing to permit appellant to read into the record various admissions; and (6) whether the trial court erred in refusing to allow appellant to present evidence and argument relative to his claim for punitive damages and whether the court incorrectly instructed the jury on this claim. We affirm.

Appellant, Benjamin C. Schecter, M.D., was employed as a surgeon in Bradford, Pennsylvania, by Surgical Associates of Bradford (Associates). The appellees are Donald R. Watkins, M.D., Edward S. Konwinski, M.D., and Associates, which

terminated the employment of appellant at a meeting of the Board of Directors on August 10, 1984.[1] Appellant filed an action alleging, inter alia, breach of his written employment contract with appellees. At the time of his termination, Dr. Schecter was recovering from a bout with alcoholism at the Marworth Facility, which is part of the Geisinger Medical Center. At issue are two provisions of this contract, Paragraph Three and paragraph Five. These two provisions read as follows:

> 3. TERM OF EMPLOYMENT. The term of this Agreement shall be one (1) year from the date set forth unless either party shall give ninety (90) days notice of their intention to terminate the agreement prior to the end of the term. This Agreement shall otherwise terminate at any time if the Employee should cease to be authorized to practice medicine in the Commonwealth of Pennsylvania, if he should die or become permanently disabled or if the Employer and Employee should mutually so agree in writing. At any time after six (6) months from the date herein, Employer and Employee may renegotiate the term of this Agreement. * * * * * * 5. DISABILITY. A. In the event of the inability of the Employee to perform his duties pursuant to this contract for a period of up to six (6) successive months due to sickness or accident his full salary shall continue to be paid by the Employer during such period. In the event such disability continues beyond six (6) months he shall be compensated to the extent that the disability income insurance shall provide. The term disability shall be defined in accordance with the definition as contained in those contracts recited in paragraph C. In determining periods of disability, periods of disability shall be counted as successive if the Employee has not returned to work for at least one (1) month between such periods of disability. B. * * * C. * * *

Dr. Schecter argues that appellees' termination of his employment with Associates is in breach of Paragraph Five of the employment contract, above, because he was wrongfully terminated due to an illness, i.e., alcoholism. Dr. Schecter maintains that Paragraph Five prohibits termination on account of illness because its terms provide for continuation of salary payments during the disability period and, if necessary, the payment of disability insurance income. Appellees counter that Dr. Schecter's termination was in accordance with Paragraph Three of the contract. At the end of Dr. Schecter's presentation of evidence at trial, appellees moved for and were granted a non-suit on the breach of contract claim.[2] The rule regarding the entry of a non-suit has been oft-stated.

The entry of a non-suit is reserved for the clearest of cases. The plaintiff must be given the benefit of all the evidence and the reasonable inferences therefrom. All conflicts in evidence must be resolved in favor of the plaintiff. Viewing the evidence in this manner, if the trier could not reasonably conclude that the cause of action has been established,

[1] Doctors Watkins and Konwinski are officers as well as employees of Associates.

[2] The parties, both at trial and in their respective appellate briefs and the court at trial and in its Opinion filed in support of its order denying post-trial motions, refer to the dismissal of the breach of contract claim interchangeably as a non-suit or a demurrer to the evidence. Since in modern practice the demurrer has been virtually superseded by the compulsory non-suit, the procedures are, in effect, identical. *Vernon D. Cox & Co., Inc. v. Giles,* 267 Pa.Super. 411, 406 A.2d 1107, n. 2 (1979).

then a non-suit is proper. *Morena v. South Hills Health System,* 501 Pa. 634, 462 A.2d 680 (1983). Grounds exist for the entry of a non-suit if the plaintiff has failed to introduce sufficient evidence to maintain the cause of action. In that event, it becomes the duty of the court to determine, prior to sending the case to the jury, whether the plaintiff has met his evidentiary burden. Id.

The court concluded at the close of Dr. Schecter's case that the latter had not presented evidence upon which his breach of contract claim could be sustained. Our review of the trial transcript supports the trial court's ruling.

At trial, Dr. Schecter attempted to introduce and did, in fact, introduce evidence that alcoholism is an illness and, from that premise, attempted to prove that his discharge was in breach of Paragraph Five of the contract. Dr. Schecter presented evidence in the nature of testimony from health care personnel at the Marworth Center to this effect. He also presented evidence that this was the official position of the American Medical Association (AMA) and the Pennsylvania Medical Society (PMS). According to these organizations, fellow physicians had the responsibility to help each other on the road to recovery from alcoholism by encouraging the recovering alcoholic physician to once again become a productive member of the profession. Dr. Schecter attempted to demonstrate that appellees' termination of his employment with Associates was not in keeping with the position espoused by these professional organizations and, therefore, effected a breach of Paragraph Five of the employment contract.

Appellees have never contested that alcoholism is an illness. However, by the introduction of evidence to this effect, Dr. Schecter attempted to demonstrate that appellees' termination of him was because of his alcoholism and, therefore, constituted a breach of the terms of Paragraph Five of the employment contract. Dr. Schecter attempted to show that the official position of the AMA and the PMS was binding upon appellees to support his breach of contract claim. In addition, Dr. Schecter introduced evidence through the testimony of Dr. Colangelo, the president of the Marworth Center, that an individual who has lost employment because of alcoholism has a lesser chance of recovery. In short, the only evidence introduced by Dr. Schecter at trial to support his breach of contract claim was that alcoholism is an illness, that both the AMA and the PMS recognized this to be so and that appellees disregarded this position as well as that of the health care personnel at the Marworth facility.

At trial, appellees denied that Associates had terminated Dr. Schecter because of his alcoholism. At the meeting of August 10, 1984, Associates decided to terminate Dr. Schecter. According to the minutes of that meeting, as testified to by appellee, Dr. Watkins, Associates decided to terminate Dr. Schecter's employment under Paragraph Three of the contract. The termination was to be effective ninety days after notice to Dr. Schecter pursuant to the terms of Paragraph Three of the employment contract. According to the minutes, "Doctor Schecter [would] be discharged for reason of his material failure to perform and satisfy the terms and convenants [sic] set forth in

paragraphs one, two and three of said employment agreement." N.T. 62.[3] Nothing in the minutes of the meeting of Associates held on August 10, 1984, nor any other testimony adduced in the presentation of Dr. Schecter's case, specifically indicates as the reason for his termination his illness.

Dr. Schecter presented evidence at trial that Dr. Watkins, an appellee here, was previously stricken with coronary disease, was not dismissed because of this and continued to receive his salary, as well. Dr. Schecter urged at trial and now urges on appeal that illness due to coronary disease is no different from illness because of alcoholism in terms of continuing his salary and employment with Associates under the terms of Paragraph Five of the agreement. Appellees counter, however, that Associates was not dissatisfied with the services of Dr. Watkins, and, consequently, that physician was not terminated.

Although Dr. Schecter relies solely on Paragraph Five of the agreement to support his claim of breach, a fair reading of this paragraph indicates that it is not a term of employment clause. This paragraph provides for contingent financial security in the event an employed physician of Associates is unable to work because of illness or accident. This paragraph, according to its terms, would support a breach of contract action only if Dr. Schecter had remained an employee of Associates and then only if Associates had refused to pay the salary of Dr. Schecter for the specified period during his disability or if it had not maintained a contract of disability insurance on him or if the disability insuror had refused to compensate him according to the terms of the policy.

Paragraph Three of the agreement, however, is a term of employment clause and is specifically labeled as such. This paragraph provides for a term of employment of one year from the date set forth in the agreement unless either party to the agreement gives ninety days' notice of intent to terminate prior to the end of the one-year term.[4] Unlike the employment-at-will situation, the contract here in question was an express one limiting Associates' ability to discharge its employees. An employment contract of definite duration cannot be legally terminated by an employer prior to its expiration date. *Dorn v. Stanhope Steel, Inc.,* 368 Pa.Super. 557, 534 A.2d 798, appeal denied, 518 Pa.

[3] The minutes of the August 10, 1984 meeting disclose some doubt as to whether the subject employment contract, which was dated July 1, 1980, was still in force at the time Associates decided to notify Dr. Schecter that he would be terminated. This is because Paragraph Three of the employment contract provided that the duration of the agreement would be for one year from July 1, 1980. Each year subsequent to July 1, 1980, Associates held a meeting on June 30, renewing the contract for another year and increasing the salaries of the physicians employed by Associates. However, no meeting was held in 1984 until August 10. Because of the possibility that the employment contract was not in effect at the time of the August 10, 1984 meeting, Associates "elect[ed] to terminate Doctor Schecter's employment relationship with the corporation effective immediately because of his failure to provide services and meet the standards expected of him and set forth in the employment agreements heretofore in effect." N.T. 62. At trial, however, all parties agreed that the employment contract had been renewed and was in effect at the time of the August 10, 1984 meeting. Even under this contingency, however, Dr. Schecter's employment was not terminated because of his illness.

[4] Other reasons for termination contained in Paragraph Three are lack of authority to practice medicine, death, permanent disability or a mutual agreement in writing to terminate. These conditions do not require the ninety days' notice, nor are they applicable to the case at bar.

656, 544 A.2d 1342 (1988). An employer may not terminate an employee for the duration of the contract period absent just cause. *Greene v. Oliver Realty, Inc.,* 363 Pa.Super. 534, 526 A.2d 1192 (1987). The employment contract at issue here, however, expressly permits termination at the behest of either party to the contract prior to the end of the contract period without a showing of any cause.

In his Reply Brief, Dr. Schecter, in effect, concedes this point:

> If Defendants [appellees here], as they have contended from the very beginning of this litigation, could at any time terminate the employment relationship upon ninety (90) days [sic] notice, then they needed no justification for doing so; they needed only to show that the Contract allowed them to terminate on ninety (90) days [sic] notice and that they provided DR. SCHECTER with such notice.

At 8; emphasis supplied. Dr. Schecter does not argue that he was not given the requisite ninety-day notice of termination, nor does he argue that the terms of the employment contract were not the result of an arms' length bargained-for exchange. He admitted at trial that the language of the contract was clear and that the contract was not one of adhesion. At trial, counsel for Dr. Schecter stated the following:

> MR. LEVINSON: I object to the question as being irrelevant. The language of the contract speaks for itself. We have the document in evidence, [sic] I don't see there's any relevance concerning negotiations or terms of the contract.
>
> N.T. 145.
>
> MR. LEVINSON: Counsel agrees it was a contract negotiated at arms length, [sic] it's not a contract of adhesion.
>
> N.T. 146.

With regard to this issue, we find as follows: (1) Paragraph Five of the employment agreement is not a term of *employment clause. We have discussed the nature and purpose of this clause, above; (2) Paragraph Three of the employment agreement is a term of employment clause. As discussed above, it sets forth the duration of the term of employment and the circumstances under which the employee may terminate or may be terminated. It does not require cause for termination on the part of either the employer or the employee; (3) Dr. Schecter has not alleged or proven at trial any breach of Paragraph Three of the employment agreement. Specifically, Dr. Schecter has neither alleged nor proven that he was terminated without the requisite ninety-days' notice prior to the end of the contractual term, the only condition of termination applicable to him under the circumstances. Nor has he alleged or proven that the ninety-day termination provision is unconscionable, adhesive or was not bargained for. In short, Dr. Schecter failed to introduce any evidence at trial which the fact finder could

consider as giving rise to a breach of the subject employment agreement. We therefore conclude that the grant of the non-suit with respect to this claim was proper.[5]

Dr. Schecter's next challenge is to the jury charge on his claim of "freeze-out". He contends that his points for charge on this claim were correct and that the trial court's charge was erroneous and confusing. We disagree.

It is now well-settled that in reviewing a challenge to a jury charge, an appellate court will scrutinize the entire charge against the evidence presented to determine if prejudicial error has occurred. This court will not reverse on the basis of isolated inaccuracies if the charge as a whole was not erroneous and did not prejudice the complaining party. *Nobel C. Quandel Co. v. Slough Flooring, Inc.,* 384 Pa.Super. 236, 558 A.2d 99 (1989). We have reviewed the charge relating to Dr. Schecter's "freeze-out" claim, in particular, as well as the entire charge, generally, according to the aforementioned standard. From this reading, we are satisfied that the charge was accurate and sufficiently covered Dr. Schecter's requested points for charge on this issue.

The term "freeze-out", also known as and referred to by the trial court as a "squeeze-out", is defined in Black's Law Dictionary as follows:

> Action taken by persons in control of corporation resulting in termination of a shareholder's interest, and term implies a purpose to enforce a liquidation or sale of other stockholder's shares, not incident to some other wholesome business goal…. The use of corporate control vested in the statutory majority of shareholders from the enterprise or to reduce to relevant insignificance their voting power or claims on corporate assets. It implies a purpose to force upon the minority shareholder a change which is not incident to any other business goal of the corporation….

At 599. The trial court explained the concept of "freeze-out" to the jury as follows:

> The question you must decide is whether Doctor [sic] Watkins and Konwinski acted together to use their majority power to act without legal justification to do things which were intended to and did harm the plaintiff's economic position as a shareholder. Did they in other words freeze out another owner, did they breach their duty of loyalty and fairness so that they themselves would be economically benefited.

N.T. 690. Upon request for clarification, the trial court further explained the theory of "freeze-out":

[5] Dr. Schecter also makes the related argument that the trial court erroneously refused his Points for Charge relating to the breach of contract claim. The trial court stated that since it granted a non-suit to this claim, the points for charge on that issue were irrelevant. Although we agree that the points for charge were properly not given, a more accurate statement of the law is that a trial court must refuse to give a requested point which has no application to the facts or which assumes the existence of evidence not in the record. *Holland v. Zelnick,* 329 Pa.Super. 469, 478 A.2d 885 (1984).

> In order for the plaintiff to win you must be satisfied … that … the defendants used their ownership position to freeze out or force out Doctor Schecter unjustifiably and that as a result, he was economically harmed. To determine whether or not a freeze out has occurred, you have to examine the entire course of dealings between the parties. Did the defendants have good reason to do what they did. Or did they engage in a course of conduct with the intent of forcing the plaintiff out of the business and financially harming him…. If you determine that what the defendants did was motivated by an unethical or unfair or improper motive, then you may conclude that a freeze out has occurred. If however you determine that what they did was properly motivated, then a freeze out has not occurred.

Id., 712-713. This charge not only comports with the legal definition of "freeze-out" but is also substantially similar to the definitional charge requested by Dr. Schecter.

Any mention of damages on Dr. Schecter's claim for breach of the employment contract which was requested in connection with the points for charge on damages for the "freeze-out" claim was properly disallowed as the former claim was not before the jury. However, the court did instruct on damages relative to the "freeze-out" claim as follows:

> Now I have told you that whether or not Doctors Watkins and Knowinski and Surgical Associates of Bradford broke the employment contract is not an issue for you to decide. You may, however, take into account all of the circumstances surrounding the corporations' [sic] decision to discharge Doctor Schecter and in deciding whether or not he was frozen out. [Y]ou must be satisfied … that the plaintiff's [sic] used their ownership position to freeze out or force out Doctor Schecter unjustifiably and did so for their own economic benefit. If you decide that they did freeze out Doctor Schecter, then you must decide how much money, if any, they should pay Doctor Schecter to reimburse him for the loss he incurred due to their action.

At 690-91.

As part of his challenge to the jury charge, Dr. Schecter alleges that the court gave no instruction relative to the personal liability of Doctors Watkins and Konwinski, as officers of Associates, as requested in Point for Charge number fifteen. Using the aforementioned standard of reviewing a jury charge for errors or omissions, we conclude that the charge was not derelict in this regard. Throughout the jury charge, the trial court mentioned the potential liability of both Doctors Watkins and Konwinski to Doctor Schecter.

As his final challenge to the jury instructions, Dr. Schecter claims that the trial court erroneously, inadequately and in a confusing manner instructed the jury on the method of determining the fair value of Dr. Schecter's stock in Associates. According to Dr. Schecter, this instruction permitted the jury to consider any factor that body deemed appropriate in determining the fair value of the stock. Dr. Schecter avers that the trial

court failed to instruct the jury in the manner requested by his Point for Charge number sixteen. The charge as given by the court reads as follows:

> The law says that if he was frozen out he's entitled to be paid the fair value of his stock. What fair value is, how much money, is for you to decide. You have heard several factors which bear on this testified to and argued. They include for example book value, asset value, earnings and profit trends, absence of a covenant not to compete, the agreement of allocation of accounts receivable between Doctor Watkins and Doctor Konwinski and the market value of the shares. You may consider any such factor you think is appropriate in deciding what Doctor Schecter's twenty-five shares are worth.

Id., 691-92. In *In re Watt & Shand,* 452 Pa. 287, 304 A.2d 694 (1973), our Supreme Court explained that in determining the fair value of a minority holder's stock, "consideration must be given to all factors and elements which reasonably might enter into the fixing of value." 452 Pa. at 292, 304 A.2d at 698. The court then listed some of the factors which must be considered, viz: asset value, market value and price, management and its policies, earnings, dividends, valuation of assets, reserves for contingencies, tax liabilities, future earnings and projected business. We find that the court charged substantially according to the language of Watt which Dr. Schecter had cited as authority for his requested point. Therefore, Dr. Schecter's claim that the jury was impermissibly informed that it could consider any factor in the context of assessing fair valuation of his stock is unfounded.[6]

In his next issue, Dr. Schecter complains that he was improperly prohibited from presenting testimony and argument that he owned or was entitled to one-third of the stock of Associates. He also alleges that the court erred in concluding as a matter of law that no option existed to permit him to purchase additional stock to complete his one-third share. At trial, Dr. Schecter and Dr. Watkins both testified that Dr. Schecter, upon joining Associates, purchased twenty-five shares of the corporation. At several annual meetings of Associates, he was made an offer to purchase and asked if and when he would purchase the remaining shares, thus bringing him up to ownership parity with Doctors Watkins and Konwinski. Dr. Schecter, throughout his tenure with Associates, informed the corporation that he was financially unable to purchase the remaining shares.

At a meeting held on November 14, 1984, Associates resolved to ratify the withdrawal of its offer to Dr. Schecter to purchase any additional shares of stock. At trial, Dr. Schecter admitted that he never made demand upon Associates to exercise his option to purchase the remaining shares prior to the meeting of November 14, 1984. Dr. Schecter, despite his testimony, attempted to show that by letter of October 30, 1984, through his then counsel, Mr. Roth, he made a demand to purchase the remaining shares of stock which would then place him on parity with his colleagues at Associates. However, the court instructed the jury to disregard any indication that Dr. Schecter had

[6] Dr. Schecter, as part of this issue, reiterates his argument on the breach of contract claim. This matter has been discussed elsewhere in this Opinion.

made the demand because of the uncertainty surrounding the representation made in the letter. The court similarly disallowed any reference to this letter as representing a demand to purchase the outstanding shares when Mr. Wick, the secretary of Associates, was examined concerning his knowledge of Dr. Schecter's demand. The purpose of representing this letter to be a demand by Dr. Schecter to purchase the outstanding stock was to demonstrate that Associates had withdrawn its offer to purchase only after Dr. Schecter had attempted to exercise that right. Based upon this testimonial background, we conclude that Dr. Schecter's complaint that the trial court prohibited him from presenting evidence that he owned or was entitled to the remaining stock is lacking in factual basis.

The trial court held as a matter of law that Dr. Schecter had no right to acquire the additional stock because it did not construe the language of Paragraph Four of the employment agreement, which addresses the purchase of stock, as an option to sell or purchase. An option contract is a contract to keep an offer open. However, the option arises and exists only if and unless the optionee elects to exercise the option by unequivocally accepting the offer. *Warner Bros. Theatres, Inc. v. Proffitt,* 329 Pa. 316, 198 A. 56 (1938). Moreover, if an option is not exercised within the time set forth in the contract, it necessarily expires. *Western Savings Fund Society v. SEPTA,* 285 Pa.Super. 187, 427 A.2d 175 (1981). Two notable commentators have stated that while "time is of the essence in an option contract … this means only that the option cannot be exercised after the offer has lapsed." J. Calamari and J. Perillo, The Law of Contracts, at 91 (2d ed. 1977).

Based upon the foregoing principles of law, we conclude that an option to purchase the stock did exist but that its purported acceptance was, as a matter of law, at least untimely, if not equivocal. As noted above, Dr. Schecter, by his own admission, never accepted the offer to purchase during any contractual period of the employment agreement, although Associates periodically reminded him of his right under the agreement to elect to purchase the stock. The trial court ruled that the letter of October 30, 1984, which purportedly contained a demand to purchase under the agreement was, at best, equivocal.[7]

However, an even more compelling reason exists to hold that Dr. Schecter's option to purchase the outstanding shares of Associates was not valid even if acceptance of the offer to purchase had been unequivocal. Paragraph Four of the employment agreement, which is entitled "Compensation", addresses the purchase of stock as follows: "After the first year, should employment continue [sic] Employee shall have the right from time to time to purchase capital common stock of the corporation, the number of shares so purchased to be mutually agreed upon by Employer and Employee." (Emphasis supplied). Associates, at a meeting held on August 10, 1984, voted to terminate Dr. Schecter's employment relationship with it. As we stated elsewhere, Dr. Schecter does not argue that he did not receive notice of this meeting or of the ultimate decision of Associates to terminate his employment relationship with it. On November 14, 1984,

[7] Although the trial court admitted this letter as an exhibit, we have not been able to examine its contents because it does not appear of record.

Associates, by written resolution, ratified the withdrawal of its offer to Dr. Schecter to purchase any additional shares of Associates.[8] As noted elsewhere, Paragraph Three of the employment agreement provides for a ninety-day notice of termination. The November 14, 1984 ratification of the withdrawal of the offer and the November 8, 1984 letter to Dr. Schecter notifying him of the said withdrawal both occurred after the ninety-day notification of termination. Thus, withdrawal of the offer was proper because Dr. Schecter at that time was no longer an employee of Associates.

Additionally, because the trial court ruled that the terms of the letter of October 30, 1984 purporting to accept the offer to purchase were uncertain, the option to purchase expired by operation of the terms of the contract, in any event, ninety days after Dr. Schecter was notified on August 10, 1984, that he would be terminated. See Western Savings, supra, and Calamari & Perillo, supra. Therefore, no error occurred here.[9]

Next, Dr. Schecter maintains that the trial court erred in denying his motion in limine to preclude evidence of his misconduct prior July 1, 1984, the date on which the renewal of his employment contract became effective through June 30, 1985. The misconduct referred to is Dr. Schecter's behavior due to the effects of alcoholism.

Dr. Schecter initially argues that evidence of his behavior prior to July 1, 1984, prejudiced him before the jury and may have influenced the jury to bring in a verdict against him. The basis for Dr. Schecter's suit against appellees was that the latter had unjustly terminated him because of his bout with alcoholism. Dr. Schecter testified at trial that he recognized that he had been an active alcoholic for thirty years prior to obtaining treatment, that he had gone to the Marworth facility for initial evaluation in 1983 and was told then that he had a problem with alcohol, that he knew in the early 1970's that he had had a drinking problem, that he had this problem when he was hired by and all through his tenure with Associates and that Doctors Konwinski and Watkins had approached him about this problem as early as 1980 or 1981. Dr. Schecter also testified concerning an incident report which was filed against him in October 1983 concerning his behavior in the emergency room at Bradford Hospital. He stated that this incident resulted in a letter of January 4, 1984, from the hospital administrator that such behavior would not be tolerated. In short, Dr. Schecter presented the very evidence which he sought to have excluded by the Motion. Therefore, in light of his testimony, Dr. Schecter can hardly complain that the denial of the motion in limine was prejudicial to him.

[8] The minutes of this meeting indicate that Dr. Schecter was actually notified of withdrawal of the offer by letter dated November 8, 1984. Dr. Schecter does not dispute this.

[9] Dr. Schecter also appends to this issue two inconsistent arguments, viz: that a directed verdict should have been granted on the issue that he had the option to purchase additional stock and that whether he had the option to purchase the stock was a jury question. He also raises the contention that it was error to refuse Dr. Schecter's request to read the deposition testimony of Doctors Watkins and Konwinski into the record concerning the stock option. The former two arguments have not been included as part of or suggested by the Statement of Question relating to the issue under discussion. See Pa.R.App.P. 2116(a). The latter will be addressed as part of another issue, infra.

Alternatively, Dr. Schecter contends that even if evidence of his behavior prior to July 1, 1984, were relevant, appellees waived their defense of discharge on the basis of Dr. Schecter's problem with alcohol because Associates continued to renew Dr. Schecter's employment contract each year with concomitant salary increases. However, at trial, Doctors Watkins and Konwinski denied that they had discharged Dr. Schecter because he was an alcoholic. The minutes of the meeting of August 10, 1984, introduced as evidence at trial, gave as the reason for Dr. Schecter's termination breach of Paragraphs One, Two and Three of the employment agreement. The Doctors also testified that Associates discharged Dr. Schecter in accordance with the terms of Paragraph Three of the agreement. Hence this argument is also meritless.

Dr. Schecter's next complaint is that the trial court erroneously refused to permit him to read into the record various admissions made by Doctors Watkins and Konwinski in their depositions. These admissions refer to the stock purchase option and the breach of contract issue. Specifically with respect to the latter, Dr. Schecter wished to read into evidence Dr. Watkins' admission that he agreed that alcoholism is an illness. We have reviewed the deposition testimony to which Dr. Schecter refers and find that it is virtually identical to the testimony given by this witness at trial. The trial court properly refused to allow these admissions to be read into the record since the evidence was merely cumulative to that already presented. We have exhaustively discussed the substance of the breach of contract and stock purchase issues elsewhere in this Opinion and will not repeat it here.

Dr. Schecter also argues that an admission of Dr. Watkins in his deposition concerning a conversation with Mrs. Schecter should have been read into evidence as being relevant to the "freeze-out" claim, the claim for punitive damages and to impeach Dr. Watkins' testimony. That deposition testimony merely refers to a conversation between Dr. Watkins and Mrs. Schecter concerning Dr. Schecter's departure for Marworth and Dr. Watkins' concern for the future well-being of Dr. Schecter and Associates. We have reviewed this deposition testimony and are unable to ascertain how it relates to the "freeze-out" claim, the claim for punitive damages or in what respect it could be used to impeach Dr. Watkins. This argument constitutes a mere recital of bald allegations to that effect.

Dr. Schecter's last allegation of trial error relates to the court's refusal to admit into evidence the AMA and PMS standards on alcoholism and alcohol-impaired physicians because admission of these standards would be relevant to an award of punitive damages on the "freeze-out" claim. Dr. Schecter alleges that punitive damages were awardable on the basis that Dr. Watkins' and Dr. Konwinski's deviation from the aforesaid AMA and PMS standards constituted outrageous conduct and reckless indifference to Dr. Schecter's rights. Dr. Schecter also maintains that the trial court erroneously instructed the jury that it could award punitive damages only if it found that Dr. Schecter was entitled to compensatory damages in excess of one thousand eight hundred eighty-two dollars and seventy-two cents, representing the amount which he paid for the initial twenty-five shares of stock of Associates. The trial court's charge does not support the interpretation suggested by Dr. Schecter. The trial court merely stated

the amount which Dr. Schecter paid for the twenty-five shares of stock and then instructed the jury that it could award punitive damages if it determined that Dr. Schecter had suffered a financial loss as a result of a "freeze-out".

The purpose of punitive damages is to punish for outrageous conduct done in reckless disregard of another's rights. The aim of punitive damages is deterrence of similar conduct. *Kirkbride v. Lisbon Contractors, Inc.,* 521 Pa. 97, 555 A.2d 800 (1989), on remand, 385 Pa.Super. 292, 560 A.2d 809 (1989). Punitive damages must arise out of liability on the cause of action because they are an element of damages flowing therefrom. Thus, if no actual damages are sustained, an award of punitive damages is not appropriate. Id. Dr. Schecter's arguments, then, are moot in light of the jury's rendition of a verdict of non-liability in favor of appellees.

Judgment affirmed.

CAVANAUGH, J., concurs in the result.

T.C. Memo. 2004-160

UNITED STATES TAX COURT

MARK W. SENDA AND MICHELE SENDA, Petitioners v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 17298-02. Filed July 12, 2004.

Daniel V. Conlisk, James R. Dankenbring, and James Robert Loranger, for petitioners.

Thomas C. Pliske, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

COHEN, Judge: Respondent determined deficiencies of $185,572, $276,321, and $25,674 in petitioners' Federal gift taxes for 1998, 1999, and 2000, respectively.

After concessions by respondent, the issue for decision is whether petitioners' transfers of stock to two family limited

partnerships, coupled with petitioners' transfers of limited partnership interests to their children (or in trust therefor), constitute indirect gifts of the stock to the children (or to the trusts) within the meaning of section 2511.

Unless otherwise indicated, all section references are to the Internal Revenue Code in effect for the years in issue, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated, and the stipulated facts are incorporated in our findings by this reference. Petitioners resided in Lake St. Louis, Missouri, at the time that they filed their petition in this case.

General Background

Petitioners have three minor children, Mark R. Senda, Janell N. Senda, and Ross J. Senda (collectively, the children).

On May 29, 1996, Mark W. Senda (petitioner) attended a seminar in Chicago, Illinois, on tax planning regarding the tax benefits of forming a family limited partnership (FLP). The seminar, Executive Tax/Financial Planning Seminar, was sponsored by Arthur Andersen, LLP, and Fraser Stryker Meusey Olson Boyer & Bloch, P.C., an Omaha, Nebraska, law firm. On December 30, 1996, petitioners formed, but did not fund, an FLP under Illinois law.

At the end of 1996 or beginning of 1997 and in 1998, petitioner received approximately $5-6 million worth of MCI WorldCom stock (stock) after MCI WorldCom acquired two companies where petitioner was successively employed.

The Mark W. Senda Family Limited Partnership

Sometime in 1998, petitioner met with James R. Dankenbring (Dankenbring), his attorney, to discuss in more detail the advantages of forming an FLP as a vehicle to hold investment assets and to serve as a means of making gifts. On or about April 1, 1998, petitioners signed the Mark W. Senda Family Limited Partnership Agreement (SFLP I Agreement). On June 3, 1998, the secretary of state of Missouri issued a certificate of limited partnership for the Mark W. Senda Family Limited Partnership (SFLP I). The partnership interests, as set forth in the SFLP I Agreement, were initially held as follows:

Partner	Percentage	Interest
Mark W. Senda, Trustee, or his successors in trust, under the Mark W. Senda Revocable Trust dated Nov. 20, 1996, and any amendments thereto	10.0	General
Mark W. Senda, Trustee, or his successors in trust, under the Mark W. Senda Revocable Trust dated Nov. 20, 1996, as amended thereto	89.8397	Limited
Michele Senda	0.1303	Limited
Mark W. Senda, as trustee for Mark R. Senda	0.010	Limited
Mark W. Senda, as trustee for Ross J. Senda	0.010	Limited
Mark W. Senda, as trustee for Janell N. Senda	0.010	Limited

Although the children's partnership interests were purportedly held for them in trust, there was no written trust agreement at the time of the transfers reflecting that the children were beneficiaries of any trust for which petitioner was the trustee. The children, as limited partners, reported income/losses from SFLP I on their individual tax returns. Trusts for the benefit of the children and of which petitioner was trustee have never filed tax returns.

On December 28, 1998, petitioners contributed to SFLP I 28,500 shares of stock in exchange for their partnership interests. Petitioners transferred the stock from their joint brokerage account to the brokerage account of SFLP I. Both accounts were held at Salomon Smith Barney. The children (or

trusts therefor) purportedly contributed oral accounts receivable in exchange for their partnership interests. The accounts receivable, however, were never reduced to writing, had no terms for repayment, and had not been paid as of the time of trial.

By fax dated December 28, 1998, petitioners informed their accountant that they had transferred stock to SFLP I and sought advice as to what percentage of partnership interests they should transfer to the children. On that same day, petitioner gave to each child (or trust therefor) a 29.94657-percent limited partnership interest in SFLP I. Michele Senda (Senda) gave to each child (or trust therefor) a 0.0434-percent limited partnership interest in SFLP I. The certificates of ownership reflecting these transfers were not prepared and signed until several years thereafter.

The SFLP I Agreement provides that the general partner shall prepare or have prepared annual financial statements. It further provides that, not less than annually, all partners shall meet to discuss the financial condition of the partnership. SFLP I has never had annual financial statements prepared or held partnership meetings. The only books and records maintained by petitioner, as general partner, were brokerage account statements and partnership tax returns. The 1998 Form 1065, U.S. Partnership Return of Income, for SFLP I was signed by the tax return preparer on October 8, 1999.

Senda & Associates, L.P.

Sometime in 1999, Dankenbring advised petitioner that, if petitioner wished to transfer additional property in partnership form to the children, he should form a second FLP instead of recapitalizing SFLP I.

On December 2, 1999, the secretary of state of Missouri issued a certificate of limited partnership for Senda & Associates, L.P. (SFLP II). On December 4, 1999, Robert Brendell signed, as trustee, the irrevocable trusts (trusts) for the benefit of each child. Petitioner and Senda, however, did not sign the trusts as "trustmakers" until May 1 and 11, 2000, respectively. Although the trusts also list Citicorp Trust South Dakota (Citicorp) as trustee, a representative of Citicorp never signed the trusts.

On December 17, 1999, petitioners signed the SFLP II Partnership Agreement (SFLP II Agreement). The partnership interests, as set forth in the SFLP II Agreement, were initially held as follows:

Partner	Percentage	Interest
Mark W. Senda, Trustee, or his successors in trust, under the Mark W. Senda Revocable Trust dated Feb. 23, 1998, and any amendments thereto	1.0	General
Mark W. Senda, Trustee, or his successors in trust, under the Mark W. Senda Revocable Trust dated Feb. 23, 1998, and any amendments thereto	97.97	Limited
Michele Senda	1.0	Limited
Citicorp Trust South Dakota and Robert Brendell, Trustees of the Mark R. Senda Irrevocable Trust	0.01	Limited
Citicorp Trust South Dakota and Robert Brendell, Trustees of the Ross J. Senda Irrevocable Trust	0.01	Limited
Citicorp Trust South Dakota and Robert Brendell, Trustees of the Janell N. Senda Irrevocable Trust	0.01	Limited

On December 20, 1999, petitioners contributed to SFLP II 18,477 shares of stock in exchange for their partnership interests. Petitioners transferred the stock from their joint brokerage account to the brokerage account of SFLP II. Both accounts were held at Salomon Smith Barney. Trusts for the children purportedly contributed oral accounts receivable in exchange for their partnership interests. The accounts receivable, however, were never reduced to writing, had no terms for repayment, and had not been paid as of the time of trial. On that same day, petitioner gave to each child, in trust, a 17.9-percent limited partnership interest in SFLP II. The

certificates of ownership reflecting these transfers were not prepared and signed until several weeks after the transfers.

By fax dated December 22, 1999, petitioners informed their accountant that they had transferred stock to SFLP II and sought advice as to the percentage of partnership interests they should transfer to the children to maximize their annual gift tax exclusions and use all of their remaining unified credits.

On January 31, 2000, petitioner gave to each child, in trust, an additional 4.5-percent limited partnership interest in SFLP II.

The SFLP II Agreement provides that petitioner, as general partner, shall keep the financial statements of the partnership for the most recent 3 fiscal years. SFLP II has never had annual financial statements prepared. The only books and records maintained by petitioner, as general partner, were brokerage account statements and partnership tax returns. The 1999 Form 1065 for SFLP II was signed by the tax return preparer on August 30, 2000.

Petitioner paid all legal fees and filing costs with respect to SFLP I and SFLP II. The partnerships did not reimburse those costs to petitioner, nor were those costs a liability of the partnerships.

Gift Tax Returns and the Notice of Deficiency

Petitioners filed Forms 709, United States Gift (and Generation-Skipping Transfer) Tax Return, for 1998, 1999, and 2000. On those returns, petitioners reported split gifts of $462,379, $183,792, and $14,307.71 for 1998, 1999, and 2000, respectively. Those amounts reflect the discounted values of the partnership interests transferred to the children, which were calculated by multiplying, for each year in issue, the value of the property petitioners contributed to the partnerships, as reported on the Forms 709, by the percentage of the partnership interests transferred to the children. Petitioners then applied lack of marketability and minority interest discounts and subtracted the annual exclusion amount for each child.

In the notice of deficiency, respondent determined that the fair market value of the property transferred to the children was $1,798,647, $791,826, and $164,103 for 1998, 1999, and 2000, respectively. Those amounts reflect the value of the property that petitioners contributed to the partnerships without lack of marketability and minority interest discounts.

Valuation Discounts

The parties stipulate that, if we conclude (1) that the partnership interests, rather than the underlying assets, should be valued for gift tax purposes and (2) that discounts should be

applied to the net asset value of the partnership assets, the following discounts should apply:

Partnership	Date of Transfer	Minority Discount	Marketability Discount	Combined Discount
SFLP I	12/28/98	5.88%	35%	38.82%
SFLP II	12/20/99	15.44	35	45.0
SFLP II	1/31/00	17.12	35	46.13

There is no dispute as to the value of the stock without any discount.

OPINION

Section 2501 imposes a tax on the transfer of property by gift during the taxable year. This tax is imposed whether the transfer is in trust or otherwise and whether the gift is direct or indirect. See sec. 2511. A gift of property is valued as of the date of the transfer. See sec. 2512(a). The gift is measured by the value of the property passing from the donor, rather than by the value of the property received by the donee or upon measure of enrichment to the donee. See sec. 25.2511-2(a), Gift Tax Regs.

The fair market value of the transferred property is the "price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts." Sec. 25.2512-1, Gift Tax Regs. Where property is transferred for less than adequate and full consideration in

money or money's worth, the amount of the gift is the amount by which the value of the property transferred exceeds the value of the property received. See sec. 2512(b).

Petitioners contend that they made gifts of limited partnership interests and that the partnerships have economic substance and are valid under Missouri law. Thus, they argue that the partnerships may not be disregarded for Federal tax purposes and that the stipulated discounts apply in determining the value of the gifts. Petitioners further contend that, because they did not shift economic value to the children when they contributed the stock to the partnerships, they did not make gifts on formation of the partnerships.

Respondent does not dispute that the partnerships are valid under Missouri law or that the partnerships have economic substance. Respondent contends, however, that petitioners' transfers of the stock to the partnerships, coupled with the transfer of limited partnership interests to the children, were indirect gifts of the stock to the children. Accordingly, respondent argues that the stock, and not the partnership interests, should be valued for gift tax purposes. Respondent argues that "the transitory allocations to petitioners' capital accounts, if such allocations even occurred at all, were merely steps in integrated transactions intended to pass the stock to the petitioners' children in partnership form."

We need not discuss the burden of proof. We decide this case on the preponderance of the evidence. Whether the children's interests were held in valid trusts or not is not material to our decision.

Section 25.2511-1(h)(1), Gift Tax Regs., provides that a transfer of property by a taxpayer to a corporation represents a gift by the taxpayer to the other shareholders of the corporation to the extent of their proportionate interests in the corporation. In Shepherd v. Commissioner, 115 T.C. 376, 389 (2000), affd. 283 F.3d 1258 (11th Cir. 2002), we applied the principle that, like a transfer of property to a corporation, a transfer of property to a partnership for less than full and adequate consideration may represent a gift to the other partners.

In Shepherd, the taxpayer transferred real property and stock to a newly formed family partnership in which he was a 50-percent owner and his two sons were each 25-percent owners. Id. at 380-381. Rather than allocating contributions to the capital account of the contributing partner, the partnership agreement provided that any contributions would be allocated pro rata to the capital accounts of each partner according to ownership. Id. at 380. Because the contributions were reflected partially in the capital accounts of the noncontributing partners, the value of the noncontributing partners' interests

was enhanced by the contributions of the taxpayer. Accordingly, we held that the transfers to the partnership were indirect gifts by the taxpayer to his sons of undivided 25-percent interests in the real property and stock. Id. at 389. The Court of Appeals for the Eleventh Circuit affirmed our decision for the reasons stated in our Opinion.

Petitioners' transfers of stock in the instant case are similar to the transfer of property in Shepherd. In both cases, the value of the children's partnership interests was enhanced by their parents' contributions to the partnerships. Petitioners attempt to distinguish Shepherd by referring to our statement in that case that "not every capital contribution to a partnership results in a gift to the other partners, particularly where the contributing partner's capital account is increased by the amount of his contribution". Id. at 389. Petitioners argue that, in the instant case, petitioners' capital accounts were increased by the amount of their contributions. Petitioners further argue that, under Estate of Jones v. Commissioner, 116 T.C. 121 (2001), it is irrelevant that the contributions of the stock to the partnerships and the transfers of the partnership interests to the children occurred on the same day.

In Estate of Jones, the taxpayer contributed property to the partnerships and received continuing limited partnership interests in return. All of the contributions of property were

properly reflected in the capital accounts of the taxpayer. Id. at 128. In the instant case, however, it is unclear whether petitioners' contributions of stock were ever reflected in their capital accounts. On cross-examination, petitioner testified with respect to SFLP I as follows:

> Q And, at that same time, certainly the same day, you transferred the partnership interests, limited partnership interests from yourself and Michele to the children, correct?
>
> A Yes, sir.
>
> Q And when did you do that? On December 28?
>
> * * * * * * *
>
> A Well, keep in mind that these things have been weeks in the making. So the fact that they triggered at a particular day or on a particular day may or may not be relevant.
>

> A How did that occur? Tell me where you're going. I'm not sure.
>
> * * * * * * *
>
> Q So how did you transfer it from yourself to the children?
>
> A How did I transfer? I'm not certain what the right, what you're looking for here.

It is apparent from petitioner's evasive testimony and from the total record that petitioners were more concerned with ensuring that the beneficial ownership of the stock was transferred to the children in tax-advantaged form than they were with the formalities of FLPs. Indeed, petitioner, as general partner, did not maintain any books or records for the partnerships other than brokerage account statements and partnership tax returns. Those tax returns were prepared months after the transfers of the partnership interests. Thus, they are unreliable in deciding whether petitioners transferred the partnership interests to the children before or after they contributed the stock to the partnerships. The same is true of the certificates of ownership reflecting the transfers of the partnership interests, which were not prepared until at least several weeks after the transfers. The informality is not surprising, inasmuch as petitioners alone, individually, or on behalf of their minor children were united in purpose and acted without restraint by any adverse interest. As a result, however, petitioners have presented no reliable evidence that they contributed the stock to the partnerships before they transferred the partnership interests to the children. At best, the transactions were integrated (as asserted by respondent) and, in effect, simultaneous.

Petitioners argue that there is sufficient evidence showing that they first funded the partnerships and then transferred the partnership interests to the children and direct our attention to the letters that they faxed to their accountant after they had funded the partnerships. Those faxes, however, establish only that petitioners had funded the partnerships. They do not show what the partnership ownership interests were immediately before the funding or how the stock was allocated among the partners' capital accounts at the time of the funding. Moreover, the fax seeking advice with respect to the SFLP II partnership interests was dated 2 days after petitioners had allegedly transferred the partnership interests to the children.

On this record, we conclude that the value of the children's partnership interests was enhanced upon petitioners' contributions of stock to the partnerships. Accordingly, we hold that petitioners' transfers of stock to SFLP I and SFLP II on December 28, 1998, and December 20, 1999, respectively, were indirect gifts of the stock to the children for purposes of sections 2501 and 2511. Respondent has conceded that the January 31, 2000, gifts were gifts of partnership interests and not gifts of stock. The gift tax thus shall be determined on the value of the stock rather than on the value of the partnership interests transferred.

We have considered the other arguments of the parties, and they are either without merit or need not be addressed in view of our resolution of the issue.

To reflect the foregoing and respondent's concessions,

Decision will be entered under Rule 155.

United States Court of Appeals
FOR THE EIGHTH CIRCUIT

No. 05-1118

Mark W. Senda and Michele Senda,	*	
	*	
Appellants,	*	
	*	Appeal from the United States
v.	*	Tax Court.
	*	
Commissioner of Internal Revenue	*	
	*	
	*	
Appellee.	*	

Submitted: September 12, 2005
Filed: January 6, 2006

Before MELLOY, BEAM, and BENTON, Circuit Judges.

BENTON, Circuit Judge.

Mark W. Senda and his wife, Michele Senda, received a notice from the Commissioner of Internal Revenue for deficiencies in gift tax. Reviewing their petition, the tax court[1] found deficiencies of $185,572 for 1998 and $276,321 for 1999. *See* ***Senda v. Comm'r***, 2004 WL 1551275 (T.C. Memo. 2004-160). The Sendas appeal under Section 7482 of the Internal Revenue Code. This court affirms.

[1]The Honorable Judge Mary Ann Cohen, United States Tax Court.

I.

In the spring of 1998, the Sendas created the Mark W. Senda Family Limited Partnership. Mark Senda – as trustee of his revocable living trust – was the general partner with a 10 percent interest, as well as a limited partner with a 89.8397 percent interest. Michele Senda owned a limited interest of 0.1303 percent. According to the partnership agreement, each of their three children had a limited interest of 0.01 percent – held in (an oral) trust with Mark Senda as trustee. The children reported partnership income/losses on their individual tax returns.

On December 28, 1998, in exchange for their interests, the Sendas transferred 28,500 shares of MCI WorldCom stock, then worth about $2 million, to the partnership. The children's trusts, according to Mark Senda, contributed oral accounts receivable (reported at $200) in exchange for their interests – which were unpaid at the time of trial. On their gift-tax return for 1998, the Sendas reported that on December 28, they gave all their limited interests equally to their three minor children.

By December 17, 1999, the Sendas formed a second partnership, Senda & Associates, L.P. Mark Senda's revocable trust was the general partner with a 1.0 percent interest, as well as a limited partner with a 97.97 percent interest. Michele Senda owned a 1.0 percent limited interest. Irrevocable (written) trusts for each child held limited interests of 0.01 percent each.

On December 20, 1999, in exchange for their interests, the Sendas transferred 18,477 shares of MCI WorldCom stock, then worth about $1.5 million, to this partnership. The children's trusts, according to Mark Senda, gave oral accounts receivable (reported at $148) in exchange for their interests – which were unpaid at the time of trial. On their gift-tax return for 1999, the Sendas reported that on

December 20, they gave a total of 53.7 percent limited interest in Senda & Associates, L.P., equally to the trusts for the three children.

The Sendas' essential claim is that they made gifts of partnership interests. The Commissioner says they made indirect gifts of stock. At stake is the value of the gifts. The Sendas value the partnership interests by multiplying the value of the stock by the percentage of interests transferred, and then discounting by (stipulated) lack-of-marketability and minority-status factors. The Commissioner values the gifts at the full undiscounted value of the stock.

II.

The Internal Revenue Code taxes the transfer of property by gift, whether "direct or indirect." 26 U.S.C. §§ 2501(a)(1), 2511(a). The Code "is clear and admits of but one reasonable interpretation: transfers of property by gift, by whatever means effected, are subject to the federal gift tax." ***Dickman v. Comm'r***, 465 U.S. 330, 334 (1984). "Thus, any transaction in which an interest in property is gratuitously passed or conferred upon another, regardless of the means or device employed, constitutes a gift subject to tax." **Treas. Reg. (26 C.F.R.) § 25.2511-1(c)(1).**

A.

According to the Sendas, the tax court should have shifted the burden of proof to the Commissioner on the indirect-gift issue, under Tax Court Rule 142(a)(1). The Commissioner concedes he did not raise this issue in the notice of deficiency, but claims it is not a "new matter." This court reviews de novo whether an issue is a new matter in the tax court. *See* ***Blodgett v. Comm'r***, 394 F.3d 1030, 1040 (8th Cir. 2005).

"A new position taken by the Commissioner is not necessarily a 'new matter' if it merely clarifies or develops the Commissioner's original determination without

requiring the presentation of different evidence, being inconsistent with the Commissioner's original determination, or increasing the amount of the deficiency." ***Id.*** Here, indirect-gift analysis did not require new evidence, did not increase the 1998 and 1999 deficiencies, and was consistent with the value determinations in the deficiency. Thus, the indirect-gift issue was not a new matter, and the burden of proof was on the Sendas. *See* ***Clajon Gas Co. v. Comm'r*** , 354 F.3d 786, 789 (8th Cir. 2004).

B.

The tax court found that the Sendas "presented no reliable evidence that they contributed the stock to the partnerships before they transferred the partnership interests to the children." This sequence is critical, because a contribution of stock *after* the transfer of partnership interests is an indirect gift to the partners (to the extent of their proportionate interest in the partnership). *See* ***Shepherd v. Comm'r***, 283 F.3d 1258, 1261 (11th Cir. 2002), *affirming* ***Shepherd v. Comm'r***, 115 T.C. 376, 388 (2000); *cf.* **Treas. Reg. (26 C.F.R.) § 25.2511-1(h)(1)** (rule for corporations).

The Sendas attack the factual and credibility findings of the tax court. This court reviews tax court decisions in the same manner and to the same extent as decisions of the district court in civil actions tried without a jury. 26 U.S.C. § 7482(a)(1). Factual determinations are reviewed for clear error. *See* ***Estate of Schuler v. Comm'r***, 282 F.3d 575, 578 (8th Cir. 2002). This court upholds factual findings unless "left with a definite and firm conviction" that the tax court committed a mistake. ***Estate of Ford v. Comm'r***, 53 F.3d 924, 926-27 (8th Cir. 1995)(quoting ***Estate of Plamer v. Comm'r***, 839 F.2d 420, 423 (8th Cir. 1988)). Findings of credibility are nearly unreviewable. *See* ***Blodgett***, 394 F.3d at 1035.

The tax court's key findings are:

> It is apparent from petitioner's evasive testimony and from the total record that petitioners were more concerned with ensuring that the beneficial ownership of the stock was transferred to the children in tax-advantaged form than they were with the formalities of FLPs. Indeed, petitioner, as general partner, did not maintain any books or records for the partnerships other than brokerage account statements and partnership tax returns. Those tax returns were prepared months after the transfers of the partnership interests. Thus, they are unreliable in deciding whether petitioners transferred the partnership interest to the children before or after they contributed the stock to the partnerships. The same is true of the certificates of ownership reflecting the transfers of the partnership interests, which were not prepared until at least several weeks after the transfers. The informality is not surprising, inasmuch as petitioners alone, individually, or on behalf of their minor children were united in purpose and acted without restraint by any adverse interest. As a result, however, petitioners have presented no reliable evidence that they contributed the stock to the partnerships before they transferred the partnership interests to the children. At best, the transactions were integrated (as asserted by respondent) and, in effect, simultaneous.

Senda v. Comm'r, T.C. Memo. 2004-160, p. 15.

The Sendas object to these findings, pointing to evidence that they contributed the stock before transferring the partnership interests. First, they rely on their gift-tax returns, the partnership's income-tax returns, and the partnership certificates of ownership. The tax court did not clearly err in ruling these after-the-fact documents unreliable. Second, the Sendas emphasize two letters faxed to tax advisors, one about each partnership, asking what percents of partnership interests should be gifted in order to obtain the best tax treatment. These letters are not conclusive. The first letter is dated the same day as the transfer of stock to the first partnership, and thus does not indicate any specific order of events. The second letter is dated two days after the second stock transfer, although the Sendas' return says they transferred the

partnership interests two days earlier, the same day as the stock transfer. Significantly, the testimony of Mark Senda – that his business practice is to execute documents and transactions "as of" a certain date – undercuts the reliability of the dates on the letters. On this record, the tax court did not clearly err in its factual and credibility findings.

C.

In an alternative tack, the Sendas argue that it is "irrelevant" whether the stock transfer was before or after the gift of partnership interests. They say:

> If the Sendas had made their capital contributions after they made the transfers of their limited partnership interest, the contributions would still have been allocable to the capital accounts associated with the partnership interests retained by the Sendas. Therefore, it was impossible under the terms of the partnership agreements for the Sendas to transfer their capital accounts without transferring the corresponding partnership interests.

The Sendas believe this also distinguishes the *Shepherd* case – which the tax court follows – where the partnership agreement allocated additional contributions pro rata among the partners' accounts. *See* ***Shepherd***, 115 T.C. at 380, 389; 382 F.3d at 1261.

The Sendas overlook the ultimate finding of the tax court. Immediately after concluding that they did not meet their burden of proving that the stock transfers preceded the gifts, the tax court finds: "At best, the transactions were integrated (as asserted by respondent) and, in effect, simultaneous." The tax court recognizes that even if the Sendas' contribution would have first been credited to their accounts, this formal extra step does not matter.

In some situations, formally distinct steps are considered as an integrated whole, rather than in isolation, so federal tax liability is based on a realistic view of the entire transaction. *See* ***Comm'r v. Clark***, 489 U.S. 726, 738 (1989). This step-transaction doctrine is "impliedly included in the gift tax statute itself." *See* ***Sather v. Comm'r,*** 251 F.3d 1168, 1174 (8th Cir. 2001). This court's very first case referencing the gift tax held that the events were "steps in one transaction." ***Oberwinder v. Comm'r***, 147 F.2d 255, 259 (8th Cir. 1945).

Whether several transactions should be considered integrated steps of a single transaction is a fact question which this court reviews for clear error, in the absence of a controlling statute, regulation, or constitutional question. *See* ***Sather,*** 251 F.3d at 1173; ***Dobson v. Comm'r***, 320 U.S. 489, 502 (1943). The general characterization of a transaction for tax purposes is a question of law, subject to de novo review. *See* ***IES Indus., Inc. v. United States,*** 253 F.3d 350, 351 (8th Cir. 2001)(*quoting* ***Frank Lyon Co. v. United States***, 435 U.S. 561, 581 n. 16 (1978)).

The key findings, quoted above, show that the transactions here were integrated and simultaneous. These findings are amply supported. For example, as to the first partnership, Mark Senda testified on cross-examination:

> Q. And, at that same time, certainly the same day, you transferred the partnership interests, limited partnership interests from yourself and Michele to the children, correct?
>
> A. Yes, sir.
>
> Q. And when did you do that? On December 28?
>
> A. When did I do that?
>
> Q. Yes, sir.

A. Well, keep in mind that these things have been weeks in the making. So the fact that they triggered at a particular day or on a particular day may or may not be relevant.

The fact that that happened during that day, I couldn't tell you if it happened at 1:00, 3:00 or 5:00. If that's what you're asking me.

Q. That was what I was asking you. The transfer of the limited partnership interests, how did that occur on December 28, 1998?

A. How did that occur? Tell me where you're going. I'm not sure.

....

Q. So how did you transfer it from yourself to the children?

A. How did I transfer? I'm not certain what the right, what you're looking for here.

Q. Did you just decide that today's the day I'm transferring the interest?

A. My wife and I, with counsel and advice, that happened to be the same day, yes, sir, that all occurred.

The tax court did not clearly err in finding that the Sendas' transfers were integrated steps in a single transaction. Moreover, the general characterization of the transaction is correct as a matter of law.

D.

The Sendas pose two other questions of law (or at least mixed questions of law and fact), which this court reviews de novo. *See* ***Clajon Gas Co.***, 354 F.3d at 789. First, they claim that the tax court ignores Missouri law that an entity (here, the limited partnerships) may not be disregarded "merely because of technical

deficiencies in the documentation or timing of certain transactions, " citing *Fairbanks v. Chambers*, 665 S.W.2d 33, 37 (Mo. App. 1984).

"State law creates legal interests and rights. The federal revenue acts designate what interests or rights, so created, shall be taxed." ***Morgan v. Comm'r***, 309 U.S. 78, 80 (1940). This approach balances the legitimate and traditional interest of the State in creating and defining property interests, and the necessity for uniform administration of the Internal Revenue Code. ***Aquilino v. United States***, 363 U.S. 509, 513 (1960).

The tax court does not violate these established rules in this case. It does not ignore the existence of the family limited partnerships, the transfers to and within them, or the capital provisions of the partnership agreements. To the contrary, the tax court recognizes these facts, and then applies federal law on indirect gifts and step transactions in order to determine how they are taxed.

Finally, the Sendas assert that in gift-tax cases, the step-transaction doctrine is limited to identifying the transferor or transferee. This assertion is refuted by this court's reciprocal-trust cases of *Sather* and *Schuler*: "The application of the reciprocal trust doctrine is not limited only to identifying the true transferor or transferee, but also applies to determining the nature of the property transferred." ***Schuler***, 282 F.3d at 578, *citing* ***Sather***, 251 F.3d at 1174. More generally as to issues beyond reciprocal trusts, such a limitation would contradict the expansive sweep of the gift-tax law itself, which taxes any "indirect" gift. *See* 26 U.S.C. 2511(a); ***Dickman***, 465 U.S. at 335. "The terms 'property,' 'transfer,' 'gift,' and 'indirectly' are used in the broadest and most comprehensive sense." ***Jewett v. Comm'r***, 455 U.S. 305, 309 (1982); ***Smith v. Shaughnessy***, 318 U.S. 176, 180 (1943). In sum, the Sendas' proposed limitation would be contrary to the precedent of the Supreme Court, which calls the step-transaction doctrine "well-established"

and "expressly sanctioned." *See* ***Clark***, 489 U.S. at 738; *cf.* ***Lannan v. Kelm***, 221 F.2d 725, 736 (8th Cir. 1955)("The idea that for purposes of taxation we are concerned with the substance and not the form appears to be well established, especially in regard to intra-family transactions").

III.

The judgment of the tax court is affirmed.

---

607 A.2d 1213 (1992)

In the Matter of the Appraisal of SHELL OIL COMPANY.

Supreme Court of Delaware.

Submitted: February 4, 1992.
Decided: May 26, 1992.

Richard L. Sutton, William O. LaMotte, III and Robert J. Valihura, Jr., Morris, Nichols, Arsht & Tunnell, Wilmington (Rory O. Millson (argued), Cravath, Swaine & Moore, New York City, of counsel), for appellants.

Clark W. Furlow, Smith, Katzenstein & Furlow, Thomas P. Preston and John L. Olsen, Duane, Morris & Heckscher and Lawrence C. Ashby, Ashby & Geddes, Wilmington (H. Lee Godfrey (argued), and Kenneth E. McNeil, Susman Godfrey, Houston, Tex., and Edward M. Selfe, Bradley, Arant, Rose & White, Birmingham, Ala., of counsel), for appellees.

Before MOORE, WALSH, JJ., and TAYLOR, Judge (sitting by designation pursuant to Del. Const. art. IV, § 12).

1215 *1215 WALSH, Justice:

This is an appeal from a decision of the Court of Chancery in an appraisal action brought pursuant to 8 *Del.C.* § 262. Petitioners below-appellees ("petitioners"), former minority shareholders of respondent below-appellant **Shell Oil** Company ("**Shell**"), sought an appraisal of the fair value of **Shell's** common stock on June 7, 1985, the date shareholders were cashed out at $58 per share. The cash out resulted from a short-form merger effectuated by **Shell's** 94.6 percent majority stockholder, respondent below-appellant **Shell** Petroleum, Inc. (f/k/a SPNV Holdings, Inc.) ("Holdings"),[1] as required by a court approved settlement of an earlier class action.

The Court of Chancery determined that the fair value of the shareholders' stock was $71.20 per share at the time of the merger. The court further found that the shareholders were entitled to simple interest at a rate of 10 percent per annum per share. In this appeal, **Shell** challenges the Court of Chancery's fair value determination and the shareholders cross-appeal the Court of Chancery's award of simple interest rather than semi-annual compounding of interest.

We have carefully reviewed the record in this case and have concluded that there is sufficient evidence to support the findings of the Court of Chancery. Accordingly, the decision of the Court of Chancery is affirmed.

I

The events leading up to the privatization of **Shell** and the extensive litigation it spawned are described in detail elsewhere. *See Joseph v. **Shell Oil** Co.,* Del.Ch., 482 **A.2d** 335 (1984) (tender offer materials failed to satisfy disclosure requirements); *Joseph v. **Shell Oil** Co.,* Del.Ch., C.A. Nos. 7450 and 7699-NC, Hartnett, V.C. (April 19, 1985) (approving proposed settlement of class action); *Selfe v. Joseph,* Del.Supr., 501 **A.2d** 409 (1985) (affirming class action settlement); *Simon v. SPNV Holdings, Inc.,* Del.Ch., C.A. No. 8395-NC, Hartnett, V.C. (Oct. 28, 1987; reversed Nov. 2, 1987) (denying defendant's motion to dismiss claims of material nondisclosure in merger materials); *Smith v. SPNV Holdings, Inc.,* Del.Ch., C.A. No. 8395-NC, Hartnett, V.C., 1989 WL 44049 (April 26, 1989) (denying defendant's motion for summary judgment on disclosure claims); *Smith v. **Shell** Petroleum, Inc.,* Del.Ch., C.A. No. 8395-NC, Hartnett, V.C., 1990 WL 84218 (June 19, 1990) (holding that defendant failed to adequately disclose all material facts prior to cash-out merger); *In the **Matter** of the Appraisal of **Shell Oil** Co.,* Del.Ch., C.A. No. 8080, Hartnett, V.C., 1990 WL 201390 (Dec. 11, 1990) (hereinafter *Appraisal of **Shell,*** slip op.); ***Shell** Petroleum, Inc. v. Smith,* Del.Supr., 606 **A.2d** 112 (1992) (affirming the Court of Chancery's award of damages for material misstatements in connection with the cash-out merger). Much of this background is only tangentially related to the issues raised in this appeal. We will therefore summarize it briefly.

Prior to the merger which precipitated these proceedings, **Shell** was a publicly traded **oil** and gas company with substantial

assets throughout the world. It was, however, only one component of a much larger natural resources conglomerate, Royal Dutch Petroleum Company ("Royal Dutch"). Royal Dutch controlled, either directly or through subsidiary holdings, over 70 percent of **Shell's** outstanding shares.

During the early 1980's, Royal Dutch began considering the acquisition of **Shell's** minority shares. To that end, it retained in 1984, the investment banking firm of Morgan Stanley & Co. ("Morgan Stanley") to prepare an estimate of the value of **Shell** stock. Morgan Stanley opined that a share of **Shell** stock was worth $53. Royal Dutch thereafter proposed to **Shell's** Board of Directors that **Shell** merge with Royal Dutch for a consideration of $55 cash for each share of **Shell** stock.

1216 *1216 In response to this offer by its majority stockholder, **Shell's** board appointed an independent committee comprised of six outside directors to consider the offer. The committee retained the firm of Goldman Sachs & Co. ("Goldman Sachs") as its financial advisor and commissioned a study of the fair value of **Shell** stock. In the resulting study, Goldman Sachs concluded that $80 to $85 per share was a range of "high confidence" and that $70 per share was the lowest price it could say was fair. The committee thereupon recommended that the **Shell** Board reject the Royal Dutch offer.

Royal Dutch then commenced a tender offer for any and all shares at a price of $58 per share with the announced intention of effectuating a freeze-out merger after completion of the offer. It completed the offer in 1984, increasing its holdings in **Shell** to 94.6 percent. However, Royal Dutch's planned short-form merger was enjoined during the pendency of litigation which continued to call into question the propriety of the tender offer. *See Selfe v. Joseph,* Del.Supr., 501 **A.2d** 409 (1985). As a result of the decision in *Joseph,* Royal Dutch was required to pay an additional $2 per share to all those shareholders who had tendered into its offer as well as increase the merger consideration from $58 to $60 for the benefit of shareholders not electing the appraisal remedy at the back-end of the transaction. *See Joseph,* 501 **A.2d** at 410.

II

After the merger was complete, 1,005,081 shares qualified for appraisal under 8 *Del.C.* § 262. The Court of Chancery conducted an appraisal hearing which lasted seven days. The parties offered extensive evidence, primarily through competing experts, respecting the value of **Shell** shares as of the date of the merger.

Petitioners' chief witness was Kurt Wulff ("Wulff"), a chemical engineer and graduate of the Harvard Business School. Wulff's experience in the **oil** and gas field spanned twenty years and included financial analysis and asset valuation. To arrive at a fair value for **Shell** shares, he employed three different approaches. First, he offered what he called a Present Value of Equity Analysis. Essentially, this approach entailed a determination of the liquidation value of **Shell's** upstream assets, such as **oil** and gas reserves and exploratory acreage, and the valuation of **Shell's** downstream assets, such as its **Oil** Products and Chemical Products divisions, on a return on investment basis. Wulff concluded that under this method a share of **Shell** stock on June 7, 1985 was worth $100 on a buyer's tax cost basis and $89 on a seller's tax cost basis.

Second, Wulff offered what he termed a Comparative Deal market Analysis. This methodology involved comparing the results yielded by Wulff's Present Value of Equity Analysis with share prices reflected in similar transactions in the **oil** and gas industry, such as DuPont's purchase of Conoco and Chevron's acquisition of Gulf **Oil**. After comparing the transaction at issue here with seventeen other industry acquisitions, Wulff fixed the fair value of a share of **Shell** stock on the merger date at approximately $106.

Wulff's final valuation standard he referred to as a Trading Market Analysis. This inquiry rests on the assumption that the stock of corporations such as **Shell** trade on the open market at a discount from their fair value. To compensate for the effect of merger speculation, Wulff constructed a hypothetical price he believed **Shell** would have traded for on the open market in 1985 had no offer been made in 1984. To this price he added a premium calculated from the premiums over market price obtained by shareholders when other **oil** companies, such as Gulf and Conoco, were acquired. Depending on which comparable was selected, Wulff found a range in value from $92 to $143 per share.

Shell's expert, Morgan Stanley, also took a three pronged approach in its valuation of **Shell**. It first offered a liquidation study using a discounted cash flow of **Shell's** upstream assets and an estimate of the value of **Shell's** downstream assets based

1217 largely on a trading market analysis. *1217 This methodology yielded a valuation of $57.50 per share at the time of merger.

Next, Morgan Stanley offered what it called a Merger Market Analysis. This technique is similar to Wulff's Comparative Deal Market Analysis in that it involved a comparison of **Shell** to other similar companies which had experienced acquisition. Morgan Stanley concluded that this method suggested a fair value of $60 per share.

Finally, Morgan Stanley offered its own Trading Market Analysis based on a calculation of what **Shell** stock would have traded for had there been no merger offer. The quest here was to determine an "unaffected stock price." This was done simply by comparing the price of **Shell** stock to other domestic and international **oil** and gas companies which had not gone through change of control or restructuring transactions in the relevant time period. The conclusion of this analysis was that **Shell** was worth $43 to $45 per share on June 7, 1985.

III

In an extensive opinion, the Vice-Chancellor addressed the merits and deficiencies of the competing value studies. He found neither of the trading market analyses particularly convincing. He assigned no weight to Wulff's Trading Market Analysis due to numerous flaws in the method used to arrive at the price range of $92 to $143. Of particular significance, the court found that Wulff improperly relied, as a basic premise, on the proposition that **Shell** stockholders were entitled to a premium over **Shell's** value. *Cf.* *Cavalier **Oil** Corp. v. Harnett,* Del.Supr., 564 **A.2d** 1137, 1144 (1989). As for Morgan Stanley's Trading Market Analysis, the court concluded that Morgan Stanley's finding that **Shell** stock in June of 1985 would have experienced no change from its January, 1984 price notwithstanding a substantial rise in the market price of other **oil** stocks during the same period, was "highly illogical." This rejection was consistent with the court's earlier finding that **Shell** was "a superior company to most of those studied by Morgan Stanley and should have been priced above the median." *Appraisal of **Shell,*** slip op. at 55. The court therefore afforded Morgan Stanley's Trading Market Analysis very little weight.

The Vice Chancellor also assigned little weight to the proffered techniques based on comparing the **Shell** transaction to other similar "deals." Although he found Wulff's Comparative Deal Market Analysis to be "an acceptable method for evaluating a corporation like **Shell**," Wulff's conclusions were found to be "of little use" because of a number of "inconsistencies and biases in favor of the party paying for the analysis." *Id.* at 32. Specifically, the court viewed Wulff's reliance on the buyer's tax cost basis of his Present Value of Equity Analysis to be a fatal flaw. The Vice Chancellor therefore concluded that Wulff's Deal Market comparisons were "less valid" than his Present Value of Equity Analysis.

Morgan Stanley's Merger Market Analysis fared little better. The Vice Chancellor found, *inter alia,* that Morgan Stanley's calculations were often too "pessimistic" and that Morgan Stanley failed to accord sufficient weight to **Shell's** more valuable domestic reserves, as opposed to its less valuable foreign reserves. The court concluded that the Morgan Stanley's Merger Market Analysis was "less valid" than its Liquidation Value Analysis.

As to the parties' liquidation value techniques, the court found both to be valid methodologies but somewhat flawed in their application. The court characterized Wulff's Present Value of Equity Analysis as "a sufficiently accurate and accepted technique to be entitled to considerable weight in determining the fair value of the shares." *Id.* at 18. However, it noted numerous instances where Wulff made assumptions "based on acceptable, but speculative, factors" and implied that many of these assumptions were "justifiable," yet "optimistic."

Similarly, the court found Morgan Stanley's Liquidation Analysis to be an acceptable valuation technique although it had a
1218 tendency toward understatement. The court commented that "in preparing its estimate [Morgan Stanley] obviously made *1218 hundreds of assumptions as to the value of a particular asset. In most instances it chose the lower, rather than the higher, value.... It is therefore clear that Morgan Stanley's Liquidation Analysis is substantially flawed." *Id.* at 53.

After reviewing the valuation evidence in its effort to fix the fair value of **Shell** stock on the date of the merger, the Court of Chancery expressed some dissatisfaction with the lack of objectivity in the presentations. The court noted that it was "obvious... that the dynamics of this litigation and the economic interest of the parties contributed to the wide differences in the expert opinions" but the court nonetheless believed it was limited "to the record as established by the parties." *Id.* at 80. On balance,

however, the court accepted Wulff's Present Value of Equity Analysis ($89) and Morgan Stanley's Liquidation Value Analysis ($57.50) as the most credible methodologies.

The court finally settled on Wulff's Present Value of Equity Analysis as entitled to the greatest weight. However, because of certain flaws in Wulff's data which tended to skew the result upward, the court applied a twenty percent discount to the $89 figure, producing a fair value for **Shell** stock of $71.20.

The court gave no explanation for its choice of twenty percent as a discount factor. However, it did conclude that portion of its opinion with the following sentence:

> For purposes of information only, it is noted that this figure [$71.20] is not far from the $70 per share "low" value arrived at by Goldman Sachs in 1984 when it prepared an estimate of value for the Independent Committee of **Shell** appointed to consider the offer of Holdings.

Id. at 83. The court then awarded the dissenting shareholders simple interest at a rate of 10 percent per year.

In this appeal both parties express dissatisfaction with the Vice Chancellor's ruling. **Shell** argues that the $71.20 finding is erroneous in three respects. First, it contends the court's valuation determination is essentially a liquidation finding. Second, it claims the trial court erred by giving no weight to the market and earnings values of **Shell** shares. Finally, **Shell** argues that, to the extent either measure of value is relevant, the court erred in selecting Wulff's Present Value of Equity Analysis over Morgan Stanley's Liquidation Value Analysis in light of the court's specific findings which seemingly favor Morgan Stanley's approach.

Petitioners cross appeal a different aspect of the Vice-Chancellor's decision. They contend the court erred in awarding simple rather than compound interest because the only evidence in the record concerning interest supported compounding on a semi-annual basis. They argue it was error for the court to make a finding for which there was no record support.

IV

The legal standards which govern an appraisal of minority shares after a freeze-out merger are not disputed by the parties. Once a shareholder perfects his right to appraisal under 8 *Del.C.* § 262(d), the Court of Chancery is required to determine the "fair value" of his shares, "exclusive of any element of value arising from the accomplishment or expectation of the merger," by considering "all relevant factors." 8 *Del.C.* § 262(h). Fair value, in an appraisal context, measures "that which has been taken from [the shareholder], *viz.,* his proportionate interest in a going concern." *Tri-Continental Corp. v. Battye,* Del.Supr., 74 **A.2d** 71, 72 (1950). In the appraisal process the corporation is valued "as an entity," *Cavalier **Oil** Corp. v. Harnett,* Del.Supr., 564 **A.2d** 1137, 1144 (1989), not merely as a collection of assets, *Bell v. Kirby Lumber Corp.,* Del.Supr., 413 **A.2d** 137 (1980), or by the sum of the market price of each share of its stock, *Chicago Corp. v. Munds,* Del.Ch., 172 A. 452 (1934). Moreover, the corporation must be viewed as an on-going enterprise, occupying a particular market position in the light of future prospects. *See Application of Delaware Racing,* Del.Supr., 213 **A.2d** 203 (1965).

1219 *1219 The appraisal quest at the Court of Chancery level admits of a broad latitude. As this Court ruled in *Weinberger v. UOP, Inc.,* Del.Supr., 457 **A.2d** 701 (1983), the parties to an appraisal action must be afforded the opportunity to present evidence of fair value consisting of "any techniques or methods which are generally considered acceptable in the financial community and otherwise admissible in court." *Id.* at 713. Thus, the scope of the Chancellor's inquiry into fair value is limited only by the appraisal statute's express exclusion "of any element of value arising from the accomplishment or expectation of the merger," 8 *Del.C.* § 262(h), and the Delaware Rules of Evidence. *Weinberger,* 457 **A.2d** at 713.

At the appellate level, when this Court reviews a Court of Chancery determination pursuant to Section 262, we impart a "high level of deference" to that court's findings. *Kahn v. Household Acquisition Corp.,* Del.Supr., 591 **A.2d** 166, 175 (1991). Recognizing that the Court of Chancery, over time, has developed an expertise in cases of this type, we will accept the court's findings if supported by the record and the product of an orderly and logical deductive process. *Levitt v. Bouvier,* Del.Supr., 287 **A.2d** 671 (1972). We will reverse those findings only when they are clearly wrong and the doing of justice requires us to do so. *Id.*

Shell first argues that the Court of Chancery erred by according 100 percent weight to Wulff's Present Value of Equity Analysis. It claims this was improper because that analysis, in effect, reflected a liquidation value, contrary to Delaware law, which precludes the use of liquidation value as the sole measure of the fair value of appraised shares. *See* *Bell v. Kirby Lumber Corp.,* Del.Supr., 413 **A.2d** 137 (1980). As **Shell** interprets the court's findings, the Vice Chancellor selected the result yielded by one valuation method, to the exclusion of other approaches and then arbitrarily discounted that value to account for perceived defects in the underlying study. Since Wulff's Present Value of Equity approach is premised on the value of **Shell** stock it remains, even when discounted, the argument runs, a liquidation approach which ignores "going concern" value.

We believe this argument mischaracterizes the trial court's findings. Our review of the court's opinion suggests that while the Vice Chancellor gave "considerable weight" to Wulff's Present Value of Equity Analysis he did not accept it, at face value, as a liquidation study. *See Appraisal of **Shell,*** slip op. at 62. Although the court considered the Present Value of Equity technique to be a "variation" of Morgan Stanley's Liquidation Value Analysis, it did not conclude that Wulff's technique produced a liquidation value.

Even if it be assumed, *arguendo,* that Wulff's Present Value of Equity Analysis is a thinly disguised liquidation study, it was considered as merely part of the total body of valuation evidence presented. At trial, the court was offered six valuation techniques, three from each side and it made discriminating judgments concerning them. As previously noted, it found that Wulff's Present Value of Equity Analysis, "although seriously flawed, must be given considerable weight." It further determined that Wulff's Comparative Deal Market Analysis because of a number of inconsistencies was "entitled to less consideration in determining the fair value of **Shell's** stock than is petitioner's Present Value of Equity Analysis." And finally, it found Wulff's Trading Market Analysis to be "entitled to no weight."

As for **Shell's** evidence, the court found Morgan Stanley's Liquidation Value Analysis to be "substantially flawed" but concluded that it was one of "the two most creditable methodologies presented." It described Morgan Stanley's Merger Market Analysis as flawed and "less valid than [Morgan Stanley's] Liquidation Value Analysis." Finally, the court concluded that the result obtained from Morgan Stanley's Trading Market Analysis was "highly illogical" and was therefore "less valid than is its Liquidation Value Analysis."

1220 Far from relying solely on Wulff's Present Value of Equity Analysis, the Vice *1220 Chancellor credited, albeit in varying degrees, each technique offered except Wulff's Trading Market Analysis, which he rejected because of its premise that **Shell** stock should command a premium over market value. In discounting the Present Value of Equity result, the court was recognizing, tacitly at least, that **Shell's** evidence, which tended to undervaluation, was entitled to some consideration. When so viewed, the court's final figure of $71.20 is clearly supportable and not the product of a liquidation analysis alone.

Shell also argues that the Vice Chancellor's selection of a discount factor was arbitrary. We do not agree. The parties had presented reams of evidence on valuation, most of which was biased to favor the position of the presenter. The competing "bottomline" valuation figures were poles apart. Unless the court slavishly adopted the position of one party, the ultimate determination of value, of necessity, was to be selected from a broad range of values. Here the final value chosen ($71.20) is very close to the mid-way mark between the two values the court found to be most credible, $89.00 (Present Value of Equity) and $57.50 (Morgan Stanley's Liquidation Value).

The trial court's selection of $71.20 per share was also verified by comparison with another view not directly tendered by the parties. The Goldman Sachs opinion, prepared in 1984 for **Shell's** Independent Committee, fixed $70 as at the low end of the range of fairness.[2] That independent assessment imparted an inference of reasonableness to the court's finding. When a court is faced with a lack of reliable direct evidence of value, or when doubt exists as to the accuracy of its findings, it is appropriate for the court, as a fact-finder, to test its conclusions against other evidence in the record before it. *Kahn,* 591 **A.2d** at 175. Given our standard of review, we cannot say the trial court's resulting conclusion was not the product of an orderly and logical deductive process.

Shell next argues that the trial court erred by giving no weight to the trading value of **Shell's** stock. It contends that instead of totally rejecting Morgan Stanley's Trading market Analysis, the court should have adjusted the input to that analysis in order to reach a fair result.

Initially, we note that the Vice Chancellor considered substituting data from other models into Morgan Stanley's Trading Market Analysis. However, it concluded that, in this case, that device was "not an acceptable alternative ... because of the difficulty of interchanging data from differing models." *Appraisal of **Shell*** at 82. Given our standard of review and the Court of Chancery's long-earned expertise in these matters, we cannot say this conclusion was clearly wrong. At any rate, **Shell's** argument mischaracterizes the court's findings. The Vice Chancellor did not "totally reject" Morgan Stanley's Trading Market Analysis. It simply found its result to be "highly illogical" and that it was "less valid" than the Liquidation Value Analysis. As we stated above, it is clear that the trial court relied on almost all of the evidence offered, including Morgan Stanley's Trading Market Analysis. Again, we cannot say that the court's treatment of that analysis was improper.

Finally, **Shell** contends the trial court erred by according any weight to Wulff's Present Value of Equity Analysis since that technique is not "generally accepted in the financial community," as required by our decision in *Weinberger,* 457 **A.2d** at 713. As a corollary to this argument it asserts that the trial court erred in favoring Wulff's equity analysis to Morgan Stanley's much sounder valuation study. We disagree.

This argument is somewhat disingenuous. In essence, **Shell** claims that a method of valuation it labels "liquidation analysis," is not generally accepted in the financial community, while at the same time tendering its own liquidation analysis. As we noted
1221 above, Wulff's Present Value of Equity approach consisted of determining the liquidation value of **Shell's** upstream *1221
assets and the return on investment value of **Shell's** downstream assets. The trial court specifically determined this to be an acceptable valuation technique and indeed noted that this approach was "really a variation of the Liquidation Analysis used by [Morgan Stanley]."

Liquidation value is one factor relevant to a fair value inquiry and an acceptable technique, with others, upon which the Court of Chancery can rely. *See Kirby Lumber,* 413 **A.2d** at 142-3. Liquidation value cannot, however, be viewed as a substitute for, or interchangeable with, fair value. We do not view Wulff's technique as a pure liquidation value analysis, however, because it entailed a consideration of cash flow characteristics, future growth potential and industry recognition of the strength of **Shell's** downstream assets. These considerations point to more than just the reflective value of **Shell's** physical assets. Nothing in the record suggests that the trial court's decision to accept a method of valuation so similar to **Shell's** own plainly acceptable method was clearly wrong. *Levitt v. Bouvier,* Del.Supr., 287 **A.2d** 671, 673 (1972).

Shell also argues that specific findings of the trial court regarding the relative persuasiveness of the evidence required preference of Morgan Stanley's liquidation value technique. It claims that the trial court's findings favored Morgan Stanley's valuation of **Shell's** reserves and exploratory acreage, in contrast to what it claims is a lack of any findings regarding Wulff's valuation of **Shell's** downstream assets. **Shell** argues that, given the implications of these findings (and lack thereof), it was error for the court to totally reject Morgan Stanley's valuations.

We find this argument to be unpersuasive in two respects. First, the trial court clearly gave at least some weight to each of Morgan Stanley's techniques. Second, the argument ignores our standard of review.

The trial court made numerous conclusions as to the acceptability and weight of all the evidence presented. It also made specific findings comparing the persuasiveness of the various techniques. Even if we were to conclude that the court should have favored Morgan Stanley over Wulff, we would not reverse the trial court on that ground alone because the initial choice is not ours to make. The discretion to weigh the evidence belongs to the Court of Chancery with our review one of abuse of that discretion. *Delaware Racing,* 213 **A.2d** at 207. In this case, each party's valuation evidence was replete with deficiencies and so susceptible to bias that indiscriminate endorsement of either would have been indefensible, even though technically supported by the record. As **Shell's** primary expert rather candidly admitted at trial, "Valuation is an art rather than a science." So too is the weighing of evidence in the appraisal process. More than anything else, this emphasizes the broad discretion which the Court of Chancery must have in fixing values. The Vice Chancellor's conclusions are amply supported by the record and the product of an orderly and logical deductive process. We therefore decline to disturb them.

V

Petitioners have also appealed from the Vice Chancellor's awarding of simple interest because the record contains no evidence

to support such an award. They contend that both experts who testified on the interest question adopted a compounding approach.

The decision to award simple or compound interest at a particular rate is within the sound discretion of the Court of Chancery. 8 *Del.C.* § 262(i); *Rapid-American Corp. v. Harris,* Del.Supr., 603 **A.2d** 796, 807 (1992). Of course, an award made arbitrarily or capriciously would be an abuse of that discretion. *Pitts v. White,* Del.Supr., 109 **A.2d** 786, 788 (1954).

In the present case, **Shell's** expert, Robert Case, of Morgan Stanley, espoused an interest rate of 7.7 percent while Petitioners expert, John Beyers, testified that the interest rate should be 10 to 10½ percent compounded semi-annually. Although the
1222 parties are now in disagreement over *1222 whether Case also recommended a compounding of interest, the record reflects that Case's ultimate position was at least neutral on the question. The Petitioners did not argue in the trial court that there was no record support for the award of simple interest and, indeed, the Vice Chancellor reviewed Case's testimony as reflecting a position in favor of "7.6% to 7.7%, simple interest." *Appraisal of **Shell,*** slip op. at 84. Although the Vice Chancellor found Case's testimony "less credible" than Beyers' because he had earlier opined in favor of a semi-annual compounded interest rate, it was clearly within his discretion to accept Case's recommendation of simple interest while at the same time fixing the interest rate near the figure recommended by Beyers.

In view of the trial court's opportunity to hear the expert testimony and evaluate the credibility and demeanor of the witnesses, we are not inclined to disturb the discretion exercised here in the awarding of simple interest. *Rapid-American* at 809.

VI

Although our affirmance of the Court of Chancery's appraisal determination resolves the merits of this appeal, we take the occasion to comment upon a recurring theme in recent appraisal cases — the clash of contrary, and often antagonistic, expert opinions on value. The presentation of widely divergent views reflecting partisan positions in appraisal proceedings adds to the burden of the Court of Chancery's task of fixing value. Such extremes may result in the court's rejection of both opinions in favor of a middle position. *See, e.g., Kahn v. Household Acquisition Corp.,* 591 **A.2d** at 172. As the trial court noted in this case: "one thing is clear from the evidence in this trial whether consciously or unconsciously, the opinions expressed by the expert witnesses significantly reflected the desires of their clients." *Appraisal of **Shell,*** slip op. at 13. We impute no impropriety to the participants in this or other appraisal litigation in their efforts to advance their respective positions. That is to be expected in an adversarial system. But if the Court is limited to the biased presentation of the parties, it is often forced to pick and choose from a limited record without the benefit of objective analysis and opinion. To compensate for this handicap, the Court of Chancery should consider, in a proper case, appointing its own expert witness.

Apparently, no Delaware Court has ever appointed a neutral expert witness upon its own initiative. However, federal courts have not hesitated to make such appointments. Those courts derive their authority to do so from their inherent power and from the express language of Rule 706 of the Federal Rules of Evidence. The Advisory Committee to the federal rules has noted that "[t]he inherent power of a trial judge to appoint an expert of his own choosing is virtually unquestioned." Fed. R.Evid. 706 advisory committee's note. The Third Circuit Court of Appeals has also noted that "the inherent power of a trial judge to appoint an expert of his own choosing is clear." *United States v. Green,* 3rd Cir., 544 F.2d 138, 145 (1976).

While the Court of Chancery rules do not contain a parallel to Federal Rule 706, this Court has held that even in the absence of a parallel federal rule, the spirit and purpose of the federal rules have always been within the inherent power of our courts. *See Cebenka v. Upjohn Co.,* Del. Supr., 559 **A.2d** 1219, 1225 (1989). Accordingly, we believe that the Court of Chancery has the inherent authority to appoint neutral expert witnesses. There is, of course, no requirement that the court do so. For example, the court need not appoint an expert when "additional experts would ... add more divergence and opinion differences." *Georgia-Pacific Corp. v. United States,* 640 F.2d 328, 334, 226 Ct.Cl. 95 (1980). The procedural steps mandated by Federal Rule 706 offer helpful guidelines where such an appointment is contemplated.

Federal Rule 706 requires the court to "enter an order to show cause why expert witnesses should not be appointed." Fed.
1223 R.Evid. 706(a). The order to show cause may be entered on the court's own initiative *1223 or on the motion of any party. *See Lightfoot v. Walker,* S.D.Ill., 486 F.Supp. 504, 506 (1980). The expert should be appointed sufficiently in advance of trial as to

permit opportunity for hearings on the appointment, consent of the expert, notification of duties, research by the expert, and a communication by the expert to the parties informing them of his findings.

The selection of the expert is solely within the discretion of the trial judge. The trial judge may appoint an expert of his own choosing or seek a list of nominations from the parties. *See* *Gates v. United States,* 10th Cir., 707 F.2d 1141, 1144 (1983). Once an expert has been retained by the Court of Chancery, the court should communicate with the expert in writing, filing a copy of the correspondence with the clerk or at a conference in which the parties have an opportunity to participate. *See* Fed.R.Evid. 706(a). Appellate review of the trial court's appointment of an expert or lack thereof proceeds under an abuse of discretion standard.

The court appointed expert is subject to the same standards which govern other expert witnesses under the Delaware Rules of Evidence. The expert must advise the parties of all findings and submit to depositions. Once trial commences, it is incumbent upon the trial judge to arrange for the court's expert witness to testify if neither party calls him as a witness. The court's expert must be subject to cross-examination by both parties, even if one party chose to call him as its witness. Finally, the court's expert should be reasonably compensated by the parties in such proportion and at such intervals as the trial court determines. [3]

We do not mandate the use of court appointed experts in any case, leaving such determination to the discretion of the trial judge, but we believe the time has come for the Court of Chancery to avail itself of such a practice whenever it believes that a more objective presentation of evidence is required, particularly in valuation matters. Finally, we suggest that the Court of Chancery consider the adoption of a rule, modeled after Federal Rule 706, which will implement its inherent authority in this area.

[1] Because their interests are the same, **Shell** and Holdings will hereafter be referred to collectively as "**Shell**."

[2] This opinion is contained in the record to this proceeding.

[3] While we express the hope that the use of such an expert will bring greater reason and clarity to the appraisal process, nothing we say here should be construed as requiring the trial court to accept the findings, conclusions or opinions of that expert. Such an appointment has no effect whatever in limiting the Court of Chancery's broad discretion in fixing fair value of corporate stock in an appraisal action.

Stern v. Stern

66 N.J. 340 (1975)

331 A.2d 257

SUSANNE H. STERN, PLAINTIFF-RESPONDENT, v. MILTON H. STERN, DEFENDANT-APPELLANT.

The Supreme Court of New Jersey.

Argued October 21, 1974.

Decided January 23, 1975.

Mr. Monroe Ackerman argued the cause for appellant (Messrs. Rudd and Ackerman, attorneys; Mr. Neil Braun, on the brief).

Mr. Everett M. Scherer argued the cause for respondent (Messrs. Riker, Danzig, Scherer and Brown, attorneys; Mr. Scherer, of counsel; Mr. Thomas C.C. Humick, on the brief).

The opinion of the Court was delivered by MOUNTAIN, J.

In this matrimonial action plaintiff, Susanne H. Stern, was granted a divorce on the ground of adultery from her husband, the defendant, Milton H. Stern. The court likewise awarded the plaintiff alimony and child support and effected an equitable distribution of property pursuant to N.J.S.A. 2A:34-23. 123 N.J. Super. 566 (Ch. Div. 1973).[1] The Appellate Division affirmed. 128 N.J. Super. 198 (1974). We granted certification at the instance of the defendant. 65 N.J. 568 (1974).

There is no challenge to the grant of a divorce. Defendant does, however, contend that the amounts of alimony and child support are excessive and that the trial judge acted improperly in the manner in which he identified and thereafter allocated marital assets between the spouses.

We perceive no error either in the amount of alimony or of child support. In respect to each of these awards the determination of the court below finds ample support in the record. The nature of the property that the trial court was called upon to examine in

[1] In the Chancery Division the cause is entitled *S.C. v. A.C.* While we continue to believe that the use of initials in order to disguise the true identity of litigants serves a legitimate end where the interests of minor children are concerned, as well as upon other miscellaneous but rare occasions, we do not approve a resort to this practice where the effort is to throw the protective cloak of anonymity over a successful and well-known member of the bar, as would appear to have been the case here.

effecting distribution, and the manner in which the allocation of these assets was made, do present issues which this Court has not heretofore considered.

Defendant was ordered to pay to the plaintiff $36,000 annually as alimony and $4,000 a year as support of a minor child. Additionally, by way of distribution of marital property, he was directed to pay the plaintiff $100,000 in forty equal consecutive quarterly installments.[2]

Defendant is a partner in a very successful, well-known and highly respected law firm. As an attorney his personal earning capacity is thoroughly proven. He concedes that his partnership interest is an asset eligible for distribution pursuant to N.J.S.A. 2A:34-23. He objects, however chiefly upon two particular grounds to the property distribution made by the trial judge. First, he disputes the inclusion and method of valuation of certain assets in determining partnership worth; secondly, he contests the propriety of considering his earning capacity as being a separately identified and distinct item of property, and as such eligible for apportionment under the statute.

We first consider the latter objection. In undertaking the statutory allocation of marital assets, the trial judge included, apparently as a separate item of property, defendant's earning capacity. The opinion states,

His ability [earning capacity] is an amorphous asset of this marriage in the absence of other assets. It consists of natural ability, undergraduate and postgraduate education, marriage to the daughter of a man of high standing and lucrative income in the area of his professional activity, entree' to his office and ultimate partnership, subsequent management of the firm, with advancement in the esteem of his professional peers. [123 N.J. Super. at 568]

We agree with defendant's contention that a person's earning capacity, even where its development has been aided and enhanced by the other spouse, as is here the case, should not be recognized as a separate, particular item of property within the meaning of N.J.S.A. 2A:34-23.[3] Potential earning capacity is doubtless a factor to be considered by a trial judge in determining what distribution will be "equitable" and it is even more obviously relevant upon the issue of alimony. But it should not be deemed property as such within the meaning of the statute.

As we have indicated, defendant readily concedes that his partnership interest is an asset that has been acquired during marriage and that it qualifies and is eligible for

[2] Plaintiff, by agreement of the parties, was to become sole owner of the marital dwelling and its contents, but defendant was to receive compensation from the plaintiff for one-half its value of $52,400. This payment of $26,200, from plaintiff to defendant, to be made over a ten-year period, will result in reducing defendant's annual payments to plaintiff to the sum of $7,380.

[3] In at least one community property state, a court has rejected the notion that a college and law school education, though financed in part by the other spouse, may be considered a separate community asset. *Todd v. Todd,* 272 Cal. App. 2d 786, 78 Cal. Rptr. 131 (Ct. of App. 1969). But see Comment, The Interest of the Community in a Professional Education, 10 *Cal. West. L. Rev.* 590 (1974).

equitable distribution. He disputes, however, the manner in which this property interest has been valued and objects to the size of the share allocated to the plaintiff.

Placing a precise or even an approximately accurate value upon an interest in a professional partnership, when the partner whose interest is in question intends to continue as a member of the firm is no easy matter. Circumstances preclude our customary resort to market value. Some other method of determining worth must be employed. Here the terms of the partnership agreement are of help. There appear in this document four quite distinct payment plans applicable with respect to a partner who withdraws from the firm, becomes disabled, dies or retires. Of these, probably the most accurate and certainly the most useful for present purposes is the formula for the calculation and payment of a partner's interest to his personal representative upon death. In such an event, according to the articles of partnership, his estate is to receive the then value of his capital account, readily determinable from the partnership books, together with a fixed sum appearing after the partner's name on a schedule appended to the partnership agreement. This schedule is revised quarterly. It is obviously intended to reflect those elements of partnership worth other than the member's capital account. The testimony reveals that these payments, occasioned by death, are to be funded with the proceeds of life insurance on the lives of the several partners, the policies being owned by and the proceeds payable to the firm. The amount appearing after defendant's name on the schedule attached to the copy of the partnership agreement which was received in evidence was $167,500. We think the trial court would be justified in adding to this sum the value of defendant's capital account and treating the total as the presumptive value of defendant's partnership interest in the firm. We say presumptive value only, because either plaintiff or defendant will be entirely at liberty to challenge the figure so determined as not being reflective of true value.

Generally speaking the monetary worth of this type of professional partnership will consist of the total value of the partners' capital accounts,[4] accounts receivable, the value of work in progress, any appreciation in the true worth of tangible personalty over and above book value, together with good will,[5] should there in fact be any; the total so arrived at to be diminished by the amount of accounts payable as well as any other liabilities not reflected on the partnership books. Once it is established that the books of the firm are well kept and that the value of partners' interests are in fact periodically and carefully reviewed, then the presumption to which we have referred should be subject to effective attack only upon the submission of clear and convincing proofs.[6]

---

[4] This partnership keeps its books on a cash basis.

[5] The good will of a law firm, for ethical reasons, may not be sold or transferred for a valuable consideration. N.J. Advisory Committee on Professional Ethics, Opinion 48, 87 N.J.L.J. 459 (1964); Opinion 80, 88 *N.J.L.J.* 460 (1965). It may, however, in a given case, be possible to prove that it does exist and is a real element of economic worth. Concededly, determining its value presents difficulties. Rev. Rul. 609, 1968-2 Cum. Bull. 327.

[6] Generally, a requirement that a presumption may only be rebutted by a degree of proof stronger than that usually required upon a civil issue, should be supported by some policy consideration. In re Weeks, 29 N.J. Super. 533, 538 (App. Div. 1954). Here we are moved to express the rule in these terms in an effort to simplify as much as possible the submission of proofs in matrimonial actions involving the issue

Defendant offers a number of objections to the consideration of partnership accounts receivable in connection with the proposed equitable distribution. Most of his argument rests upon the mistaken assumption that the court is directing the apportionment of the accounts themselves. This is not the case. The accounts receivable are not the subject matter of any proposed distribution; they are being examined and valued simply as one element to be included in determining the entire worth of defendant's partnership interest. It is the latter asset that is being allocated between the parties.

The further contention is made that if accounts receivable are to be considered at all, then their value should be diminished by the estimated amount of federal income tax that defendant will be required to pay in respect of these accounts, or some part thereof, as they reach him in the form of later partnership distributions. This argument also misconceives the purpose for which the accounts receivable are being considered to fix a total value of defendant's partnership interest. The value of the latter asset is in no way diminished by the fact that defendant may thereafter be called upon to pay an income tax resulting in substantial part from his receipt of income from the partnership. The fact that he will pay a tax on these receipts may be a relevant consideration when considering whether a distribution is equitable and it is clearly relevant with respect to the determination of alimony, but it does not affect the value of defendant's interest in the law firm.

Finally, it is urged that the accounts receivable should be excluded from consideration because they are not a property interest that has "vested" in the defendant. What we have already said would seem an adequate answer to this argument. We take the opportunity, however, to suggest that the concept of vesting should probably find no significant place in the developing law of equitable distribution. The notion of a vested interest came into being in a feudal society and was intimately associated with the medieval concept of seisin. Holdsworth, *An Historical Introduction to the Land Law,* (1927) 68; Jenks, *A Short History of English Law,* (4th ed. 1928) 84-5. It has played an important part in the development of the law of future interests, and early assumed a crucial role in the portion of that law dealing with the rule against perpetuities. On the other hand and in a quite different context the phrase, "vested rights," is occasionally used to denote something to which constitutional guaranties may apply. 1 Simes and Smith, *The Law of Future Interests* (2nd ed. 1956) sec. 136, 116-18; *Rothman v. Rothman,* 65 N.J. 219, 225 (1974). These now customary usages of the concept of vesting are clearly in no way relevant to the question of effecting an equitable distribution upon the occasion of a divorce. Our statute requires, in order that property be available for distribution incident to a divorce, that it shall have been acquired during marriage. There is no reference to vesting. With only this brief word upon the subject, which is not really before us, we leave for another day any further discussion of the important and possibly difficult question as to what future interests may qualify as "property" within the meaning of N.J.S.A. 2A:34-23.

---

of property distribution. We are also mindful of the inherent likelihood that such figures, derived from the firm's books and agreement of partnership, will be substantially accurate.

Subject to what immediately follows, those portions of the judgment below that pertain to the award of alimony and child support are affirmed; those portions pertaining to the distribution of marital assets are vacated and set aside and the case is remanded for further proceedings consistent with this opinion and with the opinions of this Court in *Chalmers v. Chalmers,* 65 N.J. 186 (1974); *Painter v. Painter,* 65 N.J. 196 (1974) and *Rothman v. Rothman,* supra, 65 N.J. 219 (1974), all of which were decided subsequent to the entry of the judgment from which this appeal was taken and which in some respects announced rules contrary to those followed by the trial judge in this case.[7] The amount of alimony may be reviewed should the trial judge, on remand, conclude that his then disposition of the issue of equitable distribution requires some change in this award.

For affirmance in part and reversal and remandment in part Chief Justice HUGHES and Justices JACOBS, HALL, MOUNTAIN, SULLIVAN, PASHMAN and CLIFFORD 7.

Opposed None.

[7] For instance, before the trial court, certain gifts received during marriage were excluded as being ineligible for equitable allocation. This Court adopted a contrary view in *Painter v. Painter,* supra, 65 N.J. at 214.

Estate of Stone v. Commissioner

T.C. Memo. 2003-309

UNITED STATES TAX COURT

ESTATE OF EUGENE E. STONE, III, DECEASED, C. RIVERS STONE, E.E. STONE, IV, MARY STONE FRASER & ROSALIE STONE MORRIS, CO-PERSONAL REPRESENTATIVES, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

ESTATE OF ALLENE W. STONE, DECEASED, C. RIVERS STONE, INDEPENDENT EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket Nos. 13647-01, 14195-01. Filed November 7, 2003.

John W. Porter, Stephanie Loomis-Price, and Robert E. August, for petitioners.

J. Craig Young, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

CHIECHI, Judge: Respondent determined deficiencies in Federal estate tax (estate tax) with respect to the Estate of

Eugene Earle Stone, III (Mr. Stone's estate), and the Estate of Allene W. Stone (Ms. Stone's estate) in the amounts of $3,268,401 and $741,809, respectively. The only issue remaining for decision in the case of Mr. Stone's estate is whether certain assets owned by each of five family limited partnerships (Five Partnerships) are includible in his gross estate under section 2036(a)(1).[1] We hold that none of the assets owned by any of the Five Partnerships is includible in Mr. Stone's gross estate under section 2036(a)(1). There are two issues remaining for decision in the case of Ms. Stone's estate. The first issue is whether certain assets owned by each of the Five Partnerships are includible in her gross estate under section 2036(a)(1). We hold that none of the assets owned by any of the Five Partnerships is includible in Ms. Stone's gross estate under section 2036(a)(1). The second issue is whether certain assets owned by one of the Five Partnerships is includible in Ms. Stone's gross estate under section 2044. We hold that none of the assets owned by that partnership is includible in Ms. Stone's gross estate under section 2044.

FINDINGS OF FACT

Many of the facts have been stipulated and are so found

[1]Unless otherwise indicated, all section references are to the Internal Revenue Code in effect on the respective dates of the deaths of Eugene Earle Stone, III (Mr. Stone), and Allene W. Stone (Ms. Stone). All Rule references are to the Tax Court Rules of Practice and Procedure.

except as discussed below.

Mr. Stone was a resident of South Carolina at the time of his death on June 5, 1997. Ms. Stone was a resident of South Carolina at the time of her death on October 16, 1998.

Mr. and Ms. Stone had four children (children): Eugene Earle Stone, IV, C. Rivers Stone, Rosalie Stone Morris (Ms. Morris), and Mary Stone Fraser (Ms. Fraser). At the time the respective petitions in these consolidated cases were filed, Eugene Earle Stone, IV, C. Rivers Stone, and Ms. Fraser resided in South Carolina, and Ms. Morris resided in Georgia.

In 1933, Mr. and Ms. Stone founded several successful ventures in the apparel industry. Thereafter, at a time before 1976 not disclosed by the record, those ventures became Stone Manufacturing Co. (Stone Manufacturing), a global manufacturer and distributor of apparel, located in Greenville, South Carolina. At least as early as the 1980s, Stone Manufacturing focused on sports apparel and in particular soccer apparel.

In 1939, Mr. Stone purchased approximately 60 acres of real property known as Cherrydale (Cherrydale property), located in Greenville County, South Carolina, for the purpose of relocating the manufacturing facilities of Mr. and Ms. Stone's apparel-industry business to that property. Shortly after purchasing the Cherrydale property, Mr. and Ms. Stone began to use it, except for the Cherrydale residence discussed below, as the location for

the operations of that business.[2]

Around 1950, after having made the repairs necessary to make it habitable, Mr. and Ms. Stone along with their children (collectively, the Stone family) began residing in the house situated on the Cherrydale property, which had been built in the 1840s. (We shall refer to the house and the approximately four acres of surrounding land on the Cherrydale property where the Stone family began residing around 1950 as the Cherrydale residence.)

From at least as early as 1994 until their respective deaths, Mr. Stone lived in North Carolina on a 582.672-acre parcel of land located on certain real property known as Cedar Mountain (Cedar Mountain property),[3] and Ms. Stone lived in a villa in The Cypress of Hilton Head (Cypress villa) on Hilton Head Island, South Carolina.

By the late 1980s or the early 1990s, the Cherrydale residence had begun to deteriorate, although the Cherrydale property was still being used as the location for Stone Manufacturing's

---

[2]Although not altogether clear from the record, it appears that at some time after Mr. Stone purchased the Cherrydale property he transferred that property, except for the Cherrydale residence discussed below, to Stone Manufacturing.

[3]Mr. and Ms. Stone's Cedar Mountain property, located in Little River Township, N.C., north of Greenville, S.C., consisted at least as early as 1994 of a 582.672-acre parcel, a 1054.415-acre parcel, and a .338-acre parcel, which they accumulated over approximately a 50-year period. During that time, Mr. and Ms. Stone carried out their vision of developing the Cedar Mountain property by, inter alia, building various lakes and bridges and at least one residence on that property.

operations. Because those operations were in such close proximity to the Cherrydale residence, Mr. Stone and Stone Manufacturing decided that that residence could serve as a place to house out-of-town business visitors to its facilities. To that end, in late summer 1995, renovation work commenced on the Cherrydale residence and was completed in the fall of 1997. During that renovation, the Cherrydale residence was uninhabitable.

In 1976, Mr. Stone formed Stones, Inc., as a holding company of Stone Manufacturing and owned 100 percent of the common stock of that holding company. (For convenience, we shall sometimes refer to Stones, Inc., and Stone Manufacturing, separately and collectively, as the Company.) From 1976 until April 1997, Mr. Stone owned a preferred stock interest in Stones, Inc.

On December 30, 1976, Mr. Stone made a gift of 2,250 shares, or 50 percent, of the common stock of Stones, Inc., to each of two trusts (collectively, the trusts) that he established, one for the benefit of his children and one for the benefit of his grandchildren. At the time the trusts were formed, Stones, Inc., owned 83.4 percent of the common stock of Stone Manufacturing. At that time, C. Rivers Stone, who became president of Stone Manufacturing shortly before Mr. Stone established the trusts,[4]

[4]C. Rivers Stone, who as a teenager began working for Stone Manufacturing during the summers, remained president of Stone Manufacturing until around 1999 when he stopped working for the Company.

and John J. Brausch (Mr. Brausch), a senior executive officer of Stone Manufacturing, were trustees of the trusts.

At least as early as April 28, 1992, Stones, Inc., owned 83.4 percent, each of the children owned 4.1 percent, and Ms. Stone owned the remaining .2 percent of the common stock of Stone Manufacturing. At least as early as that date, Eugene Earle Stone, IV, who became a vice president of Stone Manufacturing in 1978 and became its chief executive officer in 1982,[5] C. Rivers Stone, and Mr. Brausch, all of whom were also officers and directors of Stones, Inc., were trustees of the trusts.

At all relevant times, Ms. Morris and her husband, Charles H. Morris (Mr. Morris), were involved in the newspaper business in Savannah, Georgia. Ms. Fraser and her husband, Charles Fraser (Mr. Fraser), were, along with C. Rivers Stone, involved in the development of Sea Pines Plantation located on Hilton Head Island, South Carolina. At no relevant time were Ms. Morris and Ms. Fraser involved in the day-to-day affairs of the Company.

At least as early as around the late 1980s, Mr. Stone and Ms. Stone were serving as directors of the Company, but they were no longer involved in the day-to-day affairs of its business. At least as early as the last six months of 1995, Mr. Stone and Ms. Stone were in control of their respective assets, but they no

[5]Eugene Earle Stone, IV, remained chief executive officer of Stone Manufacturing at all relevant times.

longer were interested or actively involved in managing those assets and wanted their children to become actively involved in the management of those assets.

During the 1980s, Stone Manufacturing, which employed about 4,000 people, acquired from Umbro, an internationally known manufacturer and distributor of soccer apparel, the right to distribute Umbro's products within the United States. In late 1991, Stone Manufacturing began discussions regarding the possibility of acquiring from Umbro the right to distribute Umbro's products internationally. On April 28, 1992, Stone Manufacturing and the owners of Umbro signed a purchase agreement under which Stone Manufacturing agreed to acquire the right to distribute Umbro's products internationally.

On April 28, 1992, Ms. Morris, Ms. Fraser, and their respective children filed a petition (petition) in a Probate Court in South Carolina (Probate Court) against Eugene Earle Stone, IV, C. Rivers Stone, and Mr. Brausch, as trustees of the trusts, and against the children of C. Rivers Stone, as beneficiaries of one of the trusts. (We shall refer to that litigation as the litigation among the children and to all the parties in that litigation as the parties in the litigation among the children.) Eugene Earle Stone, IV, discussed the litigation among the children with his parents, but neither Ms. Stone nor Mr. Stone was or became a party in that litigation.

The petition in the litigation among the children included claims against the trustees for an accounting, breach of trust, breach of fiduciary duties, abuse of discretion, negligence, and self-dealing and sought the removal of Eugene Earle Stone, IV, C. Rivers Stone, and Mr. Brausch as trustees of the trusts. The petition alleged in part as follows:

> 1. Petitioners are beneficiaries of a certain Agreement and Declaration of Trust, dated December 30, 1976 and entered by and between Respondents, E.E. Stone, IV, C. Rivers Stone, and John J. Brausch, as Trustees, (Hereinafter "Trustees") for two Trusts established and funded by Eugene E. Stone, III. * * *.
>
> * * * * * * *
>
> 9. As Trustees of the two Trusts, Respondents, Trustees, control 100% of the shares of Stones, Inc.
>
> * * * * * * *
>
> 11. In their positions as Trustees, Respondents control, and have controlled since the inception of the Trusts on December 30, 1976, and for a period of six-teen (16) years, the election and appointment [sic] officers and directors of Stone Manufacturing Company, Inc., by virtue of their control of all of the stock of Stones, Inc. and, by reason thereof, 83.4% of shares of stock of Stones [sic] Manufacturing Company, Inc.
>
> * * * * * * *
>
> 16. Respondents', Trustees', control of the companies has allowed them to appoint themselves as directors and officers of Stone Manufacturing Company, Inc.
>
> 17. E.E. STONE, IV, C. RIVERS STONE and JOHN BRAUSCH are the officers and directors for Stones, Inc.
>
> * * * * * * *
>
> 21. Respondent Trustees, for sixteen (16) years

> have failed to manage the Trusts' assets in a fashion designed to generate income for the Trusts in an amount sufficient to enable the Trustees to distribute directly to all adult beneficiaries (and to the parent/guardians of beneficiaries who are minors) income in an amount sufficient to meet the "standard" as set forth in Article II and Article III as the 1976 Declaration of Trust to each and every beneficiary each year, such "standard" being stated in such 1976 Trust as follows:
>
> (1) "reasonable health care"
>
> (2) "support in his or her accustomed manner of living"
>
> (3) "maintenance"
>
> Since 1976, the Trustees have produced no income whatsoever to the Trusts from Trust investments and have made no distributions to the beneficiaries to meet the "standard" for such annual distributions as quoted above.
>
> * * * * * * *
>
> 26. Notwithstanding the substantial net earnings of Stone Manufacturing Company, Inc., * * * the Directors have neglected, failed and refused to ever declare a dividend for distribution of profits to shareholders.
>
> * * * * * * *
>
> 28. While Respondents, E.E. STONE, IV and C. RIVERS STONE, as officers and directors of Stone Manufacturing Company, Inc., have taken and received substantial income and benefits for themselves, from Stone Manufacturing Company, Inc., they have, in their positions as Trustees, withheld and denied any similar income and benefits to the shareholders of the company and the beneficiaries of the Trusts.

On April 28, 1992, Ms. Morris, Ms. Fraser, and their respective children filed a motion in the Probate Court for immediate restraining orders precluding Eugene Earle Stone, IV, C. Rivers

Stone, and Mr. Brausch from taking certain actions as trustees of the trusts. On April 28, 1992, the Probate Court granted that motion.

Around May 7, 1992, Stone Manufacturing filed a motion to intervene in the litigation among the children. By order dated June 18, 1992, the Probate Court made Stone Manufacturing a party in that litigation.

On a date not disclosed by the record between April 28 and July 22, 1992, Stones, Inc., became a party in the litigation among the children.

On July 22, 1992, Ms. Morris, Ms. Fraser, and their respective children filed in the Probate Court what was identified as an amended complaint (amended complaint). The amended complaint sought, inter alia, to enjoin Eugene Earle Stone, IV, C. Rivers Stone, and Mr. Brausch, as trustees of the trusts, from, inter alia, purchasing from Umbro the right to distribute Umbro's products internationally. As grounds for granting such an injunction, the amended complaint alleged that any such purchase would necessitate the incurrence of considerable debt by Stone Manufacturing and delay the payment to the trusts of any dividends from the Company.

On September 13, 1993, C. Rivers Stone filed a petition in the Probate Court (C. Rivers Stone's petition). C. Rivers Stone's petition alleged in part as follows:

Your petitioner, C. Rivers Stone, would respectfully show unto the court:

1. That he is a Respondent in the * * * action which is pending before this Court.

* * * * * * *

5. That E.E. Stone, IV, is a Director and Chief Executive officer of Stone Manufacturing Company.

* * * * * * *

7. That E.E. Stone, IV, has never been properly named or elected as a director of Stones, Inc.

8. That on Friday, September 10, 1993, E.E. Stone, IV called a meeting of Stones, Inc., and proposed that the Board of Stone Manufacturing Company be reduced from five directors to three directors and that E.E. Stone, IV vote the stock on behalf of Stones, Inc.

9. That proper notice was not given to the directors of this proposed change of the Directors and for E.E. Stone, IV to vote the stocks of Stones, Inc. as required by law and by the Company's by-laws.

* * * * * * *

19. That the moves undertaken by E.E. Stone, IV with the cooperation of John J. Brausch * * * are to take total and complete control of the Trustees and thereby totally control and dominate the family corporations.

* * * * * * *

> 22. That the Petitioner believes that he will be removed as President and Director of Stone Manufacturing with great loss in salary and will cause him irreparable harm.
>
> * * * * * * *
>
> WHEREFORE, having fully petitioned the Court, the Petitioner, C. Rivers Stone, prays that the Court issue its Order restraining E.E. Stone, IV, John J. Brausch, Stone Manufacturing Company and Stones, Inc. from:
>
> 1. Withdrawing or reducing the compensation of the Petitioner, C. Rivers Stone * * *
>
> 2. Removing the Petitioner, C. Rivers Stone, as President of Stone Manufacturing Company and Stones, Inc.;
>
> 3. Removing the Petitioner, C. Rivers Stone, as a Director of Stone Manufacturing Company and Stones, Inc.; and
>
> 4. Allowing E.E. Stone, IV from voting the stock on behalf of Stones, Inc.

On September 13, 1993, C. Rivers Stone filed a motion (C. Rivers Stone's motion) in the Probate Court seeking an immediate restraining order, as requested in C. Rivers Stone's petition, against Eugene Earle Stone, IV, Mr. Brausch, Stone Manufacturing, and Stones, Inc. On September 13, 1993, the Probate Court granted C. Rivers Stone's motion.

The parties in the litigation among the children attempted to minimize any publicity about that litigation. However, that litigation was hotly contested and became very bitter.[6] As a

[6]The litigation among the children was so contentious that even Ms. Morris and Ms. Fraser, who, along with their respective (continued...)

result, the local business community, including the customers and the suppliers of the Company and the financial institutions that dealt with it, as well as the Company's employees, became aware of that litigation and concerned about its impact on them. The litigation among the children resulted in total legal fees for the parties in that litigation of between $2 million and $3 million.

Throughout the course of the litigation among the children, the children had certain concerns regarding Mr. Stone's assets and Ms. Stone's assets (the children's concerns regarding Mr. Stone's and Ms. Stone's assets), which presented potential grounds for additional litigation among the children. The children's concerns regarding Mr. Stone's and Ms. Stone's assets included concerns relating to (1) the management of those assets (a) during their parents' lives, which became a very serious concern at least as early as the last six months of 1995 when their parents no longer were interested or actively involved in managing such assets, and (b) after their parents died; (2) certain charitable gifts that Mr. Stone had made, including a gift to Furman University in December 1994 for the design and

[6](...continued)
children, had filed the petition instituting that litigation, disagreed on certain matters, as is evidenced by the fact that at a time not disclosed by the record Ms. Morris, but not Ms. Fraser, sought to settle that litigation as it pertained to Ms. Morris and her children.

construction of a permanent soccer facility to be named the Eugene E. Stone, III, Soccer Stadium; (3) Ms. Stone's living arrangements; and (4) the use of Ms. Stone's credit cards.

With respect to the children's concerns relating to the management during their parents' lives and thereafter of their parents' respective assets, Eugene Earle Stone, IV, had a particular interest in managing, and maintaining the value of, the preferred stock of Stones, Inc. C. Rivers Stone was very interested and involved in real estate development[7] and had a particular interest in managing Mr. Stone's real property known as Piney Mountain (Piney Mountain property).[8] Ms. Morris, who had substantial expertise in business and financial matters, had a particular interest in managing certain of her parents' stocks and securities, including at least some of Mr. Stone's preferred stock in Stones, Inc. Ms. Fraser, who had developed a deep attachment to her parents' Cedar Mountain property, had a partic-

[7]C. Rivers Stone pursued on a fulltime basis his strong interest in real estate development after he stopped serving as president of Stone Manufacturing around 1999. C. Rivers Stone's first exposure to real estate development was at the age of 13 when he helped his father build two 50-acre lakes on the Cedar Mountain property. At the time of the trial in the instant cases, C. Rivers Stone had been involved in five major real estate development projects.

[8]Mr. Stone's Piney Mountain property, located in Greenville, S.C., consisted at least as early as 1994 of approximately 370 acres, which he accumulated over approximately 20 to 30 years. During that time, Mr. and Ms. Stone maintained a vision as to how the Piney Mountain property should be developed. C. Rivers Stone shared that vision.

ular interest in managing that property and envisioned that it would be used some day as a site for religious activities.[9] All of the children had a particular interest in the Cherrydale residence, which had been the site of their home starting around 1950 and thereafter while they were living with their parents and which Mr. Stone and the Company decided could serve as a place to house out-of-town business visitors to Stone Manufacturing's operating facilities located on the Cherrydale property.

Mr. Stone and Ms. Stone found their children's desires to become actively involved during their parents' lives in managing certain assets that their parents owned to be consistent with their own wishes. That is because, as discussed above, at least as early as the last six months of 1995 Mr. Stone and Ms. Stone, although in control of their respective assets, no longer were interested or actively involved in managing those assets. As a result, the prospect of having their children become actively involved in the management of their respective assets was very appealing to Mr. Stone and Ms. Stone. To that end, Mr. Stone and Ms. Stone encouraged their children to attempt to come to an agreement among themselves as to the particular assets that each child wanted to become actively involved in managing. Mr. and Ms. Stone believed that any such agreement, if one could be

[9]When Ms. Fraser was a child, she spent a lot of time at, and developed a strong connection to, the Cedar Mountain property.

reached, would be of assistance to them in deciding which of their respective assets they wanted each of their children to become actively involved in managing.

The parties in the litigation among the children engaged in extensive discussions to settle that litigation and to resolve the children's concerns regarding Mr. Stone's and Ms. Stone's assets so as to avoid any future litigation as to such concerns. Those parties intended and agreed that any agreements that they were able to reach were to be comprehensive and to cover every possible issue that might arise among them as to those matters. On June 3, 1994, the parties in the litigation among the children and their respective attorneys executed a plan (1994 plan for settlement) to settle that litigation and to resolve the various issues relating to the children's concerns regarding Mr. Stone's and Ms. Stone's assets. Ms. Stone and Mr. Stone were not parties to the 1994 plan for settlement, and neither of them signed that document.

With respect to the issues relating to the trusts, the 1994 plan for settlement provided in part as follows:

> I. TRUSTS
>
> The existing trusts will remain as two (2) trusts administered by three (3) independent, qualified Trustees.
>
> A. THREE TRUSTEES TO ADMINISTER EXISTING TRUSTS
>
> There will be three independent, qualified Trustees ("Trustees") who shall administer the two existing trusts ("Existing Trusts") in accordance with the terms of the

1976 Trust Agreement, as clarified by this Plan for Settlement. The term "independent" for purposes of the two existing trusts (Children's and Grandchildren's trust) shall mean a person who:

(1) is not related by blood or marriage to any child, grandchild or spouse;
(2) is not and has not been employed by such child, grandchild or spouse, or any company which has employed such child, grandchild or spouse;
(3) is not now and has not been engaged in any common business effort with such child, grandchild or spouse;
(4) has not acted as attorney or accountant for such child, grandchild or spouse or any company which has employed such child, grandchild or spouse; and,
(5) agrees never to do business with or purchase stock in the Company.
(6) has sole allegiance to the management of the Trust in accordance with the written provision of the Trust Agreement, as clarified by this Plan for Settlement, and to the impartial protection of the interest of the beneficiaries.

The term "qualified" shall mean a person who has been active in a senior management role in a for-profit business within the last three (3) years.

Any action taken by the Trustees of the Existing Trusts shall require majority vote and contemporaneous minutes of such action shall be circulated to the adult beneficiaries.

* * * * * * *

B. SELECTION OF TRUSTEES

Each child shall anonymously nominate one independent, qualified trustee candidate. The Probate Court shall select the three Trustees from the four nominated. * * *

* * * * * * *

H. RESIGNATION AS TRUSTEES

E.E. Stone, IV, C. Rivers Stone, and John Brausch will resign as trustees to facilitate the implementation of this Article I, effective with the selection of and acceptance by the Trustees of the Existing Trusts.

With respect to the issues relating to the children's concerns regarding Mr. Stone's and Ms. Stone's assets, the 1994 plan for settlement provided in part as follows:

VI. ESTATE ISSUES

The four children and John Brausch shall cooperate in an attempt to have E.E. Stone, III, and Allene W. Stone make the following changes in their respective estate plans:

A. PREFERRED STOCK

E.E. Stone, III, would convey or assign directly or indirectly equally to each of the four children, the right to one-fourth (1/4) of the dividends from * * * [his] preferred stock for a period of fifteen (15) years (which time period is set forth herein to allow a proper valuation) and make an immediate donation of his preferred stock to the Stone Foundation, such assignment(s) to be effectuated in a tax efficient manner. There would be no further charitable donation under his will. The Company [defined in the 1994 plan for settlement as Umbro International, Inc., the name of the company resulting from a proposed merger of Stones, Inc., and Stone Manufacturing] shall be entitled to call the preferred stock any time.

B. TESTAMENTARY TRUSTS

There would be no trusts for descendants under E.E. Stone, III or Allene W. Stone's wills. After E.E. Stone, III's death, the portion of his estate not going to Allene W. Stone, after payment of estate taxes, will be distributed equally and directly to each of the four children or that Child's designated beneficiaries. After Allene W. Stone's

death, the remaining E.E. Stone, III/Allene W. Stone estate after estate taxes would be distributed equally to the four children or that Child's designated beneficiaries.

C. FAMILY SETTLEMENT AGREEMENT

The Children and Grandchildren (or their guardians ad litem) and the Stone Foundation (if necessary) shall execute a Family Settlement Agreement (pursuant to S.C. Code § 62-3-1101 et seq.) which provides for a division inter se [sic], in the manner set forth in * * * [other parts of this agreement] in the event E.E. Stone, III, or Allene W. Stone fail to change or maintain their Wills in the same manner.

* * * * * * *

F. POWERS OF ATTORNEY

All existing powers of attorney for E.E. Stone, III and Allene W. Stone will be revoked and new, limited, permanent powers of attorney executed that have been pre-approved by all four children to provide management of parents' monthly cash needs, management of the maintenance of houses, cars, health care, etc., of both parents. All accounts relative to the parents will be audited by the Trustees' accounting firm.

* * * * * * *

H. ARBITRATION

The Children shall use their best efforts to agree on the allocation of the property of the estate of E.E. Stone, III and Allene W. Stone.

It is agreed that Rivers Stone shall receive Piney Mountain from the estate of E.E. Stone, III and Allene W. Stone provided, however, Rivers Stone shall not be entitled to receive more than one-fourth of the total value of the net estates after estate taxes.

It is further agreed that Mary Fraser shall receive one-half (½) of the Cedar Mountain property from the estate of E.E. Stone, III

> and Allene W. Stone; Rosalie Morris and E.E. Stone, IV shall each receive one-fourth (¼) of Cedar Mountain. Notwithstanding the foregoing, neither Mary Fraser, Jack Stone [Eugene Earle Stone, IV], nor Rosalie Morris shall be entitled to receive more than one-fourth (¼) of the total value of the net estates after estate taxes. The parties will use their best efforts to agree on the dimensions and appurtenances to the same prior to the final Court approval of the settlement.
>

>
> VII. IMPLEMENTATION AND JURISDICTION
>
> * * * * * * *
>
> B. CONTINUING JURISDICTION
>
> The Probate Court * * * shall maintain continuing jurisdiction to resolve any disputes which shall arise during the implementation and enforcement of this settlement agreement. * * *

The 1994 plan for settlement also provided in part as follows:

> THE FOUR CHILDREN UNDERSTAND THAT ANY RESOLUTION OF THE ESTATE ISSUES MUST INCLUDE A COMPLETELY DEFINITIVE APPROACH TO THE DIVISION OF THE ASSETS OF THE PARENT'S [sic] ESTATES. THE SETTLEMENT SHALL NOT BE FINALIZED UNTIL THE CHILDREN HAVE DETERMINED THE WILLINGNESS OF THEIR FATHER TO ADDRESS THESE ESTATE ISSUES AND ANY CHILD MAY REFUSE TO FINALIZE THE AGREEMENT IF E.E. STONE, III REFUSES TO MAKE THE CHANGES TO HIS ESTATE PLAN PROVIDED FOR HEREIN. * * *

The parties in the litigation among the children included the

above-quoted paragraph in the 1994 plan for settlement because the children were concerned about whether their parents would treat them, as a group, fairly when they decided how to divide their respective assets among their children. As reflected in the above-quoted paragraph, the children intended and agreed that they would not settle and resolve any of the issues involved in the litigation among the children and the children's concerns regarding Mr. Stone's and Ms. Stone's assets unless their parents agreed to make changes to their respective estate plans that were consistent with the provisions of the 1994 plan for settlement relating to such concerns.

In the summer of 1994, Mr. Stone retained David A. Merline (Mr. Merline) to prepare a will for him. Ms. Stone did not retain Mr. Merline; at all relevant times she had her own counsel.

After execution of the 1994 plan for settlement, issues arose with respect to the scope of the authority of the three independent, qualified trustees whom, according to the 1994 plan for settlement, the Probate Court was to select from the four candidates nominated by the children. Issues also arose with respect to whether such three independent, qualified trustees would be fully indemnified in the event of any further litigation against such trustees by any of the children. Because of the unresolved issues relating to the scope of authority and indemni-

fication of the trustees and the fact that the litigation among the children was so hotly contested and bitter, the children were unable to find candidates who were willing to serve as independent trustees of the trusts, and the 1994 plan for settlement did not result in settlement and dismissal of the litigation among the children.

During a period of time starting at least as early as 1994 that is not disclosed by the record, C. Rivers Stone was a member of three organizations: the Young Presidents Organization, the World Presidents Organization, and the Chief Executive Organization (collectively, Management Organizations). At the respective membership meetings of those organizations, various members discussed, inter alia, certain problems that they were having and other members suggested different ways of dealing with such problems. C. Rivers Stone had very close friends who were also members of the Management Organizations and who were aware of the litigation among the children and the children's concerns regarding Mr. Stone's and Ms. Stone's assets. At certain of the respective meetings of those organizations, the members discussed that litigation and those concerns and various ways of dealing with them. Sometime during 1995, certain members of the Management Organizations who were friends of C. Rivers Stone suggested that the children utilize family limited partnerships as a way of resolving the litigation among the children and the children's

concerns regarding Mr. Stone's and Ms. Stone's assets. During that year, C. Rivers Stone informed Mr. Stone, Ms. Stone, and C. Rivers Stone's siblings about that suggestion, and the Stone family became very interested in exploring it.

The primary reason why the Stone family became very interested in exploring the use of family limited partnerships was to resolve the children's concerns regarding Mr. Stone's and Ms. Stone's assets. The Stone family wanted to explore whether such concerns could be resolved by: (1) Actively involving each of the children in the management of certain of their parents' assets during their parents' lives by giving each child the opportunity, through ownership of a general partnership interest in a different family limited partnership, to manage such assets in which such child was interested; and (2) actively involving all of the children in the management of certain of their parents' other assets during their parents' lives by giving all of them the opportunity, through ownership of general partnership interests in a fifth family limited partnership, to manage such assets in which they all were interested. Another very important reason why the Stone family desired to explore the use of family limited partnerships was to settle and bring an end to the litigation among the children. Finally, the Stone family also wanted to explore the use of family limited partnerships as a way to help avoid disputes among the children regarding the ultimate

division of their parents' respective assets after their parents died, although that was not the primary reason for the Stone family's interest in exploring the use of such types of partnerships.

On August 16, 1995, Ms. Fraser and C. Rivers Stone filed a motion in the Probate Court for the following relief:

> **(a) The appointment of an arbitrator to divide the Cedar Mountain Property;**
> **(b) To appoint receivers for the Stone Trusts and the Stone Corporations;**
> **(c) To compel compliance with the * * * [1994 plan for settlement]; and**
> **(d) For other related relief.**

During the last six months of 1995, Mr. Merline and Mr. Stone discussed the suggestion of C. Rivers Stone's friends regarding the use of family limited partnerships as a means of dealing with the litigation among the children and the children's concerns regarding Mr. Stone's and Ms. Stone's assets. Mr. Merline pointed out to Mr. Stone that the use of family limited partnerships also had potential transfer tax benefits. Mr. Merline explained to Mr. Stone that if Mr. Stone and Ms. Stone were to decide to use family limited partnerships, any assets that he and Ms. Stone decided to transfer to such partnerships would no longer be available to them for their own unfettered, personal use. Instead, as explained to Mr. Stone by Mr. Merline, any assets that he and Ms. Stone decided to transfer to such partnerships would belong to such partnerships and would be

subject to the respective partnership agreements for such partnerships.

On March 28, 1996, the parties in the litigation among the children and their respective attorneys executed an amendment to the 1994 plan for settlement (1996 amendment to the 1994 plan for settlement). At the time they executed that 1996 amendment, the parties in the litigation among the children contemplated signing a third settlement agreement in which they would amend and restate both the 1994 plan for settlement and the 1996 amendment to that plan, which, as discussed below, they did. Ms. Stone and Mr. Stone were not parties to the 1996 amendment to the 1994 plan for settlement, and neither of them signed that document.

With respect to the issues relating to the trusts, the 1996 amendment to the 1994 plan for settlement did not change any of the provisions of that plan relating to such issues.

With respect to the issues relating to the children's concerns regarding Mr. Stone's and Ms. Stone's assets, the 1996 amendment to the 1994 plan for settlement provided in part as follows:

> 3. CEDAR MOUNTAIN DIVISION
>
> In implementation of * * * [the paragraph of] the June 3, 1994 Plan of Settlement [requiring arbitration of any disputes among the children regarding section VI of that plan], the parties agree as follows:
>
> (i) The parties agree to the two-page Cedar Mountain division map * * * which has been signed by * * * [the children].

(ii) The deeds to 1,054.415 acres [of the Cedar Mountain property] from E.E. Stone III to the Mary Fraser Limited Partnership will reserve for the 1,054.415-acre tract a * * * qualified road right-of-way and utility permanent easements through the adjacent 582.672-acre Life Estate Tract following the route of the existing roads * * *.

* * * * * * *

(iv) The parties * * * agree to the * * * Piney Mountain [and] Cedar Mountain * * * land appraisals.

4. Family Settlement Estate Planning: The New Limited Partnerships Plan for the Estate.

The parties shall use their reasonable best efforts to encourage E.E. Stone III and Allene W. Stone to establish the five Family Limited Partnerships contemplated by the New Plan for Mr. and Mrs. Stone's estate.

Based upon an analysis of Mr. and Mrs. Stone's assets and expenses, the Children agree to use their reasonable best efforts to encourage Mr. Stone to transfer $1,600,000 of his preferred stock in Stones, Inc. to the Mary Fraser and Rosalie Morris Family Limited Partnerships, in accordance with the "Family Limited Partnership" distribution schedule (the "Chart")[10] hand dated April 12, 1996 * * *.

In the event that assets remaining in E.E. Stone, III's and Allene W. Stone's Limited Partnership (the "Parents' L.P.") as shown in column 7 of the Chart, together with column 8, 9, and 10 and assets of E.E. Stone, III, as managed by E.E. Stone, IV, are not sufficient to pay (a) Mr. and Mrs. Stone's health, maintenance, and other reasonable (1995 standard) expenses; together with (b) estate taxes and expenses of administration payable after their deaths, the deficit shall first be offset by contributions of Jack

[10]The "Chart" identified in the 1996 amendment to the 1994 plan for settlement is not attached to the Court's copy of that amendment and is not otherwise part of the record in these cases.

> Stone equal to any future gifts made from such column 8, 9, and 10 assets in the Exhibit "A" Chart, before calling on the other three children for parental care contributions, with each Child agreeing to contribute a pro rata share of any remaining shortfall from either personal assets, or * * * assigned income rights from his or her respective Limited Partnership Interests. Provided however, that any further gifts made from such assets now shown on the chart shall first be offset by contributions of Jack Stone Family Limited Partnership.
>
> * * * * * * *
>
> In order to protect Mary Fraser on the Cedar Mountain Division, a provision will be included in the Family Settlement Agreement recognizing the Children's agreement that Mary Stone Fraser or her Limited Partnership will receive the 1,045.415-acre * * * parcel * * * and that the remainder interest in the remaining 582.672 acres will be given to one or more 501-C-3 charitable organizations recommended by Mary Fraser which are mutually agreeable to Mr. Stone and the other Children, with Mr. Stone retaining a life estate in the 582.672 acres. The Children shall use their reasonable best efforts to encourage Mr. Stone to convey the 582.672-acre Cedar Mountain property remainder interest according to the foregoing provision.
>
> The Family Settlement Agreement will acknowledge that in the event Mr. Stone executes a new Will, Codicil or other agreement which does not conform to the distribution outlined in the Chart, the Children nonetheless agree to abide by the terms of such distribution in the Chart as a Family Settlement Agreement pursuant to SC Code Sec. 62-3-1101, et seq.; and * * * to include whatever provisions are necessary to preserve any applicable marital deductions.

The 1996 amendment to the 1994 plan for settlement also provided in part as follows:

> 9. The Family Estate Plan set forth herein represents a compromise by the parties. There shall be no implementation of the Family Estate Plan * * * unless and until there is an agreement between the parties [in the litigation among the children] to an Amended and Restated Plan for Settlement.

After execution of the 1996 amendment to the 1994 plan for settlement, the children entered into intense negotiations regarding the particular assets that each child wanted their parents to transfer to a family limited partnership in which such child, as well as each of their parents, would hold a partnership interest.

Between the last six months of 1995 and April 1997, Mr. Merline met with Mr. Stone approximately a dozen times to discuss the use of family limited partnerships, the status of the children's negotiations, and why each child had an interest in certain of the respective assets of Mr. Stone and Ms. Stone. Around April 1996, Mr. Stone and Ms. Stone decided to proceed with forming five family limited partnerships. To that end, at Mr. Stone's request, Mr. Merline drafted five partnership agreements (draft partnership agreements) and circulated those draft partnership agreements among Mr. Stone, Ms. Stone, the children, and their respective attorneys. The children and their respective attorneys, inter alia, made comments on the draft partnership agreements that Mr. Merline had sent them and suggested changes to those agreements. The primary reason for the changes suggested by the children to the draft partnership agreements was the desire of the children to ensure that their parents, and in particular Mr. Stone, would not be unduly influenced by anyone to act in a manner inconsistent with each child's interest in

managing particular assets of their parents during their parents' lives and thereafter.

Mr. Stone agreed with certain of the children's comments and certain of their suggested changes to the draft partnership agreements that Mr. Merline had prepared for Mr. Stone, and Mr. Merline made changes to those draft partnership agreements in order to incorporate such comments and suggested changes. For example, one new provision incorporated into all five of the draft partnership agreements prevented anyone who obtained a power of attorney on behalf of Mr. Stone from using that power of attorney to vote any general partnership interest that Mr. Stone was to receive in each of the proposed five family limited partnerships. Another example was a new provision included only in the draft partnership agreement for the proposed partnership in which C. Rivers Stone was to hold a general partnership interest and in the draft partnership agreement for the proposed partnership in which Ms. Fraser was to hold a general partnership interest. That new provision required the unanimous consent of all the prospective general partners of each such prospective partnership in order to authorize such partnership to sell, transfer, assign, exchange, lease, convey, subdivide, partition, or encumber certain of the Piney Mountain property in the case of the proposed partnership in which C. Rivers Stone was to own a general partnership interest and certain of the Cedar Mountain

property in the case of the proposed partnership in which Ms. Fraser was to own a general partnership interest.

On May 9, 1996, Mr. Stone and Eugene Earle Stone, IV, as both general partners and limited partners, and Ms. Stone, as a limited partner, executed a partnership agreement for a limited partnership that the Stone family intended to name The Eugene E. Stone, III, Limited Partnership (ES3LP).

On May 9, 1996, Mr. Stone and Eugene Earle Stone, IV, as both general partners and limited partners, and Anne M. Stone,[11] as a general partner, executed a partnership agreement for a limited partnership that the Stone family intended to name The E.E. Stone, IV, Limited Partnership (ES4LP).

On May 9, 1996, Mr. Stone, C. Rivers Stone, and Charles Rivers Stone, Jr.,[12] as both general partners and limited partners, and Frances O. Stone,[13] as a limited partner, executed a partnership agreement for a limited partnership that the Stone family intended to name The C. Rivers Stone Limited Partnership (CRSLP).

On May 9, 1996, Mr. Stone and Ms. Morris, as both general partners and limited partners, Mr. Morris, as a general partner,

[11]Anne M. Stone is the spouse of Eugene Earle Stone, IV.

[12]Charles Rivers Stone, Jr., is the son of C. Rivers Stone.

[13]Frances O. Stone is the daughter of C. Rivers Stone.

and Charles H. Morris, Jr.,[14] and Ms. Morris as custodian for Rosalie S. Morris, II,[15] as limited partners, executed a partnership agreement for a limited partnership that the Stone family intended to name The Rosalie Stone Morris Limited Partnership (RSMLP).

On May 9, 1996, Mr. Stone, Ms. Fraser, Wyman Fraser Davis (Ms. Davis),[16] and Laura Lawton Fraser Arnal (Ms. Arnal),[17] as both general partners and limited partners, executed a partnership agreement for a limited partnership that the Stone family intended to name The Mary Stone Fraser Limited Partnership (MSFLP).

Each of the partnership agreements for the Five Partnerships set forth the following purposes of each such partnership:

> to consolidate the management of certain property of the family of EUGENE E. STONE, III (the "Family"); to make a profit; to avoid the division of the property of the Family which is in the Partnership in order to promote the greater sales potential of the property; to avoid potential expensive litigation and disputes over the property of the Family by defining the roles and rights of Family members in the property, and providing procedures to resolve disputes; to restrict the transfer of interests in the property to non-Family members; to establish protection of Family interests from interference and disruption resulting from claims by poten-

[14]Charles H. Morris, Jr., is the son of Ms. Morris.

[15]Rosalie S. Morris, II, is the daughter of Ms. Morris.

[16]Wyman Fraser Davis, also known as Mary Wyman Stone Fraser Davis, is the daughter of Ms. Fraser.

[17]Ms. Arnal is the daughter of Ms. Fraser.

> tial creditors of any Family member; to establish a combined investment policy for the Partnership; to reduce the mechanics and costs of administration of investments; * * * to facilitate the administration and reduce the costs associated with the probate of the estates of Family members; * * * to provide flexibility in business and estate planning not available through trusts, corporations or other business entities; to reduce transaction costs and multiple deeds in transferring property among Family members; * * * and acquiring, financing, developing, subdividing, managing, improving, operating, leasing, mortgaging, refinancing, pledging, selling or otherwise dealing with the Partnership Property * * *.

Each of the partnership agreements for the Five Partnerships provided that distributions to partners may be made from each such partnership only after, inter alia, determining whether the financial condition of each such partnership permitted such distributions. Each of the partnership agreements for the Five Partnerships further provided that all distributions to the partners of each such partnership must, "Unless otherwise agreed by all the Partners in writing, * * * be made simultaneously to each of the Partners and must be made in proportion to the Partners' Partnership Units."

The children understood that Mr. Stone and Ms. Stone would make the ultimate decision as to which, if any, of their parents' respective assets their parents would transfer to each of the Five Partnerships. In this connection, although Mr. Stone and Ms. Stone agreed to form the Five Partnerships, they did not intend to transfer all of the respective assets that they owned to such partnerships in exchange for partnership interests. That

was because they wanted to retain sufficient assets to enable them to maintain their respective accustomed standards of living. To that end, Mr. and Ms. Stone retained certain accountants to advise them as to what assets they should retain, and not transfer, to each of the Five Partnerships. In order to formulate such advice, those accountants performed various cashflow analyses and appraisals, using different assumptions regarding the respective life expectancies of Mr. Stone and Ms. Stone and the anticipated returns on their respective investments. The accountants retained by Mr. Stone and Ms. Stone recommended that they retain, and not transfer, to the Five Partnerships total assets that would yield a monthly total cashflow of between $12,000 and $15,000.

The Stone family intended and agreed that all the partners of each of the Five Partnerships were to receive respective partnership interests in each such partnership that were proportionate to the fair market value of the assets that such partners respectively transferred to such partnership. To that end, during the period May 1996 through March 1997, before any of the partners of each of the Five Partnerships transferred any assets to such partnership, the process (prefunding process) of identifying, describing, and obtaining various appraisals of the respective assets of Mr. Stone and Ms. Stone took place. That process was critical to enabling Mr. Stone, Ms. Stone, and the

children to make decisions about what assets to transfer to each of the Five Partnerships. During the prefunding process, various disputes arose regarding, inter alia, the appraisals of certain assets and the desire of Ms. Fraser, which her three siblings strongly opposed, that Mr. and Ms. Stone make Anne Logan Ministries a charitable beneficiary of certain of the Cedar Mountain property. Those disputes took time to resolve, and, in the case of the disputes regarding the appraisals of certain assets of Mr. Stone and Ms. Stone, new appraisals had to be obtained. Until resolution of all of the disputes that arose during the prefunding process, (1) the parties in the litigation among the children did not enter into the third settlement agreement that they contemplated when they executed the 1996 amendment to the 1994 plan for settlement, and (2) the partners of each of the Five Partnerships were not able to determine what assets were to be transferred to each such partnership.

On October 15, 1996, Mr. Stone and Eugene Earle Stone, IV, as general partners, filed a certificate of limited partnership for ES3LP with the Secretary of State of South Carolina (S.C. Secretary of State), thereby forming ES3LP under the laws of that State.

On October 15, 1996, Mr. Stone, Eugene Earle Stone, IV, and Anne M. Stone, as general partners, filed a certificate of limited partnership for ES4LP with the S.C. Secretary of State,

thereby forming ES4LP under the laws of the State of South Carolina.

On October 15, 1996, Mr. Stone, C. Rivers Stone, and Charles Rivers Stone, Jr., as general partners, filed a certificate of limited partnership for CRSLP with the S.C. Secretary of State, thereby forming CRSLP under the laws of the State of South Carolina.

On October 15, 1996, Mr. Stone, Ms. Morris, and Mr. Morris, as general partners, filed a certificate of limited partnership for RSMLP with the S.C. Secretary of State, thereby forming RSMLP under the laws of the State of South Carolina.

On October 15, 1996, Mr. Stone, Ms. Fraser, Ms. Davis, and Ms. Arnal, as general partners, filed a certificate of limited partnership for MSFLP with the S.C. Secretary of State, thereby forming MSFLP under the laws of the State of South Carolina.

On January 31, 1997, Mr. Stone was diagnosed with cancer of the gallbladder. Prior to that time, Mr. Stone had been in good health, did not have any known serious health problems, and was active and alert. After Mr. Stone was diagnosed with cancer, it was the doctors' prognosis that he would live a period of months.

By late March 1997, Mr. and Ms. Stone had become satisfied that the amount of assets that their accountants had recommended they retain, and not transfer to, each of the Five Partnerships was sufficient to enable them to maintain their respective

accustomed standards of living, and they decided to follow their accountants' recommendations. By that time, all of the disputes that arose during the prefunding process had been resolved, and Mr. Stone, Ms. Stone, and the other partners of each of the Five Partnerships had agreed on the identities and the values of the assets that they would transfer to each such partnership. Eugene Earle Stone, IV, had a particular interest in managing, and maintaining the value of, the preferred stock of Stones, Inc., and it was decided that approximately $1 million[18] of such stock, as well as certain other property, was to be transferred to ES4LP. C. Rivers Stone had a particular interest in managing Mr. Stone's Piney Mountain property, and it was decided that various parcels of that property totaling 366.097 acres, as well as certain other property, were to be transferred to CRSLP.[19] Ms.

[18]The record does not disclose the precise value of each of the assets transferred to each of the Five Partnerships as of the date of each such transfer to each such partnership. However, the record establishes the precise value of each of the assets owned by each such partnership on the respective dates of the deaths of Mr. Stone and Ms. Stone. The parties agree that, after the gifts by Mr. Stone of certain partnership interests in ES4LP, CRSLP, RSMLP, and MSFLP (described below) to Eugene Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser, respectively, all the partners of each of those four partnerships (as well as ES3LP) received, as the Stone family intended and agreed, respective percentage interests in each such partnership that were proportionate to the fair market value of the assets that such partners respectively transferred to each such partnership.

[19]The parties stipulated that a one-percent interest in each of various parcels totaling 366.949 acres of the Piney Mountain property was transferred from Mr. Stone to C. Rivers Stone and

(continued...)

Morris had a particular interest in managing certain of her parents' stock and securities, including at least some of Mr. Stone's preferred stock in Stones, Inc., and it was decided that various stock and securities, including approximately $642,000 of such preferred stock, as well as certain other property, was to be transferred to RSMLP. Ms. Fraser had a particular interest in managing her parents' Cedar Mountain property, and it was decided that the 1054.415-acre parcel of that property, as well as certain other property, was to be transferred to MSFLP. All of the children had a particular interest in the Cherrydale residence, and it was decided that that property, as well as certain other property, was to be transferred to ES3LP.

On April 4, 1997, Mr. Stone, as both a general partner and a limited partner, Eugene Earle Stone, IV,[20] C. Rivers Stone, Ms. Morris, and Ms. Fraser, as general partners, and Ms. Stone, as a limited partner, executed an amended and restated partnership

[19](...continued)
that Mr. Stone and C. Rivers Stone transferred to CRSLP their respective interests in those 366.949 acres of that property. Those stipulations are clearly contrary to the deeds relating to such transfers, and we shall disregard such stipulations. See Cal-Maine Foods, Inc. v. Commissioner, 93 T.C. 181, 195 (1989). Those deeds show that a total of 366.097 acres of various parcels of the Piney Mountain property was the subject of such transfers.

[20]As of Apr. 4, 1997, Eugene Earle Stone, IV, was no longer both a general partner and a limited partner of ES3LP; he was only a general partner.

agreement for ES3LP.[21] The purpose of that amended and restated partnership agreement was to make C. Rivers Stone, Ms. Morris, and Ms. Fraser general partners of ES3LP.

On April 5, 1997, the parties in the litigation among the children and their respective attorneys executed two documents[22] dated as of March 31, 1997, the purpose of which was to settle that litigation and to resolve the issues relating to the children's concerns regarding Mr. Stone's and Ms. Stone's assets (collectively, the 1997 amended and restated plan for settlement). The 1997 amended and restated plan for settlement amended and restated the 1994 plan for settlement and the 1996 amendment to that plan. Ms. Stone was not a party to the 1997 amended and restated plan for settlement, and she did not sign those documents. Mr. Stone signed the 1997 amended and restated plan for settlement--trusts and estate only in his capacity as a preferred stockholder of Stones, Inc.[23] Mr. Stone signed the 1997 amend

[21]On Apr. 11, 1997, Mr. Stone, Eugene Earle Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser, as general partners, filed a first amendment to the certificate of limited partnership for ES3LP with the S.C. Secretary of State, which reflected the amended and restated partnership agreement for ES3LP executed on Apr. 4, 1997.

[22]The two documents were referred to as "Amended and Restated Plan for Settlement-Trusts and Estate" (1997 amended and restated plan for settlement--trusts and estate) and "Amended and Restated Plan for Settlement-Company (1997 amended and restated plan for settlement--Company).

[23]It was necessary for Mr. Stone to sign the 1997 amended
(continued...)

ment and restated plan for settlement--Company only in his capacity as a preferred stockholder of Stones, Inc.[24]

With respect to the issues relating to the trusts, the 1997

---

[23](...continued)
and restated plan for settlement--trusts and estate in his capacity as a preferred stockholder of Stones, Inc., because that document provided:

> E.E. Stone, III will convey or assign directly or indirectly the preferred stock * * * to the Limited Partnerships [ES4LP, RSMLP, and MSFLP] created as part of the New Plan for Estate in accordance with the Chart referenced in paragraph III.H. The preferred stock shall be changed to eliminate its voting rights, or, if not so changed at the time of the conveyance or assignment, then the Children and Grandchildren shall use their reasonable best efforts to persuade E.E. Stone, III, in his capacity as General Partner of the respective Limited Partnerships, to consent to these changes.

[24]It was necessary for Mr. Stone to sign the 1997 amended and restated plan for settlement--Company in his capacity as a preferred stockholder of Stones, Inc., because that document provided:

> The Company shall offer to exchange the preferred stock in Stones [Inc.] currently held by E.E. Stone, III for new preferred stock in Stones [Inc.] which shall be classified as non-voting stock in all events ("New Preferred Stock"). * * *
>
> The Company shall have the right beginning in 1999 and for each year thereafter to redeem New Preferred Stock equal to 20% of the New Preferred Stock outstanding on January 1, 1999 on a pro rata basis until all New Preferred Stock has been redeemed. The New Preferred Stock if redeemed by the Company, in its sole discretion, shall be redeemed based on a 1996 appraised value of the preferred stock by Houlihan, Lokey, which estimates the value of the 5,100 shares of preferred stock at $4,462,500, so that the redemption price of any redeemed share shall at all times be $875.00 per share plus any dividends declared but not yet paid.

amended and restated plan for settlement--trusts and estate provided in part as follows:

> II. TRUST ISSUES
>
> A. EXISTING TRUSTS
>
> (a) Administrative Transfer to New Trusts
>
> The existing trusts established by the 1976 Agreement and Declaration of Trust ("Existing Trusts") will remain in existence as two (2) trusts. Upon receipt by the parties of a favorable Private Letter Ruling * * * the Probate Court shall release * * * [documents relating to the administrative division of the Trusts] from escrow, and thereby administratively establish eleven New Trusts * * *.
>
> It is the intent of the parties that the release of the Trust-related Plan Documents implements the Trust-related aspects of the settlement and that no further action by the parties shall be necessary to effect the administrative division of the two Existing Trusts into eleven New Trusts (as defined herein), the installation of the New Trustees (as defined herein) and the funding of these New Trusts or that any such action be ministerial and not discretionary in nature.
>
> The failure of a beneficiary to identify an Independent Trustee who has executed the Certification and Acceptance and is willing to serve over his or her New Trust shall not delay the release or implementation of the Trust-related Plan Documents. In the event an Independent Trustee selected by a beneficiary cannot be installed over a New Trust at the time the Probate Court releases the Trust-related Plan Documents from escrow, that beneficiary's New Trust shall be administered by the Existing Trustees until such time as that beneficiary

> obtains an Independent Trustee who is willing to serve as the Independent Trustee of that beneficiary's New Trust on the terms and conditions set forth in the Amended Plan and Trust-related Plan Documents.

* * * * * * *

> (b) For purposes of this Amended Plan, a Trustee of a New Trust is "qualified" if he or she is a capable and responsible individual; a Trustee of a New Trust is "Independent" if that individual is not related by blood or marriage to any Child or Grandchild (hereinafter "Independent Trustee"). * * *

* * * * * * *

H. UNDERSTANDING OF DISTRIBUTION PROVISIONS

> The distributions from the New Trusts shall be in accordance with the provision of the Existing Trusts. In this respect, there has been a legitimate dispute as to the interpretation of the Existing Trust provisions. The parties acknowledge that the language, intent and circumstances relating to the Existing Trusts are such that any income received or generated by the New Trusts shall be distributed in accordance with the distribution standards and provisions of the 1976 Trust Agreement, as restated in the New Trusts. * * *

With respect to the issues relating to the children's concerns regarding Mr. Stone's and Ms. Stone's assets, the 1997 amended and restated plan for settlement--trusts and estate provided in part as follows:

III. ESTATE ISSUES

A. GENERAL

> It is contemplated that prior to the release of the Amended Plan and Plan Docu-

ments from escrow,[25] the estate matters set forth in this Section will have been agreed to by E.E. Stone, III and Allene W. Stone and all documents necessary to fully fund the Family Limited Partnerships and to otherwise implement the Estate Section of the Amended Plan will have been executed and placed in escrow * * *. The parties understand that E.E. Stone, III and Allene W. Stone have the right to make such estate decisions as they deem appropriate. In the event they do not adopt the estate plan set forth in this Section, the Amended Plan shall not be effective unless and until an alternative estate plan is agreed to.

B. TESTAMENTARY TRUSTS

There shall be no trusts for descendants under the Wills of E.E. Stone, III or Allene W. Stone. After the death of the first of E.E. Stone, III or Allene W. Stone, the portion of the estate not going to the surviving spouse shall, after payment of estate taxes and expenses of administration, be distributed equally and directly to each of the four Children or that Child's estate, provided, however, that the decedent's interest in each of the Children's Limited Partnerships shall be distributed directly to the Child for whose Partnership such interest is held. After the death of the surviving spouse, the assets remaining in the estate of E.E. Stone,

---

[25]With respect to the "escrow" referred to in paragraph A of section III of the 1997 amended and restated plan for settlement--trusts and estate, that plan provided in part as follows:

> Executed copies of * * * [this amended plan] and all documents specified therein ("Plan Documents") shall be placed in escrow with the Probate Court. * * * [this amended plan] and Plan Documents shall not be effective unless and until they are released from escrow by the Probate Court * * *.

As discussed below, on Apr. 5, 1997, the Probate Court entered an order approving the 1997 amended and restated plan for settlement.

III and/or Allene W. Stone shall, after payment of estate taxes and expenses of administration, be distributed equally to the four Children or that Child's estate, subject, however, to the provision that the decedent's interest in each of the Children's Limited Partnerships shall be distributed directly to the Child for whose Partnership such interest is held.

C. FAMILY SETTLEMENT AGREEMENT

The Children and Grandchildren (or their guardians ad litem) and the Stone Foundation (if necessary) have executed a Family Settlement Agreement (pursuant to S.C. Code § 62-3-1101 et seq.) which provides for a division inter se [sic] of the estates of E.E. Stone, III and Allene W. Stone in the manner set forth in this Section III in the event E.E. Stone, III or Allene W. Stone fail to maintain their Wills in the same manner. The Family Settlement Agreement acknowledges that in the event E.E. Stone, III executes a new Will, Codicil or other agreement which does not conform to the distribution outline in the "Stone Family Limited Partnership Distribution Schedule" dated April 3, 1997 and attached hereto as Exhibit "J" ("the Chart") and in this Amended Plan, the Children nonetheless agree (a) the distribution outlined in such Chart and in this Amended Plan is fair and equitable; (b) to abide by the terms of such distribution as a Family Settlement Agreement pursuant to South Carolina Code § 62-3-1101, et seq.; and (c) to include whatever provisions are necessary to preserve any applicable marital deductions. * * *

* * * * * * *

E. STONE FOUNDATION

The Stone Foundation shall be divided into four separate, equal, and entirely independent foundations with each Child (and/or designee) as one of the trustees(s) of one separate foundation, but with 20% of the required income to be distributed by E.E. Stone, III to his favorite church, and/or

other charities during his lifetime. The parties shall take all steps necessary to establish and fund the four foundations within ten (10) business days of the entry of the Escrow Order.

* * * * * * *

H. NEW PLAN FOR ESTATES

* * * * * * *

In the event that assets remaining in the Parents' L.P. [ES3LP] as shown in column G,[26] together with assets listed in column H and other assets of E.E. Stone, III are not sufficient to pay health, maintenance, and other reasonable (1995 standard) expenses for E.E. Stone, III and Allene W. Stone, the deficit shall [be] borne equally by assets in the four Children's Limited Partnerships. If the assets in the residuary estate of E.E. Stone, III and the Parents' L.P. are insufficient to pay estate tax or expenses of administration payable after their deaths, any remaining estate tax or expenses of administration shall be borne equally by assets in the four Children's Limited Partnerships.

* * * * * * *

The Children shall use their reasonable best efforts to encourage E.E. Stone, III, to agree to the following: (a) to rent the Cherrydale house to Stone Manufacturing Co. until it is sold to Stone Manufacturing Co. for its fair market value as determined by a competent appraiser (which appraisal shall include, among other things the cost of the rennovation [sic] and the new furniture and fixtures) agreed to by the Buyer and Seller and (b) to revise his Will accordingly. Upon the * * * death of E.E. Stone, III, the nec-

[26]It is not clear from the record the columns to which paragraph H of section III of the 1997 amended and restated plan for settlement--trusts and estate referred.

essary portion of the proceeds from the life insurance policy maintained on E.E. Stone, III, by Stone Manufacturing Co. shall be reserved and used by Stone Manufacturing Co. to consumate [sic] the purchase of the Cherrydale house.

[I.] CEDAR MOUNTAIN DIVISION

The division of Cedar Mountain for purposes of the Chart and the Mary Fraser Limited Partnership shall be as follows:

(1) The parties agree to the two-page Cedar Mountain division map * * * which has been signed by * * * [the children]. * * *

(2) The deeds to 1,054.415 acres from E.E. Stone, III, to the Mary Fraser Limited Partnership will reserve for the 1,054.415-acre tract a * * * qualified road right-of-way and utility permanent easements through the adjacent 582.672-acre Life Estate Tract following the route of the existing roads * * *.

(3) A provision shall be included in the Family Settlement Agreement acknowledging the Children's agreement that the Mary Fraser Limited Partnership shall receive the Mary Fraser Parcel, and that the remainder interest in the Life Estate Parcel shall be given to Ann [sic] Logan Ministries, Inc., a 501(c)(3) charitable organization, with E.E. Stone, III, retaining a life estate in the Life Estate Parcel.

* * * * * * *

L. MAINTENANCE OF PARENTS

The four Children, shall jointly bear the responsibility for the financial maintenance of E.E. Stone, III and Allene W. Stone during their lives, utilizing the assets

> available to the parents ("Parental Assets") for such maintenance in the same or better manner as in recent years. * * *
>
> * * * Mary Stone Fraser shall be delegated responsibility for the management of the care for Allene W. Stone, supported by others. Allene W. Stone may be moved with Mary Fraser, including to the residence of E.E. Stone, III if he is ever incapacitated and unable to occupy the residence * * *.

The 1997 amended and restated plan for settlement--trusts and estate further provided in part as follows:

IV. IMPLEMENTATION AND JURISDICTION

* * * * * * *

B. CONTINUING JURISDICTION

> The Probate Court * * * shall maintain continuing jurisdiction to resolve any Trust-related disputes which shall arise during the implementation and enforcement of this settlement agreement. The parties will seek to have a hearing on the Amended Plan as soon as practicable after its execution.

Neither Mr. and Ms. Stone nor the children anticipated that their parents would need any financial assistance during their parents' respective lives. As discussed above, after consulting with their accountants, Mr. Stone and Ms. Stone retained, and did not transfer to the Five Partnerships, total assets that they believed would enable them to maintain their respective accustomed standards of living. Nonetheless, the parties in the litigation among the children included paragraphs H and L of section III in the 1997 amended and restated plan for settlement--trusts and estate in order to address and resolve the possibil-

ity that their parents might need financial assistance during their parents' respective lives. Those paragraphs reflected the children's agreement that, in the unlikely event that the total assets held by ES3LP and the total assets owned by Mr. Stone and Ms. Stone were insufficient to enable them to maintain their respective accustomed standards of living, the children, as a group, would share equally in providing for the maintenance of their parents at such standards of living through distributions of equal amounts from ES4LP, CRSLP, RSMLP, and MSFLP, respectively.

The parties in the litigation among the children also addressed in paragraph H of section III of the 1997 amended and restated plan an issue relating to estate taxes and estate administration expenses payable after Mr. Stone and Ms. Stone died. Those parties resolved that issue by agreeing in that paragraph that, in the event the total assets in Mr. Stone's residuary estate and the total assets owned by ES3LP were not sufficient to pay estate taxes and estate administration expenses owing as a result of their parents' respective deaths, the children, as a group, would share equally in paying any such taxes and expenses through distributions of equal amounts from ES4LP, CRSLP, RSMLP, and MSFLP, respectively.

The 1997 amended and restated plan for settlement--Company provided in part as follows:

PREAMBLE

This "Amended and Restated Plan for Settlement-Company" sets forth the provisions of the parties' settlement relating to Stones, Inc. ("Stones") and Stone Manufacturing Co. ("SMC") (and their subsidiaries) and amends and restates the Plan for Settlement dated June 3, 1994 and the First Amendment dated as of March 28, 1996 among the same parties.

I. EFFECT OF THE AMENDED PLAN

(a) Executed copies of this Amended and Restated Plan for Settlement - Company and all documents specified herein ("Plan Documents") shall be placed in escrow with the Probate Court and shall not be effective unless and until they are released from escrow by the Probate Court * * *.

II. COMPANY

A. GENERAL

Stones and SMC may be merged * * * provided such merger does not violate the provisions of any agreement for borrowed money to which Stones or SMC is a party, but no merger is required. In the event the merger does occur, any reference contained in this Amended Plan to the "Company", its Board, its officers, its shareholders, its Common Stock and its obligations shall refer to the surviving entity of the merger, its Board, its Nominating Committee, its officers, its shareholders, its Common Stock and its obligations. In the event the merger does not occur and Stones and SMC continue to exist as separate entities, except to the extent otherwise provided herein, any reference contained in this Amended Plan to the "Company", its Board, its Nominating Committee, its officers, its shareholders, its Common Stock and its obligations shall refer to each of Stones and SMC separately, as to its own Board, its Nominating Committee, its officers, its shareholders, its Common Stock and its obligations.

* * * * * * *

C. BOARD OF DIRECTORS - SELECTION OF DIRECTORS

E.E. Stone, IV and C. Rivers Stone shall both be selected as initial members of the Board. At least three members of the Board shall be independent outside directors; provided, however, that the Board initially may be comprised solely of management representatives * * * prior to the proposed initial public offering of equity securities ("IPO") of Stones, SMC or the surviving entity of the merger * * *.

* * * * * * *

IV. OWNERSHIP OF COMPANY

A. MERGER OF STONES AND SMC

Stones and SMC may be merged * * *. The shareholders agree to vote their stock in favor of any such merger that is recommended by the Board.

* * * * * * *

B. SHARE EXCHANGE

The shares of Common Stock of SMC, now held by E.E. Stone, IV, C. Rivers Stone, Mary Stone Fraser and Rosalie Stone Morris, the shares of Common Stock of Stones, held by the Existing Trusts * * * may be exchanged or otherwise changed to align their shares * * * at the Stones corporate level in a transaction recommended by the Board. * * *

* * * * * * *

The shareholders agree to vote their stock in favor of a share exchange consistent with this provision that is recommended by the Board and to exchange their shares as required.

* * * * * * *

I. PREFERENTIAL RIGHT TO SELL COMMON STOCK

The New Trusts for Mary Stone Fraser, Mary Wyman Stone Fraser Davis and Laura Lawton Stone Fraser Arnal (the "Fraser New Trusts"), the New

Trusts for Rosalie Stone Morris, Charles Hill Morris, Jr., and Rosalie Morris (the "Morris New Trusts"), and the New Trusts for Chris Stone, Frances Stone and Rosalie Stone shall have the right (but not the obligation) to dispose of their entire holding of Common Stock in the IPO and in a subsequent offering, should they choose to do so. Mary Stone Fraser and Rosalie Stone Morris shall have the right to sell their directly owned shares in either the initial or subsequent offering.
* * *

J. SALE OF THE COMPANY

The Board, with the approval of the shareholders * * * may effect a sale of the Company or other sale involving all of the stock or substantially all of the assets of the Company upon such terms and conditions as shall be determined by the Board.

* * * * * * *

M. DIVIDEND PAYMENTS

(a) To the extent actually permitted under all financing arrangements to which SMC is a party, SMC shall pay a dividend to the shareholders in 1997 of $1 million for fiscal year 1996 to shareholders of record as of December 31, 1996. * * *

(b) Mandatory dividends on all Common Stock of SMC shall be determined, and to the extent permitted under all financing arrangements to which SMC is a party paid to the shareholders as soon as practicable after the end of each fiscal year in which consolidated net after-tax earnings * * * for that year exceed $5 million * * *.

* * * * * * *

VII. IMPLEMENTATION AND JURISDICTION

* * * * * * *

B. CONTINUING JURISDICTION AND FURTHER ASSURANCES

The parties agree to take whatever additional

> actions and execute whatever additional documents are reasonably necessary to accomplish the provisions hereof * * *. The Probate Court * * * shall maintain exclusive continuing jurisdiction to resolve any disputes which shall arise during the implementation and enforcement of the Amended Plan and the Company-related Plan Documents. The parties will seek to have a hearing on the Amended Plan as soon as practicable after its execution.

Because, as discussed above, the Probate Court continued to retain jurisdiction over any issues relevant to the litigation among the children, the parties in that litigation submitted the 1997 amended and restated plan for settlement to the Probate Court for approval. Until and unless the Probate Court approved that plan, none of the partnerships was to be funded. On April 5, 1997, the Probate Court entered an order approving the 1997 amended and restated plan for settlement, finding it to be fair and equitable to all of the parties to that plan and consistent with South Carolina law.

On April 5, 1997, the children and their respective children entered into a family settlement agreement, as provided for in the 1997 amended and restated plan for settlement--trusts and estate. That agreement provided in part as follows:

> WHEREAS, in furtherance of an estate plan which has been developed for Mr. and Mrs. Stone, the parties to this Family Settlement Agreement entered into an Amended and Restated Plan For Settlement, (the "Plan") [the 1997 amended and restated plan for settlement], * * *
>
> WHEREAS, pursuant to the Plan, the Family persuaded Mr. and Mrs. Stone to execute new Wills, (collectively the "New Wills") [Mr. Stone's will executed

on April 5, 1997, discussed below, and Ms. Stone's will executed on May 3, 1997, discussed below] * * *.

WHEREAS, being mindful that Mr. and Mrs. Stone could subsequently execute other wills or codicils and revoke or amend the New Wills, the Family has agreed, pursuant to the Plan, to enter into this Family Settlement Agreement, the terms and provisions of which are consistent with the New Wills and the Plan, and which is intended to resolve the * * * [litigation among the children and the children's concerns regarding Mr. Stone's and Ms. Stone's assets] as it relates to any future will contest concerning the proper disposition of Mr. Stone's estate and Mrs. Stone's estate upon their respective deaths.

* * * * * * *

2. Terms of Family Settlement Agreement include those of the Plan and New Wills. If either Mr. or Mrs. Stone executes any subsequent will or codicil, or otherwise effectively revokes the New Wills, which would cause a distribution from their estates to the Family in a manner inconsistent with the Plan or the New Wills, then that portion of their estates which was left to the Family under the subsequent will or codicil shall pass to the Family according to the provisions of the Plan and the New Wills [Mr. and Ms. Stone's New Wills] as set forth in Exhibits A, B and C and this Family Settlement Agreement. * * *

3. State Law to Govern. This Family Settlement Agreement shall be construed, regulated and governed by and in accordance with the laws of the State of South Carolina, notwithstanding the residence in any other jurisdiction of any member of the Family.

On April 5, 1997, Mr. Stone executed his last will and testament (Mr. Stone's will). Mr. Stone's will provided in part as follows:

(1) Prior Wills. I hereby revoke all other wills and codicils heretofore made by me.

(2) Debts, Expenses and Mortgages. I direct my Personal Representative to pay my legal debts, my

funeral expenses, any unpaid expenses of my last illness, and the cost of a suitable tombstone or marker for my grave. Such debts and expenses shall first be paid out of and charged against the EUGENE E. STONE, III LIMITED PARTNERSHIP, or any proceeds received by my estate from any individual retirement account or deferred compensation. In the event these sources of funds are insufficient to pay such debts and expenses, then such remaining debts and expenses shall be paid out of and charged equally against the limited partnerships established by me for my children. In the event there are insufficient assets in a limited partnership established by me for a child of mine to pay an equal amount of such remaining debts and expenses, then the child of mine who received or receives an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of an equal amount of any such remaining debts and expenses. * * *

(3) Taxes. * * *

(a) Except as provided * * * below, I direct that all estate, generation-skipping transfer, inheritance, transfer, succession, death, or similar taxes which may be assessed or imposed upon or with respect to any interest in a limited partnership established by me for a child of mine which is included in my gross estate for the purpose of such taxes * * * shall be paid out of and charged against such limited partnership, and shall not be charged against the marital deduction. In the event there are insufficient assets in a limited partnership established by me for a child of mine to pay such taxes, then the child of mine who received or receives an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of any such remaining taxes.

(b) Except as provided in Paragraph (3)(c) below, I direct that any taxes which may be assessed or imposed by Section 2035(c) of the Internal Revenue Code, as amended, or corresponding provision of state law, including any interest or penalties thereon, as a result of any

gift tax paid or payable with respect to any interest in any limited partnerships established by me for my children which were the subject of any gifts made by me during my lifetime, shall be paid out of and charged equally against such limited partnerships, and shall not be charged against the marital deduction. In the event there are insufficient assets in a limited partnership established by me for a child of mine to pay an equal amount of such taxes, then the child of mine who received a gift of an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of an equal amount of any such remaining taxes.

(c) In the event the Internal Revenue Service or any other taxing authority changes the value attributable to (i) any assets I have contributed to a limited partnership established by me for a child of mine * * * then I direct that all gift, estate, generation-skipping transfer, inheritance, transfer, succession, death, or similar taxes which may be assessed or imposed as a result of such change in value, * * * shall be paid out of and charged against the limited partnership that received such contribution * * * and shall not be charged against the marital deduction. In the event there are insufficient assets in a limited partnership established by me for a child of mine to pay such taxes, then the child of mine who received such gift, or whose limited partnership received such contribution, or such child's estate, as the case may be, shall be responsible for the payment of any such remaining taxes.

(d) I direct that all other estate, generation-skipping transfer, inheritance, transfer, succession, death, or similar taxes, including any interest or penalties thereon, payable by reason of my death * * * or assessed or imposed with respect to my estate, or any part thereof, whether or not passing under this will, or any codicil thereto, including all policies of insurance on my life, all

> bequests and devises, all transfers made by me during my lifetime, all jointly held property, all pension and profit-sharing benefits, deferred compensation benefits and individual retirement accounts, and all powers, rights, or other interests in property included in my gross estate for the purpose of such taxes, shall first be paid out of and charged against my residuary estate. In the event there are insufficient assets in my residuary estate to pay such taxes, then such remaining taxes shall be paid out of and charged equally against the limited partnerships established by me for my children. In the event there are insufficient assets in a limited partnership established by me for a child of mine to pay an equal amount of such remaining taxes, then the child of mine who received or receives an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of an equal amount of any such remaining taxes. * * *

* * * * * * *

(4) Specific Bequests. I hereby make the following specific bequests:

(a) I give, devise and bequeath all of my tangible personal effects * * * to my children * * *.

(b) If my wife * * * survives me, I give, devise and bequeath any interest that I may own at the time of my death in the EUGENE E. STONE, III LIMITED PARTNERSHIP, or its successor, and any proceeds, net of taxes, received by my estate from any individual retirement account or deferred compensation * * * to be held in the ALLENE WYMAN STONE TRUST * * *. If my wife * * * does not survive me, then I give, devise and bequeath any interest that I may own at the time of my death in * * * [ES3LP] to my children * * *.

(c) I give, devise and bequeath any interest that I may own at the time of my death in the C. RIVERS STONE LIMITED PARTNERSHIP, or its successor, to my son, C. RIVERS STONE, if he survives me, to be his absolutely, but if he does not survive me, to my said son's

estate.

(d) I give, devise and bequeath any interest that I may own at the time of my death in the E.E. STONE, IV LIMITED PARTNERSHIP, or its successor, to my son, E.E. STONE, IV, if he survives me, to be his absolutely, but if he does not survive me, to my said son's estate.

(e) I give, devise and bequeath any interest that I may own at the time of my death in the MARY STONE FRASER LIMITED PARTNERSHIP, or its successor, to my daughter, MARY S. FRASER, if she survives me, to be hers absolutely, but if she does not survive me, to my said daughter's estate.

(f) I give, devise and bequeath any interest that I may own at the time of my death in the ROSALIE STONE MORRIS LIMITED PARTNERSHIP, or its successor, to my daughter, ROSALIE S. MORRIS, if she survives me, to be hers absolutely, but if she does not survive me, to my said daughter's estate.

* * * * * * *

(5) Allene Wyman Stone Trust. THE ALLENE WYMAN STONE TRUST shall be held, managed, invested and reinvested, administered and distributed upon the following terms and conditions and for the following uses and purposes:

(a) If my wife * * * survives me, then * * * my Trustee shall pay all of the net income from this trust, at least quarterly, to or for the benefit of my wife * * * for and during the term of her life. * * *

(b) Upon the death of my wife * * * the remaining principal of this trust shall be distributed to my children. * * *

(c) My Personal Representative shall, in its discretion, determine whether to elect under Section 2056(b)(7) of the Internal Revenue Code * * * to qualify any specific portion or all of this trust for the estate tax marital deduction. * * *

* * * * * * *

(e) * * * It is my intention that my wife under the provisions of this trust have substantially that degree of beneficial enjoyment of this trust during her lifetime which the principles of the law of trusts accord to a person who is unqualifiedly designated as the life beneficiary of a trust, and my Trustee shall not exercise its discretion in a manner which is not in accord with this expressed intention. It is also my intention that my Trustee shall invest this trust so that it will produce for my wife during her lifetime an income which is consistent with the value of the trust property and with its preservation. Therefore, non-income producing property shall not be held as a part of this trust for more than a reasonable period of time without the approval of my wife. In addition, my wife may require my Trustee at any time to either make any nonproductive property of this trust productive or to convert such nonproductive property to productive property within a reasonable period of time. It is expressly provided that my Trustee shall not in the exercise of its discretion make any determination inconsistent with the foregoing.

* * * * * * *

(8) Powers of * * * Trustee. In addition to such powers as my * * * Trustee may have by law, I authorize each of them, in their discretion, to exercise the following powers, which at all times shall be exercised in a fiduciary capacity for the benefit of the beneficiaries herein: * * * to sell, exchange, grant options and dispose of said property, real, personal, tangible or intangible at such prices and on such terms as they deem proper; * * * to invest and reinvest in any kind of property, real, personal, tangible or intangible, including, but not limited to, common trust funds, stocks, options, futures, contracts, rights, warrants, puts, calls, bonds, notes, mortgages, general or limited partnership interests, limited liability companies, savings accounts and certificates of deposit, and similar liquid funds, mutual funds, real estate, and stock of any corporate fiduciary serving hereunder or

> the holding company of such corporate fiduciary; * * * to make distributions in cash or in kind, * * * to continue and operate any business owned by me at my death in the form either of a sole proprietorship, partnership, limited liability company or corporation, and to do any and all things deemed needful or appropriate by my * * * Trustee, including the power to incorporate or form the business and to put additional capital into the business, for such time as they shall deem advisable, without liability for loss resulting from the continuance or operation of the business except for their own negligence; * * * and to do all other acts which in their discretion may be necessary or appropriate for the proper and advantageous management, investment and distribution of my estate or any trust hereunder, all of which may be done without order of or application to any court. Notwithstanding any provision in this will to the contrary, any duty or power granted to my * * * Trustee shall be absolutely void to the extent that the right to perform such duty, or to exercise such power, or the performance or exercise thereof would in any way cause my estate to lose all or any part of the tax benefits afforded by the marital deduction or any exemption allowed pursuant to the generation-skipping transfer tax provisions under either federal or state laws * * *.
>
> * * * * * * *
>
> (15) * * * Trustee. * * * I * * * nominate, constitute and appoint my children * * * as Co-Trustees of all trusts created in this will. * * *

On May 3, 1997, Ms. Stone executed her last will and testament (Ms. Stone's will). Ms. Stone's will provided as follows:

> I, ALLENE WYMAN STONE, a resident of and domiciled in Greenville County, South Carolina, do hereby make, publish and declare this writing to be and contain my Last Will and Testament, hereby revoking any and all other Wills or Codicils to Wills at any time heretofore made by me.
>
> **ITEM I**
>
> I direct that all of my just debts, secured and unsecured, be paid as soon as practicable after my

death; however, I direct that my Personal Representative may cause any debt to be carried, renewed and refinanced from time to time upon such terms and with such securities for its repayment as my Personal Representative may deem advisable taking into consideration the best interest of the beneficiaries hereunder.

ITEM II

I direct that all estate, inheritance, succession, death or similar taxes (except generation-skipping transfer taxes) assessed with respect to my estate herein disposed of, or any part thereof, or on any bequest or devise contained in this my Last Will and Testament (which term wherever used herein shall include any codicil hereto), or on any insurance upon my life or on any property held jointly by me with another or on any transfer made by me during my lifetime or on any other property or interest in property included in my estate shall be paid out of my residuary estate and shall not be charged against the marital deduction. In the event there are insufficient assets in my residuary estate which are not selected for the marital deduction to my estate taxes, then my Personal Representative may charge any such remaining tax payments against the marital deduction. Notwithstanding the foregoing, if any such tax (including any interest or penalties thereon) is imposed on property includible in my gross estate by reason of Section 2044 of the Internal Revenue Code, as amended, or corresponding provision of state law, I direct my Personal Representative to recover such tax as provided in Section 2207A of the Internal Revenue Code, as amended, or corresponding provision of state law.

ITEM III

* * * * * * *

* * * I give and devise all of my tangible personal effects and household effects of every kind * * * to my children * * *, in equal shares * * *.

* * * * * * *

ITEM IV

If my husband * * * survives me, I give, devise

> and bequeath any interest that I may own at the time of my death in * * * [ES3LP] to be held in trust pursuant to the terms of Item V of this Will. If my husband * * * does not survive me, then I give, devise and bequeath any interest that I may own at the time of my death in * * * [ES3LP] * * * to my children * * *, in equal shares * * *.
>
> * * * * * * *

ITEM VI

> I give, devise and bequeath all the rest, residue and remainder of my property of every kind and description * * * to my children * * *.

On June 14, 1997, Ms. Stone executed a first codicil to Ms. Stone's will (Ms. Stone's codicil). Ms. Stone's codicil deleted Item II and Item IV of Ms. Stone's will and replaced them with the following new Item II and Item IV:

ITEM II

> I direct that all estate, inheritance, transfer, succession, death, or similar taxes, including any interest or penalties thereon, payable by reason of my death, or assessed or imposed with respect to my estate, or any part thereof, whether or not passing under this Will, or any codicil thereto, shall be paid as follows:
>
> (a) Except as provided * * * below, I direct that all estate, generation-skipping transfer, inheritance, transfer, succession, death, or similar taxes which may be assessed or imposed upon or with respect to any interest in a limited partnership established for a child of mine which is included in my gross estate for the purpose of such taxes * * * shall be paid out of and charged against such limited partnership. In the event there are insufficient assets in a limited partnership established for a child of mine to pay such taxes, then the child of mine who received or receives an interest in such limited partner-

ship, or such child's estate, as the case may be, shall be responsible for the payment of any such remaining taxes.

(b) Except as provided in subparagraph (c) below, I direct that any taxes which may be assessed or imposed by Section 2035(c) of the Internal Revenue Code, as amended, or corresponding provision of state law, including any interest or penalties thereon, as a result of any gift tax paid or payable with respect to any interest in any limited partnerships established for my children which were the subject of any gifts made by me during my lifetime, shall be paid out of and charged equally against such limited partnerships. In the event there are insufficient assets in a limited partnership established for a child of mine to pay an equal amount of such taxes, then the child of mine who received a gift of an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of an equal amount of any such remaining taxes.

(c) In the event the Internal Revenue Service or any other taxing authority changes the value attributable to (i) any assets I have contributed to a limited partnership established for a child of mine * * * then I direct that all gift, estate, generation-skipping transfer, inheritance, transfer, succession, death or similar taxes which may be assessed or imposed as a result of such change in value, * * * shall be paid out of and charged against the limited partnership that received such contribution, or was the subject of such gift, as the case may be. In the event there are insufficient assets in a limited partnership established for a child of mine to pay such taxes, then the child of mine who received such gift, or whose limited partnership received such contribution, or such child's estate, as the case may be, shall be responsible for the payment of any such remaining taxes.

(d) I direct that all other estate, generation-

> skipping transfer, inheritance, transfer, succession, death, or similar taxes, including any interest or penalties thereon, payable by reason of my death * * * or assessed or imposed with respect to my estate, or any part thereof, whether or not passing under this Will, or any codicil thereto, including all policies of insurance on my life, all bequests and devises, all transfers made by me during my lifetime, all jointly held property, all pension and profit-sharing benefits, deferred compensation benefits and individual retirement accounts, and all powers, rights, or other interests in property included in my gross estate for the purpose of such taxes, shall first be paid out of and charged against my residuary estate. In the event there are insufficient assets in my residuary estate to pay such taxes, then such remaining taxes shall be paid out of and charged equally against the limited partnerships established for my children. In the event there are insufficient assets in a limited partnership established for a child of mine to pay an equal amount of such remaining taxes, then the child of mine who received or receives an interest in such limited partnership, or such child's estate, as the case may be, shall be responsible for the payment of an equal amount of any such remaining taxes. * * *

ITEM IV

I hereby make the following specific bequests:

(a) I give, devise and bequeath any interest that I may own at the time of my death in the EUGENE E. STONE, III LIMITED PARTNERSHIP, or its successor, to my children * * * in equal shares * * *.

(b) I give, devise and bequeath any interest that I may own at the time of my death in the C. RIVERS STONE LIMITED PARTNERSHIP, or its successor, to my son, C. RIVERS STONE, if he survives me, to be his absolutely, but if he does not survive me, to my said son's estate.

> (c) I give, devise and bequeath any interest that I may own at the time of my death in the E.E. STONE, IV LIMITED PARTNERSHIP, or its successor, to my son, E.E. STONE, IV, if he survives me, to be his absolutely, but if he does not survive me, to my said son's estate.
>
> (d) I give, devise and bequeath any interest that I may own at the time of my death in the MARY STONE FRASER LIMITED PARTNERSHIP, or its successor, to my daughter, MARY S. FRASER, if she survives me, to be hers absolutely, but if she does not survive me, to my said daughter's estate.
>
> (e) I give, devise and bequeath any interest that I may own at the time of my death in the ROSALIE STONE MORRIS LIMITED PARTNERSHIP, or its successor, to my daughter, ROSALIE S. MORRIS, if she survives me, to be hers absolutely, but if she does not survive me, to my said daughter's estate.

On April 8, 1997, Mr. Stone gave to each of the children an undivided .25-percent interest in the Cherrydale residence. On April 8, 1997, Mr. Stone gave to Eugene Earle Stone, IV, an undivided one-percent interest in 11.603 acres of land located on Keith Drive, in Greenville County, South Carolina (Keith Drive property). On April 8, 1997, Mr. Stone gave to C. Rivers Stone an undivided one-percent interest in each of various parcels totaling 366.097 acres of the Piney Mountain property. On April 8, 1997, Mr. Stone gave to Ms. Morris an undivided one-percent interest in a 4.263-acre parcel and an undivided one-percent interest in a .333-acre parcel of the Piney Mountain property. On April 8, 1997, Mr. and Ms. Stone gave to Ms. Fraser, an

undivided one-percent interest in the 1054.415-acre parcel of the Cedar Mountain property.

Around the middle of September 1998, Mr. Stone's estate filed on behalf of the deceased Mr. Stone Form 709, United States Gift (& Generation-Skipping Transfer) Tax Return, for the taxable year 1997 (1997 gift tax return), in which the above-described gifts, as well as certain other gifts including those discussed below, were reported.

In April 1997, the partners of ES3LP made bona fide, arm's-length transfers to that partnership, as follows. On April 9, 1997, Mr. Stone transferred to ES3LP the interest that he owned in the Cherrydale residence and certain other property in exchange for both general and limited partnership interests, and the children transferred to ES3LP the respective interests that they owned in the Cherrydale residence in exchange for general partnership interests.[27] At a time not disclosed by the record in April 1997, Ms. Stone transferred certain property that she owned to ES3LP in exchange for a limited partnership interest. When the partners of ES3LP formed and funded that partnership, they contemplated and intended that ES3LP operate as a joint enterprise for profit for the management of its assets and that the children contribute their services in providing such manage-

[27]Although not altogether clear from the record, it appears that each of the children also transferred certain other property to ES3LP in exchange for a general partnership interest.

ment.

Neither Mr. Stone nor Ms. Stone intended to, or did, live at the Cherrydale residence after Mr. Stone and the children transferred their respective interests in that residence to ES3LP. If Mr. Stone or Ms. Stone had desired to live at the Cherrydale residence after Mr. Stone and the children transferred their respective interests in the Cherrydale residence to ES3LP, the children, as the other partners of ES3LP, would not have objected, provided that Mr. Stone or Ms. Stone, as the case may be, used personal funds to pay rent to ES3LP.

After the partners of ES3LP transferred the respective assets that they owned to ES3LP in exchange for certain partnership interests, the children actively managed the assets of ES3LP, as Mr. and Ms. Stone intended. In this connection, during 1998, after renovation of the Cherrydale residence was completed in the fall of 1997, ES3LP rented it to, and received rental income from, Stone Manufacturing, which used that residence to house a management team that it decided to retain in order to assist the Company in addressing certain economic difficulties that it was having.[28] In addition, the respective partnership

[28]In Form 1065, U.S. Partnership Return of Income (partnership return), that ES3LP filed for 1998, ES3LP reported gross rents of $34,650 from Stone Manufacturing for the rental of the Cherrydale residence. Neither before nor after Mr. Stone and the children transferred their respective interests in the Cherrydale residence to ES3LP did Mr. Stone or Ms. Stone report any rental

(continued...)

returns that ES3LP filed for 1998 and 1999 reflected that ES3LP made investment decisions to sell some of its assets, including certain stock that it purchased on May 7, 1997, and that it sold approximately two years later for a substantial gain.[29] ES3LP also hired advisors and accountants who at all times were different from those of ES4LP, CRSLP, RSMLP, and MSFLP. At no time did the partners of ES3LP, including Mr. Stone and Ms. Stone, commingle the assets that ES3LP owned with their respective personal assets. At all times, ES3LP was respected by the Stone family as a separate entity.

In April 1997, the partners of ES4LP made bona fide, arm's-length transfers to that partnership, as follows. On April 9,

---

[28](...continued)
income from that residence in any Federal income tax return. In Form 1040, U.S. Individual Income Tax Return (Form 1040), that Mr. and Ms. Stone filed jointly for their taxable year 1995 (1995 joint return), they reported "Rents received" from "various" rental properties totaling $92,798. The depreciation schedules attached to the 1995 joint return identify those "various" rental properties as properties other than the Cherrydale residence. In Mr. and Ms. Stone's joint returns for their taxable years 1996 (1996 joint return) and 1997 (1997 joint return), they reported "Rents received" from "various" rental properties totaling $99,435 and $34,440, respectively. The respective depreciation schedules attached to the 1996 joint return and the 1997 joint return identify those "various" rental properties as properties other than the Cherrydale residence and as the same properties from which Mr. and Ms. Stone reported rents in the 1995 joint return. In Form 1040 that Ms. Stone filed for the taxable year 1998 (Ms. Stone's 1998 return), Ms. Stone did not report any rental income.

[29]Although not altogether clear from the record, it appears that ES3LP reinvested the proceeds from the sale of its assets.

1997, Mr. Stone transferred to ES4LP some of his preferred stock of Stones, Inc., his interest in the Keith Drive property, and certain other property, and Eugene Earle Stone, IV, transferred to ES4LP his interest in the Keith Drive property, in exchange for both general and limited partnership interests.[30] At a time not disclosed by the record in April 1997, Anne M. Stone transferred certain property that she owned to ES4LP in exchange for a general partnership interest. On April 15, 1997, Ms. Stone transferred certain property that she owned to ES4LP in exchange for a limited partnership interest. When the partners of ES4LP formed and funded that partnership, they contemplated and intended that ES4LP operate as a joint enterprise for profit for the management of its assets and that Eugene Earle Stone, IV, contribute his services in providing such management.

After the partners of ES4LP transferred the respective assets that they owned to ES4LP in exchange for certain partnership interests, Eugene Earle Stone, IV, began actively managing the assets of ES4LP, as Mr. and Ms. Stone intended. In this connection, Eugene Earle Stone, IV, on behalf of ES4LP, managed, and made investment decisions with respect to, ES4LP's assets. The respective partnership returns that ES4LP filed for

[30]Although not altogether clear from the record, it appears that Eugene Earle Stone, IV, also transferred certain other property to ES4LP in exchange for general and limited partnership interests.

1997 and 1999 reflected that ES4LP sold certain of its stock for substantial gains.[31] Eugene Earle Stone, IV, also hired on behalf of ES4LP advisors and accountants who at all times were different from those of ES3LP, CRSLP, RSMLP, and MSFLP. At no time did the partners of ES4LP, including Mr. Stone and Ms. Stone, commingle the assets that ES4LP owned with their respective personal assets. At all times, ES4LP was respected by the Stone family as a separate entity.

In April 1997, the partners of CRSLP made bona fide, arm's-length transfers to that partnership, as follows. On April 9, 1997, Mr. Stone transferred to CRSLP his interest in each of various parcels totaling 366.097 acres of the Piney Mountain property and certain other property, and C. Rivers Stone transferred to CRSLP his interest in each of those parcels, in exchange for both general and limited partnership interests.[32] At a time not disclosed by the record in April 1997, Charles R. Stone, Jr., transferred certain property that he owned to CRSLP in exchange for both limited and general partnership interests, and Frances O. Stone transferred certain property that she owned to CRSLP in exchange for a limited partnership interest. On

[31]Although not altogether clear from the record, it appears that ES4LP reinvested the proceeds from the sale of its stock in 1997 and 1999 in certain real estate.

[32]Although not altogether clear from the record, it appears that C. Rivers Stone also transferred certain other property to CRSLP in exchange for general and limited partnership interests.

April 15, 1997, Ms. Stone transferred property that she owned to CRSLP in exchange for a limited partnership interest. When the partners of CRSLP formed and funded that partnership, they contemplated and intended that CRSLP operate as a joint enterprise for profit for the management of its assets and that C. Rivers Stone contribute his services in providing such management.

After the partners of CRSLP transferred the respective assets that they owned to CRSLP in exchange for certain partnership interests, C. Rivers Stone began actively managing the assets of CRSLP, as Mr. and Ms. Stone intended. In this connection, C. Rivers Stone, on behalf of CRSLP, began a major project to convert CRSLP's Piney Mountain property into a high-end real property development which was to be known as Montebello and which was to consist of over 1,000 houses, with, inter alia, clubhouses for meetings and weddings, as well as shopping centers. In addition, the partnership return that CRSLP filed for 1997 reflected that CRSLP made investment decisions to sell certain of its stock for a substantial gain.[33] Moreover, the respective partnership returns that CRSLP filed for 1997, 1998, and 1999 reflected that CRSLP rented various real properties that it owned (other than the Piney Mountain property) from which it

[33]Although not altogether clear from the record, it appears that CRSLP reinvested the proceeds from the sale of its stock in, inter alia, certain real estate.

received and reported rental income. C. Rivers Stone also hired on behalf of CRSLP advisors and accountants who at all times were different from those of ES3LP, ES4LP, RSMLP, and MSFLP. At no time did the partners of CRSLP, including Mr. Stone and Ms. Stone, commingle the assets that CRSLP owned with their respective personal assets. At all times, CRSLP was respected by the Stone family as a separate entity.

In April 1997, the partners of RSMLP made bona fide, arm's-length transfers to that partnership, as follows. On April 9, 1997, Mr. Stone transferred to RSMLP certain of his stock and securities, including some of his preferred stock of Stones, Inc., his interest in the 4.263-acre parcel and the .333-acre parcel of the Piney Mountain property, and certain other property, and Ms. Morris transferred to RSMLP her interest in each of those parcels, in exchange for both general and limited partnership interests.[34] At a time not disclosed by the record in April 1997, Mr. Morris transferred certain property that he owned to RSMLP in exchange for a general partnership interest, and Charles H. Morris, Jr., and Rosalie S. Morris, II, transferred certain property that they owned to RSMLP in exchange for limited partnership interests. On April 15, 1997, Ms. Stone transferred certain property, including certain of her stock and securities,

[34]Although not altogether clear from the record, it appears that Ms. Morris also transferred certain other property to RSMLP in exchange for general and limited partnership interests.

that she owned to RSMLP in exchange for a limited partnership interest. When the partners of RSMLP formed and funded that partnership, they contemplated and intended that RSMLP operate as a joint enterprise for profit for the management of its assets and that Ms. Morris contribute her services in providing such management.

After the partners of RSMLP transferred the respective assets that they owned to RSMLP in exchange for certain partnership interests, Ms. Morris began actively managing the assets of RSMLP, as Mr. and Ms. Stone intended. In this connection, Ms. Morris, on behalf of RSMLP, began actively managing its real estate holdings. She also transferred certain of RSMLP's securities from a brokerage account that it had in Greenville, South Carolina, to a brokerage account that she opened for it in Savannah, Georgia, where she was living. In addition, the respective partnership returns that RSMLP filed for 1997, 1998, and 1999 reflected that RSMLP made investment decisions to sell certain of its stock for substantial gains.[35] Those partnership returns also reflected that RSMLP rented certain of its real property from which it received and reported rental income. Ms. Morris also hired on behalf of RSMLP advisors and accountants who at all times were different from those of ES3LP, ES4LP, CRSLP,

[35]Although not altogether clear from the record, it appears that RSMLP reinvested the proceeds from the sale of its stock.

and MSFLP. At no time did the partners of RSMLP, including Mr. Stone and Ms. Stone, commingle the assets that RSMLP owned with their respective personal assets. At all times, RSMLP was respected by the Stone family as a separate entity.

In April 1997, the partners of MSFLP made bona fide, arm's-length transfers to that partnership, as follows. On April 9, 1997, Mr. Stone transferred to MSFLP his interest in the 1054.415-acre parcel of the Cedar Mountain property and certain other property, and Ms. Fraser transferred to MSFLP her interest in that property,[36] in exchange for both general and limited partnership interests.[37] On the same date, Ms. Stone transferred to MSFLP the interest that she owned in the 1054.415-acre parcel of the Cedar Mountain property in exchange for a limited partnership interest. At a time not disclosed by the record in April 1997, Ms. Davis and Ms. Arnal transferred certain property that they owned to MSFLP in exchange for both general and limited

[36]The record is not clear as to why the deed reflecting the transfer to MSFLP of Ms. Fraser's interest in the 1054.415-acre parcel of the Cedar Mountain property showed Ms. Fraser and her husband Mr. Fraser as the grantors, while the deed reflecting the transfer by Mr. Stone and Ms. Stone to Ms. Fraser of such interest in that parcel showed the grantee only as Ms. Fraser. We presume that applicable State law required that not only Ms. Fraser but also her husband Mr. Fraser be reflected as grantors on the deed when Ms. Fraser transferred to MSFLP her interest in the 1054.415-acre parcel of the Cedar Mountain property.

[37]Although not altogether clear from the record, it appears that Ms. Fraser also transferred certain other property to MSFLP in exchange for general and limited partnership interests.

partnership interests. When the partners of MSFLP formed and funded that partnership, they contemplated and intended that MSFLP operate as a joint enterprise for profit for the management of its assets and that Ms. Fraser contribute her services in providing such management.

After the partners of MSFLP transferred the respective assets that they owned to MSFLP in exchange for certain partnership interests, Ms. Fraser began actively managing the assets of MSFLP, as Mr. and Ms. Stone intended. In this connection, Ms. Fraser, on behalf of MSFLP, began actively managing MSFLP's Cedar Mountain property, which included maintaining the roads and lakes that Mr. Stone had built on that property. In addition, the respective partnership returns that MSFLP filed for 1998 and 1999 reflected that MSFLP made investment decisions to sell certain of its stock for substantial gains.[38] Ms. Fraser also hired on behalf of MSFLP advisors and accountants who at all times were different from those of ES3LP, ES4LP, CRSLP, and RSMLP. At no time did the partners of MSFLP, including Mr. Stone and Ms. Stone, commingle the assets that MSFLP owned with their respective personal assets. At all times, MSFLP was respected by the Stone family as a separate entity.

The respective assets that Mr. Stone and Ms. Stone retained,

[38]Although not altogether clear from the record, it appears that MSFLP reinvested the proceeds from the sale of its stock.

and did not transfer in April 1997 to each of the Five Partnerships, were sufficient to maintain their respective accustomed standards of living. Mr. and Ms. Stone did not transfer to any of the Five Partnerships the 582.672-acre parcel of the Cedar Mountain property on which Mr. Stone was living in April 1997.[39] Ms. Stone did not transfer to any of the Five Partnerships the Cypress villa on Hilton Head Island in which she was living in April 1997.

Sometime after the respective bona fide, arm's-length transfers of assets in April 1997 to each of ES4LP, CRSLP, RSMLP, and MSFLP in exchange for partnership interests, the Stone family realized that there had been an inadvertent, improper valuation of certain of such assets (valuation errors). Those valuation errors resulted in each of the children's having received a total partnership interest in each such partnership in which such child had a partnership interest that was larger (unintended excessive partnership interest) than the Stone family intended and agreed each should have received had the correct valuation been used. The Stone family did not intend or agree that a partner of any of ES4LP, CRSLP, RSMLP, and MSFLP (or ES3LP) was to receive a larger

[39]On Apr. 8, 1997, Mr. and Ms. Stone gave to Anne Logan Ministries, Inc., a charity, the remainder interest in the 582.672-acre parcel of the Cedar Mountain property on which Mr. Stone was living, and Mr. Stone retained a life estate in that parcel. When Mr. Stone died, he had an ownership interest only in the .338-acre parcel of the Cedar Mountain property.

total partnership interest in each such partnership than such partner should have received based on the value of the property that such partner transferred to any such partnership. In order to correct the unintended consequences of the valuation errors, Mr. Stone made a gift as of April 9, 1997, to each of the children of the unintended excessive partnership interest in each of ES4LP, CRSLP, RSMLP, and MSFLP that each such child had received, as follows:

Donee's Name	Description of Gift	Value of Gift
Eugene Earle Stone, IV	281 General Partner Units in ES4LP	$10,095
Eugene Earle Stone, IV	1 Limited Partner Unit in ES4LP	36
C. Rivers Stone	1.02 General Partner Units in CRSLP	50
Ms. Morris	136 General Partner Units in RSMLP	6,426
Ms. Morris	1 Limited Partner Unit in RSMLP	47
Ms. Fraser	34 General Partner Units in MSFLP	1,489
Ms. Fraser	1 Limited Partner Unit in MSFLP	44
Total Value of Gifts		$18,187

After the foregoing gifts were made as of April 9, 1997,[40] all the partners of each of the Five Partnerships received, as the Stone family intended and agreed, respective percentage interests in each such partnership that were proportionate to the

[40]The above-described gifts were reported in the 1997 gift tax return filed on behalf of the deceased Mr. Stone.

fair market value of the assets that such partners respectively transferred to each such partnership, and the respective assets that the partners of each such partnership transferred to each such partnership were credited to the respective capital accounts of such partners. Upon the termination or dissolution of each of the Five Partnerships, the partners of each such partnership were entitled to distributions from each such partnership in amounts equal to their respective capital accounts.

After the partners of ES3LP made bona fide, arm's-length transfers of the respective assets that they owned to that partnership in exchange for certain partnership interests, the respective partnership interests owned by the partners of ES3LP in April 1997 were as follows:

Partner	General Partner Interests	Limited Partner Interests
Mr. Stone	1.001%	68.972%
Ms. Stone	--	29.027%
Eugene Earle Stone, IV	.250%	--
C. Rivers Stone	.250%	--
Ms. Morris	.250%	--
Ms. Fraser	.250%	--

At the time of Mr. Stone's death on June 5, 1997, Mr. Stone held the same percentage partnership interests in ES3LP that he owned in April 1997. At the time of Ms. Stone's death on October 16, 1998, Ms. Stone held the same percentage partnership interest in ES3LP that she owned in April 1997.

After the partners of ES4LP made bona fide, arm's-length transfers of the respective assets that they owned to that partnership in exchange for certain partnership interests, the respective partnership interests owned by the partners of ES4LP in April 1997 were as follows:

Partner	General Partner Interests	Limited Partner Interests
Mr. Stone	1.003%	93.874%
Ms. Stone	--	4.120%
Eugene Earle Stone, IV	1.000%	.001%
Anne M. Stone	.002%	--

At the time of Mr. Stone's death on June 5, 1997, Mr. Stone held the same percentage partnership interests in ES4LP that he owned in April 1997. At the time of Ms. Stone's death on October 16, 1998, Ms. Stone held the same partnership interest in ES4LP that she owned in April 1997.

After the partners of CRSLP made bona fide, arm's-length transfers of the respective assets that they owned to that partnership in exchange for certain partnership interests, the respective partnership interests owned by the partners of CRSLP in April 1997 were as follows:

Partner	General Partner Interests	Limited Partner Interests
Mr. Stone	1.002%	97.483%
Ms. Stone	--	.510%
C. Rivers Stone	1.000%	.001%
Charles R. Stone, Jr.	.001%	.001%
Frances O. Stone	--	.002%

At the time of Mr. Stone's death on June 5, 1997, Mr. Stone held the same percentage partnership interests in CRSLP that he owned in April 1997. At the time of Ms. Stone's death on October 16, 1998, Ms. Stone held the same partnership interest in CRSLP that she owned in April 1997.

After the partners of RSMLP made bona fide, arm's-length transfers of the respective assets that they owned to that partnership in exchange for certain partnership interests, the respective partnership interests owned by the partners of RSMLP in April 1997 were as follows:

Partner	General Partner Interests	Limited Partner Interests
Mr. Stone	1.003%	94.29725%
Ms. Stone	--	3.6935%
Ms. Morris	1.000%	.001%
Mr. Morris	.00175%	--
Charles H. Morris, Jr.	--	.00175%
Rosalie S. Morris, II	--	.00175%

At the time of Mr. Stone's death on June 5, 1997, Mr. Stone held the same percentage partnership interests in RSMLP that he owned in April 1997. At the time of Ms. Stone's death on October 16, 1998, Ms. Stone held the same partnership interest in RSMLP that she owned in April 1997.

After the partners of MSFLP made bona fide, arm's-length transfers of the respective assets that they owned to that partnership in exchange for certain partnership interests, the

respective partnership interests owned by the partners of MSFLP in April 1997 were as follows:

Partner	General Partner Interests	Limited Partner Interests
Mr. Stone	1.003%	90.141%
Ms. Stone	--	7.851%
Ms. Fraser	1.000%	.001%
Ms. Davis	.001%	.001%
Ms. Arnal	.001%	.001%

At the time of Mr. Stone's death on June 5, 1997, Mr. Stone held the same percentage partnership interests in MSFLP that he owned in April 1997. At the time of Ms. Stone's death on October 16, 1998, Ms. Stone held the same partnership interest in MSFLP that she owned in April 1997.

On June 5, 1997, Mr. Stone died at the age of 89. On that date, pursuant to Mr. Stone's will, The Allene Wyman Stone Trust (AWS Trust) was formed. Pursuant to that will, (1) the 1.001 percent general partnership interest and the 68.972 percent limited partnership interest in ES3LP that Mr. Stone held on the date of his death, (2) all the assets on that date in his individual retirement account (Mr. Stone's retirement account),[41] and (3) his right on that date to certain deferred compensation from Stone Manufacturing were transferred to that trust. (We shall sometimes refer to the assets in Mr. Stone's retirement account

[41]On the date of Mr. Stone's death, the assets in Mr. Stone's retirement account consisted of numerous corporate stocks and securities and a Government bond.

and his right to certain deferred compensation from Stone Manufacturing as certain other property.) Ms. Stone did not transfer any property to ES3LP in exchange for the general and limited partnership interests in ES3LP held by the AWS Trust as of June 5, 1997, the date of Mr. Stone's death.[42]

On August 5, 1997, after Mr. Stone died, Ms. Morris, and Mr. Morris, as general partners, filed a first amendment to the certificate of limited partnership for RSMLP with the S.C. Secretary of State. The purpose of that amendment was to remove Mr. Stone as a general partner of RSMLP.

On August 5, 1997, after Mr. Stone died, Ms. Fraser, Ms. Davis, and Ms. Arnal, as general partners, filed a first amendment to the certificate of limited partnership for MSFLP with the S.C. Secretary of State. The purpose of that amendment was to remove Mr. Stone as a general partner of MSFLP.

On August 7, 1997, after Mr. Stone died, C. Rivers Stone, and Charles Rivers Stone, Jr., as general partners, filed a first amendment to the certificate of limited partnership for CRSLP with the S.C. Secretary of State. The purpose of that amendment was to remove Mr. Stone as a general partner of CRSLP.[43]

---

[42]As discussed above, it was Mr. Stone who transferred certain property to ES3LP in exchange for the general and limited partnership interests that, pursuant to his will, were transferred to the AWS Trust.

[43]On Oct. 1, 1998, C. Rivers Stone, as a general partner, (continued...)

On October 1, 1997, after Mr. Stone died, Eugene Earle Stone, IV, and Anne M. Stone, as general partners, filed a first amendment to the certificate of limited partnership for ES4LP with the S.C. Secretary of State. The purpose of that amendment was to remove Mr. Stone as a general partner of ES4LP.

On January 8, 1998, after Mr. Stone died, Eugene Earle Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser, as general partners, filed a second amendment to the certificate of limited partnership for ES3LP with the S.C. Secretary of State. The purpose of that amendment was to remove Mr. Stone as a general partner of ES3LP.

After Mr. Stone's death, all the respective partners of each of ES4LP, CRSLP, RSMLP, and MSFLP agreed to make a distribution from each such partnership in order to pay the portion of the Federal estate tax and any applicable State estate tax (State estate tax) (collectively, Federal and State estate taxes) with respect to Mr. Stone's estate that was attributable to the inclusion in that estate of the total partnership interest in each such partnership held by Mr. Stone on the date of his death. After Mr. Stone's death, the partners of ES3LP did not agree to,

[43](...continued)
filed a second amendment to the certificate of limited partnership for CRSLP with the S.C. Secretary of State. The purpose of that amendment was to remove Charles Rivers Stone, Jr., as a general partner of CRSLP. The record does not disclose why Charles Rivers Stone, Jr., withdrew as a general partner of CRSLP.

and did not, make any distributions from that partnership to pay any Federal and State estate taxes with respect to Mr. Stone's estate.[44]

At a time not disclosed by the record after Mr. Stone's death, Ernst & Young, LLP (E&Y), prepared a document entitled "Estate of E.E. Stone, III Allocation of Estate Tax" (E&Y's Estate tax allocation schedule). That document showed for each of ES4LP, CRSLP, RSMLP, and MSFLP the amount of Federal and State estate taxes that each such partnership was to pay in 1998 and

[44]None of the Federal and State estate taxes with respect to Mr. Stone's estate was attributable to Mr. Stone's total 69.973 percent partnership interest in ES3LP. As discussed above, that partnership interest was transferred along with certain other property to the AWS Trust with respect to which, as discussed below, an election under sec. 2056(b)(7) was made.

Because of Mr. Stone's death in 1997, in that year, as reflected in the partnership return that ES3LP filed for 1997, ES3LP opened a capital account for his estate (Mr. Stone's estate's capital account in ES3LP), and the balances in Mr. Stone's capital account in ES3LP as a general partner and a limited partner were transferred to Mr. Stone's estate's capital account in ES3LP. The partnership return that ES3LP filed for 1997 reflected that ES3LP did not make distributions during that year to any of its other partners. Because of Ms. Stone's death in 1998, in that year, as reflected in the partnership return that ES3LP filed for 1998, ES3LP opened a capital account for her estate (Ms. Stone's estate's capital account in ES3LP), and the balance in Ms. Stone's capital account in ES3LP as a limited partner was transferred to Ms. Stone's estate's capital account in ES3LP. The partnership return that ES3LP filed for 1998 reflected that ES3LP did not make distributions during that year to any of its other partners. The partnership return that ES3LP filed for 1999 reflected that ES3LP made pro rata distributions during that year to its partners totaling $567,172, as follows: $396,867 to Mr. Stone's estate, $164,633 to Ms. Stone's estate, and $1,418 to each of the children. The record does not disclose the purpose or use of those distributions.

the amount of Federal and State estate taxes and interest that each such partnership was to pay in 1999, which were attributable to the inclusion in Mr. Stone's estate of the total partnership interest in each such partnership held by Mr. Stone on the date of his death. E&Y's Estate tax allocation schedule provided as follows:

	ES4LP	CRSLP	RSMLP	MSFLP
1998 Federal estate tax	$496,642.00	$80,000.00	$599,333.00	$461,597.00
1998 State estate tax	133,029.00	20,000.00	160,536.00	123,642.00
1998 TOTAL Federal and State estate taxes	$629,671.00	$100,000.00	$759,869.00	$585,239.00
1999 Federal estate tax and interest	$371,336.72	$1,000,641.91	$571,597.34	$514,194.67
1999 State estate tax and interest	98,545.00	268,474.00	151,871.00	136,704.00
1999 TOTAL Federal and State estate taxes and interest	$469,881.72	$1,269,115.91	$723,468.34	$650,898.67
GRAND TOTAL	$1,099,552.72	$1,369,115.91	$1,483,337.34	$1,236,137.67

On March 5, 1998, the Internal Revenue Service (IRS) received a total of $1,698,074 in payments for the anticipated estate tax with respect to Mr. Stone's estate. Those payments consisted of a $60,502 check drawn on the bank account of Mr. Stone's estate,[45] a $496,642 check drawn on ES4LP's bank account,

[45]The estate tax of $60,502 paid by Mr. Stone's estate was attributable to the inclusion in his estate of all the property that he owned on the date of his death except for his properties, including his partnership interest in ES3LP, to be held by the (continued...)

an $80,000 check drawn on CRSLP's bank account, a $599,333 check drawn on RSMLP's bank account, and a $461,597 check drawn on MSFLP's bank account. In 1998, State estate tax totaling $437,207 was paid with respect to Mr. Stone's estate. Of that total amount of State estate tax paid in 1998, ES4LP paid $133,029, CRSLP paid $20,000, RSMLP paid $160,536, and MSFLP paid $123,642.[46] The funds used to pay Federal and State estate taxes in 1998 with respect to Mr. Stone's estate consisted of non pro rata distributions to or on behalf of his estate by each of ES4LP, CRSLP, RSMLP, and MSFLP.

The partnership return that ES4LP filed for 1998 reflected that ES4LP made distributions during that year to its partners totaling $639,807 (i.e., $639,288 to Mr. Stone's estate, $418 to Ms. Stone, and $101 to Eugene Earle Stone, IV).[47]

---

[45](...continued)
AWS Trust for the benefit of Ms. Stone and except for his respective partnership interests in ES4LP, CRSLP, RSMLP, and MSFLP bequeathed to Eugene Earle Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser, respectively.

[46]The record discloses that ES4LP paid $133,029 to the S.C. Department of Revenue on Mar. 15, 1998. The record does not disclose the date on which CRSLP, RSMLP, and MSFLP made State estate tax payments with respect to Mr. Stone's estate.

[47]The only other distribution reflected in ES4LP's partnership return for 1998 was because of Ms. Stone's death in that year. The partnership return that ES4LP filed for 1998 reflected that ES4LP opened a capital account for Ms. Stone's estate (Ms. Stone's estate's capital account in ES4LP), and the balance in Ms. Stone's capital account as a limited partner was transferred to Ms. Stone's estate's capital account in ES4LP.

(continued...)

ES4LP's balance sheet for 1998 included a schedule entitled "Eugene E. Stone IV Limited Partnership, Transaction Detail by Date, January through December 1998" (ES4LP's 1998 transaction schedule). ES4LP's 1998 transaction schedule reflected a check dated March 15, 1998, payable to the IRS, in the amount of $496,642 and a check dated March 15, 1998, payable to the S.C. Department of Revenue, in the amount of $133,029.[48]

The partnership return that CRSLP filed for 1998 reflected that CRSLP did not make distributions during that year to any of its partners.[49] However, CRSLP's "Trial Balance Worksheet--Ac

[47](...continued)
Because of Mr. Stone's death in 1997, in that year, as reflected in the partnership return that ES4LP filed for 1997, ES4LP opened a capital account for his estate (Mr. Stone's estate's capital account in ES4LP), and the balances in Mr. Stone's capital accounts in ES4LP as a general partner and a limited partner were transferred to Mr. Stone's estate's capital account in ES4LP. The partnership return that ES4LP filed for 1997 showed that ES4LP made distributions during that year to Eugene Earle Stone, IV, totaling $8,754 and that, except for the above-discussed transfer to Mr. Stone's estate's capital account in ES4LP, it did not make distributions during that year to any of its other partners.

[48]The $496,642 distribution and the $133,029 distribution on behalf of Mr. Stone's estate shown in ES4LP's 1998 transaction schedule, when totaled, equal the total amount of Federal and State estate taxes with respect to Mr. Stone's estate (i.e., $629,671) that E&Y's Estate tax allocation schedule reflected as payable by ES4LP in 1998.

[49]Although not reflected as a distribution in CRSLP's partnership return for 1998, because of Ms. Stone's death in that year, as reflected in the partnership return that CRSLP filed for 1998, CRSLP opened a capital account for Ms. Stone's estate (Ms. Stone's estate's capital account in CRSLP), and the balance in
(continued...)

counts" for 1998 (CRSLP's 1998 trial balance worksheets) reflected the following adjustments to an account identified as "C. Rivers Stone-Draws": $510, $26,390, $66,721, $6,063, $316, and $100,000, or a total of $200,000 of adjustments to that account. CRSLP's 1998 trial balance worksheets included a schedule entitled "C. Rivers Stone LLP '98, Montebello Actual Expenses (2/9/99)" (CRSLP's 1998 Montebello expense schedule). CRSLP's 1998 Montebello expense schedule reflected in pertinent part the following entries:

Vendor	March 1998	1998 Totals
Estate Taxes	$0	$0
Estate Taxes: AW Stone 4 Lots	510	510
Estate Taxes: Commercial	26,390	26,390
Estate Taxes: Residential	66,721	66,721
Estate Taxes: Securities	6,063	6,063
Estate Taxes: Tulip Street Rental	316	316

The foregoing amounts, which total $100,000,[50] are identical to

[50](...continued)
tax allocation schedule reflected as payable by CRSLP in 1998.

[51]The $759,869 distribution to Mr. Stone's estate shown in RSMLP's 1998 partnership return equals the total amount of Federal and State estate taxes with respect to Mr. Stone's estate that E&Y's Estate tax allocation schedule reflected as payable by RSMLP in 1998.

The only other distribution reflected in RSMLP's partnership return for 1998 was because of Ms. Stone's death in that year. The partnership return that RSMLP filed for 1998 reflected that RSMLP opened a capital account for Ms. Stone's estate (Ms. Stone's estate's capital account in RSMLP), and the balance in Ms. Stone's capital account as a limited partner was transferred to Ms. Stone's estate's capital account in RSMLP.

Because of Mr. Stone's death in 1997, in that year, as reflected in the partnership return that RSMLP filed for 1997, RSMLP opened capital accounts for his estate (Mr. Stone's estate's capital accounts in RSMLP), and the balances in Mr. Stone's capital accounts in RSMLP as a general partner and a limited partner were transferred to Mr. Stone's estate's capital accounts in RSMLP. The partnership return that RSMLP filed for 1997 showed that RSMLP did not make distributions during that year to any of its other partners.

[52]The $585,239 distribution to Mr. Stone's estate shown in MSFLP's 1998 partnership return equals the total amount of Federal and State estate taxes with respect to Mr. Stone's estate
(continued...)

$69,000 to Ms. Fraser).[53]

Financial statements for MSFLP for 1998 (MSFLP's 1998 financial statements) reflected as an expense $585,239[54] of "Estate Taxes".

On September 15, 1998, Mr. Stone's estate filed Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return (Mr. Stone's estate tax return). Mr. Stone's estate tax return reported as part of the value of Mr. Stone's gross estate, inter alia, date-of-death values claimed for Mr. Stone's respective partnership interests in ES3LP, ES4LP, CRSLP, RSMLP, and

---

[52](...continued)
that E&Y's Estate tax allocation schedule reflected as payable by MSFLP in 1998.

[53]The only other distribution reflected in MSFLP's partnership return for 1998 was because of Ms. Stone's death in that year. The partnership return that MSFLP filed for 1998 reflected that MSFLP opened a capital account for Ms. Stone's estate (Ms. Stone's estate's capital account in MSFLP), and the balance in Ms. Stone's capital account as a limited partner was transferred to Ms. Stone's estate's capital account in MSFLP.

Because of Mr. Stone's death in 1997, in that year, as reflected in the partnership return that MSFLP filed for 1997, MSFLP opened capital accounts for his estate (Mr. Stone's estate's capital accounts in MSFLP), and the balances in Mr. Stone's capital accounts in MSFLP as a general partner and a limited partner were transferred to Mr. Stone's estate's capital accounts in MSFLP. The partnership return that MSFLP filed for 1997 showed that MSFLP did not make distributions during that year to any of its other partners.

[54]The $585,239 expense reflected in MSFLP's 1998 financial statements equals the total amount of Federal and State estate taxes with respect to Mr. Stone's estate that E&Y's estate tax allocation schedule reflected as payable by MSFLP in 1998. See supra note 52.

MSFLP and certain other property to be held by the AWS Trust pursuant to Mr. Stone's will. In Mr. Stone's estate tax return, the co-personal representatives[55] of Mr. Stone's estate made a qualified terminable interest property (QTIP) election under section 2056(b)(7) with respect to the AWS Trust. Consequently, although the claimed respective date-of-death values of Mr. Stone's partnership interests in ES3LP and certain other property to be held by that trust were reported in Mr. Stone's estate tax return as part of Mr. Stone's estate, Mr. Stone's estate claimed a deduction in that return under section 2056(a) for such respective values of such partnership interests and such certain other property. Mr. Stone's estate tax return showed net estate tax of $4,031,260, prior payments of $1,698,074, and a balance due of $2,333,186.

On March 10, 1999, the IRS received $2,524,858.57 (March 10, 1999 payment) in payment of the estate tax shown due (i.e., $2,333,186) in Mr. Stone's estate tax return and interest.[56] Of that total amount of estate tax and interest paid in 1999, ES4LP paid $371,336.72, CRSLP paid $1,000,641.91, RSMLP paid $571,597.34, and MSFLP paid $514,194.67. In 1999, State estate

[55]All of the children are co-personal representatives of Mr. Stone's estate.

[56]The March 10, 1999 payment included interest because Mr. Stone's estate applied for and received an extension of time within which to pay the balance of the estate tax due with respect to Mr. Stone's estate.

tax and interest totaling $655,594 were paid with respect to Mr. Stone's estate. Of that total amount of State estate tax and interest paid in 1999, ES4LP paid $98,545, CRSLP paid $268,474, RSMLP paid $151,871, and MSFLP paid $136,704. The funds used to pay Federal and State estate taxes and interest in 1999 with respect to Mr. Stone's estate consisted of non pro rata distributions to or on behalf of his estate.

The partnership return that ES4LP filed for 1999 reflected that ES4LP made distributions during that year to its partners totaling $529,254, as follows: $469,882 to Mr. Stone's estate,[57] $47,749 to Ms. Stone's estate, $11,602 to Eugene Earle Stone, IV, and $21 to Anne M. Stone.

ES4LP's balance sheet for 1999 included a schedule entitled "Eugene E. Stone IV Limited Partnership, General Ledger, As of December 31, 1999" (ES4LP's 1999 general ledger). ES4LP's 1999 general ledger reflected a check dated March 4, 1999, payable to Eugene E. Stone, III, in the amount of $469,881.72.[58] Another schedule (capital accounts schedule) included as part of ES4LP's

[57]The $469,882 distribution to Mr. Stone's estate shown in ES4LP's 1999 partnership return equals the total amount of Federal and State estate taxes and interest with respect to Mr. Stone's estate that E&Y's Estate tax allocation schedule reflected as payable by ES4LP in 1999.

[58]The $469,881.72 check reflected in ES4LP's 1999 general ledger and rounded to $469,882 equals the total amount of Federal and State estate taxes and interest with respect to Mr. Stone's estate that E&Y's estate allocation schedule reflected as payable by ES4LP in 1999. See supra note 57.

balance sheet for 1999 showed, inter alia, the capital accounts of the partners of ES4LP. The capital accounts schedule reflected cash distributions during 1998 and 1999 from ES4LP to Mr. Stone's estate of $629,671[59] and $469,882, respectively. That schedule also reflected negative adjustments to the respective capital accounts of the remaining partners of ES4LP in such amounts that all of the partners of ES4LP were shown to have received pro rata partnership distributions during 1998 and 1999. The capital accounts schedule reclassified such negative adjustments as loans made to ES4LP from all of its partners, except Mr. Stone's estate.

The partnership return that CRSLP filed for 1999 reflected that CRSLP did not make distributions during that year to any of its partners. Schedule L, Balance Sheets per Books, of the partnership return that CRSLP filed for 1999 reflected a yearend asset of $1,369,116 identified as "Other investments". A statement attached to that return explained that such "Other investments" was an amount of $1,369,116 "Due From C. Rivers Stone".

CRSLP's trial balance worksheets for 1999 reflected the following entries:

[59]As a result of bookkeeping entries, the $639,288 non pro rata distribution during 1998 from ES4LP to Mr. Stone's estate that was reflected in ES4LP's 1998 partnership return was reflected in the capital accounts schedule as a distribution to that estate of $629,671.

Description	Prior Year Balance	Current Year Balance	Adjustments	Adjusted Balance
C.R. Stone-Estate Taxes	$100,000	$100,000	[1]$1,269,115.91	$1,369,115.91

[1]The $1,269,115.91 expenditure reflected in CRSLP's 1999 Montebello expense schedule with respect to Mr. Stone's estate equals the amounts of Federal and State estate taxes and interest with respect to Mr. Stone's estate that E&Y's Estate tax allocation schedule reflected as payable by CRSLP in 1999.

A schedule entitled "C. Rivers Stone LLP '99, Montebello Actual Expenses (1/20/00)" (CRSLP's 1999 Montebello expense schedule) reflected in pertinent part the following entries:

Vendor	C/F	March 1999	1999 Totals	Grand Totals
Estate Taxes	$100,000	$1,269,115.91	$1,269,115.91	$1,369,115.91
First Trust-Est. Tax Loan	0	[1]	534,980.73	534,980.73
South Trust-Estate Tax Loan	0	[2]	14,837.39	14,837.39

[1]The 1999 Montebello expense schedule reflected various entries on the line entitled "First Trust-Est. Tax Loan" for each of the months February through December 1999. Those entries, when totaled, equaled the "1999 Totals" reflected on that line.

[2]The 1999 Montebello expense schedule reflected various entries on the line entitled "South Trust-Estate Tax Loan" for each of the months April through July 1999. Those entries, when totaled, equaled the "1999 Totals" reflected on that line.

The partnership return that RSMLP filed for 1999 reflected that RSMLP made distributions during that year to Mr. Stone's estate of $1,041,871[60] and did not make distributions during that year to any of its other partners.

[60]The $1,041,871 distribution to Mr. Stone's estate shown in RSMLP's 1999 partnership return exceeds the total amount of Federal and State estate taxes and interest with respect to Mr. Stone's estate (i.e., $723,468.34) that E&Y's Estate tax allocation schedule reflected as payable by RSMLP in 1999.

The partnership return that MSFLP filed for 1999 reflected that MSFLP made distributions during that year to Mr. Stone's estate totaling $805,693[61] and did not make distributions during that year to any of its other partners.

A 1999 profit and loss statement for MSFLP (MSFLP's 1999 profit and loss statement) reflected an expense of $805,692.67[62] for "Tax: Fed".

On October 16, 1998, Ms. Stone died at the age of 86. Pursuant to Mr. Stone's will, upon the death of Ms. Stone, any assets remaining in the AWS Trust were to be distributed equally to the children.

On the date of Ms. Stone's death, the AWS Trust held a 69.973 percent limited partnership interest in ES3LP,[63] the assets

[61]The $805,693 distribution to Mr. Stone's estate shown in MSFLP's 1999 partnership return exceeds the total amount of Federal and State estate taxes and interest with respect to Mr. Stone's estate (i.e., $650,899) that E&Y's Estate tax allocation schedule reflected as payable by MSFLP in 1999.

[62]The $805,692.67 expense reflected in MSFLP's 1999 profit and loss statement and rounded to $805,693 exceeds the total amount of Federal and State estate taxes and interest with respect to Mr. Stone's estate (i.e., $650,899) that E&Y's Estate tax allocation schedule reflected as payable by MSFLP in 1999. See supra note 61.

[63]On June 5, 1997, the date of Mr. Stone's death, Mr. Stone held a 1.001 percent general partnership interest and a 68.972 percent limited partnership interest in ES3LP. Both of those interests were transferred to the AWS Trust pursuant to Mr. Stone's will. The parties stipulated that on Oct. 16, 1998, the date of Ms. Stone's death, the AWS Trust held a 69.973 percent limited partnership interest in ES3LP. We presume that after Mr.

(continued...)

on that date in Mr. Stone's retirement account, and the right on that date to Mr. Stone's deferred compensation from Stone Manufacturing. The respective identities and values of the assets owned by ES3LP on the date of Mr. Stone's death on June 5, 1997, were not the same as the respective identities and values of the assets owned by that partnership on the date of Ms. Stone's death on October 16, 1998. Moreover, the respective identities and values of the assets in Mr. Stone's retirement account on the date of Mr. Stone's death on June 5, 1997, were not the same as the respective identities and values of the assets in that retirement account on the date of Ms. Stone's death on October 16, 1998. In addition, the present value on the date of Ms. Stone's death of Mr. Stone's right to deferred compensation from Stone Manufacturing was less than the present value of his right to such compensation on the date of his death.

On July 20, 1999, the IRS received $875,000 (July 20, 1999 payment) in payment of the anticipated estate tax with respect to Ms. Stone's estate.

On January 20, 2000, Ms. Stone's estate filed an estate tax return (Ms. Stone's estate tax return). Pursuant to section 2044, Ms. Stone's estate tax return reported as part of the value

[63](...continued)
Stone's death Mr. Stone's general partnership interest in ES3LP was converted pursuant to the partnership agreement of ES3LP into a limited partnership interest.

of her gross estate the date-of-death values claimed for all the assets held by the AWS Trust as of October 16, 1998, the date of Ms. Stone's death (i.e., the claimed fair market value on that date of the 69.973 limited partnership interest in ES3LP, the claimed fair market value on that date of all the assets in Mr. Stone's retirement account on that date, and the claimed present value on that date of the deferred compensation from Stone Manufacturing that remained to be paid as of that date).

Ms. Stone's estate tax return also reported as part of the value of her gross estate the claimed value as of the date of Ms. Stone's death of her limited partnership interest in each of the Five Partnerships.[64] Ms. Stone's estate tax return showed net

[64]E&Y was retained to provide opinions on the fair market value on the date of Ms. Stone's death of her limited partnership interest in each of ES4LP, CRSLP, RSMLP, and MSFLP. E&Y based those opinions on, inter alia, the assumptions that, as of the date of Ms. Stone's death, ES4LP, CRSLP, RSMLP, and MSFLP had the following respective liabilities for "an estate tax payable" with respect to Mr. Stone's estate:

Partnership	Erroneous Assumptions Relied on by E&Y Regarding Estate Tax Liability
ES4LP	$469,882
CRSLP	1,269,116
RSMLP	723,468
MSFLP	650,899

The parties agree that neither the Federal estate tax nor the State estate tax with respect to Mr. Stone's estate was a liability of ES4LP, CRSLP, RSMLP, or MSFLP and that, as of Oct. 16, 1998, ES4LP, CRSLP, RSMLP, and MSFLP had the following total liabilities:

(continued...)

estate tax of $861,972, a prior payment of $875,000, and an overpayment of $13,028.

Respondent commenced examinations of Mr. Stone's estate tax return and Ms. Stone's estate tax return after July 22, 1998. Mr. Stone's estate and Ms. Stone's estate cooperated with reasonable requests by respondent for witnesses, information, documents, meetings, and interviews.

On September 7, 2001, respondent issued a notice of deficiency (notice) to Mr. Stone's estate. In that notice, respondent determined, inter alia, to increase by $8,491,090 the value attributable to Mr. Stone's respective partnership interests in ES3LP, ES4LP, CRSLP, RSMLP, and MSFLP reported in SCHEDULE F, Other Miscellaneous Property Not Reportable Under Any Other Schedule (Schedule F), of Mr. Stone's estate tax return. In support of that determination, respondent relied on seven alternative grounds, including the substance over form doctrine, the economic substance doctrine, section 2036(a)(1) which was respon-

Partnership	Total Liabilities
ES4LP	$0
CRSLP	2,428,389
RSMLP	0
MSFLP	0

dent's third alternative ground, and respondent's gift theory.[65] With respect to respondent's alternative ground under section 2036(a)(1), respondent determined in the notice that

> the decedent retained until the time of his death the possession or enjoyment * * * [of], or right to the income from, the assets he contributed to the * * * [Five Partnerships] within the meaning of Internal Revenue Code Section 2036. * * *

On November 13, 2001, respondent issued a notice to Ms. Stone's estate. In that notice, respondent determined to increase (1) by $688,385 the value attributable to Ms. Stone's respective partnership interests in ES3LP, ES4LP, CRSLP, RSMLP, and MSFLP and (2) by $959,463 the value attributable to the partnership interest in ES3LP held by the AWS Trust, which were reported in Schedule F of Ms. Stone's estate tax return. In support of those determinations, respondent relied on six alternative grounds, including the substance over form doctrine, the economic substance doctrine, and section 2036(a)(1) which was respondent's third alternative ground. With respect to respon-

[65]With respect to respondent's alternative gift theory, respondent determined in the notice that

> if it is determined that the value of the decedent's [Mr. Stone's] interests is other than that as determined above, then, for purposes of determining the amount of adjusted taxable gifts, it is determined that the decedent made indirect gifts in 1997 of proportionate amounts of the property the decedent transferred to * * * [ES3LP, ES4LP, CRSLP, MSFLP, and RSMLP] within the meaning of Internal Revenue Code Sections 2501 and 2511.

dent's alternative ground under section 2036(a)(1), respondent determined in the notice that

> the decedent retained until the time of her death the possession or enjoyment of, or right to the income from, the assets he [sic] contributed to the * * * [Five Partnerships] within the meaning of Internal Revenue Code Section 2036. * * *

OPINION

Respondent has abandoned all of the various alternative determinations in the respective notices issued to Mr. Stone's estate and Ms. Stone's estate (collectively, the estates) except section 2036(a)(1).[66] According to respondent,

> The only issue remaining for decision is whether section 2036(a)(1) applies to include the value of the assets Decedents [Mr. Stone and Ms. Stone] transferred to the Stone LPs [ES3LP, ES4LP, CRSLP, RSMLP, and MSFLP], rather than of interests in the partnerships, in their gross estates.

However, as discussed below, on brief respondent also relies on section 2044 at the time of Ms. Stone's death, and section 2036(a)(1) at the time of Mr. Stone's death, in support of respondent's position that "the pro rata net asset value of the

[66]With respect to the alternative economic substance doctrine that respondent advanced in the respective notices issued to Mr. Stone's estate and Ms. Stone's estate, respondent stipulated as follows:

> Respondent does not contest the validity under state law of * * * ES3LP * * * ES4LP * * * CRSLP * * * RSMLP * * * and * * * MSFLP * * *.
>
> Respondent does not contest the economic substance of ES3LP, ES4LP, CRSLP, RSMLP, and MSFLP.

69.973% interest in ES3LP held by the AWS Trust at her [Ms. Stone's] death is * * * included in Mrs. Stone's gross estate."

In addition to the foregoing substantive disputes regarding sections 2036(a)(1) and 2044, the parties disagree over whether the burden of proof has shifted to respondent under section 7491(a). The parties' disagreements under section 7491(a) relate to the application in the instant cases of the term "credible evidence" in section 7491(a)(1) and the factual issue or issues with respect to which Mr. Stone's estate and Ms. Stone's estate must introduce credible evidence in order for the burden of proof regarding any such issue or issues to shift to respondent. We need not and shall not address those disagreements under section 7491(a)(1). That is because resolution of the issues presented under sections 2036(a)(1) and 2044 does not depend on who has the burden of proof.

Section 2036(a)(1)

In order to resolve the parties' dispute under section 2036(a)(1),[67] we must consider the following three factual issues

[67]Sec. 2036(a)(1) provides:

SEC. 2036. TRANSFERS WITH RETAINED LIFE ESTATE.

(a) General Rule.--The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he

(continued...)

presented in each of the instant cases:

(1) Was there a transfer of property by the decedent?

(2) If there was a transfer of property by the decedent, was such a transfer other than a bona fide sale for an adequate and full consideration in money or money's worth?

(3) If there was a transfer of property by the decedent that was other than a bona fide sale for an adequate and full consideration in money or money's worth, did the decedent retain possession or enjoyment of, or the right to income from, the property transferred?

Transfer of Property by the Decedent

Mr. Stone's estate concedes that Mr. Stone made a transfer of property to each of the Five Partnerships in exchange for the general and limited partnership interests in each such partnership that he owned on the date of his death. Ms. Stone's estate concedes that Ms. Stone made a transfer of property to each of the Five Partnerships in exchange for the limited partnership

---

[67](...continued)
has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death--

(1) the possession or enjoyment of, or the right to the income from, the property * * *

interest in each such partnership that she owned on the date of her death. In light of the foregoing concessions by Mr. Stone's estate and by Ms. Stone's estate, we hold that Mr. Stone and Ms. Stone each made a transfer of property under section 2036(a). We shall address below whether such respective transfers were other than bona fide sales for adequate and full consideration in money or money's worth under that section.

Ms. Stone's estate disputes, and does not concede, that Ms. Stone made a transfer of property to ES3LP in exchange for the 69.973 percent partnership interest in that partnership that the AWS Trust held on the date of her death. Respondent agrees with Ms. Stone's estate.[68] In light of respondent's concession, we hold that Ms. Stone did not make a transfer of property under section 2036(a) with respect to the 69.973 percent partnership interest in ES3LP that the AWS Trust held on the date of her death.[69]

[68]According to respondent, "it is irrelevant that Mrs. Stone made no § 2036(a) transfer with respect to that [69.973 percent] interest [in ES3LP]." That is because, as indicated above, respondent relies on sec. 2044 at the time of Ms. Stone's death, and sec. 2036(a)(1) at the time of Mr. Stone's death, to support respondent's position that 69.973 percent of the assets of ES3LP on the date of Ms. Stone's death is includible in her gross estate.

[69]We shall address below respondent's argument under sec. 2044.

Transfer Other Than a Bona Fide Sale for an Adequate and Full Consideration in Money or Money's Worth

Section 2036(a) excepts from its application any transfer of property otherwise subject to that section which is "a bona fide sale for an adequate and full consideration in money or money's worth". The foregoing exception is limited to a transfer of property where the transferor "has received benefit in full consideration in a genuine arm's length transaction". Estate of Goetchius v. Commissioner, 17 T.C. 495, 503 (1951).

It is respondent's position that the respective transfers of property by Mr. Stone and Ms. Stone to each of the Five Partnerships were not bona fide sales for adequate and full consideration in money or money's worth under section 2036(a). In support of that position, respondent relies principally on Estate of Harper v. Commissioner, T.C. Memo. 2002-121.[70] According to respondent, there is no evidence

> in the record indicating that Decedents intended to conduct a joint enterprise for the mutual profit of their children and themselves * * *.
>
> Further, a transfer is a sale for adequate and full consideration only if that received in exchange is "an adequate and full equivalent reducible to a money value." Treas. Reg. § 20.2036-1(a) (cross-referencing Treas. Reg. § 20.2043-1(a)). The average 43-percent valuation discounts claimed on Decedents' estate tax returns, and the stipulated discounts to be applied in

[70]Respondent also relies on Estate of Reichardt v. Commissioner, 114 T.C. 144 (2000), and Estate of Thompson v. Commissioner, T.C. Memo. 2002-246, which are factually similar to Estate of Harper v. Commissioner, T.C. Memo. 2002-121.

> valuing Decedents' limited partner interests in the event the Court concludes that section 2036(a)(1) is not applicable, show that Petitioners admittedly do not consider interests in the Stone LPs to be the "full equivalent reducible to a money value" of the proportionate amount of the underlying assets Decedents contributed to the partnerships. * * * As in Estate of Harper, Decedents' transfers to the Stone LPs were simply a mere recycling of value and form of ownership. * * *

It is the estates' position that the respective transfers of property by Mr. Stone and Ms. Stone to each of the Five Partnerships were bona fide sales for adequate and full consideration in money or money's worth under section 2036(a). In support of that position, the estates argue:

> Because Mr. and Mrs. Stone received pro rata partnership interests in return for the contributions made to the Partnerships * * *, and because the contributions were properly credited to each partner's capital account * * *, there was no donative transfer made in connection with the creation of the Partnerships. * * * Because no donative transfer occurred when the Partnerships were formed § 2036(a) does not apply. * * *
>
> * * * * * * *
>
> In Harper, the Court's finding of no bona fide sale for adequate and full consideration was based upon the conclusion that the creation of the partnerships was not "motivated primarily by legitimate business concerns," and constituted only "unilateral" value recycling. * * * In [Estate of] Thompson [v. Commissioner, T.C. Memo. 2002-46], the Court's finding was based on its conclusion that "the transactions were not motivated by the type of legitimate business concerns that furnished 'adequate consideration' as described in Estate of Harrison v. Commissioner [T.C. Memo. 1987-8] and Estate of Michelson v. Commissioner [T.C. Memo. 1978-371]." * * * In these [instant] cases, however, the creation of the [Five] Partnerships was motivated by substantial business purposes and their creation and funding resulted from substantial arm's-length negotia-

> tions. * * * The creation of the [Five] Partnerships did not constitute "value recycling," and Mr. and Mrs. Stone received full and adequate consideration for their transfers to the partnerships. [Fn. ref. omitted.]

On the record before us, we agree with the estates' position and reject respondent's position. The instant cases are distinguishable from Estate of Harper v. Commissioner, supra, and other cases factually similar to Estate of Harper[71] on which respondent relies, and respondent's reliance on such cases is misplaced. Unlike the transfers involved in Estate of Harper and those other cases, we have found on the record in the instant cases that the respective transfers of assets by Mr. Stone and Ms. Stone to each of the Five Partnerships, as well as the respective transfers of assets by the other partners to each such partnership,[72] were bona

[71]See supra note 70.

[72]All the partners of each of the Five Partnerships transferred to each such partnership respective assets such partners owned. We reject respondent's contention that, because certain of the assets that the children respectively transferred to one or more of the Five Partnerships were assets that they received as gifts from Mr. Stone, the children did not make transfers to one or more of such partnerships that should be recognized for purposes of determining the applicability of sec. 2036(a)(1) to such transfers. Mr. Stone gave certain property to each of the children, which they then transferred to one or more of the Five Partnerships in return for partnership interests. Mr. Stone reported the gifts that he made to the children in his 1997 gift tax return. The children owned the assets that he gave them when they respectively transferred such assets to one or more of such partnerships. In this connection, we note that respondent abandoned the alternative substance over form doctrine advanced in the respective notices issued to Mr. Stone's estate and Ms. Stone's estate.

fide, arm's-length transfers.

On the record before us, we reject respondent's contention that, because Mr. Stone and Ms. Stone did not actively participate in the negotiations by the children, the respective transfers of assets by Mr. Stone and Ms. Stone to each of the Five Partnerships were not bona fide, arm's-length transfers. Each member of the Stone family was represented by his or her own independent counsel and had input into the decision-making as to how each of the Five Partnerships was to be structured and operated and what property was to be transferred to each such partnership. The Stone family understood that Mr. Stone and Ms. Stone would not be bound by any agreements that the children were able to reach as a result of the children's negotiations and that Mr. Stone and Ms. Stone would make the ultimate decision as to which, if any, of their respective assets to transfer to each of the Five Partnerships. In this connection, although Mr. Stone and Ms. Stone agreed to form the Five Partnerships, they did not intend to, and did not, transfer all their respective assets to such partnerships. Instead, they retained sufficient assets to enable them to maintain their respective accustomed standards of living. Mr. Stone and Ms. Stone did not accept the children's recommendations resulting from the children's negotiations regarding the structure, funding, and operation of the Five Partnerships without thought, comment, or question. For example, it

was Mr. Merline, Mr. Stone's attorney, who drafted proposed partnership agreements for the Five Partnerships. Mr. Merline discussed with Mr. Stone the children's and their respective attorneys' suggested changes to those proposed agreements. Only after Mr. Stone agreed to certain of those suggested changes did Mr. Merline revise the proposed partnerships agreements to reflect the changes to which Mr. Stone agreed.

The record also establishes that the respective transfers at issue did not constitute gifts by Mr. Stone and Ms. Stone, respectively, to the other partners of each of the Five Partnerships.[73] In addition, the record shows that those transfers were motivated primarily by investment and business concerns relating to the management of certain of the respective assets of Mr. Stone and Ms. Stone during their lives[74] and thereafter and the resolution of the litigation among the children.

---

[73]Respondent properly does not contend that the respective transfers of assets by Mr. Stone and Ms. Stone to each of the Five Partnerships were gifts by them to the other partners of each such partnership. See Estate of Jones v. Commissioner, 116 T.C. 121, 127-128 (2001); Estate of Michelson v. Commission, T.C. Memo. 1978-371. In this connection, respondent asserted in the notice issued to Mr. Stone's estate an alternative gift theory which respondent has since abandoned. Respondent did not assert any alternative gift theory in the notice issued to Ms. Stone's estate.

[74]At least as early as the last six months of 1995, Mr. Stone and Ms. Stone were in control of their respective assets. However, they no longer were interested or actively involved in managing those assets and wanted their children to become actively involved in the management of those assets.

Unlike the decedent in Estate of Harper and other cases factually similar to that case, the record in the instant cases establishes that Mr. Stone and Ms. Stone did substantially more than "change the form in which he [and she] held his [and her] beneficial interest in the contributed property." Estate of Harper v. Commissioner, T.C. Memo. 2002-121. The record in the instant cases shows that the Five Partnerships had economic substance and operated as joint enterprises for profit through which the children actively participated in the management and development of the respective assets of such partnerships during their parents' lives (and thereafter). When the partners of ES3LP formed and funded that partnership, they contemplated and intended that ES3LP operate as a joint enterprise for profit for the management of its assets and that the children contribute their services in providing such management. After ES3LP was funded in April 1997, the children actively managed the assets of that partnership, as Mr. Stone and Ms. Stone intended. When the partners of ES4LP formed and funded that partnership, they contemplated and intended that ES4LP operate as a joint enterprise for profit for the management of its assets and that Eugene Earle Stone, IV, contribute his services in providing such management. After the funding of ES4LP in April 1997, Eugene Earle Stone, IV, began actively managing the assets of ES4LP, as Mr. Stone and Ms. Stone intended. When the partners of CRSLP formed and funded

that partnership, they contemplated and intended that CRSLP operate as a joint enterprise for profit for the management of its assets and that C. Rivers Stone contribute his services in providing such management. After the funding of CRSLP in April 1997, C. Rivers Stone began actively managing the assets of that partnership, as Mr. Stone and Ms. Stone intended. When the partners of RSMLP formed and funded that partnership, they contemplated and intended that RSMLP operate as a joint enterprise for profit for the management of its assets and that Ms. Morris contribute her services in providing such management. After the funding of RSMLP in April 1997, Ms. Morris began actively managing the assets of that partnership, as Mr. Stone and Ms. Stone intended. When the partners of MSFLP formed and funded that partnership, they contemplated and intended that MSFLP operate as a joint enterprise for profit for the management of its assets and that Ms. Fraser contribute her services in providing such management. After the funding of MSFLP in April 1997, Ms. Fraser began actively managing the assets of that partnership, as Mr. Stone and Ms. Stone intended.

On the record in the instant cases, we find that, unlike the transfers involved in Estate of Harper and other cases factually similar to that case, the respective transfers at issue by Mr. Stone and Ms. Stone did not constitute "circuitous 'recycling' of

value".[75]

On the record before us, we further find that the respective transfers of assets by Mr. Stone and Ms. Stone to each of the Five Partnerships were for adequate and full consideration in money or money's worth. We have found that such transfers were not, and respondent does not claim that they were, gifts by Mr. Stone and Ms. Stone, respectively, to the other partners of each such partnership. We have also found, and respondent agrees and/or does not dispute, that after all the partners of each of the Five Partnerships transferred to each such partnership certain of their respective assets and after certain gifts were made by Mr. Stone in April 1997 to correct the unintended consequences of certain inadvertent valuation errors:[76] (1) All partners of

[75]Although not cited by the parties in the instant cases because they filed their respective briefs prior to the issuance of Estate of Strangi v. Commissioner, T.C. Memo. 2003-145, Strangi insofar as it relates to sec. 2036(a)(1) is similar to Estate of Harper v. Commissioner, T.C. Memo. 2002-121, and is distinguishable from the instant cases. On the facts presented, Strangi found, as Estate of Harper did on the facts presented there, that "there has been merely a 'recycling' of value through partnership or corporate solution." Estate of Strangi v. Commissioner, supra. In so concluding, Strangi found that the arrangement involved in that case "patently fails to qualify as the sort of functioning business enterprise that could potentially inject intangibles that would lift the situation beyond mere recycling." Id.

[76]Respondent properly does not contend that Mr. Stone's gifts to correct the unintended consequences of certain inadvertent valuation errors are factors to be considered in determining whether the transfers at issue were bona fide sales for adequate and full consideration in money or money's worth under sec.

(continued...)

each of the Five Partnerships held respective partnership interests in each such partnership that were proportionate to the fair market value of the assets that such partners respectively transferred to each such partnership; (2) the respective assets that the partners of each such partnership transferred to each such partnership were properly credited to the respective capital accounts of such partners; and (3) upon the termination or dissolution of each of the Five Partnerships, the partners of each such partnership were entitled to distributions from each such partnership in amounts equal to their respective capital accounts. Under the circumstances presented in the instant cases, we find that Mr. Stone and Ms. Stone, as well as the other partners of each of the Five Partnerships, received in exchange for their respective transfers of assets to each such partnership respective partnership interests in each such partnership that were adequate and full equivalents reducible to a money value. See secs. 20.2036-1(a), 20.2043-1(a), Estate Tax Regs.; see also Estate of Goetchius, 17 T.C. at 503.

Respondent nonetheless argues that, because Mr. Stone and Ms. Stone received respective partnership interests in each of the Five Partnerships the value of which, taking into account appropriate discounts, was less than the value of the respective

[76](...continued)
2036(a).

assets that they transferred to each such partnership, they did not receive adequate and full consideration for the assets transferred. Respondent's argument in effect reads out of section 2036(a) the exception for "a bona fide sale for an adequate and full consideration in money or money's worth" in any case where there is a bona fide, arm's-length transfer of property to a business entity (e.g., a partnership or a corporation) for which the transferor receives an interest in such entity (e.g., a partnership interest or stock) that is proportionate to the fair market value of the property transferred to such entity and the determination of the value of such an interest takes into account appropriate discounts. We reject such an argument by respondent that reads out of section 2036(a) the exception that Congress expressly prescribed when it enacted that statute.

Respondent's argument about the discounted values of the partnership interests at issue also ignores the fact that each of the Five Partnerships was created, funded, and operated as a joint enterprise for profit for the management of its assets in which there was a genuine pooling of property and services. We have found that, when the partners of each of the Five Partnerships formed and funded each such partnership, they contemplated and intended that each such partnership operate as a joint enterprise for profit for the management of its assets and that the children contribute services in providing such management in the

case of ES3LP and that Eugene Earle Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser contribute services in providing such management in the case of ES4LP, CRSLP, RSMLP, and MSFLP, respectively. As Mr. Stone and Ms. Stone intended, after the funding of ES3LP, the children actively participated in the management of the assets of that partnership, and after the funding of ES4LP, CRSLP, RSMLP, and MSFLP, Eugene Earle Stone, IV, C. Rivers Stone, Ms. Morris, and Ms. Fraser, respectively, actively participated in the management of the assets of such partnerships.

Based upon our examination of the entire record before us, we find that the respective transfers of assets by Mr. Stone and Ms. Stone to each of the Five Partnerships were bona fide sales for adequate and full consideration in money or money's worth under section 2036(a).[77]

Possession or Enjoyment of, or
Right to Income from, the Transferred Property

We have found that the respective transfers of assets by Mr.

[77]Although not altogether clear, respondent appears to take the position that, where a decedent has made a bona fide transfer of property for which the decedent has received an adequate and full consideration in money or money's worth and with respect to which the transferor has retained possession or enjoyment of, or the right to income from, such property, the exception in sec. 2036(a) for "a bona fide sale for an adequate and full consideration in money or money's worth" may never apply to such a transfer. We reject any such position. That position, like respondent's position about the discounted values of the partnership interests at issue, in effect reads out of sec. 2036(a) the exception that Congress expressly prescribed when it enacted that statute.

Stone and Ms. Stone to each of the Five Partnerships were bona fide sales for adequate and full consideration in money or money's worth under section 2036(a). Consequently, we need not and shall not address the third factual issue presented under section 2036(a)(1).

Ultimate Holdings

Based upon our examination of the entire record before us, we hold that none of the assets owned by any of the Five Partnerships (1) on the date of Mr. Stone's death is includible under section 2036(a)(1) in his gross estate and (2) on the date of Ms. Stone's death is includible under section 2036(a)(1) in her gross estate.

Section 2044

Respondent argues that, because section 2036(a)(1) requires the inclusion in Mr. Stone's gross estate of 69.973 percent of the assets of ES3LP on the date of his death, section 2044 requires the inclusion in Ms. Stone's gross estate of 69.973 percent of the assets of ES3LP on the date of her death.[78] We have rejected respondent's position that section 2036(a)(1) requires the inclusion in Mr. Stone's gross estate of 69.973 percent of

[78]Respondent did not raise sec. 2044 in the notice issued to Ms. Stone's estate or in the answer. We conclude that respondent's reliance on sec. 2044 raises a new issue that respondent advances for the first time on brief. However, the estates do not object to, and we find no prejudice to the estates as a result of, respondent's raising that issue for the first time on brief.

the assets of ES3LP on the date of his death. Consequently, we need not and shall not address the argument that respondent advances under section 2044. On the record before us, we hold that none of the assets owned by ES3LP on the date of Ms. Stone's death is includible under section 2044 in her gross estate.

We have considered all of the respective contentions and arguments of the estates and of respondent that are not discussed herein, and we find them to be without merit, irrelevant, and/or moot.

To reflect the foregoing and the concessions of the parties,

Decisions will be entered under Rule 155.

Full Text of Court Cases

Estate of Strangi v. Commissioner (I)

Case name: Estate of Strangi v. Commissioner (I)
Citation: 115 T.C. 478, 115 T.C. No. 35, 2000 U.S. Tax Ct. LEXIS 89
Date of decision: November 30, 2000
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Cohen
SIC: 6733 Trusts, Except Educational, Religious, and Charitable (managers)
NAICS: 525920 Trusts, Estates, and Agency Accounts
357

Keywords: Estate tax, Fair market value (FMV), Gift tax

Counsel: Norman A. Lofgren and G. Tomas Rhodus, for petitioner. Deborah H. Delgado, Gerald L. Brantley, Sheila R. Pattison, and William C. Sabin, Jr., for respondent.

Judges: Cohen, opinion; Chabot; Laro; Foley; Wells, concurring; Parr, dissenting; Ruwe, dissenting; Beghe, Renato, dissenting

Opinion by: Cohen

On December 1, 1998, respondent determined a $ 2,545,826 deficiency in the Federal estate tax of the estate of Albert Strangi, Rosalie Gulig, independent executrix. In the alternative, respondent determined a Federal gift tax deficiency of $ 1,629,947.

After concessions by the parties, the issues for decision are (alternatively): (1) Whether the Strangi Family Limited Partnership (SFLP) should be disregarded for Federal tax purposes because it lacks business purpose and economic substance; (2) whether the SFLP is a restriction on the sale or use of property that should be disregarded pursuant to section 2703(a)(2); (3) whether the transfer of assets to SFLP was a taxable gift; and (4) if SFLP is not disregarded, the fair market value of decedent's interest in SFLP at the date of death.

Unless otherwise indicated, all section references are to the Internal Revenue Code in effect as of the date of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated, and the stipulated facts are incorporated in our findings by this reference. Albert Strangi (decedent) was domiciled in Waco, Texas, at the time of his death, and his estate was administered there. Rosalie Strangi Gulig (Mrs. Gulig) resided in Waco, Texas, when the petition in this case was filed.

Decedent was a self-made multimillionaire. He married Genevieve Crowley Strangi (Genevieve Strangi) in the late 1930's and had four children -- Jeanne Strangi, Albert T. Strangi, John Strangi, and Mrs. Gulig, collectively referred to herein as the Strangi children. In 1965, the marriage between decedent and Genevieve Strangi was terminated by divorce, and decedent remarried Irene Delores Seymour (Mrs. Strangi). Mrs. Strangi had two daughters from a previous marriage, Angela Seymour and Lynda Seymour.

In 1975, decedent sold his company, Mangum Manufacturing, in exchange for Allen Group stock, and he and Mrs. Strangi moved to Fort Walton Beach, Florida. Mrs. Gulig married Michael J. Gulig (Mr. Gulig) in 1985. Mr. Gulig was an attorney in Waco, Texas, with the law firm of Sheehy, Lovelace and Mayfield, P.C. Mr. Gulig has done a substantial amount of estate planning and is proficient in that field.

On February 19, 1987, decedent and Mrs. Strangi executed wills that named the Strangi children, Angela Seymour, and Lynda Seymour as residual beneficiaries in the event that either decedent or Mrs. Strangi predeceased the other. These wills were prepared by the law offices of Tobolowsky, Prager & Schlinger in Dallas, Texas. Mrs. Strangi also executed the Irene Delores Strangi Irrevocable Trust (the Trust). Decedent was designated as the executor of Mrs. Strangi's will and as the trustee of the Trust.

Mrs. Strangi's will provided that her personal effects were to be left to decedent and that life insurance proceeds, employee benefits, and the residuary of her estate should be distributed to the Trust. The first codicil to Mrs. Strangi's will provided that property she owned in Dallas, Texas, should be distributed to the Jeanne Strangi Brown Trust. The Trust provided that lifetime distributions would be made to Mrs. Strangi and that, upon her death, (1) her property in Florida should be distributed to Angela Seymour and Lynda Seymour, (2) $ 50,000 should be distributed to Mrs. Strangi's sister, and (3) the residuary should be distributed to decedent provided that he survived her.

In 1987 and 1988, Mrs. Strangi suffered a series of serious medical problems. In 1988, decedent and Mrs. Strangi moved to Waco, Texas. Sylvia Stone (Stone) was hired as decedent's housekeeper. She also provided assistance with the care of Mrs. Strangi. On July 19, 1988, decedent executed a power of attorney, naming Mr. Gulig as his attorney in fact.

On July 31, 1990, decedent executed a new will, naming his children as the sole residual beneficiaries if Mrs. Strangi predeceased him. This will also named Mrs. Gulig and Ameritrust Texas, N.A. (Ameritrust), as coexecutors of decedent's estate. On December 27, 1990, Mrs. Strangi died in Waco, Texas. Her will was admitted to probate in Texas and was not contested.

In May 1993, decedent had surgery that removed a cancerous mass from his back. That summer, Mr. Gulig took decedent to Dallas to be examined by a physician in the neurology department of Southwest Medical School. Decedent was then diagnosed with supranuclear palsy, a brain disorder that would gradually reduce his ability to speak, walk, and swallow. In September 1993, decedent had prostate surgery.

FORMATION OF LIMITED PARTNERSHIP

After decedent's prostate surgery, Mr. Gulig took over the affairs of decedent pursuant to the 1988 power of attorney. Mr. Gulig consulted a probate judge regarding concerns he had about decedent's affairs. On August 11, 1994, Mr. Gulig attended a seminar in Dallas, Texas, provided by Fortress Financial Group, Inc. (Fortress). Fortress trains and educates professionals on the use of family limited partnerships as a tool to (1) reduce income tax, (2) reduce the reported value of property in an estate, (3) preserve assets, and (4) facilitate charitable giving. The Fortress Plan recommends contributing assets to a family limited partnership with a corporate general partner being created for control purposes. The Fortress Plan also suggests that shares of stock of the corporate general partner or an interest in the family limited partnership be donated to a charity. To facilitate the plan, Fortress licenses the use of copyrighted limited partnership agreements and shareholders' agreements.

Following the Fortress seminar, on August 12, 1994, Mr. Gulig, as decedent's attorney in fact, formed SFLP, a Texas limited partnership, and its corporate general partner, Stranco, Inc. (Stranco), a Texas corporation. Mr. Gulig handled all of the details of the formation, executing the limited partnership agreement and shareholders' agreement using Fortress documents, as well as drafting articles of incorporation and bylaws for Stranco.

The partnership agreement provided that Stranco had the sole authority to conduct the business affairs of SFLP without the concurrence of any limited partner or other general partner. Thus, limited partners could not act on SFLP's behalf without the consent of Stranco. The partnership agreement also allowed SFLP to lend money to partners, affiliates, or other persons or entities.

Mr. Gulig filed the SFLP certificate of limited partnership and the Stranco articles of incorporation with the State of Texas. He also drafted asset transfer documents, dated August 12, 1994, assigning decedent's interest in specified real estate, securities, accrued interest and dividends, insurance policies, annuities, receivables, and partnership interests (referred to collectively herein as the contributed property) to SFLP for a 99- percent limited partnership interest in SFLP. All of the contributed property was reflected in decedent's capital account. The fair market value of the contributed property was $ 9,876,929. Approximately 75 percent of that value was attributable to cash and securities.

Mr. Gulig invited decedent's children to participate in SFLP through an interest in Stranco, the corporate general partner of SFLP. Decedent purchased 47 percent of Stranco for $ 49,350, and Mrs. Gulig purchased the remaining 53 percent of Stranco for $ 55,650 on behalf of Jeanne Strangi, John Strangi, Albert T. Strangi, and herself. To purchase the Stranco shares, Jeanne Strangi, John Strangi, and Albert T. Strangi each executed unsecured notes dated August 12, 1994, to Mrs. Gulig, with a face amount of $ 13,912.50 and interest at 8 percent. Stranco contributed $ 100,333 to SFLP in exchange for a 1-percent general partnership interest. Subsequently, as a result of the downward adjustment of the value of decedent's contributed property, Stranco's capital contribution was reduced on its books by $ 1,000 to $ 99,333, and a receivable was recorded indicating $ 1,000 due from SFLP.

Decedent and the Strangi children made up the initial board of directors of Stranco, and Mrs. Gulig served as president. On August 17, 1994, the Strangi children and Mr. Gulig met to execute the Stranco shareholders' agreement, bylaws, and a Consent of Directors Authorizing Corporate Action in Lieu of Organizational Meeting that was effective as of August 12, 1994. They also executed a Unanimous Consent of Directors in Lieu of Special Meeting to employ Mr. Gulig to manage the day-to-day affairs of SFLP and Stranco, dated August 12, 1994. Stranco never had formal meetings. All corporate actions were approved by unanimous consent agreements in lieu of actual meetings. On August 18, 1994, McLennan Community College Foundation accepted a gift of 100 Stranco shares from decedent's children "in honor of their father".

From September 1993 until his death, decedent required 24- hour home health care that was provided by Olsten Healthcare (Olsten) and supplemented by Stone. During this time, Stone injured her back. This injury resulted in Stone's having back surgery, and SFLP paid for the surgery. On October 14, 1994, decedent died of cancer at the age of 81.

On December 7, 1994, Peter Gross, an attorney from the law firm of Prager & Benson, P.C., as a representative of decedent's estate, requested that Texas Commerce Bank (TCB), successor in interest to Ameritrust, resign as coexecutor of decedent's estate. The Strangi children also requested that TCB decline to serve as coexecutor and agreed to indemnify TCB for claims related to the estate if it declined to serve as coexecutor. Accordingly, TCB declined to serve as coexecutor of decedent's estate and renounced its right to appoint a successor coindependent executor. When decedent's will was admitted to probate on April 12, 1995, Mrs. Gulig was appointed as the sole executor of decedent's estate.

Angela Seymour consulted two attorneys regarding the validity of Mrs. Strangi's will during 1994. She never intended to contest decedent's will, and, ultimately, no claim or will contest was filed against decedent's estate.

PARTNERSHIP ACTIVITIES

Following the formation of SFLP, various distributions were made by SFLP to decedent's estate and the Strangi children. When distributions were made, corresponding and proportionate distributions were made to Stranco either in cash or in the form of adjusting journal entries. In July 1995, SFLP distributed $ 3,187,800 to decedent's estate for State and Federal estate and inheritance taxes. Also in 1995 and in 1996, SFLP distributed $ 563,000 to each of the Strangi children. The distributions were characterized as distributions to decedent's estate.

In May 1996, SFLP divided its primary Merrill Lynch account into four separate accounts in each of the Strangi children's names, giving them control over a proportionate share of the partnership assets. The partnership also extended lines of credit to John Strangi, Albert T. Strangi, and Mrs. Gulig for $ 250,000, $ 400,000, and $ 100,000, respectively. In January 1997, SFLP increased John Strangi's line of credit to $ 350,000 and Albert T. Strangi's line of credit to $ 650,000. In November 1997, SFLP advanced to decedent's estate $ 2.32 million to post bonds with the Internal Revenue Service and the State of Texas in connection with the review of decedent's estate tax return. In 1998, SFLP made distributions of $ 102,500 to each of the Strangi children. The Strangi children had received $ 2,662,000 in distributions from SFLP as of December 31, 1998.

ESTATE TAX RETURN

On January 16, 1996, decedent's Form 706, United States Estate (and Generation Skipping Transfer) Tax Return (estate tax return), was filed by Mr. Gulig. On the estate tax return, decedent's gross estate was reported as $ 6,823,582. This included a $ 6,560,730 fair market value for SFLP. For purposes of the estate tax return, SFLP was valued by Appraisal Technologies, Inc., on an "ongoing business", "minority interest basis". The valuation report arrived at a value before discounts and then applied minority interest discounts totaling 33 percent for lack of marketability and lack of control.

The estate tax return also indicated that decedent had $ 43,280 in personal debt and other allowable deductions totaling $ 107,108, leaving a reported taxable estate of $ 6,673,194. The estate tax return reported a transfer tax due of $ 2,522,088. The property that was held by SFLP as of the date of death had increased in value to $ 11,100,922 due to the appreciation of

securities, particularly the Allen Group stock.

OPINION

We must decide whether the existence of SFLP will be recognized for Federal estate tax purposes. Respondent argues that, under the business purpose and economic substance doctrines, SFLP should be disregarded in valuing the assets in decedent's estate. Petitioner contends that the business purpose and economic substance doctrines do not apply to transfer tax cases and that SFLP had economic substance and business purpose.

Taxpayers are generally free to structure transactions as they please, even if motivated by tax-avoidance considerations. See Gregory v. Helvering, 293 U.S. 465, 469, 79 L. Ed. 596, 55 S. Ct. 266 (1935); Yosha v. Commissioner, 861 F.2d 494, 497 (7th Cir. 1988), affg. Glass v. Commissioner, 87 T.C. 1087 (1986). However, the tax effects of a particular transaction are determined by the substance of the transaction rather than by its form. In Frank Lyon Co. v. United States, 435 U.S. 561, 583-584, 55 L. Ed. 2d 550, 98 S. Ct. 1291 (1978), the Supreme Court stated that "a genuine multiple-party transaction with economic substance * * * compelled or encouraged by business or regulatory realities, * * * imbued with tax-independent considerations, and * * * not shaped solely by tax avoidance features" should be respected for tax purposes. "[T]ransactions which have no economic purpose or substance other than the avoidance of taxes will be disregarded." Gregory v. Helvering, supra at 469-470; see also Merryman v. Commissioner, 873 F.2d 879 (5th Cir. 1989), affg. T.C. Memo 1988-72.

Family partnerships must be closely scrutinized by the courts because the family relationship "so readily lends itself to paper arrangements having little or no relationship to reality." Kuney v. Frank, 308 F.2d 719, 720 (9th Cir. 1962); accord Frazee v. Commissioner, 98 T.C. 554, 561 (1992); Harwood v. Commissioner, 82 T.C. 239, 258 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); Estate of Kelley v. Commissioner, 63 T.C. 321, 325 (1974); Estate of Tiffany v. Commissioner, 47 T.C. 491, 499 (1967); see also Helvering v. Clifford, 309 U.S. 331, 336-337, 84 L. Ed. 788, 60 S. Ct. 554 (1940). Family partnerships have long been recognized where there is a bona fide business carried on after the partnership is formed. See, e.g., Drew v. Commissioner, 12 T.C. 5, 12-13 (1949). Mere suspicion and speculation about a decedent's estate planning and testamentary objectives are not sufficient to disregard an agreement in the absence of persuasive evidence that the agreement is not susceptible of enforcement or would not be enforced by parties to the agreement. Cf. Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989).

The estate contends that there were "clear and compelling" nontax motives for creating SFLP, including the provision of a flexible and efficient means by which to manage and protect decedent's assets. Specifically, the estate argues that its business purposes for forming SFLP were (1) to reduce executor and attorney's fees payable at the death of decedent, (2) to insulate decedent from an anticipated tort claim and the estate from a will contest (by creating another layer through which creditors must go to reach assets conveyed to the partnership), and (3) to provide a joint investment vehicle for management of decedent's assets. We agree with respondent that there are reasons to be skeptical about the nontax motives for forming SFLP.

We are skeptical of the estate's claims of business purposes related to executor and attorney's fees or potential tort claims. Mr. Gulig testified that, on various social occasions, he consulted with a former probate judge about decedent's anticipated estate. Those consultations, however, were not related in time or purpose to the formation of SFLP. In our view, the testimony about consultation is similar to the evidence described in Estate of Baron v. Commissioner, 83 T.C. 542, 555 (1984), affd. 798 F.2d 65 (2d Cir. 1986), to wit, the "'consultation' was mere window dressing to conceal tax motives."

We are not persuaded by the testimony that SFLP was formed to protect assets from will contests by Angela or Lynda Seymour or from a potential tort claim by Stone. The Seymour claims were stale when the partnership was formed, and they never materialized. There was no direct corroboration that Stone was injured by decedent while she was caring for him or any indication that Stone ever threatened litigation.

We also do not believe that a "joint investment vehicle" was the purpose of the partnership. Mr. Gulig took over control of decedent's affairs in September 1993, under the 1988 power of attorney, and Mr. Gulig continued to manage decedent's assets through his management responsibilities in Stranco. Petitioner concedes, in disputing respondent's alternative claim of gift tax liability, that "directly or indirectly, the Decedent ended up with 99.47% of the Partnership, having put in essentially 99.47% of the capital."

The formation and subsequent control of SFLP were orchestrated by Mr. Gulig without regard to "joint enterprise". He formed the partnership and the corporation and then invited Mrs. Gulig's siblings, funded by her, to invest in the corporation. The Strangi children shared in managing the assets only after and to the extent that the Merrill Lynch account was fragmented in accordance with their respective beneficial interests.

The nature of the assets that were contributed to SFLP supports the conclusion that management of those assets was not the purpose of SFLP. There were no operating business assets contributed to SFLP. Decedent transferred cash, securities, life insurance policies, annuities, real estate, and partnership interests to SFLP. The cash and securities approximated 75 percent of the value of the assets transferred. No active business was conducted by SFLP following its formation.

The actual control exercised by Mr. Gulig, combined with the 99-percent limited partnership interest in SFLP and the 47- percent interest in Stranco, suggest the possibility of including the property transferred to the partnership in decedent's estate under section 2036. See, e.g., Estate of Reichardt v. Commissioner, 114 T.C. 144 (2000). Section 2036 is not an issue in this case, however, because respondent asserted it only in a proposed amendment to answer tendered shortly before trial. Respondent's motion to amend the answer was denied because it was untimely. Applying the economic substance doctrine in this case on the basis of decedent's continuing control would be equivalent to applying section 2036(a) and including the transferred assets in decedent's estate. As discussed below, absent application of section 2036, Congress has adopted an alternative approach to perceived valuation abuses.

SFLP was validly formed under State law. The formalities were followed, and the proverbial "i's were dotted" and "t's were crossed". The partnership, as a legal matter, changed the relationships between decedent and his heirs and decedent and actual and potential creditors. Regardless of subjective intentions, the partnership had sufficient substance to be recognized for tax purposes. Its existence would not be disregarded by potential purchasers of decedent's assets, and we do not disregard it in this case.

SECTION 2703(a)(2)

Section 2703(a) provides as follows:

SEC. 2703. (a) General Rule. -- For purposes of this subtitle, the value of any property shall be determined without regard to --

(1) any option, agreement, or other right to acquire or use the property at a price less than the fair market value of the property (without regard to such option, agreement, or right), or

(2) any restriction on the right to sell or use such property.

Noting that a right or restriction may be implicit in the capital structure of an entity, see sec. 25.2703-1(a)(2), Gift Tax Regs., respondent argues that section 2703(a)(2) applies to disregard SFLP for transfer tax purposes. Respondent further argues that the SFLP agreement does not satisfy the "safe harbor" exception in section 2703(b).

Respondent's brief states:

Congress recognized substantial valuation abuse in the law as it existed prior to the enactment of I.R.C. sec. 2036(c) in 1987. In 1990 Congress replaced section 2036(c) with a new Chapter 14, including sections 2701 through 2704, which sets out special valuation rules for transfer tax purposes. It intended these new sections to target transfer-tax valuation abuses in the intra-family transfers more effectively while relieving taxpayers of section 2036(c)'s broad sweep. It wanted to value property interests more accurately when they were transferred, instead of including previously transferred property in the transferor's gross estate. "Discussion Draft" Relating to Estate Valuation Freezes: Hearing Before the House Comm. on Ways and Means, 101st Cong. 2d Sess. 102 (April 24, 1990) [House hearing]; Estate Freezes: Hearing on "Discussion Draft" Before the Subcomm. on Energy and Agricultural Taxation and Subcomm. on Taxation and Debt Management of the Senate Comm. on Finance, 101st Cong. 1233 (June 27, 1990) [Senate hearing].

The new special valuation rules in Chapter 14 departed substantially from the hypothetical willing buyer-willing seller standard. The Treasury Department recognized that valuing nonpublicly traded assets in family transactions for transfer tax purposes presented a significant problem. It testified to Congress that applying the hypothetical standard of a willing buyer-willing seller to family transactions allowed significant amounts to escape taxation. Senate hearing at 15.

Congress enacted section 2703(a) to address abusive intra-family situations. Section 2703(a)(1) addresses burdening a decedent's property with options to purchase at less than fair market value. Section 2703(a)(2), which applies to this case, addresses other restrictions that reduce the value of a decedent's property for estate tax purposes but not in the hands of the beneficiary. Congress contemplated that the section would apply to "any restriction, however created," including restrictions implicit in the capital structure of a partnership or contained in a partnership agreement, articles of incorporation, corporate bylaws or a shareholders' agreement. Informal Senate Report on S. 3209, 101st Cong., 2d Sess. (1990),136 Cong. Rec.

S15777 (October 18, 1990). Thus, it intended the word "restriction" in section 2703(a)(2) to be read as broadly as possible. See Treas. Reg. sec. 25.2703-1 (a lease from a father to son will to be disregarded for transfer tax valuation purposes because it is not similar to arm's-length transactions among unrelated parties. [Fn. ref. omitted.]

Respondent next argues that the term "property" in section 2703(a)(2) means the underlying assets in the partnership and that the partnership form is the restriction that must be disregarded. Unfortunately for respondent's position, neither the language of the statute nor the language of the regulation supports respondent's interpretation. Absent application of some other provision, the property included in decedent's estate is the limited partnership interest and decedent's interest in Stranco.

In Kerr v. Commissioner, 113 T.C. 449 (1999), the Court dealt with a similar issue with respect to interpretation of section 2704(b). Sections 2703 and 2704 were enacted as part of chapter 14, I.R.C., in 1990. See Omnibus Budget Reconciliation Act of 1990, Pub. L. 101-508, 104 Stat. 1388. However, as we indicated in Kerr v. Commissioner, supra at 470-471, and as respondent acknowledges in the portion of his brief quoted above, the new statute was intended to be a targeted substitute for the complexity, breadth, and vagueness of prior section 2036(c); and Congress "wanted to value property interests more accurately when they were transferred, instead of including previously transferred property in the transferor's gross estate." Treating the partnership assets, rather than decedent's interest in the partnership, as the "property" to which section 2703(a) applies in this case would raise anew the difficulties that Congress sought to avoid by repealing section 2036(c) and replacing it with chapter 14. We conclude that Congress did not intend, by the enactment of section 2703, to treat partnership assets as if they were assets of the estate where the legal interest owned by the decedent at the time of death was a limited partnership or corporate interest. See also Estate of Church v. United States, 2000 U.S. Dist. LEXIS 714, 85 A.F.T.R.2d (RIA) 804, 2000-1 U.S. Tax Cas. (CCH) P60,369 (W.D. Tex. 2000). Thus, we need not address whether the partnership agreement satisfies the safe harbor provisions of section 2703(b). Respondent did not argue separately that the Stranco shareholders' agreement should be disregarded for lack of economic substance or under section 2703(a).

GIFT AT THE INCEPTION OF SFLP

Respondent determined in the statutory notice and argues in the alternative that, if the partnership is recognized for estate tax purposes, decedent made a gift when he transferred property to the partnership and received in return a limited partnership interest of lesser value. Using the value reported by petitioner on the estate tax return, if decedent gave up property worth in excess of $ 10 million and received back a limited partnership interest worth approximately $ 6.5 million, he appears to have made a gift equal to the loss in value. (Petitioner now claims a greater discount, as discussed below.) In analogous circumstances involving a transfer to a corporation, the Court of Appeals in Kincaid v. United States, 682 F.2d 1220 (5th Cir. 1982), held that there was a taxable gift and awarded summary judgment to the Government. The Court of Appeals rejected the discounts claimed by the taxpayer, stating that no business person "would have entered into this transaction, * * * [thus] the 'moving impulse for the * * * transaction was a desire to pass the family fortune on to others'". Id. at 1225 (quoting Robinette v. Helvering, 318 U.S. 184, 187-188, 87 L. Ed. 700, 63 S. Ct. 540 (1943)). The Court of Appeals in Kincaid concluded that, while there may have been business reasons for the taxpayer to transfer land to a family corporation in exchange for stock, "there was no business purpose, only a donative one, for Mrs. Kincaid to accept less value in return than she gave up." 682 F.2d at 1226.

In this case, the estate claims that the assets were transferred to SFLP for the business purposes discussed above. Following the formation of SFLP, decedent owned a 99-percent limited partnership interest in SFLP and 47 percent of the corporate general partner, Stranco. Even assuming arguendo that decedent's asserted business purposes were real, we do not believe that decedent would give up over $ 3 million in value to achieve those business purposes.

Nonetheless, in this case, because we do not believe that decedent gave up control over the assets, his beneficial interest in them exceeded 99 percent, and his contribution was allocated to his own capital account, the instinctive reaction that there was a gift at the inception of the partnership does not lead to a determination of gift tax liability. In a situation such as that in Kincaid, where other shareholders or partners have a significant interest in an entity that is enhanced as a result of a transfer to the entity, or in a situation such as Shepherd v. Commissioner, 115 T.C. No. 30, (2000) (slip. op. at 21), where contributions of a taxpayer are allocated to the capital accounts of other partners, there is a gift. However, in view of decedent's continuing interest in SFLP and the reflection of the contributions in his own capital account, he did not transfer more than a minuscule proportion of the value that would be "lost" on the conveyance of his assets to the partnership in exchange for a partnership interest. See Kincaid v. United States, supra at 1224. Realistically, in this case, the disparity between the value of the assets in the hands of decedent and the alleged value of his partnership interest reflects on the credibility of the claimed discount applicable to the partnership interest. It does not reflect a taxable gift.

VALUATION OF DECEDENT'S LIMITED PARTNERSHIP INTEREST

For the reasons stated above, resolution of this case requires that we determine the fair market value of decedent's limited partnership interest in SFLP. For reasons stated above and below, we do not believe that the discounts claimed by petitioner in this case are reasonable.

Fair market value is the price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 551, 36 L. Ed. 2d 528, 93 S. Ct. 1713 (1973); sec. 20.2031-1(b), Estate Tax Regs. Under the hypothetical willing buyer-willing seller standard, decedent's interest cannot be valued by assuming that sales would be made to any particular person. See Estate of Bright v. United States, 658 F.2d 999, 1001 (5th Cir. 1981). On the other hand, transactions that are unlikely and plainly contrary to the economic interest of a buyer or seller are not reflective of fair market value. See Estate of Curry v. United States, 706 F.2d 1424, 1429 (7th Cir. 1983); Estate of Newhouse v. Commissioner, 94 T.C. 193, 232 (1990); Estate of Hall v. Commissioner, 92 T.C. 312, 337 (1989); Estate of O'Keeffe v. Commissioner, T.C. Memo 1992-210.

The trier of fact determining fair market value must weigh all relevant evidence and draw appropriate inferences. See Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. T.C. Memo 1961-347; Estate of Andrews v. Commissioner, 79 T.C. 938 (1982). Reviewing the facts of this case, at the date of death, decedent owned a 99-percent limited partnership interest in SFLP and a 47- percent interest in Stranco, the 1-percent owner and general partner of SFLP. Approximately 75 percent of the partnership's value consisted of cash and securities. It is unlikely and plainly contrary to the interests of a hypothetical seller to sell these interests separately and without regard to the liquidity of the underlying assets. SFLP was not a risky business or one in which the continuing value of the assets depended on continuing operations.

Each of the parties in this case presented expert valuation testimony. The experts agreed that the appropriate methodology was the "net asset value" approach. Each expert determined and applied a minority interest discount and a marketability discount to the net asset value of the partnership assets.

Both petitioner's expert and respondent's expert determined that a 25-percent lack of marketability discount was appropriate. Only respondent's expert, however, considered decedent's ownership of Stranco stock. We agree with respondent that the relationship between the limited partnership interest and the interest in Stranco cannot be disregarded. The entities were created as a unit and operated as a unit and were functionally inseparable.

In valuing decedent's 99-percent limited partnership interest on the date of death, respondent's expert applied an 8- percent minority interest discount and a 25-percent marketability discount, to reach a combined (rounded) discount of 31 percent. Respondent's expert valued decedent's 47-percent interest in Stranco by applying a 5-percent minority interest discount and a 15-percent marketability discount, to reach a combined (rounded) discount of 19 percent. Petitioner's expert applied a 25-percent minority interest discount and a 25-percent marketability discount, resulting in an effective total discount of 43.75 percent to the partnership. He did not value petitioner's interest in Stranco because he believed that the relationship was irrelevant. In our view, his result is unreasonable and must be rejected.

Respondent's expert selected the lower minority interest discount after considering the effective control of the limited partnership interest and the interest in Stranco and considering the detailed provisions of the partnership agreement and the shareholders' agreement. He examined closed-end funds, many of which are traded on major exchanges, and determined the range of discounts from net asset value for those funds. He selected a discount toward the lower end of the range. His analysis was well documented and persuasive. As respondent notes, normally a control premium would apply to an interest having effective control of an entity.

Petitioner argues that consideration of the stock interest in Stranco in valuing the limited partnership interest is erroneous because the shareholders' agreement granted the corporation and the other shareholders the right to purchase a selling shareholder's stock. While the shareholders' agreement may be a factor to be considered in determining fair market value, it does not persuade us that a hypothetical seller would not market the interest in the limited partnership and the interest in the corporation as a unit or that a transaction would actually take place in which only the partnership interest or the stock interest was transferred. Under the circumstances, the shareholders' agreement is merely a factor to be taken into account but not to be given conclusive weight. Cf. Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989); Estate of Lauder v. Commissioner, T.C. Memo 1994-527.

In view of our rejection of respondent's belated attempt to raise section 2036 and respondent's request that we disregard the partnership agreement altogether, we are constrained to accept the evidence concerning discounts applicable to decedent's interest in the partnership and in Stranco as of the date of death. We believe that the result of respondent's expert's discounts

may still be overgenerous to petitioner, but that result is the one that we must reach under the evidence and under the applicable statutes.

We have considered the other arguments of the parties, and they do not affect our analysis. To reflect the foregoing and the stipulated adjustments,

Decision will be entered under Rule 155.

CHABOT, WHALEN, COLVIN, HALPERN, CHIECHI, and THORNTON, JJ., agree with this majority opinion.

LARO, J., concurs in this opinion.

* * * * *

WELLS, C.J., concurring: Respectfully, although I concur in the result reached by the majority in the instant case, I wish to express my disagreement with the majority's application of the economic substance doctrine. The majority rejects the alleged business purposes underlying the formation of the disputed partnership but then concludes that the partnership "had sufficient substance to be recognized for tax purposes", majority op. p. 16, because the partnership was validly formed under State law, which altered the legal relationships between the decedent and others.

I believe that the majority's stated reasons for holding that the partnership had substance misapplies the economic substance doctrine. In cases such as ACM Pshp. v. Commissioner, 157 F.3d 231 (3d Cir. 1998), affg. in part and revg. in part on another issue T.C. Memo 1997-115, where the economic substance doctrine is applied to deny income tax benefits, the doctrine is applied regardless of the validity of the partnership under State law. Because the majority has rejected the alleged business purposes underlying the formation of the partnership in issue in the instant case, a proper application of the economic substance doctrine, if it were to apply, would ignore the partnership and disallow the discounts for minority interest and lack of marketability.

I believe that, rather than holding that the economic substance doctrine is satisfied in the instant case, the Court should conclude that the economic substance doctrine does not apply to disregard a validly formed entity where the issue is the value for Federal gift and estate tax purposes of the interest transferred in that entity. In that regard, I agree with Judge Foley's concurring opinion in Knight v. Commissioner, 115 T.C. No. 36 (2000).

FOLEY, J., agrees with this concurring opinion.

PARR, J., dissenting: The majority, citing Frank Lyon Co. v. United States, 435 U.S. 561, 583-584, 55 L. Ed. 2d 550, 98 S. Ct. 1291 (1978), states: "the tax effects of a particular transaction are determined by the substance of the transaction rather than by its form." Majority op. p. 11. The majority also cites a long line of cases, see Helvering v. Clifford, 309 U.S. 331, 336, 84 L. Ed. 788, 60 S. Ct. 554 (1940); Kuney v. Frank, 308 F.2d 719, 720 (9th Cir. 1962); Frazee v. Commissioner, 98 T.C. 554, 561 (1992); Harwood v. Commissioner, 82 T.C. 239, 258 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); Estate of Kelley v. Commissioner, 63 T.C. 321, 325 (1974); Estate of Tiffany v. Commissioner, 47 T.C. 491, 499 (1967), that require the Court to closely scrutinize family partnerships "because the family relationship 'so readily lends itself to paper arrangements having little or no relationship to reality.'" Majority op. p. 12 (quoting Kuney v. Frank, 308 F.2d 719, 720 (9th Cir. 1962)).

The majority is "skeptical of the estate's claims of business purposes related to executor and attorney's fees or potential tort claims", majority op. p. 13, is not persuaded that SFLP was formed to protect assets from will contests, does not believe that a joint investment vehicle was the purpose of the partnership, found that the formation and control of SFLP were orchestrated by Mr. Gulig without regard to joint enterprise, and found that the management of the assets contributed to SFLP was not the purpose of SFLP.

In this case, the facts clearly demonstrate that the paper arrangement, the written partnership agreement, had no relationship to the reality of decedent's ownership and control of the assets contributed to the partnership. Although under the partnership agreement a limited partner could not demand a distribution of partnership capital or income, the partnership (1) paid for Stone's surgery when she injured her back while caring for decedent, (2) distributed $ 3,187,800 to decedent's estate for State and Federal estate and inheritance taxes, (3) distributed $ 563,000 in 1995 and 1996 and $ 102,500 in 1998 to each of the Strangi children, (4) divided its primary Merrill Lynch account into four separate accounts in each of the Strangi children's names, (5) extended lines of credit to John Strangi, Albert T. Strangi, and Mrs. Gulig, and (6) advanced to decedent's estate $ 3.32 million to

post bonds with the Internal Revenue Service. It is clear that, contrary to the written partnership agreement, decedent and his successor in interest to his partnership interest (decedent's estate) had the ability to withdraw funds at will. If a hypothetical third party had offered to purchase the assets held by the partnership for the full fair market value of those assets, there is little doubt that decedent could have had the assets distributed to himself to complete the sale.

The majority, however, holds that, because the formalities were followed and SFLP was validly formed under State law, the partnership had sufficient substance to be recognized for tax purposes. The majority then values decedent's partnership interest as if the restrictions in the written partnership agreement were actually binding on the partners. The majority states, "The actual control exercised by Mr. Gulig, combined with the 99-percent limited partnership interest in SFLP and the 47-percent interest in Stranco, suggest the possibility of including the property transferred to the partnership in decedent's estate under section 2036." Majority op. p. 15. It seems incongruous that for purposes of section 2036 this Court could look to the actual control decedent exercised over the assets of the partnership, but for purposes of determining the appropriate discounts for valuing decedent's interest in the partnership this Court is limited to the written partnership agreement.

Assuming, arguendo, that the partnership must be recognized for Federal estate tax purposes, I would value the interest under the agreement that existed in fact, rather than under the written partnership agreement that had no relationship to the reality of decedent's ownership and control of the assets contributed to the partnership.

A person who maintains control over the ultimate disposition of property is, in practical effect, in a position similar to the actual owner of the property. See, e.g., Estate of Kurz v. Commissioner, 101 T.C. 44, 50-51, 59-60 (1993), supplemented by T.C. Memo 1994-221, affd. 68 F.3d 1027 (7th Cir. 1995). The Court should not allow a taxpayer who is not in fact limited by an agreement to claim a discount that is premised on that very limitation. A minority discount is allowed because a limited partner cannot cause the partnership to make distributions. Decedent and decedent's estate in fact caused the partnership to make distributions at will. The minority discount is not appropriate in this case.

Additionally, a discount for lack of marketability is allowed because a hypothetical third party would pay less for the partnership interest than for the assets. But in this case, under the actual partnership arrangement, decedent could have had all the assets distributed to himself and then sold them directly to the buyer. The lack of marketability discount, therefore, also is inappropriate in this case. Because the actual partnership arrangement provided for distributions at will, I would value the partnership interest at the value of the partnership's assets without any discount.

For the above reasons, I respectfully dissent.

BEGHE and MARVEL, JJ., agree with this dissenting opinion.

* * * * *

RUWE, J., dissenting: Decedent transferred property to a newly formed partnership in return for a 99-percent limited partnership interest. This was done 2 months before he died, as part of a plan to reduce tax on his estate. The estate presented testimony to support its argument that these actions were taken for business purposes. The trial judge clearly rejects these arguments and describes the testimony offered by the estate as "mere window dressing to conceal tax motives." Majority op. p. 13. Tax savings was the only motivating factor for transferring property to the partnership. Nevertheless, the majority validates this scheme by valuing decedent's 99-percent partnership interest at 31 percent below the value of the property that decedent transferred to the partnership.

Respondent argues that if the partnership interest that decedent received is to be valued at 31 percent less than the value of the property that decedent transferred to the partnership, then the difference should be considered to be a gift. The majority rejects respondent's gift argument. n1

n1 One of the reasons given by the majority for rejecting respondent's gift argument is "we do not believe that decedent gave up control over the assets". Majority op. p. 21. This finding is inconsistent with the majority's allowance of a 31 percent discount. If decedent owned assets worth $ 9,876,929, transferred legal title to those assets to a partnership in which he had a beneficial interest that exceeded 99 percent, and thereafter retained control over the transferred assets, how could the value of his property rights be 31 percent less after the transfer? Certainly, a hypothetical willing buyer and seller with reasonable knowledge of the relevant facts would be aware that decedent's property interests included control over the assets. The majority's analysis fails to adequately explain this apparent anomaly.

Respondent's gift tax argument is supported by the applicable statutes, regulations, and controlling opinions. If the value of the property that decedent transferred to the partnership was more than the value of the consideration that he received, and the transfer was not made for bona fide nontax business reasons, then the amount by which the value of the property transferred exceeds the value of the consideration is deemed to be a gift pursuant to section 2512(b).

Section 2512(b) provides:

SEC. 2512. VALUATION OF GIFTS.

(b) Where property is transferred for less than an adequate and full consideration in money or money's worth, then the amount by which the value of the property exceeded the value of the consideration shall be deemed a gift, and shall be included in computing the amount of gifts made during the calendar year.

Section 25.2512-8, Gift Tax Regs., provides:

Sec. 25.2512-8. Transfers for insufficient consideration.

-- Transfers reached by the gift tax are not confined to those only which, being without a valuable consideration, accord with the common law concept of gifts, but embrace as well sales, exchanges, and other dispositions of property for a consideration to the extent that the value of the property transferred by the donor exceeds the value in money or money's worth of the consideration given therefor.

* * *

Transactions made in the ordinary course of business are exempt from

the above gift tax provisions. Thus, section 25.2512-8, Gift Tax

Regs., provides:

However, a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent), will be considered as made for an adequate and full consideration in money or money's worth. * * *

The Supreme Court has described previous versions of the gift tax statutes (section 501 imposing the tax on gifts and section 503 which is virtually identical to present section 2512(b)) in the following terms:

Sections 501 and 503 are not disparate provisions. Congress directed them to the same purpose, and they should not be separated in application. Had Congress taxed "gifts" SIMPLICITER, it would be appropriate to assume that the term was used in its colloquial sense, and a search for "donative intent" would be indicated. But Congress intended to use the term "gifts" in its broadest and most comprehensive sense. H. Rep. No. 708, 72d Cong., 1st Sess., p.27; S. Rep. No. 665, 72d Cong., 1st Sess., p.39; cf. Smith v. Shaughnessy, 318 U.S. 176, 87 L. Ed. 690, 63 S. Ct. 545; Robinette v. Helvering, 318 U.S. 184, 87 L. Ed. 700, 63 S. Ct. 540. Congress chose not to require an ascertainment of what too often is an elusive state of mind. For purposes of the gift tax it not only dispensed with the test of "donative intent." It formulated a much more workable external test, that where "property is transferred for less than an adequate and full consideration in money or money's worth," the excess in such money value "shall, for the purpose of the tax imposed by this title, be deemed a gift..." And Treasury Regulations have emphasized that common law considerations were not embodied in the gift tax.

To reinforce the evident desire of Congress to hit all the protean arrangements which the wit of man can devise that are not business transactions within the meaning of ordinary speech, the Treasury Regulations make clear that no genuine business transaction comes within the purport of the gift tax by excluding "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent)." Treas. Reg. 79 (1936 ed.) Art. 8. THUS ON FINDING THAT A TRANSFER IN THE CIRCUMSTANCES OF A PARTICULAR CASE IS NOT MADE IN THE ORDINARY COURSE OF BUSINESS, THE TRANSFER BECOMES SUBJECT TO THE GIFT TAX TO THE EXTENT THAT IT IS NOT MADE "FOR AN ADEQUATE AND FULL CONSIDERATION IN MONEY OR MONEY'S WORTH." See 2 Paul, Federal Estate and Gift Taxation (1942) p. 1113. [Commissioner v. Wemyss, 324 U.S. 303, 306, 89 L. Ed. 958, 65 S. Ct. 652 (1945); fn. ref. omitted; emphasis added.]

In light of what the Supreme Court said, the estate attempted to portray the transfer of property to the partnership as a business transaction. The majority soundly rejects this as a masquerade. Indeed, it is clear that the transfer was made to reduce the value of decedent's assets for estate tax purposes, while at the same time allowing the full value of decedent's property to pass to his children.

The Supreme Court has described the objective of the gift tax as follows:

The section taxing as gifts transfers that are not made for "adequate and full [money] consideration" aims to reach those transfers which are withdrawn from the donor's estate. * * * [Commissioner v. Wemyss, supra at 307.]

Under the applicable gift tax provisions and Supreme Court precedent,

it is unnecessary to consider what decedent's children received on

the date of the transfer in order to determine the value of the

deemed gift under section 2512(b). Indeed, it is not even necessary

to identify the donees. Section 25.2511-2(a), Gift Tax Regs.,

provides:

Sec. 25.2511-2. Cessation of donor's dominion and control.

-- (a) The gift tax is not imposed upon the receipt of the property by the donee, nor is it necessarily determined by the measure of enrichment resulting to the donee from the transfer, nor is it conditioned upon ability to identify the donee at the time of the transfer. On the contrary, the tax is a primary and liability of the donor, is an excise upon his act of making the transfer, is measured by the value of the property passing from the donor, and attaches regardless of the fact that the identity of the donee may not then be known or

ascertainable.

In Robinette v. Helvering, 318 U.S. 184, 87 L. Ed. 700, 63 S. Ct. 540 (1943), the taxpayer argued that there could be no gift of a remainder interest where the putative remaindermen (prospective unborn children of the grantor) did not even exist at the time of the transfer. The Supreme Court rejected this argument stating that the gift tax is a primary and personal liability of the donor measured by the value of the property passing from the donor.

This case involves an attempt by a dying man (or his attorney) to transfer property to a partnership in consideration for a 99-percent partnership interest that would be valued at substantially less than the value of the assets transferred to the partnership, while at the same time assuring that 100 percent of the value of the transferred assets would be passed to decedent's beneficiaries. Assuming, as the majority has found, that decedent's partnership interest was worth less than the property he transferred, n2 section 2512(b) should be applied. Pursuant to that section the excess of the value of the property decedent transferred to the partnership over the value of the consideration he received is "deemed a gift" subject to the gift tax. By failing to apply section 2512(b) in this case, the majority thwarts the purpose of section 2512(b) which the Supreme Court described as "the evident desire of Congress to hit all the protean arrangements which the wit of man can devise that are not business transactions". Commissioner v. Wemyss, supra at 306.

n2 The majority's allowance of a 31-percent discount is in stark contrast to its rejection of respondent's gift argument on the ground that decedent did not give up control of the assets when he transferred them to the partnership. See majority op. p. 21. While the basis for finding that decedent did not give up control of the assets is not fully explained, it appears not to be based on the literal terms of the partnership agreement which gave control to Stranco, the corporate general partner. Decedent owned only 47 percent of the Stranco stock. Since the majority also rejects respondent's economic substance argument, the only other conceivable basis for concluding that decedent retained control over the assets that he contributed to the partnership is that the partnership arrangement was a factual sham. If that were the case, the partnership arrangement itself would be "mere window dressing" masking the true facts and the terms of the partnership arrangement should be disregarded. In an analogous situation the Court of Appeals for the Tenth Circuit disregarded the written terms of a transfer document as fraudulent. See Heyen v. United States, 945 F.2d 359 (10th Cir. 1991).

PARR, BEGHE, GALE, and MARVEL, JJ., agree with this dissenting opinion.

* * * * *

BEGHE, J., dissenting: Having joined the dissents of Judges Parr and Ruwe, I write separately to describe another path to the conclusion that SFLP had no effect on the value of Mr. Strangi's gross estate under sections 2031 and 2033. In my view, the property to be valued is the property originally held by Mr. Strangi, the so- called contributed property. Notwithstanding that the property in question may have been contributed to a partnership formed on Mr. Strangi's behalf in exchange for a 99-percent limited partnership interest, we're not bound to accept the estate's contention that the property to be valued is its interest in SFLP, subject to all the disabilities and resulting valuation discounts entailed by ownership of an interest in a limited partnership. Instead, the facts of this case invite us to use the end-result version of the step-transaction doctrine to treat the underlying partnership assets -- the property originally held by the decedent -- as the property to be valued for estate tax purposes.

The value of property for transfer tax purposes is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 550-551, 36 L. Ed. 2d 528, 93 S. Ct. 1713 (1973); sec. 20.2031-1(b), Estate Tax Regs.; sec. 25.2512-1, Gift Tax Regs. The majority state that SFLP's existence "would not be disregarded by potential purchasers of decedent's assets"; the majority also suggest that this is why the partnership should not be disregarded as a substantive sham. See majority op. p. 16.

I support the use of substance over form analysis to decide whether a transaction qualifies for the tax-law defined status its form suggests. A formally correct transaction without a business purpose may not be a "reorganization", and a title holder of property without an economic interest may not be the tax "owner". However, I share the majority's concerns about using substance over form analysis to alter the conclusion about a real-world fact, such as the fair market value of property, which the law tells us is the price at which the property actually could be sold. n1

n1 Against the grain of the majority's conclusions that the SFLP arrangements were neither a factual sham nor a substantive sham, I would observe that another "conceivable basis for concluding that decedent retained control over the assets that he contributed to the partnership" (Ruwe, J., dissenting opinion page 38 note 2) are the multiple roles played by Mr. Gulig, who had decedent's power of attorney and caused himself to be employed by Stranco to manage the affairs of SFLP, and the tacit understanding of the other family members that he would look out for their interests. Although I would agree with the majority that use of substantive sham analysis may not be appropriate in transfer tax cases, I believe that factual sham analysis can be used in appropriate cases in the transfer tax area and that the case at hand is one of those cases; the terms of the SFLP partnership agreement should be disregarded because the parties to the agreement didn't pay any attention to them. Cf. Heyen v. United States, 945 F.2d 359 (10th Cir. 1991). To adapt to the case at hand the hypothetical posed by the Court of Appeals in Citizens Bank & Trust Co. v. Commissioner, 839 F.2d 1249, 1254-1255 (7th Cir. 1988), the magic marker the Guligs used to paint the mustache on the Mona Lisa was filled with disappearing ink. However, the discussion in the text is presented as an alternative to a factual sham analysis.

Although my approach to the case at hand employs a step- transaction analysis, which is a variant of substance over form, I do not use that analysis to conclude anything about fair market value. Instead, I use it to identify the property whose transfer is subject to tax. Step-transaction analysis has often been used in transfer tax cases to identify the transferor or the property transferred.

The step-transaction doctrine is a judicially created concept that treats a series of formally separate "steps" as a single transaction if those steps are "in substance integrated, interdependent and focused toward a particular end result." Penrod v. Commissioner, 88 T.C. 1415, 1428 (1987). The most far-reaching version of the step-transaction doctrine, the end-result test, applies if it appears that a series of formally separate steps are really prearranged parts of a single transaction that are intended from the outset to reach the ultimate result. See Penrod v. Commissioner, 88 T.C. at 1429, 1430 (citing Helvering v. Alabama Asphaltic Limestone Co., 315 U.S. 179, 86 L. Ed. 775, 62 S. Ct. 540 (1942); South Bay Corp. v. Commissioner, 345 F.2d 698 (2d Cir. 1965); Morgan Manufacturing Co. v. Commissioner, 124 F.2d 602 (4th Cir. 1941); Heintz v. Commissioner, 25 T.C. 132 (1955); Ericsson Screw Machine Prods. Co., v. Commissioner, 14 T.C. 757 (1950); King Enters., Inc. v. United States, 189 Ct. Cl. 466, 475, 418 F.2d 511, 516 (1969)). The end- result test is flexible and grounds tax consequences on what actually happened, not on formalisms chosen by the participants. See Penrod v. Commissioner, supra.

The sole purpose of the transactions orchestrated by Mr. and Mrs. Gulig was to reduce Federal transfer taxes by depressing the value of Mr. Strangi's assets as they passed through his gross estate, to his children, via the partnership. The arrangement merely operated to convey the assets to the same individuals who would have received the assets in any event under Mr. Strangi's will. Nothing of substance was intended to change as a result of the transactions and, indeed, the transactions did

nothing to affect Mr. Strangi's or his children's interests in the underlying assets except to evidence an effort to reduce Federal transfer taxes. The control exercised by Mr. Strangi and his children over the assets did not change at all as a result of the transactions. For instance, shortly after Mr. Strangi's death SFLP made substantial distributions to the children, the Merrill Lynch account was divided into 4 separate accounts to allow each child to control his or her proportionate share of SFLP assets, and distributions were made to the estate to enable it to pay death taxes and post a bond. Mr. Strangi's testamentary objectives are further evidenced by his practical incompetency and failing health at formation and funding of SFLP and Stranco and the short time between the partnership transactions and Mr. Strangi's death.

The estate asserts that property with a stated value of $ 9,876,929, in the form of cash and securities, when funneled through the partnership, took on a reduced value of $ 6,560,730. It is inconceivable that Mr. Strangi would have accepted, if dealing at arm's length, a partnership interest purportedly worth only two- thirds of the value of the assets he transferred. This is especially the case given Mr. Strangi's age and health, because it would have been impossible for him ever to recoup this immediate loss.

It is also inconceivable that Mr. Strangi (or his representatives) would transfer the bulk of his liquid assets to a partnership, in exchange for a limited interest (plus a minority interest in the corporate general partner) that would terminate his control over the assets and their income streams, if the other partners had not been family members. See Estate of Trenchard v. Commissioner, T.C. Memo 1995-121; there the Court found "incredible" the assertion of the executrix that the decedent's transfer of property to a family corporation in exchange for stock was in the ordinary course of business. It is clear that the sole purpose of SFLP was to depress the value of Mr. Strangi's assets artificially for a brief time as the assets passed through his estate to his children. See Estate of Murphy v. Commissioner, T.C. Memo 1990-472, in which this Court denied decedent's estate a minority discount on a 49.65-percent stock interest because the prior inter vivos transfer of a 1.76-percent interest did "not appreciably affect decedent's beneficial interest except to reduce Federal transfer taxes." Estate of Murphy v. Commissioner, supra, 60 T.C.M. (CCH) 645, 661, 1990 T.C.M. (RIA) par. 90,472, at 90-2261.

Thus, under the end-result test, the formally separate steps of the transaction (the creation and funding of the partnership within 2 months of Mr. Strangi's death, the substantial outright distributions to the estate and to the children, and the carving up of the Merrill Lynch account) that were employed to achieve Mr. Strangi's testamentary objectives should be collapsed and viewed as a single integrated transaction: the transfer at Mr. Strangi's death of the underlying assets.

In many cases courts have collapsed multistep transactions or recast them to identify the parties (usually the donor or donee) or the property to be valued for transfer tax purposes. See, e.g., Estate of Bies v. Commissioner, T.C. Memo 2000-338 (identifying transferors for purposes of gift tax annual exclusions); Estate of Cidulka v. Commissioner, T.C. Memo 1996-149 (donor's gift of minority stock interests to shareholders followed by a redemption of donor's remaining shares treated as single transfer of a controlling interest); Estate of Murphy v. Commissioner, supra (decedent's inter vivos transfer of a minority interest followed by a testamentary transfer of her remaining shares treated as an integrated plan to transfer control to decedent's children); Griffin v. United States, 42 F. Supp. 2d 700 (W.D. Tex. 1998) (transfer of 45 percent of donor's stock to donor's spouse followed by a transfer by spouse and donor of all their stock to a trust for the benefit of their child treated as one gift by donor of the entire block). n2

n2 In Griffin v. United States, 42 F. Supp. 2d 700, 706 n.4 (W.D. Tex. 1998), the court distinguished Estate of Frank v. Commissioner, T.C. Memo 1995-132, where this Court declined to integrate the steps of the transaction.

The reciprocal trust doctrine, another application of substance over form, has been used in the estate and gift tax area to determine who is the transferor of property for the purposes of inclusion in the gross estate. See United States v. Grace, 395 U.S. 316, 321, 23 L. Ed. 2d 332, 89 S. Ct. 1730 (1969) (applying the reciprocal trust doctrine in the estate tax context to identify the grantor, and quoting with approval Lehman v. Commissioner, 109 F.2d 99, 100 (2d Cir. 1940): "The law searches out the reality and is not concerned with the form."). More recently, Sather v. Commissioner, T.C. Memo 1999-309, applied the reciprocal trust doctrine to cut down the number of present interest annual exclusions for gift tax purposes:

We must peel away the veil of cross-transfers to seek out the economic substance of the foregoing series of transfers.

* * *

* * * * * * *

We are led to the inescapable conclusion that the form in which the transfers were cast, i.e., gifts to the nieces and nephews, had no purpose aside from the tax benefits petitioners sought by way of inflating their exclusion amounts. The substance and purpose of the series of transfers was for each married couple to give to their own children their Sathers stock. After the transfers, each child was left in the same economic position as he or she would have been in had the parents given the stock directly to him or her. Each niece and nephew received an identical amount of stock from his or her aunts and uncles and was left in the same economic position in relation to the others. This was not a coincidence but rather was the result of a plan among the donors to give gifts to their own children in a form that would avoid taxes. * * * [Sather v.

Commissioner, T.C. Memo 1999-309, 78 T.C.M. (CCH) 456, 459-460, 1999 T.C.M. (RIA) par. 99,309, at 99-1964-99-1965.]

All this is set out most clearly in our reviewed opinion in Bischoff v. Commissioner, 69 T.C. 32 (1977), as explained by the Court of Appeals for the Federal Circuit in Exchange Bank & Trust Co. v. United States, 694 F.2d 1261, 1269 (Fed. Cir. 1982): "We agree with the majority in Bischoff and the appellee in this action [the United States] that the reciprocal trust doctrine merely identifies the true transferor, but the actual basis for taxation is founded upon specific statutory authority."

In Estate of Montgomery v. Commissioner, 56 T.C. 489 (1971), affd. 458 F.2d 616 (5th Cir. 1972), an elderly decedent, who was otherwise uninsurable, purchased a single premium annuity and was thereby able to obtain life insurance hat he assigned to trusts. The Court held that the arrangement was not life insurance within the meaning of the parenthetical exception contained in section 2039, and therefore, the proceeds of the policies were includable in decedent's gross estate. In so holding, the Court used the language of step transactions to find that the annuity and insurance were part of a single investment agreement.

Daniels v. Commissioner, T.C. Memo 1994-591, applied the step-transaction doctrine in a gift tax case in favor of the taxpayers to conclude that an outright gift of common stock to children and a simultaneous exchange of some common for preferred were parts of the same gift. As a result, the Commissioner's belated attempt to tax the imbalance in values on the common-preferred exchange was barred by the statute of limitations. My conclusion that the property to be valued for estate tax purposes should be the property transferred to SFLP is further supported by the decision of Citizens Bank & Trust Co. v. Commissioner, 839 F.2d 1249 (7th Cir. 1988), affg. Northern Trust Co. v. Commissioner, 87 T.C. 349 (1986). There, the Court of Appeals for the Seventh Circuit held that the taxable value of a gift is not altered by the terms of the conveyance; therefore, "restrictions imposed in the instrument of transfer are to be ignored for purposes of making estate or gift tax valuations". 839 F.2d at 1252-1253. I conclude that the formation of SFLP and subsequent distributions of partnership assets should be treated as parts of a single, integrated transaction, and that the SFLP agreement is properly viewed as a restriction included in the testamentary conveyance to the Strangi children. Accordingly, under Citizens Bank & Trust Co. v. Commissioner, supra, and the other authorities previously discussed, any reduction in values allegedly caused by the SFLP agreement should be disregarded; under sections 2031 and 2033, the contributed property is the property to be included and valued in the gross estate.

PARR, J., agrees with this dissenting opinion.

IN THE UNITED STATES COURT OF APPEALS

FOR THE FIFTH CIRCUIT

No. 01-60538

ROSALIE GULIG, Independent Executrix, on behalf of

the Estate of Albert Strangi, Deceased,

Petitioner-Appellee,

versus

COMMISSIONER OF INTERNAL REVENUE,

Respondent-Appellant.

Appeal from a Decision of

the United States Tax Court

June 17, 2002

Before DUHÉ, DeMOSS, and CLEMENT, Circuit Judges.

CLEMENT, Circuit Judge:I. FACTS AND PROCEEDINGS

In August 1994, Michael Gulig, as decedent Albert Strangi's attorney in fact,(1) (http://www.ca5.uscourts.gov/opinions/pub/01/01-60538-cv0.htm#N_1_) formed Strangi Family Limited Partnership ("SFLP") and its corporate general partner, Stranco, Inc. ("Stranco"), under Texas law. Strangi purchased 47 percent of Stranco for $49,350 and his four children purchased the remaining 53 percent for $55,650.(2) (http://www.ca5.uscourts.gov/opinions/pub/01/01-60538-cv0.htm#N_2_) Stranco transferred $100,333 to SFLP in return for a 1 percent general partnership interest. Strangi transferred property with a fair market value of $9,876,929, approximately 75 percent of which was cash and securities, to SFLP for a 99 percent limited partnership interest.

Decedent and his four children sat on Stranco's initial board of directors, with Rosalie Gulig serving as president. The partnership agreement provided that Stranco had sole authority over SFLP's business affairs; limited partners needed Stranco's consent to act on SFLP's behalf. Stranco employed Michael Gulig to manage the day-to-day affairs of SFLP and Stranco. SFLP's partnership agreement allowed it to lend money to partners, affiliates, or other persons or entities. Decedent's estate and the Strangi children have received various distributions from SFLP. On August 18, 1994, a charitable gift of 100 Stranco shares was given to McLennan Community College Foundation in decedent's memory.

Domiciled in Waco, Texas, Strangi died of cancer at the age of 81 on October 14, 1994. When decedent's will was admitted to probate on April 12, 1995, Rosalie Gulig was appointed sole executor of the estate. No claim against the estate or will contest was filed.

Strangi's estate reported Strangi's interest in SFLP as having a date-of-death value of $6,560,730, approximately $3 million lower than the value the assets had at the time of transfer from Strangi to the partnership. At the date of death, the property held by SFLP had increased in value to $11,100,922 due to the appreciation of securities. The valuation report applied a combined 33 percent minority interest discount for lack of marketability and lack of control.

On December 1, 1998, the Internal Revenue Service ("IRS") issued a notice of deficiency for $2,545,826 in federal estate taxes or, alternatively, $1,629,947 in federal gift taxes. Rosalie Gulig petitioned the tax court for a redetermination of the deficiencies. The tax court, sitting in review, considered whether SFLP should be disregarded for tax purposes under the business purpose and economic substance doctrine or alternatively as a restriction on the sale or use of property under I.R.C. § 2703(a)(2). Determining (with a 9-5 decision) that the partnership had economic substance and that § 2703 did not apply, the court proceeded to consider whether a taxable gift occurred to the extent that the value of assets Strangi transferred exceeded the value of his partnership interest and also determined the fair market value of decedent's interest at the date of death. Finding that Strangi retained enough control over the assets transferred to compensate for the disparity between value given and value received, the court did not find a taxable gift. The court accepted the 31 percent combined discount reached by the IRS's expert. Though ruling for the estate on all claims except valuation, the tax court suggested that if the Commissioner had timely filed his notice to amend to add an I.R.C. § 2036 claim, it probably would have used that section to include in the estate the assets Strangi transferred to SFLP.

II. ANALYSIS

A. Leave to amend to add a § 2036 claim

Fifty-two days before trial, the Commissioner filed a motion to amend to add a claim that under § 2036 the estate should include the value of SFLP's assets transferred from the decedent. The tax court denied the motion to amend, apparently because it considered the motion untimely. We review the tax court's decision to deny leave to amend for abuse of discretion. Halbert v. City of Sherman, Tex., 33 F.3d 526, 529 (5th Cir. 1994). "A decision to grant leave is within the discretion of the court, although if the court lacks a substantial reason to deny leave, its discretion is not broad enough to permit denial." State of Louisiana v. Litton Mortgage Co., 50 F.3d 1298, 1302-03 (5th Cir. 1995) (internal citations and quotes omitted). "In the absence of any apparent or declared reason--such as undue delay, bad faith or dilatory motive on the part of the movant, repeated failure to cure deficiencies by amendments previously allowed, undue prejudice to the opposing party by virtue of allowance of the amendment, futility of amendment, etc.--the leave sought should, as the rules require, be 'freely give.'" Foman v. Davis, 371 U.S. 178, 182 (1962).

The only insight we have into the tax court's reasoning for the denial is its statement that, even though § 2036 might apply on the facts, it was "not an issue in this case, however, because respondent asserted it only in a proposed amendment to answer tendered shortly before trial. Respondent's motion to amend the answer was denied because it was untimely." However, the motion was made nearly two months, not "shortly," before trial and was unlikely to cause delay or prejudice. If the tax court's true reasoning was that the Commissioner could have sought to assert the applicability of § 2036 earlier in the proceedings, it did not assert such and did not discuss any evidence of bad faith or dilatory motive. We cannot assume bad faith on the record here. The record does not present an obvious reason for denial

of leave to amend. See Ashe v. Corley, 992 F.2d 540, 542-43 (5th Cir. 1993) ("Where reasons for denying leave to amend are 'ample and obvious,' the district court's failure to articulate specific reasons does not indicate an abuse of discretion."). We find that the denial was an abuse of discretion.

B. Business purpose and economic substance doctrine

We review the question of whether SFLP has a business purpose and economic substance, such that it should not be disregarded for tax purposes, for clear error. See Merryman v. Commissioner, 873 F.2d 879, 881 (5th Cir. 1989); ACM Partnership v. Commissioner, 157 F.3d, 231, 245 (3rd Cir. 1998). Under this standard of review, we agree with the tax court that the partnership has enough economic substance for SFLP to be recognized for federal estate tax purposes.

As the tax court noted, "[m]ere suspicion and speculation about a decedent's estate planning and testamentary objectives are not sufficient to disregard an agreement in the absence of persuasive evidence that the agreement is not susceptible of enforcement or would not be enforced by parties to the agreement." See Hall v. Commissioner of Internal Revenue, 92 T.C. 312, 335 (1989). SFLP's partnership agreement changed the legal relationships between decedent and his heirs and creditors. Potential purchasers of decedent's assets would not disregard the partnership. As the tax court stated, " [r]egardless of subjective intentions, the partnership had sufficient substance to be recognized for tax purposes."

C. The remaining claims

Having carefully reviewed the record and read the briefs, we affirm the tax court's conclusions regarding § 2703 for essentially the reasons stated in that court's opinion. Section 2703 does not alter the determination that the estate included the decendent's interests in SFLP and Stranco and the tax court did not have to consider the applicability of the safe harbor provisions of section 2703(b) to the partnership agreement. We also affirm the tax court's conclusion that decedent's transfer of property to the partnership was not a taxable gift for essentially the reasons stated in that court's opinion. Finally, we adopt the tax court's ruling concerning the discounts and the fair market value of decedent's interest in SFLP at the date of death. However, the tax court may revisit this topic after considering the § 2036 claim.

III. CONCLUSION

We REVERSE the tax court's denial of leave to amend and REMAND for consideration of the § 2036 claim. We AFFIRM all other conclusions made by the tax court.

1. On July 19, 1988, decedent executed a power of attorney, naming Michael Gulig his attorney in fact. Michael Gulig is petitioner's husband and decedent's son-in-law.

2. Rosalie Gulig loaned her siblings the money needed to purchase the Stranco shares. Jeanne, John, and Albert T. Strangi each executed unsecured notes to Rosalie Gulig, with face amounts of $13,912.50 and an interest rate of 8 percent.

T.C. Memo. 2003-145

UNITED STATES TAX COURT

ESTATE OF ALBERT STRANGI, DECEASED, ROSALIE GULIG, INDEPENDENT EXECUTRIX, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent*

Docket No. 4102-99. Filed May 20, 2003.

Norman A. Lofgren, G. Tomas Rhodus, and Michael C. Kelsheimer, for petitioner.

Gerald L. Brantley, Lillian D. Brigman, Janice B. Geier, and John D. MacEachen, for respondent.

---

* This opinion supplements our previously filed opinion in Estate of Strangi v. Commissioner, 115 T.C. 478 (2000), affd. in part and revd. and remanded in part 293 F.3d 279 (5th Cir. 2002).

SUPPLEMENTAL MEMORANDUM FINDINGS OF FACT AND OPINION

COHEN, Judge: This matter is before the Court on remand from the Court of Appeals for the Fifth Circuit for further consideration consistent with its opinion in Estate of Strangi v. Commissioner, 293 F.3d 279 (5th Cir. 2002) (Strangi II), affg. in part and revg. and remanding in part 115 T.C. 478 (2000) (Strangi I). The issue for decision on remand is whether the value of property transferred by Albert Strangi (decedent) to the Strangi Family Limited Partnership (SFLP) and Stranco, Inc. (Stranco), is includable in his gross estate pursuant to section 2036(a). Unless otherwise indicated, all section references are to the Internal Revenue Code in effect as of the date of death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Facts with respect to this case were found in our original opinion in Strangi I and are incorporated by this reference. We summarize for convenience relevant facts from Strangi I and set forth additional findings for purposes of deciding the issue on remand.

General Background

Decedent and his first wife had four children: Jeanne, Rosalie, Albert T., and John Strangi (collectively the Strangi children). After divorcing his first wife in 1965, decedent

married Irene Delores Seymour (Mrs. Strangi), who had two daughters, Angela and Lynda Seymour (collectively the Seymour daughters), from a previous marriage. In 1985, Rosalie (hereinafter Mrs. Gulig) married Michael J. Gulig (Mr. Gulig), an attorney with the law firm of Sheehy, Lovelace and Mayfield, P.C., in Waco, Texas. On February 19, 1987, decedent and Mrs. Strangi executed wills that named the Strangi children and the Seymour daughters as residual beneficiaries in the event that either spouse predeceased the other.

During 1987 and 1988, Mrs. Strangi suffered a series of serious medical problems. In 1988, decedent and Mrs. Strangi decided to move from their then home in Fort Walton Beach, Florida, to Waco, Texas. To facilitate this move, decedent on July 19, 1988, executed a power of attorney naming Mr. Gulig as his attorney in fact and thereby authorizing Mr. Gulig, in decedent's "name, place and stead":

> To exercise, do, or perform any act, right, power, duty, or obligation whatsoever that I now have or may acquire * * * relating to any person, item, thing, transaction, business property, real or personal, tangible or intangible, or matter whatsoever;
>
> * * * * * * *
>
> To lease, purchase, exchange and acquire, and to bargain, contract, and agree for the lease, purchase, exchange, and acquisition of, and to take, receive and possess any real or personal property whatsoever, tangible or intangible, or interest therein, on such terms and conditions, and under such covenants as the attorney in fact shall deem proper;

> To improve, repair, maintain, manage, insure, rent, lease, sell, release, convey, subject to lien, mortgage, hypothecate, and in any way or manner deal with all or any part of any real or personal property whatsoever, intangible, or any interest therein, which I now own or may hereafter acquire, for me and in my name, and under such terms and conditions, and under such covenants as said attorney shall deem proper;
>
> To engage in and transact any and all lawful business of whatever nature or kind for me and in my name;
>
> To sign, endorse, execute, acknowledge, deliver, receive and possess such * * * [contracts, agreements, etc.] and such other instruments in writing of whatever kind and nature as may be necessary or proper in the exercise of the rights and powers herein granted.

Thus, among other things, Mr. Gulig was authorized to close the purchase of a residence in Waco. After the move to Waco, Sylvia Stone (Ms. Stone) was hired as decedent's housekeeper and also provided assistance with the care of Mrs. Strangi.

On July 31, 1990, decedent executed a new will, naming the Strangi children as the sole residual beneficiaries if Mrs. Strangi predeceased him. This will also designated Mrs. Gulig and Ameritrust Texas, N.A. (Ameritrust), as coexecutors of decedent's estate. Mrs. Strangi died on December 27, 1990.

During 1993, decedent had surgery to remove a cancerous mass from his back; was diagnosed with supranuclear palsy (a brain disorder that would gradually reduce his ability to speak, walk, and swallow); and had prostate surgery. Mr. Gulig thereafter took over decedent's affairs pursuant to the 1988 power of

attorney. Mr. Gulig also developed a close personal relationship with decedent after the death of Mrs. Strangi. Every morning, Mr. Gulig would visit decedent to have coffee and read the newspaper.

SFLP and Stranco

On August 11, 1994, Mr. Gulig attended a seminar provided by Fortress Financial Group, Inc. (Fortress), on the use of family limited partnerships as a tool for (1) asset preservation, (2) estate planning, (3) income tax planning, and (4) charitable giving. The following day, on August 12, 1994, Mr. Gulig, as decedent's attorney in fact, formed SFLP, a Texas limited partnership, and its corporate general partner, Stranco, a Texas corporation, and filed with the State of Texas the respective certificate of limited partnership and articles of incorporation. In August 1994 Mr. Gulig believed decedent had about 12 to 18 months to live. Mrs. Gulig expected decedent to survive about 2 years.

An Agreement of Limited Partnership of Strangi Family Limited Partnership (SFLP agreement) was prepared by Mr. Gulig using documents licensed from Fortress and sets forth the governing provisions for the entity. Stranco is designated therein as the managing general partner, the authority of which is broadly described as follows:

> Except as otherwise provided in this Agreement, the Managing General Partner of the Partnership, shall have

> the sole, exclusive and absolute right and authority to act for and on behalf of the Partnership and all of the Partners in connection with all aspects of the business of the Partnership.

More specifically, the SFLP agreement enumerates various rights, powers, and authorities of the managing general partner, including without limitation "to acquire, hold, lease, encumber, pledge, option, sell, exchange, transfer, dispose or otherwise deal with real or personal property (or rights or interests therein) of any nature whatsoever as may be necessary or advisable for the operation of the Partnership"; "to borrow or lend money for Partnership purposes"; and "to determine the use of the revenues of the Partnership for Partnership purposes". The SFLP agreement obligates the managing general partner to use its good faith efforts to manage partnership affairs in a prudent and businesslike manner and to act at all times in the best interests of the partnership. According to the SFLP agreement, limited partners are without "any authority or right to take part in the management of the business or transact any business" for the entity.

As regards distributions, the SFLP agreement provides that income from operations and capital transactions, after deduction for certain listed expenses:

> shall be distributed at such times and in such amounts as the Managing General Partner, in its sole discretion, shall determine, taking into account the reasonable business needs of the Partnership (including plan for expansion of the Partnership's business). The

> Managing General Partner's determination regarding whether or not to make distributions and the amount of distributions to be made shall be final and binding on all Partners. Such distributions shall be made to each Partner in accordance with such Partner's Interest in the Partnership.

Likewise, "Assets of the Partnership may be distributed in kind in the sole and absolute discretion of the Managing General Partner."

Pursuant to the SFLP agreement, the partnership would be dissolved and terminated upon: (1) A unanimous vote of the limited partners and unanimous consent of the general partners; (2) a decision of the managing general partner after the disposition of substantially all partnership assets; (3) an entry of judicial dissolution; (4) the death, insolvency, bankruptcy, removal, or withdrawal of any general partner, unless the limited partners within 90 days unanimously elect a new general partner to continue the business; (5) the involuntary transfer of a general partnership interest in the event there is only one general partner, unless the limited partners within 90 days vote unanimously to continue the partnership; or (6) December 31, 2014.

Upon dissolution and termination, SFLP was to be liquidated. The managing general partner was designated as liquidator and instructed to dispose of partnership assets first in payment of third-party debts, then in repayment of loans from partners, and

finally in repayment to partners of positive capital account balances.

By a series of transfer documents, Mr. Gulig assigned to SFLP property of decedent with a fair market value of $9,876,929, constituting approximately 98 percent of decedent's wealth, in exchange for a 99-percent limited partnership interest. The contributed property included decedent's interest in specified real estate (including the residence occupied by decedent), securities, accrued interest and dividends, insurance policies, an annuity, receivables, and partnership interests. About 75 percent of the contributed value was attributable to cash and securities. The majority of the asset transfer documents were dated August 12, 1994, while change of ownership forms for the life insurance policies were executed on August 14 and 15, 1994. Letters dated August 15, 1994, were also sent to the brokers holding decedent's securities accounts, to those administering the contributed partnership interests, and to the borrowers on notes payable to decedent advising them regarding transfer of the underlying assets to SFLP. All of the contributed property was reflected in decedent's capital account. Brokerage and bank accounts were opened in the name of the partnership during the period from August through October.

Mr. Gulig invited the Strangi children to participate in SFLP through an interest in Stranco. Decedent purchased

47 percent of Stranco for $49,350, and Mrs. Gulig purchased the remaining 53 percent for $55,650 on behalf of herself and her three siblings (with each thereby acquiring a 13.25-percent interest). The moneys were deposited into a bank account opened in August 1994 in Stranco's name. Stranco contributed a portion of these funds to SFLP in exchange for a 1-percent general partnership interest.

Stranco's articles of incorporation named decedent and the Strangi children as the initial five directors. On August 17, 1994, the Strangi children and Mr. Gulig met to execute the Stranco bylaws, a shareholders agreement, and a "Consent of Directors Authorizing Corporate Action in Lieu of Organizational Meeting" effective as of August 12, 1994. They also signed a "Unanimous Consent of Directors in Lieu of Special Meeting" that authorized the corporate president to execute a management agreement employing Mr. Gulig.

The Stranco bylaws set forth provisions governing corporate formalities. As pertains to shareholders, the bylaws state that a majority of the outstanding shares shall constitute a quorum at a meeting. Shareholders may also take informal action by means of a consent in writing signed by all shareholders.

Concerning directors, the bylaws specify that there shall be five directors, one of whom shall be elected president. At a meeting of the board, a majority of the directors then serving

shall constitute a quorum, and the act of a majority of the directors present at a meeting with a quorum shall be the act of the board. Directors may also take informal action by a written consent signed by all directors. The president shall be the principal executive officer of the corporation and, subject to the control of the board, shall generally supervise and control all of the business and affairs of the corporation. Among the particular powers or duties placed under the board is the payment of dividends, as follows: "The Board of Directors may declare, and the corporation may pay, dividends on its outstanding shares in any manner and upon any terms and conditions not restricted by the Articles of Incorporation or prohibited by law."

The management agreement executed by Stranco and Mr. Gulig described his duties as follows:

> Scope of Employment. Employee is hired to manage the day-to-day business of Employer. Additionally, the Employee shall manage the day-to-day business of the Strangi Family Limited Partnership, a Texas limited partnership (the "Partnership") in which Employer serves as the sole general partner and the managing partner of the Partnership. During the term of this Agreement, the Employee shall devote such portion of his time, attention, and energies to the businesses of the Employer and the Partnership and will diligently and to the best of his ability perform all duties incident to his employment hereunder. The duties of Employee shall include, but not be limited to, management of the Partnership's rental properties, cash and investment management, and the preparation and filing of all required governmental reports including tax returns.

In the shareholders agreement, decedent and the Strangi children agreed that at each annual meeting they would vote to reelect themselves (or a nominee) as the five directors. They further agreed that, if a vacancy occurred on the board by reason of the death, disability, resignation, retirement, or removal of a director so elected, they would cause the bylaws to be amended so as to reduce by one the number of directors.

Thereafter, each of the four Strangi children gave a .25-percent interest in Stranco to McLennan Community College Foundation (MCC Foundation), and the charity became a 1-percent shareholder in the corporation. MCC Foundation accepted the gift by execution on August 18, 1994, of an agreement to be bound by the terms of the preexisting shareholders agreement.

Decedent died of cancer on October 14, 1994, at the age of 81. Following decedent's death, Texas Commerce Bank, N.A. (TCB), successor in interest to Ameritrust, was asked to decline to serve as coexecutor of his estate. TCB subsequently did so, and decedent's will was admitted to probate on April 12, 1995, with Mrs. Gulig appointed as the sole executor.

After its formation, various monetary outlays were made from SFLP. From September 1993 until his death, decedent required 24-hour home health care that was provided by Olsten Healthcare (Olsten) and supplemented by Ms. Stone. During this time and while assisting decedent, Ms. Stone injured her back. The

resultant back surgery was paid for by SFLP. SFLP also paid nearly $40,000 in 1994 for funeral expenses, estate administration expenses, and related debts of decedent, including a $19,810.28 check to Olsten for nursing services. SFLP then paid more than $65,000 in 1995 and 1996 for estate expenses and a specific bequest to decedent's sister. In July 1995, SFLP distributed $3,187,800 to decedent's estate for Federal estate and State inheritance taxes. When such disbursements were made to or for the benefit of decedent or his estate, Stranco received corresponding and proportionate sums either in cash or in the form of adjusting journal entries. For accounting purposes, certain amounts expended by SFLP were initially recorded on its books as advances to, and accounts receivable from, partners. SFLP also accrued rent on the residence occupied by decedent and reported the rental income on its 1994 income tax return. The accrued amount was paid in January 1997. Mr. Gulig made all entries into the books and records of SFLP and Stranco and prepared all income tax returns for the entities.

Estate Tax Proceedings

On January 17, 1996, a Form 706, United States Estate (and Generation-Skipping Transfer) Tax Return, filed on behalf of decedent's estate was received by the Internal Revenue Service. The value reported on the Form 706 for the gross estate was $6,823,582, which included $6,560,730 for decedent's interest in

SFLP and $24,551 for his stock in Stranco. The total value of the property held by SFLP as of the date of death was $11,100,922, to which discounts were applied in calculating the reported fair market value. The Form 706 also reflected other assets of $238,301 (including household and personal items, vehicles, securities, certain receivables, and bank account balances totaling $762) and claimed deductions of $43,280 for debts of decedent (including $5,161 for rents to SFLP) and $107,108 for expenses.

In a statutory notice dated December 1, 1998, respondent determined a deficiency in Federal estate tax of $2,545,826 and an alternative deficiency in Federal gift tax of $1,629,947. The estate tax deficiency resulted in large part from respondent's conclusion that decedent's interest in SFLP should be increased by $4,386,613 (to $10,947,343) and his interest in Stranco should be increased by $29,009 (to $53,560).

The proceedings in Strangi I were initiated in response to the foregoing notice of deficiency. Prior to trial, respondent attempted by motion to raise section 2036 as an issue. Strangi I at 486. That motion was denied as untimely. Id. With respect to the remaining issues, we held in Strangi I at 486-493: (1) The partnership was valid under State law and would be recognized for estate tax purposes; (2) section 2703 did not apply to the partnership agreement; (3) the transfer of assets to

SFLP was not a taxable gift; and (4) decedent's interests in SFLP and Stranco should be valued using the discounts applied by respondent's expert.

After entry of decision, respondent appealed to the Court of Appeals for the Fifth Circuit. The appellate court ruled as follows:

> We REVERSE the Tax Court's denial of leave to amend and REMAND with instructions that the court either (1) set forth its reasons for adhering to its denial of the Commissioner's motion for leave to amend, bearing in mind the mandate of the Federal Rule of Civil Procedure 15(a), or (2) reverse its denial of the Commissioner's motion, permit the amendment, and consider the Commissioner's claim under sec. 2036. We AFFIRM all other conclusions made by the tax court. [Strangi II at 282.]

Over petitioner's objection, leave was granted for respondent's amendment to answer and a second amendment to answer raising section 2036.

OPINION

I. Inclusion in the Gross Estate--Section 2036

A. General Rules

As a general rule, the Internal Revenue Code imposes a Federal tax "on the transfer of the taxable estate of every decedent who is a citizen or resident of the United States." Sec. 2001(a). The taxable estate, in turn, is defined as "the value of the gross estate", less applicable deductions. Sec. 2051. Section 2031(a) specifies that the gross estate comprises

"all property, real or personal, tangible or intangible, wherever situated", to the extent provided in sections 2033 through 2045.

Section 2033 broadly states that "The value of the gross estate shall include the value of all property to the extent of the interest therein of the decedent at the time of his death." Sections 2034 through 2045 then explicitly mandate inclusion of several more narrowly defined classes of assets. Among these specific sections is section 2036, which reads in pertinent part as follows:

> SEC. 2036. TRANSFERS WITH RETAINED LIFE ESTATE.
>
> (a) General Rule.--The value of the gross estate shall include the value of all property to the extent of any interest therein of which the decedent has at any time made a transfer (except in case of a bona fide sale for an adequate and full consideration in money or money's worth), by trust or otherwise, under which he has retained for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death--
>
> (1) the possession or enjoyment of, or the right to the income from, the property, or
>
> (2) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom.

Regulations further explain that "An interest or right is treated as having been retained or reserved if at the time of the transfer there was an understanding, express, or implied, that the interest or right would later be conferred." Sec. 20.2036-1(a), Estate Tax Regs.

Given the language used in the above-quoted provisions, it has long been recognized that "The general purpose of this section is 'to include in a decedent's gross estate transfers that are essentially testamentary' in nature." Ray v. United States, 762 F.2d 1361, 1362 (9th Cir. 1985) (quoting United States v. Estate of Grace, 395 U.S. 316, 320 (1969)). Accordingly, courts have emphasized that the statute "describes a broad scheme of inclusion in the gross estate, not limited by the form of the transaction, but concerned with all inter vivos transfers where outright disposition of the property is delayed until the transferor's death." Guynn v. United States, 437 F.2d 1148, 1150 (4th Cir. 1971).

As used in section 2036(a)(1), the term "enjoyment" has been described as "synonymous with substantial present economic benefit." Estate of McNichol v. Commissioner, 265 F.2d 667, 671 (3d Cir. 1959), affg. 29 T.C. 1179 (1958); see also Estate of Reichardt v. Commissioner, 114 T.C. 144, 151 (2000). Regulations additionally provide that use, possession, right to income, or other enjoyment of transferred property is considered as having been retained or reserved "to the extent that the use, possession, right to the income, or other enjoyment is to be applied toward the discharge of a legal obligation of the decedent, or otherwise for his pecuniary benefit." Sec. 20.2036-1(b)(2), Estate Tax Regs. Moreover, possession or enjoyment of

transferred property is retained for purposes of section 2036(a)(1) where there is an express or implied understanding to that effect among the parties at the time of the transfer, even if the retained interest is not legally enforceable. Estate of Maxwell v. Commissioner, 3 F.3d 591, 593 (2d Cir. 1993), affg. 98 T.C. 594 (1992); Guynn v. United States, supra at 1150; Estate of Reichardt v. Commissioner, supra at 151; Estate of Rapelje v. Commissioner, 73 T.C. 82, 86 (1979). The existence or nonexistence of such an understanding is determined from all of the facts and circumstances surrounding both the transfer itself and the subsequent use of the property. Estate of Reichardt v. Commissioner, supra at 151; Estate of Rapelje v. Commissioner, supra at 86.

As used in section 2036(a)(2), the term "right" has been construed to connote "an ascertainable and legally enforceable power". United States v. Byrum, 408 U.S. 125, 136 (1972). Nonetheless, regulations clarify:

> With respect to such a power, it is immaterial (i) whether the power was exercisable alone or only in conjunction with another person or persons, whether or not having an adverse interest; (ii) in what capacity the power was exercisable by the decedent or by another person or persons in conjunction with the decedent; and (iii) whether the exercise of the power was subject to a contingency beyond the decedent's control which did not occur before his death (e.g., the death of another person during the decedent's lifetime). The phrase, however, does not include a power over the transferred property itself which does not affect the enjoyment of the income received or earned during the decedent's life. * * * Nor does the phrase apply to a power held

> solely by a person other than the decedent. But, for example, if the decedent reserved the unrestricted power to remove or discharge a trustee at any time and appoint himself as trustee, the decedent is considered as having the powers of the trustee. [Sec. 20.2036-1(b)(3), Estate Tax Regs.]

Additionally, retention of a right to exercise managerial power over transferred assets or investments does not of itself result in inclusion under section 2036(a)(2). United States v. Byrum, supra at 132-134.

An exception to the treatment mandated by section 2036(a) exists where the facts establish "a bona fide sale for an adequate and full consideration in money or money's worth".

B. Burden of Proof

Typically, the burden of disproving the existence of an agreement regarding a retained interest has rested on the estate, and this burden has often been characterized as particularly onerous in intrafamily situations. Estate of Maxwell v. Commissioner, supra at 594; Estate of Reichardt v. Commissioner, supra at 151-152; Estate of Rapelje v. Commissioner, supra at 86. In this case, however, the section 2036 issues are new matters within the meaning of Rule 142(a). Thus, the burden of proof is on respondent.

C. Existence of a Retained Interest

Respondent contends that the value of the property transferred to SFLP and Stranco is includable in decedent's gross estate under either section 2036(a)(1) or section 2036(a)(2).

Underlying both of these arguments is the particular structure of the SFLP/Stranco arrangement, as set forth in the relevant governing documents.

The SFLP agreement provides that distributions of proceeds and assets from the entity shall be made in the sole discretion of the managing general partner. The SFLP agreement also designates Stranco as the managing general partner. Stranco, in turn, executed the management agreement employing Mr. Gulig to manage the day-to-day business of SFLP, as well as of Stranco itself. Yet Mr. Gulig was already decedent's attorney in fact pursuant to the 1988 general power of attorney. Under this instrument, Mr. Gulig was granted full and durable authority to act for decedent in his "name, place and stead". Mr. Gulig set up the SFLP/Stranco arrangement to facilitate decedent's estate planning goals and capitalized the partnership primarily with decedent's property.

When distilled to their most essential terms, the governing documents gave Mr. Gulig authority to specify distributions from SFLP, which is entirely consistent with his authority under the 1988 power of attorney. Although the estate protests that Mr. Gulig's authority under the management agreement was limited to managing "the day-to-day business" of the partnership and did not extend to making distributions or loans, the pertinent instruments provide no basis for concluding that making

distributions would be outside the day-to-day business of a partnership capitalized nearly exclusively with investment assets. As a practical matter, actual disbursement of funds occurred when checks were issued by Mr. and Mrs. Gulig in their various related capacities, pursuant to rights granted to them by decedent, acting through Mr. Gulig.

Hence, to summarize, the SFLP agreement named Stranco managing general partner with the sole discretion to determine distributions. The Stranco shareholders, including decedent (through Mr. Gulig), then acted together to delegate such authority to Mr. Gulig under the management agreement. Decedent's attorney in fact thereby stood in a position to make distribution decisions. Mrs. Gulig effectuated these decisions by signing checks to the recipients so designated.

1. Section 2036(a)(1)

Section 2036(a)(1) provides for inclusion of transferred property with respect to which the decedent retained, by express or implied agreement, possession, enjoyment, or the right to income. Enjoyment in this context is equated with present economic benefit.

a. Right to income

As a threshold matter, we observe that our analysis above of the express documents suggests inclusion of the contributed property under section 2036(a)(1) based on the "right to the

income" criterion, without need further to probe for an implied agreement regarding other benefits such as possession or enjoyment. The governing documents contain no restrictions that would preclude decedent himself, acting through Mr. Gulig, from being designated as a recipient of income from SFLP and Stranco. Such scenario is consistent with the reach of the right to income phrase as we described it in Estate of Pardee v. Commissioner, 49 T.C. 140, 148 (1967):

> section 2036(a)(1) refers not only to the possession or enjoyment of property but also to "right to the income" from property. The section does not require that the transferor pull the "string" or even intend to pull the string on the transferred property; it only requires that the string exist. See McNichol's Estate v. Commissioner, 265 F.2d 667, 671 (C.A. 3, 1959), affirming 29 T.C. 1179 (1958) * * *

b. Possession or enjoyment

The facts of this case support the finding of an implied agreement for retained possession or enjoyment. We have previously considered implicit retention of these benefits under section 2036(a)(1) in situations involving family limited partnerships in Estate of Reichardt v. Commissioner, 114 T.C. 144 (2000); Estate of Thompson v. Commissioner, T.C. Memo. 2002-246; Estate of Harper v. Commissioner, T.C. Memo. 2002-121; and Estate of Schauerhamer v. Commissioner, T.C. Memo. 1997-242. Although the instant case is based on limited post-transfer history, due in part to decedent's death only 2 months after creation of the partnership, we conclude that the reasoning underlying those

opinions directs a like result here. Fundamentally, the preponderance of the evidence shows that decedent as a practical matter retained the same relationship to his assets that he had before formation of SFLP and Stranco.

Circumstances that have been found probative of an implicitly retained interest under section 2036(a)(1) include transfer of the majority of the decedent's assets, continued occupation of transferred property, commingling of personal and entity assets, disproportionate distributions, use of entity funds for personal expenses, and testamentary characteristics of the arrangement. Guynn v. United States, 437 F.2d at 1150; Estate of Reichardt v. Commissioner, supra at 152-154; Estate of Thompson v. Commissioner, supra; Estate of Harper v. Commissioner, supra; Estate of Trotter v. Commissioner, T.C. Memo. 2001-250; Estate of Schauerhamer v. Commissioner, supra.

At the outset, we acknowledge that, in contrast to certain of the prior cases, the participants involved in the SFLP/Stranco arrangement generally proceeded such that "the proverbial 'i's were dotted' and 't's were crossed'." Strangi I at 486. Steps were taken to abide by the formal terms of the structure created. Such measures may give SFLP and Stranco sufficient substance to be recognized as legal entities in the context of valuation, which requires assumption of a hypothetical buyer and seller. They do not preclude implicit retention by decedent of economic

benefit from the transferred property for purposes of section 2036(a)(1).

First, we cannot lose sight of the fact that decedent contributed approximately 98 percent of his wealth, including his residence, to the SFLP/Stranco arrangement. Respondent alleges that the transfer left decedent with inadequate assets and cash flow to meet his living expenses, to which the estate takes objection. The estate goes to great lengths to counter respondent's assertion, claiming that decedent at his death possessed liquefiable assets of at least $172,000 and received on a monthly basis a pension of $1,438.18 and Social Security of $1,559. The estate also stresses that respondent has not established the amount of decedent's living expenses and maintains that, even if the $33,323.22 in checks paid from decedent's account in August and September were used as an estimate, the purported liquefiable assets would have covered decedent's needs for his concededly short life expectancy of 12 to 24 months. However, the relative dearth of liquefied (decedent's Form 706 showed two bank accounts with funds totaling $762), as opposed to "liquefiable", assets persuades us that decedent and his children and Mr. Gulig all expected that SFLP and Stranco would be a primary source of decedent's liquidity. It is unreasonable to expect that decedent would be forced to rely on sale of assets to meet his basic costs of living.

A second feature highly probative under section 2036(a)(1) is decedent's continued physical possession of his residence after its transfer to SFLP. The estate maintains that any otherwise negative implications of this circumstance are neutralized by the fact that SFLP "charged Mr. Strangi rent" on occupancy of the home and reported rental income on its 1994 tax return. Decedent likewise reported a rent obligation on his estate tax return. For accounting purposes, the accrued rent was recorded by SFLP on its books. Yet the accrued amount was not paid until January 1997. A residential lessor dealing at arm's length would hardly be content merely to accrue a rental obligation for eventual payment more than 2 years later. As we have remarked, accounting entries alone are of small moment in belying the existence of an agreement for retained possession and enjoyment. Estate of Reichardt v. Commissioner, 114 T.C. at 154-155; Estate of Harper v. Commissioner, T.C. Memo. 2002-121.

Concerning factors that relate to use of entity funds, the estate emphasizes that each disbursement for decedent or his estate was accompanied by a pro rata allotment to Stranco. Where, as here, the only interest in the partnership other than that held by the decedent is de minimis, a pro rata payment is hardly more than a token in nature. In these circumstances, pro rata disbursements are insufficient to negate the probability that the decedent retained economic enjoyment of his or her

assets. After all, distributing 1 percent to Stranco would not in any substantial way operate to curb decedent's ability to benefit from SFLP property. Accordingly, we direct our attention to the purpose, as opposed to the mechanics, of partnership distributions and expenditures.

The record reveals several instances where SFLP expended funds in response to a need of decedent or his estate. SFLP paid for Ms. Stone's back surgery to alleviate an injury she sustained in caring for decedent prior to the formation of SFLP. In 1994, SFLP expended nearly $40,000 for funeral expenses, estate administration, and related debts, including a $19,810.28 check to Olsten to pay for nursing services rendered to decedent before his death. These sums were followed in 1995 and 1996 by further payment of over $65,000 for estate expenses and a specific bequest. SFLP also disbursed approximately $3 million directed toward decedent's estate and inheritance taxes.

The estate seeks to justify these payments primarily by emphasizing that they were accounted for on SFLP's books as advances to partners and later closed as distributions, with pro rata amounts either advanced or distributed to Stranco. The evidence also indicates that the $65,000-plus amount was repaid in January 1997. The estate further explains that certain of these payments from SFLP were necessitated by the delay in

probate of decedent's estate engendered by the process of getting TCB to decline executorship.

To the extent that the estate's arguments focus on accounting manipulations, they are unavailing. As demonstrated in Estate of Reichardt v. Commissioner, supra at 154-155, and Estate of Harper v. Commissioner, supra, accounting adjustments do not preclude a conclusion that those involved understood that the decedent's assets would be made available as needs materialized. Belated repayment of certain amounts likewise does not refute the inference of an implicit agreement for retained enjoyment that arises from the demonstrated and contemporaneous availability of large sums. Furthermore, to the extent that the estate's explanations focus on a delay in probate, they lack specificity. The more salient feature would appear to be the insufficiency of the assets not contributed to SFLP and Stranco to cover the significant expenses reasonably to be expected to ensue in connection with decedent's poor health and death. That, in turn, speaks to retained enjoyment.

Regarding testamentary characteristics, the SFLP/Stranco arrangement also bears greater resemblance to one man's estate plan than to any sort of arm's-length, joint enterprise. As in Estate of Harper v. Commissioner, supra, "the largely unilateral nature of the formation, the extent and type of the assets contributed thereto, and decedent's personal situation are

indicative." Mr. Gulig established the entities using Fortress documents with little, if any, input from other family members. The contributed property included the majority of decedent's assets in general and his investments, a prime concern of estate planning, in particular. Decedent was advanced in age and suffering from serious health conditions. Furthermore, as discussed in Strangi I at 485-486, the purpose of the partnership arrangement was not to provide a joint investment vehicle for the management of decedent's assets, but was consistent with testamentary intent.

Moreover, the crucial characteristic is that virtually nothing beyond formal title changed in decedent's relationship to his assets. Mr. Gulig managed decedent's affairs both before and after the transfer. Decedent's children did not obtain a meaningful economic stake in the property during decedent's life. They raised no objections or concerns when large sums were advanced for expenditures of decedent or his estate, thus implying an understanding that decedent's access thereto would not be restricted.

In face of the foregoing realities, the estate argues that whatever possession or enjoyment of the contributed property decedent may have experienced was neither "retained" by means of a contemporaneous agreement nor "with respect to the transferred property". As regards the first point, the estate contends that

respondent has offered no evidence to prove a contemporaneous agreement requiring the distributions made, as opposed to an independent subsequent decision by Stranco to make the same outlay. According to the estate:

> Even if decisions to make distributions were made based on "sympathy for poor old dad," i.e., "Oops, Mr. Strangi imprudently put too much money into SFLP and we need to give some back" that would not meet the criteria set by judicial precedent for determining the existence of a retained expectation of possession of [sic] enjoyment: which is that there must have been an implied agreement that was contemporaneous with the transfer of the property at issue, not a subsequent agreement or act. * * * [Fn. ref. omitted.]

We are persuaded that the evidence and circumstances detailed above render such a contemporaneous agreement more likely than not.

The second point mentioned stems from the estate's view that pro rata distributions were made not with respect to the transferred property, in which decedent possessed no legal interest under the Texas Revised Limited Partnership Act (TRLPA), Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 7.01 (Vernon Supp. 2003), but with respect to his partnership interest. Yet this argument relies on paper title to the exclusion of the practicalities that are the focus of section 2036(a)(1). The property contributed by decedent was the source of the payments made. Furthermore, the record suggests that the impetus underlying a number of significant SFLP disbursements was needs

of decedent or his estate, rather than exigencies pertaining to Stranco or the partnership itself.

Hence, the preponderance of the evidence establishes that decedent retained possession of, enjoyment of, or the right to income from the property transferred within the meaning of section 2036(a)(1).

2. Section 2036(a)(2)

Although we have held supra that section 2036(a)(1) requires the estate to include the value of the transferred assets in the gross estate for Federal estate tax purposes, the parties have argued extensively over the issue of whether section 2036(a)(2) applies. Consequently, we address the applicability of section 2036(a)(2) to the instant case. As stated above, section 2036(a)(2) mandates inclusion in the gross estate of transferred property with respect to which the decedent retained the right to designate the persons who shall possess or enjoy the property or its income. This provision was interpreted by the Supreme Court in United States v. Byrum, 408 U.S. 125 (1972), and both parties devote a significant portion of their respective arguments to the implications of that decision. We address these arguments as an alternative to our conclusions concerning section 2036(a)(1) and with particular consideration of the facts of this case.

In United States v. Byrum, supra at 126, the decedent, Mr. Byrum, created an irrevocable trust for the benefit of his

children. He funded the trust with shares of three closely held corporations but retained the right to vote the shares and to veto any sale or transfer of the stock. Id. at 126-127. As a result, Mr. Byrum at his death continued to have the right to vote not less than 71 percent of the common stock in each of the three corporations. Id. at 128-129. The three corporations were involved in lithography-related businesses and had a substantial number of minority shareholders unrelated to Mr. Byrum. Id. at 130 & n.2, 142 & n.20. (The Supreme Court noted that 11 of 12, 5 of 8, and 11 of 14 stockholders, respectively, in the three corporations appeared to be unrelated to Mr. Byrum. Id. at 142 n.20.) The trust instrument specified that there be, and Mr. Byrum named, an independent corporate trustee. Id. at 126. The trustee was authorized in its "absolute and sole discretion" to pay income and principal to or for the benefit of the beneficiaries. Id. at 127.

The Commissioner argued that, by retaining voting control over the corporations, Mr. Byrum was in a position to select the corporate directors and thereby to control corporate dividend policy. Id. at 131-132. According to the Commissioner, the scenario in dispute gave Mr. Byrum the ability to regulate the flow of income to the trust, which ability was characterized as tantamount to a grantor-trustee's power to accumulate trust income for remaindermen or to distribute to present

beneficiaries. Id. at 132. The Court had previously ruled that the latter power to accumulate rather than disburse constituted a right to designate under section 2036(a)(2). Id. at 135-136; United States v. O'Malley, 383 U.S. 627, 631 (1966).

Given the above facts, the Supreme Court held "that Byrum did not have an unconstrained de facto power to regulate the flow of dividends to the trust, much less the 'right' to designate who was to enjoy the income from trust property." United States v. Byrum, 408 U.S. at 143. The Court rejected the Commissioner's "control rationale" as it "would create a standard--not specified in the statute--so vague and amorphous as to be impossible of ascertainment in many instances." Id. at 137 n.10. In reaching its conclusion, the Court relied on a series of "economic and legal constraints" to which any power that Mr. Byrum might have had was subject and which prevented such power from being equivalent to a right to designate persons to enjoy trust income. Id. at 144.

The Court emphasized that the independent corporate trustee alone had the right under the trust instrument to pay out or withhold income. Id. at 137. Even if Mr. Byrum had managed to flood the trust with dividends, he had no way of compelling the trustee to pay out or accumulate that income. Id. at 143. The Court also noted that the power to elect directors conferred no legal right to command them to pay or not pay dividends. Id. at

137. Moreover, the flow of dividends from the corporations would be subject to economic vicissitudes, retained earnings policies, and business needs. Id. at 139-140. In this regard, the Court explained:

> There is no reason to suppose that the three corporations controlled by Byrum were other than typical small businesses. The customary vicissitudes of such enterprises--bad years; product obsolescence; new competition; disastrous litigation; new, inhibiting Government regulations; even bankruptcy--prevent any certainty or predictability as to earnings or dividends. There is no assurance that a small corporation will have a flow of net earnings or that income earned will in fact be available for dividends. Thus, Byrum's alleged de facto "power to control the flow of dividends" to the trust was subject to business and economic variables over which he had little or no control. [Id. at 249.]

Furthermore, the Supreme Court stressed that "A majority shareholder has a fiduciary duty not to misuse his power by promoting his personal interests at the expense of corporate interests" and the directors of a corporation "have a fiduciary duty to promote the interests of the corporation." Id. at 137-138. Such duties were legally enforceable by means of, for example, a derivative suit. Id. at 141-142.

With respect to the case at bar, the estate asserts that decedent retained no legally enforceable rights of the genre required by United States v. Byrum, supra. The estate emphasizes that management powers are insufficient to warrant inclusion and points out that, under the SFLP agreement, the limited partner was without even the right to exercise any managerial authority.

The estate likewise reiterates that "right" as used in section 2036(a)(2) is not to be construed as control and notes that, under the TRLPA, Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 3.03 (Vernon Supp. 2003), a limited partner expressly does not participate in control of the business of a partnership by virtue of acting as an officer, director, or stockholder of a corporate general partner. In this connection, the estate also remarks that, as a minority shareholder of Stranco, decedent was without the ability to elect a majority of directors, thus retaining even less control than was present in United States v. Byrum, supra.

Moreover, the estate repeatedly invokes the concept that "any power which Mr. Strangi or Stranco might have would be subject to state law fiduciary duties. Such fiduciary duties effectively render Section 2036(a)(2) inapplicable under the teaching of Byrum."

Conversely, it is respondent's position that United States v. Byrum, supra, fails to shield the assets placed in SFLP and Stranco from the reach of section 2036. Respondent avers that decedent had legally enforceable rights based on the relevant written agreements, not mere de facto control or influence. Respondent argues that decedent's rights go beyond the management powers and influence at issue in United States v. Byrum, supra, and extend to designation of persons who shall enjoy entity property and income. Respondent sets forth several ways in which

decedent's authority can be derived from the provisions of the governing documents and the roles played by the family members involved. Furthermore, respondent maintains that no impediments comparable to those in United States v. Byrum, supra, existed to constrain decedent's powers and that the Supreme Court's reasoning is therefore inapplicable here. In the particular circumstances of this case, we agree with respondent.

a. Legally enforceable rights

On these facts, decedent can properly be described as retaining a right to designate who shall enjoy property and income from SFLP and Stranco within the meaning of section 2036(a)(2). In this regard, it is immaterial whether we characterize the pertinent documents and relationships as creating rights exercisable by decedent alone, in conjunction with other Stranco shareholders, or in conjunction with Stranco's president. See sec. 20.2036-1(b)(3), Estate Tax Regs.

With respect to SFLP income and as previously recounted in greater detail, the SFLP agreement named Stranco managing general partner and conferred on the managing general partner sole discretion to determine distributions. The Stranco shareholders, including decedent (through Mr. Gulig), then acted together to delegate this authority to Mr. Gulig through the management agreement. The effect of these actions placed decedent's attorney in fact in a position to make distribution decisions.

Mrs. Gulig effectuated such decisions by executing checks to the recipients so designated.

In addition to the rights described above related to income, decedent also retained the right, acting in conjunction with other Stranco shareholders, to designate who shall enjoy the transferred SFLP property itself. The Supreme Court indicated in United States v. Byrum, 408 U.S. at 143 n.23 (citing Commissioner v. Estate of Holmes, 326 U.S. 480 (1946)), that a "power to terminate the trust and thereby designate the beneficiaries at a time selected by the settlor" would implicate section 2036(a)(2). Pursuant to the SFLP agreement, the partnership would be dissolved and terminated upon a unanimous vote of the limited partners and the unanimous consent of the general partner. The shareholders agreement likewise specifies that dissolution of SFLP requires the affirmative vote of all Stranco shareholders. Once dissolution and termination occur, liquidation is accomplished as set forth in the SFLP agreement. The managing general partner is named as the liquidator, which in turn disburses partnership assets first in payment of debts and then in repayment of partners' capital account balances. Authority is expressly granted for distributions in kind. Accordingly, decedent can act together with other Stranco shareholders essentially to revoke the SFLP arrangement and thereby to bring about or accelerate present enjoyment of partnership assets.

Furthermore, it is noteworthy that such action would likely revest in decedent himself, as the 99-percent limited partner, the majority of the contributed property.

As regards property transferred to Stranco and income therefrom, decedent held the right, in conjunction with one or more other Stranco directors, to declare dividends. The corporation's bylaws authorize the board of directors to declare dividends from the entity. For the board to take such action, a majority vote of the directors at a meeting with a quorum present is sufficient. Under the bylaws, a majority of the directors then serving constitutes a quorum. Because Stranco had five directors, a quorum would consist of three, so two directors (e.g., decedent through Mr. Gulig and one other) could potentially act together to declare a dividend. The Stranco shareholders agreement further provided that each of the initial five directors would be reelected annually, thus effectively ensuring decedent's position on the board.

In response to various of the above concepts pertaining to joint action, particularly by stockowners, the estate suggests: "If the mere fact that a shareholder could band together with all of the other shareholders of a corporation and such banding together would be sufficient to cause inclusion under Section 2036, then it would have been impossible for the United States Supreme Court to reach the decision that it did in Byrum." The

estate's observation ignores the existence in United States v. Byrum, supra, of the independent trustee who alone had the ability to determine distributions from the disputed trust, notwithstanding any prior action by corporate owners or directors. It also ignores the identity of the shareholders in this case and the dual roles played by Mr. Gulig.

To summarize, review of the documentary evidence discussed above reveals that decedent here retained rights of a far different genre from those at issue in United States v. Byrum, supra. Rather than mere "control", management, or influence, there are traceable to decedent through the explicit provisions of the governing instruments ascertainable and legally enforceable rights to designate persons who shall enjoy the transferred property and its income. The estate's reliance on a limited partner's lack under the TRLPA of participation in control and under the SFLP agreement of management authority is thus misplaced. The alleged absence of such powers cannot negate the dispositive rights granted in the instant case. The SFLP/Stranco arrangement placed decedent in a position to act, alone or in conjunction with others, through his attorney in fact, to cause distributions of property previously transferred to the entities or of income therefrom. Decedent's powers, absent sufficient limitation as discussed infra, therefore fall within the purview of section 2036(a)(2).

b. Constraints upon rights to designate

The Supreme Court in United States v. Byrum, supra, relied upon several impediments to the exercise of powers held by Mr. Byrum in concluding that such powers did not warrant inclusion under section 2036(a)(2). Here, the rights held by decedent are of a different nature and were not accompanied by comparable constraints. In our view, the constraints alleged by the estate are illusory.

One circumstance highlighted by the Supreme Court was the existence of an independent trustee with the sole authority ultimately to pay or withhold income from the trust. Here, in contrast, no similar layer of independence was interposed. Rather, decisions with respect to distributions were placed in Stranco, of which decedent owned 47 percent and was the largest shareholder. All decisions ultimately were made by Mr. Gulig, who continued to act as decedent's attorney in fact.

Another element stressed by the Supreme Court was the manner in which the flow of funds allegedly under Mr. Byrum's control would be subject to economic and business realities consequent upon the status of the relevant corporations as typical small operating enterprises. Earnings and dividends of a small operating company could be affected by, inter alia, changes in products, in competition, or in industry regulation and outlook; use of funds for replacement of plant and equipment or for growth

and expansion; and the need to retain sufficient earnings for working capital. These complexities do not apply to SFLP or Stranco, which held only monetary or investment assets.

Yet another constraining factor cited by the Supreme Court was the presence of fiduciary duties held by directors and shareholders, and it is upon this aspect of the Supreme Court's opinion that the estate focuses. The Supreme Court emphasized that corporate directors and shareholders have a fiduciary duty to promote the best interests of the entity, as opposed to their personal interests. The Supreme Court further pointed to a substantial number of unrelated minority shareholders who could enforce these duties by suit.

The fiduciary duties present in United States v. Byrum, 408 U.S. 125 (1972), ran to a significant number of unrelated parties and had their genesis in operating businesses that would lend meaning to the standard of acting in the best interests of the entity. As a result, there existed both a realistic possibility for enforcement and an objective business environment against which to judge potential dereliction. Given the emphasis that the Supreme Court laid on these factual realities, Byrum simply does not require blind application of its holding to scenarios where the purported fiduciary duties have no comparable substance. We therefore analyze the situation before us to

determine whether the fiduciary duties relied upon by the estate would genuinely circumscribe use of powers to designate.

The estate summarizes its contentions regarding fiduciary duties as follows:

> Just like Mr. Byrum, Mr. Strangi's "rights" (whatever those rights appear to be) were severely limited by the fiduciary duties of other people who (according to Byrum) presumably could be counted on the [sic] observe those restraints against whatever desires they might otherwise have had to run pell-mell to do the bidding of the Decedent: (1) Mr. Gulig, who (separate and apart from his role as attorney-in-fact for Mr. Strangi) had fiduciary duties to Stranco, whom he served as manager; (2) the directors of Stranco, who had fiduciary duties to both Stranco and to SFLP as a whole; and (3) McLennan County Community College ("MCCC"), which had rights as a minority shareholder of Stranco and a fiduciary obligation to enforce such rights for the benefit of its own beneficiaries as well as the people of the State of Texas (with the Attorney General of Texas having the ability to step in to enforce such rights if MCCC failed in its duties).
> * * *

None of the foregoing obligations cited by the estate is sufficiently on par with those detailed in United States v. Byrum, supra, to bring the present case within the Supreme Court's rationale.

Concerning Mr. Gulig, any fiduciary duties that Mr. Gulig might have had in his role as manager of Stranco (and thereby of SFLP) are entitled to comparatively little weight on these facts. Prior to his instigation of the SFLP/Stranco arrangement, Mr. Gulig stood in a confidential relationship, and owed fiduciary duties, to decedent personally as his attorney in fact. Thus, to

the extent that Stranco or SFLP's interests might diverge from those of decedent, we do not believe that Mr. Gulig would disregard his preexisting obligation to decedent.

As regards fiduciary obligations of Stranco and its directors, these duties, too, have little significance in the present context. Although Stranco would owe a fiduciary duty to SFLP and to the limited partners, decedent owned the sole, 99-percent limited partnership interest. The rights to designate traceable to decedent through Stranco cannot be characterized as limited in any meaningful way by duties owed essentially to himself. Nor do the obligations of Stranco directors to the corporation itself warrant any different conclusion. Decedent held 47 percent of Stranco, and his own children held 52 of the remaining 53 percent. Intrafamily fiduciary duties within an investment vehicle simply are not equivalent in nature to the obligations created by the United States v. Byrum, supra, scenario.

With respect to the role of MCC Foundation, United States v. Byrum, supra, affords no basis for permitting outcomes under section 2036(a)(2) to turn on factors amounting to no more than window dressing. A charity given a gratuitous 1-percent interest would not realistically exercise any meaningful oversight.

Lastly, we are unpersuaded that any different result should obtain on account of the Commissioner's having taken a contrary

position in certain previous administrative rulings. As the estate repeatedly brings to our attention, the Commissioner has cited United States v. Byrum, supra, in such rulings for the principle that fiduciary constraints counsel against inclusion of family limited partnership assets under section 2036(a)(2). See, e.g., Priv. Ltr. Rul. 94-15-007 (Apr. 15, 1994); Priv. Ltr. Rul. 93-10-039 (Mar. 12, 1993); Tech. Adv. Mem. 91-31-006 (Aug. 2, 1991). These written determinations are expressly declared by statute to be without precedential force. Sec. 6110(k)(3). Thus, any claimed reliance on them is unavailing. In any event, cursory exposition in limited factual circumstances does not preclude our analysis of statutory provisions and regulations in the context of this case.

In sum, the estate's averment that decedent's "'rights' * * * were severely limited by the fiduciary duties of other people who (according to Byrum) presumably could be counted on * * * [to] observe those restraints" rests on a faulty legal premise and ignores factual realities. First, the Supreme Court's opinion in United States v. Byrum, supra, provides no basis for "presuming" that fiduciary obligations will be enforced in circumstances divorced from the safeguards of business operations and meaningful independent interests or oversight. Second, the facts of this case belie the existence of any genuine fiduciary impediments to decedent's rights. We conclude that the

value of assets transferred to SFLP and Stranco is includable in decedent's gross estate under section 2036(a)(2).

D. Existence of Consideration

Having decided that decedent retained an interest in the assets transferred to SFLP and Stranco for purposes of section 2036(a), we evaluate whether the statute's application may nonetheless be avoided on the basis of the parenthetical exception for "a bona fide sale for an adequate and full consideration in money or money's worth". Availability of the exception rests on two requirements: (1) A bona fide sale, meaning an arm's-length transaction, and (2) adequate and full consideration. See Estate of Harper v. Commissioner, T.C. Memo. 2002-121. The situation before us meets neither of these criteria.

First, no bona fide sale, in the sense of an arm's-length transaction, occurred in connection with decedent's transfer of property to SFLP and Stranco. Mr. Gulig, as decedent's attorney in fact, prepared the arrangement using Fortress materials in absence of any meaningful negotiation or bargaining with other anticipated interest-holders. He determined how the entities would be structured and operated, what property would be contributed, and what interests various parties would obtain therein. Hence, decedent essentially stood on both sides of the transaction, a fact unchanged by the manner in which the Strangi

children opted to join after the substantive decisions had been made.

Second, full and adequate consideration does not exist where, as here, there has been merely a "recycling" of value through partnership or corporate solution. See Estate of Thompson v. Commissioner, T.C. Memo. 2002-246; Estate of Harper v. Commissioner, supra; Kimbell v. United States, 244 F. Supp. 2d 700 (N.D. Tex. 2003). As we recently explained in Estate of Harper v. Commissioner, supra:

> to call what occurred here a transfer for consideration within the meaning of section 2036(a), much less a transfer for an adequate and full consideration, would stretch the exception far beyond its intended scope. In actuality, all decedent did was to change the form in which he held his beneficial interest in the contributed property. * * * Without any change whatsoever in the underlying pool of assets or prospect for profit, as, for example, where others make contributions of property or services in the interest of true joint ownership or enterprise, there exists nothing but a circuitous "recycling" of value. We are satisfied that such instances of pure recycling do not rise to the level of a payment of consideration. To hold otherwise would open section 2036 to a myriad of abuses engendered by unilateral paper transformations.

We see no distinction of consequence between the scenario analyzed in Estate of Harper v. Commissioner, supra, and that of the present case. Decedent contributed more than 99 percent of the total property placed in the SFLP/Stranco arrangement and received back an interest the value of which derived almost exclusively from the assets he had just assigned. Furthermore, the SFLP/Stranco arrangement patently fails to qualify as the

sort of functioning business enterprise that could potentially inject intangibles that would lift the situation beyond mere recycling. Cf. Estate of Harrison v. Commissioner, T.C. Memo. 1987-8; Church v. United States, 85 AFTR 2d 2000-804, 2000-1 USTC par. 60,369 (W.D. Tex. 2000), affd. without published opinion 268 F.3d 1063 (5th Cir. 2001) (both involving contributions by other participants not de minimis in nature, for a genuine pooling of interests). We therefore hold that decedent did not engage in any transfer for consideration upon the creation and funding of SFLP and Stranco. Accordingly, the estate is entitled to no exception to the treatment mandated by section 2036(a).

II. Amount Includable

With respect to the amount includable in decedent's gross estate on account of a retained interest, the estate makes the following assertion:

> I.R.C. sec. 2036(a) only requires inclusion of property in a decedent's estate to the extent that the decedent retained an interest in the transferred property. Assuming arguendo that Decedent did retain an interest in some of the property transferred to SFLP, I.R.C. sec. 2036 does not automatically require inclusion of all of the property transferred by Decedent to SFLP and Respondent has not sustained his burden of proof of establishing the extent, if any, of any retained interest.

The foregoing premise, however, rests on a faulty understanding of the statute's operation. As we recently explained in Estate of Thompson v. Commissioner, supra:

> Section 2036(a) effectively includes in the gross estate the full fair market value, at the date of death, of all property transferred in which the decedent had retained an interest, rather than the value of only the retained interest. Fidelity-Philadelphia Trust Co. v. Rothensies, 324 U.S. 108 (1945). This furthers the legislative policy to "include in a decedent's gross estate transfers that are essentially testamentary--i.e., transfers which leave the transferor a significant interest in or control over the property transferred during his lifetime." United States v. Estate of Grace, 395 U.S. 316, 320 (1969). Thus, an asset transferred by a decedent while he was alive cannot be excluded from his gross estate unless he "absolutely, unequivocally, irrevocably, and without possible reservations, parts with all of his title and all of his possession and all of his enjoyment of the transferred property." Commissioner v. Estate of Church, 335 U.S. 632, 645 (1949). * * * [Emphasis added.]

Regulations further detail that "If the decedent retained or reserved an interest or right with respect to a part only of the property transferred by him, the amount to be included in his gross estate under section 2036 is only a corresponding proportion". Sec. 20.2036-1(a), Estate Tax Regs. Accordingly, caselaw and regulatory authority converge to indicate that the full value of transferred property is includable unless there existed some specific portion of the contributed assets that the retained interest or rights could not reach.

Here, the record reveals that no part of the transferred property was exempt from the rights or enjoyment retained by decedent. The relevant documents make no distinction among the various assets contributed, nor does the evidence reflect that Mr. Gulig looked to particular assets in determining whether

amounts should be distributed. The preponderance of the evidence therefore establishes that the full value of the transferred assets is includable under section 2036(a).

Pursuant to section 2036(a), 99 percent of the net asset value of SFLP and 47 percent of the value of assets held by Stranco should be included in decedent's gross estate. Nonetheless, because respondent never asserted an increased deficiency in connection with the section 2036 issue, valuation of the property in dispute, i.e., interests in SFLP and Stranco, will be limited by the amounts determined in the notice of deficiency. The decision to be entered, however, will take into account any additional deductions to which the estate is entitled for costs and expenses incurred subsequent to the initial trial of this case.

To reflect the foregoing,

Decision will be entered under Rule 155.

Stringer v. Car Data Systems, Inc.

841 P.2d 1183 (1992)

314 Or. 576

Paul H. STRINGER and Timothy D. Schubert, Petitioners on Review, v. CAR DATA SYSTEMS, INC., an Oregon corporation; Consumer Data Systems, Inc., an Oregon corporation; James L. Adkisson; David W. Agnor; Sharon Agnor; James L. Agnor; Arlene L. Belanger; Peter G. Bock; Susan D. Ebner; Mark S. Boyd; Jeffrey Scott Carlson; Lawrence R. Custer; Stephen J. Ebner; William A. Henry; John H. Hodges, Sr.; Bernal Hug, Jr.; Virginia Hug; Celas A. Hug; Kent Hug; Cheryl Hug; Paul E. Johnson; Corleen Johnson; Mark Anthony Royal Kallenberger; David E. Lamb; Jacqueline C. Lamb; Steven D. Lee; Claudia J. Lee; Leslie R. Lock; Terry R. Lock; Steve P. Nagel; Henry B. Shafer; Bob Sievers, Jr.; Judy A. Sievers; Donald Smith; Richard M. Botteri and Weiss, Descamp & Botteri, a professional corporation, an Oregon professional corporation, Respondents on Review, and Elizabeth A. Perry; and James B. Kargman, Nominal Defendants.

CC A8907-04022; CA A65113; SC S38792.

Supreme Court of Oregon, In Banc.

Argued and Submitted May 5, 1992.

Decided November 19, 1992.

Robert J. McGaughey, of McGaughey & Georgeff, Portland, argued the cause and filed the petition for petitioners on review.

Mark A. Turner, of Ater Wynn Hewitt Dodson & Skerritt, Portland; Carolyn E. Wells, of Miller Nash Wiener Hager & Carlsen, Portland; and Thomas W. Brown, of Cosgrave, Vergeer & Kester, Portland, argued the cause and filed a response to the petition for review on behalf of the following respondents on review: Mr. Turner, for Car Data Systems, Inc., James L. Adkisson, Celas A. Hug, Peter G. Bock, Mark S. Boyd, Kent Hug, and David E. Lamb; Ms. Wells, for Arlene Belanger, Jeffrey Scott Carlson, Lawrence R. Custer, William A. Henry, John H. Hodges, Sr., Mark Anthony Royal Kallenberger, Leslie R. Lock, Terry R. Lock, Steve P. Nagel, Bob Sievers, Jr., and Judy A. Sievers; and Mr. Brown, for Richard M. Botteri and Weiss, Descamp & Botteri.

Glen H. Downs, Portland, filed a brief on behalf of amicus curiae Oregon Trial Lawyers Ass'n.

PETERSON, Justice.

This case involves what courts and commentators have described as a "cash-out merger," a "squeeze-out merger," or a "freeze-out merger." In this opinion, we will use the term "cash-out merger." Under ORS 60.551 to 60.594, majority shareholders may eliminate minority shareholders of a corporation by merger procedures that allow dissenting minority shareholders to receive "fair value" for their shares.

Plaintiffs were minority shareholders in Consumer Data Systems, Inc. (CDS), an Oregon corporation. They filed this action, claiming a violation of various rights incident to a cash-out merger involving CDS and another corporation, Car Data Systems, Inc. (Car Data). Plaintiffs allege that other CDS shareholders and directors breached a fiduciary duty owed to plaintiffs as minority shareholders. They seek compensatory and punitive damages.[1] The trial court dismissed their complaint for failure to state a claim, ORCP 21 A(8), and the Court of Appeals affirmed. *Stringer v. Car Data Systems, Inc.,* 108 Or.App. 523, 816 P.2d 677, modified on reconsideration, 110 Or.App. 14, 821 P.2d 418 (1991). We affirm the decision of the Court of Appeals, but on different grounds.

Before turning to the facts, a brief summary of cash-out mergers is appropriate.

At common law, each shareholder of a corporation was considered to have a "vested right" in the corporation. As a result, the rule in many jurisdictions was that a single shareholder could veto a proposed business combination. See Annot, Valuation of Stock of Dissenting Shareholders in Case of Consolidation or Merger of Corporation, Sale of its Assets, or the Like, 48 ALR3d 430, 435 (1973); *Chicago Corp. v. Munds,* 20 Del.Ch. 142, 172 A. 452, 455 (1934).

Legislatures, courts, and commentators found that the right of a single shareholder to veto business transactions trammeled the concept of corporate democracy. The veto was therefore eliminated. The general rule today is that decision-making by the majority must take precedence over the objection of a lone dissenter. See Revised Model Business Corporation Act § 13.02 (1984) (the "Model Act"); ORS 60.554(1).

The rejection of a minority veto and the recognition of majority rule has not occurred without regard for the potential abuses of a majority's power directed against minority interests. The linchpin of a dissenter's protection in merger cases is found in the statutory appraisal remedy. This remedy is designed to provide statutory protection to those minority shareholders who do not concur with the decision of the majority shareholders.

One device commonly used to eliminate minority shareholders who disagree with the majority shareholders about corporate decision-making is the cash-out merger. A typical

[1] In their complaint, plaintiffs also asked for rescission of the merger, for the appointment of a receiver, for the dissolution of CDS, and for an accounting. Those claims are not in issue here. Only plaintiffs' claims for compensatory and punitive damages remain. The lawyers for CDS and Car Data were also named as defendants. Because we conclude that plaintiffs have no claim apart from an appraisal, the claims against the lawyers also may not be maintained.

cash-out merger, and the appraisal remedy, are described in 1 F.H. O'Neal & R. Thompson, O'Neal's Oppression of Minority Shareholders 21-22, § 5:04 (2d ed):

> "Controlling shareholders often utilize a statutory merger as an instrument for squeezing out minority shareholders or altering their rights and preferences. In every state the corporation statute provides a statutory procedure by which two or more corporations can be combined into a single corporation even though less than all shareholders approve. * * *
>
> "* * * * *
>
> "Under the typical procedure for merger, the directors of the combining companies adopt a plan of merger, which sets forth the terms and conditions of the merger, including the manner in which shares of each of the constituent corporations are to be converted into shares, obligations, or other securities of the surviving corporation, or into cash or other property. The board then submits the plan to the shareholders of each constituent corporation. Depending on the corporation statute in the particular jurisdiction, the plan must be approved by holders of a majority or another specified proportion of each company's shares or by holders of a majority or specified proportion of shares with voting rights. * * * If the plan receives the required approval, it is then filed in a specified public office. A shareholder who dissents from a merger can force the corporation in which he has held stock or the surviving corporation, depending upon the statute, to purchase his shares at their appraised value." (Footnotes omitted.)

Undeniably, such mergers have a coercive element.

"Freezeouts, by definition, are coercive: minority stockholders are bound by majority rule to accept cash or debt in exchange for their common shares, even though the price they receive may be less than the value they assign to those shares. But this alone does not render freezeouts objectionable. Majority rule always entails coercion. It is, nonetheless, an acceptable rule of governance if all members of the voting constituency share a common goal and if all will be identically affected by the outcome of the vote. In the ordinary arm's-length merger negotiated by the managements of two unrelated corporations, stockholders of the merged entity are properly viewed as having a common interest in maximizing the returns on their stock, whether through periodic dividends or through sale or liquidation of the firm. Once approved by a statutory majority, the terms of such a merger will apply equally to each of the merging company's stockholders, and the common decision will satisfy the principle that all members of the class be treated alike. Majority rule is thus an appropriate means of deciding whether an arm's-length merger should be allowed, and it is of course a universal feature of the corporate law. Despite the element of coercion, dissenters to such a merger are bound, or remitted to an appraisal proceeding, by vote of a majority of their class, because it is assumed that any disagreement among the stockholders involves nothing more than a practical judgment about the best way to achieve a

common aim." Brudney & Chirelstein, A Restatement of Corporate Freezeouts, 87 Yale LJ 1354, 1357-58 (1978).

The Oregon statutes that permit cash-out mergers, ORS 60.481 to 60.501, contain procedural protections for minority shareholders. ORS 60.554 provides in part:

> "(1) Subject to subsection (2) of this section, a shareholder is entitled to dissent from, and obtain payment of the fair value of the shareholder's shares in the event of, any of the following corporate acts: "(a) Consummation of a plan of merger to which the corporation is a party if shareholder approval is required for the merger by ORS 60.487 or the articles of incorporation and the shareholder is entitled to vote on the merger or if the corporation is a subsidiary that is merged with its parent under ORS 60.491;
>
> "(b) Consummation of a plan of share exchange to which the corporation is a party as the corporation whose shares will be acquired, if the shareholder is entitled to vote on the plan[.]"

Dissenters from a proposed merger have a right to demand payment for their shares. ORS 60.571. If they do so, the corporation is then required to pay each dissenter "the fair value of the shareholder's shares, plus accrued interest." ORS 60.577(1). If the parties do not agree as to fair value for the shares, the corporation "shall commence a proceeding * * * to determine the fair value of the shares and accrued interest." ORS 60.591(1). A court then determines the fair value of the shares. The appraisal procedure is the sole remedy for dissenting shareholders in the absence of "unlawful or fraudulent" conduct. ORS 60.554(2) provides:

> "A shareholder entitled to dissent and obtain payment for the shareholder's shares under ORS 60.551 to 60.594 may not challenge the corporate action creating the shareholder's entitlement unless the action is unlawful or fraudulent with respect to the shareholder or the corporation."

Plaintiffs brought this action, claiming that defendants acted unlawfully incident to the transfer of CDS shares to Car Data, squeezing out plaintiffs. The trial court granted defendants' motions to dismiss for failure to state a claim. ORCP 21 A(8).

Plaintiffs' complaint alleges that plaintiffs Stringer and Schubert and two other shareholders owned 43 percent of the shares of CDS. Thirty-two individuals, including the six directors of CDS, owned the remaining 57 percent of CDS. According to the complaint, "[i]n late 1988 or early 1989, the CDS Directors and the larger CDS shareholders, Donald Smith, Mark Kallenberger and Lawrence Custer * * *, decided to squeeze the Minority Shareholders out of their ownership in CDS and to offer them a nominal sum for their stock, which sum was significantly below the fair market value of the stock." The directors and larger shareholders formed a new company that subsequently became Car Data, transferred their shares in CDS to Car Data in exchange for its stock, and solicited all the remaining shareholders, except for the four

minority shareholders, to participate in their plan. A total of 32 CDS shareholders transferred their stock, amounting to 57 percent of the CDS shares, to Car Data. Car Data shareholders then voted for a merger between Car Data and CDS. Pursuant to the merger proposal, each CDS shareholder would receive $0.002 per share. As owner of 57 percent of CDS, Car Data voted for the merger. The merger was approved over the objections of plaintiffs and two other minority shareholders.

Plaintiffs claimed that their shares were worth at least $0.10 per share and refused to accept the $0.002 offered them. Car Data rejected plaintiffs demand for $0.10 per share and instituted an appraisal proceeding in the circuit court pursuant to ORS 60.591.[2] Plaintiffs instituted this action in the circuit court against Car Data, CDS, the 32 individual former shareholders of CDS and the present shareholders of Car Data (the shareholder defendants), and the lawyers who represented both CDS and Car Data during the merger process. Plaintiffs' complaint contained three claims for relief: (1) a claim for breach of fiduciary duty against all defendants,[3] in which they prayed for rescission of the merger and appointment of a receiver, or, alternatively, for compensatory damages[4] and an award of punitive damages against Car Data and the shareholder defendants; (2) a claim for civil conspiracy against all defendants, in which they sought compensatory damages and punitive damages against Car Data and the shareholder defendants; and (3) a derivative claim against the former directors of CDS for failing to obtain the best price for all shareholders.

The circuit court stayed the proceedings in the present case pending trial of the appraisal case. The appraisal case was concluded, and this case then proceeded.[5]

Defendants moved to dismiss plaintiffs' claim on the grounds that (1) plaintiffs' sole remedy is under the appraisal procedure, and (2) even if appraisal is not the sole remedy, plaintiffs' complaint "fail[s] to state facts to support a claim for relief * * * for breach of fiduciary duty." The circuit court dismissed plaintiffs' complaint.

Plaintiffs appealed, pursuing their damages claims on theories of breach of fiduciary duty and civil conspiracy, but abandoned their derivative claim and rescission claim. The Court of Appeals affirmed. Stringer v. Car Data Systems, Inc., supra, 108 Or.App. at 527-28, 816 P.2d 677; id., 110 Or.App. at 17, 821 P.2d 418 (on reconsideration).

---

[2] ORS 60.591(1) provides in part:
"If a demand for payment under ORS 60.587 remains unsettled, the corporation shall commence a proceeding within 60 days after receiving the payment demand under ORS 60.587 and petition the court under subsection (2) of this section to determine the fair value of the shares and accrued interest."

[3] All references to "defendants" or "all defendants" exclude nominal defendants Perry and Kargman, the two other minority shareholders of CDS.

[4] Plaintiffs sought damages based on what their 28.6 percent ownership interest would have been worth at the time of trial, i.e., what the value of their stock would have been if they had not been cashed out in the merger.

[5] The Court of Appeals affirmed the judgment of the circuit court in the appraisal action. *Chrome Data Systems, Inc. v. Stringer,* 109 Or. App. 513, 820 P.2d 831 (1991). Car Data had changed its name to Chrome Data Systems, Inc. after this action was brought, but before it instituted the appraisal proceeding.

Because this case comes to us on appeal of an order of dismissal, we must determine whether the complaint states a claim. In considering the sufficiency of plaintiffs' complaint, we accept all well-pleaded allegations of the complaint as true and give plaintiffs the benefit of all favorable inferences that may be drawn from the facts alleged. *Madani v. Kendall Ford, Inc.,* 312 Or. 198, 201, 818 P.2d 930 (1991). We quote pertinent portions of plaintiffs' complaint:

> "12. "Throughout 1988 and into 1989, CDS experienced continued success in selling its product. Its revenues during this period were increasing at a much faster rate than its expenses. All shareholders had a reasonable belief that the value of CDS would rise significantly over the next few years. "13. "In late 1988 or early 1989, the CDS Directors and the larger CDS shareholders, Donald Smith, Mark Kallenberger and Lawrence Custer (collectively referred to herein as the `Controlling Shareholders'), decided to squeeze the Minority Shareholders out of their ownership in CDS and to offer them a nominal sum for their stock, which sum was significantly below the fair market value of the stock (the `Plan'). The principal purpose of the Plan was to deprive the Minority Shareholders of most of the present value of their stock in CDS and to deprive the Minority Shareholders of their share of the anticipated significant rise in the value of CDS stock over the next few years.
>
> "* * * * *
>
> "24. "Throughout April 1989, while all defendants were carrying forth the Plan to squeeze out the Minority Shareholders, all defendants knew the $0.002 per share to be offered the Minority Shareholders was grossly less than the present fair market value of the shares. "25. "Throughout April 1989, while all defendants (except Kargman and Perry) were carrying forth the Plan to squeeze out the Minority Shareholders, all such defendants believed that the value of the CDS stock would greatly increase over the next few years, based on the increased business sales and profitability of CDS. "
>
> 26."In early 1989, CDS received an offer from a third party to purchase substantially all of the corporation's assets. This offer was at a price substantially greater than $0.002 per share.
>
> "27. "At a shareholders' meeting on February 6, 1989, the shareholders voted to reject this offer. All of the Majority Shareholders voted to reject this offer."

The thrust of plaintiffs' claims here is this (quoting from their brief):

> "The majority shareholders owe a duty of loyalty, good faith, fair dealing, and full disclosure to the minority shareholders. This duty is breached when the majority transfers corporate assets to themselves and offers the minority a mere fraction of the true value of their shares."

As stated above, ORS 60.554(2) provides that a dissenting shareholder "may not challenge the corporate action creating the shareholder's entitlement unless the action is unlawful or fraudulent with respect to the shareholder or the corporation." The dispositive question here is whether plaintiffs have alleged facts that would establish that defendants' conduct was "unlawful or fraudulent" within the meaning of ORS 60.554(2).

We start with the observation that this court may not question the wisdom of the Legislative Assembly in enacting the Oregon Business Corporation Act. That law drew upon the Model Business Corporation Act and contains procedures for majority shareholders to "squeeze out" minority shareholders. The legislative decision involved considerations affecting both majority shareholders and dissenting shareholders.

"The accompanying proposals as a whole are designed to benefit both minority shareholders and controlling shareholders. Minority shareholders benefit because the assertion of their rights is made easier, and penalties are introduced for vexatious obstruction by corporate management. Controlling shareholders benefit directly and indirectly. They benefit directly by the added incentives for dissenters to settle without a judicial appraisal. They benefit indirectly because the provision of an adequate appraisal right diminishes the justification for courts to enjoin or set aside corporate changes because of the absence of an `adequate remedy at law,' or because the corporate action `would operate as a fraud.'" Conard, Amendments of Model Business Corporation Act Affecting Dissenters' Rights (Sections 73, 74, 80, and 81), 33 BusLaw 2587, 2593 (1978).

In order to decide whether plaintiffs have a claim in addition to their rights under the appraisal procedure statutes, we must look more closely at those statutes. After both corporations have "consummated" a plan of merger, ORS 60.487, the appraisal procedures of ORS 60.551 to 60.594 may be invoked by dissenting shareholders. The procedures are:

First, a dissenting shareholder must give notice of intent to demand payment for his or her shares, ORS 60.564(1), and then demand payment and deposit the share certificates, ORS 60.571. The surviving corporation is required to "pay each dissenter * * * the amount the corporation estimates to be the fair value of the shareholder's shares, plus accrued interest." ORS 60.577(1). The payment must be accompanied by the "corporation's balance sheet," a "statement of the corporation's estimate of the fair value of the shares," and "explanation of how the interest was calculated," a "statement of the dissenter's right to demand payment under ORS 60.587," and a "copy of ORS 60.551 to 60.594." ORS 60.577(2).

A dissenter who is dissatisfied with the price paid may notify the corporation and demand payment of the dissenter's estimate of the shares' "fair value."[6] ORS 60.587.

[6] ORS 60.551(4) defines "fair value" as follows:

The corporation must then do one of three things: (1) not go forward with the merger, (2) pay the estimate to the shareholder, or (3) commence a proceeding in the circuit court to determine the fair value of the shares and accrued interest. ORS 60.587, 60.591.

In circuit court appraisal proceedings, dissenting shareholders who have been paid less than fair value of their shares by the corporation are entitled to a court award of the difference between the amount paid by the corporation and the fair value of the shares, plus interest. With exceptions not relevant here, the corporation also is required to pay "all costs of the proceeding, including the reasonable compensation and expenses of appraisers appointed by the court." ORS 60.594(1), 60.591(5)(a).

In addition, dissenters are entitled to "fees and expenses of [their] counsel and experts" if (1) "the corporation did not substantially comply with * * * ORS 60.561 to 60.587," or (2) the corporation "acted arbitrarily, vexatiously or not in good faith with respect to the rights provided by this chapter." ORS 60.594(2).

Under ORS 60.591(5), a dissenting shareholder is entitled to payment for that which has been taken, the fair value of the stock. In determining the fair value of a stock immediately before the merger, many factors are relevant, including, but not limited to, the following:[7] the price at which the shares had been selling; the amount, if any, of present share value increase or decrease because of anticipated future earnings of the corporation; corporate assets; corporate earnings or losses; corporate reputation; anticipated competition. ORS 60.551(4) excludes consideration of appreciation or depreciation in anticipation of the corporate action, unless it would be inequitable to exclude such appreciation or depreciation.

The fair value of corporate stock may be more or less than the sum of the parts of the corporation, depending on a host of factors. In determining the fair value of stock in a closely held corporation, ORS 60.551(4), the court's responsibility and authority is similar to that of a judge in a tax case or a domestic relations case involving the fair market value of stock of a corporation. In short, the court should take into account all relevant factors.[8]

"`Fair value,' with respect to a dissenter's shares, means the value of the shares immediately before the effectuation of the corporate action to which the dissenter objects, excluding any appreciation or depreciation in anticipation of the corporate action unless exclusion would be inequitable."

[7] ORS 60.554(3) excludes cases involving shares "registered on a national securities exchange or prices * * * quoted on the National Association of Securities Dealers, Inc. Automated Quotation System as a National Market System."

[8] The Delaware court has held that "fair value * * * includes any damages, resulting from the taking, which the stockholders sustain as a class. If that was not the case, then the obligation to consider the [statutory obligation to take into account] `all relevant factors' in the valuation process would be eroded." Weinberger v. UOP, Inc., 457 A.2d 701, 713 (Del.1983). Although the Delaware statute, 8 Del C § 262(h), is not identical to ORS 60.551(4), and expressly includes "all relevant factors," it is reasonable to include those factors by implication. We need not and do not decide, in this case, what damages claims other than those asserted by plaintiffs herein would be permissible under ORS 60.551(4).

Plaintiffs' complaint in this case alleged neither fraud nor misleading representations that were relied upon by plaintiffs. From plaintiffs' complaint, one can infer only that the amount paid by CDS was unfair and unreasonably low, in an attempt to avoid paying fair value to plaintiffs for their shares.

Cases such as this are the very kind addressed by the statutory scheme. With the exception of punitive damages, every element of damages that plaintiffs seek herein is recoverable under ORS 60.551 to 60.594. The complaint contains no allegations of fact that, if proved, would support a punitive damages award.[9] The legislative plan expressly provides for recovery of attorney fees and expenses and of expert fees and expenses for arbitrary or vexatious action, or actions "not in good faith" in connection with the cash-out merger. See 60.594(1) and (2). This provision suggests to us that the legislature intended that, even if the corporation offers too little money to the dissenters for their shares "arbitrarily, vexatiously or not in good faith," ORS 60.594(2), and if the disagreement is solely as to the value of the shares, statutory appraisal is the exclusive remedy.[10]

The last clause of ORS 60.551(4) also is significant. To the extent, if any, that plaintiffs seek damages for "any appreciation or depreciation in anticipation of the corporate action," those damages can be considered if "exclusion would be inequitable." We agree with the Delaware Supreme Court that "there is a legislative intent to fully compensate shareholders for whatever their loss may be, subject only to the narrow limitation that one can not take speculative effects of the merger into account." *Weinberger v. UOP, Inc.,* 457 A.2d 701, 714 (Del.1983).

"`Thus, market value, asset value, dividends, earning prospects, the nature of the enterprise and any other facts which were known or which could be ascertained as of the date of merger and which throw any light on future prospects of the merged corporation are not only pertinent to an inquiry as to the value of the dissenting stockholders' interest, but must be considered by the agency fixing the value.' "This is not only in accord with the realities of present day affairs, but it is thoroughly consonant with the purpose and intent of our statutory law." Id. at 713 (quoting *Tri-Continental Corp. v. Battye,* [31 Del.Ch. 523,] 74 A.2d 71, 72 (Del.1950)).

In Weinberger, the Delaware court also stated:

---

[9] In support of their punitive damages claim, plaintiffs allege that the acts of defendants, set forth in the text above at 8-9, "were wanton misconduct amounting to a deliberate disregard of the rights of the plaintiffs, entitling plaintiffs to an award of punitive damages."
"[I]f punitive damages are sought, facts must be alleged which, if proved, will establish the right to recover punitive damages." *Davis v. Tyee Industries, Inc.,* 295 Or. 467, 477, 668 P.2d 1186 (1983). A mere recitation that a defendant's conduct was wanton or malicious is a mere conclusion of the pleader. "Where punitive damages are sought, the complaint should set forth the ultimate facts which are claimed to support the recovery of punitive damages." Id. at 479, 668 P.2d 1186; accord: *Holden v. Pioneer Broadcasting Co.,* 228 Or. 405, 418, 365 P.2d 845 (1961).

[10] Where the dissenting shareholders vote for the merger or surrender their shares as a result of misrepresentation or fraud, they may bring a separate action for damages. See *Weinberger v. UOP, Inc.,* supra note 8, and *Rabkin v. Philip A. Hunt Chemical Corp.,* 498 A.2d 1099 (Del.1985). No such claims are made in this case.

> "But elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered." Id. at 713.

Plaintiffs' complaint clearly alleges a disagreement as to valuation, and we also can infer payment by Car Data of an unreasonably low price. Where the allegations show only a disagreement as to price, however, with no allegations that permit any inference of self-dealing, fraud, deliberate waste of corporate assets, misrepresentation, or other unlawful conduct, the remedy afforded by ORS 60.551 to 60.594 is exclusive. That is true even if the majority shareholders acted arbitrarily or vexatiously or not in good faith. *Stepak v. Schey,* 51 Ohio St.3d 8, 553 N.E.2d 1072, 1075 (1990) (remedy for breach of fiduciary duty involving only the price that a shareholder receives is limited to appraisal statute); *Schloss Associates v. C & O Ry.,* 73 Md.App. 727, 536 A.2d 147, 158 (1988) ("What we have then is essentially a complaint over price the amount and how it was establishedfor which the statutory appraisal right is a wholly adequate remedy."); *Green v. Santa Fe Industries, Inc.,* 70 N.Y.2d 244, 519 N.Y.S.2d 793, 800, 514 N.E.2d 105, 112 (1987) ("Here, * * * all of the actions with which defendant corporations are charged relate to price; there are no claims asserted against individual defendants based on dual representation; and it cannot be said that the `defendants are charged with bad faith which goes beyond issues of "mere inadequacy of price". *Cole v. National Cash Credit Association* 18 Del.Ch. 47, 156 A. 183, 187-88 [1931]'").[11] It may be that the $0.002 offer was insulting to plaintiffs, and it may even have been motivated by bad faith. But, because the facts alleged in the complaint, if established, support no claim for damages apart from the fair value of the shares, we believe that the legislature intended that dissenting shareholders in the position of plaintiffs be limited to their remedies under the appraisal statutes.

The decision of the Court of Appeals and the judgment of the circuit court are affirmed.

UNIS, Justice, concurring in part, dissenting in part.

The issue in this case is whether plaintiffs' complaint states a claim for breach of fiduciary duty and civil conspiracy. I cannot agree with the majority's holding that plaintiffs' complaint fails to state a claim under either theory. I would hold that plaintiffs' complaint states a claim for breach of fiduciary duty and civil conspiracy against all

[11] *Green v. Santa Fe Industries, Inc.,* upholds cash-out mergers motivated solely to freeze out minority shareholders. In Weinberger v. UOP, Inc., supra note 8, the Delaware court abandoned the "business purpose" rule requiring that a cash-out merger have some business purpose and was not merely for the purpose of squeezing out the minority shareholders that it had adopted in 1977. Other courts still require that a parent-subsidiary merger serve a business purpose. E.g., *Coggins v. New England Patriots Football Club,* 397 Mass. 525, 492 N.E.2d 1112, 1118 (1986). No such issue is presented here, and we express no opinion on that issue.

defendants [12] except defendant attorneys.[13] I agree with the majority that the complaint does not state a claim against defendant attorneys. I, therefore, concur in part and dissent in part.

Because plaintiffs' complaint was dismissed for failure to state a claim pursuant to ORCP 21 A(8),[14] this court must accept the allegations in the complaint as "true," *Madani v. Kendall Ford, Inc.,* 312 Or. 198, 201, 818 P.2d 930 (1991), and as "facts," *Nicholson v. Blachly,* 305 Or. 578, 580, 753 P.2d 955 (1988). Moreover, as the majority recognizes, we must give plaintiffs the benefit of all favorable inferences that may be drawn from the allegations. 314 Or. at 584, 841 P.2d at 1187. Applying these principles, the following seems to be a fair summary of those pleaded "facts" and favorable inferences to be drawn therefrom.

Plaintiffs Stringer and Schubert and three others founded CDS in 1986. Stock was sold in the corporation until, in 1989, there were 36 shareholders. Stringer and Schubert, along with the two nominal defendants in this case, retained about 43 percent of the stock. The stock was sold at about 10 cents a share during this period.

According to the complaint, CDS was successful during this period, and revenues were increasing faster than expenses. In early 1989, again according to the complaint, a third party made a written offer to purchase CDS at a price substantially above what was subsequently offered during the "squeeze-out" merger at issue here. CDS, by vote of the majority of shareholders, rejected the third party's offer.

The complaint alleges the following:

> "In late 1988 or early 1989, the CDS Directors and the larger CDS shareholders, Donald Smith, Mark Kallenberger and Lawrence Custer (collectively referred to herein as the `Controlling Shareholders'), decided to squeeze the Minority Shareholders out of their ownership in CDS and to offer then a nominal sum for their stock, which sum was significantly below fair market value of the stock (the `Plan'). The principal purpose of the Plan was to deprive the Minority Shareholders of most of the present value of their stock in CDS and to deprive the Minority Shareholders of their share of the anticipated significant rise in the value of CDS stock over the next few years." (Emphasis added).

[12] Elizabeth A. Perry and James B. Kargman are named as nominal defendants. Both were CDS shareholders who were not solicited to transfer stock to Car Data and did not vote for the merger.
[13] Defendant attorneys are Richard M. Botteri and Weiss, Descamp & Botteri, an Oregon professional corporation. In the complaint, plaintiffs allege only that the controlling shareholders of CDS retained legal services to "assist them in squeezing out the Minority Shareholders." The complaint does not state, and it cannot be inferred from the complaint, that the attorneys were made aware that the purpose of the merger was to temporarily devalue CDS's stock in order to capture for the majority shareholders some of the true value of the minority shareholders' stock. It is not unlawful simply to assist in an otherwise legitimate squeeze-out merger.
[14] The trial court also denied plaintiffs' leave to replead.

The complaint goes on to allege that the directors and the three larger majority shareholders, whom plaintiffs describe in their complaint as the "Controlling Shareholders," retained defendant attorneys to incorporate a new corporation, Car Data, as the vehicle for the completion of this plan.

The complaint also alleges that, in furtherance of the plan, the CDS directors and the "Controlling Shareholders" transferred all their CDS stock to Car Data and then solicited the participation of all CDS shareholders, except plaintiffs and the two nominal defendants. Once Car Data had obtained by these means a majority of the stock of CDS, a merger was proposed between CDS and Car Data.

As majority shareholder of CDS, Car Data approved the merger with a stock value of $0.002 per share, a price far below that previously offered by the third party. The stockholders of Car Data, i.e., the board of directors of CDS and all the former shareholders of CDS except plaintiffs and the two nominal defendants, also approved the merger. Plaintiffs allege that, as a result of this vote, the minority shareholders received $9,900 for stock with a fair market value of $290,000.

BREACH OF FIDUCIARY DUTY CLAIM

In plaintiffs' claim for breach of fiduciary duty, plaintiffs allege that the above acts by the directors, the collective majority of CDS shareholders and Car Data, constitute a breach of their fiduciary duty to the minority shareholders, including plaintiffs. Plaintiffs seek, inter alia, rescission of the merger or, in the alternative, damages equal to the fair market value of plaintiffs' proportionate share of defendant Car Data on the date of trial, plus punitive damages.

The majority holds that the allegations in plaintiffs' complaint "show only a disagreement as to price" and do not "permit any inference of self-dealing, fraud, deliberate waste of corporate assets, misrepresentation, or other unlawful conduct." 314 Or. at 590, 841 P.2d at 1190. The majority concludes that plaintiffs have no claim against defendants apart from their remedy under the appraisal statutes, ORS 60.551 to 60.594. This conclusion, in my judgment, ignores allegations that we must accept on an ORCP 21 A(8) motion as "true" pleaded "facts," and it ignores inferences favorable to plaintiffs that may be drawn from those allegations.

In 1987, the legislature adopted the Revised Model Business Corporation Act (RMBCA) sections 13.30 and 13.31, Or. Laws 1987, ch. 52, §§ 136 and 137, except for modifications necessary to conform to Oregon's judicial system. See Report of the Revised Model Business Corporation Act Task Force of the Business Law Section of the Oregon State Bar 63 (March 24, 1987). The sections became ORS 60.591 and ORS 60.594. These statutory provisions provide a dissenting shareholder with an appraisal remedy to secure "fair value" for shares in the event of a corporate act resulting in a merger.

The statutory provisions relating to the appraisal procedure are subject to ORS 60.554(2) and must be read in conjunction with that provision. ORS 60.554(2), which is taken from RMBCA section 13.02(b), provides that a dissenting shareholder "may not challenge the corporate action creating the shareholder's entitlement unless the action is unlawful or fraudulent with respect to the shareholder or the corporation." (Emphasis added.) The explanation for the exception provided for in ORS 60.554(2) is that "the prospect that shareholders may be `paid off' [through the appraisal procedure] does not justify the corporation in proceeding unlawfully or fraudulently." Official Comment to RMBCA section 13.02 at 1366 in 3 Model Business Corporation Act Annotated (3d ed, 1992 Supp).

Although the type of "unlawful" or "fraudulent" conduct required by ORS 60.554(2) to overcome the exclusive remedy of appraisal is not precisely defined, the Official Comment to RMBCA section 13.02 provides guidance. The Official Comment states that:

> "Because of the variety of situations in which unlawfulness and fraud may appear, this section makes no attempt to specify particular illustrations. Rather, it is designed to recognize and preserve the principles that have developed in the case law of Delaware, New York and other states with regard to the effect of dissenters' rights on other remedies of dissident shareholders." Id. at 1367 (emphasis added).

Thus, "[i]f the corporation attempts an action in violation of the corporation law on voting, in violation of clauses in articles of incorporation prohibiting it, by deception of shareholders, or in violation of a fiduciary duty," it cannot later hide behind the appraisal remedy provision of the RMBCA. Id. at 1366.

The Official Comment to RMBCA section 13.02(b) singles out *Weinberger v. UOP, Inc.,* 457 A.2d 701 (Del.Supr.1983), as an example of the case law that section 13.02(b) was designed to recognize and preserve. Id. at 1367. *Weinberger* recognizes that the statutory appraisal remedy may not be adequate, "particularly where fraud, misrepresentation, self-dealing, deliberate waste of corporate assets or gross and palpable overreaching are involved." *Weinberger v. UOP, Inc.,* supra, 457 A.2d at 714. Post-Weinberger Delaware decisions clearly recognize that appraisal rights are not the exclusive remedy in the face of allegations of misconduct.

In *Sealy Mattress Co. of N.J., Inc. v. Sealy, Inc.,* 532 A.2d 1324 (Del.Ch.1987), the Delaware Court of Chancery held that the minority shareholders were entitled to a preliminary injunction enjoining a squeeze-out merger. According to the court, "[a]s fiduciaries seeking to `cash out' the minority stockholders of a Delaware corporation in a non-arm's length merger, the defendants had a duty to be entirely and scrupulously fair to the plaintiffs in all respects." Id. at 1335. (citing *Weinberger v. UOP, Inc.,* supra, 457 A.2d at 710). The Delaware court was concerned that the majority stockholder not be allowed to "time or structure the transaction, or to manipulate the corporation's values,

so as to permit or facilitate the forced elimination of the minority stockholders at an unfair price." Id.

In *Sealy Mattress,* the court noted that the corporation's directors "were obliged to make an informed, deliberate judgment, in good faith, that the merger terms, including the price, were fair and that the merger would not become a vehicle for economic oppression." Id. Moreover, noted the Delaware court, "the directors (and the majority stockholder, to the extent that it involved itself in such matters) were obliged to disclose with entire candor all material facts concerning the merger, so that the minority stockholders would be able to make an informed decision as to whether to accept the merger price or to seek judicial remedies such as appraisal, an injunction, or a post-merger damage action." Id.

As in Sealy, none of the fiduciary obligations owed by corporate directors and majority shareholders were satisfied in this case.[15] Plaintiffs Stringer and Schubert alleged that the directors of CDS, acting with three certain larger CDS shareholders, developed a plan to squeeze out plaintiffs for a nominal sum, a sum significantly below the fair market value of plaintiffs' shares. The squeeze-out merger was implemented just after the majority shareholders had rejected a third-party offer to purchase substantially all of CDS assets at a price substantially greater than the $0.002 per share price set in the squeeze-out merger. The squeeze-out merger would have permitted the majority shareholders, which includes the six directors of CDS, to sell the CDS assets at this higher price without sharing any of the proceeds with the minority shareholders.

Such conduct by directors and the large shareholders does not meet duties of good faith and fair dealing imposed by Oregon law. See, e.g., *Zidell v. Zidell, Inc.,* 277 Or. 413, 418, 560 P.2d 1086 (1977) ("those in control of corporate affairs have fiduciary duties of good faith and fair dealing toward minority shareholders"); ORS 60.357 (requiring a director to discharge the duties of the office "in good faith"); ORS 60.361 ("[a] conflict of interest transaction is a transaction with the corporation in which a director of the corporation has a direct or indirect interest"). With respect to the minority shareholders of CDS and, in particular, plaintiffs, the allegations of the complaint are, in my view, sufficient to permit an inference of self-dealing and gross, palpable, overreaching conducta violation of the fiduciary duty owed to plaintiffs by CDS directors and majority shareholders.[16] As such, the case should not have been dismissed at the pleading stage for failure to state a claim.

The majority admits that "[p]laintiffs' complaint clearly alleges a disagreement as to valuation, and we also can infer payment by Car Data of an unreasonably low price." 314 Or. at 590, 841 P.2d at 1190 (emphasis added). The majority, however, concludes that the only complaint plaintiffs make is the price of CDS's stock. Id. That interpretation

[15] It is unclear at this preliminary stage which, if any, of the defendants exercised majority shareholder control. Nevertheless, the allegation that the directors and the three larger CDS shareholders worked in concert to control CDS, together with the other allegations in plaintiffs' complaint, are sufficient to state a claim against those shareholders.

[16] Once the directors and the three larger shareholders of CDS transferred their stock to Car Data, it became the single majority shareholder in CDS.

ignores the means by which that price was alleged to have been determined, and who made that determination.

According to the allegations in plaintiffs' complaint and to inferences favorable to plaintiffs that may be drawn from those allegations, the directors of CDS hatched a plan to capture some of the corporation's stock at a bargain. This action, again taken from the complaint, was undertaken immediately following a purchase offer that these same directors, in their official capacity, had rejected. The inference drawn is that the directors of CDS, realizing the value of their stock, determined to capture as much of that value as possible for themselves. To do so, however, they needed to create a majority voting block.

To that end, the complaint alleges, the directors formed a paper corporation that had no assets whatsoever. The directors then transferred their CDS stock to the new corporation, Car Data. The complaint alleges that the purpose of the new corporation was to deprive a minority of the shareholders of CDS stock of the value of that stock. Surely the majority does not mean to hold that it is lawful for the directors of a corporation to plot unlawfully against some of the corporation's shareholders as long as those shareholders can subsequently defeat the unlawful plot through judicial action to determine the fair value of the company's stock. Yet that is the effect of the majority's holding.

I believe that the complaint alleges a breach of the fiduciary duty that the directors of CDS owed to plaintiffs as shareholders of CDS. The complaint does not allege that the directors wanted to "squeeze out" minority shareholders for the benefit of the corporation; it alleges that they conspired to steal some or most of the value of their stock by using a pseudo squeeze-out merger.[17] Car Data, the majority shareholder of CDS, was the vehicle used to accomplish that goal. The other shareholders who then joined the directors are implicated in the same misconduct.[18] Though they may not, as the majority states, have owed plaintiffs a fiduciary duty as shareholders, it nonetheless would be unlawful for them to conspire with the directors of the corporation to increase the value of their stock by creating a paper corporation with the intent to devalue temporarily the corporation's stock.

The inference fairly drawn from the complaint is that there was no "merger" in this case to which one could apply an appraisal remedy. Car Data, the complaint alleges, was no more than the alter ego of CDS's own directors and several of its largest shareholders. Its purpose, again according to the complaint, was to create a majority voting block to devalue the corporation's stock.

---

[17] The majority recognizes that, in certain circumstances, such as a parent-subsidiary merger, courts may require that a cash-out merger have some business purpose, not just be undertaken to squeeze out minority shareholders. See 314 Or. at 590 n. 11, 841 P.2d at 1190. In this case, not only is there no business purpose for the merger of two corporations that share directors and majority shareholders, but the merger is alleged to be for the sole purpose of depriving the minority shareholders of one corporation of the value of their stock.

[18] See, infra, "Civil Conspiracy Claim."

Had the three larger majority shareholders ("Controlling Shareholders") conspired with the CDS directors to reject a legitimate purchase offer and then sold all CDS's assets to Car Data at far below market value so that they could resell Car Data at a windfall price, I do not believe that the majority would find it as difficult to find "overreaching." Yet, in this case, an allegation that certain shareholders and the directors of CDS created a paper corporation in order to accomplish the same result through a "merger" is considered insufficient. I do not believe that the drafters of the RMBCA or the Oregon legislature intended to create a vehicle for this kind of business practice simply because they wished to facilitate legitimate business mergers when there is a disagreement among shareholders over the wisdom of the merger.

In *Joseph v. Shell Oil Co.,* 498 A.2d 1117, 1122 (Del.Ch.1985), the Delaware Court of Chancery cautioned:

> "Because all inferences in the allegations in a complaint must be construed in favor of the plaintiffs, and because each suit is unique, complaints asserting a claim of unfair dealing as to a tender offer or freeze-out merger must be read carefully to determine if an appraisal will provide an adequate remedy if the claims prove to be true. Great care must be taken not to unjustifiably relegate objecting stockholders to an appraisal proceeding because to do so might have the result of precluding the imposition of an adequate remedy for serious breaches of fiduciary duty."

Appraisal actions are exclusive remedies only when the disagreement is over whether or not to accept an otherwise legitimate merger offer. When that is not the case, other courts allow actions to be pursued apart from an appraisal statute. See, e.g., *Rabkin v. Phillip A. Hunt Chemical Corp.,* 498 A.2d 1099 (Del.Supr.1985); *Coggins v. New England Patriots Football Club, Inc.,* 397 Mass. 525, 492 N.E.2d 1112 (1986); *Edelman v. Fruehauf Corp.,* 798 F.2d 882, 886-87 (6th Cir.1986); *Stepak v. Schey,* 51 Ohio St.3d 8, 553 N.E.2d 1072 (1990).

CIVIL CONSPIRACY CLAIM

Plaintiffs' complaint, in my opinion, also states a claim for civil conspiracy. In *Bonds v. Landers,* 279 Or. 169, 566 P.2d 513 (1977), this court upheld a judgment based on a theory of civil conspiracy,[19] stating:

> "`A civil conspiracy is a combination of two or more persons by concerted action to accomplish an unlawful purpose, or to accomplish some purpose not in itself unlawful by unlawful means.' 15A CJS 596, Conspiracy § 1(1), citing *Bliss v. Southern Pacific Co.,* 212 Or. 634, 321 P.2d 324 (1958); *Pitts v. King,* 141 Or.

[19] In *Bonds,* this court cited with favor the elements of civil conspiracy as set out in 15A CJS 599, Conspiracy § 1(2). Those elements are: "(1) Two or more persons, and for this purpose a corporation is a person; (2) an object to be accomplished; (3) a meeting of minds on the object or course of action; (4) one or more unlawful overt acts; and (5) damages as the proximate result thereof." *Bonds v. Landers,* 279 Or. 169, 174, 566 P.2d 513 (1977).

> 23, 15 P.2d 379, modified 141 Or. 23, 15 P.2d 472 (1932)." 279 Or. at 174, 566 P.2d 513.

Plaintiffs allege that defendants adopted a "plan" to deprive plaintiffs of the value of their stock. The underlying wrongful act was the breach of fiduciary duty by the directors and the collective majority of shareholders. Thus, the "concerted action" or "plan" of defendants to accomplish this unlawful act constitutes civil conspiracy.

CONCLUSION

In sum, I concur in that part of the majority's opinion that holds that plaintiffs' complaint fails to state a claim for breach of fiduciary duty and civil conspiracy against defendant attorneys. As against all other defendants, however, plaintiffs' complaint alleges facts that, if proved and considered along with favorable inferences to be drawn therefrom, would establish their right to recover for breach of fiduciary duty and civil conspiracy. I would hold, therefore, that defendants' ORCP 21 A(8) motions should have been denied, except as to defendant attorneys.

FADELEY, J., joins in this opinion.

IN THE COURT OF CHANCERY OF THE STATE OF DELAWARE

IN RE SUNBELT BEVERAGE CORP. SHAREHOLDER LITIGATION) Consol. C.A. No. 16089-CC)

MEMORANDUM OPINION

Date Submitted: November 20, 2009
Date Decided: January 5, 2010

S. Mark Hurd and Samuel Taylor Hirzel II, of MORRIS, NICHOLS, ARSHT & TUNNELL LLP, Wilmington, Delaware; OF COUNSEL: Preston H. Longino, of LAW OFFICE OF PRESTON H. LONGINO, Phoenix, Arizona, Attorneys for Plaintiff.

Jesse A. Finkelstein, Srinivas M. Raju, and Blake Rohrbacher, of RICHARDS LAYTON & FINGER, P.A., Wilmington, Delaware; OF COUNSEL: Howard Graff and Judith R. Cohen, of DICKSTEIN SHAPIRO LLP, New York, New York, Attorneys for Defendants.

CHANDLER, Chancellor

This consolidated breach of fiduciary duty and appraisal proceeding arises out of the August 22, 1997 merger (the "Merger") of SBC Merger Corporation ("SBC") with and into Sunbelt Beverage Corporation ("Sunbelt"). One consequence—and a specific goal—of the Merger was the cash-out of Jane Goldring ("Goldring" or "Plaintiff") as a minority shareholder in Sunbelt.

Goldring contends that members of the Sunbelt board of directors ("Defendants") violated their fiduciary duties in cashing her out at an unfair price, for which Goldring seeks rescissory relief in the form of Arizona, Maryland, or another state in Sunbelt's wholesale alcohol distribution portfolio. In the alternative, Goldring seeks an appraisal of the fair value of her shares of Sunbelt stock as of the Merger date, an award of interest on the value of her shares, and an award of all costs and expenses, including attorneys' and experts' fees. Defendants, meanwhile, ask this Court to determine that the fair value of Sunbelt's stock at the time of the Merger was $45.83, that the Merger process was entirely fair, and that Goldring should not be awarded interest or attorneys' and experts' fees. Finally, defendants also ask the Court to strike exhibit A to Goldring's post-trial answering brief.

For the reasons set forth below, I determine that the fair value of Sunbelt at the time of the Merger was $114.04 per share. I award Goldring her pro rata share of Sunbelt's fair value on the date of the Merger, as well as pre- and post-judgment

interest, compounded monthly, at the legal interest rate. I also award Goldring all of her court costs and her experts' fees, but not her attorneys' fees. Lastly, I grant defendants' motion to strike exhibit A to Goldring's post-trial answering brief.

I. BACKGROUND

A. The Parties

Plaintiff Jane Goldring was an individual shareholder in Sunbelt. At the time of the Merger, Goldring held 120,000[1] shares of Sunbelt stock, or approximately 14.9% of the company. Although Goldring was the named stockholder, her husband, William Goldring, managed the investment pursuant to a permanent power of attorney to control all matters related to the Sunbelt stock.[2] The Goldring family has been engaged in the wholesale liquor business for four generations. Goldring viewed her investment in Sunbelt as a long-term investment, which would enable her to increase the presence and market share of the Goldring family in the wholesale alcohol distribution industry.

Defendant Sunbelt is a privately-held Delaware corporation engaged in the business of wholesale distribution of wine and spirits in multiple states. Sunbelt

[1] In their pre-trial stipulation, the parties agreed that Goldring held 120,000 shares of Sunbelt stock. The parties also stipulated that Goldring acquired her shares through two separate transactions, which, as discussed below, involved 54,000 shares and 60,000 shares, respectively. This appears to be a case in which the whole is greater than the sum of its parts. Given, however, that the parties agreed that Goldring held 120,000 shares, I will not probe more deeply the details relating to the number of shares Goldring held.

[2] For purposes of this Opinion, I will not differentiate between Goldring and her husband when I describe business activities and decisions.

formerly was a division of McKesson Corporation ("McKesson"), a public corporation that in 1988 began to divest its wine and spirits operations. McKesson approached Ray Herrmann ("Herrmann"), the former Vice-Chairman of McKesson Wine & Spirits, to inquire whether he would be interested in purchasing McKesson Wine & Spirits from McKesson. Herrmann responded by organizing a group of investors, including investment funds from the private investment firm of Weiss, Peck, and Greer ("WPG"),[3] to purchase McKesson Wine and Spirits. That purchase constituted the birth of Sunbelt. The consideration McKesson received for its 1988 sale of McKesson Wine & Spirits included a block of stock in Sunbelt and the right to designate a member of Sunbelt's board of directors so long as McKesson was a Sunbelt shareholder. Following this sale, McKesson and WPG were the primary shareholders of Sunbelt. Several other individuals held smaller amounts of Sunbelt stock and were involved in the management of Sunbelt.

The individual defendants were all members of Sunbelt's board of directors from at least mid-1994 through at least August 1997. These individuals include: Herrmann, Eugene Luciana, Herman Merinoff ("Merinoff"), Charles Merinoff, Spencer Merinoff, and Charles Andrews. Notably, the Merinoffs had been involved in the wholesale alcohol distribution industry for at least three generations.

[3] WPG's involvement in this divestiture was its first foray into the wholesale alcohol distribution industry.

B. Industry Background

In 1997, at the time of the Merger, a large number of states regulated the sale and importation of alcoholic beverages through a three-tier system, with suppliers at the top, wholesalers or distributors in the middle, and retailers at the bottom. Separate licenses were required to operate at each tier. Suppliers of alcoholic beverages generally could sell only to licensed in-state wholesalers, and wholesalers in turn generally could sell only to licensed in-state retailers. As of 1997, there were no publicly-traded distributors in the United States; regardless of size, these distributors universally were private closely-held companies, often family-owned, and did not make public disclosures of financial affairs.

C. Goldring Becomes a Sunbelt Shareholder

In 1991, Sunbelt acquired certain alcohol distribution rights in Florida held by Goldring, and in return issued to Goldring 54,000 shares of Sunbelt stock. At that time, the controlling shareholder in Sunbelt was WPG.

D. WPG and McKesson Seek to Sell Their Sunbelt Shares

In 1994, Philip Greer of WPG approached Goldring and asked if Goldring would be interested in acquiring the majority interest in Sunbelt held by WPG and McKesson. Goldring declined to make the acquisition but did express an interest in purchasing some number of additional shares of Sunbelt stock. Herrmann suggested WPG and McKesson approach Merinoff to inquire about his interest in

purchasing the controlling share of Sunbelt. By a stock purchase agreement dated March 31, 1994 ("1994 Agreement"), Colmar Investment Company LLC, an investment vehicle for the Merinoff family and certain other persons close to the Merinoffs, acquired Sunbelt common stock from WPG, McKesson, and other Sunbelt stockholders. Peter Pfister ("Pfister") was the WPG representative principally responsible for WPG's role in the negotiations of this agreement. The 1994 Agreement permitted the buyers to make purchases of Sunbelt stock over a period of three years, subject to a formula that would calculate the purchase price for each round of purchases ("WPG Formula" or "Formula").[4] At the same time as the 1994 Agreement, Goldring entered into a share purchase agreement ("1994 Shareholder Agreement") and acquired an additional 60,000 shares of Sunbelt stock. The 1994 Shareholder Agreement established, *inter alia*, that the WPG Formula would be the basis for a put of or call on Goldring's shares should certain triggering events occur.

E. Business Sweetens, Relations Sour

Goldring and Merinoff provide different accounts of events between March 31, 1994 and August 20, 1997. What is indisputable is that Sunbelt faced various business challenges in the early stages of that three-year period, including the loss of a key product line in Florida and South Carolina, but by 1997 Sunbelt seemed to

[4] There is a significant dispute over the implications of the various components of the Formula, which I discuss later in this Opinion.

have overcome those challenges and had posted record profits for the company. Goldring alleges that after becoming a Sunbelt shareholder she had received a steady stream of financial information about Sunbelt's operations, but that the flow dramatically decreased after the Merinoff interests assumed control of Sunbelt in 1994. Merinoff denies any decrease in financial information. By the spring and summer of 1997, an exchange of letters and conversations occurred, in which Merinoff expressed an intent to acquire Goldring's shares in Sunbelt, and in which Goldring expressed no interest in parting with those shares at the price Merinoff was offering. The initial exchange appears to have occurred during a trip to France. In a letter dated May 22, 1997, Goldring indicated he believed Merinoff's offer price extremely undervalued Sunbelt, especially given how profitable a year 1997 was proving to be for Sunbelt. In that letter, Goldring also suggested that an exchange could be made in which Goldring would acquire full rights to certain segments of Sunbelt's portfolio in return for Merinoff acquiring Goldring's shares.

Goldring believed Merinoff's offer price to be so low that she offered in a June 27, 1997 letter to purchase the entirety of the Sunbelt stock she did not already own. The purchase price of Goldring's offer was identical to the per-share price Merinoff had proposed for Goldring's own stock. If any other Sunbelt shareholder took Goldring's offer seriously, no one accepted. The letter and Goldring's offer had no impact. Merinoff reemphasized his intent to acquire

Goldring's shares, and Goldring reemphasized her view that Merinoff's valuation of Sunbelt stock was off the mark.

F. A Brewing Relationship with Young's Market

The summer of 1997 also saw an acceleration of planning for a stock swap between Sunbelt and Young's Market, the largest wholesale alcohol distributor in California as of 1997, with each company receiving 15% of the other. Goldring appears to have heard of the proposed relationship with Young's Market through the grapevine, and she believed a business relationship between Sunbelt and Young's Market would greatly enhance the value of Sunbelt, particularly given the consolidation in the industry that was occurring at that time. She mentioned this relationship and the business benefits in her June 27, 1997 letter. Yet in a July 14, 1997 letter, Merinoff informed Goldring that the stock swap with Young's Market was dependent upon Goldring's 15% share in Sunbelt being the Sunbelt stock that would be used in the stock swap.[5] In that same letter, Merinoff expressed his recollection that Goldring had previously made a verbal agreement with Merinoff to relinquish her shares upon Merinoff's request, at a price to be determined by the WPG Formula. On July 21, 1997, Herrmann sent Goldring a letter expressing that

[5] Vern Underwood, the President, Chairman, and CEO of Young's Market, testified in a 2001 deposition that he had never given a thought to which 15% of Sunbelt's stock Young's Market would need to acquire in 1997. That is, it appears Young's Market was indifferent to whether the Sunbelt stock was stock owned by Goldring or stock owned by any other Sunbelt shareholder, or newly issued shares of Sunbelt.

he too recollected that Goldring had previously promised Merinoff that Goldring would relinquish her Sunbelt stock upon request.

G. Final Purchase of Stock from McKesson and WPG

On July 31, 1997, McKesson and WPG sold their last remaining shares of Sunbelt stock to the Merinoffs ("July 31, 1997 Transaction" or "1997 Transaction"). The WPG Formula price for that transaction was $45.83. In completing the sale and parting with the last of its Sunbelt stock, McKesson was no longer entitled to a seat on Sunbelt's board of directors.

H. The August 6, 1997 Board Meeting

Sunbelt's board convened a week later, on August 6, 1997, to discuss a variety of matters, including the proposed business alliance with Young's Market. The board discussed the promises Goldring was said to have made relating to relinquishment of her stock at Merinoff's request, as well as her denial of having made any such promises. Before the conclusion of the meeting, the board authorized Sunbelt's officers to obtain a fairness opinion for a $45.83 per-share offer for Goldring's stock.

I. The Hempstead Fairness Opinion

Between Friday, August 8, 1997, and Friday, August 15, 1997, Mark Penny of Hempstead & Co. conducted a valuation of Sunbelt and prepared a fairness opinion for a proposed Sunbelt stock transaction at $45.83 per share. Penny

prepared this opinion in one week's time while simultaneously working on and traveling for another project. Penny's opinion used the following valuation approaches (and reached the following valuations): a discounted cash flow analysis ($36.68 per share); an analysis of prior transactions involving Sunbelt stock ($45.83 per share);[6] and an asset-based approach ($33.57 to $37.06 per share). On the basis of these valuations, Penny issued a fairness opinion that $45.83 was a fair price for a share of Sunbelt stock.

J. The August 18, 1997 Board Meeting

On August 18, 1997, Penny presented his fairness opinion to the Sunbelt board. The Sunbelt board then issued two authorizations: first, a call (the "Call") on Goldring's shares per the 1994 Shareholder's Agreement—which specified the Call would be at the WPG Formula—and, second, a freeze-out merger at the same WPG Formula price, or $45.83 as of July 31, 1997. The Merger became effective on August 22, 1997.

K. Litigation Commences

By letter to Sunbelt dated September 9, 1997, Goldring demanded appraisal of her shares under Delaware law. On December 12, 1997, Goldring filed her appraisal action in this Court, seeking a determination of the statutory fair value of her stock on August 22, 1997 plus interest, fees, expenses, and costs arising out of

[6] The earlier transactions were those involved in the July 31, 1997 sale of McKesson's and WPG's shares in Sunbelt, at the WPG Formula price.

the Merger. Nearly two years later, on August 12, 1999, Goldring filed a common law action for breach of fiduciary duty against Sunbelt and defendants, seeking rescission and rescissory damages. The latter filing occurred within weeks of a final decision by the United States District Court for the Southern District of New York that compelled Goldring to participate in arbitration that Sunbelt sought pursuant to the 1994 Shareholder Agreement. I stayed the Delaware proceedings, pending the outcome of arbitration in New York.

The New York arbitration hearing was conducted from October 1, 2001 through October 4, 2001. On December 18, 2001, the arbitration panel held that the Call and the Merger were attempts to eliminate Goldring as a minority shareholder without notice and without legal justification and to obtain her stock at a formula price, and that the Call was neither valid nor supported in law or in fact. The panel also held that it found no persuasive evidence that Goldring had ever promised she would relinquish her shares to Merinoff upon request, at the WPG Formula price or at any other price.

Following the conclusion of the New York arbitration, I lifted the stay on the Delaware proceedings and consolidated Goldring's appraisal action and her common law breach of fiduciary duty action. A three-day trial in the consolidated action was held on April 14, 16, and 17, 2009.

L. Expert Valuations

At trial, I heard testimony from valuation experts for both Goldring and defendants. Goldring's expert was Dr. Richard S. Ruback, the Willard Prescott Smith Professor of Corporate Finance at the Harvard Business School. Defendants' expert was Robert Reilly, a managing director of Willamette Management Associates, which is a valuation consulting, economic analysis, and financial advisory services firm.

Ruback used the following valuation approaches (and reached the following valuations): a discounted cash flow analysis ($114.04 per share)[7] and a comparable transactions analysis ($104.16 per share).[8]

Reilly used the following valuation approaches (and reached the following valuations)[9]: a discounted cash flow analysis ($36.30 per share), an analysis of

[7] This analysis and per-share value are Ruback's corrections to Reilly's own discounted cash flow analysis, to account for what Ruback believes are overstatements in Sunbelt's weighted average cost of capital. The Ruback and Reilly valuation models thus do not differ in terms of the underlying financial inputs. I note that Ruback had prepared an earlier discounted cash flow analysis, which involved corrections to Penny's own discounted cash flow analysis and which valued Sunbelt at $116.77 per share. One source of divergence between this value and $114.04 is the differing amounts for Sunbelt's fully diluted shares outstanding, as applied in the Reilly and Penny analyses.

[8] I will discuss below details relating to two versions of Ruback's comparable transactions analysis. The final operative per-share value, however, is $104.16.

[9] These valuations are described in defendants' post-trial briefs as those based upon Reilly's initial calculations but also "adjusted based upon the trial evidence." Defs.' Post-Trial Br., 62.

earlier transactions involving Sunbelt stock ($45.83 per share),[10] and an asset-based approach ($42.12 per share).

II. ANALYSIS

This case consists of both an entire fairness action[11] and a statutory appraisal action. The dual prongs of entire fairness—fair dealing and fair price—must both be satisfied.[12] Here, defendants bear the burden of demonstrating that the Merger was entirely fair, as they did not "use any of the procedural devices that could temper … the application of the entire fairness standard, such as a special negotiating committee of disinterested and independent directors or a majority-of-the-minority stockholder vote provision."[13] The element of fair price, furthermore, relates closely to the determination of fair value under the Delaware appraisal statute, 8 Del. C. § 262.[14] I therefore begin my analysis by examining briefly the issue of fair dealing and then turn to the related issues of fair price and statutory appraisal. I conclude with an examination of additional considerations, including

[10] The prior transactions were those involved in the July 31, 1997 sale of McKesson's and WPG's shares in Sunbelt, at the WPG Formula price.
[11] The relevant standard of review in this case is entire fairness, as there is no dispute that all defendants stood on both sides of the transaction. *See Kahn v. Lynch Commc'ns Sys., Inc.*, 638 A.2d 1110, 1117 (Del. 1994).
[12] *See Weinberger v. UOP, Inc.*, 457 A.2d 701, 711 (Del. 1983).
[13] *Delaware Open MRI Radiology Assoc. v. Kessler*, 898 A.2d 290, 311 (Del. Ch. 2006).
[14] For additional discussion of this, see *id.* at 312 (noting that the "key issues relevant to each type of claim are common, and the differing rubrics have relatively little influence on the bottom line outcome of the case, which turns on whether the merger was financially fair.").

the shifting of fees and costs, and defendants' motion to strike an exhibit to Goldring's post-trial answering brief.

A. Fair Dealing

The goal of the Merger was to eliminate Goldring as a Sunbelt shareholder for the sole purpose of enabling the Merinoff family to join forces with Young's Market. The various attempts to acquire Goldring's shares in the months and weeks leading up to the Merger, itself ultimately a method of last resort, provide clear evidence of the intent behind the Merger. In their totality, defendants' tactics and approaches were nothing short of strong-armed. Sunbelt board members first communicated directly with Goldring in an attempt to acquire her Sunbelt shares at the WPG Formula price, alleging in a coordinated attack that Goldring had promised to sell her shares back to the Merinoffs upon the simple request from the Merinoffs that she do so. When these efforts bore no fruit, defendants issued the Call on Goldring's shares, which under the terms of the Shareholder Agreement was priced per the WPG Formula. Not surprisingly, the New York arbitration panel ultimately held the Call to be without justification in law or fact. Having foreseen the possibility that a court or arbitration panel may hold the Call to have been unjustified, defendants also approved a squeeze-out merger, devoid of procedural protections, as a final means of forcing Goldring out of the company and obtaining her 15% stake.

The process here was anything but fair. Instead, defendants employed a process that was jerryrigged every step of the way and that was transparent in its goal to eliminate Goldring before a stock swap with Young's Market, and to obtain her stock at the WPG Formula price. The ultimate step in the process, the Merger, included no procedural protections designed to ensure arm's-length bargaining or to approximate a fair valuation procedure. There was no special committee, no opportunity for genuine negotiations regarding the merger consideration, and no dissemination of material information that would level the playing field and prevent Goldring from becoming a drastically disadvantaged minority shareholder. Before the Merger was authorized, defendants obtained a fairness opinion for the proposed merger consideration of $45.83. Yet that fairness opinion itself is highly suspect. It was produced in approximately one week—during which the lead appraiser was busy working on at least one other matter that included a cross-country site visit and, thus, unable to work extensively and meaningfully with Sunbelt representatives—and just before the Sunbelt board meeting at which the board voted to issue the Call and to authorize the Merger. The "fairness opinion" was a mere afterthought, pure window dressing intended by defendants to justify the preordained result of a merger at the Formula price of $45.83 per share. In short, defendants abjured any semblance of a fair process.

B. Fair Value and Statutory Appraisal

The fairness of the Merger price is an analytical question "common to both the entire fairness and appraisal claims."[15] For the purposes of fair value, I will address the claims as one, through an analysis of the various methodologies employed in the parties' determination of Sunbelt's value at the time of the Merger. On the basis of that analysis I will determine which methodologies are most appropriate under Delaware law and in light of the particular circumstances of this case. On that basis, I will then determine the fair value of Sunbelt at the time of the August 22, 1997 Merger.

1. WPG Formula

At the heart of defendants' argument lies the WPG Formula. As discussed above, the WPG Formula determined the per-share price of Sunbelt stock for purposes of stock transactions that occurred between 1994 and 1997 and involved Herman Merinoff and others acquiring the remaining holdings of McKesson and WPG in Sunbelt. Defendants describe the WPG Formula as the outcome of an arm's-length negotiation between sophisticated parties and, thus, relevant under Delaware law as evidence of the fairness of the price Goldring received for her shares in the 1997 Merger, even if the negotiations underlying the Formula occurred in 1994 (three years before the cash-out Merger was even contemplated).

[15] *Id.* at 311.

Goldring asserts that there is no basis to assume the WPG Formula reflects fair value and that defendants' reliance on transactions pursuant to the Formula is circular. Ultimately, I conclude that the WPG Formula price is neither relevant to nor evidence of fair value and, thus, I decline to accord it any weight whatsoever in my determination of Sunbelt's fair value at the time of the Merger.

Defendants are correct in their assessment of the evidentiary import Delaware courts have accorded prior transactions in a company's stock. That import is grounded in the reasoning that the "fact that major shareholders … who had the greatest insight into the value of the company, sold their stock … at the same price paid to the remaining shareholders … powerfully implies that the price received was fair."[16] Additionally, even when provided with the results of expert valuations, a court may find arm's-length negotiations to be the most persuasive evidence of fair value.[17] But the cases to which defendants direct the Court involved transactions very different from the July 31, 1997 Transaction, and those differences are fatal to defendants' argument.

The 1997 Transaction did constitute an exchange of Sunbelt shares for cash, did occur in the weeks leading up to the Merger, and did involve sophisticated

[16] *Cinerama, Inc. v. Technicolor, Inc.*, 663 A.2d 1156, 117 (Del. 1995) (quoting *Cinerama, Inc. v. Technicolor, Inc.*, 663 A.2d 1134, 1143 (Del. Ch. 1994)).
[17] *See, e.g., Prescott Group Small Cap, L.P. v. Coleman Co.*, 2004 WL 2059515, at *32 (Del. Ch. Sept. 8, 2004) (finding that "the most reliable and persuasive evidence of [the company's] fair value at the time of the [merger] is the value of the consideration that was negotiated at arm's length, and that [the acquirer] actually paid, to acquire the controlling interest [in the company] and to cash out the options held by minority shareholders.").

parties, both of which were members of (or had representatives on) Sunbelt's board of directors immediately before the 1997 Transaction. At first blush, these characteristics of the 1997 Transaction make the transaction seem similar in form to other earlier transactions that Delaware courts have examined and weighed when conducting valuation analyses. Yet this description of the 1997 Transaction does not reveal the key fact that the terms of the transaction were controlled by an agreement negotiated and signed *three years earlier*, in 1994, rather than the results of negotiations that occurred immediately before (or contemporaneously with) the Merger. The latter is the type of transaction that this Court has considered as relevant evidence to the question of fair value. The former is not.

There is no bright-line rule relating to the maximum length of time that may occur between an earlier transaction and a cash-out merger before the Court discounts the weight of the earlier transaction as evidence of fair value. Given the unusual circumstances here and the nature of this particular business, however, I conclude that three years is far too wide a gap between the two events. Defendants present what they describe as an "extensive record which establishes that the 1994 Transaction (whereby the Merinoff interest became shareholders in Sunbelt) and the WPG Formula (used to price subsequent stock purchases) were the result of hard, arm's-length negotiations between knowledgeable, financially sophisticated

parties each seeking to maximize their economic self-interests."[18] Those negotiations may have been hard and at arm's length, and the parties to them may have been knowledgeable and sophisticated, but what contractual terms the parties were willing to agree to in 1994 may be—and likely are—very different from the contractual terms that the parties would agree to in 1997, let alone different from the fair value of Sunbelt in 1997 as determined by the valuation techniques Delaware courts most frequently apply.

Defendants ask the Court to bridge the gap between 1994 and 1997 by considering the following question: if Sunbelt's 1997 fair value actually was anywhere close to the value Goldring ascribes to it, why would sophisticated investors such as McKesson, Pfister, and WPG agree to accept $45.83 per share in the sale of their remaining Sunbelt shares? According to defendants, "Pfister, WPG, and McKesson would not have been content to walk away from the many millions of dollars"[19] that adherence to the WPG Formula in effect would have denied them, even if it is the case, as defendants predict Goldring would assert, "that the sellers were contractually obligated to accept [the WPG Formula] price."[20] Furthermore, McKesson had a seat on Sunbelt's board until the sale of its last remaining shares in Sunbelt, which meant McKesson was in a position to have

[18] Defs.' Post-Trial Br., 8.
[19] *Id.* at 19.
[20] *Id.*

great insight into the value of Sunbelt and to gauge if over the course of three years there had grown to be a significant difference between: 1) the value of the company and 2) the share price as determined by the WPG Formula. But it is not up to me to gauge how effectively McKesson used whatever insight its board position provided it between 1994 and 1997. Nor am I entitled to speculate about the possible motivations of McKesson, Pfister, or WPG when they negotiated the terms of their exit strategy in 1994.[21] Ultimately, however, I am not persuaded by (nor do I find credible) any of the evidence offered by defendants that I should accept the valuation of Sunbelt that interested parties had struck *over three years before* defendants decided to cash out Goldring. It was defendants' burden to persuade me to accept the Formula as a proxy for Sunbelt's value, and they failed to meet their burden.

Despite my strong hesitation to accept the 1997 Transaction as evidence relevant to a determination of fair value, there are additional reasons to examine

[21] Nor can I determine the motivations of these individuals and groups at the time they negotiated and signed the 1994 Agreement. As noted above, Sunbelt describes those motivations as involving the maximization of economic interests. Goldring counters with a description of other motivations that may have guided the final decisions of the private-equity investors, even if those decisions resulted in a failure to maximize the value of their shares in Sunbelt as part of the transactions pursuant to the 1994 Agreement. These other potential motivations include ensuring a sufficient return on investment (rather than pure maximization of returns, or gauging returns in the same way Delaware courts determine fair value) or employing exit strategies based more on a strict time schedule rather than on returns on investment (for example, holding assets in a company or industry for no more than five to seven years). In deciding to what extent, if any, to weigh the WPG Formula in my determination of Sunbelt's fair value at the time of the Merger, I need not determine what motivations (or balance of motivations) guided those who were parties to the 1994 Agreement.

the WPG Formula more closely.[22] In short, although I believe the Formula is unreliable for the reason stated earlier, I nonetheless will examine the specific nature of the Formula.

Even a brief examination of that specific nature leads me to believe that the WPG Formula should not be used to determine fair value in this proceeding. First, the WPG Formula relies too heavily on the book value of Sunbelt,[23] provides a premium reliant solely on the company's net income in the two years preceding any Formula-based transaction,[24] and does not adequately incorporate the influence of intangibles and good will on the company's value.[25]

---

[22] Goldring alleges that the WPG Formula in fact is the driving force behind Sunbelt's other valuation approaches, and has tainted the methodological integrity of those other approaches. I need not examine the connection between the WPG Formula and the results of Sunbelt's other valuation analyses, as there are independent reasons for rejecting those analyses.

[23] I do not believe Sunbelt to be a company in an industry—wholesale alcohol distribution—whose characteristics merit much, if any, use of book value in a determination of a company's fair value. Companies in this industry rely chiefly on agreements and good relationships with suppliers to conduct their primary business: moving and selling alcohol. Contrast this industry with one based primarily on natural resources or the intense reliance on physical, long-term assets, such as the coal or steel industry. Companies in the latter industries derive far more value from the use and maintenance of their physical assets, thus arguably justifying valuation driven by book value. Sunbelt, however, does not. It is for this reason that I also do not accord weight to Reilly's asset-based valuation approach, and decline to provide here a detailed discussion of that approach's specific findings. For an example of a context in which an asset-based approach is more appropriate, see *Neal v. Alabama By-Products Corp.*, 1990 WL 109243 (Del. Ch. Aug. 1, 1990), *aff'd*, 588 A.2d 255 (Del. 1991).

[24] Although I recognize that this premium did enable Pfister, WPG, and McKesson to realize some of any increases in Sunbelt's profitability that occurred while they remained Sunbelt shareholders, I do not believe a premium based on tax-adjusted net income adequately captures all elements of fair value to which a Sunbelt shareholder, or a former shareholder now contesting the Merger price, is entitled under Delaware law.

[25] As already noted, *see supra* note 23, Sunbelt is a company that relies heavily on agreements and good relationships with suppliers. Sunbelt's reputation in the industry, dependent in part on the names and reputations of the individuals who were shareholders in Sunbelt, is an intangible

Ruback's own quantitative examination of the WPG Formula also gives me pause, even beyond the complaint that the Formula does not calculate what the Court should accept as an indication of fair value. For example, Ruback compared the market capitalization of twelve public companies in SIC Code 514[26] to the value of those companies as calculated by the WPG Formula. On average, the WPG Formula valued these twelve public companies *three times less* than their market capitalizations.[27] Although I recognize that market capitalization is not necessarily—and most likely is not—strictly equivalent to fair value and that the efficient markets hypothesis has received due criticism, I also believe a consistent and drastic undervaluing of companies relative to their market capitalization in liquid equity markets strongly implies that the WPG Formula is valuing something very different from fair value. Furthermore, it is reasonable to expect that the WPG Formula would reach similar, even if not identical, results for a collection of companies outside SIC Code 514. If this Court and its valuation methodologies had, in the past, reliably and consistently determined the fair value of public

---

asset. So too are the various agreements Sunbelt has with suppliers, even if those agreements can be canceled at a moment's notice, and particularly if the agreements are less likely to be canceled given Sunbelt's reputation in the industry and any enhancements to that reputation over time, however derived. The WPG Formula excludes these and other intangibles and, thus, fails to capture what I believe to be a significant source of value to Sunbelt, its operations, and its shareholders.

[26] As described in Ruback's expert rebuttal report, SIC Code 514 "includes wholesalers of groceries and related products, the industry with publicly traded firms most comparable to wholesalers of beverage alcohol, which are not publicly traded."

[27] Pl.'s Post-Trial Br., 56.

companies to be one-third of their market capitalization, I might have less concern about valuations using the WPG Formula. Defendants have not, however, provided any credible evidence that this Court's decisions and valuations suggest public securities markets systematically value companies at *three times their fair value*.

Perhaps with complete indifference to the evidence that the WPG Formula calculates the values of companies to be far lower than the value as determined by liquid securities markets, defendants ask the Court to consider the fact that Goldring "agreed that the WPG Formula would be utilized as a pricing mechanism for Sunbelt's option to purchase all of [her] shares (or [her] option to sell [her] shares) upon certain triggering events."[28] Defendants assert that "[w]hile these options are triggered by certain specific circumstances, if there were a chance any of those might occur, it is reasonable and appropriate to conclude that [Goldring] took pains to ensure [she] would receive a fair price for [her] Sunbelt shares."[29] This argument, however, has no legal relevance in the context of an appraisal proceeding. For one thing, there simply are too many variables that can change over the course of three years' time and over the shift in factual and legal contexts from the pricing of a put/call option—which is subject to a variety of triggering

[28] Defs.' Post-Trial Br., 16. This agreement occurred as part of the 1994 Shareholders Agreement.
[29] *Id.* at 18.

events—to the determination of fair value. In 1994, Goldring agreed to a valuation methodology in the event of a valid put or call. But no valid put or call ever occurred. Thus, the agreement has absolutely no relation to Goldring's statutory appraisal rights or to the accompanying valuation methodologies to which Goldring is now entitled under Delaware law.

The WPG Formula may have guided an unrelated transaction that occurred in the weeks before the Merger, but it was the result of an agreement negotiated and signed *three years before the Merger*. Given the potential for change in circumstances affecting Sunbelt's valuation over those three years, as well as the specific nature of the Formula and evidence that suggests the Formula tends to undervalue companies quite significantly, I attach no weight to the WPG Formula in my determination of Sunbelt's fair value at the time of the Merger.

2. Comparable Transactions Analysis

Defendants attack Ruback's comparable transactions analysis in its entirety, on the grounds that the analysis is flawed both methodologically and factually. Goldring proposes that I weigh Ruback's comparable transactions analysis as 50% of my final determination, though it is unclear if Goldring's proposal relates to Ruback's original analysis or his adjusted analysis.[30] For reasons I briefly describe

[30] Reilly indicated that Ruback's original comparables analysis did not account for the potential upwards impact of synergies on the pricing of the comparable transactions and, thus, the analysis's calculation of $149.69 per share may have been an overvaluation. Ruback responded

below, I believe it is most appropriate to accord no weight to either of Ruback's comparable transactions analyses.

The clash on comparables plays out on the field of fact rather than on the landscape of law. Goldring correctly notes that Delaware courts have used the comparable transactions approach when determining the fair value of companies,[31] and defendants are correct that Delaware courts have expressed reservations when using the approach[32] and that "the burden of proof on the question whether the comparables are truly comparable lie with the party making that assertion."[33] The parties do not appear to disagree on the relevant law. Here, the question turns on whether the companies involved in the transactions that underlie Ruback's analysis are sufficiently comparable to Sunbelt to merit inclusion of the transactions and thus to inspire confidence in the results of Ruback's comparables analysis. The inquiry also depends on whether certain aspects of Ruback's methodology

---

by explaining his views that synergies likely did not influence the valuation upwards, yet he still completed an adjusted comparable transactions analysis that did account for the possibility that the comparable transactions were valued higher in anticipation of realizing synergies. Ruback's adjusted analysis resulted in an average per-share value of Sunbelt of $104.16.

[31] *See, e.g.*, *Dobler v. Montgomery Cellular Holding Co.*, 2004 WL 2271592 (Del. Ch. Sept. 30, 2004), *aff'd*, 880 A.2d 206 (Del. 2005) (affirming the Chancery Court's decision to give 65% weight to a comparable transactions analysis).

[32] *See, e.g.*, *Kleinwort Benson Ltd. v. Silgan Corp.*, 1995 WL 376911, at *4 (Del. Ch. June 15, 1995) (determining that a merger and acquisition analysis was unhelpful for appraising the going concern value of a company, given that the "merger and acquisition data undoubtedly contain[ed] post-merger value, such as synergies with the acquirer, that must be excluded from appraisal value.").

[33] *ONTI, Inc. v. Integra Bank*, 751 A.2d 904, 916 (Del. Ch. May 26, 1999).

sufficiently compensate for concerns the Court may have regarding the suitability of specific elements of transactions Ruback used in his analysis.

I do have doubts about the comparability of the companies included in Ruback's analysis. These doubts are driven by the differences in size between the comparables and Sunbelt,[34] as well as the differences across product lines and geography, both of which stand to introduce differences across regulatory regimes. Furthermore, the companies were all privately held in a tightly controlled market. I am hesitant to examine what apparently are personality-driven transactions in a private market and to use the terms of those transactions to project what the value of another transaction should be.[35] When faced with these concerns, it is important to be particularly diligent about selecting companies and transactions that are as comparable as possible to the company in question. Ultimately, I am skeptical that Ruback's analysis achieved sufficient comparability, which alone is a basis for me to reject it as a reliable indicator of fair value.

Beyond the question of company comparability lie issues relating to methodology. Even if the companies themselves were more comparable to Sunbelt

[34] Ruback testified that due to economies of scale, Sunbelt's large size relative to the companies in the comparable transactions may mean a multiple should be *larger* for Sunbelt than for the comparables and, thus, the small size of the comparables relative to Sunbelt should not be a concern.

[35] Ruback also testified that the specific facts of the transactions in his comparables analysis suggest the terms of those transactions heavily favored the acquirers and, thus, that the sale prices may have been lower than the true values of the companies. This would result in artificially low calculations of the transaction multiples.

than I am willing to find, Ruback failed to account for important elements of specific transactions that stood to influence the accuracy of his calculations. Two examples of these elements are the transactions' inclusions of real-estate payments and post-closing price adjustments. Defendants assert that Ruback's analysis includes these failures and many other discrepancies. In response, Ruback noted that he could not estimate the impact of any such discrepancies without further studying the specific terms of the transactions, and that ultimately he relied on his use of the median multiple approach to compensate for any shortcomings related to specific companies or transactions. Although I do not agree with defendants that Ruback's comments were "academic doubletalk,"[36] I am not willing to rely on the employment of a median multiple approach as a justification for ignoring several known deficiencies in facts and methodology. The median multiple approach is at its best when it smooths out unknown or immeasurable sources of difference and error in an analysis. When, as appears to be the case here, there are known and measurable variations or errors in an already small sample size, the median multiple approach cannot be the sole justification for a failure to account for such variations or errors. That approach may help here to some extent with smoothing,

[36] Defs.' Post-Trial Answering Br., 41. Methodological issues aside, I believe Ruback's testimony was, in general, quite nuanced, and that nuances are what many academics bear in mind when providing expert testimony. And strict etymology aside, I was not impressed with defense counsel's efforts to characterize an appreciation for nuance as an adherence to Orwellian practices.

but I do not find it sufficient to inspire confidence in according weight to the comparable transactions analysis in my determination of Sunbelt's fair value.

There are a number of disputes about the factual and methodological bases of Ruback's comparable transactions analysis. Some of these bases may have increased the calculated values of Sunbelt, and others may have decreased it. It is unclear what resolution of those disputes would do, on balance, to the comparables calculation, but it is clear that neither party has provided me with the information required to independently address the issues with quantitative and methodological confidence. I could accept Ruback's comparables calculation as a Goldilocks valuation, nestled comfortably between valuations potentially above and below $104.16. Or I could attach partial weight to the comparable analysis in my final determination of Sunbelt's value, reflecting a marginal confidence that Ruback's comparables calculation hits somewhere in the vicinity of Sunbelt's fair value, even if it misses high or low. Given the clear shortcomings in Ruback's comparables analysis, however, I decline to do either. Instead, I attach no weight to Ruback's comparables analysis.

3. Discounted Cash Flow Analyses

The parties disagree on two components that significantly guide the results of their experts' respective discounted cash flow analyses: the appropriate level of the small-firm risk premium, and the propriety of including any kind of company-

specific risk premium. I will analyze these two components as they relate to the facts of this case and then briefly assess the legal basis for adjusting the value of Sunbelt to account for its post-Merger conversion to S-corporation status.

a. Small-Firm Risk Premium

The parties agree on the propriety of including a small-firm risk premium in the discounted cash flow analysis. The appropriate value of the premium, however, is a point of stout contention.

Both parties claim their respective experts followed the instructions of Ibbotson Associates ("Ibbotson")[37] when selecting the appropriate value of the small-firm risk premium. Ibbotson provides a table of the premium values that correspond to the deciles of company size as measured by market capitalization. The relationship between company size and premium value is inverse; that is, the larger a company's market capitalization, the smaller the corresponding risk premium. Ruback selected a premium of 3.47%, which is the value Ibbotson indicates should be used for micro-cap companies whose equity capitalization is at or below $201,169,500, or in the ninth and tenth deciles of equity capitalization on the New York Stock Exchange. Reilly, however, selected a premium of 5.78%,

[37] According to their website, Ibbotson Associates is "a leading authority on asset allocation with expertise in capital market expectations and portfolio implementation." Ibbotson Associates, Overview, http://corporate.morningstar.com/ib/asp/subject.aspx?xmlfile=1383.xml (last visited Dec. 18, 2009). In Delaware appraisal actions, valuation experts and this Court often rely on the data and guidance provided by Ibbotson.

which is the value Ibbotson measures as the size premium for companies in the tenth decile of equity capitalization on the New York Stock Exchange.

The divergence in Ruback and Reilly's selection of risk premiums presents the Court with two questions: what is the market capitalization of Sunbelt and the corresponding decile for that market capitalization, and what is the appropriate Ibbotson premium to use in a discounted cash flow analysis of Sunbelt, given that Ibbotson lists premiums for individual deciles as well as premiums for groups of deciles?

The first question poses an issue of circularity. The Ibbotson table assumes one already knows or has an estimate of a company's market capitalization. Based on that knowledge or estimate, one can determine which decile the company falls into and then select the corresponding premium from the Ibbotson table. But when the very issue in dispute is the value of the company itself and when a discounted cash flow analysis is a proposed means for resolving the dispute, the appropriate risk premium cannot be taken as exogenous. That is, a discounted cash flow analysis both *values* the size of a company (and thus points to the appropriate Ibbotson premium to use) and *relies* on the appropriate Ibbotson premium to determine the value of the company. This process is circular; which should come first, the valuation of the company or the selection of the Ibbotson risk premium?

Ruback's selection of a 3.47% premium ensures a larger calculated equity capitalization (and thus a company perhaps deserving of the 3.47% premium) than Reilly's selection of a 5.78% premium (which in turn ensures a smaller calculated equity capitalization and, thus, one perhaps deserving of the 5.78% premium). Reilly goes as far as to say that because his selection of a 5.78% premium results in a valuation that places Sunbelt in the tenth decile—the decile with a corresponding premium of 5.78%—I should take this as evidence that the 5.78% premium is appropriate. I cannot accept this asserted mathematical proof and proposed flow of causality. It is methodologically problematic to rely on a discounted cash flow analysis to determine the Ibbotson risk premium appropriate to use in the discounted cash flow analysis. There must be some independent basis or value[38] used for determining the propriety of applying a risk premium from the Ibbotson table, particularly when, as appears to be the situation here, the company's valuation may actually place the company close to the line between deciles.

[38] *See, e.g.*, *In re Emerging Commc'ns, Inc. S'holders Litig.*, 2004 WL 1305745, at *18-19 (Del. Ch. May 3, 2004) (acknowledging the possibility of employing an iterative process involving an independent valuation to overcome a circularity problem (in calculating the weighted average cost of capital), but ultimately: 1) rejecting both experts' assumed enterprise valuations; 2) finding that "the only sensible way (in the Court's view) to avoid the circularity … is to use an enterprise valuation of [the company] that is not litigation-drive"; and 3) declining to employ the iterative process and instead selecting independent estimates of both the company's enterprise value and the company's debt-to-value ratio); *Cede & Co. v. JRC Acquisition Corp.*, 2004 WL 286963 (Del. Ch. Feb. 10, 2004) (finding that the record did not support the methodology of using implied fair value (that is, a non-independent basis) to determine the appropriate equity size premium to select from the Ibbotson tables).

Each party's argument provides me with an option for circumventing this methodological problem. Defendants point to the result of Ruback's own comparable transactions analysis[39]—which calculates a value for Sunbelt that would place the company in the tenth decile—as a basis for selecting the tenth-decile premium of 5.78%. Although this calculation is one independent of a discounted cash flow analysis and thus could provide a basis for selecting a small-firm risk premium from the Ibbotson table, I prefer the option presented by Goldring and employed by Ruback: follow the strict language Ibbotson used to describe how it adjusted for small-firm premiums in its own publication, and apply a premium of 3.47% for companies in the ninth or tenth deciles.[40] This approach also helps to answer the second question posed above, that relating to whether to apply a risk premium from an individual decile or one assigned to a composite of deciles. According to Ibbotson, the 3.47% premium is a weighted balance between the ninth-decile premium of 2.65% and the tenth-decile premium of 5.78%. Given the uncertainty in Sunbelt's own value and whether Sunbelt falls on the smaller or larger side of the line between the ninth and tenth deciles, I believe it is more

[39] The analysis to which Sunbelt points is Ruback's adjusted comparable transaction analysis, which calculated an average per-share value of Sunbelt of $104.16.

[40] I elect not to use the comparable transactions analysis as a basis for determining the appropriate Ibbotson risk premium. As discussed earlier, I have several concerns about the methodology and factual information underlying the comparables analysis and, consequently, I will not factor the comparables analysis into my valuation of Sunbelt. It, therefore, is most appropriate not to rely on the comparables analysis's valuation of Sunbelt as a basis for determining the appropriate Ibbotson risk premium to use in a discounted cash flow analysis.

appropriate to select 3.47%, a small-firm risk premium that accounts for the possibility that the company is on either side of the line and that Ibbotson itself seems to have applied to all firms within (or between) the ninth and tenth deciles.

b. Company-Specific Risk Premium

In an appraisal action, "the proponent of a company specific premium bears the burden of convincing the Court of the premium's appropriateness."[41] Defendants accept this burden and point the Court to cases in which the Court has deemed a company-specific risk premium to be appropriate.[42] Yet as Vice Chancellor Strine explained in one of the cases defendants cited, even though courts may approve the use of these premiums, "[t]o judges, the company specific risk premium often seems like the device experts employ to bring their final results in line with their clients' objectives, when other valuation inputs fail to do the trick."[43] Proponents of a company-specific risk premium thus not only bear a burden of proof but also must overcome some level of baseline skepticism founded upon judges' observations over time of how parties have employed the quantitative

[41] *Hintmann v. Fred Weber, Inc.*, 1998 WL 83052, at *5 (Del. Ch. Feb. 17, 1998).
[42] *See, e.g.*, *Delaware Open MRI Radiology Assoc. P.A. v. Kessler*, 898 A.2d 290, 340-41 (Del. Ch. 2006) (declining to "quibble" with including a company-specific risk premium, and ultimately selecting the more conservative of the two premiums the parties presented); *Henke v. Trilithic Inc.*, 2005 WL 2899677, at *10 (Del. Ch. Oct. 28, 2005) (agreeing that an upwards adjustment to account for company-specific risk was appropriate); *Lane v. Cancer Treatment Ctrs. Of Am., Inc.*, 2004 WL 1752847, at *30-31 (Del. Ch. July 30, 2004) (accepting adjustments for company-specific risk); *ONTI, Inc. v. Integra Bank*, 751 A.2d. 904, 919-20 (Del. Ch. 1999) (applying a company-specific risk premium yet reducing the suggested value thereof after finding that not all risks outlined by valuation experts were risks specific only to the company).
[43] *Delaware Open MRI*, 898 A.2d at 339.

tool of a company-specific risk premium. Here, defendants have completely failed to clear this hurdle. I believe the use of a company-specific risk premium in this case is unwarranted.

Defendants offer three primary justifications for including a company-specific risk premium: (1) the at-will termination of supplier agreements that prevails throughout the wholesale alcohol distribution industry; (2) the competition Sunbelt faces from specific players such as Southern Wine & Spirits; and (3) the level of optimism contained in Sunbelt's management projections.[44]

I conclude that none of these justifications merits inclusion of a company-specific risk premium for Sunbelt. The first and second justifications clearly relate to the industry as a whole, rather than specifically to Sunbelt.[45] In the absence of defendants showing why Sunbelt *specifically* faces these first two risks in a manner greater than other industry players, I must rely on defendants' own description of

[44] *See* Defs.' Post-Trial Br., 31-41.

[45] Indeed, it is entirely possible that these first two factors pose *less* of a risk to Sunbelt than they do to other companies. Sunbelt's market size and presence could decrease the risk that a supplier would choose to terminate an agreement and in doing so lose the potential benefits of a relatively large distribution channel. Likewise, Sunbelt's size and presence could decrease the threat of a competitor cherry-picking a supplier from Sunbelt's portfolio, if the competitor believes Sunbelt would be more likely to respond or more likely to respond effectively than would a smaller competitor. Of course, Sunbelt's size could also open it up to greater risks and threats, if suppliers in this industry have an aversion to working with larger or more experienced companies, or if competitors believe a larger portfolio means cherry-picking would feel to Sunbelt more like a prick than a stab and, thus, would be less likely to elicit retaliation. The actual risks Sunbelt faces relative to its competitors are a matter of empirics. Sunbelt both fails to provide evidence demonstrating why the risks it faces are different from those its competitors face, and fails to persuade me that any differences in risk actually find Sunbelt in a more precarious position than are other companies in the industry.

these "unique risks in the alcoholic beverage wholesale industry"[46] as simply that—risks to everyone in the industry, not only to Sunbelt. As a result, these are not risks that merit inclusion of a company-specific risk premium.

I also believe Sunbelt's management projections to be an inappropriate basis for inclusion of a company-specific risk premium. First and foremost, I see no evidence, persuasive or otherwise, that at the time they were developed management projections were excessively or generously optimistic. Defendants thus have failed to meet their evidentiary burden to demonstrate to me that it was riskier for Sunbelt to rely on its specific management projections than it is for all companies to rely on management projections. Furthermore, even had defendants met that burden, I am skeptical that a company-specific risk premium is an appropriate response to optimistic management projections. It is not clear to me how one would or should value the appropriate company-specific risk premium to use as an adjustment for such projections. Also, this risk adjustment certainly would not be without its own irony. I do not believe a company should be able to manufacture justification for a company-specific risk premium (and all the quantitative uncertainty accompanied therewith) simply by adjusting its management projections such that there is a heightened risk in relying on those projections, no matter how unique that risk-thirsty practice may be to the company.

[46] Defs.' Post-Trial Br., 31.

The present case demonstrates another critical consideration in evaluating the propriety of a company-specific risk premium. Even if I were to have found persuasive the arguments defendants have made for inclusion of a company-specific risk premium, I would be especially skeptical of the 3% risk premium which defendants advocate. Reilly has provided no specific, quantitative explanation for why 3% is the appropriate level for a company-specific risk premium. It is important for any proposed company-specific risk premium to be based on a specific financial analysis, so that the Court can verify both the propriety of including the risk premium and the appropriate level of the premium.[47]

Defendants have failed to meet their burden to demonstrate why Sunbelt faces company-specific risks rather than risks faced by all companies in its industry and thus why valuations of the company merit inclusion of a company-specific risk premium. They also have failed to provide a rigorous, quantitative explanation for why their proposed company-specific risk premium of 3% is an appropriate discount. Accordingly, I make no adjustments to a calculation of Sunbelt's fair value on the basis of company-specific risks.

[47] *See, e.g., Gesoff v. IIC Industries, Inc.*, 902 A.2d 1130, 1158-59 (Del. Ch. 2006) (noting that the valuation expert's "application of the [company-specific risk premium] was based almost entirely on his subjective beliefs as to the correct discount rate," that the expert was "unable, crucially, to point to specific financial analyses on which the court could rely to derive such a discount," and that although the calculation of a company-specific risk premium inherently involves some level of subjectivity, the expert's analysis was "unmoored to any objective financial analysis the court can reasonably evaluate, and thus cannot be the basis of what are, in aggregate, substantial discounts to [the company's] fair value.").

c. Subchapter S Conversion

Both parties adjusted their respective valuations to take into account the effect of a conversion in Sunbelt to Subchapter S status, a 26% increase in the company's value, as calculated by Reilly and later accepted by Goldring. Though it may seem unusual for a court to interfere with rare harmony in opposing parties' valuation methodologies,[48] I now must do just that, for the parties have, in my view, failed to apply a fundamental principle of Delaware appraisal law.

As noted above, it is well settled that "[t]he basic concept of value under the appraisal statute is that the stockholder is entitled to be paid for that which has been taken from him"[49] or her, and that "speculative elements of value that may arise from the 'accomplishment or expectation' of the merger are excluded."[50] Goldring owned shares in a C corporation, and those shares were taken from her. Further, it may be inaccurate even to describe Sunbelt's conversion to S-corporation status as an "accomplishment" or "expectation" of the Merger itself, for the Merger was only one part of a broader corporate reorganization plan that included a post-merger conversion to S-corporation status. Yet however one

[48] Sunbelt argues in its post-trial briefs that there should be no adjustment in the value of Sunbelt for its conversion to S-corporation status. This argument arises now, despite the fact that Sunbelt had already instructed Reilly to adjust the results of his discounted cash flow valuation to account for potential enhancements in the value of Sunbelt stock after Sunbelt's post-Merger conversion to S-corporation status. Following Sunbelt's instructions yet despite his own objection to the propriety of the adjustment, Reilly increased his valuation by 26%, and Goldring saw no reason to refrain from following suit.
[49] *Tri-Continental Corp. v. Battye*, 74 A.2d 71, 72 (Del. 1950).
[50] *Weinberger v. UOP, Inc.*, 457 A.2d 701, 713 (Del. 1983).

describes Sunbelt's conversion to S-corporation status in the context of the corporate reorganization, Goldring never held nor ever would have held Sunbelt shares at the time it was an S corporation. She was cashed out as a shareholder in a C corporation.

Accordingly, I conclude that there is no basis for an upwards adjustment of the per-share value of Sunbelt on the basis of Sunbelt's post-merger conversion to an S corporation.[51] Consequently, I will not accord weight to valuation calculations that have incorporated an adjustment on the basis of Sunbelt's S-corporation conversion.

[51] Sunbelt explains its issuance of the instruction as a response to inquiries from Goldring's counsel, during depositions, about the potential impact of S-corporation conversion, though a 26% increase in Reilly's calculations is a most generous response to mere inquiries during depositions. I also wonder to what extent generosity and methodological flexibility—whether benefiting Sunbelt or not—may underlie other aspects of Sunbelt's valuations and arguments. Strictly in terms of the issue of S-corporation status, however, I need not explore the issues of generosity and flexibility or the question of why Sunbelt's position appears inconsistent. Nor do I need to examine Sunbelt's new argument against adjustment on the basis of S-corporation status, which is not an argument based on law but rather one of complete conjecture: the specific level of distributions Sunbelt may or may not make to its shareholders and thus the value those shareholders may or may not enjoy as a result of Sunbelt's status as an S corporation. Goldring correctly notes that the Court in *Delaware Open MRI* did not accept such conjecture, though Goldring fails to distinguish that Delaware Open MRI, unlike Sunbelt, was an S corporation *at the time of its merger*. Delaware Open MRI's pre-merger status as an S corporation is what entitled the minority shareholders in that case to a valuation incorporating the future benefits of being a shareholder in an S corporation. No matter what level of distributions Sunbelt ultimately elected to provide its shareholders after the Merger, Delaware law clearly excludes from the valuation of Goldring's shares any enhanced value stemming from Sunbelt's post-Merger conversion to S-corporation status.

4. Court's Valuation of Sunbelt and Determination of Appropriate Remedy

Because I have rejected Ruback's comparable transactions analysis, the WPG Formula, and adjustments based on Sunbelt's post-merger conversion to S-corporation status, I will value Sunbelt using the experts' discounted cash flow methodology. In doing so, I draw on the financial inputs as provided by Sunbelt and agreed upon by the valuation experts, and I use the discount rates employed by Ruback. Applying this methodology, I determine that the fair value of Sunbelt at the time of the 1997 Merger was $114.04 per share.

This determination represents fair value, will fully and fairly compensate Goldring, and suffers from none of the practical problems that afflict Goldring's proposed rescission remedy. The rescissory damages Goldring requests would require the Court to carve out approximately 15% of Sunbelt's distribution portfolio to reflect the 15% stake Goldring held in Sunbelt at the time of the Merger. Goldring suggests the distribution market of Arizona or Maryland as an example of an appropriate state market for the Court to carve out and award to her as "rescissory damages." I do not believe, however, that rescissory damages are appropriate in this case. Any such award would present significant issues related to complexity and implementation, not the least of which would find the Court engaged in another valuation analysis. I would first have to determine what valuation metric is most appropriate to use in seeking to identify 15% of Sunbelt's

portfolio, and I would then have to determine the period of time over which to value the company. Both of these elements, as well as others, pose an issue of arbitrariness, and certainly would not guarantee an award that accurately reflects 15% of Sunbelt's portfolio as of the Merger date, particularly given the ever-changing system of overlapping and tiered regulations in which an alcohol distributor such as Sunbelt operates. Simply put, Sunbelt and its business portfolio are too complex to unscramble and, ultimately, rescission is an equitable remedy that a court of equity will only grant, as an exercise of discretion, when that remedy is clearly warranted.[52] Here, given practical difficulties in crafting rescissory relief and the fact that $114.04 per share in money damages is a clearly adequate substitute remedy, I decline to award rescissory damages

C. Additional Considerations

1. Fees and Costs

Goldring seeks a shifting of attorney fees and costs in her favor.[53] Defendants oppose any such shift and propose that any shifting of fees should be in Sunbelt's favor.[54] I award to Goldring all court costs and expert witness fees that

[52] *See, e.g., Weinberger v. UOP, Inc.*, 457 A.2d 701, 714 (Del. 1983) (outlining examples of circumstances under which "the Chancellor's powers are complete to fashion any form of equitable and monetary relief as may be appropriate, including rescissory damages.").
[53] Pl.'s Post-Trial Br., 48.
[54] Defs.' Post-Trial Answering Br., 45 ("Given the evidence in this case of Mr. Goldring's ever-changing testimony at trial and Professor Ruback's cavalier approach to his expert obligations, if there is to be any fee-shifting in this case, it should be in favor of Sunbelt.").

she incurred in the process of litigating this consolidated action, but I decline to shift attorneys' fees.

It is within my discretion to determine costs of the proceedings and to tax the costs "upon the parties as the Court deems equitable in the circumstances."[55] In the present circumstances and on the basis of my analysis of defendants' conduct, I believe it is most equitable for defendants to pay the court costs Goldring incurred during the course of litigation. Likewise, I award Goldring all costs incurred in association with the testimony and preparation of her expert witness valuations.[56] The expert fees total $841,763, an amount that defendants have objected to as unreasonable both in the timing and activities upon which the fees were based.[57] Nevertheless, I have rejected defendants' objection, principally on the ground that a litigant who has paid fees at a time when it was uncertain the fees would be recovered is evidence of the fees' reasonableness.[58] In addition, after reviewing the fees, I have independently determined that they are reasonable

[55] 8 *Del. C.* § 262(j).
[56] *See* 10 *Del. C.* § 8906 ("[F]ees for witnesses testifying as experts … in cases in … the Court of Chancery … shall be fixed by the court in its discretion [and] taxed as part of the costs in each case and shall be collected and paid as other witness fees are now collected and paid."). *See also Dobler v. Montgomery Cellular Holding Co., Inc.*, 2002 WL 31112195 (Del. Ch. Aug. 29, 2002) (awarding expert costs on the basis of the discretion that 10 *Del. C.* § 8906 provides the Court).
[57] Defendants did not use the word "concern" or "objection" in their November 20, 2009 letter, but I believe it appropriate to accept defendants' letter as one expressing concern and objection over the total and source of the fees.
[58] *See, e.g.*, *Arbitrium (Cayman Islands) Handels AG v. Johnston*, 1998 WL 155550, at *2 (Del. Ch. Mar. 30, 1998) (determining fees to be reasonable, in part on the consideration that litigant had paid fees even though it was unclear if fee recovery would be possible later in the proceedings), *aff'd*, 720 A.2d 542 (Del. 1998).

for complex and hard fought litigation involving difficult valuation issues. Accordingly, I award Goldring $841,763 in expert fees.

I agree with defendants' analysis on the issue of shifting attorney fees: "to constitute bad faith [and thus warrant shifting of attorney fees contrary to the American Rule], the defendants' action must rise to a high level of egregiousness."[59] Here, I cannot find defendants' actions to be of the egregious, vexatious, or bad-faith sort that have merited the shifting of attorney fees in earlier cases.[60] Most notably, although I acknowledge many of the similarities Goldring identifies between the present matter and *Montgomery Cellular Holding Co. v. Dobler*,[61] I believe defendants' reliance on the transactions priced at the WPG Formula was sufficiently reasoned to preclude a finding that there was no legal issue in this case upon which reasonable parties could differ. That is, parties could and did reasonably differ on the legal import of the WPG Formula. The WPG Formula ultimately may have had no weight in my valuation analysis and may

[59] *Judge v. City of Rehoboth Beach*, 1994 WL 198700, at *2 (Del. Ch. Apr. 29, 1994).
[60] *See, e.g.*, *Arbitrium (Cayman Islands) Handels AG v. Johnston*, 705 A.2d 225 (Del. Ch. 1997) (finding that defendants acted in bad faith by, *inter alia*, opposing the action despite their knowledge that plaintiff's claim to majority shareholder status was valid and altering testimony, changing positions repeatedly, and falsifying evidence at trial), *aff'd*, 720 A.2d 542 (Del. 1998); *Abex Inc. v. Koll Real Estate Group, Inc.*, 1994 WL 728827, at *20 (Del. Ch. Dec. 22, 1994) (describing the case as one contrary to "a defendant resist[ing] a contractual liability on grounds as to which reasonable men could differ" and the defendant as having operated in bad faith via having "contest[ed] liability, threaten[ed] litigation, and force[d] plaintiffs to prosecute this action and litigate defenses that had no factual or legal merit.").
[61] 880 A.2d 206, 228 (Del. 2005) (upholding a Court of Chancery decision to award attorney fees on the basis of, *inter alia*, the merger price having been set unilaterally as well as unfairly low and not on the basis of any legitimate valuation of the company).

have played an unduly large role in guiding defendants' other valuations of Sunbelt stock at the time of the 1997 Merger, but it did present me with a legitimate legal question and a potentially legitimate valuation metric for Sunbelt. I therefore do not find defendants to have conducted themselves with the necessary egregiousness or vexatiousness to warrant shifting attorneys' fees.

2. Interest

Plaintiff seeks interest no lower than 7.14%, the highest rate of Sunbelt's borrowing costs as calculated by Reilly, defendants' valuation expert.[62] Defendants, meanwhile, propose two alternatives from which the Court can choose, the first being the prudent investor rate as calculated by Reilly (3.56% on a simple basis) and the second being a weighted combination of i) the 3.56% prudent investor rate, and ii) two different calculated rates for Sunbelt's actual cost of borrowing (in total, this weighted combination is 4.90%).[63]

Although in earlier cases this Court has awarded interest rates similar in value and justification to those for which both parties in the present case advocate,[64] in this case I will exercise my statutory discretion to award interest at

[62] Pl.'s Post-Trial Br., 60.
[63] Defs.' Post-Trial Br., 65.
[64] *See, e.g.*, *Delaware Open MRI Radiology Assoc., P.A., v. Kessler*, 898 A.2d 290, 343-44 (Del. Ch. 2006) (awarding a pre-judgment interest at a rate of 6.9%, compounded monthly, that is an average of a prudent investor rate and the company's actual cost of borrowing, and is the "more generous, but still responsible, rate of interest proposed by [plaintiffs]."); *Henke v. Trilithic Inc.*, 2005 WL 2899677, at *12-13 (Del. Ch. Oct. 28, 2005) (awarding the prudent investor rate of 6.14%, compounded monthly, rather than a weighted combination of a prudent investor rate and

the legal rate (5% greater than the Federal Reserve discount rate as measured during that period of time), compounded quarterly.[65] I do not find either party to have demonstrated good cause for me to depart from this statutory interest rate. When calculating the interest due, parties should be certain to adjust appropriately for each and every change in the Federal Reserve discount rate that has occurred over the course of this lengthy litigation.

D. Defendants' Motion to Strike

Defendants ask the Court to strike exhibit A of plaintiff's post-trial answering brief. Exhibit A is a 2007 *BeverageWorld* article that examines Sunbelt's success and its future prospects. The article quotes extensively from an interview with Charles Merinoff. Defendants argue that "Mr. [Charles] Merinoff's 2007 statements about Sunbelt's circumstances a decade [after the Merger] prove nothing about Sunbelt's fair value as of 1997—or about the fairness of the Merger consideration when it was set in 1997."[66] Goldring contests the assertion that there is no relevant link between the 2007 *BeverageWorld* article and the Court's

---

the company's actual cost of borrowing, given "the Petitioner's failure to diligently prosecute [the] action."); *Chang's Holdings, S.A. v. Universal Chemicals and Coatings*, 1994 WL 681091, at *2, *5 (Del. Ch. Nov. 22, 1994) (employing "a sliding scale that alters the relevance of the prudent investor rate and the cost of borrowing rate according to the relative fault of the parties in causing the delay [in the appraisal action]" to award a simple interest rate of 7.79%).

[65] *See* 8 *Del. C.* § 262(h) (stating that "[u]nless the Court in its discretion determines otherwise for good cause shown, interest from the effective date of the merger through the date of payment of the judgment shall be compounded quarterly and shall accrue at 5% over the Federal Reserve discount rate … as established from time to time during the period between the effective date of the merger and the date of payment of the judgment.").

[66] Defs.' Reply in Further Support of Mot. to Strike, 4.

process of determining Sunbelt's fair value at the time of the Merger. According to Goldring, the 2007 article and the success of Sunbelt it covers are "relevant both for purposes of impeachment [of Sunbelt's claims of industry and company risk] and to show Defendants' bad-faith in connection with this litigation."[67] Specifically, Goldring asks the Court to weigh the contents of the 2007 *BeverageWorld* article and its description of Sunbelt's stellar success in the alcohol distribution industry against defendants' arguments that Sunbelt operated in a high-risk industry, that its management projections in and before 1997 were optimistic and aggressive, and that Reilly's discounted cash flow analysis incorporated appropriate adjustments for industry-specific and company-specific risk.[68]

Exhibit A, an article written and published ten years after the Merger, is irrelevant to my analysis of issues prevailing at the time of the Merger. I have already ruled on the propriety of the risk adjustments found in both defendants' and plaintiff's discounted cash flow analyses. My findings and conclusions on those adjustments are based entirely on evidence known to the parties in 1997. Evidence discussing Sunbelt's success as of and in the years immediately before 2007 and Sunbelt's prospects for future growth is beyond the time relevant to my determination of Sunbelt's fair value in July-August 1997 (the time of the Merger) and my determination of the propriety of the methodology underlying both parties'

[67] Pl.'s Resp. to Defs.' Mot. to Strike, 2.
[68] *Id.* 3-4.

expert valuations. It matters not that Sunbelt has performed extremely well since defendants squeezed Goldring out, and despite the high levels of risk that, according to defendants and their experts, Sunbelt faces. Accordingly, I grant defendants' motion to strike exhibit A.

III. CONCLUSION

For the reasons discussed above, I determine that the fair value of Sunbelt Beverage Corporation at the time of the Merger was $114.04 per share. Goldring is entitled to her pro rata share of Sunbelt's fair value on the date of the Merger, as well as pre- and post-judgment interest, compounded quarterly, at a rate of five percent above the Federal Reserve discount rate on each day of the relevant time period. I also award Goldring all court and filing costs and experts' fees, and I grant defendants' motion to strike exhibit A to Goldring's post-trial answering brief.

Counsel shall agree upon a form of implementing Order, which shall be submitted within twenty days of this date.

IT IS SO ORDERED.

847 S.W.2d 116 (1992)

Jerry E. THEILEN

v.

Virginia D. THEILEN.

No. WD 45658.

Missouri Court of Appeals, Western District.

November 24, 1992.

John R. Shank, Jr., Gunn, Shank & Harman, P.C., Kansas City, for appellant.

Michael P. Keleher, Keleher & Eastman, Gladstone, for respondent.

Before KENNEDY, P.J., and SPINDEN and SMART, JJ.

SMART, Judge.

This dissolution of marriage proceeding raises questions concerning the valuation of certain marital property interests and concerning the adequacy of maintenance and child support awards. Judgment is affirmed in part and modified in part.

Dr. Theilen ("Husband") is a 43 year old dentist practicing in Claycomo, Missouri. He had been married to his wife, Virginia, almost 19 years at the time of the decree. He has been practicing dentistry 15 years. He and his twin brother, James Theilen, each own fifty percent of the stock in their professional corporation. He and his brother are partners in a real estate partnership (Twin Center) which owns the building occupied by their practice. In addition, they are partners in a venture (Dental Data) which owns and leases equipment to their professional corporation.

The trial court calculated Husband's stock in the professional corporation to have a value of $105,000.00. The value of Husband's general partnership interest in Twin Center Partnership was determined to be $80,000.00. The court valued Husband's interest in Dental Data Services at $60,000.00. Thus, Husband's interest in the three entities together was $245,000.00. The marital residence was found to have a net value of $127,000.00. Other marital property was valued at $146,391.00.

Husband was ordered to pay $1,040.00 in child support for his two teenage daughters, $520.00 for each child. Husband was also ordered to pay Mrs. Theilen ("Wife") $800.00 per month in maintenance. $92,970 in marital property was awarded to Wife, and Husband received $53,421 in other marital property. Husband, who was awarded the residence and the businesses, was ordered to pay $166,226.00 to Wife as additional distribution of marital property.

Appellate review of this action is governed by the standards set forth in *Murphy v. Carron,* 536 S.W.2d 30, 32 (Mo. banc 1976), which require the trial court's judgment to be affirmed unless it is against the weight of the evidence, erroneously declares the law, or erroneously applies the law.

Twin Center Partnership

Husband's first point on appeal is that the trial court erred in finding the net value of the Twin Center Partnership to be $160,000.00. Husband contends that the sole asset of the partnership, a commercial building, is encumbered by a debt which exceeds its fair market value.

Thomas Smeed, Husband's expert, testified at trial that in his opinion the commercial building in which Husband's dental practice is housed had a fair market value of $825,000.00 and an outstanding debt of $867,438.00, resulting in a negative value of $42,438.00. The building, which was completed in 1985, contains about 9,200 square feet. It is a two story building. The primary tenant of the building is the dental practice of Jerry and James Theilen, which occupies the first floor. The building had recently lost the other tenants in the building. The evidence did not reveal any particular reason to expect the building to continue to lack occupancy. Robert Boland, Wife's expert, testified that the net value of Husband's interest in the partnership was $118,949.00. Using the capitalization of income approach, Mr. Boland calculated the value based upon a weighted average of the previous four years and nine months of the partnership's operation. Mr. Boland testified that a valuation method focusing on the vacancies in the building would not be appropriate because this type method ignores the cyclical nature of real estate. Wife's expert used a capitalization of income method which took into account the financial data of past years in determining a current value. The court's valuation of the partnership interest at $80,000.00 was within the range of the two valuations. *See Howerton v. Howerton,* 796 S.W.2d 665, 667 (Mo.App.1990). It is the trial court's job to analyze all of the evidence and assess the credibility of the witnesses. When the trial court calculates an amount that is "within the range of evidence, an appellate court generally will not find the determination erroneous or weigh the evidence." *In re Marriage of Lewis,* 808 S.W.2d 919, 925 (Mo.App.1991); *see also Vohsen v. Vohsen,* 801 S.W.2d 789, 792 (Mo.App.1991). The trial court's determination was within the range of the values testified to and therefore, cannot be faulted. Point I is denied.

Dental Data Services

Husband's second argument on appeal is that the trial court erred in valuing his interest in Dental Data Services at $60,-000.00, because such a value is based upon an historical approach of capitalization and fails to take into account current economic conditions. In his brief, Husband refers this court to a profit and loss statement dated October 8, 1991, for Dental Data Services. In the comments on this statement, Husband states that Theilen & Theilen is two months behind on its rent payments to Dental Data due to cash flow problems and that Dental Data has had to purchase $26,314.32 of additional equipment. Husband did not offer testimony at trial as to the value of his interest. Mr. Boland, Wife's expert, testified that the partnership interest was worth $124,515.00 in 1990, and that he

had insufficient data from which to base the value in 1991 because he had never received from appellant the financial documents he had requested to make this determination. Mr. Boland utilized a cash flow method with a weighting factor in valuing the partnership interest. The trial court valued the interest at $60,000.00. Again, based upon the evidence presented, the trial court's valuation fell within the range of the evidence. *Lewis,* 808 S.W.2d at 925. Husband has not shown any error on the trial court's valuation. Point II is denied.

Theilen & Theilen, D.D.S., P.C.

Husband challenges the trial court's valuation of his interest in the professional corporation at $105,000.00. He argues that this determination is erroneous in that it relies on the capitalization of income approach. In valuing the professional corporation, Husband's expert, Mr. Smeed, utilized an approach he called the "Comparable Characteristics" method which calculates a fair market value based on valuation of three components: 1) the in-place value of physical assets; 2) the face value of consumable supplies; and 3) the value of any intangible assets. Mr. Smeed's valuation included valuation of the dental equipment ($37,995.00), office furnishings and equipment ($2,600.00), dental supplies ($5,000.00), office supplies ($200.-00), accounts receivable (he valued Husband's share at $16,707.20)[1] and intangibles ($0.00). Mr. Smeed testified that he valued intangibles at zero because of the difficulty of predicting where Husband's patients would go after a sale of his interest to a third party. Mr. Smeed also did not include the value of any corporation bank accounts. Wife's expert, Mr. Boland, took another approach to value, employing a capitalization method in valuing Husband's interest. Mr. Boland valued Husband's interest at $149,670.00, which was based upon valuation of the corporation's tangible assets ($37,672.74), accounts receivable ($91,992.48), and intangibles[2] ($169,676.00). Mr. Boland multiplied the total corporation value of $299,341.22 by 50%, thus determining Husband's one-half interest to be $149,-670.00.

Husband contends on appeal that Mr. Boland's calculation of his interest was erroneous, and that the trial court erred in valuing Husband's interest at $105,000.00. Husband relies on *Hanson v. Hanson,* 738 S.W.2d 429 (Mo. banc 1987) in charging this error. In *Hanson,* which involved a spouse's interest in an oral surgery partnership, the Supreme Court of Missouri examined goodwill as a marital asset in dissolution proceedings involving a professional practice. *Id.* Goodwill in a professional practice has been defined as "the value of the practice which exceeds its tangible assets and which is the result of the tendency of clients/patients to return to and recommend the practice irrespective of the reputation of the

[1] Mr. Smeed calculated this amount by first subtracting the dollar amount of accounts receivable over 120 days old from the total accounts receivable for the corporation ($91,992.48 -$25,694.00 = $66,298.48). He then determined that Dr. Theilen's production rate equalled 28%. Multiplying this production rate by the accounts receivable base he arrived at $18,-563.55. Finally, Mr. Smeed determined that the accounts receivable had a collectibility factor of 90%, arriving at a final value of $16,707.20. The problem with this approach is that, regardless of his individual production, Husband had a fifty percent interest in all the receivables by virtue of his ownership of fifty percent of the stock. Therefore, Smeed's calculation of the value of the accounts receivable was incorrect.

[2] Mr. Boland valued the intangible assets based on a percentage of gross collections for 1991. Gross collections through September 30, 1991 were $424,191.00. Mr. Boland annualized this figure to account for all of 1991 determining the value to be $565,588.00. Based on a study of dental surveys and statistics and drawing from his own experience, Mr. Boland used a 30% factor multiplied by the gross collections for 1991, $565,588.00, to determine an intangible asset value of $169,676.

individual practitioner." *Id.* at 434 (Mo. banc 1987). Reliance by patients/clients on the reputation and skill of the individual practitioner is generally related inversely to the number of practitioners in the practice. *Id.* at 435. In determining the evidentiary standard for proving the existence of goodwill, the court in *Hanson* indicated that the acceptable method of valuation was the "fair market value" approach. The court stated:

Because of the difficulties inherent in separating the reputation of the professional from that of his enterprise, evidence that other professionals are willing to pay for goodwill when acquiring a practice is, in our view, the only acceptable evidence of the existence of goodwill. Thus, as a matter of proof, the existence of goodwill is shown only when there is evidence of a recent actual sale of a similarly situated professional practice, an offer to purchase such a practice, or expert testimony and testimony of members of the subject profession as to the existence of goodwill in a similar practice in the relevant geographic and professional market.

Id.

Under *Hanson,* the trial court may not include a value for goodwill or intangible factors without there being specific evidence, such as evidence of a recent actual sale of a similar practice, to support it. *Id.* The court in *Hanson* rejected capitalization as an approach to determining goodwill because of the speculative nature of placing a present value on the future earning capacity of the individual professional, and because of the inequity of compelling a professional practitioner to pay a share of a value that is not realizable by sale or other method of liquidation. *Id.* Similarly, in *Taylor v. Taylor,* 736 S.W.2d 388 (Mo. banc 1987), which involved a chiropractic practice, the court specifically rejected testimony by Mr. Boland taking a capitalization approach similar to that taken in this case.

Under the *Hanson* approach, the trial court should consider the value of the tangible assets, accounts receivable, and monetary assets of a professional practice. Goodwill will rarely be found to exist in the case of a sole practitioner or small office because of the individualized nature of the client/patient attention. *Hanson,* 738 S.W.2d at 435. A professional share in a large partnership or professional corporation may, in contrast, have a significant goodwill value. When determining the existence of goodwill by reference to sales of similar professional practices, the value of a covenant not to compete should be excluded. *Johnston v. Johnston,* 778 S.W.2d 674, 676 (Mo.App.1989). Perhaps a reason for this rule is that no professional practitioner is required to give up his profession in order to be divorced. Therefore, any value attributable to a theoretical non-competition covenant should be excluded from the calculation.

Here, there was no evidence that Husband could sell, on the open market, his interest in the corporation for a value in excess of a proportionate share of the tangible and monetary assets and accounts receivable unless he were to also provide a covenant not to compete. The shareholder agreement of Husband does not include any covenant not to compete upon the sale of his stock. Apart from a negotiated non-competition agreement, therefore, Husband would be free to compete by opening an office down the street. Indeed, especially with the second floor of the office building now vacant, and available for Husband to rent, it is doubtful any purchaser would pay for any intangible factors in order to purchase

Husband's interest. If that is so, the best estimate of what someone would pay is the net value of the tangible assets, the receivables, and the monetary assets.

Respondent suggests that, even if the determination of value is restricted to a "fair market value" approach, nevertheless the evidence of the 1985 transaction involving two other dentists, Yingling and Feldhaus, establishes a basis for finding a goodwill value in the Theilen practice. This court disagrees. The 1985 transactions were not at all comparable to the circumstances at hand. Those were transactions in which each of the dentists constituting the "buyer" in the transactions were paying for the privilege of severing an independent contractor relationship between the respective dentist and the Theilens' corporation. Previously, these dentists had entered into a contract to work in space provided by the corporation and using equipment provided by the corporation in return for the payment of a percentage of revenues to the corporation. In 1985, the relationship was being terminated, and the dentist in each case was being released from a covenant not to compete. The dentist was not buying any physical assets other than patient charts, records, x-rays, and patient lists. In addition, the dentist in each case was buying the percentage interest of the corporation in the accounts receivable. In addition, the corporation was providing a no-compete covenant by agreeing it would not contact, directly or indirectly, the patients whose charts were being purchased by buyer. For these reasons, together with the fact that one of the dentists agreed, as part of the transaction, to lease space from the Twin Center partnership, these transactions are completely distinguishable. *See* ***Gerard v. Gerard,*** 825 S.W.2d 21 (Mo.App.1992).

This case is somewhat unusual in that the professional relationship of the Theilen brothers may be exceptionally close. There is an indication in the evidence that the Theilen brothers would often care for each other's patients somewhat interchangeably. In such a case, it is problematical to determine whether, if Husband were to sell his interest in the corporation and set up a practice down the street or upstairs in the same building, his former patients would stay with the corporation or would be inclined instead to seek out Husband in his new office. Without having specific evidence of this theoretical event, the court has nothing but speculation to entertain in this regard. The trial court may have believed that there was, in fact, a basis for concluding the existence of goodwill in such a circumstance, but at this point it is not supported in the record. *Hanson* leaves open the possibility that expert testimony as to the existence of goodwill in a similar practice in the relevant market could be presented, but it is doubtful such evidence would be available in this case.

Here, the evidence shows that the corporation owns dental equipment of $37,-672.24, office furniture of $2,600, dental supplies of $5,000, and office supplies of $200. The corporation had total accounts receivable of $91,992.48, and bank accounts amounting to $15,126.82. This court is unaware of any other factors which should be included in the valuation under the *Hanson* formula. The finding of the trial court as to the value of Husband's interest in the professional corporation, and the order as to the division of marital property based thereon, is reversed because the valuation of the corporation was not based strictly on the competent evidence. The case is remanded for findings and orders consistent with this opinion.

Award of Child Support

Husband also challenges the award of child support in the amount of $520.00 per child, totalling $1,040.00, claiming the award was erroneous in the following ways: 1) it failed to consider Husband's income at the time of the dissolution; 2) it failed to consider the award of maintenance granted to Wife; 3) it failed to consider Husband's debts; 4) it failed to consider the actual needs of the children; and 5) there was no evidence to support presumed continuing partnership distributions which were included by the trial court in its calculation of child support.

Husband's first contention is that the trial court erred in its award of child support because the award failed to consider Husband's income at the time of the dissolution. He also contends that the trial court's award of child support surpassed both his own Form 14 calculation, as well as Wife's Form 14 calculations. Husband is mistaken in this contention in that Wife's Form 14 calculated the child support amount at $1,074.03. It is true, however, that the trial judge did not rely on the forms submitted by the parties to determine his calculation of child support. In the decree of dissolution, the trial judge states that "child support under Rule 88.01 and Form 14, consistent with the Findings of Fact made herein by the Court, is hereby determined to be just and appropriate." The trial judge found Husband's gross income to be $6,333.00 per month in the decree of dissolution. He found that Wife's gross income was $760.00 per month, but also found that she could earn $960.00 per month if she were working 40 hours per week. Based upon the trial court's findings, which are supported in the evidence, we conclude that the trial judge performed his own Form 14 calculations based upon his findings, which, according to our calculations, yielded the figure of $1,036.17. The trial court obviously rounded this figure to $1,040.00, in order to obtain the round figure of $520.00 per month per child.

There is a rebuttable presumption that the child support amount calculated in Form 14 is the amount that should be awarded as set forth in Rule 88.01. A departure from the amount calculated in Form 14 requires a specific finding made by the trial judge that the Form 14 amount would be unjust or inappropriate. *Beeman v. Beeman,* 816 S.W.2d 15, 17 (Mo.App. 1991). The trial judge here prepared his own Form 14 based upon his findings of fact and then rounded his result to obtain $1,040.00 total child support award, or $520.00 per child. Although the court did not round to the nearest dollar, this rounding is close enough that the award should not be disturbed on appeal.

None of Husband's other contentions regarding error of the child support award change the initial determination reached by this court. First, there is no evidence that the trial court did not consider Husband's income at the time of trial. The trial court had numerous exhibits before it for examination, numbering over 100. These exhibits were satisfactory in detailing Husband's sources of income. The trial judge made a finding that Husband's gross income equaled $6,333.00 per month. Nothing in the record mandates a conclusion that this finding was erroneous.

Husband also argues that the child support award should have taken into account the award of maintenance that he is required to pay to Wife. Husband argues "Rule 88.01 sets forth a worksheet which provides for a reduction to the non-custodial parent and a corresponding increase to the custodial parent if there is another court-ordered obligation which results in either payments by non-custodial parent or income by the custodial parent." The Directions for Use of Form No. 14 explain each entry on the worksheet. Line 2b

provides a blank for "Other spousal support payments being made." This entry is explained in the Directions for Use as follows: "Enter the monthly amount of any other court or administrative order for spousal support from monthly gross income to the extent that such payments are actually being made to a person not a party to the action." Wife is a party to this action. An entry in line 2b would result from a maintenance order payable to a previous spouse. Therefore, the maintenance award that Husband is required to pay to Wife should not be considered in this entry. This does not mean that the trial court did not consider child support and maintenance in relation to one another. Indeed, the trial court would have considered the child support in making the award of maintenance.

Husband also suggests that the child support is erroneous because it fails to take into consideration his outstanding debts. Rule 88.01 provides that the child support amount should consider "the financial resources and needs of the parents." Again, the trial court had over 100 exhibits in front of it when making its findings and determinations, plus testimony from both parties to this action. The evidence suggests that all of the financial resources and obligations of both parties were considered. Husband's suggestion is without merit.

Next, Husband contends that the award did not consider the actual needs of the children. Evidence was presented that the expenses of the children were $910.37 per month, which did not take into consideration the expense of housing or utilities. There is no evidence to suggest that the trial court did not consider the actual needs of the children.

Finally, Husband asserts that there is no evidence to support the inclusion of partnership distributions in Husband's income in the Form 14 calculations. Form 14 Directions for Use provides that gross income includes "income from salaries, wages, overtime compensation, commissions, bonuses, dividends, severance pay, pensions, interest, trust income, annuities, capital gains, social security benefits, retirement benefits, workers' compensation benefits, unemployment compensation benefits, disability insurance benefits, and spousal support actually received from a person not a party to the order." It is clear that partnership distributions would be included in this definition. Nothing in this definition or in Rule 88.01 requires the distributions be stable and fixed as long as there is a reasonable expectation of continuity. Here, it is reasonable to assume that the real estate partnership and Dental Data would continue to generate income for Husband. Therefore, the trial court did not err in including these distributions in the child support calculation. Point IV is denied.

Maintenance

Husband's fifth point on appeal is that trial court abused its discretion in awarding Wife $800.00 per month maintenance because the award was unwarranted and wholly beyond the means of Husband to pay, and because Wife has the ability to properly care for herself. Section 452.335, RSMo Supp.1991 sets forth the guidelines that the trial court must follow in awarding maintenance. This section gives the trial court "great latitude" in calculating maintenance. *In re Marriage of Ross,* 772 S.W.2d 890, 893 (Mo.App.1989). A balancing test is utilized in determining the appropriate amount of maintenance which balances the reasonable needs of the party seeking the support against the ability of the other spouse to pay. *Schelsky v. Schelsky,* 796 S.W.2d 888, 892 (Mo.App. 1990). Appellate intervention is not warranted unless the maintenance award is "wholly beyond the means of the spouse

who pays maintenance." *Id.* The party challenging the award, in this case Husband, bears the "`stark burden' to show an abuse of such discretion so as to `shock' the appellate court's sense of justice." *Id.* This is so because an award of maintenance is presumed correct. *Ross,* 772 S.W.2d at 893.

Based upon the evidence presented, the trial judge made the following findings: 1) Wife was 41 years old and in reasonably good health; 2) she has a high school diploma and degree in cosmetology with some experience in the early part of the marriage in hair dressing; 3) following a one year period of working in Husband's office, Wife had not been employed outside the home prior to the separation of the parties, since 1980; 4) aside from her current experience as a receptionist in an optometrist office, she has had no other skills or work experience; 5) Wife lacks sufficient property, including marital property apportioned to her, to provide for her reasonable needs and is unable, at this time, to support herself through appropriate employment; 6) there is no substantial evidence that she will be able to obtain better employment in the immediate future and, therefore, maintenance should be continuing and modifiable.

Husband points out that Wife has an earning capacity of $11,520.00 a year, an award of personal property of $92,970.00, and a substantial award of marital property. He also states that his net monthly income is $4,463.00 and that after he has deducted the house payment and the child support, he is left with $1,571.00 in funds. Husband testified that in 1990 he had approximately $5,660 in disposable income each month, which contradicts his contention that his net monthly income is $4,463.00.[3] Husband also ignores the fact that the $2,000.00 payments to Wife are required only if he does not sell the house within 180 days after the judgment. If Husband succeeds in selling the residence, he will be relieved of his mortgage payment. From the above it is clear that $800.00 per month in maintenance is not wholly beyond the means of Husband to pay.

Husband further contends that Wife is able to take care of herself based upon her award of marital assets and her earning capacity. The trial court found that Husband made $6,333.00 in gross income per month and that Wife could make $960.00 working on a full time basis. Husband's gross income, therefore, is six times greater than Wife's expected income. Wife testified that aside from her children's expenses, which she calculated as $910.37 not including housing or utilities, she requires an additional $2,752.68 a month to meet her own living expenses. The evidence does not show that Wife has an outstanding earning capacity or that she will develop a substantially greater earning capacity in the near future. The evidence does show that Wife earns substantially less than what is needed to pay her monthly expenses. It has been consistently held that a party is not required to deplete his or her share of marital property before being awarded maintenance. *Barth v. Barth,* 800 S.W.2d 127, 129 (Mo.App.1990).

It also should not be overlooked, and was not overlooked by the trial court, that Wife's efforts in the early years of the marriage contributed to Husband's ability to gain a dental degree and a license to practice dentistry. There was also no evidence that she contributed to the demise of the marriage through any misconduct, while there was evidence of

[3] It is possible that a reason for this contradiction is the fact that Dr. Theilen's partnership interest in Twin Center has allowed him a significant tax shelter. Thus, viewed from the end of the year, his "disposable income" is higher than his net paycheck.

Husband's misconduct. There is no reason to believe that justice requires that Husband be able to abandon his marital responsibilities without having to provide financially for his ex-spouse, even if such provision means that Husband has few resources for his desired lifestyle.

For the foregoing reasons, there was substantial evidence to support the amount of the trial court's award of maintenance. Since, however, the division of marital property will be adjusted as a result of re-evaluation of Husband's interest in the professional corporation, this court hereby sets aside the award of maintenance so that the trial court may re-consider the maintenance award in the light of any adjustment in the property division.

Tax Consequences

Husband's last point on appeal is that the trial court failed to consider the tax consequences of the division of property or orders concerning debt. However, the record does not show that the trial court was advised of tax consequences which should be considered, and a party who fails to advise the court of tax consequences of a property division will not be heard to complain on appeal concerning such consequences. *In re Marriage of Ross,* 772 S.W.2d 890, 892 (Mo.App. 1989). Point VI is denied.

Conclusion

This court finds that the trial court's evaluation of Husband's interest in the Twin Center partnership and the Dental Data Services partnership were not erroneous. The court finds that the evaluation of Husband's interest in the professional corporation was erroneous in that the court should have found the value of his interest to be limited to the value of the physical assets, investments and operating cash, and accounts receivable.

The award of child support is not erroneous and is affirmed. The award of maintenance is not erroneous; however, we reverse the award and the trial court will be allowed to further adjust the maintenance on remand, if the trial court deems it appropriate and just, because of the possible interrelatedness of the maintenance award and the division of marital property.

The case is remanded to the trial court with instructions to make a new finding of the value of Husband's interest in the professional corporation, allowing nothing for goodwill, and to adjust the division of marital property accordingly. The award of maintenance is reversed and the trial court is also permitted to adjust the award of maintenance, if the trial court deems it just and appropriate, in view of the adjustments made in the other components of the decree. In all other respects, the judgment of the trial court is affirmed.

All concur.

546 So.2d 99 (1989)

William De Forest THOMPSON, Appellant,

v.

Tobitha THOMPSON, Appellee.

No. 87-1356.

District Court of Appeal of Florida, Fourth District.

July 7, 1989.

Edna L. Caruso of Edna L. Caruso, P.A., and Searcy & Denney, P.A., West Palm Beach, for appellant.

Jane Kreusler-Walsh of Klein, Beranek & Walsh, P.A., and Ronald Sales of Ronald Sales, P.A., West Palm Beach, for appellee.

PER CURIAM.

The former husband appeals from property distribution, permanent alimony and award of attorney's fees provisions of the trial court's final judgment of dissolution. We affirm.

The guiding principles for this opinion, as for many marriage dissolution cases, are found in *Canakaris v. Canakaris,* 382 **So.2d** 1197 (Fla. 1980), *Tronconi v. Tronconi,* 466 **So.2d** 203 (Fla. 1985), and their progeny. These principles may be expressed as follows:

(1) Distribution of existing marital assets, and award of permanent periodic alimony, lump sum alimony, child support, special equity and exclusive use of jointly owned property as remedies in dissolution orders are parts of an overall scheme that should be reviewed not piecemeal but as a whole, applying the abuse of discretion standard. If a reasonable person could have concluded as did the trial court, there has been no abuse of discretion.

(2) Generally, marital assets should be distributed equally, unless a disparity is shown in the respective parties' contributions, or another relevant factor justifies a variation.

100 *100 (3) In awarding lump sum alimony, the court should consider all relevant circumstances in order to assure equity and justice between the parties. It should be awarded only in special circumstances, such as where, for example, the receiving spouse assisted the paying spouse in accumulating property; and where the paying spouse's financial condition makes it possible without jeopardy to that party's business, profession or employment. This principle, expressed in *Canakaris,* is lifted directly from and attributed to the opinion in *Yandell v. Yandell,* 39 **So.2d** 554 (Fla. 1949).

In the instant case, the former wife acted during four early years of this twenty-three year marriage simultaneously as mother, housekeeper, and substantial economic provider, while the husband completed his collegiate and legal education. Thereafter she bent her energies primarily to a career as wife and mother, managing the household and rearing the parties' children. Upon becoming a member of the bar, the husband, after a more or less average start insofar as level of professional earnings is concerned, has, in the last several years, developed an impressively lucrative plaintiff's practice in personal injury and medical malpractice cases.

Applying the guiding principles cited above, we conclude that a reasonable person could have created the economic scheme employed by the trial court in this case. It is not lopsidedly in favor of the former wife, as the former husband urges. The record fails to support the former husband's supposition that the trial court wished to punish him for adultery. The level of periodic alimony awarded is in line with the husband's voluntary payments during the parties' separation preceding the dissolution, the former wife's needs and the former husband's financial ability. The lump sum alimony, payable over a period of years, may be perceived as recognition, in some measure, of the former wife's extraordinary part in making the husband's successful professional career possible. The award of attorney's fees and costs to the former wife appears justified.

There is no compelling reason to conclude that the trial court factored in the value of the husband's professional association's good will in making the property distribution. Nevertheless, inasmuch as this is an issue herein, we certify the following question as being one of great public importance:

> IN MARRIAGE DISSOLUTION PROCEEDINGS TO WHICH AN OWNER OF A PROFESSIONAL ASSOCIATION IS A PARTY, MAY THE VALUE OF THE PROFESSIONAL ASSOCIATION'S GOOD WILL BE FACTORED IN IN DETERMINING THE PROFESSIONAL ASSOCIATION'S VALUE?

Attention of bench and bar is called to Miller, *Professional Goodwill, The Phantom Asset?,* 14 The Family Law Commentator (1989). The article discusses the above issue in light of the Florida Supreme Court's declination of jurisdiction to review *Moebus v. Moebus,* 529 **So.2d** 1163 (Fla.3d DCA 1988), *rev. denied,* 539 **So.2d** 475 (Fla. 1989), which opinion answers this question in the negative.

DOWNEY and GLICKSTEIN, JJ., and SNYDER, ARTHUR I., Associate Judge, concur.

Tri-Continental Corp. v. Battye

Case name: Tri-Continental Corp. v. Battye
Citation: 1950 Del. LEXIS 23
Date of decision: June 8, 1950
Country: US
State or Federal: State
State/Jurisdiction: Delaware
Court: Supreme Court
Type of action: Dissenting Shareholder
Judge: Wolcott
SIC: 6211 Security Brokers, Dealers, and Flotation Companies (security dealers and underwriters)
NAICS: 523120 Securities Brokerage

Keywords: Discount rate, Fair market value (FMV)

COUNSEL:

William Prickett and Wm. Dwight Whitney, of the firm of Cravath, Swaine & Moore), of New York City, for appellants.

Charles F. Richards, of the firm of Richards, Layton & Finger, and George Rosier and Zelig R. Nathanson, of the firm of Austrian & Lance, of New York City, for appellees.

JUDGES:

TERRY, CAREY, Layton and WOLCOTT, JJ., sitting.

OPINIONBY:

WOLCOTT

OPINION:

WOLCOTT, Judge, delivering the opinion of the court:

Section 61 of the General Corporation Law, Revised Code 1935, § 2093, provides that upon the merger of a corporation, stockholders who object to the merger and who fulfill the statutory requirements to register their objection shall be paid the value of their stock on the date of the merger, exclusive of any element of value arising from the expectation or accomplishment of the merger. The meaning of the word "value" under this section of the corporation law has never been considered by this court. However, the Court of Chancery has on several occasions applied a definition of value under the section. This definition was first formulated in Chicago Corporation v. Munds, 20 Del.Ch. 142, 172 A. 452, and was followed in Root v. York Corporation, 29 Del.Ch. 351, 50 A.2d 52, and In re General Realty

& Utilities Corporation, 29 Del.Ch. 480, 52 A.2d 6. We think the basic doctrine of valuation applied in Chicago Corporation v. Munds, supra, was formulated in accordance with proper principles and the better reasoned authorities.

The basic concept of value under the appraisal statute is that the stockholder is entitled to be paid for that which has been taken from him, viz., his proportionate interest in a going concern. By value of the stockholder's proportionate interest in the corporate enterprise is meant the true or intrinsic value of his stock which has been taken by the merger. In determining what figure represents this true or intrinsic value, the appraiser and the courts must take into consideration all factors and elements which reasonably might enter into the fixing of value. Thus, market value, asset value, dividends, earning prospects, the nature of the enterprise and any other facts which were known or which could be ascertained as of the date of merger and which throw any light on future prospects of the merged corporation are not only pertinent to an inquiry as to the value of the dissenting stockholders' interest, but must be considered by the agency fixing the value.

The rule as stated requires that certain obvious conclusions be drawn. Thus, since intrinsic or true value is to be ascertained, the problem will not be settled by the acceptance as the sole measure of only one element entering into value without considering other elements. For example, as was specifically held in Chicago Corporation v. Munds, supra, market value may not be taken as the sole measure of the value of the stock. So, also, since value is to be fixed on a going-concern basis, the liquidating value of the stock may not be accepted as the sole measure of value.

General was a regulated closed-end investment company with leverage, and was engaged in the business of investing in the stock market generally seeking to acquire and hold a cross-section of the stock market. Investments were made by General primarily with the possibility of capital appreciation in view. General's portfolio held diversified investments, practically all of which fell within the class of marketable securities readily liquidated.

A regulated close-end investment company is of a peculiar nature. The common stockholder of a closed-end company has no right at any time to demand of the company his proportionate share of the company's assets. n1 A regulated investment company is required to distribute all of its income from dividends and interest to its stockholders but, in so doing, pays no tax on the amounts so distributed. It also has the option of distributing net long-term capital gains to its stockholders or retaining them and paying a flat 25% tax. As in the case of individuals, a regulated investment company has the right to deduct capital losses from its capital gains.

n1 In contradistinction, the stockholders of the so-called open-end company have the right at the close of business on designated days to demand from the company their proportionate share of the company's assets.

On September 30, 1948, the day preceding the merger, General had outstanding debentures and preferred stock equaling in value 60.8% of the total assets of the company, leaving 39.2% of the company's assets applicable to the common stock. This condition of General made applicable the principle of leverage. Simply stated, this meant that since the debentures and preferred stock of General were a fixed liability, the same amount of assets at all times was required to be set off against them. The result of this unalterable fact was that if the stock market declined, thus decreasing the value of the

assets of General, all of the decrease fell upon the common stock. On the other hand, when the stock market rose, thus increasing the value of General's assets, all of the increase accrued to the benefit of the common stock.

Experience demonstrates that when the stock market declines, the market price of the common stock of closed-end investment companies with leverage declines at a more rapid rate because of the resulting shrinkage of asset value behind the common stock. Conversely, a rise in the stock market results in a rise in the market price of the common stock of such companies at a more rapid rate than the market is increasing generally.

The closed-end feature and leverage have a direct effect on the market value of the common stock of closed-end investment companies. When the market price of the common stock moves into a certain price range in relation to its net asset value, upward leverage disappears and the stock sells on the market at a lower price than its net asset figure. This fact, together with the inability of the common stockholder to withdraw his proportionate interest in the assets of the company, has consistently resulted in a lower market value of the common stock in comparison with its net asset value. This difference between the net asset value and the market value of the common stock of a closed-end investment company is known as discount.

The record discloses that the common stock of General, prior to the merger, was selling within the price range which brought discount into play. The appraiser found the discount rate applicable to General to be 25%. This rate of discount is accepted for the purposes of this case since the parties do not argue that this finding was error.

Discount, therefore, may be applied to net asset value to determine on any day a theoretical or constructed market value of the common stock of a closed-end investment company with leverage. On September 30, 1948, the net asset value of the common stock of General was $ 4.90 per share and, if the discount of 25% is applied to that figure, a market value of General's common stock on that day of $ 3.67 per share is constructed.

The appraiser considered various factors which all agree should be considered in valuing the common stock of General. Those factors were: The nature of the enterprise, i. e., a regulated closed-end investment company; leverage; discount; net asset value; market value; management; earnings and dividends; expenses of operation; particular stockholdings in General's portfolio; and a favorable tax situation which General had.

The appraiser found that the factors of management, earnings and dividends, expenses of operation, and the particular stockholdings of General, under the circumstances, were not entitled to be debited or credited in arriving at a value for the common stock. It is not necessary to review his reasons, for the parties are agreed that his findings in this respect were correct. Since, however, earnings and dividends of a corporation are ordinarily of prime importance in valuing common stock, we feel, in order to avoid future confusion, that we should state briefly why they are not of much importance in this case. The reason is that General was an investment company with large leverage which meant that normal income of the company necessarily went in large part to the servicing of the senior debentures and preferred stock, leaving a relatively small amount left to be paid out in dividends to the common. Actually, dividends on the common stock of General in the past were negligible, nor were the prospects for the future materially brighter.

The favorable tax situation of General was found by the appraiser to be worth 29c to each share of common stock. This finding is not urged as error. The favorable tax situation resulted from realized losses in 1948 and loss carryovers which would have enabled General to take profits gained before the end of 1948 equal to the realized losses incurred in 1948 and the loss carryover expiring at the end of that year, to the extent of over $ 1,500,000, without paying a 25% capital gains tax or distributing the proceeds to its stockholders who would then be taxed on them.

The appraiser found that, at the time of merger and prior thereto, there was no actual market of General's common stock uninfluenced by the merger and, accordingly, excluded actual market value of the stock as a factor to enter into the final determination of value. This was not error, nor would it have been error had the appraiser constructed a hypothetical uninfluenced market value by discounting the net asset value of the common stock on the day of merger and giving some effect to it in his final valuation. Had there been an actual market value uninfluenced by the merger in existence, it would have been error to disregard it, but the absence of such an element does not require the construction of a hypothetical market value to be given effect in the final determination of value.

A great deal of argument in this cause has turned around the phrase "net asset value" which is simply a mathematical figure representing the total value of the assets of General less the prior claims. The net asset value of the common stock of General could be determined as of any date by computing the total market value of the securities in the portfolio, adding to that sum the cash in the company's possession, deducting the total of the outstanding liabilities, debentures and preferred stock, and dividing the final result by the number of common shares outstanding.

However, since the value of dissenting stock is to be fixed on a going-concern basis, the taking of the net asset value as the appraisal value of the stock obviously is precluded by the rule. This is so because, primarily, net asset value is a theoretical liquidating value to which the share would be entitled upon the company going out of business. Its very nature indicates that it is not the value of stock in a going concern.

Furthermore, since we are called upon to fix the value of common stock in a closed-end investment company with leverage, an additional reason exists for the refusal to fix the value of that stock at its net asset value. This reason is that the common stockholder of a closed-end company can never withdraw his proportionate interest from the company as long as it is a going concern. He can obtain his full proportionate share of the company's assets, or the net asset value of his stock, only upon liquidation of the company. n2 He cannot obtain the net asset value of his common stock by sale of the stock because of discount which is always applicable when the stock of the closed-end investment company is selling within the necessary price range, and which prevents the sale of the common stock except at a price less than the net asset value.

n2 Actually, net asset value of common stock of a closed-end company could never, as a practical matter, be obtained since liquidation would be accompanied by expense and would probably result in driving the market down through the sudden sale of large blocks of stock, thus automatically decreasing the net asset value.

Since, therefore, net asset value is, in reality, a liquidating value, it cannot be made the sole criterion of the measure of the value of the dissenting stock. The appraiser, therefore, properly concluded that net asset value as of September 30, 1948 should not be taken as the basis for arriving at the appraisal

value. He preferred, and we think correctly,to construct an asset value on the basis of month-end averages of the portfolio securities over a reasonable period of time. This method resulted in an asset figure of $ 5.15 per share of common stock of General. The appraiser also found that, during the period over which his average was taken, the stock market was normal. This finding is not attacked as error.

The fact that the stock market was normal during the period used for the establishment of the asset value of General's common stock bears directly on the application of the principle of leverage in this case. The element of leverage, it will be recalled, operates to increase the value of the common stock of a closed-end company as the stock market rises and, conversely, operates to decrease the value of the common stock of closed-end companies as the stock market sinks. The finding that the general level of the stock market is normal means that no adjustment in the value of the common stock was required because of the element of leverage. This is important because leverage, in the valuation of the common stock of closed-end companies, must be considered and given effect if it is an operating element at the time value is to be determined. The market being normal, leverage was not operating. Therefore, the value of the common stock of General did not have to be debited or credited because of the principle of leverage.

To the per share asset value of $ 5.15 so determined, the appraiser added 29c, the value of the favorable tax situation of General, to each share of its common stock. The result of $ 5.44 is called by the appraiser the "fair asset value" of a share of the common stock of General. The appraiser then arrived at the true or intrinsic value of a common share of General by applying the discount to the fair asset value of $ 5.44, and arrived at a value of $ 4.08 per share for the common stock of General.

The Vice Chancellor adopted the findings of the appraiser in every particular, but disagreed with him as to the method of arriving at the value of the common share from those findings. He differed with the method of arriving at value used by the appraiser primarily because he was of the opinion that discount "has exclusive application to the question of but one element of value, namely, market value." With this as his premise, he reached the conclusion that the appraiser,in discounting the fair asset value of $ 5.44, had in fact constructed a market value of the common share, and had committed error when he gave 100% weight to that constructed market value.

The Vice Chancellor was of the opinion that net asset value unaltered by the discount factor must be considered as an independent element of value because it was a value based on mere possession, an important factor when capital appreciation is the principal attraction to the investor. He, accordingly, felt that constructed market value and net asset value should be fairly weighed in order to determine the value of the shares involved. Recognizing that the weighting of different elements of value necessarily is arbitrary, he gave a weight of 40% to net asset value and a weight of 60% to constructed market value, reaching the conclusion that the value of a common share of General was $ 4.62.

We do not agree with the Vice Chancellor in this respect for the reason that he has treated "fair asset value" as though it were the same as "net asset value". That they are not the same is apparent when it is considered that fair asset value was arrived at from averages in a normal stock market.Furthermore, the inclusion of the value of the favorable tax position of General necessarily means that "fair asset value" includes elements value of the common share which could not possibly be included in "net asset value" which necessarily is determined from a mathematical computation of the market values of the portfolio securities.

The 29c item would have accrued to the benefit of the common stockholders of General only after General's management had taken advantage of its favorable tax situation. While the possibility existed, advantage had not been taken of it at the time of the merger. The 29c, therefore, was an entirely hidden and prospective asset. Its inclusion in the fair asset value of the common share was to give effect to the prospect of future advances in the value of the common share, and was to include an element of value which, under no circumstances, could have been reflected in a net asset value, a value fixed by the market price of General's portfolio securities.

These circumstances make it clear to us that the appraiser's fair asset value includes several elements which, in turn, affect the true value of the common shares. It includes "net asset value" and, furthermore, it includes an element of value over and above net asset value which can only represent the investment possibility of the common stock which the Vice Chancellor refers to as an important element based "on mere possession". It is, therefore, obvious that discounting of the "fair asset value" of General's common stock will not, as the Vice Chancellor held, result in a constructed market value. A constructed market value results only from the discount of net asset value. This must be the fact since discount is fixed by experience in the market, and is nothing more than the average rate of difference between the actual market prices of General's common stock and the net asset value of that stock computed from the basic fact of the market prices of General's portfolio securities.

The dissenting stockholder is entitled to receive the intrinsic value of his share in a going concern. This can mean only that he is entitled to receive that sum which represents the amount he would have received as a stockholder in one way or another as long as the company continued in business. Since we are dealing with a regulated closed-end investment company with leverage from which the stockholder cannot withdraw his proportionate interest, and since dividends on the stock of such companies are of small importance, it follows that the only way in which a common stockholder of a going closed-end company with leverage can obtain the value of his stock is by the sale of it on the market. Furthermore, whenever he seeks to do so, he, by force of circumstances, must sell at a discount, whenever this is an operating element.

The conclusion is, therefore, inescapable that the full value of the corporate assets to the corporation is not the same as the value of those assets to the common stockholder because of the factor of discount. To fail to recognize this conclusion in the valuing of common stock of a regulated closed-end company with leverage is to fail to face the economic facts and to commit error. Discount is an element of value which must be given independent effect in the valuing of common stock of regulated closed-end investment companies with leverage, and is not confined solely to the construction of a hypothetical market value.

The ultimate value of General's common stock, therefore, is the percentage of the fair asset value which could reasonably be expected, at some time, to have been realized by the common stockholder. The most critical factor to be determined in the fixing of such value is the fair asset value, itself. If it is an amount which contains within it the proportionate interest the common stock has in the assets of the company, the possibility of capital appreciation inherent in the company and the effect of leverage, then fair asset value has been properly determined. Application of the independent element of discount to that amount will give the true or intrinsic value of the common stock of the regulated closed-end investment company with leverage under consideration. The important thing to bear in mind is that value

of stock in a going concern is to be measured in terms of ability to realize that value through various media. In the case of General, the only way to realize the common stock value was by the sale of the stock.

We believe that the appraiser was correct in his method of determining value and in the result reached by him. The Vice Chancellor, in weighting as he did fair asset value instead of net asset value, has in effect overbalanced the weight to be given to the element of possible capital appreciation to the extent that he has committed error.

We are asked to apportion costs of this proceeding between the parties rather than against Tri-Continental alone, as was done by the order of the Vice Chancellor. In Meade v. Pacific Gamble Robinson Co., 30 Del.Ch. 509, 58 A.2d 415, we refused to modify an order for costs unless there was present an abuse of judicial discretion. In the absence of a showing of bad faith on the part of the dissenting stockholders, or a showing that the statutory procedure was made use of for the purpose of being "bought off", we think it reasonable to tax all costs against the surviving corporation. There is no showing, or hint, of such bad faith on the part of the dissenting stockholders. The order taxing costs will not be disturbed.

A mandate will be entered reversing the order of the Vice Chancellor and directing him to give effect to the valuation of the appraiser.

UNITED STATES DISTRICT COURT
DISTRICT OF MINNESOTA

US Salt, Inc.,

Plaintiff,

Civ. No. 07-1988 (RHK/JSM)
MEMORANDUM OPINION AND ORDER

v.

Broken Arrow, Inc.,

Defendant.

Evon M. Spangler, Perry M. de Stefano, Spangler and de Stefano, PLLP, St. Paul, Minnesota, for Plaintiff.

Wallace G. Hilke, Amy R. Mason, Daniel N. Sacco, Lindquist & Vennum PLLP, Minneapolis, Minnesota, for Defendant.

INTRODUCTION

The issue before the Court is whether US Salt has any evidence of damages that should be submitted to a jury. For the reasons set forth below, the Court finds that it does not and consequently its breach-of-contract claim fails as a matter of law.

BACKGROUND

This case arises out of a contract dispute between US Salt and Broken Arrow. US Salt alleged that Broken Arrow violated the agreement when it stopped shipping salt. The Court agreed with US Salt and granted its motion for summary judgment as to

liability on this claim.[1] The parties then submitted their voluminous trial materials on the issue of damages and filed numerous evidentiary objections. US Salt relied heavily on its damages expert, Arthur H. Cobb, to prove its lost-profits claim.[2] Broken Arrow, however, moved to exclude Cobb's proposed testimony and expert reports under Federal Rule of Evidence 702. Under Rule 702, an expert may testify if (1) the testimony is based upon sufficient facts or data, (2) the testimony is the product of reliable principles and methods, and (3) the witness has applied the principles and methods reliably to the facts of the case. The party offering expert testimony has the burden to prove its admissibility. Lauzon v. Senco Prods., Inc., 270 F.3d 681, 686 (8th Cir. 2001).

The Court carefully reviewed Cobb's expert reports, his deposition testimony, and the parties' briefs, including their arguments at the April 24, 2008 pretrial hearing. It concluded that Cobb's proposed testimony was not sufficiently reliable under Rule 702. Cobb issued two reports, both of which had very little analysis and were riddled with unsupported assumptions. Cobb initially opined that US Salt's lost profits were $1,800,000, but later revised that number in his supplemental report to a range of

[1] Although the Court denied Broken Arrow's motion for summary judgment on US Salt's breach of express and implied warranty claims, it later dismissed those claims with prejudice because the record conclusively established that the nonconforming salt had been cured. (See Doc. No. 127.) At the pretrial hearing on April 24, 2008, counsel for US Salt was unable to specifically identify any damages related to these claims. (See 4/24/08 Unofficial Tr. at 15.) Furthermore, US Salt never disclosed these damages as part of its initial disclosures or in its response to Broken Arrow's interrogatory on damages. See Fed. R. Civ. 26(a)(1)(A)(iii), Fed R. Civ. P. 26(e)(1)(A), Fed. R. Civ. P. 37(c)(1).

[2] The Court points out that US Salt's exhibit list (Doc. No. 89) contained a number of documents related to lost profits that were never previously disclosed to Broken Arrow. (See Exs. 94-97.) Furthermore, these documents were completely inconsistent with US Salt's initial-damages disclosure and with Cobb's two expert reports. (See Doc. No. 113 at 4.)

$600,000 to $1,060,000. (See Doc. No. 65 Exs. A-B.) Damages that are remote, speculative, or conjectural are not recoverable as a matter of law. Leoni v. Bemis Co., Inc., 255 N.W.2d 824, 826 (Minn. 1977). Although the law does not require mathematical certainty in the proof and calculation of lost profits, it requires evidence of definite profits *grounded upon a reasonable factual basis.* See Cardinal Consulting Co. v. Circo Resorts, Inc., 297 N.W.2d 260, 266-67 (Minn. 1980). Notably, Cobb relied almost exclusively on the assumptions and estimates provided by US Salt's president and owner, Tom Johnson. (See, e.g., Doc. No. 65 Ex. F at 23-24, 26-27, 33-35, 48-49, 52, 87-88, 90-92.) But Cobb did nothing to investigate the market conditions in Minnesota or verify the estimates in his reports despite the fact that US Salt's sales projections and goals were based on vague and speculative information. (Id. at 17, 27-32, 34-35, 41, 48-49, 76-78, 80; Ex. G at 53, 56, 58-59, 68, 72.) The difficulties with Cobb's expert reports are illustrated by his deposition testimony:

> Q: Did Mr. Johnson tell you who had prepared Exhibit 30?[3]
>
> A: I think there was a reference that a person who had acted in a financial role for the company had initially prepared Exhibit 30. I don't remember the person's name . . . .

(Cobb's Jan. 25, 2008 Dep. at 52.)

> Q: Did you speak with the person who actually prepared this document?
>
> A: No.

(Id.)

[3] Exhibit 30 is an incomplete spreadsheet that was prepared by US Salt's former office manager, which purportedly shows US Salt's lost profits. (See Doc. No. 112 at Ex. B; Ex. C at 170-71.)

> Q: Have you done anything to verify . . . that it's accurate?
>
> A: Not that comes to mind.

(Id.)

> Q: Did you ask Mr. Johnson to provide you with any backup documentation for any of these items [in Exhibit 30?]
>
> A: No.

(Id. at 34.) In essence, Cobb has not formed an opinion as to US Salt's lost profits; he has simply adopted Johnson's opinion as to US Salt's expected sales and the nature of the market. But as illustrated by Johnson's testimony, US Salt's expected sales were speculative at best:

> Q: Did Mr. Capone ever tell you the volume of salt he expected to buy from you?
>
> A: He gave me different estimates, and then like I say, from what he gave I had no way of verifying it until I started bagging or trying to do that.

(Johnson Dep. at 217.)

> Q: Throughout your marketing efforts were you able to get a written commitment from any customer regarding how much they would pay for solar salt?
>
> A: No.

(Id. at 226.) In the Court's view, Johnson's assumptions and estimates as to US Salt's expected sales were nothing more than optimistic projections. And Cobb's wholesale acceptance of Johnson's projections without any verification of these estimates or any independent market analysis is simply too speculative to submit to a jury. See Hammann v. 1-800 Ideas.com, Inc., 455 F. Supp. 2d 942, 948 (D.

Minn. 2006) (Schiltz, J.) ("Damages for lost profits, especially for a relatively new business venture, must be supported by specific, concrete evidence, not by mere 'speculation and conjecture.'") (citing Mostly Media, Inc. v. U.S. W. Commc'ns, 186 F.3d 864, 866 (8th Cir. 1999) (noting that "[t]he burden of proof required of a plaintiff in a lost-profits case is admittedly heavy" and affirming district court's determination that the proof of damages was too speculative)). In neither his expert reports nor his depositions could Cobb identify a reliable factual basis for his opinions regarding US Salt's expected sales, demand for solar salt, or the market conditions in Minnesota. Accordingly, the Court excluded Cobb's unreliable testimony regarding lost profits.[4]

The Court recognized that these evidentiary rulings left US Salt with little or no evidence of damages. It then asked if there were any remaining damages for trial, to which US Salt's counsel responded: "[w]ell, there are damages that we have not – we were not planning on including in the case because we were looking primarily at the lost profits . . . ." (4/24/08 Unofficial Tr. at 6.) Nonetheless, the Court requested that US Salt promptly provide Broken Arrow and the Court with a summary of what damages, if any, it believed remained for trial. (Id. at 46-47, 49.)

[4] The Court also excluded Johnson's proposed testimony with respect to lost profits (Doc. No. 127) because, as acknowledged by counsel for US Salt, Johnson does not have the financial expertise or specialized knowledge that is necessary for calculating and presenting its complex lost-profits claim to a jury. (4/24/08 Unofficial Tr. at 26-28.) Furthermore, the record shows that Johnson's assumptions for expected sales were based on speculative information and were devoid of any evidence showing that a proven market existed for this product or that comparable businesses that were similarly structured had been successful. See Cardinal, 297 N.W.2d at 267-68 (explaining how a new business can prove its lost profits).

US Salt, however, appeared to misunderstand the Court's request. Instead of providing a summary of previously claimed damages that remained for trial, it submitted an itemized list of damages totaling approximately $225,491 that had never been previously disclosed to Broken Arrow. Its new damages claim was made up of the following items: (a) equipment costs: $172,797; (b) rail-car demurrage: $28,280; (c) bag costs: $22,798; (d) fliers: $1,246; and (e) travel costs: $370. Broken Arrow moved to exclude US Salt's new damages claim, arguing that such damages were never disclosed and would unfairly prejudice Broken Arrow on the eve of trial.

The Court held a hearing on April 30, 2008 to address the issue of damages. Attached to US Salt's one-page list of damages were hundreds of exhibits that were not cross-referenced to its itemized list of damages. Notably, US Salt did not provide any explanation as to how it calculated its damages or why they were appropriate to submit to a jury. Because the Court did not fully understand US Salt's proffer of damages, it continued the trial to May 12, 2008, and directed US Salt to submit a memorandum explaining its damages theory and a document that cross-referenced its itemized damages with the attached exhibits. The Court also ordered the parties to meet with Magistrate Judge Mayeron on May 8, 2008 for a settlement conference in light of its recent evidentiary rulings. The parties' submissions on the issue of damages followed.[5]

[5] The trial was rescheduled to June 10, 2008. (See Doc. Nos. 130-31.) The parties informed the Court on May 21, 2008 that they were unable to reach a settlement.

ANALYSIS

US Salt contends that its new damages claim should be allowed as reliance damages under the Minnesota Uniform Commercial Code ("UCC") and as incidental and consequential damages. Broken Arrow, however, argues that US Salt's new damages claim should be excluded because US Salt never previously disclosed such evidence.[6] Broken Arrow asserts that the exclusion of US Salt's new damages claim would leave US Salt with no evidence of damages, which would require dismissal of US Salt's breach-of-contract claim.

The record shows that during the discovery process, Broken Arrow served an interrogatory on US Salt that required US Salt to identify its damages theories and the factual basis and methodology for its calculations. But US Salt never disclosed the damages it now seeks to present at trial in its response to that interrogatory. Broken Arrow's interrogatory on the issue of damages and US Salt's answer were as follows:

> **Interrogatory No. 14:** Describe in detail all damages that you allege in this action together with your method for calculating damages and a complete description of all evidence that you understand to support your claim of damages.
>
> **Answer:** See Exhibit 30 which is hereby attached and incorporated by reference herein showing the detail of damages and the method for calculating. Discovery is ongoing. Plaintiff reserves the right to supplement its answer.

[6] Broken Arrow also argues that reliance damages are not permitted under the Minnesota UCC and that US Salt's new damages do not qualify as incidental or consequential damages. For the reasons explained below, the Court need not address these arguments because US Salt's new damages claim was never previously disclosed to Broken Arrow as required by the discovery rules.

(Doc. No. 112 Ex. A at 17.) Exhibit 30 relates to US Salt's lost-profits claim; nowhere does it disclose the damages US Salt now seeks. (Id. at Ex. B.) In fact, US Salt acknowledges that this is a new damages claim. (See Pl.'s Reply Mem. on New Damages Theory at 1-5.)

The purpose of discovery is to "make a trial less a game of blind man's bluff and more a fair contest with the basic issues and facts disclosed to the fullest practicable extent." United States v. Procter & Gamble Co., 356 U.S. 677, 682 (1958) (citing Hickman v. Taylor, 329 U.S. 495, 501 (1947)). Notably, US Salt was required to disclose the calculation of its damages in its initial disclosures. See Fed. R. Civ. P. 26(a)(1)(A)(iii) (requiring as part of the initial disclosures "a computation of each category of damages claimed by the disclosing party.") Furthermore, US Salt was required to supplement its disclosures "in a timely manner if [it] learns that in some material respect the disclosure or response is incomplete or incorrect, and if the additional or corrective information has not otherwise been made known to [Broken Arrow] during the discovery process." Fed. R. Civ. P. 26(e)(1)(A).

Here, it is undisputed that US Salt never disclosed the damages it now seeks to offer at trial and never supplemented its disclosures on damages as required by the Federal Rules of Civil Procedure. So what is the consequence here? Rule 37(c)(1) provides that the Court must exclude the undisclosed evidence at trial unless a party shows that failure to comply with Rule 26(a) or 26(e) was substantially justified or harmless. The Eighth Circuit has set forth four factors that the Court should consider in

determining whether a failure to disclose was justified or harmless: (1) the importance of the excluded material; (2) the explanation for failing to comply with the disclosure rules; (3) the potential prejudice from allowing the material to be used at trial; and (4) the availability of a continuance to cure such prejudice. Citizens Bank v. Ford Motor Co., 16 F.3d 965, 966 (8th Cir. 1994).

Applying these factors, the Court determines that the nondisclosure of US Salt's new damages claim was neither substantially justified nor harmless. There is no question that the undisclosed damages are important to US Salt's claim. Despite the importance of this evidence, however, US Salt has failed to present a reasonable explanation for its failure to disclose this evidence of damages. It attempts to explain its failure to disclose on the basis that this Court's exclusion of its lost-profits claim forced it to now disclose a new damages claim. "The problem with [US Salt's] response is that the time for calculating damages and disclosing its theory on damages was long ago." Multimatic, Inc. v. Faurecia Interior Sys. USA, Inc., No. 05-60120, 2007 WL 627874, at *7 (E.D. Mich. Feb. 26, 2007) (finding that party had offered no justification for its failure to disclose information regarding its damages calculation and that such failure had "blindsided" other side and therefore was prejudicial given that discovery was closed). The purpose of discovery "is to narrow the issues, *to eliminate surprise*, and to achieve substantial justice." Greyhound Lines, Inc. v. Miller, 402 F.2d 134, 143 (8th Cir. 1968) (emphasis added). As part of its initial disclosures, US Salt was required to disclose a computation of each category of damages. See Fed. R. Civ. P. 26(a)(1)(A)(iii). If the

evidence for its damages claim became known or available only after its initial disclosure, then its initial response should have been supplemented pursuant to Rule 26(e)(1)(A). "For litigation to function efficiently, parties must provide clear and accurate responses to discovery requests. Parties are entitled to accept answers to previous interrogatories as true, and to refrain from seeking additional discovery directed to the same issue." ELCA Enters., Inc. v. Sisco Equip. Rental & Sales, Inc., 53 F.3d 186, 190 (8th Cir. 1995) (affirming district court's exclusion of evidence of damages because of plaintiff's incomplete interrogatory responses and "an eleventh-hour attempt to switch the basis for its alleged damages") (internal quotations and citations omitted).

The record shows that US Salt's new damages claim came unexpectedly on the eve of trial and only after the Court excluded its evidence on lost profits. The Court concludes that it would be highly prejudicial to Broken Arrow if the undisclosed evidence for US Salt's new damages claim was allowed at trial given that Broken Arrow has not had a full opportunity to test the reliability of this evidence through discovery and expert analysis. For example, US Salt's failure to disclose has prevented Broken Arrow from retaining an expert witness to offer testimony on the value of the used equipment and from deposing other witnesses, including Johnson, on these specific damages. It would be fundamentally unfair to allow US Salt to proceed with a completely new damages claim that was never revealed during the discovery process. Moreover, the record shows that all of the evidence US Salt seeks to introduce was in its possession

from the very early stages of the litigation and it offers no excuse for its failure to disclose other than its strategic decision to seek only lost profits as damages.[7]

Finally, the Court concludes that a continuance is unwarranted under the circumstances here. Although the Court could further delay the trial and open up discovery on US Salt's new damages claim, it would be unduly prejudicial to Broken Arrow given that US Salt is completely responsible for creating this situation. At this very late stage of the proceedings, the Court finds that it is neither appropriate nor economical to reopen discovery on US Salt's new damages claim.

Based on the foregoing, the Court concludes that US Salt's failure to disclose its new damages claim was neither substantially justified nor harmless. Accordingly, this evidence must be excluded. See Fed. R. Civ. P. 37(c)(1).

Having no evidence of damages, US Salt cannot prevail on its breach-of-contract claim as a matter of law. Under Minnesota law, a breach-of-contract claim consists of four elements: (1) a valid contract; (2) performance by the plaintiff of any conditions precedent; (3) a material breach of the contract by the defendant; and (4) damages. Parkhill v. Minn. Mut. Life Ins. Co., 174 F. Supp. 2d 951, 961 (D. Minn. 2000) (applying

[7] US Salt alleged in its Complaint that it was seeking incidental and consequential damages. As such, US Salt argues that Broken Arrow was on notice for the damages it now seeks. The Court disagrees. US Salt produced more than 15,000 pages of documents in response to Broken Arrow's discovery requests. (Third Hilke Aff. ¶ 8.) These documents were not segregated or organized according to the document requests to which they were responsive. (Id.); see also Fed. R. Civ. P. 34(b)(2)(E)(i). Furthermore, Broken Arrow is not required to examine this material in order to discern every possible claim for damages that might conceivably be made when it had already asked US Salt to specify its calculation of damages. See ELCA, 53 F.3d at 190 (party posing the interrogatory is entitled to rely on the answer given by the opponent). It is US Salt's responsibility under the federal rules to disclose its damages calculation. US Salt, however, failed to do that with respect to the damages it now seeks to offer at trial.

Minnesota law). "A breach of contract claim fails as a matter of law if the plaintiff cannot establish that [it] has been damaged by the alleged breach." Jensen v. Duluth Area YMCA, 688 N.W.2d 574, 578-79 (Minn. Ct. App. 2004).

Because US Salt cannot prove damages – an essential element of its breach-of-contract claim – that claim necessarily fails. See id.; see also Multimatic, 2007 WL 627874, at *7-8 (excluding evidence of damages because party did not include its calculation of damages in its initial disclosures or in its interrogatory responses. Because the party had no evidence of damages, it could not prevail on its claim as a matter of law).

CONCLUSION

Based on the foregoing, and all the files, records, and proceedings herein, **IT IS ORDERED** that US Salt's new damages claim is **EXCLUDED** and its Complaint (Doc. No. 1) is **DISMISSED WITH PREJUDICE**.

LET JUDGMENT BE ENTERED ACCORDINGLY.

Date: May 30, 2008

RICHARD H. KYLE
United States District Judge

116 T.C. No. 11

UNITED STATES TAX COURT

ESTATE OF W.W. JONES II, DECEASED, A.C. JONES IV, INDEPENDENT EXECUTOR, Petitioner v.
COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 13926-98. Filed March 6, 2001.

D formed a family limited partnership (JBLP) with his son and transferred assets including real property, to JBLP in exchange for a 95.5389-percent limited partnership interest. D also formed a family limited partnership (AVLP) with his four daughters and transferred real property to AVLP in exchange for an 88.178-percent limited partnership interest. D's son contributed real property in exchange for general and limited partnership interests in JBLP, and the daughters contributed real property in exchange for general and limited partnership interests in AVLP. All of the contributions were properly reflected in the capital accounts of the contributing partners. Immediately after formation of the partnerships, D transferred by gift an 83.08-percent limited partnership interest in JBLP to his son and a 16.915-percent limited partnership interest in AVLP to each of his daughters.

Held: The transfers of property to the partnerships were not taxable gifts. See Estate of Strangi v. Commissioner, 115 T.C. 478 (2000).

Held, further, sec. 2704(b), I.R.C., does not apply to this transaction. See Kerr v. Commissioner, 113 T.C. 449 (1999).

Held, further, the value of D's gift to his son was 83.08-percent of the value of the underlying assets of JBLP, reduced by a lack-of-marketability (8%) discount. The value of D's gift to each of his daughters was 16.915 percent of the value of the underlying assets of AVLP, reduced by secondary market (40%) and lack-of-marketability (8%) discounts.

Held, further, the gifts of limited partnership interests are not subject to additional lack-of-marketability discounts for built-in capital gains. Estate of Davis v. Commissioner, 110 T.C. 530 (1998), distinguished.

William R. Cousins III, Robert Don Collier, Robert M. Bolton, and Todd A. Kraft, for petitioner.

Deborah H. Delgado and Gerald L. Brantley, for respondent.

COHEN, Judge: Respondent determined a deficiency of $4,412,527 in the 1995 Federal gift tax of W.W. Jones II. The issues for decision are (alternatively): (1) Whether the transfers of assets on formation of Jones Borregos Limited Partnership (JBLP) and Alta Vista Limited Partnership (AVLP) (collectively, "the partnerships") were taxable gifts pursuant to section 2512(b); (2) whether the period of limitations for assessment of gift tax deficiency arising from gifts on formation

is closed; (3) whether restrictions on liquidation of the partnerships should be disregarded for gift tax valuation purposes pursuant to section 2704(b); and (4) the fair market value of interests in the partnerships transferred by gift after formation. Unless otherwise indicated, all section references are to the Internal Revenue Code in effect on the date of the transfers, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated, and the stipulated facts are incorporated in our findings by this reference. W.W. Jones II (decedent), resided in Corpus Christi, Texas, at the time the petition in this case was filed. Decedent subsequently died on December 17, 1998, and a motion to substitute the estate of W.W. Jones II, deceased, A.C. Jones IV, independent executor, as petitioner was granted. The place of probate of decedent's estate is Nueces County, Texas. At the time of his appointment as executor, A.C. Jones IV (A.C. Jones), also resided in Nueces County, Texas.

For most of his life, decedent worked as a cattle rancher in southwest Texas. Decedent had one son, A.C. Jones, and four daughters, Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, and Lorine Jones Booth.

During his lifetime, decedent acquired, by gift or bequest, the surface rights to several large ranches, including the Jones Borregos Ranch, consisting of 25,669.49 acres, and the Jones Alta Vista Ranch, consisting of 44,586.35 acres. These ranches were originally acquired by decedent's grandfather and have been held by decedent's family for several generations. The land on these ranches is arid natural brushland, and commercial uses include raising cattle and hunting.

Motivated by his desire to keep the ranches in the family, decedent became involved in estate planning matters beginning in 1987. In 1994, decedent's certified public accountant suggested that decedent use partnerships as estate and business planning tools. Following up on this suggestion, A.C. Jones prepared various projections for decedent concerning a hypothetical transfer of the ranches to partnerships and the discounted values that would attach to the partnership interests for gift tax purposes.

A.C. Jones, Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, and Lorine Jones Booth each owned a one-fifth interest in the surface rights of the Jones El Norte Ranch. They acquired this ranch by bequest from decedent's aunt in 1979. The Jones El Norte Ranch was also originally owned by decedent's grandfather and has also been owned by decedent's extended family for several generations.

Effective January 1, 1995, decedent and A.C Jones formed JBLP under Texas law. Decedent contributed the surface estate of the Jones Borregos Ranch, livestock, and certain personal property in exchange for a 95.5389-percent limited partnership interest. The entire contribution was reflected in the capital account of decedent. A.C. Jones contributed his one-fifth interest in the Jones El Norte Ranch in exchange for a 1-percent general partnership interest and a 3.4611-percent limited partnership interest.

On January 1, 1995, the same day that the partnership was effectively formed, decedent gave to A.C. Jones an 83.08-percent interest in JBLP, leaving decedent with a 12.4589-percent limited partnership interest. Decedent used a document entitled "Gift Assignment of Limited Partnership Interest" to carry out the transfer. The document stated that decedent intends that A.C. Jones receive the gift as a limited partnership interest.

Federal income tax returns for 1995, 1996, 1997, and 1998 were filed for JBLP and signed by A.C. Jones as tax matters partner. Attached to each return were separate Schedules K-1 for each general partnership interest and each limited partnership interest. The Schedules K-1 for the limited partnership interest of A.C. Jones included the interest in partnership received by gift from decedent.

Also effective January 1, 1995, decedent and his four daughters formed AVLP under Texas law. Decedent contributed the surface estate of the Jones Alta Vista Ranch in exchange for an 88.178-percent limited partnership interest. The contribution was reflected in decedent's capital account. Susan Jones Miller and Elizabeth Jones each contributed their one-fifth interests in the Jones El Norte Ranch in exchange for 1-percent general partnership interests and 1.9555-percent limited partnership interests, and Kathleen Jones Avery and Lorine Jones Booth each contributed their one-fifth interest in the Jones El Norte Ranch in exchange for 2.9555-percent limited partnership interests. The following chart summarizes the ownership structure of AVLP immediately after formation:

Partner	Percentage	Interest
Elizabeth Jones	1.0	General
	1.9555	Limited
Susan Jones Miller	1.0	General
	1.9555	Limited
Kathleen Jones Avery	2.9555	Limited
Lorine Jones Booth	2.9555	Limited
Decedent	88.178	Limited

On January 1, 1995, the same day that the partnership was effectively formed, decedent gave to each of his four daughters a 16.915-percent interest in AVLP, leaving decedent with a 20.518-percent limited partnership interest. Decedent used four separate documents, one for each daughter, entitled "Gift Assignment of Limited Partnership Interest" to carry out the

transfers. Each document stated that decedent intended for his daughters to receive the gifts as limited partnership interests.

Federal income tax returns for 1995, 1996, 1997, and 1998 were filed for AVLP and signed by Elizabeth Jones as tax matters partner. Attached to each return were separate Schedules K-1 for each general partnership interest and each limited partnership interest. The Schedules K-1 for each daughter's limited partnership interest included the partnership interest received by gift from decedent.

Decedent's attorney drafted the partnership agreements of both JBLP and AVLP with the intention of creating substantial discounts for the partnership interests that were transferred by gift. Both partnership agreements set forth conditions for when an interest that is transferred by gift or by other methods may convert to a limited partnership interest. Section 8.3 of the JBLP agreement provides that the general partner and 100 percent of the limited partners must approve the conversion to a limited partnership interest in writing, and section 8.3 of the AVLP agreement provides that the general partners and 75 percent of the remaining limited partners must approve the conversion in writing. Both agreements also require that an assignee execute a writing that gives assurances to the other partners that the assignee has acquired such interest without the intention to distribute such interest, and the assignee must execute a

counterpart to the partnership agreement adopting the conditions therein.

Sections 8.4 and 8.5 of the partnership agreements provide that, before a partner may transfer an interest in the partnerships to anyone other than decedent or any lineal descendant of decedent, the partnership or remaining partners shall have the option to purchase the partnership interest for the lesser of the agreed upon sales price or appraisal value. The partnership may elect to pay the purchase price in 10 annual installments with interest set at the minimum rate allowed by the rules and regulations of the Internal Revenue Service.

Section 9.2 of the agreements provides that the partnerships will continue for a period of 35 years. Section 9.3 provides that a limited partner will not be permitted to withdraw from the partnership, receive a return of contribution to capital, receive distributions in liquidation, or redemption of interest except upon dissolution, winding up, and termination of the partnership.

Section 9.4 of the partnership agreements provides for the removal of a general partner and the dissolution of the partnership. The AVLP agreement provides that a general partner may be removed at any time by the act of partners owning an aggregated 75-percent interest in the partnership. The JBLP agreement provides that a general partner may be removed at any time by the act of the partners owning an aggregated 51-percent

interest in the partnership. After removal, if there is no remaining general partner, the remaining limited partners shall designate a successor general partner. If the limited partners fail to designate a successor general partner within 90 days, the partnership will dissolve, affairs will be wound up, and the partnership will terminate. Except upon dissolution, windup, and termination, both partnership agreements prohibit a limited partner from withdrawing and receiving a return of capital contribution, distribution in liquidation, or a redemption of interest.

Section 5.4 of the AVLP agreement originally provided that the general partners could not sell any real property interest that was owned by the partnership without first obtaining the consent of partners owning a majority interest in the partnership. This section was later amended so that partners owning 85 percent of the partnership must consent to a sale of real property.

On January 1, 1995, the Jones Alta Vista Ranch had a fair market value of $10,254,860, and the Jones Borregos Ranch, livestock, and personal property that were contributed by decedent to JBLP had a fair market value of $7,360,997. Neither partnership ever made a section 754 election. At the time that decedent transferred interests in the partnerships by gift to his children, the net asset values (NAV) of the underlying

partnership assets that were held by AVLP and JBLP were $11,629,728 and $7,704,714, respectively. JBLP and AVLP had bases in their assets of $562,840 and $1,818,708, respectively.

Attached to his 1995 Federal gift tax return, decedent included a valuation report prepared by Charles L. Elliott, Jr. (Elliott), who also testified as the estate's expert at trial. The partnerships were valued on the return and by Elliott at trial using the NAV method on a "minority interest, nonmarketable" basis. Nowhere in his report did Elliott purport to be valuing assignee interests in the partnership. The valuation report arrived at an NAV for the partnerships and then applied secondary market, lack-of-marketability, and built-in capital gains discounts. The expert report concluded that a 66-percent discount from NAV is applicable to the interest in JBLP and that a 58-percent discount is applicable to the interest in AVLP. On the return, decedent reported gifts of "an 83.08 percent limited partnership interest" in JBLP valued at $2,176,864 and a "16.915 percent limited partnership interest" in AVLP to each of his four daughters, valued at $821,413 per interest.

In an affidavit executed on January 12, 1999, A.C. Jones stated that the gifts that he and his sisters received from decedent were "limited partnership interests". The sole activity

of AVLP is the rental of its real property. AVLP produces an average annual yield of 3.3 percent of NAV.

OPINION

Gift at the Inception of the Partnerships

In an amendment to the answer, respondent contends that decedent made taxable gifts upon contributing his property to the partnerships. Using the value reported by decedent on his gift tax return, respondent argues that, if decedent gave up property worth $17,615,857 and received back limited partnership interests worth only $6,675,156, decedent made taxable gifts upon the formation of the partnerships equal to the difference in value.

In Estate of Strangi v. Commissioner, 115 T.C. 478, 489-490 (2000), a decedent formed a family limited partnership with his children and transferred assets to the partnership in return for a 99-percent limited partnership interest. After his death, his estate claimed that, due to lack-of-control and lack-of-marketability discounts, the value of the limited partnership interest was substantially lower than the value of the property that was contributed by the decedent. The Commissioner argued that the decedent had made a gift when he transferred property to the partnership and received in return a limited partnership interest of lesser value. The Court held that, because the taxpayer received a continuing interest in the family limited partnership and his contribution was allocated to his own capital

account, the taxpayer had not made a gift at the time of contribution.

In Shepherd v. Commissioner, 115 T.C. 376, 379-381 (2000), the taxpayer transferred real property and stock to a newly formed family partnership in which he was a 50-percent owner and his two sons were each 25-percent owners. Rather than allocating contributions to the capital account of the contributing partner, the partnership agreement provided that any contributions would be allocated pro rata to the capital accounts of each partner according to ownership. Because the contributions were reflected partially in the capital accounts of the noncontributing partners, the value of the noncontributing partners' interests was enhanced by the contributions of the taxpayer. Therefore, the Court held that the transfers to the partnership were indirect gifts by the taxpayer to his sons of undivided 25-percent interests in the real property and stock. See id. at 389.

The contributions of property in the case at hand are similar to the contributions in Estate of Strangi and are distinguishable from the gifts in Shepherd. Decedent contributed property to the partnerships and received continuing limited partnership interests in return. All of the contributions of property were properly reflected in the capital accounts of decedent, and the value of the other partners' interests was not

enhanced by the contributions of decedent. Therefore, the contributions do not reflect taxable gifts.

Because the contributions do not reflect taxable gifts, we need not decide whether the period of limitations for assessment of a deficiency due to a gift on formation has expired.

Section 2704(b)

Respondent determined in the statutory notice, and argues in the alternative, that provisions in the partnership agreements constitute applicable restrictions under section 2704(b) and must be disregarded when determining the value of the partnership interests that were transferred by gift.

Section 2704(b) generally states that, where a transferor and his family control a partnership, a restriction on the right to liquidate the partnership shall be disregarded when determining the value of the partnership interest that has been transferred by gift or bequest if, after the transfer, the restriction on liquidation either lapses or can be removed by the family. Section 25.2704-2(b), Gift Tax Regs., provides that an applicable restriction is a restriction on "the ability to liquidate the entity (in whole or in part) that is more restrictive than the limitations that would apply under the State law generally applicable to the entity in the absence of the restriction."

Respondent argues that both partnership agreements contain provisions limiting the ability of a partner to liquidate that are more restrictive than the default Texas partnership provisions. Specifically, respondent points to section 9.2 of the partnership agreements, which provides that each partnership shall continue for a period of 35 years. Respondent also points to section 9.3 of the partnership agreements, which prohibits a limited partner from withdrawing from the partnership or from demanding the return of any part of a partner's capital account except upon termination of the partnership.

Respondent compares sections 9.2 and 9.3 of the partnership agreements with section 6.03 of the Texas Revised Limited Partnership Act (TRLPA). TRLPA section 6.03 provides:

> A limited partner may withdraw from a limited partnership at the time or on the occurrence of events specified in a written partnership agreement and in accordance with that written partnership agreement. If the partnership agreement does not specify such a time or event or a definite time for the dissolution and winding up of the limited partnership, a limited partner may withdraw on giving written notice not less than six months before the date of withdrawal to each general partner * * *.

Tex. Rev. Civ. Stat. Ann. art. 6132a-1, sec. 6.03 (West Supp. 1993).

Respondent's argument is essentially the same as the argument we rejected in Kerr v. Commissioner, 113 T.C. 449, 469-474 (1999). In Kerr, the taxpayers and their children formed two

family limited partnerships with identical liquidation restrictions. Shortly after formation, the taxpayers transferred limited partnership interests to their children by gift. On their Federal gift tax return, the taxpayers claimed substantial discounts in the value of the interests compared to the value of the underlying assets due to lack of control and lack of marketability. The partnership agreements provided that the partnerships would continue for 50 years.

The Court held:

> Respondent's reliance on TRLPA section 6.03 is misplaced. TRLPA section 6.03 governs the withdrawal of a limited partner from the partnership--not the liquidation of the partnership. TRLPA section 6.03 sets forth limitations on a limited partner's withdrawal from a partnership. However, a limited partner may withdraw from a partnership without requiring the dissolution and liquidation of the partnership. In this regard, we conclude that TRLPA section 6.03 is not a "limitation on the ability to liquidate the entity" within the meaning of section 25.2704-2(b), Gift Tax Regs.

Id. at 473. In sum, the Court concluded that the partnership agreements in Kerr were not more restrictive than the limitations that generally would apply to the partnerships under Texas law. See id. at 472-474. Respondent acknowledges that Kerr is applicable to this issue but argues that Kerr was incorrectly decided. However, we find no reason to reach a result that is different than the result in Kerr. Thus, section 2704(b) does

not apply here. See also Knight v. Commissioner, 115 T.C. 506, 519-520 (2000); Harper v. Commissioner, T.C. Memo. 2000-202.

Valuation of Decedent's Gifts of Limited Partnership Interests

A gift of property is valued as of the date of the transfer. See sec. 2512(a). The gift is measured by the value of the property passing from the donor, rather than by the property received by the donee or upon the measure of enrichment to the donee. See sec. 25.2511-2(a), Gift Tax Regs. The fair market value of the transferred property is the price at which the property would change hands between a willing buyer and willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. See United States v. Cartwright, 411 U.S. 546, 551 (1973); sec. 25.2512-1, Gift Tax Regs. The hypothetical willing buyer and the hypothetical willing seller are presumed to be dedicated to achieving the maximum economic advantage. See Estate of Davis v. Commissioner, 110 T.C. 530, 535 (1998). Transactions that are unlikely and plainly contrary to the economic interests of a hypothetical willing buyer or a hypothetical willing seller are not reflective of fair market value. See Estate of Strangi v. Commissioner, 115 T.C. 478, 491 (2000); Estate of Newhouse v. Commissioner, 94 T.C. 193, 232 (1990); Estate of Hall v. Commissioner, 92 T.C. 312, 337 (1989).

As is customary for valuation issues, the parties rely extensively on the opinions of their respective experts to support their differing views about the fair market value of the gifts of partnership interests. The estate relies on Elliott, a senior member of the American Society of Appraisers and a principal in the business valuation firm of Howard Frazier Barker Elliott, Inc. Respondent relies on Francis X. Burns (Burns), a candidate member of the American Society of Appraisers and a principal in the business valuation firm of IPC Group, Inc. Each expert prepared a report.

We evaluate the opinions of the experts in light of the demonstrated qualifications of each expert and all other evidence in the record. See Estate of Davis v. Commissioner, supra at 536. We are not bound by the formulae and opinions proffered by expert witnesses, especially when they are contrary to our judgment. Instead, we may reach a determination of value based on our own examination of the evidence in the record. Where experts offer contradicting estimates of fair market value, we decide what weight to give those estimates by examining the factors used by the experts in arriving at their conclusions. See id. Moreover, because valuation is necessarily an approximation, it is not required that the value that we determine be one as to which there is specific testimony, provided that it is within the range of figures that properly may

be deduced from the evidence. See Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285. The experts in this case agree that, in ascertaining the fair market value of each gift of interest in the partnerships, one starts with the fair market value of the underlying assets of each partnership and then applies discounts for factors that limit the value of the partnership interests.

A. Nature of Interests Transferred

The first argument of the estate is that the partnership interests that were transferred by decedent were assignee interests rather than limited partnership interests. The estate claims that decedent and the recipients of the gifts did not fulfill the necessary requirements set forth in the partnership agreements for transferring limited partnership interests. The JBLP agreement provides that, upon an exchange of an interest in the partnership, the general partner and 100 percent of the remaining limited partners must approve, in writing, of a transferred interest becoming a limited partnership interest. The AVLP agreement provides that the general partners and 75 percent of the limited partners must approve, in writing, of a transferred interest's becoming a limited partnership interest. Because these written approvals were not carried out, the estate contends that the recipients of the gifts are entitled only to the rights of assignees.

In Kerr v. Commissioner, 113 T.C. 449, 464 (1999), the taxpayers held greater than 99 percent of the partnership interests of two family limited partnerships as general and limited partners. The taxpayers' children held the remaining partnership interests, totaling less than 1 percent of overall ownership, as general partners. The partnership agreements provided that no person would be admitted as a limited partner without the consent of all general partners. In 1994, the taxpayers transferred a large portion of their limited partnership interests to trusts for which they served as trustees. At trial, the taxpayers argued that, although they made these transfers to themselves as trustees, pursuant to the family limited partnership agreement, their children as general partners had to consent to the admission of the trustees as limited partners. The taxpayers argued that the interests held by the trusts should be valued as assignee interests. The Court looked at all of the surrounding facts and circumstances in holding that the interests that were transferred by the taxpayers were limited partnership interests. See id. at 464.

On review of the facts and circumstances of the case at hand, decedent, like the taxpayers in Kerr, transferred limited partnership interests to his children rather than assignee interests. The evidence shows that decedent intended for the transfers to include limited partnership interests and that the

children consented to the transfer of limited partnership interests, having waived the requirement of a writing.

Pursuant to the AVLP agreement, Susan Jones Miller and Elizabeth Jones as general partners would have had to consent in writing to the transfer of the interests as limited partnership interests. Also, 75 percent of the remaining limited partners, i.e., Elizabeth Jones, Susan Jones Miller, Kathleen Jones Avery, Lorine Jones Booth, and decedent, would have had to consent in writing. Pursuant to the JBLP agreement, A.C. Jones as general partner would have had to consent in writing to the transfer as a limited partnership interest. Also, all of the remaining limited partners, i.e., A.C. Jones and decedent, would have had to consent in writing.

Although the estate argues that the absence of written consents leads to the conclusion that the interests transferred were assignee interests, it is difficult to reconcile that position with the language that decedent, his children, and Elliott used to document and characterize the transfers. First, the documents entitled “Gift Assignment of Limited Partnership Interest”, created by decedent to carry out the transfers, state that, after the transfers are complete, each child will hold his or her newly acquired interest as a “limited partnership interest”. Second, in his 1995 Federal gift tax return, decedent describes the gifts as “limited partnership interests” rather

than assignee interests. Third, in an affidavit executed on January 12, 1999, A.C. Jones states that the gifts that he and his sisters received from decedent were "limited partnership interests". Fourth, the 1995, 1996, 1997, and 1998 Federal income tax returns for JBLP and AVLP, signed by A.C. Jones and Elizabeth Jones, respectively, designate the interests as limited partnership interests on the Schedules K-1. Fifth, although he claimed at trial that he was valuing assignee interests, Elliott's written report referred only to limited partnership interests. These factors lead to the conclusion that the estate's argument, that decedent transferred assignee interests, was an afterthought in the later stages of litigation.

Also, after giving the gifts to his daughters, decedent was left with a 20.518-percent limited partnership interest. Section 5.4 of the AVLP agreement was modified so that consent of 85 percent of the partners was required in order for a general partner to sell a real estate interest belonging to the partnership. With this modification, decedent could retain the power to block unilaterally a sale of a real estate interest even after giving the gifts. This amendment would not have been necessary if the daughters had received only assignee interests.

This case is distinguishable from Estate of Nowell v. Commissioner, T.C. Memo. 1999-15, relied on by petitioner. In Estate of Nowell, the partnership agreements specified that the

recipient of limited partnership interests would become an assignee and not a substitute limited partner unless the general partners consented to the assignee's admission as a limited partner. The Court there decided that interests in the partnerships should be valued for estate tax purposes as assignee interests rather than as limited partnership interests.

The transactions in Estate of Nowell differ from the gifts in the case at hand in that the beneficiaries, the estate, and the decedent in Estate of Nowell never treated the passing interests in the partnerships as limited partnership interests. The record was void of evidence that showed that a limited partnership interest was in fact transferred. Here, the conduct of decedent, A.C. Jones, and the daughters reflects that limited partnership interests were actually transferred by decedent.

B. Value of the Transferred Interest in JBLP

Having concluded that decedent transferred an 83.08-percent limited partnership interest in JBLP to A.C. Jones, the next issue for decision is the value of the limited partnership interest. The estate relies on the conclusions of Elliott, who opined that the value of the interest in JBLP is subject to a secondary market discount of 55 percent, a lack-of-marketability discount of 20 percent, and an additional discount for built-in capital gains. Respondent relies on the valuation of Burns, who opined that no discounts apply.

Section 9.4 of the JBLP agreement provides that a general partner may be removed at any time by the act of the partners owning an aggregate 51-percent interest in the partnership. After removal, if no general partners remain, the limited partners shall designate a successor general partner. If the limited partners fail to designate a successor general partner within 90 days, the partnership will dissolve, affairs will be wound up, and the partnership will terminate.

Section 9.4 effectively gives ultimate decision-making authority to the owner of the 83.08-percent limited partnership interest. Under the threat of removal of the general partner, the 83.08-percent limited partner would have the power to control management, to compel a sale of partnership property, and to compel partnership distributions. If the general partner refused, the 83.08-percent limited partner could force liquidation within 90 days. Having the ability to force liquidation also gives the 83.08-percent limited partner the right to force a sale of the partnership assets and to receive a pro rata share of the NAV. Because the 83.08-percent limited partner has the power to control the general partner or to force a liquidation, the discounts proffered by Elliott are unreasonable and unpersuasive. The size of the interest to be valued and the nature of the underlying assets make the secondary market an improbable analogy for determining fair market value.

We do not believe that a seller of the 83.08-percent limited partnership interest would part with that interest for substantially less than the proportionate share of the NAV.

Burns opined that no discount for lack of control should apply for the reasons stated above. We agree. He also concluded that "the size and the associated rights of the interest would preclude the need for a marketability discount." He recognized that section 8.4 of the partnership agreement purported to give family members the power to prevent a third-party buyer from obtaining an interest in the JBLP, but he maintained that "to adhere to the fair market value standard, an appraiser must assume that a market exists and that a willing buyer would be admitted into the partnership." We believe that there is merit to this position. Self-imposed limitations on the interest, created with the purpose of minimizing value for transfer tax purposes, are likely to be waived or disregarded when the owner of the interest becomes a hypothetical willing seller, seeking the highest price that the interest will bring from a willing buyer. The owner of the 83.08-percent interest has the ability to persuade or coerce other partners into cooperating with the proposed sale. Nonetheless, liquidation of a partnership and sale of its assets, the most likely threat by which the owner of such a controlling interest would persuade or coerce, would involve costs and delays. The possibility of litigation over a

forced liquidation would reduce the amount that a hypothetical buyer would be willing to pay for the interest. See Adams v. United States, 218 F.3d 383 (5th Cir. 2000); Estate of Newhouse v. Commissioner, 94 T.C. 193, 235 (1990). A marketability discount would apply, but we believe that, under the circumstances of this case, an 8-percent discount more accurately reflects reality. This amount approximates the discount for lack of marketability proposed by Burns with respect to AVLP, as discussed below.

The experts also disagree about whether a discount attributable to built-in capital gains to be realized on liquidation of the partnership should apply. The parties and the experts agree that tax on the built-in gains could be avoided by a section 754 election in effect at the time of sale of partnership assets. If such an election is in effect, and the property is sold, the basis of the partnership's assets (the inside basis) is raised to match the cost basis of the transferee in the transferred partnership interest (the outside basis) for the benefit of the transferee. See sec. 743(b). Otherwise, a hypothetical buyer who forces a liquidation could be subject to capital gains tax on the buyer's pro rata share of the amount realized on the sale of the underlying assets of the partnership over the buyer's pro rata share of the partnership's adjusted basis in the underlying assets. See sec. 1001. Because the JBLP

agreement does not give the limited partners the ability to effect a section 754 election, in this case the election would have to be made by the general partner.

Elliott opined that a hypothetical buyer would demand a discount for built-in gains. He acknowledged in his report a 75- to 80-percent chance that an election would be made and that the election would not create any adverse consequences or burdens on the partnership. His opinion that the election was not certain to be made was based solely on the position of A.C. Jones, asserted in his trial testimony, that, as general partner, he might refuse to cooperate with an unrelated buyer of the 83.08-percent limited partnership interest (i.e., the interest he received as a gift from his father). We view A.C. Jones' testimony as an attempt to bootstrap the facts to justify a discount that is not reasonable under the circumstances.

Burns, on the other hand, opined, and respondent contends, that a hypothetical willing seller of the 83.08-percent interest would not accept a price based on a reduction for built-in capital gains. The owner of that interest has effective control, as discussed above, and would influence the general partner to make a section 754 election, eliminating any gains for the purchaser and getting the highest price for the seller. Such an election would have no material or adverse impact on the preexisting partners. We agree with Burns.

Petitioner relies on Eisenberg v. Commissioner, 155 F.3d 50 (2d Cir. 1998), revg. T.C. Memo. 1997-483, and Estate of Davis v. Commissioner, 110 T.C. 530, 546-547 (1998). Those cases, however, are distinguishable. In the contexts of those cases, the hypothetical buyer and seller would have considered a factor for built-in capital gains in determining a price for closely held stock in a corporation. In Eisenberg, the Court of Appeals emphasized that earlier Tax Court cases declining to recognize a discount for unrealized capital gains were based on the ability of the corporation, under the doctrine of General Utilities & Operating Co. v. Helvering, 296 U.S. 200 (1935), to liquidate and distribute property to its shareholders without recognizing built-in gain or loss and thus circumvent double taxation. The Court of Appeals went on to explain that the tax-favorable options ended with the Tax Reform Act of 1986, Pub. L. 99-514, sec. 631, 100 Stat. 2085, 2269. In reversing our grant of summary judgment on this issue and remanding the case for determination of gift tax liability, the Court of Appeals cited and quoted from Estate of Davis v. Commissioner, supra, in support of its reasoning.

In Estate of Davis, the Court rejected the Government's argument that no discount for built-in capital gains should apply because of the possibility that the corporation could convert to an S corporation and avoid recognition of gains on assets

retained for 10 years. Applying the hypothetical buyer and seller test, the Court, based on the record presented, including the testimony of experts for both parties, concluded that a discount for tax on built-in gains would be applied.

In the cases in which the discount was allowed, there was no readily available means by which the tax on built-in gains would be avoided. By contrast, disregarding the bootstrapping testimony of A.C. Jones in this case, the only situation identified in the record where a section 754 election would not be made by a partnership is an example by Elliott of a publicly syndicated partnership with "lots of partners * * * and a lot of assets" where the administrative burden would be great if an election were made. We do not believe that this scenario has application to the facts regarding the partnerships in issue in this case. We are persuaded that, in this case, the buyer and seller of the partnership interest would negotiate with the understanding that an election would be made and the price agreed upon would not reflect a discount for built-in gains.

C. Value of Interests in AVLP

The estate relies on the conclusions of Elliott, who opined that the value of each transferred interest in AVLP is subject to a secondary market discount of 45 percent, a discount for lack of marketability equal to 20 percent, and an additional discount for built-in capital gains. Burns opined that the transferred

interests are entitled to a secondary market discount of 38 percent, a discount for lack of marketability equal to 7.5 percent, and no discount for built-in capital gains.

An owner of a 16.915-percent limited partnership interest in AVLP does not have the ability to remove a general partner. As such, a hypothetical buyer would have minimal control over the management and business operations. Also, a 16.915-percent limited partnership interest in AVLP is not readily marketable, and any hypothetical purchaser would demand a significant discount. In calculating the overall discount for the AVLP interests, both experts use data from different issues of the same publication regarding sales of limited partnership interests on the secondary market. The publication was the primary tool used by both experts.

Burns, using the May/June 1995 issue, opined that interests in real estate-oriented partnerships with characteristics similar to AVLP traded at discounts due to lack of control equal to 38 percent on January 1, 1995. The May/June 1995 issue contained data regarding the sale of limited partnership interests during the 60-day period ended May 31, 1995. Burns classified AVLP as a low-debt partnership making current distributions.

Elliott, using the May/June 1994 issue, opined that similar partnerships traded at a secondary market discount of 45 percent. The secondary market discount is an overall discount encompassing

discounts for both lack of control and lack of marketability for minority interests in syndicated limited partnerships. The May/June 1994 issue contained data regarding the sale of limited partnership interests during the 60-day period ended May 31, 1994.

The estate argues that Burns' conclusion, which is based on data found in the May/June 1995 issue, is flawed because such information was not available on January 1, 1995, the date the gift was made. The estate contends that, since a gift of property is valued, pursuant to section 2512(a), as of the date of the transfer, posttransfer data cannot affect our decision. However, Burns does not use the posttransfer data to prove directly the value of the transferred interests. Instead, he uses the May/June 1995 issue to show what value would have been calculated if, on January 1, 1995, decedent had looked at transactions involving the sale of interests in similarly situated partnerships occurring at that point in time. Data regarding such transactions involving similarly situated partnerships were available on the valuation date. Therefore, the data available in the May/June 1995 issue are relevant as they provide insight into what information would have been found if, on January 1, 1995, decedent had looked at transactions occurring on or near the valuation date.

The data on which Burns relied show that interests in similarly situated partnerships were trading at a 38-percent discount from April 2 to May 31, 1995. The data on which Elliott relied show that interests in similarly situated partnerships were trading at a 45-percent discount from April 2 to May 31, 1994. Therefore, transfers of interests on or around January 1, 1995, would have been trading at a discount somewhere between 38 and 45 percent. Because the data on which Burns relied are closer in time to the transfer date of the 16.915-percent AVLP interests, we give greater weight to his determination. Recognizing that the valuation process is always imprecise, a 40-percent discount is reasonable. This discount is a reduction in value for an interest trading on the secondary market and encompasses discounts for lack of control and lack of marketability.

Elliott opines that an additional 20-percent discount for lack of marketability is applicable because the partnerships that are the subject of the data in the publication are syndicated limited partnerships. He believes that, although there is a viable market for syndicated limited partnership interests, a market for nonsyndicated, family limited partnership interests does not exist. The additional 20-percent discount opined by Elliot is also attributable to sections 8.4 and 8.5 of the AVLP agreement, which attempt to limit the transferability of

interests in AVLP. In calculating the additional discount, Elliott relied on data found in various restricted stock and initial public offering studies.

Elliott acknowledges that the secondary market for syndicated partnerships is not a strong market and that a large discount for lack of marketability is already built into the secondary market discount. Although Elliott adjusts his analysis of the data found in the restricted stock and initial public offering studies to take into consideration the lack-of-marketability discount already allowed, his adjustment is inadequate. His cumulation of discounts does not survive a sanity check.

Sections 8.4 and 8.5 of the AVLP agreement do not justify an additional 20-percent discount. An option of the partnership or the other partners to purchase an interest for fair market value before it is transferred to a third party, standing alone, would not significantly reduce the value of the partnership interest. Nevertheless, the right of the partnership to elect to pay the purchase price in 10 annual installments with interest set at the minimum rate allowed by the rules and regulations of the Internal Revenue Service would increase the discount for lack of marketability. Texas courts have been willing to disregard option clauses that unreasonably restrain alienation. See Procter v. Foxmeyer Drug Co., 884 S.W.2d 853, 859 (Tex. App.

1994). We express no opinion whether this election is enforceable under Texas law. Because this clause would cause uncertainty as to the rights of an owner to receive fair market value for an interest in AVLP, a hypothetical buyer would pay less for the partnership interest. See Estate of Newhouse v. Commissioner, 94 T.C. 193, 232-233 (1990); Estate of Moore v. Commissioner, T.C. Memo. 1991-546. We believe that an additional discount equal to 8 percent for lack of marketability, to the NAV previously discounted by 40 percent, is justified.

For the reasons set forth in the built-in capital gains analysis for JBLP, an additional discount for lack of marketability due to built-in gains in AVLP is not justified. Although the owner of the percentage interests to be valued with respect to AVLP would not exercise effective control, there is no reason why a section 754 election would not be made. Elliott admits that, because AVLP has relatively few assets, a section 754 election would not cause any detriment or hardship to the partnership or the other partners. Thus, we agree with Burns that the hypothetical seller and buyer would negotiate with the understanding that an election would be made. Elliott's assumption that Elizabeth Jones and Susan Jones Miller, as general partners, might refuse to cooperate with a third-party purchaser is disregarded as an attempt to bootstrap the facts to justify a discount that is not reasonable under the

circumstances. Therefore, a further discount for built-in capital gains is not appropriate in this case.

D. Conclusion

The schedules below summarize our conclusions as to fair market value for the transferred JBLP and AVLP limited partnership interests:

83.08-Percent Interest in JBLP

NAV of limited partnership	$ 7,704,714
	83.08%
Pro rata NAV	6,401,076
Lack of marketability (8%)	(512,086)
Fair market value	$ 5,888,990

16.915-Percent Interest in AVLP

NAV of limited partnership	$11,629,728
	16.915%
Pro rata NAV	1,967,168
Secondary market (40%)	(786,867)
	1,180,301
Lack of marketability (8%)	(94,424)
Fair market value	$ 1,085,877

We have considered all remaining arguments made by both parties for a result contrary to those expressed herein, and, to the extent not discussed above, they are irrelevant or without merit.

To reflect the foregoing,

Decision will be entered under Rule 155.

Full Text of Court Cases

Wall v. Commissioner

Case name: Wall v. Commissioner
Citation: T.C. Memo 2001-75; 2001 Tax Ct. Memo LEXIS 97
Date of decision: March 27, 2001
Country: US
State or Federal: Federal
Court: United States Tax Court
Type of action: Estate and Gift Taxation
Judge: Beghe, Renato
Experts: Donna J. Walker, CFA, ASA
Gary L. Schroeder, ASA
SIC: 2522 Office Furniture, Except Wood
NAICS: 337214 Office Furniture (except Wood) Manufacturing
450

JUDGES: Beghe, Renato

OPINIONBY: BEGHE, RENATO

OPINION: These are gift tax valuation cases in which the transferred property is nonvoting common stock of a family corporation given by petitioners to 20 trusts for their 10 children. The value per share determined by the statutory notices exceeded the value claimed in the gift tax returns by only 17 percent. The reports prepared by the experts for trial came up with values that widened the gap between the parties' initial positions. In Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 451-452 (1980), the Court suggested that valuation cases should be settled, and warned the parties that in some cases the Court might be persuaded to adopt the position of one party, rather than to split the difference between their positions; these are such cases. Held: the determination of value in the statutory notices is sustained.

Rex A. Guest and Melvin L. Katten, for petitioners.

Michael F. O'Donnell and George W. Bezold, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

BEGHE, Judge: Respondent determined a $73,789 deficiency in petitioner John E. Wall's gift tax for calendar 1992. Respondent also determined a $73,789 deficiency in the 1992 gift tax of Mr. Wall's spouse, petitioner Joanne Wall. Mrs. Wall is a party to these consolidated cases solely because petitioners elected to treat Mrs. Wall as the donor of one-half of the gifts Mr. Wall made during 1992. See sec. 2513. n1

n1 All section references are to the Internal Revenue Code in effect for 1992, and all Rule references are to the Tax Court Rules of Practice and Procedure, unless otherwise specified.

The only issue for decision is the fair market value, as of January 1, 1992, of 9,380 shares of Demco, Inc., nonvoting common stock, which Mr. Wall gave on that date to 20 trusts for the benefit of his children. Petitioners claimed on their gift tax returns that the fair market value of the stock was $221.75 per share. Respondent asserted in the statutory notices that the correct value was $260.13 per share, approximately 17 percent more than the value claimed by petitioners.

FINDINGS OF FACT

Petitioners resided in Madison, Wisconsin, when they filed the petitions in the cases at hand.

Demco, Inc. (Demco), is a Wisconsin corporation that has elected to be an S corporation for Federal income tax purposes.

Mr. Wall was Demco's sole stockholder immediately before the gifts in issue. He owned all 1,200 issued and outstanding shares of Demco's voting common stock and all 12,000 issued and outstanding shares of Demco's nonvoting common stock.

On January 1, 1992, Mr. Wall (as grantor) and Michael O. Hartz (as trustee) created two irrevocable trusts for the benefit of each of Mr. Wall's 10 children. Of these 20 trusts, 10 were known as "annual exclusion" trusts, and 10 were known as "nonvoting stock" trusts.

Also on January 1, 1992, Mr. Wall gave 443 shares of his Demco nonvoting common stock to each of the annual exclusion trusts and 495 shares of his Demco nonvoting common stock to each of the nonvoting stock trusts. As a result of these transactions, Mr. Wall gave 938 shares of the Demco nonvoting common stock to trusts for the benefit of each of his 10 children, for total gifts of 9,380 shares (collectively, the gifts).

After the gifts, Mr. Wall continued to own all 1,200 shares of Demco's voting common stock and the remaining 2,620 shares of Demco's nonvoting common stock.

Demco's stock was not listed on an exchange on or around the date of the gifts, and there was no other public market for Demco stock.

DEMCO'S HISTORY AND BUSINESS

Demco is a direct mail distributor and manufacturer of office supplies, furniture, and accessories. Demco's principal customers are libraries, schools, and professional and business offices. Demco distributes its products nationwide and has over 100,000 customers.

Demco started doing business in 1906 as part of the Democrat Printing Company of Madison, Wisconsin. In 1931, Demco was chartered as Demco Library Supplies, Inc., a company owned and operated by Norman Bassett. In January 1972, Demco became a wholly owned subsidiary of George Banta Co. of Menasha, Wisconsin, a publicly owned educational printer. In 1978, following a failed takeover attempt by another corporation, Demco's management (including Mr. Wall, who was then Demco's president and chief executive officer) acquired Demco's stock in a leveraged buyout.

Demco's headquarters are in Madison, Wisconsin. At the time of the gifts, Demco also operated a 15,700 square foot distribution facility in Fresno, California, and a 131,000 square foot distribution, manufacturing, and converting facility in DeForest, Wisconsin.

Demco had built a strong reputation for quality, service, and moderate pricing by the time of the gifts, all of which gave Demco good name recognition and a strong market position. Demco also had a strong continuing customer base which generated repeat business.

Demco had an experienced management team at the time of the gifts that had worked together for many years. Demco's relationship with its workforce (which was nonunion) was good, turnover was low, and Demco had not experienced any difficulty recruiting qualified employees at all levels. During 1991, the year immediately prior to the gifts, Demco had approximately 235 employees.

Demco's net revenues and net income for 1987-91 (the 5 years prior to the gifts), and Demco's projected net revenues and net income for 1992 (the year of the gifts, as projected by management around the time of the gifts) were as shown in the following table: n2

n2 The financial information in the table was compiled from Demco's audited and unaudited financial statements and management's projections for 1992, as adjusted by petitioners' expert Donna J. Walker (Ms. Walker) to eliminate the results of Demco's media division, which was sold in 1991. Respondent's expert Gary L. Schroeder (Mr. Schroeder) considered this information to be reliable and used it to prepare his report.

YEAR NET REVENUES NET INCOME

1987 $ 21,922,286 $ 1,615,877

1988 25,060,137 1,314,997

1989 27,256,611 1,361,810

1990 29,770,281 1,002,367

1991 30,536,365 511,072

1992 (Projected) 31,260,786 1,434,198

As the foregoing table shows, Demco's net revenues increased steadily from 1987 to 1991 and were projected to continue to increase in 1992. Demco's net income, however, decreased from 1987-90, then fell more sharply in 1991, but was projected to recover in 1992.

The decrease in Demco's net income was not caused by any increase in Demco's cost of goods sold; Demco's gross margin increased from 43.9 percent of net revenues in 1987 to 45.5 percent of net revenues in 1991. Rather, Demco's declining profitability was attributable to increases in its marketing and administrative expenses. From 1987 to 1991, Demco's marketing expenses increased from 16.5 percent of net revenues to 19.3 percent; administrative expenses increased even more sharply over the same period, from 9.7 percent of net revenues to 16.3 percent.

Demco's management predicted that these trends would be reversed and that Demco's net income would return to historic levels in 1992. n3 Nevertheless, at the beginning of 1992 general economic conditions were unfavorable and Demco's principal customers (libraries and schools) were suffering from budget cuts. However, many economists predicted that a weak recovery would begin in mid to late 1992.

n3 In particular, Mr. Wall testified that the expenses of a poorly performing division had caused 1991 earnings to decline by approximately $535,000; that division was later terminated.

MEDIA DIVISION SALE

From about 1970 or 1971 to June 1, 1991, Demco operated two other businesses, which the parties refer to as Demco's "media division". One of these businesses converted paperback books for use in school libraries, by rebinding the books in hard covers using Demco's "Turtle Back" process. The other business provided periodical subscriptions management services for libraries.

In June 1991, Demco discontinued the operations of the media division and sold the division's assets to a limited partnership. An S corporation owned entirely by Mr. Wall was the purchasing partnership's 1-percent general partner; an irrevocable trust for the benefit of Mr. Wall's family was the purchaser's 99-percent limited partner.

The sales price for the media division's assets was $1,200,000. Of this amount, Demco received $120,000 in cash; it also received the purchasing partnership's note (media note) for the remaining $1,080,000 due. The media note was collateralized by substantially all of the acquired assets and bore interest at 7.64 percent. Mr. Wall expected Demco to receive full payment of the media note, and the note's outstanding principal amount had been reduced to approximately $430,000 by the time of trial.

PRIOR TRANSACTIONS IN DEMCO STOCK

The parties have identified six transactions in Demco stock that occurred between 1978 and the gifts in 1992. All six transactions involved the sale or repurchase of stock to or from Demco employees. Three of the transactions occurred more than 5 years before the gifts. The three others occurred approximately 2 years before the gifts, on February 9, 1990, when Demco redeemed a total of 600 shares of its voting common stock from three of its officers.

The redeemed shares were subject to a buy-sell agreement at the time of the redemptions. The redemptions were not made pursuant to that agreement, because neither of the events that would have triggered the agreement (the death or termination of employment of any of the officers/shareholders) had occurred. The redemption price paid to each officer was instead determined through individual negotiations. However, under the terms of the buy-sell agreement, each officer ultimately would have been entitled to receive the book value of his stock upon his death or earlier termination of employment. n4

n4 As matters turned out, two of the officers did not retire until 6 years after the redemptions, in 1998; the third officer was still employed by Demco at the time of trial (March 1999).

The parties agree that the book value of the redeemed stock shortly before the redemptions was $4,391 per share. The average redemption price of $4,750 per share therefore exceeded that book value by approximately 8 percent.

Demco's equity capital immediately before the redemptions consisted of 1,800 shares of voting common stock, 1,200 of which were owned by Mr. Wall. The 600 shares redeemed therefore represented a one-third, voting but noncontrolling, interest in Demco. If (1) the average redemption price was equal to the fair market value of the redeemed stock and (2) each share of Demco's stock had the same value, then after adjusting for the greater number of shares (13,200) outstanding at the time of the gifts, the $4,750 average redemption price would have been equivalent to approximately $432 per share. n5

n5 The calculation is ($4,750 average redemption price per share) times (1,200 shares outstanding after redemption) equals ($5,700,000 post-redemption value) divided by (13,200 shares outstanding at time of gifts) equals ($432 per share).

Demco's net income fell sharply during the 2 years between the redemptions and the gifts. n6

n6 Petitioners asserted before trial that the redemptions and the sale of the media division had "never been properly raised as issues by respondent". Petitioners objected on that ground to our consideration of any facts or issues relating to those transactions.

Notwithstanding their objections, petitioners introduced evidence at trial concerning the redemptions and the media division sale. Petitioners' briefs do not mention any objection to our consideration of this evidence. Moreover, petitioners' briefs contain extensive proposed findings of fact concerning both the redemptions and the media division sale; they also set forth petitioners' arguments on the effect those transactions should have on our determination of the fair market value of Demco stock. As a result, petitioners have waived their objections. See Stringer v. Commissioner, 84 T.C. 693, 706 (1985), affd. without published opinion 789 F.2d 917 (4th Cir. 1986); Estate of Miller v. Commissioner, T.C. Memo 1998-416 (objection to admission of testimony held waived because objecting party's brief proposed finding of fact and set forth argument based on that testimony). We also note that the original report of petitioners' expert Ms. Walker discussed both the redemptions and the media division sale. Petitioners submitted a copy of that report with their gift tax returns and rely on it in the cases at hand.

OPINION

PRELIMINARY OBSERVATIONS

Before discussing our findings and analysis of value, we make some observations about the cases at hand and about valuation cases generally.

First, the parties' original positions, as set forth in the gift tax returns and the statutory notices, were not very far apart. The $260.13 value determined in the notices was only 17 percent greater than the $221.75 value claimed in the returns.

Second, this litigation has not helped the parties settle and compromise their differences; to the contrary, it has driven the parties further apart. The overall value of $192.20 per share set forth in the revised report of petitioners' expert Donna J. Walker (Ms. Walker) is lower than the value claimed in the gift tax returns; the overall value of $273.99 per share set forth in the report of respondent's expert Gary L. Schroeder (Mr. Schroeder) is higher than the value determined in the statutory notices, although respondent has not asserted an increased deficiency. n7

n7 Notwithstanding their differing conclusions about value, the parties' experts agree on many important matters concerning the proper measure of Demco's historical financial performance, the methods to be used to appraise value based on that performance, and the availability and magnitude of lack of marketability and nonvoting stock discounts. See infra p. 38.

In light of these observations, what the Court had to say in Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441 (1980), concerning the "pure factual issue" of valuation, is particularly germane to the cases at hand:

As the Court repeatedly admonished counsel at trial, the issue is more properly suited for the give and take of the settlement process than adjudication. The existing record reeks of stubbornness rather than flexibility on the part of both parties, based upon "an overzealous effort * * * to infuse a talismanic precision" into their respective views as to valuation. We are convinced that the valuation issue is capable of resolution by the parties themselves through an agreement which will reflect a compromise Solomon-like adjustment, thereby saving the expenditure of time, effort, and money by the parties and the Court -- a process not likely to produce a better result. Indeed, each of the parties should keep in mind that, in the final analysis, the Court may find the evidence of valuation by one of the parties sufficiently more convincing than that of the other party, so that the final result will produce a significant financial defeat for one or the other, rather than a middle-of-the-road compromise which we suspect each of the parties expects the Court to reach. * * * [Id. at 451-452; citations omitted.]

Of course, because the parties have insisted that we value the Demco stock, we shall do our job.

For the reasons set forth below, we conclude petitioners have not shown that the value of the gifts was less than the $260.13 per share respondent determined in the statutory notices. To the contrary, the record persuades us that the value was at least equal to that amount.

In reaching this conclusion, we are not imposing a sanction on petitioners, cf. the taxpayer's argument in Estate of Kaplin v. Commissioner, 748 F.2d 1109, 1111-1112 (6th Cir. 1984), revg. on another ground T.C. Memo 1982-440, nor should Buffalo Tool & Die be interpreted as expressing an intention to do so in any comparable circumstances. See Parker v. Commissioner, 86 T.C. 547, 562 (1986). We have merely found respondent's original determination in the statutory notices to be closer to the actual value than either petitioners' return position or the position taken in petitioners' expert's revised report.

RELEVANT LAW

Section 2512(a) provides that, if a gift is made in property, "the value thereof at the date of the gift shall be considered the amount of the gift." Value for this purpose is fair market value; i.e., the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell, and both having reasonable knowledge of relevant facts. See sec. 25.2512-1, Gift Tax Regs.; see also United States v. Cartwright, 411 U.S. 546, 551, 36 L. Ed. 2d 528, 93 S. Ct. 1713 (1973).

Mr. Wall gave 9,380 shares of Demco nonvoting common stock to 20 trusts for the benefit of his children on January 1, 1992. The cases at hand therefore require us to determine the fair market value of that Demco stock as of the date of the gifts, January 1, 1992.

If stock is listed on an exchange or there is otherwise a market for the stock, fair market value generally is determined by reference to the stock's quoted selling prices or bid and asked prices, at or around the time of the gift. See sec. 25.2512-2, Gift Tax Regs. If there is no market for the stock, arm's-length transactions made in the normal course of business, within a reasonable time before or after the date of the gift, may be the best evidence of fair market value. See Ward v. Commissioner, 87 T.C. 78, 101 (1986); Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982); Duncan Indus., Inc. v. Commissioner, 73 T.C. 266, 276 (1979).

Demco stock was not listed on an exchange at the time of the gifts, and there was no other public market for Demco stock. The parties have identified six transactions in Demco stock occurring prior to the gifts. However, three of these transactions occurred more than 5 years before the gifts. The three others (the redemptions from Demco's officers) were consummated almost 2 years before the gifts; Demco's net income declined sharply during those years. Moreover, the officers whose stock was redeemed would have been entitled, under the terms of the buy-sell agreement, to receive the book value of the stock upon their deaths or earlier terminations of employment. The redemption price actually paid was only slightly higher than book value. For all these reasons, the redemptions and other prior transactions in Demco stock are not the best evidence of, and should not by themselves determine, the fair market value of Demco stock on the date of the gifts.

In cases such as those at hand, where there is no market for the stock to be valued and there are no dispositive arm's-length transactions, fair market value is to be determined by taking all "relevant factors" into account. n8 See sec. 25.2512-2(f), Gift Tax Regs. The factors we must consider are those that an informed buyer and an informed seller would take into account. See Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. T.C. Memo 1961-347. Rev. Rul. 59-60, 1959-1 C.B. 237, "has been widely accepted as setting forth the appropriate criteria to consider in determining fair market value", Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990); it lists the following factors to be considered, which are quite similar to the "relevant factors" listed in section 25.2512-2(f), Gift Tax Regs.:

n8 Petitioners' expert Ms. Walker stated that the three transactions in Demco stock that occurred more than 5 years before the gifts were "not deemed relevant to the valuation" due to the passage of time. By contrast, Ms. Walker asserted that the redemptions were "not conclusively indicative of fair market value" due to the buy-sell agreement. However, she never stated that they were irrelevant.

We agree with Ms. Walker's conclusion that none of the prior transactions is determinative. However, we believe that the redemptions, which took place at a price equivalent to approximately $432 per share, are nevertheless relevant evidence of the value of the gifts, to be taken into account with all other relevant factors. Although the three officers/shareholders could have received book value for their stock upon their deaths or terminations of employment, two of the officers did not choose to retire until 6 years after the redemptions; the third was still in Demco's employ at the time of trial.

(a) The nature of the business and the history of the enterprise from its inception.

(b) The economic outlook in general and the condition and outlook of the specific industry in particular.

(c) The book value of the stock and the financial condition of the business.

(d) The earning capacity of the company.

(e) The dividend-paying capacity.

(f) Whether or not the enterprise has goodwill or other intangible value.

(g) Sales of the stock and the size of the block of stock to be valued.

(h) The market price of stocks of corporations engaged in the same or a similar line of business having their stocks actively traded in a free and open market, either on an exchange or over-the-counter.

In short, the fair market value of the Demco stock is a question of fact that depends on all the circumstances. See Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957), affg. in part and remanding in part on another ground T.C. Memo 1956-178; Estate of Newhouse v. Commissioner, supra at 217; Skripak v. Commissioner, 84 T.C. 285, 320 (1985). The weight to be accorded any particular evidentiary factor is also to be determined by the circumstances. See sec. 25.2512-2(f), Gift Tax Regs.

As is customary in valuation cases, the parties primarily rely on expert opinion evidence to support their positions. We evaluate expert opinions in light of the demonstrated qualifications of each expert and all other evidence in the record. See Anderson v. Commissioner, supra at 249; Parker v. Commissioner, supra at 561. We have broad discretion to evaluate '"the overall cogency of each expert's analysis.'" Sammons v. Commissioner, 838 F.2d 330, 334 (9th Cir. 1988) (quoting Ebben v. Commissioner, 783 F.2d 906, 909 (9th Cir. 1986), affg. in part and revg. in part T.C. Memo 1983-200), affg. in part and revg. in part on another ground T.C. Memo 1986- 318. Expert testimony sometimes aids the Court in determining value; sometimes it does not, particularly when the expert is merely an advocate for the position argued by one of the parties. See, e.g., Estate of Halas v. Commissioner, 94 T.C. 570, 577 (1990); Laureys v. Commissioner, 92 T.C. 101, 129 (1989).

We are not bound by the formulas and opinions proffered by an expert witness and will accept or reject expert testimony in the exercise of sound judgment. See Anderson v. Commissioner, supra at 249; Estate of Newhouse v. Commissioner, supra at 217; Estate of Hall v. Commissioner, 92 T.C. 312, 338 (1989). Where necessary, we may reach a determination of value based on our own examination of the evidence in the record. See Lukens v. Commissioner, 945 F.2d 92, 96 (5th Cir. 1991) (citing Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo 1974-285)). Moreover, while we may accept the opinion of an expert in its entirety, see Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. at 452, we may be selective in the use of any part of such opinion or reject the opinion in its entirety, see Seagate Tech., Inc. v. Commissioner, 102 T.C. 149, 186 (1994), and authorities cited therein. Finally, because valuation necessarily results in an approximation, the figure at which we arrive need not be directly attributable to specific testimony if it is within the range of values that may properly be arrived at from consideration of all the evidence. See Silverman v. Commissioner, supra at 933; Alvary v. United States, 302 F.2d 790, 795 (2d Cir. 1962).

PETITIONERS' EXPERT'S REPORTS

Petitioners rely on two reports prepared by Ms. Walker as the primary evidence in support of their position. Ms. Walker received a bachelor of arts degree from the University of Wisconsin at Madison. She is a Chartered Financial Analyst and a member of the American Society of Appraisers, holding the Accredited Senior Appraiser (business valuation) designation.

Ms. Walker prepared her first report several years before trial; a copy of that report was submitted with petitioners' gift tax returns for the year in issue. n9 Ms. Walker prepared a revised report shortly before trial, to respond to respondent's criticism of Ms. Walker's failure to include an "income-based"

n9 Although Ms. Walker's original report concluded that the overall value of the gifts was $211.20 per share, petitioners reported a 5 percent higher value, $221.75 per share, on their gift tax returns. Mr. Wall testified that the reason for this was his accountants' advice, based on their experience with respondent's local personnel, that the lack of marketability and nonvoting stock discounts determined by Ms. Walker "might better be a little more conservative" determination of value in her original report.

Ms. Walker was a principal of Willamette Management Associates, Inc., when she prepared her original report. She was a principal of Columbia Financial Advisors, Inc., when she prepared her revised report; she was still a principal of Columbia at the time of trial. Respondent stipulated Ms. Walker's qualifications and expert status.

MS. WALKER'S ORIGINAL REPORT

In her original report, Ms. Walker relied almost entirely on the "guideline public company", or "market-based", approach to appraise the fair market value of the Demco stock. n10 In one variation of this approach, Ms. Walker calculated several measures of Demco's historical financial performance; she then used her guideline company data to determine how the public stock markets would have valued a company with those performance measures. In the other variation, Ms. Walker applied the guideline public company data to three measures of Demco's projected financial performance for 1992, the year of the gifts.

n10 Ms. Walker's original report did include one "income- based" approach, in which Ms. Walker appraised Demco's value by capitalizing Demco's distributions to stockholders for 1991 (as adjusted by Ms. Walker). However, Ms. Walker concluded that this approach deserved very little weight.

HISTORICAL PERFORMANCE MEASURES APPROACH

To avoid having to take into account differing amounts of leverage, Ms. Walker decided to perform her analysis on a "debt free" basis. She examined Demco's audited and unaudited financial statements for the 5 years prior to the year of the gifts, i.e., for 1987-91; she then used those statements to develop measures of what Demco's financial performance would have been, if it had had no debt. n11

n11 Because she wanted to perform her analysis on a continuing operations basis, Ms. Walker further adjusted her performance measures to eliminate financial results attributable to Demco's media division, which was sold in June 1991.

The debt-free performance measures Ms. Walker developed were the following:

1. Earnings before interest and taxes (EBIT) for 1991 and for 1987-91.

2. Earnings before depreciation (including amortization), interest, and taxes (EBDIT) for 1991 and 1987-91.

3. Debt free net income (DFNI) for 1991 and 1987-91.

4. Debt free cash-flow (DFCF) for 1991 and 1987-91.

5. Debt free book value of total invested capital (BVIC) for 1991.

Ms. Walker determined that seven publicly traded companies were sufficiently similar to Demco to serve as guideline companies. n12 She examined the performance measures and trading prices of the guideline companies, in order to determine the multiples of the performance measures at which the public stock markets valued the total invested capital of the guideline companies. Applying these multiples to Demco's performance measures, and giving greater weight to the indicated values developed from the earnings based measures, Ms. Walker determined that the publicly traded

equivalent value of Demco's total invested capital, as of December 31, 1991, was $10,550,000. n13 Ms. Walker then subtracted the book value of Demco's debt ($5,636,000) from this amount, to conclude that the indicated fair market value of Demco's equity (before applying any discounts) was $4,914,000.

n12 The companies were Action Products International, Inc.; Banta Corp.; Educational Development Corp.; Kleer-Vu Industries, Inc.; Library Bureau, Inc.; Stuart Hall Co., Inc.; and United Stationers, Inc.

n13 Although Ms. Walker's reports appraised the value of Demco stock as of Dec. 31, 1991, the day before the date of the gifts, the parties have not suggested and nothing in the record suggests that Ms. Walker's opinion would be any different with respect to the stock's value as of the date of the gifts. For convenience, we hereinafter discuss Ms. Walker's reports and opinions as though they referred to fair market value as of the date of the gifts rather than the day before.

Because the guideline public company method determines value by reference to the trading prices of minority interests, Ms. Walker did not apply a minority discount to her indicated value of Demco's equity. However, on the basis of several studies comparing the trading prices of restricted stock with freely traded stock, and other studies comparing the trading prices of stock before and after initial public offerings, Ms. Walker concluded that a 40-percent lack of marketability discount should be applied to her guideline public company value. In addition, on the basis of other studies comparing prices of voting and nonvoting stock, Ms. Walker concluded that a further 5-percent discount should be applied to reflect the nonvoting status of the stock given by Mr. Wall.

After having applied these discounts, under Ms. Walker's historical performance measures/guideline public company approach the fair market value of the Demco nonvoting common stock as of the date of the gifts was $212.20 per share. n14

n14 The calculation is (total equity value) times (1 minus lack of marketability discount) times (1 minus nonvoting discount) divided by (number of shares outstanding), or ($4,914,000) times (.6) times (.95) divided by (13,200) equals ($212.20 per share). measures, Ms. Walker concluded that the publicly traded equivalent value of Demco's equity was $4,900,000. This is not materially different from the $4,914,000 value Ms. Walker determined using historical performance measures.

FORECASTED-EARNINGS APPROACH

Ms. Walker also applied the guideline public company approach to Demco's projected earnings for 1992, the year of the gifts. Using projections made by Demco's management, Ms. Walker calculated three forecasted earnings measures for Demco: 1992 EBIT, EBDIT, and after tax earnings. Applying multiples derived from two of her guideline companies to these forecasted earnings

CONCLUSION OF MS. WALKER'S ORIGINAL REPORT

Giving great weight to the two guideline company approaches (historical performance and 1992 forecasted earnings), and giving very little weight to a capitalized distributions approach, n15 Ms. Walker concluded that the publicly traded equivalent value of Demco's equity was $4,890,000. After applying the 40-percent lack of marketability and 5-percent nonvoting discounts, Ms. Walker concluded that the fair market value of the Demco nonvoting common stock on the date of the gifts was $211.20 per share. n16

n15 See supra note 10.

n16 The calculation is ($4,890,000) times (.6) times (.95) divided by (13,200) equals ($211.16) per share, which Ms. Walker rounded to $211.20. criticism, Ms. Walker's revised report combined an income-based approach with the market-based approach of her original report.

MS. WALKER'S REVISED REPORT

In February 1999, Ms. Walker prepared a revised report appraising the value of the Demco stock. This report was prepared in response to respondent's criticism that Ms. Walker's original report had failed to include an income-based determination of Demco's value. In response to respondent's

MS. WALKER'S INCOME-BASED APPROACH

In general, a market-based appraisal concentrates on a company's historical performance measures and, by reference to guideline public company multiples, attempts to determine the price at which the stock of a company with those performance measures would trade. An income-based appraisal, by contrast, is more forward looking; it attempts to predict, and then determine the present value of, all future returns an investor could expect to receive from an investment in the subject company. See Pratt et al., Valuing Small Businesses and Professional Practices 236-240 (3d ed. 1998). n17

n17 As Ms. Walker's reports and testimony made clear, no bright line separates market-based appraisal methods from income-based methods. For example, Ms. Walker's market-based appraisal used some performance measures derived from Demco's forecasted income for 1992. Also, both Ms. Walker and respondent's expert Mr. Schroeder determined the discount (or capitalization) rates used in their income-based appraisals by reference to the actual rates of return available on publicly traded investments. See infra pp. 28-29 and pp. 35-36.

Because an income-based approach attempts to value directly the future cash-flows that will be generated by an investment in the subject company, it will produce accurate results only if an accurate forecast of the company's future earnings is available. See id. at 257. It appears from the record that at the time of the gifts, Demco's management had only predicted 1 year (1992) of future results. Ms. Walker stated in her revised report that she normally would have a 3- to 5-year forecast available when performing an income-based appraisal.

It is important to note that because Ms. Walker did not have a long-term forecast, she did not attempt to predict Demco's future cash-flows for use in her income-based analysis. Moreover, because Demco's historical cash-flow varied greatly from year to year, Ms. Walker did not use Demco's historical cash-flows in her analysis either. Instead, Ms. Walker used Demco's historical results to develop what she called Demco's "normalized" free cash-flow; she then simply assumed that this cash-flow would grow 5 percent per year indefinitely after 1992.

More particularly, in her income-based appraisal Ms. Walker: (1) Examined Demco's operating results for 1987-91 and its forecasted results for 1992; (2) used those results to derive what she called Demco's "normalized free cash-flow", or "dividend paying capacity"; (3) assumed this normalized cash-flow would continue indefinitely after 1992 and grow 5 percent per year; and (4) determined the present value of that indefinite cash-flow using a 22.75-percent capitalization rate. n18 As the preceding sentence makes clear, the two key variables in this approach are Demco's normalized free cash-flow and the appropriate discount or capitalization rate to be used to determine the present value of that cash-flow.

n18 Ms. Walker described this method as a form of the "constant growth dividend discount model". Ms. Walker stated that she typically used this method when she did not have a long-term forecast for the subject company.

In order to determine Demco's normalized free cash-flow, Ms. Walker began by adding Demco's 1987 to 1991 pretax income to its forecasted 1992 pretax income; she then divided that sum by the number of years in the period (6) to arrive at an average annual pretax income of $1,097,381. Ms. Walker then made the following adjustments to this average to arrive at normalized free cash-flow:

1. She subtracted hypothetical income taxes at a 34-percent rate. n19

n19 Because Demco is an S corporation, it is not subject to Federal income tax and pays only a small amount of State income tax. Nevertheless, Ms. Walker computed Demco's normalized free cash-flow by subtracting a hypothetical income tax, at a 34-percent rate, from Demco's average income for 1987-92. This is referred to as "tax- effecting" Demco's income.

As Ms. Walker acknowledged in her testimony, appraisers disagree on whether it is appropriate to tax-effect the income of an S corporation. The argument in favor of tax-effecting stresses that many potential buyers of S corporations are C corporations. Because a C corporation would be unable to maintain a target company's S corporation status following an acquisition, the C corporation would tax-effect the S corporation's income (at C corporation rates) in deciding how much it would pay for the S corporation. See Trugman, Understanding Business Valuation: A Practical Guide to ValuingSmall to Medium-Sized Businesses, at 198-199 (1998). By contrast, the argument against tax-effecting stresses that although an S corporation's stockholders are subject to tax on the corporation's income, they are generally not subject to a second level of tax when that income is distributed to them. This could make an S corporation at least somewhat more valuable than an equivalent C corporation. However, tax-effecting an S corporation's income, and then determining the value of that income by reference to the rates of return on taxable investments, means that an appraisal will give no value to S corporation status.

In her revised report, Ms. Walker computed the present value of Demco's tax-effected cash-flow using a capitalization rate determined by reference to the market rates of return on Treasury securities and common stocks. See infra pp. 28-29. The interest and dividends on such investments are fully taxable to their holders. Because this methodology attributes no value to Demco's S corporation status, we believe it is likely to result in an undervaluation of Demco's stock. See Gross v. Commissioner, T.C. Memo 1999-254.

2. She subtracted an amount equal to 5 percent of Demco's working capital in 1991, because she assumed working capital would grow from that level at a 5-percent rate.

3. She added an amount equal to 5 percent of Demco's indebtedness in 1991, because she assumed debt would increase from that amount at a 5-percent rate.

4. She subtracted an amount equal to the excess of Demco's average capital expenditures for 1987-91 over its average depreciation and amortization for that period.

5. She increased the overall result by 5 percent, because she assumed Demco would grow 5 percent from 1991 to 1992.

On the basis of all these calculations and assumptions, Ms. Walker determined that Demco's normalized free cash-flow for 1992 would be $720,317.

Ms. Walker developed her capitalization rate in part by reference to two sources: (1) The 1991 yield on long-term Treasury securities, as set forth in the report of respondent's expert; and (2) the rates of return on publicly traded stocks (the Ibbotson data) as set forth in Ibbotson Associates, Stocks, Bonds, Bills, & Inflation, 1992 Yearbook.

As Ms. Walker correctly noted, respondent's expert stated in his report that in December 1991, the rate of return on a risk- free investment (long-term Treasury securities) was 7.7 percent. n20 According to Ms. Walker, the Ibbotson data revealed that historically, the annual return on the Standard & Poors 500 Composite Common Stock Index (S & P 500) was 7.4 percentage points higher than a risk-free return; it also revealed that the annual return on stocks of smaller companies was 5.1 percentage points higher than the overall S & P 500 return.

n20 We note that in her original report Ms. Walker stated that at the end of 1991, the yield on 30-year Treasury bonds was only 7.39 percent; she also stated that this yield was expected to be 7.30 percent in June 1992 and 7.49 percent at the end of 1992.

Ms. Walker was of the opinion that because Demco was significantly smaller than the average small public company, investors would demand an additional risk premium of 2.55 percentage points (one-half the 5.1 percentage point additional return on small company stocks) on any investment in Demco stock. Therefore, on the basis of the Ibbotson data and her opinion, Ms. Walker concluded that an appropriate capitalization rate for Demco was 22.75 percent, calculated as follows: (1) A 7.7-percent risk-free rate; plus (2) a 7.4-percent equity-risk premium; plus (3) a 5.1-percent small company risk premium; and plus (4) an additional 2.55-percent premium to reflect Demco's exceptionally small size.

Taking her normalized free cash-flow of $720,317, and capitalizing this at a net rate of 17.75 percent (i.e., 22.75 percent capitalization rate, less 5-percent assumed growth rate), Ms. Walker concluded that under her income-based method the value of Demco's equity would be $4,058,124.

Ms. Walker also concluded in her revised report, as she had in her original report, that a 40-percent lack-of-marketability discount and a 5-percent nonvoting discount should be applied. After applying these discounts, the value of the nonvoting Demco common stock on the date of the gifts, under Ms. Walker's income-based analysis, was $175.24 per share.

CONCLUSION OF MS. WALKER'S REVISED REPORT

Ms. Walker's original report concluded that the fair market value of the Demco nonvoting common stock, as of the date of the gifts, was $211.20 per share. As noted, under Ms. Walker's income-based analysis the stock's value was $175.24 per share.

In her revised report, Ms. Walker relied on both her market-based and her income-based results to arrive at her final opinion on the value of the Demco stock. Giving these methods equal weight (and after rounding), Ms. Walker stated in her revised report that in her opinion, the value of the Demco nonvoting common stock was $192.20 per share on the date of the gifts.

MS. WALKER'S TESTIMONY

Although Ms. Walker's revised report was more recent than, and incorporated the conclusions of, her original report, Ms. Walker did not disavow her original report at trial. To the contrary, Ms. Walker testified that it remained her opinion that her original report's $211.20 conclusion was a reasonable indication of fair market value. She further observed that valuation is not an exact science; as she saw it, her revised report simply indicated that one could justify a lower value than her original report's $211.20 value, if one chose to do so.

RESPONDENT'S EXPERT'S REPORT

Respondent primarily relies on the February 1999 report of Gary L. Schroeder to support respondent's position. n21 Mr. Schroeder is associated with the St. Louis area office of Mentor Valuations, Inc. Like Ms. Walker, Mr. Schroeder is a member of the American Society of Appraisers and holds the Accredited Senior Appraiser (business valuation) designation. Mr. Schroeder's report employed both a guideline public company approach and an income-based approach to appraise the value of the Demco stock.

n21 Mr. Schroeder had prepared an earlier version of his report in January 1996; respondent relied on that report to prepare the statutory notices. Mr. Schroeder's 1996 report had concluded that the overall value of the gifts was $260.13 per share, the same amount asserted in the statutory notices. Mr. Schroeder's February 1999 report concluded that the overall value was $273.99 per share. There are only two material differences in methodology between the two versions of Mr. Schroeder's report. First, in his 1999 report, Mr. Schroeder treated the media note as a nonoperating asset (see infra p. 32); he had not been able to do this in his 1996 report due to a lack of financial data. Second, in his 1999 report Mr. Schroeder gave his income-based value for Demco's stock approximately twice the weight of his market-based value; he had given his income and market- based values approximately equal weight in his 1996 report.

MR. SCHROEDER'S GUIDELINE COMPANY APPROACH

Except for its treatment of the media note (discussed immediately below) and its conclusion as to value, Mr. Schroeder's guideline company approach was quite similar to Ms. Walker's. In fact, Mr. Schroeder used Ms. Walker's calculations of Demco's net revenues and net income as the starting point for the derivation of his performance measures. He also used two of the guideline companies chosen by Ms. Walker, Educational Development Corporation and Library Bureau, Inc. However, Mr. Schroeder used only four performance measures and three guideline companies to derive Demco's value; this is far fewer than the 12 measures and seven companies used by Ms. Walker. n22 In addition, the multiples chosen by Mr. Schroeder appeared to vary more from one guideline company to another than the multiples chosen by Ms. Walker.

n22 The four measures used by Mr. Schroeder were: "adjusted net income" for 1991 and for 1987 to 1991, and "revenues" for 1991 and for 1987 to 1991. Mr. Schroeder's revenues were equal to Demco's net revenues as calculated by Ms. Walker. Mr. Schroeder's "adjusted net income" was equal to Demco's net income as calculated by Ms. Walker, less: (1) The 6 months of interest on the media note included in Ms. Walker's net income for 1991; (2) a few nonrecurring items; and (3) a provision for income tax at 34 percent.

The third guideline company used by Mr. Schroeder was Viking Office Products, Inc.

Notwithstanding these distinctions, the major methodological difference between the guideline company approaches of Mr. Schroeder and Ms. Walker is that Mr. Schroeder treated the media note as a separate, "nonoperating" asset. As a result, Mr. Schroeder used a three-step procedure to derive his market-based value for Demco. First, he developed four historical performance measures for Demco that completely excluded the media division's operating results and the interest payable on the media note. Second, he applied the guideline company multiples he developed to those measures. Third, he added the media note's $1,080,000 face amount to his guideline company value.

Having performed these steps, Mr. Schroeder concluded that the value of Demco's equity, before any discounts, was $6,800,000. On the basis of his review of studies similar to those cited by Ms. Walker, Mr. Schroeder concluded that both lack of marketability and nonvoting stock discounts should be applied. Like Ms. Walker, Mr. Schroeder concluded that the lack of marketability discount should be 40 percent. However, he concluded that the nonvoting stock discount should be only 2 percent as opposed to the 5-percent discount proposed by Ms. Walker.

Applying these discounts to his total equity value, Mr. Schroeder concluded that under his market-based method the value of the Demco nonvoting common stock on the date of the gifts was approximately $2,840,000, or $303.03 per share. This is approximately $92 per share more than Ms. Walker's $211.20 market-based value. It is also approximately $33 per share more than the $269.70 market- based value (and approximately $43 more than the $260.13 overall value) determined in the earlier version of Mr. Schroeder's report, on which respondent relied in preparing the statutory notices. See supra note 21.

MR. SCHROEDER'S INCOME-BASED APPROACH

Mr. Schroeder's income-based approach differs from Ms. Walker's income-based approach in several important respects. First, in his income-based approach Mr. Schroeder again treated the media note as a nonoperating asset whose value should be added to the present value of Demco's predicted future income from sources other than the note. Second, Mr. Schroeder expressly stated that his approach was designed to produce a "control" value for Demco, rather than a minority value; he therefore applied a 17-percent minority discount to the present value of Demco's future income. Third, Mr. Schroeder's determinations of both Demco's future income and the appropriate discount rate to apply to that income were quite different from Ms. Walker's.

With respect to his estimation of Demco's future income, Mr. Schroeder, unlike Ms. Walker, did attempt to predict Demco's operating results for 1992-96. Of course, because Demco's management had not made any long-term forecasts, Mr. Schroeder's predictions, like Ms. Walker's extrapolations, necessarily were based to a considerable extent on Demco's historical operating results. Nevertheless, Mr. Schroeder did specifically predict that Demco's distribution, marketing, and administrative expenses would decline from their 1991 levels. He also predicted that management's forecasted 1992 net income was too high. n23

n23 We note that Mr. Schroeder, like Ms. Walker, tax effected Demco's future cash-flows by subtracting hypothetical income tax from Demco's projected net income (Mr. Schroeder used a 40-percent rate, while Ms. Walker used a 34-percent rate). We believe this is likely to result in an undervaluation of Demco because Demco is an S corporation. See supra note 19. forecast; he then increased that rate by 0.5 percentage points for each of the next 4 years, to arrive at a terminal rate of 17 percent. By contrast, Ms. Walker chose a 22.75- percent rate, as discussed above.

With respect to the appropriate discount rate, Mr. Schroeder chose a rate of 15 percent for 1992, the first year of his

Mr. Schroeder's explanation for his choice of rates was not very clear. Mr. Schroeder claimed that at the time of the gifts long-term BAA rated corporate bonds were yielding approximately 9 percent. Mr. Schroeder then asserted that because an investment in Demco was riskier than an investment in BAA bonds, a 6-percentage point risk premium would be appropriate. However, he did not explain why this was an appropriate premium.

Mr. Schroeder also attempted to justify his rates by reference to the Ibbotson data. According to Mr. Schroeder, the Ibbotson data showed that the average historical return on small company stocks was 17.5 percent. Mr. Schroeder then asserted that a lower rate than this would be appropriate for his analysis, because controlling investors would accept a lower rate of return than minority investors would; once again, Mr. Schroeder did not offer any support for this assertion. Moreover, Mr. Schroeder did not contest Ms. Walker's observations that 7.7 percent was an applicable risk- free rate at the time of the gifts and that small company stocks have historically yielded 12.5 percentage points more than risk-free investments.

Setting these objections aside for the moment, Mr. Schroeder calculated his income-based value of Demco as follows. First, he calculated the present value of Demco's 1992-96 projected net income, by discounting it at his 15- to 17-percent rates. Second, he computed a 1997 residual value for Demco, by assuming that Demco's 1996 projected net income would grow at 3 percent per year in perpetuity and capitalizing that income at his 17-percent rate; he then discounted that terminal value back to a present value as of the date of the gifts. Third, he added the foregoing values together and applied his 17-percent minority discount, to arrive at an income- based minority equity value of $4,770,010. Fourth, he added the face amount of the media note to arrive at a total equity value of $5,850,010. Fifth and finally, he applied his 40-percent lack-of- marketability and 2-percent nonvoting discounts, to arrive at rounded values of $2,440,000 or $260.61 per share. This is approximately $85 per share higher than Ms. Walker's $175.24 per share income-based value.

MR. SCHROEDER'S CONCLUSION

Mr. Schroeder made his overall appraisal of Demco's value by combining his income-based and market-based values and giving the income-based value approximately twice as much weight. In Mr. Schroeder's overall opinion, the fair market value of the Demco nonvoting common stock Mr. Wall gave to his children, as of the date of the gifts, was $2,570,000 or $273.99 per share.

VARIOUS POSITIONS AS TO VALUE

The following table sets forth the various positions as to value taken by the parties or their experts:

EVENT OR REPORT VALUE PER SHARE

Gift Tax Returns $ 221.75

Statutory Notices $ 260.13

Ms. Walker's Original Report $ 211.20

Ms. Walker's Revised Report $ 211.20 (original report's market-

based value)

$ 175.24 (new income-based value)

$ 192.20 (overall value conclusion)

Mr. Schroeder's Report $ 303.03 (market-based value)

$ 260.61 (income-based value)

$ 273.99 (overall value conclusion)

DISCUSSION

As we observed at the outset, the parties' original positions on the value of the gifts were quite close; this litigation has driven the parties further apart. The overall value asserted in Ms. Walker's revised report is less than the value asserted in her original report and the value claimed by petitioners on their gift tax returns. Similarly, the value asserted in Mr. Schroeder's report is greater than the value determined in his prior report that was used to prepare the statutory notices.

Notwithstanding their differing conclusions as to value, Ms. Walker and Mr. Schroeder agree on the following important points.

1. Both accept the same data as an accurate representation of Demco's financial performance.

2. Both agree that the guideline companies used in the market-based approaches are in fact comparable to Demco; two of the three companies used by Mr. Schroeder were included in the seven companies used by Ms. Walker.

3. Ms. Walker used a capitalization rate of 22.75 percent in her income-based analysis, while Mr. Schroeder used rates varying from 15 to 17 percent. However, Ms. Walker assumed that Demco would grow 5 percent per year, while Mr. Schroeder assumed 3-percent growth. The difference between the experts' positions (17.75-percent effective or net capitalization rate for Ms. Walker, 12-to-14-percent net rate for Mr. Schroeder) is therefore less than first appears.

4. Both Ms. Walker and Mr. Schroeder agreed that a 40- percent lack of marketability discount was appropriate.

5. Both Ms. Walker and Mr. Schroeder agreed that a nonvoting stock discount should also be applied; Ms. Walker asserted that the discount should be 5 percent while Mr. Schroeder contended that a 2-percent discount was more appropriate.

Despite the closeness of the parties' original positions and the large areas of agreement between the experts that existed even at time of trial, the parties have been unable to settle their differences, and we are now required to value the Demco stock.

Respondent determined in the statutory notices that the value of the gifts was $260.13 per share. This determination is presumed to be correct; petitioners have the burden of proving it to be incorrect. See Rule 142(a); Welch v. Helvering, 290 U.S. 111, 78 L. Ed. 212, 54 S. Ct. 8 (1933); Estate of Jung v. Commissioner, 101 T.C. 412, 423 (1993).

Ms. Walker's and Mr. Schroeder's reports were generally thoughtful and professional, and their testimony was responsive and helpful. Nevertheless, for the reasons set forth below, we conclude that Ms. Walker's guideline company approach significantly understated Demco's value, while Mr. Schroeder's guideline approach somewhat overstated value and has other flaws that limit its reliability. We also conclude that the experts' income-based approaches are entitled to little weight, in part because it was very difficult to predict Demco's future income as of the time of the gifts.

As a result, we conclude petitioners have not shown that the value of the gifts was less than the $260.13 per share determined in the statutory notices. To the contrary, the record establishes to our satisfaction that the value lay between the experts' guideline company values and was at least $260.13 per share.

PROBLEMS WITH THE GUIDELINE COMPANY APPROACHES

Although Ms. Walker's guideline company approach was thorough and clear, deserves careful consideration, and is entitled to some weight, we believe it systematically understated Demco's value. First, it did not adequately take account of the value of the $1,080,000 media note. Second, it used erroneous measures of Demco's projected income for 1992. Third, it did not use all the guideline company multiples but instead picked and chose among the lowest.

TREATMENT OF MEDIA NOTE

As noted above, Ms. Walker adjusted Demco's historical performance and forecasted earnings measures to eliminate income attributable to the media division; that division was sold on June 1, 1991, in exchange for cash and the media note. However, Ms. Walker did not then readjust Demco's measures to include pro forma interest amounts on the media note, or any other amounts reflecting the media division's income from 1987 until the date of sale. As a result, the only income attributable to the media note reflected in the measures calculated by Ms. Walker was the 6 months' worth of interest that accrued on the note from the sale date to the end of 1991 and the interest projected to be received in 1992.

Demco's performance measures, as calculated by Ms. Walker, therefore understated Demco's earning power and value. In fact, Ms. Walker testified that under her analysis, Demco's ownership of the media note -- a $1,080,000 face amount, fully collateralized, interest bearing asset -- did not materially increase the value of the Demco stock. By contrast, the nonoperating asset method used by Mr. Schroeder took the value of the media note into account, by adding it to the guideline value based on his performance measures, and we believe it is preferable to Ms. Walker's approach in that respect.

In her testimony, Ms. Walker admitted that Mr. Schroeder's treatment of the media note was a reasonable approach. However, Ms. Walker also stated that in her opinion, a minority discount should be applied to the value of the media note under that approach, because a minority stockholder could not require liquidation of Demco and thus could not realize the note's full value.

We agree with Ms. Walker on this point. We conclude that although Mr. Schroeder's treatment of the media note is preferable because it recognizes the note's value, it somewhat overstates that value to a minority stockholder. However, even if the 25-percent minority discount Ms. Walker proposed at trial were applied to the value of the media note, in addition to her 40-percent lack of marketability and 5-percent nonvoting stock discounts, then treating the media note as a nonoperating asset would add approximately $35 per share to Ms. Walker's values.

ERRONEOUS INCOME AMOUNT

The forecasted earnings measures Ms. Walker used in her guideline company approach were significantly less than the measures actually projected by Demco's management. For example, Ms. Walker's original report stated that Demco was projecting 1992 EBIT of $1,372,000 and 1992 earnings of $1,034,615. However, Demco was actually projecting that its earnings would be approximately $400,000 higher; i.e., 1992 EBIT of $1,774,306 and earnings of $1,434,198. We conclude that Ms. Walker simply made a few transcription errors; nevertheless, these errors mean that Ms. Walker's appraisals significantly understated Demco's value.

If the 1992 EBIT and earnings actually projected by Demco were substituted for the erroneous amounts used by Ms. Walker, then Ms. Walker's appraisal of the Demco stock under her forecasted earnings approach would have been approximately $289 per share, approximately $77 per share higher than the forecasted earnings value set forth in her original report. The record does not disclose Demco's projected EBDIT for 1992. However, based on Demco's historical depreciation, we conclude that the measure of 1992 EBDIT used by Ms. Walker was, like her 1992 EBIT and earnings measures, also approximately $400,000 too low. If Ms. Walker's measure of Demco's 1992 EBDIT were also increased by $400,000, then Ms. Walker's forecasted earnings value would have been approximately $315 per share, approximately $103 per share higher than the value in her original report. We note that these values are quite close to the $303 guideline company value set forth in Mr. Schroeder's report.

CHOICE OF MULTIPLES

When Ms. Walker applied the guideline public company method to Demco's historical performance measures, she did not use the multiples of all seven companies she had identified as comparable. Instead, she consistently chose a multiple determined by reference to the two or three companies with the lowest multiples, as shown in the following table.

Mean Multiple of

the Comparable Multiple Used by

Measure Companies Ms. Walker

1991 EBIT 10.1 8.2

1987-91 EBIT 7.3 6.5

1991 EBDIT 7.7 5.0

1987-91 EBDIT 7.5 4.7

1991 DFNI 13.6 13.0

1987-91 DFNI 11.7 9.5

1991 DFCF 8.8 6.5

1987-91 DFCF 7.0 6.4

BVIC 1.19 1.25

Measure	Mean Multiple of the Comparable Companies	Multiple Used by Ms. Walker
1991 EBIT	10.1	8.2
1987-91 EBIT	7.3	6.5
1991 EBDIT	7.7	5.0
1987-91 EBDIT	7.5	4.7
1991 DFNI	13.6	13.0
1987-91 DFNI	11.7	9.5
1991 DFCF	8.8	6.5
1987-91 DFCF	7.0	6.4
BVIC	1.19	1.25

Ms. Walker justified her disregard of most of the comparable companies' multiples by referring to the decline in Demco's earnings from 1990-92. According to Ms. Walker, three of the seven comparable companies had also suffered recent earnings declines; it therefore made more sense to determine the applicable multiples by reference to those companies, rather than by reference to the comparable companies as a whole.

Ms. Walker's use of the two or three lower multiple companies is inconsistent with the conclusion expressed elsewhere in her report that, even after the decline in Demco's earnings had been taken into account, Demco's profitability and risk levels were close to or at the industry norm. It also may be inconsistent with her conclusion that the seven companies she identified as comparable were in fact comparable to Demco. For these reasons we believe that the multiples used by Ms. Walker resulted in an understatement of the value of the Demco stock. See Pratt et al., Valuing Small Businesses and Professional Practices 276 (3d ed. 1998) (warning the analyst that she should be cautious and careful, when using the guideline public company method, to ensure that the use of certain companies for some measures but not for others does not introduce bias or distortion into the value indications).

If the mean multiples of the comparable companies had been applied to Demco's historical performance measures instead of the multiples used by Ms. Walker, then the value of the Demco stock under Ms. Walker's historical performance measures approach would have been approximately $300 per share, approximately $88 per share higher than the historical performance measures value in Ms. Walker's original report. n24

n24 The statement in the text assumes that each performance measure is equally weighted. Ms. Walker stated that she gave the earnings-based measures greater weight, but we are unable to determine the weighting she used. only four performance measures; the multiples he used seemed to vary greatly

from company to company, and his choice of multiples was not very well explained.

We have similar concerns with Ms. Walker's choice of multiples in her forecasted earnings approach. Ms. Walker's original report discussed the forecasted earnings multiples of only two of the seven comparable companies. Moreover, the multiples Ms. Walker used were lower than even those two companies' multiples; the stated reason for this was that Demco was predicting higher earnings growth.

MR. SCHROEDER'S GUIDELINE COMPANY APPROACH

Notwithstanding the foregoing criticisms of Ms. Walker's guideline company approach, we do not believe Mr. Schroeder's guideline public company approach deserves controlling weight. As noted above, Ms. Walker's guideline analysis was thorough and well explained; it is still entitled to some weight. In addition, Mr. Schroeder's approach somewhat overstates the media note's effect on value, because it does not apply a minority discount. We also accept Ms. Walker's criticism that it would have been preferable if Mr. Schroeder had used more than three guideline companies. Moreover, we note that Mr. Schroeder used

PROBLEMS WITH THE INCOME-BASED APPROACHES

Ms. Walker testified that in theory, income-based approaches should produce more accurate determinations of value, because they attempt to value directly the future income streams flowing from an investment. She also testified, however, that many assumptions must be made to employ such approaches and the results are highly sensitive to the assumptions used. Most importantly, if the subject company's future income is unpredictable, then income-based methods will produce inaccurate appraisals of the company's value. See Pratt et al., supra at 257.

We conclude that as of the date of the gifts, it was very difficult to predict Demco's future income. It appears that as of that date Demco's management had predicted only 1 year of future results. Due to the lack of a long-range forecast, Ms. Walker did not even attempt to predict Demco's future revenues. Instead, she used an average of Demco's historical and forecasted results to create a measure she described as Demco's "normalized" free cash-flow, and assumed this would grow at a constant rate. In this connection, we note that one of the leading treatises on business valuations cautions that historical averages or pure extrapolations from those averages are usually inadequate bases for an income-based analysis; an analyst should use such averages only if she can explain why they are a reasonable proxy for future expectations. See Pratt et al., supra at 240, 254. Given the fluctuations in Demco's net income, the difficulties being experienced by Demco's major customer groups, and the unsettled economic conditions around the time of the gifts, it appears less likely than usual that Demco's past results could have served to predict its future results. We also note that Ms. Walker's original report relied entirely on a market-based approach; her revised report added an income-based approach only in response to respondent's criticism of her original report. For all these reasons, we conclude that Ms. Walker's income-based approach is entitled to little weight.

Although Mr. Schroeder at least attempted to predict Demco's future income, his income-based analysis suffers from the same flaws as Ms. Walker's. Mr. Schroeder's predictions, like Ms. Walker's extrapolations, were based to a great extent on Demco's average past performance. In addition, Mr. Schroeder did not explain or justify very well either his assumptions about future changes in Demco's performance or his choice of discount rates. We also note that although Ms. Walker had little criticism of Mr. Schroeder's guideline company approach--or couched that criticism in terms of reasonable

professional differences--she identified several more serious problems with Mr. Schroeder's income-based approach. For all these reasons, we conclude that Mr. Schroeder's income-based analysis, like Ms. Walker's, is entitled to little weight.

CONCLUSION

Ms. Walker's market-based appraisal of the Demco nonvoting common stock was $211.20 per share; Mr. Schroeder's market-based appraisal was $303.03 per share. For the reasons set forth above, Ms. Walker's market-based appraisal significantly understated Demco's value. As we have explained, treating the media note as a nonoperating asset would have increased Ms. Walker's market-based values by approximately $35 per share, even after applying the 25- percent minority discount Ms. Walker suggested. Similarly, using the correct projections for Demco's 1992 earnings would have added approximately $103 per share to Ms. Walker's forecasted earnings based valuation, while using the mean multiples of the comparable companies, instead of the lower multiples chosen by Ms. Walker, would have added approximately $88 per share to Ms. Walker's historical performance measures based valuation. Nevertheless, we still conclude that Mr. Schroeder's market-based appraisal somewhat overstated Demco's value, in part because it did not apply a minority discount to the media note; we also conclude that it does not deserve controlling weight because it used very few performance measures and comparable companies.

Ms. Walker's and Mr. Schroeder's income-based appraisals were lower than their market-based appraisals, at $175.24 per share and $260.61 per share, respectively. However, we conclude that those income-based appraisals are entitled to little weight for the reasons set forth above. n25

n25 We also note that both experts' income-based analyses probably understated Demco's value, because they determined Demco's future cash-flows on a hypothetical after tax basis, and then used market rates of return on taxable investments to determine the present value of those cash-flows. See supra notes 19, 23.

On the basis of the foregoing and all the other facts and circumstances, we conclude petitioners have not shown that the value of the Demco nonvoting common stock, as of the date of the gifts, was less than $260.13 per share. To the contrary, the record establishes that it was at least equal to that amount.

To reflect all the foregoing,

DECISIONS WILL BE ENTERED

FOR RESPONDENT.

T.C. Memo. 2000-51

UNITED STATES TAX COURT

ESTATE OF ETTA H. WEINBERG, DECEASED, MELLON BANK, DONALD H. HERMAN AND LOUISE W. ALBERT, EXECUTORS, Petitioners v. COMMISSIONER OF INTERNAL REVENUE, Respondent

Docket No. 5076-97. Filed February 15, 2000.

Steven T. Stern and David J. Ackerman, for petitioners.

Alan S. Kline, for respondent.

MEMORANDUM FINDINGS OF FACT AND OPINION

WHALEN, Judge: Respondent determined a deficiency of $760,515 in the Federal estate tax of the estate of Mrs. Etta H. Weinberg, herein referred to as the decedent. After concessions by the parties, the sole issue for decision is the fair market value of a limited partnership

interest over which the decedent had a general power of appointment on the date of her death.

Throughout this opinion, all section references are to the Internal Revenue Code as in effect on the date of decedent's death, and all Rule references are to the Tax Court Rules of Practice and Procedure.

FINDINGS OF FACT

Some of the facts have been stipulated and are found accordingly. The stipulation and the accompanying exhibits are incorporated herein.

The decedent died on December 15, 1992. She was a resident of Philadelphia, Pennsylvania, at that time. She was also a widow. Her husband, Mr. Bernard Weinberg, had died in 1964. She was survived by two children from her marriage to Mr. Weinberg, Mr. Paul S. Weinberg and Ms. Louise W. Brown.

On the date of her death, the decedent possessed a general power of appointment over the principal of a so-called marital deduction trust that had been created under the last will and testament of her late husband (referred to herein as Trust A). Trust A held a 25.235-percent interest in a limited partnership, the Hill House Limited Partnership (Hill House).

Hill House owned and operated an apartment complex that consisted of an 11-story building containing 188 apartment units, an office suite, a two-level underground parking garage, and a swimming pool. The apartment complex had been constructed in 1964. At the time of the decedent's death, only three of the apartment units in the complex were vacant. As of December 31, 1992, there was one mortgage on the property in the principal amount of $448,544. The mortgage was payable in monthly installments of $18,406, including principal and interest at the annual rate of 6.25 percent. The final mortgage payment was due on April 1, 1993. The parties agree that on the date of the decedent’s death the fair market value of the apartment complex was $10,050,000.

Hill House is governed by the Hill House Limited Partnership Agreement of May 1, 1980. Article IV of the agreement governs distributions to the partners. Paragraph 4.1 of the agreement gives the general partner sole discretion to determine when distributions are made. It further provides: “Such distributions shall be made pro rata to the Partners in accordance with their respective Percentage Interests.” Article VII of the agreement governs the transferability of partnership interests, and paragraph 7.3 thereof gives all partners a right of first

refusal under which a partner who wishes to transfer his, her, or its interest in Hill House to a third party must first offer to sell the interest to the other partners on the same terms and conditions offered by the third party. Paragraph 7.4 of the agreement gives the general partner absolute discretion to consent to or deny the substitution of a limited partner, unless the purchaser is already a partner.

The Limited Partnership Agreement sets forth the following list of partners and the percentage interest of each:

General Partner	Percentage Interest
Paul S. Weinberg	1.000
Limited Partners	
Trust A	25.235
Paul Trust	14.982
Etta H. Weinberg, copartner in M.E.L. Realty Co.	14.395
Anne K. Gross, copartner of M.E.L. Realty Co.	8.648
Barbara G. Reines, copartner in M.E.L. Realty Co.	8.648
Paul Trust, copartner in M.E.L. Realty Co.	14.395
Anne K. Gross	9.390
Max and Esther S. Oppenheim	3.307

As shown above, the decedent’s son, Mr. Paul S. Weinberg, was the sole general partner of Hill House and

held a 1-percent interest in the partnership in that capacity. He was also the sole beneficiary of the Paul S. Weinberg Testamentary Trust that had been created under his father's last will and testament (referred to above and herein as the Paul Trust). The Paul Trust had a limited partnership interest of 14.982 percent in Hill House and an additional interest of 14.395 percent in Hill House as a copartner of M.E.L. Realty Co.

On November 2, 1984, the decedent created an inter vivos trust, and on February 17, 1989, she substantially amended it. The amended trust directed that upon the decedent's death the trustees were to distribute all the decedent's interests in Hill House to a trust that she had created earlier for the benefit of her son, Mr. Paul S. Weinberg, and his issue (the Paul Family Trust). This distribution was to include the 25.235-percent interest in Hill House held in Trust A, over which the decedent possessed a general power of appointment. The decedent's will states that the decedent exercised her power of appointment over the subject limited partnership interest as provided in the amended trust. Her will states as follows:

> I exercise in full the power of appointment given to me under Article III of the Last Will

> and Testament of my late husband, BERNARD WEINBERG, and direct that all assets governed thereby be distributed to my Trustees under my Trust executed November 2, 1984, as amended, whereunder I am now Trustee. In the event that such Trust, for any reason, is not in existence at the time of my death, I exercise my power of appointment in favor of my Executors.

The financial statements of Hill House for the years 1990 through 1992 report the following:

	1990	1991	1992
Rental income	$1,928,127	$2,003,912	$2,057,151
Total income	1,996,306	2,082,707	2,137,058
Net income	754,465	893,678	843,275
Cash	722,128	836,450	801,078
Mortgage payable	810,211	635,012	48,544
Distributions	650,000	600,000	800,000

On the estate tax return filed on behalf of the decedent's estate, the executors of the estate reported $1,075,000 as the value of the 25.235-percent interest in Hill House over which the decedent held a general power of appointment. The estate now claims that the fair market value is $971,838. In the notice of deficiency, respondent determined that the fair market value of the subject interest in Hill House was $2,422,500. Respondent now claims that the fair market value is $1,770,103.

OPINION

Section 2031(a) provides that the value of the gross estate of a decedent is determined by including the value at the time of the decedent's death of all property, real or personal, tangible or intangible, wherever situated. Section 2041 provides generally that a decedent's gross estate shall include the value of all property over which the decedent has a general power of appointment at the time of his or her death. See sec. 2041(a)(2).

As mentioned above, at the time of her death, the decedent possessed a general power of appointment over a 25.235-percent limited partnership interest in Hill House. In this opinion, we sometimes refer to this interest as the subject limited partnership interest. Thus, the decedent's gross estate includes the value of this interest. The sole issue for decision in this case is the fair market value of the subject limited partnership interest.

Fair market value is defined for Federal estate and gift tax purposes as the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of all the relevant facts. See sec. 20.2031-1(b), Estate Tax Regs.; United States v.

Cartwright, 411 U.S. 546, 551 (1973); Estate of Andrews v. Commissioner, 79 T.C. 938, 940 (1982). This is an objective test based upon hypothetical buyers and sellers in the marketplace and is not based upon a particular buyer or seller. See Estate of Bright v. United States, 658 F.2d 999, 1005-1006 (5th Cir. 1981); Estate of Andrews v. Commissioner, supra at 956.

The value of an item of property as of the date of a person's death is a question of fact. See Hamm v. Commissioner, 325 F.2d 934, 938 (8th Cir. 1963), affg. T.C. Memo. 1961-347; Estate of Newhouse v. Commissioner, 94 T.C. 193, 217 (1990). The taxpayer bears the burden of proving that respondent's determination of fair market value of property is incorrect. See Rule 142(a). The Court as the trier of fact must weight all relevant evidence and draw appropriate inferences. See, e.g., Estate of Hall v. Commissioner, 92 T.C. 312, 335 (1989).

The determination of fair market value is an inherently imprecise process. See Estate of Gilford v. Commissioner, 88 T.C. 38, 50 (1987); Buffalo Tool & Die Manufacturing Co. v. Commissioner, 74 T.C. 441, 452 (1980). On numerous occasions, this Court has stressed the appropriateness of settling valuation issues. See Estate

of Andrews, supra at 956; Buffalo Tool & Die Manufacturing Co. v. Commissioner, supra at 452; Messing v. Commissioner, 48 T.C. 502, 512 (1967); Furman v. Commissioner, T.C. Memo. 1998-157.

In this case, the parties agree that in valuing the subject limited partnership interest a minority discount and a lack of marketability discount must be applied. The minority discount accounts for a decedent's lack of control over the property. See Ward v. Commissioner, 87 T.C. 78, 106 (1986); Harwood v. Commissioner, 82 T.C. 239, 267 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986); Estate of Andrews v. Commissioner, supra at 953. The lack of marketability discount accounts for the fact that there is no ready market for a decedent's interest in the property. See Estate of Andrews v. Commissioner, supra at 953. While the parties agree that both discounts are appropriate, they disagree about the amount of each discount, and, thus, they disagree about the value of the subject limited partnership's interest.

To establish the value of the subject limited partnership interest, the parties rely upon the testimony and report of their respective expert witnesses. The Court evaluates an expert opinion in light of the demonstrated

qualifications of the expert and all other evidence of value. See Estate of Newhouse v. Commissioner, supra at 217; Parker v. Commissioner, 86 T.C. 547, 561 (1986). The Court is not bound by the opinion of any expert witness. See Estate of Newhouse v. Commissioner, supra at 217; Estate of Hall v. Commissioner, supra at 338; Parker v. Commissioner, 86 T.C. at 561. The Court may adopt an expert's entire opinion or selectively choose to adopt some portion of the expert's opinion. See Parker v. Commissioner, supra at 562. Because valuation necessarily results in an approximation, the value at which the Court arrives need not be one as to which there is specific testimony if it is within the range of values that may properly be arrived at from consideration of all the evidence. See Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. T.C. Memo. 1974-285.

Petitioners' Expert

Petitioners rely on the expert report of Mr. Robert M. Siwicki of Howard, Lawson & Co. Mr. Siwicki is an accredited senior appraiser with the American Society of Appraisers and holds a master's degree in finance from the Wharton School.

Mr. Siwicki valued the subject limited partnership interest using both the capitalization of income approach and the net asset value approach. Under the capitalization of income approach, it is necessary to identify the income stream to be capitalized. The income stream is then capitalized using a rate of return realized by hypothetical investors on comparable investments. Under the net asset value approach, it is necessary to determine the net asset value of the asset. If necessary, that value is then discounted to reflect the minority ownership of the interest.

Mr. Siwicki started his valuation in this case by reviewing the data on 85 publicly registered real estate partnerships compiled in the May/June 1992 edition of "The Perspective", a bimonthly publication of Partnership Profiles, Inc., which provides market data for publicly registered limited partnership interests. Mr. Siwicki focused on limited partnerships that invested in residential property, had little or no debt, and made cash distributions to the limited partners. He identified seven publicly registered real estate partnerships that he believed were comparable to Hill House. They are listed

below with their yield and discount to net asset value (NAV):

Partnership	Type of Investment	Yield	Discount to NAV
American Insured Mortgage 86	M	10.6%	35%
American Insured Mortgage 88	M	9.1%	30%
Hutton/ConAm Realty Investors 4	E	8.9%	NA[3]
IDS/Balcor Income Properties	E	11.1%	51%
Krupp Insured Plus	M	10.9%	29%
Krupp Insured Plus II	M	10.1%	13%
Shearson Lehman Sr. Income Fund	E	11.5%	NA[3]

[3] Not available.

Four of the above partnerships, those with an “M” in the column entitled Type of Investment, did not own real properties but invested in portfolios of federally insured mortgages. Mr. Siwicki believed that they were “less risky than their equity-based counterparts” and “would be expected to have lower discounts to NAV compared to equity-based real estate partnerships.” He selected the IDS Balcor Income Properties, a partnership that owned only two apartment buildings, as the limited partnership that was most comparable to Hill House that owned a single property. The data for IDS Balcor reported a yield of approximately 11 percent and a net asset value discount of 51 percent.

In identifying an appropriate income stream, Mr. Siwicki noted that there was a "disconnect between the performance of the [Hill House] partnership and the amount of distributions being made". For that reason, he chose as

the income stream a 3-year average of the cash distributions made during the years 1990 through 1992, $683,333 (i.e., total distributions during 3-year period, $2,050,000, divided by 3). In calculating the average distributions, Mr. Siwicki did not adjust the average to take into account the final mortgage payment due on April 1, 1993.

A 25.235-percent share of the 3-year average of cash distributions (i.e., the share attributable to the subject limited partnership interest) is $172,439 (i.e., $683,333 x 25.235 percent). Mr. Siwicki capitalized that amount, $172,439, by 11 percent, the approximate yield of an interest in IDS Balcor, to arrive at $1,567,627 as the value of the subject limited partnership interest.

As mentioned above, the parties agree, for purposes of this case, that the fair market value of the Hill House apartment complex on the date of death was $10,050,000. On the basis of the financial statements of Hill House for 1992 and the fair market value of the property as stipulated by the parties, Mr. Siwicki determined that the net asset value of Hill House on the date of the decedent's death was $10,332,769. Thus, the subject 25.235-percent interest in the net asset value of Hill House was

$2,607,474. By applying the discount of 51 percent identified in the case of IDS Balcor, Mr. Siwicki computed $1,277,662 as the value of the subject limited partnership interest using the net asset value approach (i.e., $2,607,474 x .49).

Mr. Siwicki combined the values he computed under the two approaches by weighting the capitalization approach by 75 percent and the net asset value approach by 25 percent. Mr. Siwicki felt a 3-to-1 ratio adequately emphasized the fact that the capitalization approach was the more important approach for this partnership interest. This resulted in a value of the subject limited partnership interest of $1,495,136.

Mr. Siwicki then applied a 35-percent discount to the above value to account for the lack of marketability of the subject limited partnership interest. He reviewed various market studies on illiquid securities to arrive at the amount of this discount. In particular, he relied on a study by the Securities and Exchange Commission (SEC) that compared sales between 1966 and 1969 of the restricted stock of companies that also had freely tradable, publicly traded counterparts.

After analyzing the various market studies on illiquid securities, Mr. Siwicki concluded that the lack of marketability discount for the subject limited partnership interest was most comparable to the portion of the SEC study that reported a 30-percent discount for restricted securities of nonreporting over-the-counter issuers. However, Mr. Siwicki believed the subject limited partnership interest warranted a greater discount due to two differences. First, he found that there was no prospect of a public market ever developing for this interest. Second, he found that the restrictions on the sale of this interest were perpetual, as opposed to the restrictions in the studies which lasted for only 1 to 3 years. Thus, Mr. Siwicki concluded a 35-percent discount represented the lack of marketability of the interest. After applying this discount, Mr. Siwicki concluded that the fair market value of the subject limited partnership interest on the date of death was $971,838.

Mr. Siwicki's analysis is summarized as follows:

Petitioner's Expert	Capitalization Approach		Net Asset Value Approach	
Distributions during 1990	$650,000.00	Value of apartment complex	$10,050,000.00	
Distributions during 1991	600,000.00	Other assets	840,075.00	
Distributions during 1992	800,000.00	Total liabilities	557,306.00	
Total distributions	2,050,000.00	Net Asset Value of Hill House	10,332,769.00	
Average annual distributions	683,333.33			
Percentage interest	0.25235	Percentage interest	0.25235	
Share of average annual distributions	172,439.17	Share of Net Asset Value	2,607,474.26	
Percentage yield of IDS Balcor Income Properties	0.11	Less: Discount of 51%	1,329,811.87	
Value of Hill House before marketability discount	1,567,628.82	Value of Hill House before marketability discount	1,277,662.39	
Weight of capitalization approach	0.75	Weight of Net asset value approach	0.25	
	1,175,721.61		319,415.60	$1,495,137.21
Less: Marketability discount of 35%				523,298.02
Fair Market Value of the subject limited partnership interest				971,839.19

The values computed by Mr. Siwicki are slightly different from the above values because of rounding.

Respondent's Expert

Respondent relies on the testimony and expert report of Dr. Samuel J. Kursh who is certified as a business appraiser by the Institute of Business Appraisers, Inc., and holds a doctorate in business administration from George Washington University.

Dr. Kursh valued the subject limited partnership interest using only the capitalization of income approach. According to Dr. Kursh, the net asset value approach is inappropriate for valuing the subject interest in Hill House because the partnership's underlying asset was income-producing real estate. Respondent argues that the net asset value is irrelevant because a hypothetical buyer could not control the sale of the underlying property or the liquidation of the partnership.

Dr. Kursh began his valuation by computing a discount rate. To do this, he selected comparables from the limited partnerships referenced in the May/June 1993 edition of "The Perspective". This is the same publication used by petitioner’s expert but a later edition. Dr. Kursh

selected partnerships that owned real estate (residential and/or commercial), had low debt or leverage, had cash flows greater than their distributions and capital expenditures, and had assets that were valued by independent appraisers. Dr. Kursh's criteria produced 16 comparables. According to his report, investors in these 16 comparables "anticipated annual returns from cash distributions ranging from 9.31 percent to 11.58 percent." Dr. Kursh selected the midpoint of those yields, 10.45 percent, as the rate of return an investor would require for a minority interest investment in a limited partnership with the characteristics of the comparables.

Dr. Kursh then made three adjustments to the average yield of the comparables to take into account the particular characteristics of Hill House. First, Dr. Kursh added 50 basis points to account for the fact that Hill House owned only one piece of property and thus lacked diversity, while the comparables owned multiple pieces of property. Second, Dr. Kursh subtracted 100 basis points to account for the fact that the general partner of Hill House was also a limited partner. According to Dr. Kursh, this commonality of interest would tend to ensure cash

distributions to the limited partners. Again, this characteristic was not present in the comparables. Lastly, Dr. Kursh subtracted 25 basis points to account for the fact that the data for the comparables might include distressed sales. Dr. Kursh based this adjustment on the following editor's note in "The Perspective":

> Limited partnership investments are generally illiquid, long term investments. Sellers of such investments are often considered distressed for various reasons and find it necessary to accept discounted sales prices. As a result, the above price information may not reflect the intrinsic value of a limited partnership interest.

After making the above adjustments to the average yield, Dr. Kursh concluded that a potential purchaser would require an investment in Hill House to yield a rate of return of 9.7 percent (i.e., 10.45 + .50 - 1.00 - .25).

For an income stream, Dr. Kursh used the cash distributions made by Hill House in 1992, $800,000. A 25.235-percent share of the 1992 cash distributions is approximately $202,000. Because the only liability on the property was the mortgage that was due to be fully paid on April 1, 1993, Dr. Kursh believed that the partnership would realize a substantial increase in income after that

date. Dr. Kursh reasoned that the aggregate distributions made during 1992 were at the minimum level of distributions that a potential buyer would anticipate. Applying the discount rate of 9.7 percent to the decedent's 1992 distributions of $202,000, Dr. Kursh computed the value of the decedent's interest in Hill House of $2,082,474 (i.e., $202,000 ÷ 9.7 percent).

Dr. Kursh then applied a marketability discount. In order to determine the amount of this discount, he used the Quantitative Marketability Discount Model (QMDM) that is described in a book written by Mr. Z. Christopher Mercer entitled Quantifying Marketability Discounts (1997). The QMDM is an economic model that attempts to relate the present value of the future returns of an investment in the form of distributions and capital appreciation to the amount an investor is willing to pay for the investment. The QMDM incorporates various factors, including: The expected distribution yield (i.e., the expected annual return through distributions), the expected growth rate of value (i.e., the expected growth in the underlying asset value), the required holding period return (i.e., the rate of return on similar investments), and the assumed holding

period. The QMDM consists of various summary tables in which implied marketability discounts are enumerated for each set of the above four factors.

As to this case, Dr. Kursh assumed the expected growth rate of value to be between 3 and 4 percent. Dr. Kursh based this determination on the historical inflation rate. He assumed the expected distribution yield to be 10 percent, based on the yields for comparable real estate investments. He assumed a required holding period return of 16.4 percent. This percentage was calculated using the rates of return on publicly traded securities as modified by specific characteristics of the particular investment. And lastly, Dr. Kursh assumed a holding period of 10 to 15 years. From the QMDM tables, Dr. Kursh's assumptions produced a marketability discount of 15 percent.

After applying the 15-percent marketability discount, Dr. Kursh concluded that the fair market value of the subject limited partnership interest on the date of death is $1,770,103. Dr. Kursh's analysis is summarized as follows:

Respondent's Expert		Capitalization Approach
Distributions during 1992		$800,000.00
Percentage interest		0.25235
Share of distributions during 1992		201,880.00
Rounded		202,000.00
Average yield of 16 comparables	10.45%	
Plus: Adjustment for lack of diversity	0.50%	
Less: Adjustment for commonality	-1.00%	
Less: Adjustment for distressed sales	-0.25%	
Percentage yield		9.70
Value of Hill House before marketability discount		2,082,474.23
Less: Marketability discount of 15%		312,371.13
Fair market value of the subject limited partnership interest		1,770,103.10

Analysis and Conclusions

As described above, both experts determined the fair market value of the subject limited partnership interest and then calculated and applied an appropriate discount to account for the diminished marketability of the interest. Strictly speaking, neither expert computed a minority discount. They both computed the fair market value of the subject limited partnership interest as a minority interest. Nevertheless, it is useful to compare the minority discounts that are implied in the experts' computations. It is also helpful to compare the combined discounts implied in their computations. The following schedule shows the values of the subject limited

partnership interest and the marketability discounts determined by the experts and the minority discounts and the combined discounts implied by the experts' computations:

	Petitioner's Expert	Respondent's Expert
Net asset value of Hill House	$10,332,769.00	$10,332,769.00
25.235-percent share	2,607,474.26	2,607,474.26
Minority discount percentage	42.6596	20.1344
FMV of the subject interest before marketability discount	1,495,136.00	2,082,474.00
Marketability discount percentage	35.00	15.00
FMV of the subject interest	971,838.00	1,770,103.00
Combined discount percentage	62.7287	32.1143

As shown above, the computations of petitioner's expert imply a combined discount of 62.7287 percent and the computations of respondent's expert imply a combined discount of 32.1143 percent. We do not fully agree with either expert. Set out below is our view of some of the points about which the parties' experts disagree and our conclusion regarding the fair market value of the subject limited partnership interest.

First, we agree with petitioner's expert that it is appropriate to consider the fair market value of the

subject limited partnership interest as computed under both the net asset value and the capitalization approaches. We also agree with petitioner that a weighted average of 75 percent for the capitalization approach and 25 percent for the net asset value approach adequately reflects the attributes of this partnership.

In Estate of Andrews v. Commissioner, 79 T.C. 938 (1982), we considered the value of the decedent's stock in four closely held corporations, each of which was engaged principally in the ownership, operation, and management of commercial real estate properties. In valuing the decedent's 20-percent stock interest in each of the corporations, the parties differed over the weight to be given to earnings and to the net asset value of the corporations. The taxpayer argued that the corporations should be characterized as operating companies and greater weight should be placed on earnings and dividend-paying capacity than on net asset values. See id. at 944. The Commissioner argued, contrary to the Government's position in this case, that the corporations were in the nature of investment companies and would be valued by a hypothetical investor based upon a buyer's right to share in the value

of the corporation's underlying net assets. See id. at 943. For that reason, the Commissioner argued that the corporations should not be valued using earnings and dividend-paying capacity. See id. In resolving that dispute, we stated as follows:

> [R]egardless of whether the corporation is seen as primarily an operating company, as opposed to an investment company, courts should not restrict consideration to only one approach to valuation, such as capitalization of earnings or net asset values. * * * Certainly the degree to which the corporation is actively engaged in producing income rather than merely holding property for investment should influence the weight to be given to the values arrived at under the different approaches but it should not dictate the use of one approach to the exclusion of all others. [Id. at 945; citations omitted.]

In this case we do not agree with respondent that the net asset value approach is irrelevant on the ground that a hypothetical buyer of the subject limited partnership interest would have no control over when the underlying property was sold or when the partnership was liquidated. The net asset value should still be considered because the value of the underlying real estate will retain most of its inherent value even if the corporation is not efficient in securing a stream of rental income. See id. at 944. Thus,

weight must be given to the net asset value of the partnership's underlying assets even though a hypothetical buyer of the subject limited partnership interest would have no ability to directly realize the value by forcing liquidation. See id. at 945.

Second, we agree with petitioner's expert that for purposes of computing the fair market value of the subject limited partnership interest under the capitalization of income approach, it is appropriate to use the average of the distributions made during the years 1990 through 1992, rather than the amount of the 1992 distribution. As mentioned above, paragraph 4.1 of the partnership agreement grants the general partner sole discretion to determine when distributions are made. While there is no guaranty that past distributions will reflect the distributions to be made in the future, we believe that an average of the distributions over 3 years better reflects the cash distributions that an investor could reasonably anticipate in the future, than the distributions made during 1992 of $800,000, an amount that exceeds the 3-year average by $116,667. We do not agree with respondent's position that an investor would consider the 1992 distributions of

$800,000 to be the minimum future distributions because the final mortgage payment was to be made in April 1993.

Third, we agree with respondent's expert's use of 16 comparables. Respondent's expert selected 16 comparables and found the midpoint of the returns of those comparables, 10.45 percent. He made three adjustments and arrived at 9.7 percent as the return that an investor would require from Hill House. On the other hand, petitioner's expert in effect based the yield used in his computation on a single comparable. We believe that the use of a single comparable can be problematic, and we prefer the approach of respondent's expert in using a number of comparables. Cf. Estate of Hall v. Commissioner, 92 T.C. 312, 339-340 (1989).

As noted above, respondent's expert did not use the net asset value approach. Nevertheless, using the 16 comparables that respondent's expert selected, it appears that an investor would discount the net asset value of Hill House by 53.4 percent to arrive at the fair market value of the subject limited partnership interest under the net asset value approach. We computed this discount using a

method similar to the method used by Dr. Kursh in computing the rate of return of 10.45 percent used in his analysis.

Finally, we do not agree with the marketability discount computed by either expert. We disagree with the discount computed by Dr. Kursh on the basis of the QMDM model because slight variations in the assumptions used in the model produce dramatic differences in the results. For example, if the holding period for the investment were extended from 10 to 15 years, the period assumed by Dr. Kursh, to 15 to 20 years, and the required holding period return were increased to 20 percent from the return assumed by Dr. Kursh of between 16 to 18 percent, the QMDM table produces a 30-percent discount, twice the amount of the discount produced using Dr. Kursh's assumptions. Because the assumptions are not based on hard data and a range of data may be reasonable, we did not find the QMDM helpful in this case.

Similarly, we disagree with Mr. Siwicki's computation of a marketability discount. Mr. Siwicki arrived at an initial marketability discount, 30 percent, based upon his review of an SEC study of unregistered shares of nonreporting over-the-counter companies. He increased the

discount by 5 percent to reflect the perpetual restrictions on this interest and the slim prospect of the interest ever being publicly traded. We believe that Mr. Siwicki failed adequately to take into account certain characteristics of the subject limited partnership interest that suggest a decrease in the marketability discount. These factors include consistent dividends, the nature of the underlying assets, and a low degree of financial leverage.

Based on all the evidence of record, we find that a marketability discount of 20 percent should be applied to the subject limited partnership interest.

Valuation

Based upon the entire record of this case, we find the date-of-death fair market value of the subject limited partnership interest is $1,309,650.64. Our analysis is summarized in the following schedule:

Court's Analysis		Capitalization		Net Asset Value	
Distributions during 1990		$650,000.00	Value of apartment complex	$10,050,000.00	
Distributions during 1991		600,000.00	Other assets	840,075.00	
Distributions during 1992		800,000.00	Total liabilities	557,306.00	
Total distributions		2,050,000.00	Net Asset Value of Hill House	10,332,769.00	
Average annual distributions		683,333.33			
Percentage interest		0.25235	Percentage interest	0.25235	
Share of average annual distributions		172,439.17	Share of Net Asset Value	2,607,474.26	
Average yield of 16 comparables	10.45%				
Plus: Adjustment for lack of diversity	0.50%				
Less: Adjustment for commonality	-1.00%				
Less: Adjustment for distressed sales	-.025%				
Percentage yield		9.70%	Less: Discount of 53.4% approach	1,392,391.25	
Value of Hill House before marketability discount		1,777,723.40	Value of Hill House before marketability discount	1,215,083.01	
Weight of capitalization approach		0.75%	Weight of net asset value approach	0.25	
Fair market value of the subject limited partnership interest		1,333,292.55		303,770.75	$1,637,063.30
Less: Marketability discount of 20%					327,412.66
Fair market value of the subject limited partnership interest					1,309,650.64

Based upon the foregoing, and concessions,

Decision will be entered under Rule 155.

Weinberger v. UOP, Inc.

457 A.2d 701 (1983)

William B. WEINBERGER, Plaintiff Below, Appellant, v. UOP, INC., et al., Defendants Below, Appellees.

Supreme Court of Delaware.

Submitted: July 16, 1982.
Decided: February 1, 1983.

William Prickett (argued), John H. Small, and George H. Seitz, III, of Prickett, Jones, Elliott, Kristol & Schnee, Wilmington, for plaintiff.

A. Gilchrist Sparks, III, of Morris, Nichols, Arsht & Tunnell, Wilmington, for defendant UOP, Inc.

Robert K. Payson and Peter M. Sieglaff, of Potter, Anderson & Corroon, Wilmington, and Alan N. Halkett (argued) of Latham & Watkins, Los Angeles, Cal., for defendant The Signal Companies, Inc.

Before HERRMANN, C.J., McNEILLY, QUILLEN, HORSEY and MOORE, JJ., constituting the Court en Banc.

MOORE, Justice:

This post-trial appeal was reheard en banc from a decision of the Court of Chancery.[1] It was brought by the class action plaintiff below, a former shareholder of UOP, Inc., who challenged the elimination of UOP's minority shareholders by a cash-out merger between UOP and its majority owner, The Signal Companies, Inc.[2] Originally, the defendants in this action were Signal, UOP, certain officers and directors of those companies, and UOP's investment banker, Lehman Brothers Kuhn Loeb, Inc.[3] The present Chancellor held that the terms of the merger were fair to the plaintiff and the other minority shareholders of UOP. Accordingly, he entered judgment in favor of the defendants.

Numerous points were raised by the parties, but we address only the following questions presented by the trial court's opinion:

1) The plaintiff's duty to plead sufficient facts demonstrating the unfairness of the challenged merger;
2) The burden of proof upon the parties where the merger has been approved by the purportedly informed vote of a majority of the minority shareholders;

[1] Accordingly, this Court's February 9, 1982 opinion is withdrawn.
[2] For the opinion of the trial court see *Weinberger v. UOP, Inc.,* Del. Ch., 426 A.2d 1333 (1981).
[3] Shortly before the last oral argument, the plaintiff dismissed Lehman Brothers from the action. Thus, we do not deal with the issues raised by the plaintiff's claims against this defendant.

3) The fairness of the merger in terms of adequacy of the defendants' disclosures to the minority shareholders;
4) The fairness of the merger in terms of adequacy of the price paid for the minority shares and the remedy appropriate to that issue; and
5) The continued force and effect of *Singer v. Magnavox Co.,* Del.Supr., 380 A.2d 969, 980 (1977), and its progeny.

In ruling for the defendants, the Chancellor re-stated his earlier conclusion that the plaintiff in a suit challenging a cash-out merger must allege specific acts of fraud, misrepresentation, or other items of misconduct to demonstrate the unfairness of the merger terms to the minority.[4] We approve this rule and affirm it.

The Chancellor also held that even though the ultimate burden of proof is on the majority shareholder to show by a preponderance of the evidence that the transaction is fair, it is first the burden of the plaintiff attacking the merger to demonstrate some basis for invoking the fairness obligation. We agree with that principle. However, where corporate action has been approved by an informed vote of a majority of the minority shareholders, we conclude that the burden entirely shifts to the plaintiff to show that the transaction was unfair to the minority. *See, e.g., Michelson v. Duncan,* Del.Supr., 407 A.2d 211, 224 (1979). But in all this, the burden clearly remains on those relying on the vote to show that they completely disclosed all material facts relevant to the transaction.

Here, the record does not support a conclusion that the minority stockholder vote was an informed one. Material information, necessary to acquaint those shareholders with the bargaining positions of Signal and UOP, was withheld under circumstances amounting to a breach of fiduciary duty. We therefore conclude that this merger does not meet the test of fairness, at least as we address that concept, and no burden thus shifted to the plaintiff by reason of the minority shareholder vote. Accordingly, we reverse and remand for further proceedings consistent herewith.

In considering the nature of the remedy available under our law to minority shareholders in a cash-out merger, we believe that it is, and hereafter should be, an appraisal under 8 *Del.C.* § 262 as hereinafter construed. We therefore overrule *Lynch v. Vickers Energy Corp.,* Del.Supr., 429 A.2d 497 (1981) (*Lynch II*) to the extent that it purports to limit a stockholder's monetary relief to a specific damage formula. *See Lynch II,* 429 A.2d at 507-08 (McNeilly & Quillen, JJ., dissenting). But to give full effect to section 262 within the framework of the General Corporation Law we adopt a more liberal, less rigid and stylized, approach to the valuation process than has heretofore been permitted by our courts. While the present state of these proceedings does not admit the plaintiff to the appraisal remedy per se, the practical effect of the remedy we do grant him will be co-extensive with the liberalized valuation and appraisal methods we herein approve for cases coming after this decision.

Our treatment of these matters has necessarily led us to a reconsideration of the business purpose rule announced in the trilogy of *Singer v. Magnavox Co., supra; Tanzer v. International General Industries, Inc.,* Del.Supr., 379 A.2d 1121 (1977); and *Roland*

[4] In a pre-trial ruling the Chancellor ordered the complaint dismissed for failure to state a cause of action. *See Weinberger v. UOP, Inc.,* Del.Ch., 409 A.2d 1262 (1979).

International Corp. v. Najjar, Del.Supr., 407 A.2d 1032 (1979). For the reasons hereafter set forth we consider that the business purpose requirement of these cases is no longer the law of Delaware.

I.

The facts found by the trial court, pertinent to the issues before us, are supported by the record, and we draw from them as set out in the Chancellor's opinion.[5]

Signal is a diversified, technically based company operating through various subsidiaries. Its stock is publicly traded on the New York, Philadelphia and Pacific Stock Exchanges. UOP, formerly known as Universal Oil Products Company, was a diversified industrial company engaged in various lines of business, including petroleum and petro-chemical services and related products, construction, fabricated metal products, transportation equipment products, chemicals and plastics, and other products and services including land development, lumber products and waste disposal. Its stock was publicly held and listed on the New York Stock Exchange.

In 1974 Signal sold one of its wholly-owned subsidiaries for $420,000,000 in cash. *See Gimbel v. Signal Companies, Inc.,* Del. Ch., 316 A.2d 599, *aff'd,* Del.Supr., 316 A.2d 619 (1974). While looking to invest this cash surplus, Signal became interested in UOP as a possible acquisition. Friendly negotiations ensued, and Signal proposed to acquire a controlling interest in UOP at a price of $19 per share. UOP's representatives sought $25 per share. In the arm's length bargaining that followed, an understanding was reached whereby Signal agreed to purchase from UOP 1,500,000 shares of UOP's authorized but unissued stock at $21 per share.

This purchase was contingent upon Signal making a successful cash tender offer for 4,300,000 publicly held shares of UOP, also at a price of $21 per share. This combined method of acquisition permitted Signal to acquire 5,800,000 shares of stock, representing 50.5% of UOP's outstanding shares. The UOP board of directors advised the company's shareholders that it had no objection to Signal's tender offer at that price. Immediately before the announcement of the tender offer, UOP's common stock had been trading on the New York Stock Exchange at a fraction under $14 per share.

The negotiations between Signal and UOP occurred during April 1975, and the resulting tender offer was greatly oversubscribed. However, Signal limited its total purchase of the tendered shares so that, when coupled with the stock bought from UOP, it had achieved its goal of becoming a 50.5% shareholder of UOP.

Although UOP's board consisted of thirteen directors, Signal nominated and elected only six. Of these, five were either directors or employees of Signal. The sixth, a partner in the banking firm of Lazard Freres & Co., had been one of Signal's representatives in the negotiations and bargaining with UOP concerning the tender offer and purchase price of the UOP shares.

[5] *Weinberger v. UOP, Inc.,* Del.Ch., 426 A.2d 1333, 1335-40 (1981).

However, the president and chief executive officer of UOP retired during 1975, and Signal caused him to be replaced by James V. Crawford, a long-time employee and senior executive vice president of one of Signal's wholly-owned subsidiaries. Crawford succeeded his predecessor on UOP's board of directors and also was made a director of Signal.

By the end of 1977 Signal basically was unsuccessful in finding other suitable investment candidates for its excess cash, and by February 1978 considered that it had no other realistic acquisitions available to it on a friendly basis. Once again its attention turned to UOP.

The trial court found that at the instigation of certain Signal management personnel, including William W. Walkup, its board chairman, and Forrest N. Shumway, its president, a feasibility study was made concerning the possible acquisition of the balance of UOP's outstanding shares. This study was performed by two Signal officers, Charles S. Arledge, vice president (director of planning), and Andrew J. Chitiea, senior vice president (chief financial officer). Messrs. Walkup, Shumway, Arledge and Chitiea were all directors of UOP in addition to their membership on the Signal board.

Arledge and Chitiea concluded that it would be a good investment for Signal to acquire the remaining 49.5% of UOP shares at any price up to $24 each. Their report was discussed between Walkup and Shumway who, along with Arledge, Chitiea and Brewster L. Arms, internal counsel for Signal, constituted Signal's senior management. In particular, they talked about the proper price to be paid if the acquisition was pursued, purportedly keeping in mind that as UOP's majority shareholder, Signal owed a fiduciary responsibility to both its own stockholders as well as to UOP's minority. It was ultimately agreed that a meeting of Signal's executive committee would be called to propose that Signal acquire the remaining outstanding stock of UOP through a cash-out merger in the range of $20 to $21 per share.

The executive committee meeting was set for February 28, 1978. As a courtesy, UOP's president, Crawford, was invited to attend, although he was not a member of Signal's executive committee. On his arrival, and prior to the meeting, Crawford was asked to meet privately with Walkup and Shumway. He was then told of Signal's plan to acquire full ownership of UOP and was asked for his reaction to the proposed price range of $20 to $21 per share. Crawford said he thought such a price would be "generous", and that it was certainly one which should be submitted to UOP's minority shareholders for their ultimate consideration. He stated, however, that Signal's 100% ownership could cause internal problems at UOP. He believed that employees would have to be given some assurance of their future place in a fully-owned Signal subsidiary. Otherwise, he feared the departure of essential personnel. Also, many of UOP's key employees had stock option incentive programs which would be wiped out by a merger. Crawford therefore urged that some adjustment would have to be made, such as providing a comparable incentive in Signal's shares, if after the merger he was to maintain his quality of personnel and efficiency at UOP.

Thus, Crawford voiced no objection to the $20 to $21 price range, nor did he suggest that Signal should consider paying more than $21 per share for the minority interests. Later, at the executive committee meeting the same factors were discussed, with Crawford repeating the position he earlier took with Walkup and Shumway. Also considered was the 1975

tender offer and the fact that it had been greatly oversubscribed at $21 per share. For many reasons, Signal's management concluded that the acquisition of UOP's minority shares provided the solution to a number of its business problems.

Thus, it was the consensus that a price of $20 to $21 per share would be fair to both Signal and the minority shareholders of UOP. Signal's executive committee authorized its management "to negotiate" with UOP "for a cash acquisition of the minority ownership in UOP, Inc., with the intention of presenting a proposal to [Signal's] board of directors ... on March 6, 1978". Immediately after this February 28, 1978 meeting, Signal issued a press release stating:

> The Signal Companies, Inc. and UOP, Inc. are conducting negotiations for the acquisition for cash by Signal of the 49.5 per cent of UOP which it does not presently own, announced Forrest N. Shumway, president and chief executive officer of Signal, and James V. Crawford, UOP president.
>
> Price and other terms of the proposed transaction have not yet been finalized and would be subject to approval of the boards of directors of Signal and UOP, scheduled to meet early next week, the stockholders of UOP and certain federal agencies.

The announcement also referred to the fact that the closing price of UOP's common stock on that day was $14.50 per share.

Two days later, on March 2, 1978, Signal issued a second press release stating that its management would recommend a price in the range of $20 to $21 per share for UOP's 49.5% minority interest. This announcement referred to Signal's earlier statement that "negotiations" were being conducted for the acquisition of the minority shares.

Between Tuesday, February 28, 1978 and Monday, March 6, 1978, a total of four business days, Crawford spoke by telephone with all of UOP's non-Signal, i.e., outside, directors. Also during that period, Crawford retained Lehman Brothers to render a fairness opinion as to the price offered the minority for its stock. He gave two reasons for this choice. First, the time schedule between the announcement and the board meetings was short (by then only three business days) and since Lehman Brothers had been acting as UOP's investment banker for many years, Crawford felt that it would be in the best position to respond on such brief notice. Second, James W. Glanville, a long-time director of UOP and a partner in Lehman Brothers, had acted as a financial advisor to UOP for many years. Crawford believed that Glanville's familiarity with UOP, as a member of its board, would also be of assistance in enabling Lehman Brothers to render a fairness opinion within the existing time constraints.

Crawford telephoned Glanville, who gave his assurance that Lehman Brothers had no conflicts that would prevent it from accepting the task. Glanville's immediate personal reaction was that a price of $20 to $21 would certainly be fair, since it represented almost a 50% premium over UOP's market price. Glanville sought a $250,000 fee for Lehman Brothers' services, but Crawford thought this too much. After further discussions Glanville finally agreed that Lehman Brothers would render its fairness opinion for $150,000.

During this period Crawford also had several telephone contacts with Signal officials. In only one of them, however, was the price of the shares discussed. In a conversation with Walkup, Crawford advised that as a result of his communications with UOP's non-Signal directors, it was his feeling that the price would have to be the top of the proposed range, or $21 per share, if the approval of UOP's outside directors was to be obtained. But again, he did not seek any price higher than $21.

Glanville assembled a three-man Lehman Brothers team to do the work on the fairness opinion. These persons examined relevant documents and information concerning UOP, including its annual reports and its Securities and Exchange Commission filings from 1973 through 1976, as well as its audited financial statements for 1977, its interim reports to shareholders, and its recent and historical market prices and trading volumes. In addition, on Friday, March 3, 1978, two members of the Lehman Brothers team flew to UOP's headquarters in Des Plaines, Illinois, to perform a "due diligence" visit, during the course of which they interviewed Crawford as well as UOP's general counsel, its chief financial officer, and other key executives and personnel.

As a result, the Lehman Brothers team concluded that "the price of either $20 or $21 would be a fair price for the remaining shares of UOP". They telephoned this impression to Glanville, who was spending the weekend in Vermont.

On Monday morning, March 6, 1978, Glanville and the senior member of the Lehman Brothers team flew to Des Plaines to attend the scheduled UOP directors meeting. Glanville looked over the assembled information during the flight. The two had with them the draft of a "fairness opinion letter" in which the price had been left blank. Either during or immediately prior to the directors' meeting, the two-page "fairness opinion letter" was typed in final form and the price of $21 per share was inserted.

On March 6, 1978, both the Signal and UOP boards were convened to consider the proposed merger. Telephone communications were maintained between the two meetings. Walkup, Signal's board chairman, and also a UOP director, attended UOP's meeting with Crawford in order to present Signal's position and answer any questions that UOP's non-Signal directors might have. Arledge and Chitiea, along with Signal's other designees on UOP's board, participated by conference telephone. All of UOP's outside directors attended the meeting either in person or by conference telephone.

First, Signal's board unanimously adopted a resolution authorizing Signal to propose to UOP a cash merger of $21 per share as outlined in a certain merger agreement and other supporting documents. This proposal required that the merger be approved by a majority of UOP's outstanding minority shares voting at the stockholders meeting at which the merger would be considered, and that the minority shares voting in favor of the merger, when coupled with Signal's 50.5% interest would have to comprise at least two-thirds of all UOP shares. Otherwise the proposed merger would be deemed disapproved.

UOP's board then considered the proposal. Copies of the agreement were delivered to the directors in attendance, and other copies had been forwarded earlier to the directors participating by telephone. They also had before them UOP financial data for 1974-1977, UOP's most recent financial statements, market price information, and budget projections

for 1978. In addition they had Lehman Brothers' hurriedly prepared fairness opinion letter finding the price of $21 to be fair. Glanville, the Lehman Brothers partner, and UOP director, commented on the information that had gone into preparation of the letter.

Signal also suggests that the Arledge-Chitiea feasibility study, indicating that a price of up to $24 per share would be a "good investment" for Signal, was discussed at the UOP directors' meeting. The Chancellor made no such finding, and our independent review of the record, detailed *infra,* satisfies us by a preponderance of the evidence that there was no discussion of this document at UOP's board meeting. Furthermore, it is clear beyond peradventure that nothing in that report was ever disclosed to UOP's minority shareholders prior to their approval of the merger.

After consideration of Signal's proposal, Walkup and Crawford left the meeting to permit a free and uninhibited exchange between UOP's non-Signal directors. Upon their return a resolution to accept Signal's offer was then proposed and adopted. While Signal's men on UOP's board participated in various aspects of the meeting, they abstained from voting. However, the minutes show that each of them "if voting would have voted yes".

On March 7, 1978, UOP sent a letter to its shareholders advising them of the action taken by UOP's board with respect to Signal's offer. This document pointed out, among other things, that on February 28, 1978 "both companies had announced negotiations were being conducted".

Despite the swift board action of the two companies, the merger was not submitted to UOP's shareholders until their annual meeting on May 26, 1978. In the notice of that meeting and proxy statement sent to shareholders in May, UOP's management and board urged that the merger be approved. The proxy statement also advised:

> The price was determined after *discussions* between James V. Crawford, a director of Signal and Chief Executive Officer of UOP, and officers of Signal which took place during meetings on February 28, 1978, and in the course of several subsequent telephone conversations. (Emphasis added.)

In the original draft of the proxy statement the word "negotiations" had been used rather than "discussions". However, when the Securities and Exchange Commission sought details of the "negotiations" as part of its review of these materials, the term was deleted and the word "discussions" was substituted. The proxy statement indicated that the vote of UOP's board in approving the merger had been unanimous. It also advised the shareholders that Lehman Brothers had given its opinion that the merger price of $21 per share was fair to UOP's minority. However, it did not disclose the hurried method by which this conclusion was reached.

As of the record date of UOP's annual meeting, there were 11,488,302 shares of UOP common stock outstanding, 5,688,302 of which were owned by the minority. At the meeting only 56%, or 3,208,652, of the minority shares were voted. Of these, 2,953,812, or 51.9% of the total minority, voted for the merger, and 254,840 voted against it. When Signal's stock was added to the minority shares voting in favor, a total of 76.2% of UOP's outstanding shares approved the merger while only 2.2% opposed it.

By its terms the merger became effective on May 26, 1978, and each share of UOP's stock held by the minority was automatically converted into a right to receive $21 cash.

II.

A.

A primary issue mandating reversal is the preparation by two UOP directors, Arledge and Chitiea, of their feasibility study for the exclusive use and benefit of Signal. This document was of obvious significance to both Signal and UOP. Using UOP data, it described the advantages to Signal of ousting the minority at a price range of $21-$24 per share. Mr. Arledge, one of the authors, outlined the benefits to Signal:[6]

Purpose Of The Merger

1) Provides an outstanding investment opportunity for Signal — (Better than any recent acquisition we have seen.)
2) Increases Signal's earnings.
3) Facilitates the flow of resources between Signal and its subsidiaries — (Big factor — works both ways.)
4) Provides cost savings potential for Signal and UOP.
5) Improves the percentage of Signal's `operating earnings' as opposed to `holding company earnings'.
6) Simplifies the understanding of Signal.
7) Facilitates technological exchange among Signal's subsidiaries.
8) Eliminates potential conflicts of interest.

Having written those words, solely for the use of Signal, it is clear from the record that neither Arledge nor Chitiea shared this report with their fellow directors of UOP. We are satisfied that no one else did either. This conduct hardly meets the fiduciary standards applicable to such a transaction. While Mr. Walkup, Signal's chairman of the board and a UOP director, attended the March 6, 1978 UOP board meeting and testified at trial that he had discussed the Arledge-Chitiea report with the UOP directors at this meeting, the record does not support this assertion. Perhaps it is the result of some confusion on Mr. Walkup's part. In any event Mr. Shumway, Signal's president, testified that he made sure the Signal outside directors had this report prior to the March 6, 1978 Signal board meeting, but he did not testify that the Arledge-Chitiea report was also sent to UOP's outside directors.

Mr. Crawford, UOP's president, could not recall that any documents, other than a draft of the merger agreement, were sent to UOP's directors before the March 6, 1978 UOP meeting. Mr. Chitiea, an author of the report, testified that it was made available to Signal's directors, but to his knowledge it was not circulated to the outside directors of UOP. He specifically testified that he "didn't share" that information with the outside directors of UOP with whom he served.

[6] The parentheses indicate certain handwritten comments of Mr. Arledge.

None of UOP's outside directors who testified stated that they had seen this document. The minutes of the UOP board meeting do not identify the Arledge-Chitiea report as having been delivered to UOP's outside directors. This is particularly significant since the minutes describe in considerable detail the materials that actually were distributed. While these minutes recite Mr. Walkup's presentation of the Signal offer, they do not mention the Arledge-Chitiea report or any disclosure that Signal considered a price of up to $24 to be a good investment. If Mr. Walkup had in fact provided such important information to UOP's outside directors, it is logical to assume that these carefully drafted minutes would disclose it. The post-trial briefs of Signal and UOP contain a thorough description of the documents purportedly available to their boards at the March 6, 1978, meetings. Although the Arledge-Chitiea report is specifically identified as being available to the Signal directors, there is no mention of it being among the documents submitted to the UOP board. Even when queried at a prior oral argument before this Court, counsel for Signal did not claim that the Arledge-Chitiea report had been disclosed to UOP's outside directors. Instead, he chose to belittle its contents. This was the same approach taken before us at the last oral argument.

Actually, it appears that a three-page summary of figures was given to all UOP directors. Its first page is identical to one page of the Arledge-Chitiea report, but this dealt with nothing more than a justification of the $21 price. Significantly, the contents of this three-page summary are what the minutes reflect Mr. Walkup told the UOP board. However, nothing contained in either the minutes or this three-page summary reflects Signal's study regarding the $24 price.

The Arledge-Chitiea report speaks for itself in supporting the Chancellor's finding that a price of up to $24 was a "good investment" for Signal. It shows that a return on the investment at $21 would be 15.7% versus 15.5% at $24 per share. This was a difference of only two-tenths of one percent, while it meant over $17,000,000 to the minority. Under such circumstances, paying UOP's minority shareholders $24 would have had relatively little long-term effect on Signal, and the Chancellor's findings concerning the benefit to Signal, even at a price of $24, were obviously correct. *Levitt v. Bouvier,* Del.Supr., 287 A.2d 671, 673 (1972).

Certainly, this was a matter of material significance to UOP and its shareholders. Since the study was prepared by two UOP directors, using UOP information for the exclusive benefit of Signal, and nothing whatever was done to disclose it to the outside UOP directors or the minority shareholders, a question of breach of fiduciary duty arises. This problem occurs because there were common Signal-UOP directors participating, at least to some extent, in the UOP board's decision-making processes without full disclosure of the conflicts they faced.[7]

[7] Although perfection is not possible, or expected, the result here could have been entirely different if UOP had appointed an independent negotiating committee of its outside directors to deal with Signal at arm's length. *See, e.g., Harriman v. E.I. duPont de Nemours & Co.,* 411 F.Supp. 133 (D.Del.1975). Since fairness in this context can be equated to conduct by a theoretical, wholly independent, board of directors acting upon the matter before them, it is unfortunate that this course apparently was neither considered nor pursued. *Johnston v. Greene,* Del.Supr., 121 A.2d 919, 925 (1956). Particularly in a parent-subsidiary context, a showing that the action taken was as though each of the contending parties had in fact exerted its bargaining power against the other at arm's length is strong evidence that the transaction meets the

B.

In assessing this situation, the Court of Chancery was required to:

> examine what information defendants had and to measure it against what they gave to the minority stockholders, in a context in which `complete candor' is required. In other words, the limited function of the Court was to determine whether defendants had disclosed all information in their possession germane to the transaction in issue. And by `germane' we mean, for present purposes, information such as a reasonable shareholder would consider important in deciding whether to sell or retain stock.
>
> * * * * * *
>
> ... Completeness, not adequacy, is both the norm and the mandate under present circumstances.

Lynch v. Vickers Energy Corp., Del.Supr., 383 A.2d 278, 281 (1977) (*Lynch I*). This is merely stating in another way the long-existing principle of Delaware law that these Signal designated directors on UOP's board still owed UOP and its shareholders an uncompromising duty of loyalty. The classic language of *Guth v. Loft, Inc.,* Del.Supr., 5 A.2d 503, 510 (1939), requires no embellishment:

> A public policy, existing through the years, and derived from a profound knowledge of human characteristics and motives, has established a rule that demands of a corporate officer or director, peremptorily and inexorably, the most scrupulous observance of his duty, not only affirmatively to protect the interests of the corporation committed to his charge, but also to refrain from doing anything that would work injury to the corporation, or to deprive it of profit or advantage which his skill and ability might properly bring to it, or to enable it to make in the reasonable and lawful exercise of its powers. The rule that requires an undivided and unselfish loyalty to the corporation demands that there shall be no conflict between duty and self-interest.

Given the absence of any attempt to structure this transaction on an arm's length basis, Signal cannot escape the effects of the conflicts it faced, particularly when its designees on UOP's board did not totally abstain from participation in the matter. There is no "safe harbor" for such divided loyalties in Delaware. When directors of a Delaware corporation are on both sides of a transaction, they are required to demonstrate their utmost good faith and the most scrupulous inherent fairness of the bargain. *Gottlieb v. Heyden Chemical Corp.,* Del.Supr., 91 A.2d 57, 57-58 (1952). The requirement of fairness is unflinching in its demand that where one stands on both sides of a transaction, he has the burden of establishing its entire fairness, sufficient to pass the test of careful scrutiny by the courts. *Sterling v. Mayflower Hotel Corp.,* Del.Supr., 93 A.2d 107, 110 (1952); *Bastian v. Bourns, Inc.,* Del.Ch., 256 A.2d 680, 681 (1969), *aff'd,* Del.Supr., 278 A.2d 467 (1970); *David J. Greene & Co. v. Dunhill International Inc.,* Del.Ch., 249 A.2d 427, 431 (1968).

---

test of fairness. *Getty Oil Co. v. Skelly Oil Co.,* Del.Supr., 267 A.2d 883, 886 (1970); *Puma v. Marriott,* Del.Ch., 283 A.2d 693, 696 (1971).

There is no dilution of this obligation where one holds dual or multiple directorships, as in a parent-subsidiary context. *Levien v. Sinclair Oil Corp.,* Del.Ch., 261 A.2d 911, 915 (1969). Thus, individuals who act in a dual capacity as directors of two corporations, one of whom is parent and the other subsidiary, owe the same duty of good management to both corporations, and in the absence of an independent negotiating structure (see note 7, *supra*), or the directors' total abstention from any participation in the matter, this duty is to be exercised in light of what is best for both companies. *Warshaw v. Calhoun,* Del. Supr., 221 A.2d 487, 492 (1966). The record demonstrates that Signal has not met this obligation.

C.

The concept of fairness has two basic aspects: fair dealing and fair price. The former embraces questions of when the transaction was timed, how it was initiated, structured, negotiated, disclosed to the directors, and how the approvals of the directors and the stockholders were obtained. The latter aspect of fairness relates to the economic and financial considerations of the proposed merger, including all relevant factors: assets, market value, earnings, future prospects, and any other elements that affect the intrinsic or inherent value of a company's stock. Moore, *The "Interested" Director or Officer Transaction,* 4 Del.J. Corp.L. 674, 676 (1979); Nathan & Shapiro, *Legal Standard of Fairness of Merger Terms Under Delaware Law,* 2 Del.J. Corp.L. 44, 46-47 (1977). *See Tri-Continental Corp. v. Battye,* Del.Supr., 74 A.2d 71, 72 (1950); 8 *Del.C.* § 262(h). However, the test for fairness is not a bifurcated one as between fair dealing and price. All aspects of the issue must be examined as a whole since the question is one of entire fairness. However, in a non-fraudulent transaction we recognize that price may be the preponderant consideration outweighing other features of the merger. Here, we address the two basic aspects of fairness separately because we find reversible error as to both.

D.

Part of fair dealing is the obvious duty of candor required by *Lynch I, supra.* Moreover, one possessing superior knowledge may not mislead any stockholder by use of corporate information to which the latter is not privy. *Lank v. Steiner,* Del. Supr., 224 A.2d 242, 244 (1966). Delaware has long imposed this duty even upon persons who are not corporate officers or directors, but who nonetheless are privy to matters of interest or significance to their company. *Brophy v. Cities Service Co.,*Del. Ch., 70 A.2d 5, 7 (1949). With the well-established Delaware law on the subject, and the Court of Chancery's findings of fact here, it is inevitable that the obvious conflicts posed by Arledge and Chitiea's preparation of their "feasibility study", derived from UOP information, for the sole use and benefit of Signal, cannot pass muster.

The Arledge-Chitiea report is but one aspect of the element of fair dealing. How did this merger evolve? It is clear that it was entirely initiated by Signal. The serious time constraints under which the principals acted were all set by Signal. It had not found a suitable outlet for its excess cash and considered UOP a desirable investment, particularly since it was now in a position to acquire the whole company for itself. For whatever reasons, and they were only Signal's, the entire transaction was presented to and approved by UOP's board within four business days. Standing alone, this is not necessarily indicative of any lack of fairness

by a majority shareholder. It was what occurred, or more properly, what did not occur, during this brief period that makes the time constraints imposed by Signal relevant to the issue of fairness.

The structure of the transaction, again, was Signal's doing. So far as negotiations were concerned, it is clear that they were modest at best. Crawford, Signal's man at UOP, never really talked price with Signal, except to accede to its management's statements on the subject, and to convey to Signal the UOP outside directors' view that as between the $20-$21 range under consideration, it would have to be $21. The latter is not a surprising outcome, but hardly arm's length negotiations. Only the protection of benefits for UOP's key employees and the issue of Lehman Brothers' fee approached any concept of bargaining.

As we have noted, the matter of disclosure to the UOP directors was wholly flawed by the conflicts of interest raised by the Arledge-Chitiea report. All of those conflicts were resolved by Signal in its own favor without divulging any aspect of them to UOP.

This cannot but undermine a conclusion that this merger meets any reasonable test of fairness. The outside UOP directors lacked one material piece of information generated by two of their colleagues, but shared only with Signal. True, the UOP board had the Lehman Brothers' fairness opinion, but that firm has been blamed by the plaintiff for the hurried task it performed, when more properly the responsibility for this lies with Signal. There was no disclosure of the circumstances surrounding the rather cursory preparation of the Lehman Brothers' fairness opinion. Instead, the impression was given UOP's minority that a careful study had been made, when in fact speed was the hallmark, and Mr. Glanville, Lehman's partner in charge of the matter, and also a UOP director, having spent the weekend in Vermont, brought a draft of the "fairness opinion letter" to the UOP directors' meeting on March 6, 1978 with the price left blank. We can only conclude from the record that the rush imposed on Lehman Brothers by Signal's timetable contributed to the difficulties under which this investment banking firm attempted to perform its responsibilities. Yet, none of this was disclosed to UOP's minority.

Finally, the minority stockholders were denied the critical information that Signal considered a price of $24 to be a good investment. Since this would have meant over $17,000,000 more to the minority, we cannot conclude that the shareholder vote was an informed one. Under the circumstances, an approval by a majority of the minority was meaningless. *Lynch I,* 383 A.2d at 279, 281; *Cahall v. Lofland,* Del.Ch., 114 A. 224 (1921).

Given these particulars and the Delaware law on the subject, the record does not establish that this transaction satisfies any reasonable concept of fair dealing, and the Chancellor's findings in that regard must be reversed.

E.

Turning to the matter of price, plaintiff also challenges its fairness. His evidence was that on the date the merger was approved the stock was worth at least $26 per share. In support, he offered the testimony of a chartered investment analyst who used two basic approaches to valuation: a comparative analysis of the premium paid over market in ten other tender offer-merger combinations, and a discounted cash flow analysis.

In this breach of fiduciary duty case, the Chancellor perceived that the approach to valuation was the same as that in an appraisal proceeding. Consistent with precedent, he rejected plaintiff's method of proof and accepted defendants' evidence of value as being in accord with practice under prior case law. This means that the so-called "Delaware block" or weighted average method was employed wherein the elements of value, i.e., assets, market price, earnings, etc., were assigned a particular weight and the resulting amounts added to determine the value per share. This procedure has been in use for decades. *See In re General Realty & Utilities Corp.,* Del.Ch., 52 A.2d 6, 14-15 (1947). However, to the extent it excludes other generally accepted techniques used in the financial community and the courts, it is now clearly outmoded. It is time we recognize this in appraisal and other stock valuation proceedings and bring our law current on the subject.

While the Chancellor rejected plaintiff's discounted cash flow method of valuing UOP's stock, as not corresponding with "either logic or the existing law" (426 A.2d at 1360), it is significant that this was essentially the focus, i.e., earnings potential of UOP, of Messrs. Arledge and Chitiea in their evaluation of the merger. Accordingly, the standard "Delaware block" or weighted average method of valuation, formerly employed in appraisal and other stock valuation cases, shall no longer exclusively control such proceedings. We believe that a more liberal approach must include proof of value by any techniques or methods which are generally considered acceptable in the financial community and otherwise admissible in court, subject only to our interpretation of 8 *Del.C.* § 262(h), *infra. See also* D.R.E. 702-05. This will obviate the very structured and mechanistic procedure that has heretofore governed such matters. *See Jacques Coe & Co. v. Minneapolis-Moline Co.,* Del.Ch., 75 A.2d 244, 247 (1950); *Tri-Continental Corp. v. Battye,* Del.Ch., 66 A.2d 910, 917-18 (1949); *In re General Realty and Utilities Corp., supra.*

Fair price obviously requires consideration of all relevant factors involving the value of a company. This has long been the law of Delaware as stated in *Tri-Continental Corp.,* 74 A.2d at 72:

> The basic concept of value under the appraisal statute is that the stockholder is entitled to be paid for that which has been taken from him, viz., his proportionate interest in a going concern. By value of the stockholder's proportionate interest in the corporate enterprise is meant the true or intrinsic value of his stock which has been taken by the merger. In determining what figure represents this true or intrinsic value, the appraiser and the courts must take into consideration all factors and elements which reasonably might enter into the fixing of value. Thus, market value, asset value, dividends, earning prospects, the nature of the enterprise and any other facts which were known or which could be ascertained as of the date of merger and which throw any light on *future prospects* of the merged corporation are not only pertinent to an inquiry as to the value of the dissenting stockholders' interest, but *must be considered* by the agency fixing the value. (Emphasis added.)

This is not only in accord with the realities of present day affairs, but it is thoroughly consonant with the purpose and intent of our statutory law. Under 8 *Del.C.* § 262(h), the Court of Chancery:

> shall appraise the shares, determining their *fair* value exclusive of any element of value arising from the accomplishment or expectation of the merger, together with a fair rate of interest, if any, to be paid upon the amount determined to be the *fair* value. In determining such *fair*value, the Court shall take into account *all relevant factors* ... (Emphasis added)

See also ***Bell v. Kirby Lumber Corp.,*** Del. Supr., 413 A.2d 137, 150-51 (1980) (Quillen, J., concurring).

It is significant that section 262 now mandates the determination of "fair" value based upon "all relevant factors". Only the speculative elements of value that may arise from the "accomplishment or expectation" of the merger are excluded. We take this to be a very narrow exception to the appraisal process, designed to eliminate use of *pro forma* data and projections of a speculative variety relating to the completion of a merger. But elements of future value, including the nature of the enterprise, which are known or susceptible of proof as of the date of the merger and not the product of speculation, may be considered. When the trial court deems it appropriate, fair value also includes any damages, resulting from the taking, which the stockholders sustain as a class. If that was not the case, then the obligation to consider "all relevant factors" in the valuation process would be eroded. We are supported in this view not only by *Tri-Continental Corp.,* 74 A.2d at 72, but also by the evolutionary amendments to section 262.

Prior to an amendment in 1976, the earlier relevant provision of section 262 stated:

> (f) The appraiser shall determine the value of the stock of the stockholders ... The Court shall by its decree determine the value of the stock of the stockholders entitled to payment therefor ...

The first references to "fair" value occurred in a 1976 amendment to section 262(f), which provided:

> (f) ... the Court shall appraise the shares, determining their fair value exclusively of any element of value arising from the accomplishment or expectation of the merger....

It was not until the 1981 amendment to section 262 that the reference to "fair value" was repeatedly emphasized and the statutory mandate that the Court "take into account all relevant factors" appeared [section 262(h)]. Clearly, there is a legislative intent to fully compensate shareholders for whatever their loss may be, subject only to the narrow limitation that one can not take speculative effects of the merger into account.

Although the Chancellor received the plaintiff's evidence, his opinion indicates that the use of it was precluded because of past Delaware practice. While we do not suggest a monetary result one way or the other, we do think the plaintiff's evidence should be part of the factual mix and weighed as such. Until the $21 price is measured on remand by the valuation standards mandated by Delaware law, there can be no finding at the present stage of these proceedings that the price is fair. Given the lack of any candid disclosure of the material

facts surrounding establishment of the $21 price, the majority of the minority vote, approving the merger, is meaningless.

The plaintiff has not sought an appraisal, but rescissory damages of the type contemplated by *Lynch v. Vickers Energy Corp.,* Del.Supr., 429 A.2d 497, 505-06 (1981) (*Lynch II*). In view of the approach to valuation that we announce today, we see no basis in our law for *Lynch II*'s exclusive monetary formula for relief. On remand the plaintiff will be permitted to test the fairness of the $21 price by the standards we herein establish, in conformity with the principle applicable to an appraisal — that fair value be determined by taking "into account all relevant factors" [*see* 8 *Del.C.* § 262(h), *supra*]. In our view this includes the elements of rescissory damages if the Chancellor considers them susceptible of proof and a remedy appropriate to all the issues of fairness before him. To the extent that *Lynch II,* 429 A.2d at 505-06, purports to limit the Chancellor's discretion to a single remedial formula for monetary damages in a cash-out merger, it is overruled.

While a plaintiff's monetary remedy ordinarily should be confined to the more liberalized appraisal proceeding herein established, we do not intend any limitation on the historic powers of the Chancellor to grant such other relief as the facts of a particular case may dictate. The appraisal remedy we approve may not be adequate in certain cases, particularly where fraud, misrepresentation, self-dealing, deliberate waste of corporate assets, or gross and palpable overreaching are involved. *Cole v. National Cash Credit Association,* Del.Ch., 156 A. 183, 187 (1931). Under such circumstances, the Chancellor's powers are complete to fashion any form of equitable and monetary relief as may be appropriate, including rescissory damages. Since it is apparent that this long completed transaction is too involved to undo, and in view of the Chancellor's discretion, the award, if any, should be in the form of monetary damages based upon entire fairness standards, i.e., fair dealing and fair price.

Obviously, there are other litigants, like the plaintiff, who abjured an appraisal and whose rights to challenge the element of fair value must be preserved.[8] Accordingly, the quasi-appraisal remedy we grant the plaintiff here will apply only to: (1) this case; (2) any case now pending on appeal to this Court; (3) any case now pending in the Court of Chancery which has not yet been appealed but which may be eligible for direct appeal to this Court; (4) any case challenging a cash-out merger, the effective date of which is on or before February 1, 1983; and (5) any proposed merger to be presented at a shareholders' meeting, the notification of which is mailed to the stockholders on or before February 23, 1983. Thereafter, the provisions of 8 *Del.C.* § 262, as herein construed, respecting the scope of an appraisal and the means for perfecting the same, shall govern the financial remedy available to minority shareholders in a cash-out merger. Thus, we return to the well established principles of *Stauffer v. Standard Brands, Inc.,* Del.Supr., 187 A.2d 78 (1962) and *David J. Greene & Co. v. Schenley Industries, Inc.,* Del.Ch., 281 A.2d 30 (1971), mandating a stockholder's recourse to the basic remedy of an appraisal.

III.

[8] Under 8 *Del.C.* § 262(a), (d) & (e), a stockholder is required to act within certain time periods to perfect the right to an appraisal.

Finally, we address the matter of business purpose. The defendants contend that the purpose of this merger was not a proper subject of inquiry by the trial court. The plaintiff says that no valid purpose existed — the entire transaction was a mere subterfuge designed to eliminate the minority. The Chancellor ruled otherwise, but in so doing he clearly circumscribed the thrust and effect of *Singer. Weinberger v. UOP,* 426 A.2d at 1342-43, 1348-50. This has led to the thoroughly sound observation that the business purpose test "may be ... virtually interpreted out of existence, as it was in *Weinberger.*"[9]

The requirement of a business purpose is new to our law of mergers and was a departure from prior case law. *See Stauffer v. Standard Brands, Inc., supra; David J. Greene & Co. v. Schenley Industries, Inc., supra.*

In view of the fairness test which has long been applicable to parent-subsidiary mergers, *Sterling v. Mayflower Hotel Corp.,* Del.Supr., 93 A.2d 107, 109-10 (1952), the expanded appraisal remedy now available to shareholders, and the broad discretion of the Chancellor to fashion such relief as the facts of a given case may dictate, we do not believe that any additional meaningful protection is afforded minority shareholders by the business purpose requirement of the trilogy of *Singer, Tanzer,*[10] *Najjar,*[11] and their progeny. Accordingly, such requirement shall no longer be of any force or effect.

The judgment of the Court of Chancery, finding both the circumstances of the merger and the price paid the minority shareholders to be fair, is reversed. The matter is remanded for further proceedings consistent herewith. Upon remand the plaintiff's post-trial motion to enlarge the class should be granted.

37 T.C.M. (CCH) 883 (1978)
T.C. Memo. 1978-208.

Richard O. Wheeler and Betty P. Wheeler
v.
Commissioner.

Docket No. 6482-73.

United States Tax Court.

Filed June 7, 1978.

Fenelon Boesche, 1300 NBT Building, 320 S. Boston Ave., Tulsa, Okla. and James Littleton Daniel, for the petitioners. G. Phil Harney, for the respondent.

884 *884 ## Memorandum Findings of Fact and Opinion

IRWIN, Judge:

The Commissioner determined the following deficiencies in petitioners' joint Federal income tax:

Year	Deficiency
1968	$68,999.26
1969	94,607.93

In an amendment to the answer the Commissioner asserted an alternative deficiency of $140,783.76 for the year 1968 should this Court find a certain stock transaction to be taxable in that year rather than in the taxable year 1969. This alternative deficiency for 1968 would result in a reduced deficiency for the year 1969.

Certain concessions having been made, the issues remaining for our decision are:

(1) whether certain stock, debentures and a note received by petitioner Richard O. **Wheeler** in the taxable year 1968 constituted compensation for services or a distributable portion of joint venture capital gain;

(2) whether restrictions on the stock received prevented income realization in the year of receipt;

(3) the fair market value of the stock, if any, on the date of receipt;

(4) the fair market value of the debentures and the note on the date of receipt; and

(5) whether petitioners, by amendment to their petition, made a timely election under section 1304(a)[1] of the Internal Revenue Code to have the benefits of the income averaging provisions apply.

Findings of Fact

Some of the facts have been stipulated. The stipulation of facts along with attached exhibits are incorporated herein by this reference.

Petitioners, husband and wife, resided in Tulsa, Okla., at the time of filing their petition herein. The filed joint Federal income tax returns for the calendar years 1968 and 1969 with the Internal Revenue Service Center in Austin, Tex. Since Betty P. **Wheeler**

is a party hereto solely by reason of having filed joint income tax returns with her husband for the years in issue, Richard O. **Wheeler** alone will hereafter be referred to as the petitioner.

In 1958 petitioner went into the real estate development and construction business building warehouses, churches, and small shopping centers. In some of these real estate projects petitioner had an ownership interest in the property being developed and in others he did not.

It was in early 1961 that petitioner first met Ainslie Perrault. Although Mr. Perrault had no experience as a real estate developer, he was a very successful businessman, having owned a variety of business interests. Petitioner sought out Mr. Perrault to obtain financing for a project petitioner was contemplating. At that time petitioner had an option to purchase a tract of land and a lease commitment from National Cash Register Company for a building to be constructed on the land. What petitioner needed from Mr. Perrault was the front money necessary to exercise the option. Mr. Perrault agreed to provide the funds in return for a 50 percent interest in the project. Petitioner thereafter took title to the land in his name and followed through with the construction and leasing of the building. The project ultimately proved successful.

The next project in which the parties joined involved remodeling the Skelly Oil Building. This time Perrault initiated the project and requested that petitioner join forces with him. Perrault again offered to finance the project if petitioner would agree to remodel and acquire tenants for the building. The parties agreed to divide the profits on a 90 percent — 10 percent basis. The building was remodeled, leased, and eventually sold to the Franklin Realty Company in Philadelphia at a profit.

After these two successful ventures, Perrault and petitioner decided to seek other projects that were larger in scope. In 1962 a general oral agreement was entered into under which Perrault was to provide the necessary front money for the projects and petitioner was to undertake to carry them through the financing, construction and occupancy phases. The essential term of the agreement was that profits would be divided 75 percent to Perrault and 25 percent to petitioner after Perrault recovered his investment plus a 6 percent interest factor. Petitioner was also to receive a salary of $700 per month (later raised to $1,000) as
885 part of the agreement. Perrault was to *885 absorb overall losses incurred on the projects undertaken; however if an individual project ran a loss while the venture was operating at a profit, the loss was to be shared in the profit ratio previously indicated. The association between petitioner and Perrault was a marriage of capital and know-how.

Subsequent to this general arrangement between the principals, they began to look for new ventures. It was agreed that Perrault would hold legal and record title as nominee in order to protect his investment in the projects. However, petitioner and Perrault held themselves out as co-owners for the years during which the oral agreement and a later written agreement were in effect.

In 1965 petitioner and Perrault confirmed their 1962 verbal agreement in writing. Petitioner requested the written agreement for several reasons. Prior to 1965 Mr. Perrault had been represented by petitioner's brother, presumably as his attorney. As a result, petitioner felt safe with a verbal agreement. However, petitioner's brother died and petitioner thereafter felt a written agreement was necessary to protect his interest in the projects. Also Perrault was in his middle or upper sixties at that time and petitioner felt he would be better protected with a written agreement. While petitioner was not totally satisfied with the agreement as written, he felt he had lost much of the earlier leverage which he had in his bargaining position due to the death of his brother. He, therefore, felt compelled to accept the agreement as written by Perrault because his alternatives were to proceed on the basis of the oral agreement or walk off, neither a satisfactory alternative.

Under the agreement, petitioner and Perrault undertook six real estate projects. In 1965 the first of these projects was sold at a profit. Petitioner reported his share of the joint venture capital gain as gain from the sale of a capital asset. He has consistently reported gain from the sale of the projects in this manner. It is this manner of reporting the gain from the sale of three of the projects in the years 1968 and 1969 to which respondent objects.

The projects sold in 1968 were the Camelot Inn, the Mansion House, and the University Club Tower. Perrault and **Wheeler** handled all of these projects similarly. In the case of the Camelot Inn, for example, it was petitioner who suggested the site to be acquired and that a motel be erected. Perrault agreed that it would be a good project so the site was acquired using Perrault's funds. Petitioner's duties with respect to the projects included supervising construction, hiring subcontractors to do the specialty work, approving payrolls, making payments for materials, approving change orders, and approving interim payments to

subcontractors. Additionally, in the cases of the Mansion House and the University Club Tower which were financed through an F.H.A. guarantee, it was petitioner who had sole responsibility for developing the final figures necessary to obtain the financing. Petitioner also performed a number of duties jointly with Perrault, such as selecting the architects for the projects and obtaining permanent financing for the Camelot Inn. Subcontracts were mutually agreed upon before signing, which either Perrault or **Wheeler** had the authority to do.

Petitioner did not report any current operating revenues nor did he deduct any expenses with respect to the projects on his Federal income tax returns for the years in issue. Rather, during the period of years that the projects were operated under the Perrault-**Wheeler** arrangement and before the properties were sold, Perrault reported all the current operating income and deducted all the expenses with respect to the projects. Upon sale of the properties, the profit reported by Perrault was the gain on the sale of the projects reduced by petitioner's 25 percent share, that is, petitioner's share was taken off the top.

After completion of the projects, and a brief period of operation, the Camelot Inn, University Club Tower, and Mansion House were sold to the Kin-Ark Oil Company on May 23, 1968, in exchange for Kin-Ark Oil Company stock and debentures.

Kin-Ark Oil Company was a small conglomerate whose stock was traded on the American Stock Exchange. Average trading volume for the stock was approximately 10,000 shares per month. The company had incurred losses in each of the three years preceding the year of sale.

Petitioner's share of the sale proceeds was 32,029 shares of unregistered Kin-Ark Oil Company stock which was subject to an investment letter restriction, unregistered Kin-Ark Oil Company convertible debentures,[2] and a note from the University Club
886 *886 of Tulsa in the face amount of $37,500.[3] As part of the agreement Kin-Ark Oil Company was to use its best efforts to effect registration of the stock within approximately eight months after consummation of the sale. The stock was eventually registered sometime in early 1969.

Petitioner reported the proceeds in 1968 as his share of joint venture capital gain, and not as compensation for services. Although the stock which he received traded on the American Stock Exchange at a mean price of $5.875 per share on the date of receipt, petitioner reported the stock as having a value of $2.15 per share on that date. Petitioner subsequently sold that same stock in April 1969 for approximately $7.39 per share. Similarly, while the face value of the debentures he received was $200,000, petitioner reported them as having a fair market value of $135,844 on the date of their receipt. Petitioner sold the debentures in September 1969 for $151,784.50. Finally, the $37,500 note, which was petitioner's share of a debt owed the joint venture by the University Club of Tulsa, was reported for Federal income tax purposes as having a value of $25,000. The club settled the note in full for $33,750 in 1969. Thus, in tabular form, petitioner reported the 1968 and 1969 transactions as follows:

	Sale Price	Cost (Value at 5-23-68)	Capital Gain
32,029 Kin-Ark common	$236,841.90	$ 68,741	$168,100.90
200M Kin-Ark debentures	151,784.50	135,844	15,940.50
Cash—**Wheeler**-Perrault Venture[4]	33,750.00	25,000	8,750.00
Cash—from Perrault[5]	25,163.00	—	25,163.00
Totals	$447,539.40	$229,585	$217,954.40
Reported long-term capital gain			$108,977.20

Respondent, in the notice of deficiency, objected to not only the characterization and timing of the income reported by petitioner, but also to the values which petitioner assigned to each of the three instruments discussed above. Respondent asserted that

the proceeds which petitioner received from the sale of the projects were not his share of joint venture capital gain, but rather were compensation for services. He further asserted that the investment letter restriction to which the stock received by petitioner was subject was such a severe restriction that no income was realized in the year of receipt, but rather in the year the restriction lapsed. As a result, he included the stock in petitioner's income in 1969 at its full unrestricted value on the date of its receipt (May 23, 1968) in accordance with section 1.421-6(d)(2)(i), Income Tax Regs. As for the debentures, respondent maintained that the value was not $135,844 as reported by petitioner, but rather $150,000. Finally, respondent determined that the University Club note had a fair market value of $33,750 on the date it was received by petitioner. Thus, respondent treated the transactions as follows:

887 *887

	Received In 1969	Ordinary Income In 1968	Ordinary Income In 1969	Capital Gain In 1969
32,029 Kin-Ark common	$236,841.90	$	$188,170.38	$48,671.52
200M Kin-Ark debentures	151,784.50	150,000	.....	1,784.50
University Club note	33,750.00	33,750	.....	.....
Cash from Ainslie Perrault	25,163.00	.....	25,163.00	.....
Totals	$447,539.40	$183,750	$213,333.38	$50,456.02
Recognized Capital Gain				$25,228.01

Opinion

Briefly restated, petitioner entered into an agreement with Perrault to acquire and develop specific tracts of real property. Petitioner was to provide the "know-how" and Perrault the necessary finances. It was agreed that Perrault should recoup his investment plus a six percent interest factor, and that remaining profits, if any, were to be divided 75 percent to Perrault and 25 percent to petitioner. The parties followed through with their agreement and, among others, constructed the Camelot Inn, the University Club Tower and the Mansion House, all located in Tulsa, Okla. These properties were sold in 1968 to Kin-Ark Oil Company in exchange for unregistered common stock and convertible debentures of Kin-Ark Oil Company plus unsecured notes of the University Club of Tulsa, a tenant in the University Club Tower. Petitioner had the stock, debentures and note which he received in 1968 appraised and reported this transportation for Federal income tax purposes as a long term capital gain based on the appraised values. In 1969, petitioner sold the stock and debentures and received payment on the University Club note. On the basis of these transactions he reported long term capital gain on his 1969 Federal income tax return.

The salient issue which emerges from this set of facts is one of income characterization. This issue must necessarily be resolved by a determination of whether the agreement between petitioner and Perrault was one of joint venture or one of employment. Thus, we must determine the elements necessary to form a valid joint venture and whether those elements existed in the case before us.

Setting forth the particular elements of a joint venture is not as easy as might appear. A threshold issue we need determine is whether Federal or local law is determinative of the existence of a joint venture for Federal income tax purposes. In the instant case both parties assumed Oklahoma law alone was applicable in determining whether a joint venture had been formed. However, we to not agree.[6]

This and other courts have previously had to deal with the problem of whether Federal or local law is determinative of the existence of a joint venture for Federal income tax purposes. These decisions have not been consistent nor have they

addressed other decisions apparently to the contrary. In each instance the court determined which body of law was to apply in deciding whether a joint venture arrangement existed without explanation as to why that particular body of law should apply.

A "joint venture" is not specifically defined by the Internal Revenue Code of 1954. The closest thing to a definition appears in both section 761(a) and section 7701(a)(2) where it is stated that "the term `partnership' includes a syndicate, group, pool, joint venture, or other unincorporated organization".[7] However, because a joint venture is an entity taxable as a partnership, cases dealing with the choice of law question with respect to partnerships are of probative value.[8]

The Supreme Court has thrice dealt with the Federal-state choice of law problem in relation to partnerships. *Commissioner v.*
888 *888 *Culbertson* [49-1 USTC ¶ 9323], 337 U.S. 733 (1949); *Commissioner v. Tower* [46-1 USTC ¶ 9189], 327 U.S. 280 (1946); *Lusthaus v. Commissioner* [46-1 USTC ¶ 9190], 327 U.S. 293 (1946). In each of the three cases the Court tested for the existence of a partnership using a Federal standard, ignoring the result at which an application of local law would have arrived. [9]

However, lower courts have differed as to whether the similarity of a joint venture to a partnership is sufficient to include a joint venture within the umbra cast by the trilogy of cases decided by the Supreme Court. There are a number of cases which hold Federal law determinative of the existence of a joint venture for Federal income tax purposes. *Estate of Kahn v. Commissioner* [74-2 USTC ¶ 9524], 499 F. 2d 1186 (2d Cir. 1974), affg. a Memorandum Opinion of this Court [Dec. 31,623(M)]; *Arthur Venneri Co.v. United States* [65-1 USTC ¶ 9190], 340 F. 2d 337 (Ct. Cl. 1965); *Haley v. Commissioner* [53-1 USTC ¶ 9350], 203 F. 2d 815 (5th Cir. 1953); *First Mechanics Bank v. Commissioner* [**37**-2 USTC ¶ 9393], 91 F. 2d 275 (3d Cir. 1937); *Herzberg v. United States* [59-2 USTC ¶ 9578], 176 F. Supp. 440 (S.D. Ind. 1959); *Luna v. Commissioner* [Dec. 26,967], 42 T.C. 1067 (1964); *Beck Chemical Equipment Corp. v. Commissioner* [Dec. 22,265], 27 T.C. 840 (1957).[10] There are, however, also cases which appear to apply a state law standard. *Joe Balestrieri & Co.v. Commissioner* [49-2 USTC ¶ 9479], 177 F. 2d 867 (9th Cir. 1949); *Fishback v. United States* [63-2 USTC ¶ 9555], 215 F. Supp. 621 (D.S.D. 1963); *Frazell v. United States* [63-1 USTC ¶ 9244], 213 F. Supp. 457 (W.D. La. 1963), revd. and remanded on other grounds [64-2 USTC ¶ 9684] 335 F. 2d 487 (5th Cir. 1964), petition for rehearing denied per curiam 339 F. 2d 885 (5th Cir. 1964), cert. denied 380 U.S. 961 (1965); *Flanders v. United States* [59-1 USTC ¶ 9424], 172 F. Supp. 935 (N.D. Cal. 1959); *Copeland v. Ratterree,* an unreported case (N.D.N.Y. 1957, 52 AFTR 1309, 57-2 USTC ¶ 9895); *Tate v. Knox* [55-1 USTC ¶ 9483], 131 F. Supp. 514 (D. Minn. 1955). Finally, there are those cases which do not state whether a Federal or local law standard is being applied. *S. & M. Plumbing Co.v. Commissioner* [Dec. 30,634], 55 T.C. 702 (1971); *Podell v. Commissioner* [Dec. 30,456], 55 T.C. 429 (1970); *Au v. Commissioner* [Dec. 26,110], 40 T. C 264 (1963), affd. [64-1 USTC ¶ 9447] 330 F. 2d 1008 (9th Cir. 1964), cert. denied 379 U.S. 960 (1965).[11] See also *Smith v. Commissioner* [Dec. 15,862], 8 T.C. 1319 (1947). Thus it can be seen that we have an issue, the resolution of which is anything but clear.

The fact that there is a Federal standard for partnerships, we believe, provides a strong inference that the standard governing the existence of joint venture is likewise Federal.[12] As previously stated, sections 761(a) and 7701(a)(2) provide that "the term `partnership' includes a * * * joint venture." It seems patently unreasonable that the term "partnership" as used in the Code should be defined utilizing a Federal standard and that the term "joint venture," an entity subsumed within the term "partnership" for Federal income tax purposes, should be defined utilizing standards of local law. To do so would open the door for potential conflict because a joint venture as defined under local law might not bear the necessary indicia of partnership as that term is defined for Federal income tax purposes. Conversely, an entity, not technically a joint venture under local law, may well be an entity taxable as a partnership for Federal income tax purposes.[13]

889 *889 Additionally, everything stated by the Supreme Court in the *Tower, Lusthaus,* and *Culbertson* cases is equally applicable to joint ventures. *Beck Chemical Equipment Corp. v. Commissioner, supra.* In those three cases the paramount concern of the Court was that if classifications were left to determinations of state law, problems of form over substance would abound. As a result the Supreme Court found it necessary that the word "partnership" for purposes of Federal income taxation mean something other than the word "partnership" for purposes of state law. Federal tax statutes are designed to accomplish different purposes and goals than are state statutes. State courts are mindful of the purposes and goals of the state statutes when they classify an entity.[14] When an entity must be classified for purposes of a Federal income tax statute, policy considerations of Federal income tax law should govern that classification, not policy consideration of state law.[15]

From the foregoing, the process of inductive reasoning should lead us to a rule of law stated generally as follows:

> Whether or not a joint venture exists for tax purposes is determined by applying the same tests used in determining the existence of a partnership. * * * Though it has been held that state law applies in determining whether there was a joint venture, the sounder view seems to be that state law is not determinative. * * * [6 Mertens, Law of Federal Income Taxation, sec. 35.05, p. 29.] [Fn. refs. omitted.]

Having decided that a Federal standard is appropriate, we must proceed to determine what that standard is. Again the trilogy of Supreme Court cases must first be examined to see if they offer any guidance. In the case of *Commissioner v. Culbertson, supra,* it is stated that the primary consideration in determining whether an entity taxable as a partnership exists is whether:

> the parties in good faith and acting with a business purpose intended to join together in the present conduct of the enterprise. * * * [337 U.S. at 742]

See also *Luna v. Commissioner, supra.* Thus the single most important consideration is the parties' intent to enter into a joint venture. And there are particular elements, none of which are conclusive, which are indicative of the existence or nonexistence of such intent. They are:

> The agreement of the parties and their conduct in executing its terms; the contributions, if any, which each party has made to the venture; the parties' control over income and capital and the right of each to make withdrawals; whether each party was a principal and coproprietor, sharing a mutual proprietary interest in the net profits and having an obligation to share losses, or whether one party was the agent or employee of the other, receiving for his services contingent compensation in the form of a percentage of income; whether business was conducted in the joint names of the parties; whether the parties filed Federal partnership returns or otherwise represented to
> 890 respondent or to persons *890 with whom they dealt that they were joint venturers; whether separate books of account were maintained for the venture; and whether the parties exercised mutual control over and assumed mutual responsibilities for the enterprise. [*Luna v. Commissioner, supra* at pp. 1077-1078.]

The agreement between the parties seems fairly clear in this case. It specifically stated:

> The parties hereto are associated in a joint venture, under the name of "Perrault and **Wheeler**", for the purpose of holding, developing, and managing real property for investment purposes.[16]

It was further stated:

> The venture shall relate to and include the projects described on Exhibits "A", "B', and "C" attached hereto and such other projects as Perrault and **Wheeler** shall *mutually agree upon* and designate from time to time * * * [Emphasis supplied.]

The actual conduct of the parties supported the existence of a joint venture agreement between the parties. It was petitioner who exercised his authority on a day-to-day basis in selecting subcontractors, signing subcontracts, approving payrolls, approving interim payments to subcontractors, approving payments for materials, approving change orders in construction, and negotiating the F.H.A. commitments among other things. While any one of these duties may not raise one to the status of a joint venturer, the total authority granted to petitioner was certainly consistent with such status.

Petitioner was to use his best efforts and so much of his time as was reasonably necessary for the successful completion of the projects; his efforts were to be particularly related to the acquisition, ownership, development and operation of real estate and improvements thereon. Perrault was to contribute cash, credit, or other financing for the purchase and development of the projects covered by the agreement.

Little control was exercised over the petitioner's drawing account. He testified that his drawing account was very informal with no restriction as to amount. This seems supported in the record because at the point in time in 1969 when petitioner released his interest in the Villa Roma project he had a debit balance in his drawing account in the amount of $12,162.

Profits were to be allocated 75 percent to Perrault and 25 percent to petitioner. Cumulative losses were to be borne solely by

Perrault; however, once operation of the venture resulted in a profit on a cumulative basis, losses on individual projects were to be allocated in accordance with the ratios indicated above.

Business was transacted under the name of "Perrault and **Wheeler**." The parties maintained an office in which they based their business operations. The stationery bore a "Perrault and **Wheeler**" letterhead. Advertising for the real estate projects also indicated a partnership type relationship between the parties.

Additionally, we believe the manner in which Perrault reported the sales transaction for tax purposes is highly significant in seeking to determine intent. Perrault did not report 100 percent of the profit and then take a deduction for petitioner's share as compensation, even though it would have had significant tax advantages for him to have done so. This indicates to us that Perrault, who for tax purposes had an interest adverse to the existence of a joint venture, intended that a joint venture exist between himself and petitioner. Of course, petitioner likewise reported the transaction as if a joint venture existed between the parties.

Separate books of account were maintained for the venture's operations. Perrault was given the authority to keep those books by means of which the net profits of the venture were to be computed, subject however to **Wheeler's** right of examination at all reasonable times. Cf. *Estate of Kahn v. Commissioner, supra.* The books were required to be kept using a generally accepted
891 method of accounting and petitioner could submit any dispute to Arthur Anderson & Co., certified public accountants, *891 whose determination on the disputed matter would be conclusive on the parties.

Respondent argued at trial that the fact Perrault reported all current operating income and current operating expenses from the operation of the projects was fatal to the finding of a joint venture because it indicated that petitioner did not truly share in the results of the venture's operations. However, this is not so. The agreement stated that petitioner was not to receive any distribution of profits until Perrault received, out of his share of operating income or sales proceeds (from the projects), an amount equal to his capital and advances plus six percent interest thereon. The agreement also provided that Perrault was to bear all losses in connection with each project until operation of the projects, on a cumulative basis, resulted in a profit. In the relatively brief period that the joint venture actually operated each of the projects there was not a sufficient amount of operating income generated to entitle petitioner to begin receiving his share of the profits. As a result, Perrault's reporting of all income and expenses during this period comported perfectly with the agreement between the parties and was not adverse to the existence of a joint venture interest in petitioner.

To be sure, there are factors in the agreement which tend to indicate the relationship between the parties was not that of a joint venture. Title to the properties was held solely in Perrault's name.[17] Cumulative losses of the venture were to be borne solely by Perrault. Petitioner could not borrow or lend money on behalf of the venture, execute a security instrument, release any debt or claim except upon payment in full, compromise or submit to arbitration any controversy involving the venture or to sell, assign, pledge, or mortgage his net profits interest in the venture. However, these restrictions on petitioner's authority were merely protection for Perrault's capital advances, and characteristics such as Perrault's holding title to the properties or bearing all the losses have been specifically recognized by respondent as insufficient to negate the existence of a joint venture. Rev. Rul. 54-84, 1954-1 C.B. 284. Perrault was also restricted in his authority to deal with assets of the venture, and although he was not restricted as severely as petitioner, the restriction on Perrault was designed to accomplish the same purpose as those on the petitioner, that is to protect the other party's share of the joint venture income.[18]

A relationship having salient characteristics similar to the one here at issue has been recognized by respondent as a joint venture. In Rev. Rul. 54-84, *supra,* respondent held that the combination of service and capital partners, the absence of loss sharing, and title being held to venture property by one venturer (the one who made the capital contributions) was not fatal to the existence of a joint venture. Without specifically passing on the validity of the above ruling, we believe petitioner's contribution of his skill and know-how in developing commercial realty and Perrault's contribution of the capital necessary to get the projects under way were essential elements of the business enterprise. While not entirely free from doubt, we believe the totality of the relationship between the parties must be viewed as a joint venture.[19]

The remaining issues for our resolution concern problems of valuation. Both parties briefed these issues as if we would have to determine the timing and amount of compensation for services rendered (i.e., they assumed a ruling adverse to petitioner on

the classification issue). In order to increase the amount of compensation received by petitioner, respondent asserted in the notice of deficiency that the stock had no ascertainable fair market value upon receipt because of the investment letter restriction, but that fair market value could be determined only at such time as the restrictions lapsed. See section 1.421-6(d)(2)(i), Income Tax Regs. Petitioner contended that the property had an ascertainable fair market value on the date of receipt so as to have a lesser amount taxed as compensation at ordinary income rates, and a greater amount of subsequently realized
892 capital gain. In light of our resolution of the first issue, that petitioner's *892 share of the proceeds represented his distributable share of joint venture capital gain income, it is not clear that the positions of the parties would remain as they argued at trial and on brief because it now appears that we have an issue which is only one of timing. However, because the problem of valuation (including the question of whether the stock received had an ascertainable fair market value on the date of receipt, a question which goes to the issue of timing) is factual in nature, we will utilize the contentions of the parties to aid us in arriving at the proper resolution of the timing and valuation issues.

In the 1968 exchange, petitioner gave up his interest in three parcels of improved real property owned by the joint venture in exchange for 32,029 shares of unregistered stock of Kin-Ark Oil Company, unregistered convertible debentures of Kin-Ark Oil Company and a note of the University Club of Tulsa. The stock, as traded on the American Stock Exchange, had a mean price of $5.875 per share on May 23, 1968, the date the sale transaction took place. However, petitioner reported the stock on his return as having a value of $2.15 per share. Petitioner contends that this value is appropriate taking into account discount factors based on the investment letter restriction to which the stock received was subject, a blockage factor attributable to the large number of shares received, and the possibility that the stock would be delisted because Kin-Ark Oil Company had incurred losses in each of the three preceding years. The unregistered convertible debentures had a face value of $200,000 but were reported by petitioner on his return as having a fair market value of $135,844 on the date of their receipt. Petitioner supports this discount based on the fact that the company was incurring losses and because the equity portion of the balance sheet was fairly modest when compared with the total capital structure of Kin-Ark Oil Company. However, respondent contends the appropriate value to have been $150,000. Finally, the University Club note had a face value of $37,500 but was reported by petitioner as having a value of $25,000 on the date it was received due to the "shakey financial condition of the club." Respondent contends the value of the note to have been $33,750.

The standard of fair market value is easily articulated, to wit:

> the price at which property would change hands in a transaction between a willing buyer and a willing seller, neither being under compulsion to buy or sell, and both being reasonably informed as to all relevant facts. [*Jack Daniel Distillery v. United States* [67-2 USTC ¶ 9499], 379 F. 2d 569 (Ct. Cl. 1967.)]

Unfortunately, the application of that standard is not self-executing. Nonetheless, that standard must be applied and a value derived for each of the three items received by petitioner in exchange for his interest in the joint venture property.

The first item which must be valued is the restricted common stock of Kin-Ark Oil Company. In order to do so some of the cases which have valued restricted stock will be examined.

There may be times when stock is so severely restricted that it does not have an ascertainable fair market value. *Helvering v. Tex-Penn Oil Co.* [**37**-1 USTC ¶ 9194], 300 U.S. 481 (1937); *MacDonald v. Commissioner* [56-1 USTC ¶ 9284], 230 F. 2d 534 (7th Cir. 1956), reversing [Dec. 20,651] 23 T.C. 227 (1954); *Propper v. Commissioner* [**37**-1 USTC ¶ 9236], 89 F. 2d 617 (2d Cir. 1937); *Kuchman v. Commissioner* [Dec. 18,934], 18 T.C. 154 (1952). However, this is the exception rather than the rule. More often, although a restrictive sales agreement will have a depressing effect on value, it will not render the value of the stock indeterminable. *Heiner v. Gwinner,* [40-2 USTC ¶ 9663], 114 F. 2d 723 (3d Cir. 1940), cert. den. 311 U.S. 714 (1940); *LeVant v. Commissioner* [67-1 USTC ¶ 9387], 376 F. 2d 434 (7th Cir. 1967); *Victorson v. Commissioner* [64-1 USTC ¶ 9198], 326 F. 2d 264 (2d Cir. 1964); *Husted v. Commissioner* [Dec. 28,392], 47 T.C. 664 (1967); *Arc Realty Co.v. Commissioner* [Dec. 24,230], 34 T.C. 484 (1960); *Kalech v. Commissioner* [Dec. 20,818], 23 T.C. 672 (1955). We think that in light of the circumstances here present, such as the agreement by Kin-Ark Oil Company to utilize its best efforts to effect registration of the stock within approximately eight months after the transaction and the possibility of a private sale during the interim, that the Kin-Ark Oil Company stock was not "so severely restricted" that it did not have an ascertainable fair market value on May 23, 1968, the date of its receipt by petitioner.

Before proceeding, it should be noted that petitioner's subsequent sales of the instruments being valued may play a part in the
893 valuation process. In the present *893 case petitioner received Kin-Ark Oil Company stock, Kin-Ark Oil Company debentures, and the note from the University Club of Tulsa. Within the year following the year of receipt petitioner sold all three items. To the extent factors external to the character of the instruments themselves do not contribute to any dramatic increase, we believe the subsequent sales prices are probative evidence of fair market value on the date of receipt. Courts have utilized subsequent events in the bad debt area which requires a determination of worthlessness, *Minneapolis, St. Paul Railroad Co.v. United States* [64-1 USTC ¶ 9213], 164 Ct. Cl. 226 (1964); *Portland Manufacturing Co.v. Commissioner* [Dec. 30, 729], 56 T.C. 58 (1971), as well as in the cases of valuation generally. *Estate of Brown v. Commissioner* [70-1 USTC ¶ 12,683], 425 F. 2d 1406 (5th Cir. 1970); *Arc Realty Co. v. Commissioner, supra*[20] *Couzens v. Commissioner* [Dec. 3931], 11 B.T.A. 1040, 1165 (1928). However, care must be used in utilizing such sales as evidence of value and proper regard must be given to factors arising in the interim between the date of valuation and the date of sale. Clearly, the proximity of such sale to the valuation date will greatly influence the weight to be accorded such sale in the valuation process.

Because of the proximity of the subsequent sales to the date of receipt by petitioner, and the absence of any evidence showing outside factors which would explain marked fluctuations in value between the date of receipt by petitioner and the date of sale, we do find the later sales prices highly probative evidence of the correct value of the instruments received by petitioner on May 23, 1968. At a minimum, these later sales indicate what the buyer and seller might reasonably have expected the value of the instruments to be on the valuation date. Now we must proceed to value each specific instrument on that date.

It may be possible that a letter agreement restriction could in some instances cause a discount from market value by as much as 60 percent, the amount contended by petitioner. However, the situation here was not one where petitioner's stock was subject to an investment letter restriction and petitioner had no rights of his own apart from those restrictions; rather, he had an agreement with Kin-Ark Oil Company that it was to use its best efforts to effect registration within approximately eight months after the date of the sale. In light of this ancillary agreement with Kin-Ark Oil Company and considering the later sales prices received by petitioner for the Kin-Ark Oil Company stock, we hold that a 60 percent discount factor is excessive. However, we do feel that some discount due to the investment letter restriction is appropriate, and estimating as best we can from the evidence presented, we hold the appropriate discount to be 10 percent.

Petitioner also maintains that a discount was appropriate in recognition of the blockage factor. An excellent discussion of blockage is contained in the case of *Bankers Trust Co.v. United States* [75-2 USTC ¶ 9593], 518 F. 2d 1210, 1221-1222 (Ct. Cl. 1975), cert. den. 424 U.S. 966 (1976), where it is stated:

> While a large block of shares dumped on the market at one moment will ordinarily depress the market price for a time, *Seas Shipping Co.v. Comm'r, supra* 371 F. 2d at 530, the courts which have considered the blockage issue have concluded that the problem should be treated in terms of whether the market could have absorbed the shares within a reasonable period of time. *Richardson v. Comm'r* [45-2 USTC ¶ 10,225], 151 F. 2d 102 (C.A. 2, 1945), *cert. denied* 326 U.S. 796, 66 S. Ct. 490, 90 L. Ed. 485 (1946); *White Farm Equipment Co., supra,* 61 T.C. at 215. In those cases in which either a blockage discount has been allowed or the market price disregarded entirely because too large a block was involved, the number of shares being valued was very much greater than the total shares traded in a year. See, e.g., *Amerada Hess Corp., supra,* 517 F. 2d at 89, 91 (665,000 shares being valued; 444,000 traded during entire year); *Moore-McCormack Lines, Inc., supra,* 44 T.C. at 760 (300,000 shares being valued; 166,000 traded during entire year). * * *

In the case before us petitioner received 32,029 shares of Kin-Ark Oil Company stock. Testimony by petitioner's witness at trial indicated that the average trading volume for the Kin-Ark Oil Company shares during the first five months of 1968 was in excess
894 of 10,000 shares per month. Clearly, the 32,029 shares received by petitioner were far below the total *894 number of shares traded in a year. We think that the market would absorb petitioner's shares within a reasonable period of time. As a result, a blockage discount is inappropriate.

Nor should any discount be allowed merely because of the possibility the stock could be delisted as of December 31, 1969. We believe the investing public would be aware this possibility existed and the market price would accordingly reflect the depressing effect which this possibility had on the stock's value.

Therefore, based on all the evidence in the present case, we find the value of the Kin-Ark Oil Company stock to have been $169,353 at the time it was received by petitioner in 1968.

Turning now to the debentures, petitioner reported them as having a value of $135,844 on the date of their receipt. Testimony from petitioner's expert witness indicated that this discount from the $200,000 face value was in recognition of the high risk nature of the security. This risk was attributable to the following factors; the company was incurring losses, the equity portion of the balance sheet was fairly modest when compared with its total capital structure, and the securities were not readily marketable. A high rate of return (13 percent) was utilized by petitioner's appraiser to reflect the necessity that these debentures had to yield an attractive investment return in order to offset the risks associated with those securities.[21] However, while we are convinced that a substantial discount from face value is appropriate, the burden of proof to establish a value lower than that asserted by the Commissioner is on the taxpayer. *Welch v. Helvering* [3 USTC ¶ 1164], 290 U.S. 111 (1933); Rule 142(a), Tax Court Rules of Practice and Procedure. Although the petitioner herein has certainly established that a discount from face is appropriate, it was incumbent upon him to lay a foundation from which this Court could sufficiently quantify the fair market value of the debentures to show that they had a value lower than the $150,000 value asserted by the Commissioner. We feel he has not done this, and accordingly we find the Commissioner's value of $150,000 is correct.

The same must be said with respect to the note of the University Club of Tulsa which had a face value of $37,500, but was reported by petitioner as having a value of $25,000 on the date of its receipt. Petitioner testified that the $12,500 discount reflected the "very shakey" financial condition of the club due to undercapitalization, the fact that enthusiasm for the club had waned due to a delay in construction, and the fact that the club had overextended its financial resources in spending too much money for interior finishing. Once again, while these factors would all tend to indicate the note had a value less than face, petitioner has failed to demonstrate that a value lower than the $33,750 value asserted by the Commissioner is appropriate. *Welch v. Helvering, supra;* Rule 142(a), Tax Court Rules of Practice and Procedure. Accordingly, we hold the fair market value of the note on May 23, 1968, to have been $33,750.

Decision will be entered under Rule 155.

[1] All statutory references are to the Internal Revenue Code of 1954 as in effect for the years in issue.

[2] The conversion price of the debentures was $5.60 per share.

[3] While the parties here have stipulated that the note was part of the sales proceeds, there is evidence in the record that the note was owned by the Perrault-**Wheeler** business entity prior to the sale and that it was not actually part of the sales proceeds. However, because the parties have stipulated that the note was part of the sales proceeds, we find accordingly.

[4] This represents a note from the University Club of Tulsa. Although petitioner treats the proceeds from this portion of the transaction as the proceeds of a sale or exchange, it was actually proceeds from the satisfaction of indebtedness. However, because of our holding as to the value of the note on the date it was received by petitioner, it will not be necessary for us to raise an issue as to the characterization of the proceeds of the note.

[5] Although not clear from the record, this figure apparently represents a payment by Perrault to petitioner for petitioner's relinquishment of his interest in a fourth project of the venture (Villa Roma). This apparently occurred in 1969 and payment received by petitioner was in the form of a credit against his prior advances and cash. A discrepancy appears in the record as to the precise amount of this final settlement, but, if necessary, this can be resolved by the parties in the Rule 155 computation.

[6] We cannot reconcile respondent's position here with his position in Rev. Rul. 54-85, 1954-1 C.B. 284, finding a particular business entity a joint venture without knowing the status of the entity under local law.

[7] See J. Sullivan, "Conflicts Between State Partnership Laws and the Internal Revenue Code," 15 Tax L. Rev. 105, 113 (1959), where the generally broader classification of the term partnership in the Internal Revenue Code is specifically noted. See also section 301.7701-3(a), Proced. & Admin. Regs.

[8] Id. at 230-231, where is is stated:

Joint ventures, the last of the specifically enumerated classes considered as partnerships, are generally considered to be partnerships and subject to the same rules as partnerships. Some efforts are made to distinguish them from partnerships on the ground that they are intended to carry out a specific transaction or a single enterprise rtaher than carry on a continuing business.90 Neither such distinctions nor

limited applicability of partnership law to some aspects of joint venture operations or the actions of the members of joint ventures justify different treatment for tax purposes. [Fn. ref. omitted.]

See also 6 Mertens, Law of Federal Income Taxation, sec 35.05, p. 29, which states:

Whether or not a joint venture exists for tax purposes is determined by applying the same tests used in determining the existence of a partnership. * * *

[9] See *Earp v. Jones* [42-2 USTC ¶ 9765], 131 F. 2d 292 (10th Cir. 1942), where an entity recognized as a partnership under Oklahoma law was held not to be a partnership for Federal income tax purposes. See also *Kelly v. Commissioner* [Dec. 30,317(M)], T.C. Memo. 1970-250, where the Tax Court stated, "there may be a partnership for Federal income tax purposes even though there is no partnership as a matter of State law."

[10] *Baughn v. Commissioner* [Dec. 29,887(M)], T.C. Memo. 1969-282; *Badger Co.v. Commissioner* [Dec. 28,592(M)], T.C. Memo. 1967-178.

[11] *Melbourne Ranches, Inc. v. Commissioner* [Dec. 31,029(M)], T.C. Memo. 1971-264.

[12] Indeed, section 301.7701-1(c), Proced. & Admin. Regs., states: the classes into which organizations are to be placed for purposes of taxation are determined under the Internal Revenue Code. * * *

[13] See *Kelly v. Commissioner,* cited at footnote 9, *supra.*

[14] In *Estate of Kahn v. Commissioner, supra,* a state court in a previous case involving the taxpayer wanted to find a partnership so the taxpayer's associate could maintain an action for an accounting under state law. This Court and the Court of Appeals found no partnership so Kahn (the taxpayer) would be taxed on all the funds with which he absconded.

[15] While the parties here agree that the issue is whether a joint venture was formed between petitioner and Perrault, and apparently most courts would approach the problem in this manner, it may well be that the best approach to the issue before us lies not in determining whether a joint venture has been formed, but rather whether an entity taxable as a partnership has been formed. In the statute it seems as though the terms "syndicate," "group," "pool," and "joint venture" are merely illustrative of the concept of an entity taxable as a partnership under Federal tax law and the "catch-all" phrase "or other unincorporated organization" is intended to bring within the meaning of the term partnership entities of a kind like those specifically enumerated. Thus, the key determination using this approach would not be whether a joint venture or any other of the enumerated entities had been formed, but rather whether an entity is of the same generic class as those entities and is, therefore, taxable as a partnership. This approach was used in *Bartholomew v. Commissioner* [51-1 USTC ¶ 9150], 186 F. 2d 315 (8th Cir. 1951), and apparently in *Estate of Kahn v. Commissioner, supra.* For instance this Court in *Kahn* dealt specifically with the issue of whether a joint venture had been formed which would then be taxable as a partnership. See *Grober v. Commissioner* [Dec. 31,623(M)], T.C. Memo. 1972-240. We applied a Federal standard to find no joint venture had been formed. However, the Second Circuit, in affirming our decision, seemingly ignored the intermediate step of determining whether a joint venture had been formed and went directly to the question of whether an entity taxable as a partnership had been formed. Clearly this latter approach would entail the use of a Federal standard because the Supreme Court has stated that the ultimate determination of whether an entity is taxable as a partnership is to be governed by a Federal standard. *Commissioner v. Culbertson, supra; Commissioner v. Tower, supra; Lusthaus v. Commissioner, supra.* See also J. Sullivan cited at footnote 8, *supra.*

[16] Paragraph 10 of the agreement between Perrault and petitioner stated:

The parties stipulate and agree that no partnership has been or is hereby created or intended between them. The parties shall be joint venturers only and only with respect to the projects herein designated and upon the limited basis herein set forth. Pursuant to Section 761(a) of the Internal Revenue Code of 1954, Perrault and **Wheeler** hereby elect to exclude this venture from the application of all or any part of the Subchapter K, Subtitle A, Chapter I of the Internal Revenue Code of 1954, to the full extent permitted by regulations issued by the Secretary of the Treasury or his delegate. Perrault may cause to be filed with the Internal Revenue Service an appropriate election on behalf of himself and **Wheeler** to be so excluded.

[17] Although title to the property was held in Perrault's name, there are indications in the record that the parties intended petitioner's interest in the properties to be one of ownership. For instance, in documents filed with the Federal Housing Administration Perrault listed petitioner as a co-owner of the Mansion House and University Club Tower.

[18] Paragraph 5(d)(ii) of the agreement between Perrault and petitioner stated: "Perrault shall not, however, withdraw or utilize funds of the venture for any purpose unrelated to the venture unless the venture has retained, after such withdrawals, sufficient cash or liquid assets to equal **Wheeler's** share of the profits."

[19] Because of our resolution of this issue in favor of petitioners, we need not decide the income averaging issue which petitioners only sought to raise if the income received was determined to be compensation for services rendered.

[20] *Mills v. Commissioner,* a Memorandum Opinion of this Court dated Aug. 19, 1946.

[21] In valuing the debentures, petitioner assumed the stock had a fair market value of $2.15 per share and that the convertible feature was of no value. However, in light of the value which we have determined the stock to have had, the convertible feature does have significance in valuing the debentures.

Williams v. Williams

Case name: Williams v. Williams
Citation: 667 So. 2d 915
Date of decision: February 7, 1996
Country: US
State or Federal: State
State/Jurisdiction: Florida
Court: Court of Appeals
Type of action: Marital Dissolution
Judge: Ryder
SIC: 8721 Accounting, Auditing, and Bookkeeping Services (auditing accountants)
NAICS: 541219 Other Accounting Services
61

Keywords: Professional practice

Counsel for Appellee: John M. Strickland and Herbert H. Hofmann, II, Sarasota

Counsel for Appellant: C. Eugene Jones and Julie Ginsburg, Sarasota

Judges: Ryder, Danahy, and Fulmer

Opinion by: Ryder

Verne Williams, the former husband, seeks review of the lower court's valuation of property for purposes of equitable distribution. He also challenges the court's decision to award primary custody of his son to the former wife, Kim Williams. We affirm the custodial determination without discussion. We likewise affirm the court's valuation of the parties' marital residence, known as the Clark Road Property. We hold, however, that the trial court erred in assigning a value for goodwill to the husband's accounting practice, Verne Williams Accounting, Inc. Accordingly, we reverse on that issue.

Under Florida law, the goodwill of professional practice can be a marital asset subject to division in a dissolution proceeding, if it exists and if it was developed during the marriage. Thompson v. Thompson, 576 So. 2d 267, 269 (Fla. 1991). The Thompson court emphasized, however, that for goodwill to be a marital asset, it must exist separate and apart from the reputation or continued presence of the marital litigant. 576 So. 2d at 270. The first step in analyzing goodwill is to determine whether it exists. Young v. Young, 600 So. 2d 1140, 1142 (Fla. 5th DCA 1992), review denied, 613 So. 2d 13 (Fla. 1992).

The evidence in this case failed to establish the existence of goodwill in the husband's practice. Mr. Williams was the only accountant in his practice. He performs all of the work himself, and he alone deals with his clients. The Young court noted that, when attempting to determine whether goodwill exists in a practice such as this, the evidence should show recent actual sales of a similarly situated practice, or

expert testimony as to the existence of goodwill in a similar practice in the relevant market. 600 So. 2d at 1142 (citing Hanson v. Hanson, 738 S.W. 2d 429, 435 (Mo. 1987)). The wife's expert discussed sales of other accounting practices, but none were similar to Mr. Williams's. While the expert did mention he knew of a one-man accounting practice that had been for sale in 1993, he gave no details of the sale, nor did he state whether goodwill had been a factor in the sale. Moreover, the husband's expert, who testified the practice had no goodwill, stated that no one would buy the practice without a noncompete clause. This is telling evidence of a lack of goodwill. See Walton v. Walton, 657 So. 2d 1214 (Fla. 4th DCA 1995).

Under these facts, we hold that the evidence failed to show the existence of goodwill in Verne F. Williams, Inc., separate and apart from the reputation and continued presence of Mr. Williams. The trial court, therefore, erred when it valued the business's goodwill at $43,200.00 for purposes of equitable distribution. Accordingly, we remand for further proceedings consistent with this opinion.

Affirmed in part, reversed in part and remanded.

DANAHY and FULMER, JJ., Concur.

COUNSEL:

E. M. Murray and Matthew W. Stanley, for the petitioner.

Robert F. Geraghty, for the respondent.

OPINIONBY:

GOFFE

OPINION:

MEMORANDUM FINDINGS OF FACT AND OPINION

GOFFE, Judge: The Commissioner determined a deficiency in petitioner's Federal estate tax in the amount of $115,601. After concessions, the issues for decision are the fair market value of common and Class B preferred stock in Cascade Olympic Corporation on the alternate valuation date of March 3, 1980, and whether certain corporate stock characterized by the Commissioner as community property was the separate property of the decedent's surviving spouse.

FINDINGS OF FACT

Some of the facts have been stipulated. The stipulation of facts and accompanying exhibits are so found and incorporated herein by reference.

Richard O. Yeager (the decedent) died testate on September 3, 1979. At all times pertinent to this case, the decedent resided in Shelton, Washington. The decedent was survived by his wife, Jean (now Mrs. Manning), whom he married on September 8, 1960. Mrs. Manning had two sons by a former marriage,

Mack Davis Elliott and Scott Elliott, and a grandson, Jeffrey Elliott. Throughout their marriage, the decedent and Mrs. Manning were residents of the State of Washington. Mrs. Manning resides in Olympia, Washington.

The mailing address of the Estate of Richard O. Yeager, deceased, Jean M. Manning, Executrix (petitioner), was Shelton, Washington, at the time the petition in this case was filed. Mrs. Manning has been duly appointed and qualified as the personal representative of the decedent's estate. The estate is being administered in the Superior Court of Mason County, Washington. Petitioner filed a timely estate tax return with the Internal Revenue Service in Ogden, Utah, upon which it elected the alternate valuation date of March 3, 1980. The estate tax return reported an estate tax liability of $33,237, which petitioner elected to pay in installments pursuant to section 6166. n1

n1 Unless otherwise indicated, all section references are to the Internal Revenue Code of 1954, as amended and in effect at the date of the decedent's death, and all Rule references are to the Rules of Practice and Procedure of this Court.

On the date of his death, decedent owned, among other things, 100 shares of common stock and 50 shares of Class B preferred stock of Cascade Olympic Corporation (hereinafter referred to as Cascade Olympic) as his separate property. The 100 shares of common stock of Cascade Olympic represented 50.25 percent of the voting power in the corporation. Cascade Olympic was the common parent of a group of affiliated corporations as defined by section 1504. The other corporations within this group were Capital Cascade, Inc. (Capital Cascade), Capitol Center, Inc. (Capitol Center), Center Offices, Inc. (Center Offices), and Capital Cascade Investment Corporation (Cascade Investment). Except for the parent corporation, Cascade Olympic, all of the affiliated corporations listed above had only common stock outstanding as of the alternate valuation date. The affiliated corporations were incorporated under the laws of the State of Washington on the following dates: Cascade Olympic, August 13, 1948; Capital Cascade, June 21, 1956; Capitol Center, June 25, 1962; Center Offices, March 21, 1966; Cascade Investment, December 18, 1978. n2

n2 Most of these corporations began existence under another name now held by another of the affiliated corporations. We will refer to each of these corporations solely by its legal name during the period relevant to this case.

Each of the affiliated corporations was owned in part by at least one other member of the affiliated group, although all of the corporations also had minority shareholders who were not members of the affiliated group. The ownership of the common stock of each member of the affiliated group was as follows:

Corporation	Shareholder	Percentage of Ownership	Par Value Per Share	Mumber of Shares of Common Stock
Cascade Olympic	Decedent	50.25	$100.00	100
	Others	49.75		99
				199
Capital Cascade	Cascade Olympic	81.69	$ .40	196,374
	Center Offices	12.48		30,000

	Others	5.83		14,016
				240,390
Capitol Center	Center Offices	86.01	$ .50	34,364
	Others	13.99		5,565
				39,929
Center Offices	Cascade Olympic	39.92	$ 10.00	1,996
	Capital Cascade	42.40		2,120
	Capitol Center	4.14		207
	Others	13.54		677
				5,000

Until his death, the decedent was president, chief executive officer, and a director of Cascade Olympic, Capital Cascade, and Capitol Center. He was the only officer and director of these corporations who was involved in their day-to-day affairs. The decedent was also president of Center Offices until 1979. The presence of the decedent was critical to the operation of both Cascade Olympic and the affiliated corporations.

On the alternate valuation date, March 3, 1980, the officers of Cascade Olympic and Capital Cascade, all of whom were also directors, were as follows: Jean Manning, President; William McCann, Vice-President; and Mack D. Elliott, Secretary-Treasurer. At that date, the officers of Capitol Center, all of whom were also directors, were as follows: Jean Manning, President; Glendon A. Ferguson, Vice-President; and Mack D. Elliott, Secretary-Treasurer. Harold Sargent and Roy McConkey were also directors. The officers of Center Offices, all of whom were also directors, were as follows: Mack D. Elliott, President; P. W. Harrington, Vice-President; and Patricia Kennedy, Secretary-Treasurer. Jean Manning was a director of Center Offices, but not an officer.

On the alternate valuation date Cascade Olympic had three classes of stock, each of which had a $100 par value: common, Class A preferred, and Class B preferred. The owners of the common stock were entitled to vote. The holders of Class A and Class B preferred stock had no voting rights, but were entitled to annual, noncumulative dividends up to a maximum of 5 percent of par value before the payment of any dividends to the holders of common stock. Upon dissolution, the holders of Class A preferred stock were entitled to a preference to the extent of par value and accumulated dividends, if any, while the holders of both Class B preferred and common stock were entitled to share equally in the remaining assets.

As of March 3, 1980, the alternate valuation date, 1,980 shares of Cascade Olympic Class A preferred were outstanding, 200 of which were owned by Capital Cascade and 1,780 of which were owned by individuals other than the decedent or Mrs. Manning. As of that date, the Class A and Class B preferred stock of Cascade Olympic was held as follows:

	Preferred A	Preferred B
Shareholder	Number of Shares	Number of Shares

Decedent		50
Center Offices		120
Capital Cascade	200	232
Others	1,780	119
	1,980	521

The principal assets of Capital Cascade included third-party receivables, real estate, and stock ownership in Center Offices. During the 1960's and until 1975 or 1976, a division of Capital Cascade operated as a construction company, at times employing up to 500 people.

On March 1, 1978, Capital Cascade sold the common stock of an unrelated corporation for $900,000 to CHG International, Inc. (CHG). The contract terms provided for a $50,000 down payment and payments of $6,000 each month thereafter with the balance payable in full on or before 10 years from the date of sale. With interest accruing on the unpaid principal balance at the rate of 8.5 percent per annum, required monthly payments of CHG were insufficient to cover accrued interest on the note.The note provided that the "Maker shall be entitled to a moratorium on monthly payments (not to exceed in the aggregate 36 monthly payments, which may be taken at any time and from time to time in any combination or combinations during the term of this note) * * *." On December 20, 1979, CHG invoked the moratorium provision as of January 1, 1980. Capital Cascade required CHG to pay 3 months of interest payments that were in arrears before permitting the moratorium. At the end of the 3-year moratorium period, CHG settled the obligation.

On December 26, 1978, Capital Cascade and CHG entered into a purported limited partnership agreement to form Talisman Associates. Capital Cascade lent CHG $360,000, secured by a promissory note, which CHG invested in a property known as Talisman Apartments. On that same date, Capital Cascade executed an option on another property on behalf of the partnership. Capital Cascade brought suit in Pierce County Superior Court against CHG to recover the amount due on the Talisman Apartment loan and the price paid for the option. The court concluded, inter alia, that the promissory note was enforceable according to its terms but that the purported partnership agreement and option were unenforceable.

In February 1978, Capital Cascade acquired a note from Bel Corporation (Bel) of Anchorage, Alaska, an unrelated entity, which required Bel to pay the sum of $15,000. Bel defaulted on the note and in February 1979, Capital Cascade brought suit to collect the balance of the note plus interest. Bel answered the lawsuit in March 1979, denying liability on the note and asserting counterclaims. As of December 31, 1979, the unpaid balance of the note was $16,598. In 1980, Capital Cascade concluded that the note was uncollectible and claimed it as a bad debt on its Federal tax return for the taxable year 1980.

On August 10, 1976, Capital Cascade entered into a joint venture agreement with Structurals Northwest, Limited, to participate in the construction of the Comprehensive Health Facility, a hospital in Bethel, Alaska (the Bethel project or the project). The primary involvement of Capital Cascade was to provide financing. Cascade Olympic Construction Company d/b/a Structurals Northwest, Ltd. (the joint venture),

contracted with the prime contractor to furnish and install siding, prefabricated panels, and decking. The joint venture subcontracted its materials and installation responsibilities to H.F. Industries and Adkins Steel Company, respectively.

St. Paul Fire & Marine Insurance Company (St. Paul), on behalf of the joint venture, executed a performance bond in favor of the prime contractor. Indemnity agreements were executed in favor of St. Paul as surety by others, including, Cascade Olympic, Capital Cascade, and the decedent and Mrs. Manning. The Bethel project was scheduled for completion by August 1, 1978, and the contract provided for liquidated damages for any delay in completion in addition to exposure to liability for deficiencies in the project.

The Bethel project was not timely completed. Two major problems developed with the project which affected Capital Cascade. The first was a structural problem with the siding and delamination of panels that could have resulted in potential liability of up to $2 million, but which was eventually resolved by hiding the defect with signs. The second, more substantial problem was that the other joint venturer, Structurals Northwest, and its owner had no money for completing the project nor money for the indemnity agreements. After Capital Cascade advanced $174,000 to the joint venture through the surety, arrangements were made for St. Paul to advance the remainder of the funds needed to complete the project. During 1979, Capital Cascade paid or accrued expenditures for the Bethel project approximating $467,000, representing amounts paid by both Capital Cascade and by St. Paul. As of December 31, 1979, Capital Cascade expected to pay a minimum of $184,000 to complete the Bethel project.

In the fall of 1979, the joint venture owed money to both of its subcontractors, H.F. Industries and Adkins Steel. By the end of 1979, Adkins Steel had stopped work on the project and had joined H.F. Industries in a proceeding under the Miller Act, 40 U.S.C. sec. 270a et seq., to recover damages from the joint venture. In response to the claims under the Miller Act, the joint venture employed engineers to analyze the project's problems and the potential liabilities. The prime contractor also filed a claim with the U.S. Department of Health, Education and Welfare (HEW) for its unwarranted certification requirements that delayed the completion of the project.

By March 3, 1980, Capital Cascade had incurred major losses on the Bethel project and the extent of further losses or potential recoveries was uncertain. The best estimate as of that date as to the losses anticipated on the project was: (1) $50,000 to $200,000 to repair the panels; (2) $500 per day liquidated damages for a period in excess of 19 months; (3) $300,000 maximum exposure in the suit brought by the prime contractor; (4) $66,000 maximum liability to the prime contractor for the cost of heating the building for the subcontractors through two extra winters; (5) uncertain exposure for the delamination problems in a range from zero to $2 million; (6) up to $85,000 liability to Adkins Steel, a subcontractor to the joint venture; and (7) legal and engineering fees of approximately $130,000. Counterbalancing these claims, however, were likely possibilities of recovery for the joint venture's claims against HEW through the prime contractor's suit, the payment of the retainage on the project, and the likelihood of a reduction in the eventual liability for many of the risks listed.

The Bethel project was finally completed on September 30, 1980, and accepted by HEW in February 1981. Capital Cascade recovered a total of $507,000 in the years 1982 and 1983 as a result of the recovery by the prime contractor for its claims against HEW which served to offset some of the losses incurred by Capital Cascade with respect to the hospital. Capital Cascade also recovered $97,000 in

retainage from the prime contractor and approximately $50,000 for extras ordered during the construction process. Capital Cascade's final net loss on the Bethel project was approximately $650,000.

The principal assets of Capitol Center included receivables, the Tacoma Mall Office Building (Tacoma Mall), and stock ownership in affiliated companies. Tacoma Mall was acquired by Capitol Center in 1975. The fair market value of Tacoma Mall on the alternate valuation date was $5,200,000. The outstanding mortgage on Tacoma Mall was placed on the property in early 1968 and it required monthly payments of $17,400. The note, due in full in March 1993, carried an interest rate of seven percent, and included a substantial prepayment penalty. As of the alternate valuation date, the unpaid balance on the note was $1,845,086. The mortgagee was approached after September 1980, about the possibility of a waiver of the prepayment penalties or a discount for prepayment. Although the prevailing interest rate on comparable obligations entered into at or near the alternate valuation date was approximately 12.5 percent, the mortgagee declined to agree to more favorable repayment terms.

All of the income of Capitol Center for the taxable year 1979 was derived from the rental of its principal asset, Tacoma Mall, to an affiliated corporation, Center Offices. n3 Center Offices leased Tacoma Mall from Capitol Center and managed and operated the property. Management problems became apparent, however, after the death of the decedent and Mrs. Manning assumed management of the property from Center Offices from 1980 until April 1981. Thereafter Tacoma Mall was managed by an independent property management firm.

n3 Since 1981, Center Offices has been inactive.

Tacoma Mall was not available for purchase as of the alternate valuation date nor was any sale of the property anticipated at that time. The only justification for a sale of Tacoma Mall in March 1980, would have been to provide cash to advance to Capital Cascade. However, such an infusion of cash would have complicated the efforts of Capital Cascade to obtain the assistance of the bonding company. It also would not have been in the interest of the minority shareholders of Capitol Center. At that time, there was no business purpose for selling Tacoma Mall from the viewpoint of Capitol Center.

After the preparation and the filing of the estate tax return, a potential buyer approached Capitol Center. Although no offer to purchase materalized, the possibility of a sale focused the attention of the board of directors on solutions to the problems that had developed with the management of Tacoma Mall since the death of the decedent. In the fall of 1980, the board of directors of Capitol Center, which included representatives of the minority shareholders, decided that a sale might be advisable in light of the management problems. Although the property has never been listed for sale, the availability of Tacoma Mall was made known after September 1980 to all major real estate brokers in the area, real estate investment companies, and Merrill Lynch. A number of proposals were received and two were accepted in late 1980, one as primary and another as backup. The board of directors of Capitol Center made the concurrent decision to change management of Tacoma Mall should neither proposal result in a completed sale.

Cascade Investment was organized by the decedent prior to his death. The only property transferred to Cascade Investment upon its incorporation was cash in the amount of $4,800. Cascade Investment was never activated. The intentions of the decedent with respect to the operations of this corporation were not known. At one time, a transfer of Cascade Olympic Class B preferred stock to Cascade Investment

was anticipated and a stock certificate was prepared but never delivered to Cascade Investment. The certificate was cancelled in January or February of 1980, immediately after a meeting was held to dissolve Cascade Investment. Cascade Investment was reported as an affiliated corporation on Cascade Olympic's consolidated income tax returns for the calendar years 1979 through 1982. During the period relevant to this case, Cascade Investment earned no income. Cascade Investment was administratively dissolved by the State of Washington on December 30, 1983, for failure to comply with notice and licensing requirements.

As of March 3, 1980, the book values of the assets of Cascade Olympic and its affiliated corporations, excluding the interests held by each corporation in an affiliated corporation, were as follows:

Assets:	Book Value
Cash	$ 53,500
Accounts Receivable	16,767
Current Portion Notes, Loans, Contracts Receivable	335,600
Marketable Securities	51,247
Federal Tax Receivable	4,632

On the date of decedent's death, Cascade Olympic, Capital Cascade, and others owned the outstanding stock of BHC, Inc. (BHC), but BHC was not a member of the Cascade Olympic affiliated group. BHC was incorporated on April 9, 1979, under the laws of the State of Washington, to own, develop, and market real property. The principal assets of BHC included receivables from Thousand Trails, Inc. (also known as Pacific Rim) and land. The initial officers of BHC, all of whom were also directors, were as follows: the decedent, President; Mack D. Elliott, Vice-President; and Mrs. Manning, Secretary-Treasurer. As of the alternate valuation date, BHC had two classes of stock, each of which had a $1.00 par value: common and Class A preferred. The owners of the common stock were entitled to vote. The holders of Class A preferred stock had no voting rights, but were entitled to annual, non-cumulative dividends up to a maximum of 5 percent of par value before the payment of any dividends to the holders of common stock. Upon dissolution, the holders of Class A preferred stock were entitled to a liquidating preference to the extent of par value. In April 1979, the following persons acquired BHC stock by purchase or in exchange for real property:

Stockholder	Common Shares	Class A Preferred Shares
Cascade Olympic	2,000	17,500
Capital Cascade		2,500
Decedent		30
Jean Manning		10

Mack Elliott		10	
Others	2,000		20,000
	4,050		40,000

In May 1979, BHC entered into a Subcription Agreement with Thousand Trails, Inc. (Thousand Trails), a travel- trailer/campground business, which provided for the acquisition by Thousand Trails of 2,000 shares of the common and 20,000 shares of the preferred stock of BHC. The purchase price was $510,000, to be paid by the assignment of certain installment contracts yielding a monthly return of $11,300 for 5 years. The BHC stock to be purchased under the Thousand Trails subscription agreement was to be held in escrow as a guarantee for the value of the Thousand Trails installment contracts. The parties to the subscription agreement further agreed that, upon completion of the stock purchase, they would execute a buy/sell agreement whereby either party could make a purchase offer for the entire interest of the other. The party receiving the offer could then buy the other parties' interest or sell its own at the offered price. Alternatively, Thousand Trails could then tender all of its preferred and common shares for certain real estate described in the agreement. BHC was also required under the terms of the agreement to loan $250,000 to Thousand Trails for 12 months.

Mrs. Manning had no stock interest in Cascade Olympic or any of its subsidiaries prior to her marriage to the decedent. In 1965, she acquired 10 shares of Cascade Olympic common stock. The shares were given to her by her husband as a gift. Her ownership of these shares continued through March 1980. In 1969, Mrs. Manning purchased 660 shares of Capital Cascade stock for $1,200 with the proceeds from the sale of her residence which was separately owned by her. Her ownership of the 660 shares of Capital Cascade continued through March 1980.

Petitioner filed a timely estate tax return with the Internal Revenue Service in Ogden, Utah, using the alternate valuation date of March 3, 1980. The major assets of the estate were the 100 shares of common stock of Cascade Olympic valued by the estate at $357,500 and 50 shares of Preferred B stock of Cascade Olympic valued at $178,750. The estate tax return reported an estate tax liability of $33,237.

On August 31, 1983, the Commissioner mailed a statutory notice of deficiency to petitioner. As relevant to this opinion, the Commissioner determined that the value of all of the shares of Cascade Olympic was $7,166.60 per share resulting in a value of 100 shares of common stock of Cascade Olympic at $716,660 and 50 shares of Preferred Class B stock of Cascade Olympic at $358,330. The Commissioner also determined that 510 n4 shares of Capital Cascade and 10 shares of Cascade Olympic in the name of Mrs. Manning were community property and that half of the value of those shares or $44,248 should be included in the estate. The deficiency determined was $115,601.

n4 There is no explanation of the discrepancy between the 510 shares described in the statutory notice and the 660 shares which respondent concedes were owned by Mrs. Manning.

Petitioner disputes the deficiency and claims that its return overstated the value of the Cascade Olympic stock and that there is no estate tax due or payable by reason of the decedent's death. Petitioner, therefore, claims an overpayment of estate tax.

ULTIMATE FINDINGS OF FACT

The fair market value of each share of common and Class B preferred stock in Cascade Olympic Corporation held by decedent as of the alternate valuation date of March 3, 1980, is $3,395 with a total fair market value of $509,250.

The shares of Cascade Olympic and Capital Cascade held in the name of Mrs. Manning, the widow of decedent, were her separate property in which the decedent held no interest at the time of his death.

OPINION

The Commissioner's determination in his statutory notice of deficiency is presumptively correct, and petitioner has the burden of disproving each individual adjustment. Welch v. Helvering, 290 U.S. 111 (1933); Rule 142(a). The issues for decision in this case are the valuation of stock held by the decedent and the nature of the interest, if any, held by the decedent in shares of Capital Cascade and Cascade Olympic held in the name of Mrs. Manning. We shall discuss the valuation issue first.

The valuation controversy is over the value of shares of Cascade Olympic. As demonstrated in our findings of fact, however, the valuation of these particular shares requires an examination of the entire group of interrelated corporations including members of the consolidated group and BHC.To recapitulate, Cascade Olympic directly owned 81.69 percent of Capital Cascade, 39.92 percent of Center Offices, and 49.38 percent of the common stock of BHC. As Capital Cascade and Center Offices each owned interests in at least one of the other affiliated corporations or BHC (not a member of the affiliated group), however, the valuation of the Cascade Olympic stock held by decedent must consider the valuation of those interests as well.

Relevant portions of section 20.2031-1(b), Estate Tax Regs., provide:

The value of every item of property includible in a decedent's gross estate under sections 2031 through 2044 is its fair market value at the time of the decedent's death, except that if the executor elects the alternate valuation method under section 2032, it is the fair market value thereof at the date, and with the adjustments, prescribed in that section. The fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of relevant facts. The fair market value of a particular item of property includible in the decedent's gross estate is not to be determined by a forced sale price. Nor is the fair market value of an item of property to be determined by the sale price of the item in a market other than that in which such item is most commonly sold to the public, taking into account the location of the item wherever appropriate. * * * The value is generally to be determined by ascertaining as a basis the fair market value as of the applicable valuation date of each unit of the property. * * * All relevant facts and elements of value as of the applicable valuation date shall be considered in every case. * * *

Valuation issues are inherently imprecise and capable of resolution only by a Solomon-like pronouncement. Buffalo Tool & Die Mfg. Co. v. Commissioner, 74 T.C. 441, 452 (1980); Messing v. Commissioner, 48 T.C. 502, 512 (1967). We must, however, apply the facts and circumstances test of section 20.2031-1(b), Estate Tax Regs., and establish the fair market value of the stock held by decedent as the parties have failed to agree. The fair market value of closely held stock on any given date is a factual question and requires that we consider and weigh all relevant evidence in the record. Mauldin v. Commissioner, 60 T.C. 749, 759 (1973); Kaplan v. Commissioner, 43 T.C. 663, 665 (1965).

We have carefully considered all of the evidence contained in the entire record including the stipulations of fact, the testimony of all witnesses presented by the parties, and the numerous exhibits. We have analyzed all of the evidence and given due weight to each item with proper regard for the fact that the burden of proof is upon petitioner. Among the factors considered in valuing the stock were the following: the organization and history of the corporations; their capital structure, financial condition, the nature of their business, and the overall manner in which the business was operated; the number of outstanding shares of each class of Cascade Olympic's stock and identity of the shareholders; the fact that Cascade Olympic's shares were not listed on any exchange, were not dealt with through brokers or in over-the-counter trading, and had not been the subject of any sales; the character and amounts of Cascade Olympic's assets and liabilities and those of the corporations in which Cascade Olympic held an interest; the book value and fair market value of the underlying assets of Cascade Olympic, its affiliated corporations and BHC; and all other factors which in our view or that of the witnesses were relevant and material to the value of such stock on the alternate valuation date.

Petitioner's expert witness valued the decedent's shares in Cascade Olympic at $264,000 and respondent's expert witness valued the same shares at $1,278,132 assuming a power to liquidate and $1,175,516 assuming inability to liquidate. The value determined in the statutory notice of deficiency was $1,074,990.

Although opinion evidence is obviously admissible and relevant on the question of value, we must weigh such evidence in the light of the demonstrated qualifications of the experts and of all other relevant evidence of value. Anderson v. Commissioner, 250 F.2d 242, 249 (5th Cir. 1957), affg. a Memorandum Opinion of this Court. Furthermore, we are not bound by the opinion of any expert witness when that opinion is contrary to our own judgment. Barry v. United States, 501 F.2d 578 (6th Cir. 1974); Tripp v. Commissioner, 337 F.2d 432 (7th Cir. 1964), affg. a Memorandum Opinion of this Court; Kreis' Estate v. Commissioner, 227 F.2d 753, 755 (6th Cir. 1955). We may embrace or reject expert testimony, whichever, in our best judgment is appropriate. Helvering v. National Grocery Co., 304 U.S. 282 (1938); Silverman v. Commissioner, 538 F.2d 927, 933 (2d Cir. 1976), affg. a Memorandum Opinion of this Court. In weighing the opinions of the expert witnesses, we have considered the following: their qualifications and demeanor; their familiarity with Cascade Olympic and its affiliated corporations and their assets and liabilities; the soundness of the valuation method employed; and skill employed in assembling, analyzing, and weighing supporting data.

Where there is an on-going business such as we have in this case, it is inappropriate to treat the underlying asset value as the sole criterion in determining stock value. See Hamm v. Commissioner, 325 F.2d 934, 941 (8th Cir. 1963), affg. a Memorandum Opinion of this Court; Estate of Andrews v. Commissioner, 79 T.C. 938, 945 (1982); Portland Manufacturing Co. v. Commissioner, 56 T.C. 58, 80 (1971), affd. without published opinion (9th Cir. April 21, 1975). In the cases in which stock was valued solely on the basis of asset value, the corporations were, in essence, in the business of selling their assets, and thus, earnings were not a reliable indicator of value. Harwood v. Commissioner, 82 T.C. 239 (1984), affd. without published opinion 786 F.2d 1174 (9th Cir. 1986) (timber business); Estate of Huntington v. Commissioner, 36 B.T.A. 698 (1937) (real estate subdivision and sales). However, the degree to which the corporation is actively engaged in producing income rather than merely holding property for investment should influence the weight to be given to earnings power and other factors as opposed to net asset value. Estate of Andrews v. Commissioner, 79 T.C. at 945.

In this case, the primary business of each of the corporations is the management, development and sale of real estate, and the investment in related obligations. Under these circumstances, earnings, in the form of rent, are conceded by both parties to not be a realistic gauge of the value of the stock at issue. Therefore, we believe that the appropriate method of valuing the stock held by the decedent in this case is by reference to the value of the corporate assets, adjusted however for the appropriate discounts and premiums. Estate of O'Connell v. Commissioner, 640 F.2d 249 (9th Cir. 1981), affg. in part and revg. in part a Memorandum Opinion of this Court; Hamm v. Commissioner, supra; Estate of Lee v. Commissioner, 69 T.C. 860, 870 (1978).

Both parties agree that the appropriate measure of the value of the stock of Cascade Olympic held by the decedent is the value of the underlying assets held by each of the corporations in which Cascade Olympic held an interest, adjusted for factors such as minority interests, control factors, liquidity or lack of marketability, and the structure of the corporations. Both experts reviewed the consolidated income tax returns and varying numbers of the documents supporting both the assets and liabilities of each corporation and the contested stock ownership. Neither expert contacted all relevant parties nor reviewed all relevant contracts and loan agreements.

There is substantial agreement on the fair market value of the assets although the discounts applied to liabilities, particularly the mortgage held on Tacoma Mall, vary widely. The primary area of disagreement between the expert witnesses of petitioner and respondent is the appropriate premiums and discounts to be applied to the value of the net assets of all of the affiliated corporations. They differ further on the value of the minority interests held in each of the relevant corporations and how to allow for the minority interests when valuing the Cascade Olympic stock at issue.

Shares of stock of a corporation which represent a minority interest are usually worth less than a proportionate share of the value of the assets of the corporation. Estate of Bright v. United States, 658 F.2d 999 (5th Cir. 1981) (en banc); Harwood v. Commissioner, supra; Estate of Andrews v. Commissioner, supra; Estate of Zaiger v. Commissioner, 64 T.C. 927 (1975). The minority discount is recognized because the holder of a minority interest lacks control over corporate policy, cannot direct the payment of dividends, and cannot compel a liquidation of corporate assets. See Harwood v. Commissioner, 82 T.C. at 267; Estate of Andrews v. Commissioner, 79 T.C. at 953; Drybrough v. United States, 208 F.Supp. 279, 287-288 (W.D.Ky. 1962). A lack of liquidity discount, on the other hand, reflects the fact that there is no ready market for shares in a closely held corporation. Liquidity discounts and minority discounts must be determined on the basis of the shares being valued without combining those shares with the shares of affiliated parties. See Propstra v. United States, 680 F.2d 1248 (9th Cir. 1982); Estate of Lee v. Commissioner, supra. "For purposes of valuation, one should construct a hypothetical sale from a hypothetical willing seller to a similarly hypothetical willing buyer," regardless of the fact that "the reality of the situation may be that the stock will most probably be sold to a particular party or type of person." Estate of Andrews v. Commissioner, 79 T.C. at 955-956. However, "the hypothetical sale should not be constructed in a vacuum isolated from the actual facts that affect the value of the stock in the hands of decedent * * *." 79 T.C. at 956.

Applying these standards to the facts at issue, the decedent was the owner of a majority interest only in Cascade Olympic, and did not hold sufficient voting power even in Cascade Olympic to liquidate the corporation without the assistance of shares held by other parties. Wash. Rev. Code Ann. secs. 23A.20.030 and 23A.28.030 (1969). However, because the decedent's majority interest in the voting

shares of Cascade Olympic enabled him to control the board of directors of Cascade Olympic, he could direct Cascade Olympic to vote for the liquidation of Capital Cascade or its merger into Cascade Olympic. Wash. Rev. Code Ann. secs. 23A.08.370 and 23A.08.380 (1969). As there were minority interests in each of the corporations other than the interest of the decedent or Cascade Olympic, fiduciary constraints would limit such actions. We find, however, that there were no plans as of the alternate valuation date to liquidate or merge any of the corporations into any of the other corporations. Further, as of that date, there were valid business reasons to affirmatively avoid any such action because such action would expose those assets to the uncertainty of the liability exposure of Capital Cascade.

Respondent and his expert argue that no business purpose for the complex corporate structure headed by Cascade Olympic was presented and that the corporations must be viewed as essentially one economic entity. The corporate structure selected by a taxpayer is generally respected absent fraud, alter ego situations, or other circumstances not present here. Moline Properties, Inc. v. Commissioner, 319 U.S. 436 (1943). Disregarding the corporations' individual status is not lightly done. Petitioner has presented ample justification for the decision to hold the various assets and particularly the contingent liabilities within separate corporate structures. Further, respondent has failed to note that all of the corporations at issue had minority shareholders whose interests would not necessarily be met by either a liquidation or a merger of their corporations resulting in a change in the form and nature of their investment. Respondent's philosophical objection to the complexity of the intercorporate relationships in this case cannot justify the decision of his expert to, in essence, disregard this structure merely because it makes the valuation more complex.

Respondent's expert valuation of the Cascade Olympic stock held by the decedent proceeds, however, from this preliminary decision to treat all of the corporations as one consolidated corporation rather than as a group of corporations. He used the financial statements of each corporation for the taxable year 1979, the most current financial information available, to estimate the fair market value of all assets and all liabilities. These values were netted to obtain an adjusted fair market value for the net assets of each corporation.

The value of the minority interests in the non-stock assets and liabilities of each of the corporations was then subtracted. The manner of accounting for the minority interests failed, however, to subtract the value held by the minority shareholders in each corporation consisting of the stock of one of the other members of the affiliated group and BHC.

Various discount factors, including a discount of 20 percent for the complicated ownership structure, were then applied to arrive at the final estimate of the adjusted fair market value as of the alternate valuation date of the Cascade Olympic stock held by the decedent. In essence, respondent's expert assumes that the corporate structure actually in existence has been collapsed in order to facilitate the computations necessary to determine the value of the stock at issue.

Respondent's expert relied, to a large extent, upon the materials in respondent's files which were incomplete. He met with company management only once and was virtually unaware of the importance of the decedent to Cascade Olympic and its subsidiaries. The adjustments made to the book value of the assets and liabilities appeared to depend more upon a general approach toward mortgages and promissory notes than a particularized inquiry as to the nature of the item before him. For example, the mortgage on Tacoma Mall was discounted from $1.8 million to $1.3 million on the assumption that its

low interest rate would result in a willingness by the lender to not only waive prepayment penalties but also accept a prepayment at less than book value. Respondent's expert failed, however, to learn that the mortgagee refused to accept any change in terms.

A further failing in respondent's expert's valuation is discounting the value of the Preferred A and Preferred B shares of Cascade Olympic not held by the decedent by approximately 99 percent, to an amount below par value, because of the lack of control held by minority shareholders of Cascade Olympic, resulting in a corresponding increase in value of the common shares held by the decedent. This discount ignores the par value of $100 which was the minimum amount to be received by each owner of Preferred A and Preferred B upon liquidation absent bankruptcy. This methodology places a far higher value upon the common stock than can be justified.

Respondent's expert did not review the subscription agreement between Thousand Trails and BHC, and yet he valued the Thousand Trails' subscription obligation as equivalent to an easily transferrable medium grade corporate bond. Respondent's expert then applied a lower than market discount rate despite a concession at trial that it would have been difficult to sell the obligation on the open market without further discount. In a similar fashion, many of the obligations held by the various corporations were not discounted on the basis of a knowledge of their terms nor on the basis of whether they were current, nor were appropriate interest rates always used for the discounting to the alternate valuation date.

On the other hand, we find that we are unable to rely totally on the opinion of petitioner's expert. He also relied heavily on company management and its advisors to supply him with the correct data without further personal verification. The financial statements and income tax returns of Cascade Olympic reflected 521 outstanding shares of Class B preferred stock. Yet petitioner's expert assumed for purpurses of his report that there were 591 shares outstanding, presumably from information he obtained from corporate management. Although he reviewed more of the underlying documentation than did respondent's expert, the values selected for the assets and liabilities were, in some instances, based upon assumptions rather than fact. Further, in the examination of the Bethel project liabilities, much of the information relied upon was unknown on the alternate valuation date.

His method of valuation in general, however, is a far better reflection of the fair market value of the shares of Cascade Olympic held by the decedent under the corporate structure that actually existed. His use of simultaneous, interdependent equations, although complex, accounts for the inter-relationships of the corporations and the value of the minority interests not only in the non-stock assets but also in the stock ownership of the affiliated corporations.

The final valuation figure selected for petitioner's interest in Cascade Olympic was, however, heavily dependent upon the expert's description of Cascade Olympic as a closed-end investment company with investments in a number of other corporations. He applied a discount of 45 percent to the value of the Cascade Olympic shares due to this view of the structure of the company. A portion of this discount was also due to the importance of the decedent to the operations of the corporations.

An additional discount was applied for the effect of capital gains tax payable by the shareholders of BHC, although transaction costs are not ordinarily considered when no liquidation or merger was, in fact, anticipated. Estate of Andrews v. Commissioner, 79 T.C. at 942; Estate of Piper v. Commissioner,

72 T.C. 1062, 1086-1087 (1979); Estate of Cruikshank v. Commissioner, 9 T.C. 162 (1947). Appropriate adjustments were made for lack of liquidity.

We have pointed out above the defects of the approaches used by the experts of both parties. Having taken diametrically opposed views as to the factors to be weighed in valuing the stock involved in this case, the parties "failed successfully to conclude settlement negotiations -- a process clearly more conducive to the proper disposition of disputes such as this." Messing v. Commissioner, 48 T.C. 502, 512 (1967). Because we have concluded that there are basic flaws in the valuations offered by both of the experts, we must necessarily make our best judgment of value. While we have considered both of the valuation reports, we have also weighed all other relevant factors shown in the record. We have accepted the valuations placed on the underlying assets and liabilities by petitioner's expert to a large degree, but have applied the appropriate discounts for the restricted marketability of the shares and the lack of control held by Cascade Olympic in a number of the affiliated companies holding a number of the underlying assets. The closed-end investment company discount has been removed although we have retained a 10 percent discount for the effect of the death of the decedent upon the management of the corporations. We have also adjusted the valuation to allow for our factual finding that only 521 shares of Preferred B were outstanding upon the alternate valuation date. Based upon all of these facts and upon the entire record, we conclude and find as a fact that the fair market value of the shares of Cascade Olympic held by the decedent as of the alternate valuation date was $3,395 per share for a total fair market value of $509,250.

The second issue for decision is whether decedent held an interest in the shares of Cascade Olympic and Capital Cascade in the name of his surviving spouse, Jean Manning. In determining the nature and extent of decedent's community interest in these shares, this Court must look to the laws of the State of Washington where the decedent and Mrs. Manning resided throughout their marriage. Katz v. United States, 382 F.2d 723 (9th Cir. 1967). Under the laws of the State of Washington, all property acquired after marriage by either husband or wife or both, is presumed to be community property. Wash. Rev. Code Ann. sec. 26.16.030 (1986). While the presumption is rebuttable, the burden rests upon the spouse asserting the separate character of the property acquired by purchase during the marriage to establish his or her claim by clear and satisfactory evidence. Berol v. Berol, 37 Wash. 2d 380, 223 P.2d 1055, 1056 (1950). Indefinite evidence that certificates of stock issued in one spouse's name were intended to be separate property is also insufficient to rebut the presumption. In re Wheeler Estate, 123 Wash. 531, 212 P. 1043 (1923). In this case, however, we find the testimony of Mrs. Manning regarding events occurring over 15 years before trial to be credible and sufficient to rebut the presumption. We find that the 10 shares of Cascade Olympic stock acquired by her in 1965 were a gift to her by the decedent and that the 660 shares of Capital Cascade stock acquired by her in 1969 were purchased with separate funds. All of the shares of Cascade Olympic and Capital Cascade stock held in the name of Mrs. Manning were, therefore, separate property and decedent had no interest in the shares at the time of his death.

Decision will be entered Under Rule 155.

In re Marriage of Zells

Case name: In re Marriage of Zells
Citation: 572 N.E.2d 944,1991 Ill. LEXIS 30
Date of decision: April 18, 1991
Country: US
State or Federal: State
State/Jurisdiction: Illinois
Court: Supreme Court
Type of action: Marital Dissolution
Judge: Heiple
SIC: 8111 Legal Services
NAICS: 541110 Offices of Lawyers

Keywords: Marital dissolution, Personal goodwill

COUNSEL:

Melvyn H. Berks, of Des Plaines, for appellant.

Joel S. Ostrow, of Chicago, for appellee.

JUDGES:

Justice Heiple delivered the opinion of the court. Justice Calvo took no part in the consideration or decision of this case.

OPINIONBY:

HEIPLE

OPINION:

JUSTICE HEIPLE delivered the opinion of the court:

This case concerns the division and distribution of marital property between a lawyer and his spouse. There are two issues. The first is whether a lawyer's contingent fee contracts are subject to valuation, division and distribution as part of the marital estate. The second issue is whether professional goodwill is a marital asset and subject to division or distribution. Our conclusion is that neither contingent fee contracts nor professional goodwill is subject to valuation, division or distribution as marital assets.

The circuit court of Cook County determined that contingent fee contracts are marital assets which are subject to equal division between the parties. The court also determined that the goodwill of the husband's law practice is a marital asset. The appellate court affirmed the valuation and distribution of

goodwill, but held that contingent fees are not marital assets subject to division. (197 Ill. App. 3d 232.) We reverse and remand.

We agree with that part of the appellate court's opinion which found that contingent fees are not marital assets. In its determination, the appellate court relied on three factors:

"First, the nature of a contingent fee contract indicates that an attorney has neither the right to receive the fee until the case is disposed of, nor any assurance that he ever will receive the fee. Second, the amount of the contingent fee depends on the amount of the award or settlement in the case; therefore its ultimate value, if any, remains highly speculative during the pendency of the case. * * * Third, the worth of a contingent fee to an attorney, if any, remains intangible until the firm receives cash or other consideration for the services rendered." 197 Ill. App. 3d at 237.

The context for the consideration of fees, contingent or otherwise, is in the determination of income for support and maintenance. Fees earned by an attorney contribute to the annual income figures relied upon in awarding maintenance and support. Future earned fees would be considered should the subject of maintenance be revisited.

Additionally, we note the impermissible ethical conflict posed by a court-ordered division of contingent fees. Rule 5.4 of the Illinois Rules of Professional Conduct (134 Ill. 2d R. 5.4) provides in part:

"(a) A lawyer or law firm shall not share legal fees with a nonlawyer, except that:

(1) an agreement by a lawyer with the lawyer's firm, partner, or associate may provide for the payment of money, over a reasonable period of time after the lawyer's death, to the lawyer's estate or to one or more specified persons;

(2) a lawyer who undertakes to complete unfinished legal business of a deceased lawyer may pay to the estate of the deceased lawyer that proportion of the total compensation which fairly represents the services rendered by the deceased lawyer; and

(3) a lawyer or law firm may include nonlawyer employees in a compensation or retirement plan, even though the plan is based in whole or in part on a profit-sharing arrangement." 134 Ill. 2d R. 5.4.

This court outlined the potential harms associated with fee-sharing arrangements between attorneys and non-attorneys in O'Hara v. Ahlgren, Blumenfeld & Kempster (1989), 127 Ill. 2d 333 (revenue-sharing agreement between attorney's widow and new law firm to which she sold her husband's practice held to violate Rule 3 -- 102 of the Code of Professional Responsibility (107 Ill. 2d R. 3 -- 102)). While it is not necessary to here restate these harms in full, we reaffirm the reasoning of O'Hara and decline to enlarge the exceptions to include a contingent fee fee-sharing arrangement resulting from a judgment of dissolution.

We next address the issue of the goodwill value of the law practice. Goodwill represents merely the ability to acquire future income. Consideration of goodwill as a divisible marital asset results in gross inequity.

In the instant case, the trial court purported to divide the marital assets but offset an award of real assets to the wife against professional goodwill or blue sky which was assigned to the lawyer husband. This type of disproportionate division has been the basis for the decisions of other State courts that professional goodwill is not a marital asset. Holbrook v. Holbrook (Wis. App. 1981), 103 Wis. 2d 327,

309 N.W.2d 341 (marital estate did not include goodwill or intangible value of husband's partnership interest in reputable law firm); Powell v. Powell (1982), 231 Kan. 456, 648 P.2d 218 (goodwill in a professional medical practice was not an asset subject to division in a divorce action).

Panels of the Illinois appellate court have similarly held that the goodwill of a professional business is not marital property subject to division. The first district adopted this position with its decision In re Marriage of Wilder (1983), 122 Ill. App. 3d 338. The appellate court held that the trial court's failure to set a fixed monetary value for goodwill in valuing the husband's stock in his medical practice, a professional corporation, was not error. (122 Ill. App. 3d at 348.) The Wilder position was in contrast to the earlier fifth district decision In re Marriage of White (1981), 98 Ill. App. 3d 380, wherein the appellate court stated that goodwill is a factor to be considered in valuing a professional corporation "under the theory that despite the intangible quality of good will in a professional practice, it is of value to the practicing spouse both during and after the marriage and its value is manifested in the amount of business and, consequently, in the income which the spouse generates." (98 Ill. App. 3d at 384.) The Wilder court held that the White definition of goodwill is reflected in three of the factors which the trial court must consider in reaching a just property distribution under section 503(d) of the Illinois Marriage and Dissolution of Marriage Act (the Dissolution Act) (Ill. Rev. Stat. 1989, ch. 40, par. 101 et seq.):

"[T]he relevant economic circumstance of each spouse when the division of property is to become effective[,] * * * [the] occupation, amount and sources of income, vocational skills, [and] employability * * * of each of the parties * * * [and] the reasonable opportunity of each spouse for future acquisition of capital assets and income." Ill. Rev. Stat. 1989, ch. 40, pars. 503(d)(4), (d)(7), (d)(10).

The third district followed the reasoning of Wilder in In re Marriage of Courtright (1987), 155 Ill. App. 3d 55, holding that the goodwill value of the husband's medical practice was not a marital asset. The court stated:

"Although many businesses possess this intangible known as good will, the concept is unique in a professional business. The concept of professional good will is the sole asset of the professional. If good will is that aspect of a business which maintains the clientele, then the good will in a professional business is the skill, the expertise, and the reputation of the professional. It is these qualities which would keep patients returning to a doctor and which would make those patients refer others to him. The bottom line is that this is reflected in the doctor's income-generating ability.

* * *

Although good will was not considered in the court's valuation of the business itself, it was a factor in examining [the husband's] income potential. To figure good will in both facets of the practice would be to double count and reach an erroneous valuation." 155 Ill. App. 3d at 58-59.

The reasoning presented in Courtright is correct. Adequate attention to the relevant factors in the Dissolution Act results in an appropriate consideration of professional goodwill as an aspect of income potential. The goodwill value is then reflected in the maintenance and support awards. Any additional consideration of goodwill value is duplicative and improper.

For the foregoing reasons, we affirm in part and reverse in part the judgment of the appellate court, reverse the judgment of the circuit court, and remand the cause to the circuit court for further proceedings.

Appellate court affirmed in part and reversed in part; circuit court reversed; cause remanded.

JUSTICE CALVO took no part in the consideration or decision of this case.

What It's Worth

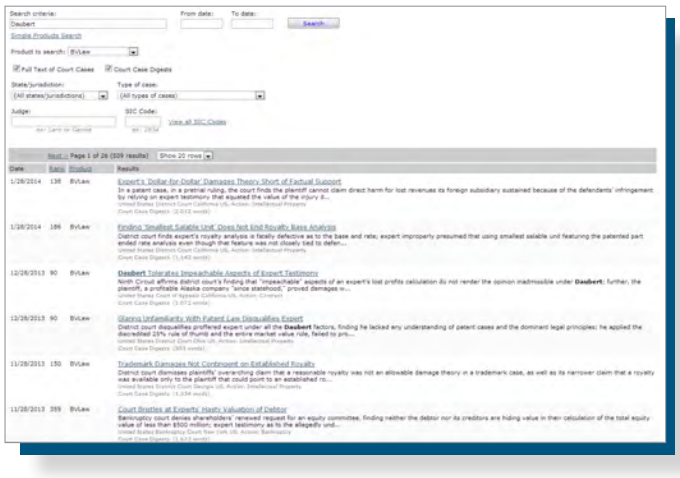
BVLaw – Case Law Database



A robust, searchable database of business valuation-related court digests and full-text opinions.

When your reputation is on the line, use the **BVLaw** database to learn the court's perspective on the critical elements of your business valuation. This comprehensive database of 3,500+ business valuation cases and case digests includes decisions that involve economic damages, lost profits, estate and gift tax, divorce, shareholder oppression, partnership dissolution, securities litigation, and more. **BVLaw** has been locating, indexing and analyzing BV-specific cases for 15+ years and BVR's team of legal experts continuously track published decisions from the courts in all 50 states and federal jurisdictions (including Delaware Chancery Court and the U.S. Tax Court) to ensure you're current on valuation decisions.

Benefits

- Our unique collection of business valuation case law eliminates the need for cumbersome searching. The database includes case digests and full-text court opinions that date back to 1925
- Minimize your legal research fees – enjoy unlimited searches unlike pricier legal databases
- Save time - our legal experts concisely summarize each case so you can drill down to the relevant issues
- State-of-the-art search engine with advanced search functionality. Search by:
  - Case name
  - Judge name
  - Type of case
  - Jurisdiction
  - Topic
  - SIC code
  - Keyword
  - Date
